Moſt of their winged companions had now left them, the grey albatroſſes only excepted, and, inſtead of the other birds, they were viſited by a few antarctic peterels, two of which were ſhot. To the deſcription given above of this bird, we may add, that they are of the ſize of a large pigeon, the feathers of the head, back, and part of the upper ſide of the wings, are of a light brown; the belly and ſide of the wings white, the tail feathers are alſo white, but tipped with brown. Another peterel was ſhot afterwards, ſmaller, and intirely of a grey plumage; theſe birds were fuller of feathers than any hitherto ſeen. A few chocolate coloured albatroſſes were ſeen in theſe parts, all which birds kept among the ice, from whence, captain Cook obſerved, he might with reaſon conjecture that there is land to the ſouth.

On December 22, they had penetrated to ſixty-ſeven degrees thirty-one minutes, being the higheſt ſouthern latitude they had reached; one hundred and forty-two degrees fifty-four minutes weſt longitude. Twenty-three ſmall ice-iſlands were this day ſeen from the deck, and twice that number from the maſt-head, and yet the weather was ſo foggy, that they could not ſee above two or three miles round them. On the 25th the weather was clear and fair, and upwards of ninety large ice-iſlands were in ſight. This being Chriſtmas-day, the captain invited the officers and mates to dinner; and one of the lieutenants entertained the petty officers. The ſailors feaſted on a double portion of pudding, regaling themſelves with the brandy of their allowance which they had ſaved for this occaſion ſome months beforehand. The ſight of an immenſe number of ice-iſlands, among which the ſhip drifted at the mercy of the current; every moment in danger of being daſhed in pieces againſt them, could not deter the ſailors from indulging in their favourite amuſement; as long as they had brandy left, they would perſiſt to keep Chriſtmas in their way, though the elements had conſpired together for their deſtruction. Their long acquaintance with a ſeafaring life had enured them to all kinds of perils; and their heavy labour, with the inclemencies of the weather, and other hardſhips, making their muſcles rigid, and their nerves obtuſe, had communicated inſenſibility to their minds.

January 3, 1774. Being in fifty-ſix degrees ſouth, one hundred and forty degrees thirty-one minutes weſt, the wind being weſterly obliged them to ſteer north-eaſtwardly, the captain was therefore obliged to leave a ſpace of ſea unexplored to the weſt, containing near forty degrees of longitude, and half that of latitude. January 20, being in ſixty-two degrees thirty-four minutes ſouth latitude, one hundred and ſixteen degrees twenty-four minutes weſt longitude, they were becalmed; when two ice-iſlands appeared in ſight, one of which was ſuppoſed to be full two hundred feet in height, and terminated in a peak not unlike the cupola of St. Paul's church. January 25, the wind increaſed very much, and in a ſhort time blew a tempeſtuous gale; at nine o'clock at night a huge mountainous wave ſtruck the ſhip on the beam, and filled the deck with a deluge of water; it poured into the cabin, and extinguiſhed the lights, leaving the gentlemen who were ſitting there for a moment in doubt whether they were not intirely overwhelmed, and ſinking into the abyſs. The ice, the fog, the ſtorms, and ruffled ſurface of the ſea, compoſed a ſoul-ſinking ſcene, which was ſeldom cheered by the reviving beams of the ſun. January 26, paſſed for the third time within the antarctic polar circle, longitude one hundred and nine degrees thirty-one minutes weſt; and on the 29th in the afternoon were in ſixty-nine degrees forty-five minutes ſouth, one hundred and eight degrees five minutes weſt, paſſed a piece of weed covered with barnacles, which a brown albatroſs was picking off. The mildeſt ſun-ſhine was enjoyed that day, that had ever been experienced in the frigid zone. This led them to entertain hopes of penetrating as far towards the ſouth pole as other navigators had done towards the north pole; but the next day about four in the morning, they diſcovered a ſolid ice-field of immenſe extent before them, which bore from eaſt to weſt. A bed of fragments ſtoated all round this field, which ſeemed to be raiſed ſeveral feet high above the level of the water. Whilſt in this ſituation, the ſouthern part of the horizon was illuminated by the rays of light reflected from the ice to a conſiderable height. Ninety-ſeven ice-iſlands were diſtinctly ſeen within the field, beſides thoſe on the outſide; many of them very large, and looking like a ridge of mountains, riſing one above another, till they were loſt in the clouds. There was no other occurrence worth relating, till they fell in with Eaſter iſland the 11th of March 1774, having been one hundred and four days out of ſight of land. On the 19th of October, the ſloop came once more to an anchor in Queen Charlotte's Sound in New Zealand, and ſailed on the 10th of November following, and made a run, without ſeeing any land, quite acroſs the South Sea to Tiera del Fuego, and on the 17th of December made Cape Deſcada, on the ſouth-weſtern extremity of that dreary coaſt and diſmal climate.

January 4, 1775. Captain Cook ſailed ſouth eaſt from Staten iſland, in order to paſs a third ſummer ſeaſon to the ſouthward. On leaving Staten iſland, he has the following remarks: "It is amazing to ſee how the different animals, which inhabit this ſpot, are mutually reconciled: they ſeem to have entered into a league not to diſturb each other's tranquillity. The ſea-lions occupy moſt of the ſea coaſt; the ſea-bears take up their abode in the iſland; the ſhags have poſt in the higheſt cliffs; the penguins fix their quarters where there is the moſt eaſy communication to and from the ſea; and the other birds chuſe more retired ſtations. We have ſeen all theſe animals mix together like domeſtic cattle and poultry in a farm yard, without once attempting to moleſt the other; nay, I have often obſerved the eagles and vultures ſitting on the hills among the ſhags, without either the old or young of the latter being diſturbed at their preſence. It may be aſked how theſe birds of prey live? I ſuppoſe on the carcaſes of ſeals and birds which die by various cauſes, and probably in no ſmall numbers, as there are ſo many of them."

On January 14, being in fifty-three degrees fifty-ſix minutes ſouth latitude, and thirty-nine degrees twenty-four minutes weſt longitude, land was diſcovered; its mountains appeared of a vaſt height, covered with ſnow and ice, in moſt places, quite to the water's edge: towards the ſouth end ſeveral low iſlands were ſeen, which appeared to have ſome verdure upon them, and were therefore called the Green iſlands. This land, which was at firſt ſuppoſed to be part of a great continent, was found at length to be an iſland of ſeventy leagues in circuit, between the latitudes of fifty-three degrees fifty-ſeven minutes and fifty-four degrees fifty-ſeven minutes, and longitudes thirty-eight degrees thirteen minutes and thirty-five degrees thirty-four minutes weſt, extending ſouth-eaſt by eaſt, and north-weſt by weſt, and is thirty-one leagues long, in that direction; its greateſt breadth is about ten leagues. It ſeemed to abound with bays and harbours, which the vaſt quantities of ice rendered inacceſſible the greateſt part of the year. This large iſland received the name of Southern Georgia. Captain Cook landed in a bay on the northern ſide of this iſland, which he called Poſſeſſion Bay; here he diſplayed his colours in three different places, and took poſſeſſion of the country in his Majeſty's name, under a diſcharge of ſmall arms.

Two rocky iſlands are ſituated on the north end, one of which was named Willis's iſland, from the perſon who diſcovered it. It is a craggy cliff, nearly perpendicular, which contained the neſts of many thouſand ſhags. The other received the name of Bird iſland, from the innumerable flocks of birds of all ſorts that were ſeen upon it, from the largeſt albatroſſes down to the leaſt peterels. Several porpoiſes were likewiſe obſerved, and ſeals, which probably came to breed on theſe inhoſpitable ſhores. The head of the bay, as well as two places on each ſide, were terminated by perpendicular ice cliffs, of conſiderable height, ſuch as are found in the harbour of Spitſbergen, in the northern hemiſphere. Pieces were continually breaking off and floating out to the ſea; and a great fall happened while they were in the bay, which made a noiſe like cannon.

The other parts of the country were not leſs ſavage and horrible. The wild rocks raiſed their lofty ſummits till they were loſt in the clouds; and the vallies lay covered with ſnow. Not a tree was to be ſeen, nor a ſhrub even big enough to make a tooth-pick. The only vegetation obſerved was a ſtrong bladed graſs, growing in tufts; wild burnet, and a plant like moſs, which ſprung from the rocks: Seals, or ſea-bears, were pretty numerous. Among them was a huge animal of the ſame kind with the ſea-lion deſcribed in lord Anſon's voyages; a midſhipman ſhot it through the head, whilſt it lay aſleep. It was all over of a dark grey colour, with a ſlight olive caſt, ſomething like the ſeals in the northern hemiſphere: it likewiſe reſembled thoſe animals, in the moſt perfect ſhape of its forefeet, and the want of external ears; its noſe projected far beyond the mouth, and had a looſe wrinkled ſkin; it was about thirteen feet long. Here was found a flock of about twenty penguins, of a much greater ſize than any before ſeen, being thirty-nine inches long, and weighing forty pounds. The ſeals and penguins killed here were very acceptable to the whole crew; for any kind of freſh meat was eagerly craved. Beſides being uninhabitable, South Georgia does not appear to contain a ſingle article for which it might be viſited occaſionally by European ſhips. On the whole coaſt, not a river or ſtream of freſh water was to be ſeen.

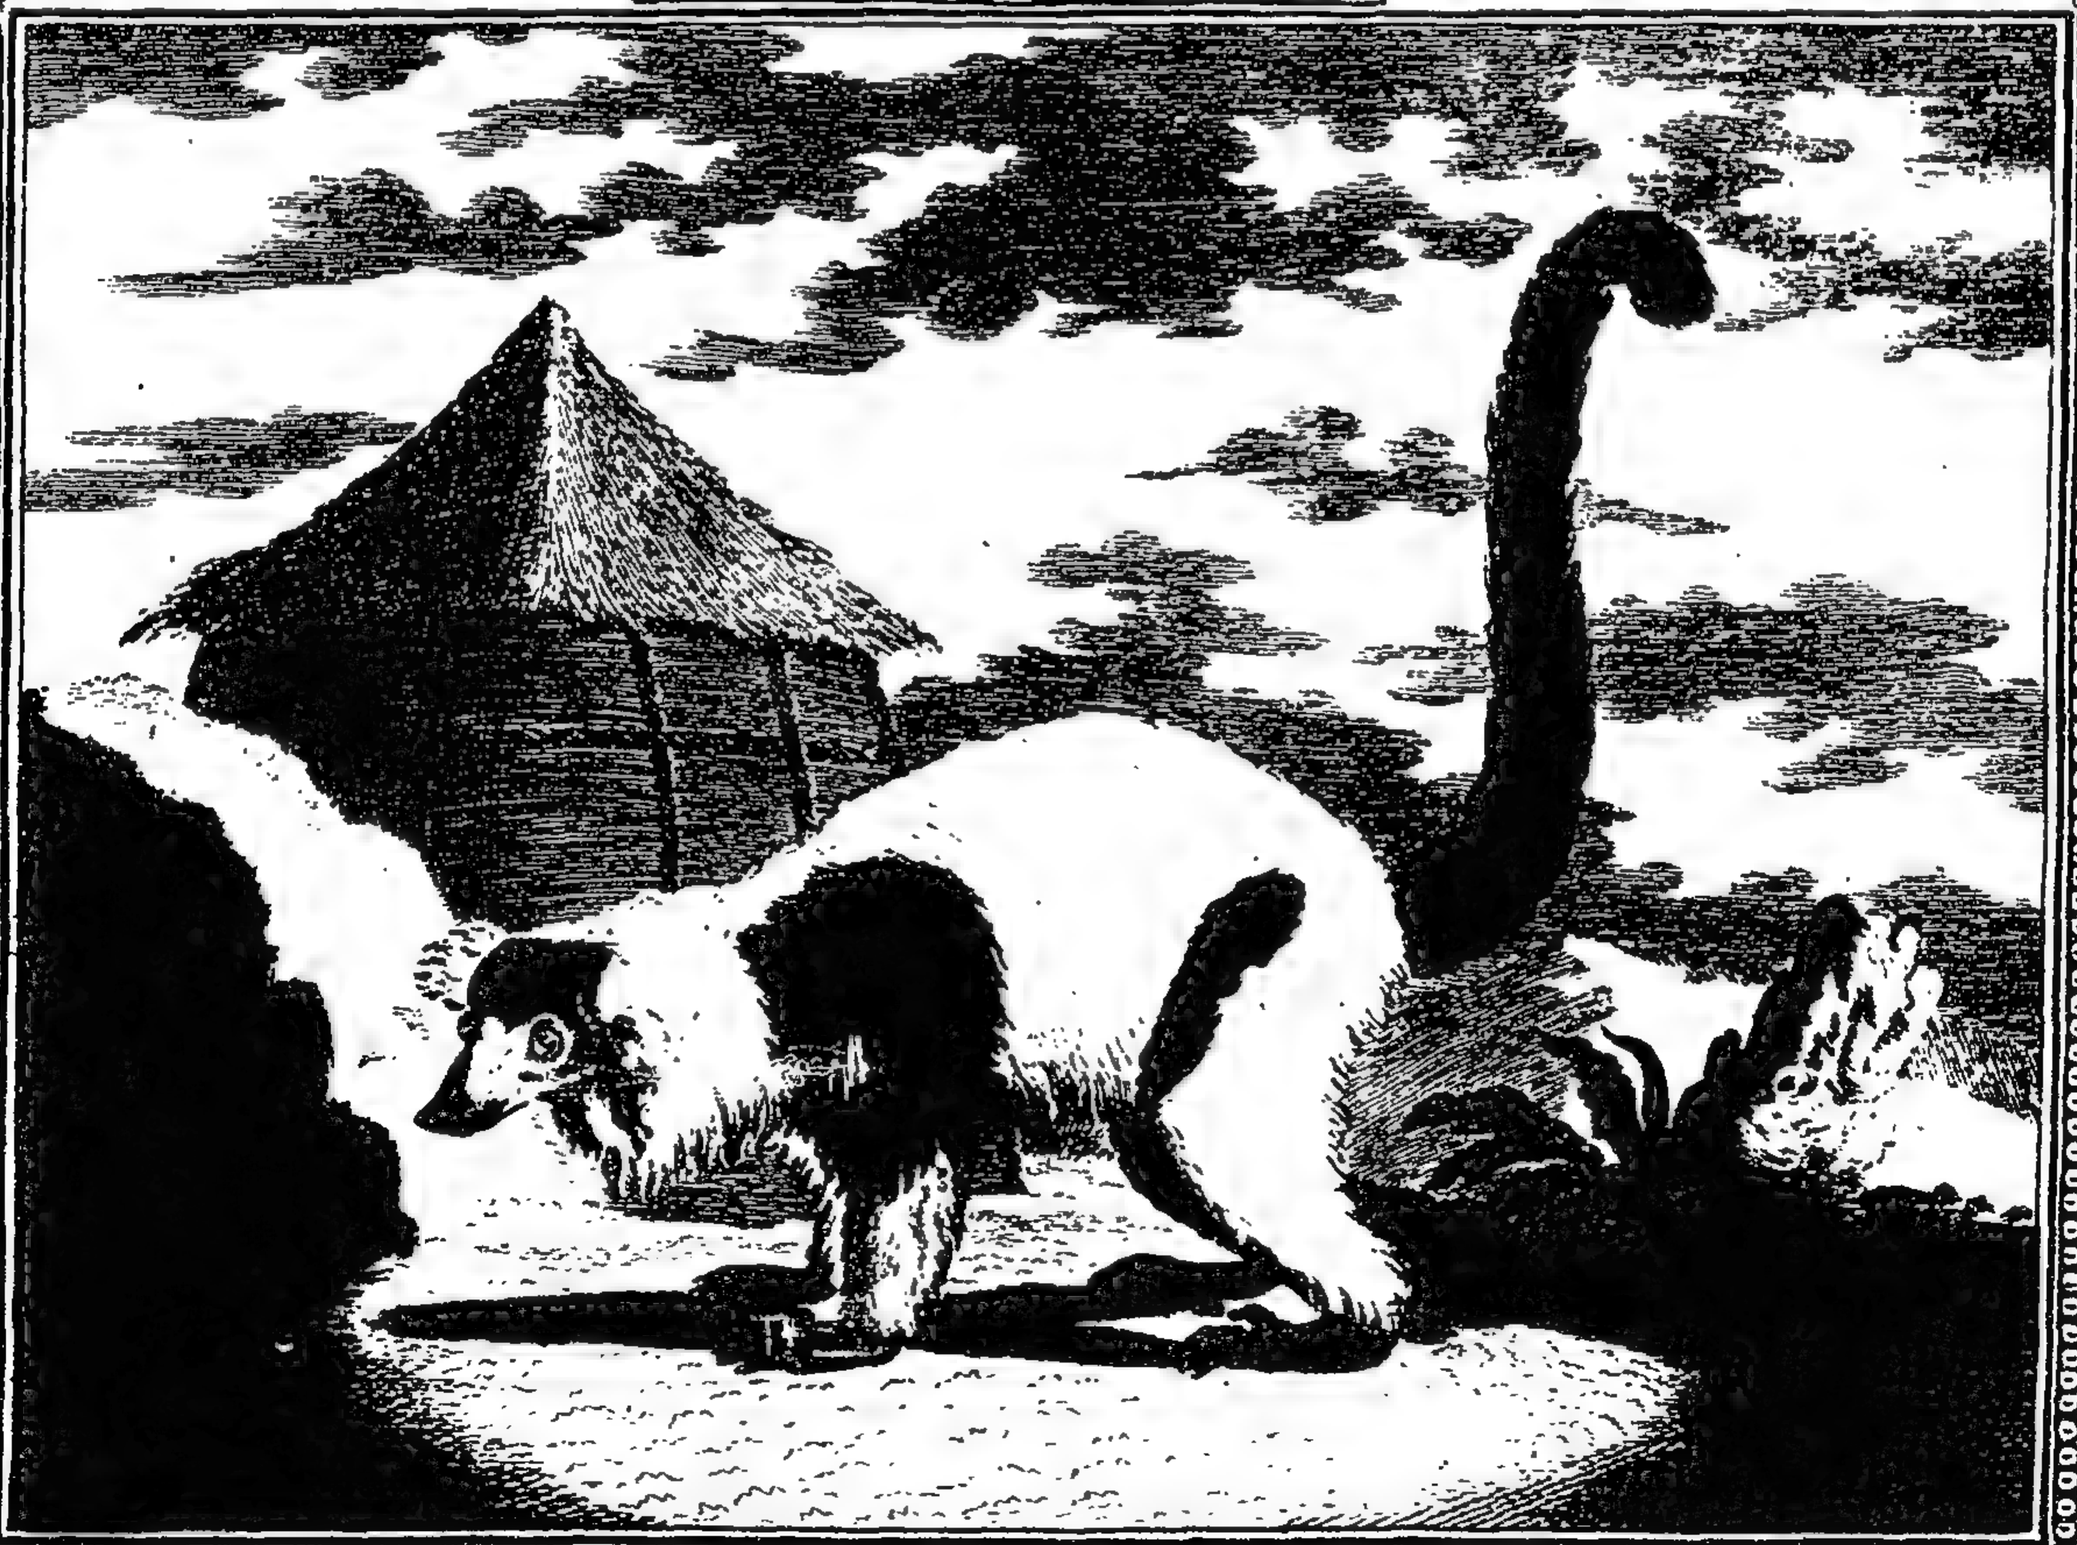
On the 26th of January captain Cook left the ſouthern part of this iſland, and ſteered eaſt ſouth-eaſt, until he arrived in ſixty degrees latitude, further than which he did not intend to go, unleſs he obſerved ſome certain ſigns of meeting with land. Theſe high ſouthern latitudes, where nothing was to be found but ice and thick fogs, had at length tired even this perſevering chieftain himſelf; he therefore put about to the eaſtward.

January 31, paſſed one of the largeſt ice iſlands that had been ſeen in the voyage. As this ſhip was now proceeding northward, the hope of ſoon reaching a milder climate diffuſed a general ſatisfaction; but another frozen country roſe to their view, and threatened to retard the accompliſhment of their wiſhes. The diſcovery of this iſland was made on January 31, at ſeven in the morning. Captain Cook gave the name of Sandwich land to this diſcovery, which may poſſibly be the northern point of a continent; for he is of opinion that there is a tract of land near the pole, which is the ſource of moſt of the ice that is ſpread over this vaſt ſouthern ocean.

Southern Thule, in latitude fifty-nine degrees thirty minutes ſouth; longitude twenty-ſeven degrees thirty minutes weſt, was the moſt ſouthern extremity that was ſeen; proceeding northward, many projecting points of land were diſcovered; the mountains appeared to be of vaſt height; their ſummits being conſtantly wrapped in clouds, and the lower parts covered with ſnow down to the water-edge. Theſe captain Cook named, in the order in which they were ſeen, Freezeland Peak, Cape Briſtol, and Cape Montagu; with an iſland that received the name of Saunders, ſituated fifty-eight degrees twenty-ſeven minutes ſouth latitude, twenty-ſix degrees forty-four minutes weſt longitude; and two ſmall ones, which were named Candlemas iſles; they are of no great extent, but are of conſiderable height, and are covered with ſnow. The whole country had the moſt deſolate and horrid appearance imaginable; not a ſingle blade of graſs could be diſcerned upon it, and it ſeemed to be forſaken even by the amphibious and lumpiſh animals which dwelt on South Georgia.

February 15, bore away to the northward, having croſſed the meridian of Greenwich, in latitude fifty-ſeven degrees fifty minutes. On the 19th croſſed the place where Cape Circumciſion is laid down by Bouvet, without having the leaſt ſigns of land, though the weather was favourable to diſcovery. Captain Furneaux likewiſe paſſing between Georgia and Sandwich land, croſſed the meridian of Cape Circumciſion in the latitude of fifty-ſeven degrees fifty minutes ſouth, without meeting with any land. The ſolicitude of all on board to arrive at an European port, was now riſen to the moſt impatient height; their voyage had then laſted twenty-ſeven months after leaving the Cape of Good Hope, ſince which time they had not touched at any European ſettlement, but had ſevered from all intercourſe with their country, their friends, relations, and domeſtic endearments. As they approached a place that had ſome correſpondence with Europe, their hopes and fears began to be anxiouſly excited; all the tender and endearing ties at home now took intire poſſeſſion of the breaſt, and agitated with the ſtrongeſt ſenſations.

On March 26, being then between thirty-five and thirty-ſix degrees ſouth latitude a ſhip was ſeen to windward, and in three hours afterwards they came in ſight of another. The eagerneſs with which every perſon on board bent his eyes towards theſe welcome objects, was the ſtrongeſt proof of that ardent longing for an intercourſe with Europeans, which till then had been ſuppreſſed by the attentions which their ſituations and regard to perſonal ſafety demanded. Two tedious days however, paſſed in this ſtate of painful uncertainty, before they could come up with either of the ſhips; at length they got within five miles of one of them, which proved to be a Dutch Eaſt Indiaman. A boat was hoiſted out and ſent on board her, and in a few hours returned with the welcome news that there was univerſal peace in Europe. In the afternoon they got ſight of two Swediſh, one Daniſh, and an Engliſh ſhip, the latter of which bore down to them, and lieutenant Clarke, the elder Mr. Forſter, and a midſhipman, went on board her. This ſhip was the True Briton, captain Broadly, on her return from China. The gentlemen were received with a generous hoſpitality, and invited to dinner. Theſe three famiſhed circumnavigators, who had not ſeen freſh meat for ſix weeks, attacked with the higheſt reliſh a diſh of fattened Chineſe quails, and a delicious gooſe, which their kind entertainer reckoned very homely fare. On relating how long they had been abſent from any European ſettlement, how long they had lived upon ſalt beef, and how often they had regaled themſelves, with ſeals, albatroſſes, and penguins, the captain and the mates dropped their knives and forks, and in pure pity to the ſtrangers reſigned all pretenſions to their dinner. At parting, captain Broadly preſented them with a large fat pig and ſeveral geeſe, on which the gentlemen of the ſhip dined the two following days.



They came to an anchor in Table Bay, in the Cape of Good Hope, on the 22d, which they found was only the 21ſt according to the reckoning of the people on ſhore, they having advanced a whole day by ſailing round the world to the eaſtward. On the 27th of April captain Cook ſailed from the Cape, and in his way to England touched at St. Helena, the weſtern iſlands of Aſcenſion and Fernando Norenha, Fayal; and on the 29th of July made the land near Plymouth having been abſent from England three years and eighteen days, in which time it is computed that they ran over a greater ſpace of

ſea

ſea than any ſhip ever did before; ſince according to Mr. Forſter, all their tacks, taken together, form more than thrice the circumference of the globe. Thus was completed a voyage which will immortalize the conductor of it, as it was not only the moſt extenſive, but the moſt inſtructive one ever performed.

In this celebrated voyage, captain Cook not only diſcovered, but ſurveyed vaſt tracts of new coaſts: diſpelling hereby the illuſion of a Terra Auſtralis incognita, and fixing the bounds of the habitable earth, as well as thoſe of the navigable ocean, in the ſouthern hemiſphere. But being the ableſt navigator which perhaps any age or country ever produced, is not this great ſeaman's ultimate praiſe; his humane and judicious attention to every means which might poſſibly conduce to the healthineſs of the ſhip's company, gives him an eminent place among the diſtinguiſhed few who are true friends to mankind, and his endeavours were ſucceſsful to a degree of admiration, the methods he made uſe for preſerving the health of the ſailors being no leſs ſimple than efficacious. With a company of one hundred and eighteen men, he performed a voyage of upwards of three years, throughout all climates from fifty-two degrees north, to ſeventy-one degrees ſouth, with the loſs of only one man by a diſtemper. From hence it plainly appears, that marine diſeaſes are not cauſed by any malignity in the ſea air; and a voyage round the world may be undertaken with leſs danger to health, than a common tour in Europe; eſpecially when ſuch aſſiduous care is taken of the diet, bedding, cloaths, the application of excellent antiſcorbutic medicines, &c. as was conſtantly employed by captain Cook, which obtained him the cordial eſteem and affection of the moſt reſpectable ſocieties in this country, and will for ever erect a monument of deſerved eulogium and gratitude in the hearts of his countrymen, and the friends to real merit, of every diſtinction, throughout the globe.

SECT. XV.

We ſhall here obſerve, as Supplementary to our Account of the Dutch Settlements in the Eaſt Indies; that

ON November 12, 1781, the town and citadel of Negapatam, on the coaſt of Coromandel, in the Eaſt Indies, was taken from the Dutch by the Engliſh fleet and army commanded by admiral Hughes and Sir Hector Munro; the garriſon conſiſted of near eight thouſand men, about five hundred of which were Europeans, and the reſt Indians: and alſo,

On January 16, 1782, Forts Oſtenburgh and Trincomale, ſituated in Trincomale bay in the iſland of Ceylon, were taken from the Dutch by the Engliſh fleet and army under admiral Hughes and Sir Hector Munro, and are now in the poſſeſſion of the king of Great Britain.

THE WHOLE WORLD.

BOOK II.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

AFRICA.

CONCERNING AFRICA IN GENERAL.

SOME geographers, both Greek and Latin, have, in their ſyſtems, ranked Africa as the third part of the known or inhabited world: nevertheleſs, as the poſterity of Noah made their firſt emigrations out of Aſia into this northern quarter of the globe (for the antients knew but little of the ſouthern part of Africa), we ſhall therefore make choice of it, as moſt proper for the ſecond diviſion of our work.

The far greater part of Africa continues ſtill unknown to us; and though we are at preſent become better acquainted with it than we formerly were, yet our knowledge of it extends little farther than the regions that lie chiefly along the coaſts of the Mediterranean; which being the moſt fruitful in corn and other produce, and alſo more eaſy of acceſs, have been more conſtantly reſorted to both by Europeans and Aſiatics.

The midland parts were for a long while believed inacceſſible and uninhabited by reaſon of their intolerable heat, they lying moſtly under the torrid zone, and have on that very account, as well as the ſavageneſs of its inhabitants, been little viſited by any ſtrangers. Even the ſouthern parts of it, which lie under a more temperate climate, and are much eaſier of acceſs, are found inhabited by ſuch barbarous people, ſo fierce and ſavage in their nature, ſo uncouth and forbidding in their manners and language, and ſo ſhy of all intercourſe with foreign nations, that our readers need not wonder that we are almoſt as much in the dark about them as we are about the midland part of this continent.

The name of Africa, or Afric, was given to this vaſt tract of ground from one of its antient provinces, which we now ſtyle Africa Propria, and extends itſelf along the Mediterranean, from the ancient Mauritania, on the weſt, to Cyrenaica, on the eaſt, where is now the kingdom of Tunis, and where was once the ſeat of the celebrated Carthagenians. The antient Greeks called it Libya, from another of its provinces, whoſe deſart part bordered upon Egypt, and was included, with other uninhabited parts of it, by the old Arabs, under the name of El-ber, which ſignifies a divided, or forſaken land. The Indians call it Bazenah; the Arabs, Iphrica, or rather Aphirikiah, or Afrikea; the Ethiopians, Alkabutan; and the Perſians, Armenians, and other nations, by different names.

Africa, in its largeſt ſenſe, lies ſouth of Europe, and weſt of Aſia, and is bounded on the north by the Mediterranean, which parts it from the former; and on the eaſt by the Red ſea, which ſeparates it from the latter, to which it only joins by that ſmall iſthmus or neck of land which cuts off the communication between thoſe two ſeas, and is commonly known by the name of Suez. On the ſouth and weſt, it is ſurrounded by the main ocean, ſo that it may be properly ſtyled a vaſt overgrown peninſula, joined only to the continent of Aſia by the iſthmus above-mentioned, which, if cut off, would make it by far the largeſt iſland in the world. It extends itſelf a vaſt way, not only on each ſide of the equinox, but of the two tropics likewiſe, the ſouthern verge of it reaching quite to the thirty-fifth degree of ſouthern, and the northern almoſt to the thirty-ſeventh degree of north latitude: ſo that its utmoſt extent, from north to ſouth, is almoſt ſeventy-two degrees, or about four thouſand three hundred and twenty miles. From eaſt to weſt it reaches ſtill farther, viz. from ſeventeen weſt to ſixty eaſt, or ſeventy-ſeven degrees of longitude, that is, four thouſand ſix hundred and twenty miles.

The antients divided this part of the then known world into twelve regions or provinces, and ranged them in the order following, going from eaſt to weſt, viz. the two Mauritanias, the two Numidias, Africa Propria, Libya Cyrenaica, and Marmarica, Lower Egypt, Thebais, Libya Interior or Upper, and the two Ethiopias. Others ranked them in the following order: Egypt, Marmarica, Cyrenaica, Syrtica, Africa Propria, Numidia, the two Mauritanias, Inland Africa, Libya Interior, and Ethiopia. Under the Romans, it was divided only into theſe ſix provinces: Africa Propria, Mauritania Cæſarienſis, Mauritania Tingitana, Numidia, Tripolitana, and Bizacena; all which amounted to little more than what we ſtyle the preſent Barbary, but was all they poſſeſſed, or were perhaps acquainted with, except the kingdom of Egypt, which they did dot reckon a part of Africa. Even Strabo had little notion of its real extent; and though Ptolemy, who was much better acquainted with it, and hath gone farther in his diviſion of it than any of the antients, having diſtinguiſhed it by twelve regions or provinces; yet one half of the country was unknown to this excellent geographer.

The African and Arabic geographers have been no better acquainted with this region, than the Greeks and Romans. This plainly appears from the general deſcription which Mocaudi and Becker, two of the beſt, have given of it. They neither allow it ſo great an extent as Ptolemy doth; nor place in it Egypt and the other countries that lie between the Nile, the Red Sea, and the eaſtern ocean in Africa, but make them to be part of Aſia. They are no leſs inaccurate in aſſigning the true ſituation, names, &c. of capes, gulfs, and ſeveral cities and provinces, but a general confuſion ſeems to run through the whole, occaſioned

AFRICA, agreeable to the most approved MAPS and CHARTS, By Mr Kitchen.

Longit. W. from Ferro. 10 — 15 — 20 — 25 — 30 — 35 — 40 — 45 — 50 — 55 — 60 — 65 — 70 — 75 Longit. East from Ferro.

in all likelihood by the coming of the Arabs into this part of the world, who, to blot out the remembrance of its antient inhabitants, gave new names to thoſe places, and cauſed ſuch changes in it, as the old Africans, upon their recovery of it, could never thoroughly rectify.

Having made it evidently conſpicuous, that the antients had a very imperfect knowledge of a great part of Africa, and conſequently had never ſailed round it, as ſome have affirmed, the Phœnicians did; we ſhall proceed to ſhew when, and, in what manner it was circumnavigated about three hundred years ago, which is a fact that is not doubted of in the preſent day.

The Goths having recovered Portugal from the Moors, followed them croſs the ſtreights of Gibraltar, and ſubdued part of Morocco, taking from them the towns of Tangier, Ceuta, Arzilla, &c.

Prince Henry V. ſon of John II. king of Portugal, accompanying his father in one of theſe expeditions againſt the Moors of Africa, being firmly perſuaded that a way might be traced out round Africa to the Eaſt-Indies, from whence the fine ſpices and other rich merchandize were brought to Egypt and the ports of the Levant, and obſerving, alſo, that gold, ivory, and other valuable merchandize was annually brought over land by caravans from Guinea to Morocco, he formed the deſign of diſcovering the weſt coaſt of Africa, being convinced that it would turn to account to viſit thoſe golden ſhores, if he ſhould be diſappointed in finding a paſſage to India by the ſouth of Africa He no ſooner returned to Portugal, therefore, from the African expedition, but he obtained leave of his father, king John, to fit out ſome ſhips for the diſcovery of that coaſt; but the attempt proved more difficult than he expected; for his ſhips arriving at Cape Bajadore, the waves beat ſo terribly on that coaſt that they durſt not attempt to paſs it for ten years afterwards: but having at length overcome the difficulty, he obtained a bull or grant from the pope, of all infidel countries that ſhould be diſcovered to the ſouth and eaſt from Cape Bajadore to the Eaſt-Indies, with a plenary indulgence for all ſuch ſouls as ſhould periſh in the undertaking.

Prince Henry continued his diſcoveries on this coaſt to the eighth degree of north latitude; but dying in the year 1463, he was not ſo fortunate as to ſee Africa entirely ſurrounded.

In the year 1471, the trade was extended as far as the Gold-coaſt, in five degrees north latitude.

King John III. cauſed the fort of St. George del Mina to be erected for the protection of the Gold-coaſt, in the year 1481, and having now great expectations of diſcovering a way to the Eaſt-Indies round Africa, and apprehending that other princes, notwithſtanding his grant from the pope, would attempt to follow his people to India by the ſame rout, he applied to the ſeveral princes of Chriſtendom, repreſenting, that they ought to furniſh their quotas towards ſubduing the infidel nations on the coaſt of Africa and India, as they would all reap the benefit of it; but the enterprize being ſtill eſteemed very hazardous, or rather chimerical, they all refuſed to be engaged in it. Whereupon king John applied himſelf to the pope, to confirm the donation of all pagan countries, ſouth and eaſt of Cape Bajadore, which had been made to his anceſtors by the holy ſee; and the pope not only confirmed the former grant, but decreed, that no other nation ſhould be intitled to any ſuch diſcoveries; and the king of Portugal from that time (1484) aſſumed the title of Lord of Guinea, by which was then meant all the weſt coaſt of Africa then diſcovered, or then after to be diſcovered, ordering his commanders to ſet up ſtone croſſes in memory of taking poſſeſſion of thoſe countries as part of the Portugueſe dominions.

Diego Cam, was the firſt commander ſent out, which was in 1484, who, paſſing Cape Catharina, came to the river Congo in the kingdom of that name, but called by the natives Zayre: he paſſed on twenty leagues further, and ſet up a croſs at a place he called St. Auguſtin, in thirteen degrees ſouth latitude, and another in twenty-two ſouth; and returning to Congo, he had a conference with the king of that country, wherein he told him, they came to inſtruct his people in the Chriſtian religion, as they did in every place they came to; and the king ſent one of his ſons and ſeveral of his nobility with captain Diego to Portugal, where they were baptized, the king and queen, and ſeveral perſons of quality being ſponſors: the chief's former name was Zakuta, but they gave him the king's name of Don John.

Bartholomew Diaz, in 1486, was ſent with three ſhips to make further diſcoveries to the ſouthward, in order to find a paſſage to the Eaſt-Indies; and was ſo fortunate as to make the moſt ſoutherly promontory of Africa, which he named Cabo Tormentoſo, from the terrible ſtorms and mountainous ſeas he met with there; which ſo terrified him, that he durſt not paſs it, but returned to Liſbon, to give the king an account of his voyage, who concluded now that he had gained his point by opening a paſſage to India, and gave the ſouthern promontory Diaz dreaded ſo much the name of Cabo de Bueno Eſperanza, the Cape of Good Hope, inſtead of that which Diaz had given it.

However, the paſſing the Cape of Good Hope, and planting colonies in India, were not effected till the reign of Emanuel, the ſon of king John. This prince ſent three ſhips, on board whereof were one hundred and ſixty men commanded by Vaſco de Gama, to attempt the paſſage of the Cape of Good Hope. De Gama ſet ſail from Portugal on the 8th of July 1497; the captains who commanded the other two ſhips were, Paul de Gama, brother to Vaſco, and Nicholas Nunez; they had a tender with them loaden with proviſions, commanded by Gonzalo Nonnez, and a ſloop, of which Bartholomew Diaz was captain, bound to Del Mina on the coaſt of Guinea. Admiral de Gama, with his three ſhips, made the Cape of Good Hope on the 18th of November in the evening, and paſſed it on the 20th; after which he landed, and erected a croſs, and bought ſome cattle of the natives for trifles; but ſtill, the natives looking on the Portugueſe with a jealous eye, and apprehending they had a deſign to ſubdue their country, pulled down the croſs that had been erected, and the Portugueſe ſailed away to the north-eaſt, not ſeeing land again till Chriſtmas-day, and gave it the name of Terra de Natal, as being our Saviour's birth-day. They afterwards arrived at a river, which they called De los Reys, or the King's, being on the feaſt of the Epiphany; here they went on ſhore, and dealt with the natives for ſome ivory and proviſions, and the admiral left two men here to inform him of the ſtate of the country at his return; theſe men were condemned criminals, whoſe puniſhment had been changed for this purpoſe. Coaſting along ſtill to the northward, they arrived at Moſambique, in fifteen degrees ſouth latitude, where they found Arabian merchants that traded to India for ſpices, precious ſtones, &c. There was a pretty good harbour, and the town was inhabited by Moors, who traded to the Red Sea, and to India, in large veſſels, but without decks. The Portugueſe having entered the harbour, the ſheik, or chief of the Moors, ſent them preſents and proviſions, deſiring leave to come on board, which was granted, and he came with a numerous train of attendants, dreſt in a Turkiſh habit; and here the Portugueſe obtained a pilot of the king to carry them to Calicut in India, which they were told lay about one thouſand leagues to the eaſtward.

But to proceed with our general ſurvey: Africa comprehends forty-one kingdoms, ſtates, or countries; namely, 1. Tripoli; 2. Barca; 3. Algiers; 4. Tunis; 5. Morocco; 6. Zaara; 7. Biledulgerid; 8. Tombut; 9. Mundingo; 10. Sierra Leona; 11. Jaloffs; 12. Pholey; 13. Ardrah; 14. Whidah; 15. Gold Coaſt; 16. Slave Coaſt; 17. Commendo; 18. Fetu; 19. Anta; 20. Jaby; 21. Tooth Coaſt; 22. Axim; 23. Grain Coaſt; 24. Benin; 25. Angola; 26. Benguela; 27. Loanga; 28. Congo Proper; 29. Monomugi; 30. Monomotapa; 31. Caffraria; 32. Moſambique; 33. Melinda; 34. Sofala; 35. Abex; 36. Magadoxa; 37. Anian; 38. Abyſſinia; 39. Brana; 40. Egypt; 41. Nubia.

In treating of theſe extenſive countries, we ſhall conſider the dominions of which it conſiſts, in the following order, viz.

I. Barbary; comprehending, Morocco, Algiers, Tunis, Tripolis, and Barca.

II. Negroland; containing, Sierra Leona, Mundingo, Pholey, and Jaloffs.

III. Guinea; comprehending, Whidah, Ardrah, Slave Coaſt, Gold Coaſt, Fetu, Commendo, Jaby, Anta, Axim, Tooth Coaſt, Grain Coaſt.

IV. Congo; compriſing Benguela, Angola, Congo Proper, Loango.

V. Caffraria; or the country of the Hottentots, &c.

VI. Zanguebar; containing Moſambique, Melinda, Sofala.

VII. Abyſſinia, or Ethiopia Superior; comprehending Nubia and the coaſt of Abex.

VIII. Egypt; being the north eaſt diviſion of Africa.

In order to give our readers a more clear and diſtinct idea of the continent, iſlands, and other particulars worthy of notice in this diviſion of the globe, at one view, we have annexed the following Tables:

A New, Complete, and General TABLE of the Continent of AFRICA.

Included under the General Names of		Nations.	Length.	Breadth.	Principal Cities.	Dist. and Bear. from London.

CHAP. I.

THE NEW HISTORY AND DESCRIPTION OF

BARBARY.

SECT. I.

Of the Situation, Boundaries, Rivers, Mountains, Provinces, chief Towns, &c. of the Kingdom of MOROCCO.

MOROCCO is ſituated on the weſtern borders of Barbary, between two and eleven degrees of weſt longitude, and between twenty-eight and thirty-ſix degrees of north latitude; being bounded on the ſouth, by the celebrated mountain called the Great Atlas; on the north, by the Mediterranean; on the eaſt, by the river Mulvia, which ſeparates it from Algiers; and, on the weſt, by the Atlantic Ocean: it is about five hundred miles long, and four hundred and eighty broad, and ſome make the dimenſions much larger.

This empire contains three grand diviſions or provinces; namely, that of Fez, to the north. 2. Morocco Proper in the middle: and, 3. Suz on the ſouth.

The chief rivers are, 1. The river Mulvia, which runs from ſouth to north, ſeparating the kingdom of Fez from Algiers, and diſcharging its waters into the Mediterranean. This is a large deep river, according to Dr. Shaw, and admits of ſmall cruiſing veſſels, and might be made commodious for ſhips of greater burthen: the ſources of this river lie a great way within the Sahara or deſart, at the diſtance of eight hundred miles from the ſea, and runs almoſt its whole courſe in the ſame meridian. 2. The river Suz, which runs from eaſt to weſt, through the kingdom of that name, diſcharges itſelf into the Atlantic Ocean, at the mouth whereof lies the port-town of Santa Cruz. 3. The river Rabatta, which runs almoſt in the ſame direction, and diſcharges itſelf into the ſame ocean, the piratical port of Sallee ſtanding at the mouth of it. 4. The river Cebu, at the mouth whereof Mamora is ſituated, being another piratical port. The river Lecus runs in the ſame direction, and falls into the ſame ocean, near the mouth whereof ſtands the port of Larrache. None of theſe are navigable for ſhips, and the ports at their mouths will admit but of ſmalls veſſels. The moſt commodious are thoſe of Tangier and Tetuan, in the Mediterranean; but theſe are unſafe in ſome winds. The Spaniards are in poſſeſſion of the port of Ceuta, oppoſite to Gibraltar, and of Penon de Velez eaſt of it; but neither of them are ſafe harbours. Others leſs conſiderable are the Taga, the Ommirabih, and the Tenſiſt. This river runs through the city of Morocco, and ſupplies the inhabitants with water: it has a handſome bridge over it.

The Greater and Leſſer Atlas are not only the principal mountains in Barbary, but ſome of the moſt celebrated in the univerſe. The Great Atlas divides Barbary from Biledulgerid; and the Little Atlas extends along the Barbary coaſt to the ſtraights of Gibraltar. The coldneſs and inacceſſibility render the Great Atlas in many parts uninhabitable; but ſome places enjoy a milder climate, contain many villages, numerous herds and flocks of cattle, are well cultivated, and inhabited by Arabs, Barebers, and other African people, who, in the ſeverer parts of the winter, are obliged to retire into vaſt caverns, to preſerve themſelves and their flocks from being overwhelmed with the prodigious quantities of ſnow that fall, and from the inclemency of the weather. Theſe people are in general fierce, cruel, and warlike, and are ſpread in numerous tribes over the various branches of this prodigious mountain. They can bring many men into the field, and have it in their power to be very troubleſome to the neighbouring governments, it being as impoſſible to be intirely upon the defenſive againſt them, as to bring them totally under ſubjection.

The capital city of this empire, called alſo Morocco, is pleaſantly ſituated on an extenſive plain, between two rivers, the Nephtis and the Agmed, and is watered by the Tenſiſt. It is one of the moſt opulent, populous, and important cities in Africa. The moſt received opinion is, that it was founded by Abu-Techifien, and finiſhed by his warlike ſon Joſeph, who after obtaining many glorious victories in Spain, brought from thence thirty thouſand captives, whom he conſtantly employed in ſurrounding it with ſtrong walls, which were twelve miles in circumference. It then contained one hundred thouſand houſes, and ſtill hath twenty-four magnificent gates, and a great number of moſques, palaces, &c. but at preſent its priſtine ſplendor is much decayed. It is ſixteen miles north of mount Atlas, and one hundred and fifty from the Atlantic ocean, in thirty degrees forty minutes north latitude, and ſeven degrees weſt longitude. The walls are ſo ſtrong both with reſpect to the ſtones themſelves, and the cement with which they are connected, that they are impenetrable to the pick-ax, and other inſtruments; they are ſurrounded with a deep ditch, and flanked with ſtrong towers, bulwarks, baſtions, &c.

Within a ſpacious fortreſs called the Al-Capava, and which is ſituated on the outſide of the city, ſtands the imperial palace. It is defended by high walls, ſtrong towers, a deep ditch, &c. and has only two gates, the one leading towards the country, and the other towards the city; both of theſe are handſome and well guarded; and that towards Morocco faces an elegant and capacious ſtreet, the viſta of which is terminated by a large magnificent moſque, admirably embelliſhed with carvings of marble, jaſper, &c. and the noble gates of the church of Seville, which the celebrated Almanzor brought from Spain. On the top of its ſtately tower, four large copper balls, plated with gold, were fixed upon iron ſpikes; they weigh together ſeven hundred pounds, but the ſizes are unequal, the ſmaller being capable of containing one, the next two, the third four, and the largeſt eight ſacks of wheat. There is a capacious vault beneath the moſque; it was originally deſigned for a ciſtern, but is now converted into a granary. The battlements are exceeding loſty, and the ſpire riſes ſeventy feet above them, from the ſummit of which the talleſt men appear to the beholder like ſmall children. The royal apartments, halls of audience, ſeraglio, &c. are noble ſtructures, highly embelliſhed, and richly furniſhed.

The gardens, though neither well deſigned, or properly variegated, are extenſive and magnificent, containing all kinds of trees, herbs, flowers, ſhrubs, &c. which can poſſibly grow in that climate: but the ſplendor ſtill remaining is inconſiderable with reſpect to the former grandeur of the place, the veſtiges of which yet ſubſiſt in a variety of noble fragments. The innumerable ruins of many ſuperb palaces, colleges, halls, baths, hoſpitals, and above four hundred aqueducts, are the mournful monuments of the devaſtations of time, the effects of deſpotiſm, and the ravages of frequent wars.

Great part of the houſes are gone quite to decay, and the reſt are but in an indifferent condition. The inhabitants are about twenty-five thouſand; but the Jews, the number of whom is about four thouſand, live in a particular quarter, which is near the palace, and ſurrounded by a wall, through which there is but one gate, and that is well guarded by Moors; yet foreign ambaſſadors, agents, merchants, &c. chuſe to live in this part, preferably to any other in Morocco. The Jews have the art of growing rich, though they are exceedingly taxed; but they, politically, pretend to poverty, and from obvious motives make a very mean appearance.

The city of Fez, ſituate in thirty-eight degrees north latitude, and four degrees weſt longitude, was originally the capital of the kingdom of the ſame name, and is at preſent a rich and populous city. It compriſes three diſtinct parts, viz. 1. Beleyd, which contains about four thouſand houſes, and ſtands on the eaſt ſide of the river Fez. 2. Ain-Alu: containing about four thouſand inhabitants, and ſtands on the weſt ſide of the ſame river. 3. Albegd, or White Fez, which was built by Jacob, king of the Beni-Mereni, and contains twenty thouſand inhabitants. The two firſt form Old Fez, the latter New Fez, and at preſent they form together one city.

Old Fez is nine miles in circumference, ſtands between two hills, is ſurrounded by ſtrong walls, and flanked with magnificent towers. It is without ſuburbs, contains many excellent gardens, hath narrow ſtreets, ſeven gates and two caſtles; the one old and gone to decay, the other new and in good condition; the latter is garriſoned with blacks, but neither have any cannon to defend them. The houſes are of ſtone or brick, three ſtories high, flat roofed, encompaſſed with galleries, adorned on the outſide with moſaic work, and embelliſhed within with carving, painting, and handſome furniture; but it is to be obſerved, that in general the ſeraglios are upon the turrets of the houſes, from whence the women have a fine proſpect; but they are never permitted to ſtir abroad, being confined to the ſeraglio.

The principal magiſtrate of this capital is ſtyled provoſt of the merchants, beſides whom there is a governor, a cadi, and their ſubordinate officers. The river Fez, in paſſing through the city, divides itſelf into ſix canals, over the various parts of which are two hundred and fifty ſtone bridges, and three hundred and ſeventy mills are turned by the ſeveral ſtreams. In the city, three hundred and thirty-ſix ovens are daily employed, the moſques are computed at five hundred, fifty of which are of the firſt rank, and one in particular is a moſt amazing ſtructure: it is a mile and a half in circuit, including the cloiſter and college belonging to it: the roof is one hundred and fifty cubits high, and fifty in breadth; there are thirty ſtately gates; and the pillars which ſupport the minaret, or tower, are thirty cubits in length and twenty in breadth: the roof is ſuſtained by one thouſand five hundred pillars of white marble, and ſeventeen arches; two curious lamps continually kept burning, adorning every arch. In the cloiſter belonging to this moſque are forty-two galleries, and four hundred ciſterns for people to perform their ablutions. The college is the moſt eminent, and contains the beſt library in the empire; here are ſeveral other hoſpitals and colleges, which are large, magnificent, and well endowed; ſix hundred water conduits, and two hundred ſpacious inns. As Fez is uſually deemed the grand magazine and principal mart of Barbary, the ſtreets therefore ſwarm with merchants and tradeſmen of all profeſſions, and the warehouſes, ſhops, &c. are filled with a great variety of commodities.

Mequinez, where the court now reſides, is ſituated in a pleaſant plain, in ſix degrees of weſt longitude, and thirty-four degrees of north latitude. The city is divided into ſeveral quarters, or rather contains ſeveral cities united. The palace is a diſtinct city; the parks and gardens that ſurround it, with the number of halls, rooms of ſtate, offices, pavilions, &c. are ſuprizing to the beholder. The quarter of the Moors and the Negro town are alſo diſtinct, and the Jews have a quarter to themſelves, in which there do not reſide leſs than fifteen thouſand of that nation, being allowed a ſheik or magiſtrate, who has the government of them according to their own laws, and the king allows them his protection. Notwithſtanding which, theſe people are exceedingly ill uſed, as they are plundered, abuſed, and beat, even by the very meaneſt of the Moors, and dare not reſent the ill treatment they receive. The great men horſe-whip or cudgel them whenever they come in their way, and they are not permitted to come out of their quarter with ſhoes and ſtockings on, being obliged to walk barefooted in the ſtreets which the Moors frequent.

The city is three miles in circumference, ſurrounded with ſtrong walls, environed by gardens, and embelliſhed with many moſques, colleges, baths, &c. the markets are daily crouded with people, particularly Arabs, who bring honey, wax, butter, hides, and dates for ſale. It has alſo an extenſive ſeraglio, large magazines and ſtorehouſes, an armoury, barracks for the guards, and apartments for various mechanics, who are continually retained by the emperor to do buſineſs immediately belonging to the palace.

Sallee, on the weſt coaſt of the kingdom of Fez, is eſteemed the beſt port the emperor of Morocco has. It is ſituated in thirty-three degrees forty-eight minutes north latitude, and ſix degrees twenty-five minutes weſt longitude. This is an antient city, being mentioned by Ptolemy, and ſtands on the river Gueron, which divides into two parts. The northern part, encompaſſed with a ſtrong wall, and defended by batteries, towers, &c. is Salla or Sallee, properly ſo called; but the ſouthern part, named Rabat, compriſes many farm houſes, orchards, gardens, and corn-fields; the latter being ſufficiently extenſive to yield wheat enough for the ſuſtenance of fifteen thouſand perſons, yet the whole is ſurrounded by walls, which were erected by the captives that Almanzor brought from Spain. On the ſouth eaſt part there is a tower which ſerves for a land mark in the day time, and a light houſe at night: it is lower than it was originally, for ſome part of the top was ſtruck off by lightning; it is fifty feet ſquare, built of ſtone ſtrongly cemented, and opens towards a magnificent moſque one thouſand four hundred paces long, and three hundred wide, in the court of which is a well thirty feet deep, and one hundred in width. Beneath the tower are two docks, the one for wintering, and the other for building of ſhips. The harbour is large; but ſo large, that the piratical ſhips are obliged to put into the iſland of Tedal near its mouth. The town is defended by two caſtles, which communicate with each other, but the fortifications are irregular and ill-deſigned. All articles of commerce pay a tenth part to the emperor. The main ſupport of the place is the piratical trade, for it has long been famous for its rovers or pirates, which make prizes of all Chriſtian ſhips that come in their way, except there is a treaty to the contrary.

Magazanis, a ſtrong, well built town, ſurrounded by a ſtrong wall about ſix yards thick, and well defended by cannon. It is ſituated thirty miles ſouth of Sallee, and poſſeſſed by the Portugueſe, who have a numerous garriſon here. The piratical ſhips often intercept the proviſion veſſels, which puts the garriſon to great ſtraits, and obliges them, in order to obtain a ſubſiſtence, to make excurſions, and rob the Moors.

Alcaſſar, was a good trading town till the Portugueſe took it in 1458; but while they poſſeſſed it, they did it great injury; and after it was recovered by the Moors, it was ſuffered to run to decay. The celebrated Muley Zeydan is ſuppoſed to have built this town.

Arzilla, and ſome other port towns on the weſt, belong to Portugal ſtill. They are ſtrong fortreſſes, ſuch at leaſt as the Moors cannot take, for their foot are very indifferent militia, and are not able to recover any of their places from the Portugueſe, or Ceuta from the Spaniards. It is about twenty-four miles from the ſtraights of Gibraltar.

Tangier, is ſituate in thirty-five degrees fifty-ſix minutes north latitude, and ſix degrees thirty minutes weſt longitude, on a bay of the ſea, near Cape Spartel, juſt at the entrance of the ſtraights of Gibraltar, on the African ſide: it is built on the declivity of a hill, which makes it exceſſive hot in ſummer, the afternoon ſun lying full upon it. When the Engliſh poſſeſſed it, the walls were upwards of a mile in circumference, and they had lines and redoubts that took in the neighbouring hills, with two caſtles, the upper and lower, for its defence; in the former whereof lived the Engliſh governor, and the baſſa at preſent: there was a mole built for the ſecurity of ſhipping, the heads whereof run out three hundred fathoms into the ſea, and were defended by three batteries of cannon; but theſe and moſt of the works were blown up, or demoliſhed by the Engliſh when they abandoned the place, and it is now not very ſtrong: there is but one ſingle moſque in the town, and another in the caſtle; however, it makes a tolerable appearance from the ſea, the houſes being white, and all in view; but they have ſcarce any trade. This, as has been obſerved, was the Tingis of the antients; and from it this part of Africa was called Mauritania Tingitana. Alphonſo V. king of Portugal took it from the Moors, in the year 1463; and in 1662, the court of Portugal transferred it to Charles II. king of England, on his marriage with the princeſs Catharine, infanta of Portugal. The Engliſh kept it twenty-two years, and laid out a great deal of money in the mole and fortifications; but the parliament refuſing to let the king have money to maintain the garriſon, he found himſelf obliged to quit the place, though it is agreed, it would have been of very great ſervice to the nation, if we had been maſters of it in the late wars with France and Spain.

In January 1745, the Inſpector privateer, having ſprung a leak, was obliged to run aſhore in the bay of Tangier, where the whole crew (except the captain, whoſe name was Veale, four lieutenants, and two private men), were dragged to a loathſome dungeon, and ſuffered inconceivable hardſhips, being almoſt famiſhed with hunger, and otherwiſe

cruelly treated. Out of the whole ſhip's company, which amounted to one hundred and eighty-three before the wreck, excluſive of Mr. Ruſſel the ſurgeon, whoſe dead body they found on the ſhore, ninety-five periſhed by the waves, or were murdered by the Moors; and the ſurvivors, to the number of about ſixty, were redeemed for a large ſum of money by the Engliſh ambaſſador, at the command of George II. king of Great Britain.

Melilla, in the province of Garet, is ſeated near the ſea, ſeventy-five miles from Tremeſen, at the bottom of a bay called Entrefolcos, in one degree fifty-ſeven minutes weſt longitude, and thirty-four degrees forty-eight minutes north latitude. It received its name from the great quantity of bones which the neighbouring territory yields. It was antiently the capital of the province, and is ſtill a conſiderable place, containing two thouſand houſes. It was taken by the Spaniards in 1496, who built a citadel here, but is returned back to the Moors.

Ceuta is ſituated in ſix degrees twenty-five minutes weſt longitude, and thirty-ſix degrees thirty-five minutes north latitude, and lies at the entrance of the Mediterranean, on a kind of peninſula, which is the neareſt point of land to the Spaniſh coaſt; the walls and fortifications are not ſo good as might be expected from its ſituation; nevertheleſs it is a conſiderable town, has a ſtrong garriſon, a magnificent cathedral, and a noble palace. John king of Portugal took it from the Moors in 1415, but now it belongs to the Spaniards. It ſuſtained a vigorous ſiege in 1697 againſt the Moors, who have never been able to take it, though they have blockaded it ever ſince. Near this city is a mountain with ſeven heads, which the antients diſtinguiſh with the appellation of Septem Fratres, or Seven Brothers. It is a place of great trade, and has a good harbour.

The next town we ſhall deſcribe in the province of Fez is Tetuan, which is ſituated on the aſcent of a rock, about eight miles from a bay of the Mediterranean ſea, called from this place Tetuan Bay, and is between twenty and thirty miles ſouth of Ceuta, and about fifty ſouth-eaſt of Tangier. The town is about a mile long, and half a mile broad, and has a fine proſpect of the ſea and the country beneath it: the ſtreets are narrow, unpaved and full of dunghills, which makes it a filthy place in winter; and yet this is ſaid to be one of the beſt towns in the country, on account of its being better built than moſt others. Their houſes are uſually built about a little open ſquare, with piazzas ſupporting galleries above them; and in the middle of the ſquare, people of ſubſtance always have a fountain. There are commonly four rooms on a floor, one on every ſide of the ſquare, which have no other light than what they receive from the great folding doors that open into the piazza.

The town of Tetuan contains about thirty thouſand inhabitants, of which five thouſand at leaſt are Jews, who have ſeven ſynagogues here; but, though their numbers are ſo great, they have not two hundred houſes amongſt them, ſeveral families living under the ſame roof. They are ſaid to be very poor, though all the trade of the place paſſes through their hands; for they are the only brokers between Chriſtians and Moors. One thing to be obſerved with reſpect to this town, is, that the people walk on the tops of the houſes, which are flat roofed, and viſit one another from thence, more than by the ſtreets, as they do in Algiers, and other parts of Barbary. The town is ſurrounded with an ordinary wall, and defended by an old caſtle, conſiſting of two ſquares; the outward ſquare flanked with towers, but the walls not cannon proof, and it is commanded by hills about it. They have a burying place, on a hill above the town, adorned with ſuch numbers of cupolas and pyramids, that it looks like a town itſelf; but what is beſt worth ſeeing at Tetuan is the baſha's palace, the entrance into which is by a cloiſter, which leads to a ſpacious ſquare, ſurrounded by a piazza, and in the middle a marble fountain, the pavement of the area and piazza being of moſaic work. The moſques are as elegant as any buildings can be that are in the Moreſco ſtyle. The ſantons or monks have about twelve cloiſters, which are places of refuge for all criminals, except thoſe guilty of treaſon. The Chriſtian ſlaves here are very numerous and very ill uſed, being locked up every night in a diſmal dungeon, called the Mortimore, which is a place twenty feet under ground, where there is no light but what comes from a hole at the top, like a gully hole in England; and it is always very damp, on account of the ſprings riſing in it, occaſioned by its being dug ſo deep. The inhabitants, between trade and thieving, are in tolerable circumſtances; for when they are not ſtrong enough to plunder a ſhip, they will traffic with the crew.

Mella, in the province of Suz, and on the river of that name, is compoſed of three fortified towns lying in a triangle, each ſurrounded by a wall, and about a mile diſtant from each other: there is a temple in it built of large fiſh bones inſtead of timber. It is ſituated at the foot of mount Atlas, near the ocean, in a country abounding with palm trees, eight degrees fifty-five minutes weſt longitude, and twenty-nine degrees twenty minutes north latitude. The adjacent territory is fertilized by the overflowing of the river, and whales have been frequently caſt upon the ſhore.

The town of Teſſut, about four miles diſtant from Meſſa, is like that divided into three parts. A branch of the river Suz waters it, and paſſes through a large moſque in the centre of it, by which means the people have an opportunity of performing their ablutions in a running ſtream. The town contains about four thouſand families, the neighbouring territory is extremely fertile; and the principal commodities are ſugar and Morocco leather.

Tarudant is a handſome, populous, and flouriſhing place but ſmall, and the inhabitants are opulent, polite, and courteous.

Tedſi is ſeated in a plain abounding in corn, and where there is plenty of ſheep, ſeventeen miles from mount Atlas, and twenty from Tarudant. This town is famous for its ſugar manufactory, and contains about five thouſand inhabitants. The chief alfakis, who is ſupreme judge in all eccleſiaſtical matters, reſides in the great moſque here: it has a good market on Mondays, the chief traffic being leather, linen, woollen, cattle, horſes, iron tools, ſugar, wax, honey, butter, &c.

Tagaoſt, is reckoned the largeſt city in the province of Suz; it is ſituated in a fertile plain, one hundred and fifty miles from the ſea, and thirty-ſeven ſouth of Tarudant. and contains eight thouſand families, four hundred of which are Jews, who carry on a conſiderable trade. Here are two markets weekly, to which the Arabs and Moors reſort with their commodities, and the negroes to buy apparel. It lies in ſeven degrees thirty-five minutes weſt longitude, and twenty-eight degrees thirty-two minutes north latitude.

Tafilet, is ſeated on a river in a plain, three hundred and twenty miles ſouth-by-eaſt of Fez, and two hundred and ſeventy-five ſouth-eaſt of Morocco. The territory in which it ſtands was once a kingdom of itſelf, but never very conſiderable; the whole country is divided into three provinces, Dras, Saro, and Tuet. It is mountainous and ſandy, but produces an excellent kind of indigo, dates, and a little wheat and barley by the ſides of the rivers. The people are miſerably poor, living upon camel's fleſh and dates, and they breed horſes to ſell to foreigners. They have alſo oſtriches and dromedaries, which laſt will travel one hundred miles in a day. Moſt of the dates which are ſent to Europe come from hence, as the emperor will not permit them to be exported from any other part of his dominions: and it is affirmed that the leather manufacture here is tanned with the ſtones of that fruit. About four thouſand horſe are retained in this diſtrict, to keep the people, who are chiefly Bereberes in ſubjection, and it is uſually governed by a prince of the blood. The governor reſides in the city, which has a ſtrong caſtle to defend it. The inhabitants are about two thouſand in number, and are employed in the manufactures of leather, ſilk, and linen: they are very ſociable, though extremely ſuperſtitious. It is a great rendezvous of both African and European merchants.

Geſula, a province on the coaſt of Barbary, is ſubordinate to the governor of Tafilet: it is a dry barren country, the limits of which are not perfectly aſcertained. The mountains, however, yield plenty of iron and copper, and the inhabitants are famous for working in thoſe metals, by the exchange of which they procure horſes, linens, woollens, ſpices, &c. They have annually ſeveral fairs, but one in particular, which is kept on a large plain, laſts two months, and is reſorted to by merchants from all parts of Barbary; and this fair is, perhaps, better regulated than any other in the univerſe; as the people, though naturally bruiſh, are under ſuch reſtrictions, that a quarrel was never known to happen during the fair time, and it is ſaid, that the merchants who come thither to buy the wares, are maintained at the expence of the province.

Scymetars, daggers, darts, ſpears, and ſhort guns, are the weapons of the Geſulians, who can bring ſixty thouſand men into the field. Their dreſs is a ſtriped jacket of linen or woollen, with ſhort ſleeves, over which they throw a gown of coarſe woollen cloth. They have only one

mode of punishment, that is, piercing the criminal to death with darts, and throwing his carcase to the dogs or wild beasts.

SECT. II.

Containing a Description of the Persons, Habits, Music, Buildings, Food, Furniture, Customs, &c. of the Inhabitants of MOROCCO.

THESE people, as well as the rest of the inhabitants of Barbary, consist of three sorts, all of the Mahometan religion, but differ much in their way of life. The Moors, the original inhabitants, live in towns and are the most numerous: the Arabs live in tents, and remove their camps when they want forage for their cattle. Those who inhabit mount Atlas, in the south, are a plain innocent people.

The natives are generally of a good stature, and well proportioned: the Moors, that are not exposed to the weather, have good complexions: the Arabs are a tawny race; and labouring people among the Moors are as tawny as the Arabs. The Moorish ladies are fair, and usually have fine features: neither Moors or Arabs have any great share of learning, but are men of good natural parts, and want only opportunities of improvement.

Their music is bad: they do not write down their compositions, nor have they any contrast or variety of parts. The music of the Arabs is suitable to their homely instruments. The bladder and string is in great esteem amongst them; and they have another instrument in the form of a kettle-drum, which serves as a base in their concerts. The music of the Moors is more ingenious and melodious than that of the Arabs, and they have a greater variety of instruments. Besides several sorts of flutes and hautboys, they have a violin of two strings, and a base double stringed lute bigger than our viol, with several small guitars of different sizes, each of them tuned an octave higher than another.

The inhabitants of the mountains, named kabyles, live in dashkas, or thatched cottages, and their villages are called gurbies: each of these cottages contains but one room, in which also they house their calves and kids, the people and their young cattle living much alike. The Arab women make the cloathing and furniture for the family, particularly their hykes, or woollen blankets, and the webs of goats hair for their tents. One of these hykes is usually six yards long, and five or six broad, serving the kabyle and Arab for a complete dress in the day, and for his bed and covering in the night. It is a loose but troublesome kind of garment, being frequently discoucerted, and falling upon the ground; so that the person who wears it is obliged to tuck it up continually.

They have a garment called the Burnoose, which is a cloak or mantle also made by these women. The Moors and wealthy Arabs wear caps or turbans; but many of the poorer sort among the latter go bare-headed, binding their temples with a narrow fillet, to prevent their hair being troublesome. Some of the Arabs wear under their hykes a close bodied frock or tunic, girt about their bodies, except when they are at work; for then they usually throw off their hykes and mantles. The Moors wear linen under their tunics, but the Arabs in general wear nothing but woollen.

The Bedwins, or Arabs, are not used to wear drawers, which the citizens of both sexes do constantly, especially when they go abroad or receive visits. The virgins are distinguished from the matrons, in having theirs made of needle-work, striped silk or linen. But when the women are at home, and in private, then they lay aside their hykes, and sometimes their tunics; and instead of drawers, bind only a towel about their waist.

With respect to the habits of the Moorish women, when they appear in public, they always fold themselves up so close in their hykes, that without the addition of a vail, there is very little to be seen of their faces. But in the summer months, when they retire to their country seats, they walk abroad with less caution and reservedness; and upon the approach of a stranger, let only their vails fall over their faces. They all affect to have their hair long, which they collect into one roll, upon the hinder part of the head, binding and plaiting it afterwards with ribbons. Where nature has been less liberal, there the defect is to be supplied by art, and foreign hair interwoven with the natural. After their hair is plaited up in this manner, they proceed to dress their heads, by tying close together, above the roll I have described, the several corners of the triangular piece of linen, wrought into a variety of figures by the needle. Persons of better fashion, wear above this a sarmath, as they call it, which differs not much in shape from the former head dress, but is made of thin flexible plates of gold or silver variously cut through, and engraved in imitation of lace; a handkerchief of crape, gauze silk, or painted linen, bound close about the sarmath, and falling afterwards without any order, upon the lock, is part of the head-dress of the Moorish ladies.

None of them think they are completely dressed, till they have tinged the hair and edges of their eyelids with the powder of lead-ore. The sooty colour, which is in this manner communicated to the eyes, is thought to add a wonderful gracefulness to persons of all complexions.

Persons of distinction, among the Moors, have variety of dishes at an entertainment, mixed up with almonds, dates, sweetmeats, milk, honey, &c. "I have seen at some of their festivals, says Dr. Shaw, more than two hundred dishes, whereof forty, at least, were of different kinds; but among the Arabs and kabyles, there are neither utensils nor conveniencies for such entertainments; two or three wooden bowls, a pot and a kettle, being the whole kitchen furniture of the greatest emir, or prince." However, all the orders and degrees of these people, from the bedwin to the bassa, eat in the same manner, washing first their hands, and then sitting cross legged round a mat, or low table, upon which their dishes are placed. They make no use of a table cloth, each person contenting himself with a share of a long towel that lies round the mat, knives and spoons are little in use, for the food being well roasted and boiled, requires no carving. Cuscassowe, pilloe, and other dishes likewise, which we should reckon spoon meats, are served up in the same manner, with all other sorts of food, lukewarm; so that the whole company dipping their fingers together in the dish, making use of their right hand only, take what portion of it they can conveniently dispose of for a mouthful, making it first into little balls, or pellets, in the palms of their hands. No sooner is any person satisfied, than he rises up and washes himself, without paying the least regard to the company, whilst another that very moment takes his place; the servant sometimes (for there is no distinction of tables) succeeding his master. When they sit down to these meals, or eat and drink at any other time, and, indeed, when they enter upon their daily employ, or undertake any business whatsoever, they always pronounce with the greatest seriousness and reverence, the word Bismilla, i. e. in the name of God, using the expression Alhamdalla; that is, God be praised, after they are sufficed, as they do when their affairs are prosperous.

With respect to the Moors, they are early risers, constantly attending their public devotions at break of day. Each person employs himself afterwards, in the exercise of his proper trade and occupation, till ten in the morning, the usual time of dining; returning again to their business till asa, the afternoon prayers, at which time all kind of work ceases, and their shops are shut up. The supper commonly follows the prayers of magreb, sun set; and then, repeating the same at the setting of the watch, when it begins to be dark, they immediately after go to bed.

The inhabitants of Morocco, who dwell in the inland parts of the country, are an hospitable, inoffensive people; and, notwithstanding their poverty, they have a liveliness about them, especially those of the Arabic descent, that gives them an air of contentment; for, having nothing to lose, they are peaceable among themselves; but both Moors and Arabs are cruelly oppressed by a small number of insolent domineering Turks.

As to their religion, many of the people of Morocco follow the tenets of one Hamet, a modern sectarist, who was an enemy to the antient doctrine of the califfs. They are all very fond of idiots; whose protection will in some cases screen offenders from punishment, who have been guilty of the most atrocious crimes. The Moors of Barbary in general have however adopted the very worst parts of the Mahometan religion, retaining only so much of it as authorises them to commit the most shocking actions with impunity. Though the men are indulged with plurality of wives and concubines, they are nevertheless allowed to commit the most unnatural crimes. Adultery in the women is punished with death.

The Bedwin, or Arab, follows no regular trade or employment: his life is one continued round of idleness or diversion. When no pastime calls him abroad, he does nothing all the day but loiter at home, smoke his pipe, and

and repoſe himſelf under ſome neighbouring ſhade. He hath no reliſh at all for domeſtic pleaſures; what he moſt of all values, is his horſe, for in this he places his higheſt ſatisfaction, being ſeldom pleaſed, or in a good humour, but when he is far from home, riding at full ſpeed, and hunting.

SECT. III.

Treating of the Inhabitants of MOROCCO, with reſpect to their Civil, Political, and Eccleſiaſtical Hiſtory, Revenue, Coins, Trade, Learning, &c.

GOVERNMENT cannot be with propriety ſaid to exiſt in Morocco, whoſe monarch is deemed the moſt deſpotic prince in the univerſe, having an uncontrolable power over the lives and property of his ſubjects, or rather vaſſals; for there is not a ſingle perſon in the whole empire who can pretend to the leaſt ſhadow of freedom, or dares openly to avow his ſentiments: theſe monarchs have for ſome ages been parties, judges, and even executioners with their own hands, in all criminal matters; to all which their ſubjects ſubmit with a degree of ſatisfaction almoſt incredible. Every military officer in the abſence of the emperor, has the power of life and death in his hand, and they ſeldom regard the form of a judicial proceeding. The infatuation of the people reſpecting their monarch is ſaid to be ſo great, that they think he does them a favour when he treats them with barbarity; and imagine, that to be murdered by him is a peculiar bleſſing, as it inſures their immediate admittance into paradiſe.

This monarch, beſides the unbounded power he exerciſes over the people's property during their lives, is the univerſal heir to all his ſubjects upon their deceaſe; ſo that the greateſt part of the wealth of the empire devolves to him. His titles are very exalted, being called, The moſt Glorious, Mighty, and Noble Emperor of Afric, King of Fez and Morocco, Tafilet, Suz, Dahra, and all the Algarbe and its territories in Afric, Grand Sherif (that is, deſcendant) of the prophet Mahomet, &c. &c.

Mr. Blathwait, who attended Mr. Ruſſel, the Engliſh ambaſſador to the court of Morocco, about the beginning of the reign of his late majeſty George II. gives us a very ſhocking account of the manners of the Moors at that miniſter's audience at the palace of Mequinez. He relates, that on the day appointed, a Spaniard, alcaide (i. e. governor) of the Chriſtians, and ſeveral officers of the palace, came to conduct the ambaſſador to court: that about twelve of them mounted, and rode in the following manner: the ambaſſador, between the baſſa who conducted him to Mequinez, and the baſſa's brother, preceded by twenty muſketeers; and the reſt of the Engliſh gentlemen, accompanied by another of the baſſa's brothers, and ſome other officers of the court: two of the ambaſſador's ſervants in liveries on horſeback, and after them the captives, and the Mooriſh and Jewiſh ſervants who walked on foot: the whole cloſed with a guard of horſe belonging to the baſſa: however, a drunken Moor of quality, in the ſuperabundance of his zeal, rode in amongſt them, calling them Chriſtian dogs and rogues, preſenting his piece at the Engliſh, and it was with ſome difficulty he was perſuaded to go about his buſineſs. Nor was this inſult taken any notice of; for, it ſeems, a flaming zeal for their ſuperſtition is an atonement for any crime they commit.

When they had entered into the firſt gate of the palace, they all alighted, and in the ſquare within it were found thirteen fine horſes of the emperor's, richly capariſoned and accoutred, and held by ſo many negro grooms, for ſtate: theſe the baſſa led them to take a view of; after which, having paſſed two or three ſquares more, they came to the emperor's apartment, but in ſuch a croud, that it was with a great deal of difficulty that they arrived there. After ſome time they were conducted into a long gallery, the floor and ſides whereof were covered with ſmall tiles an inch ſquare, of various colours. Hither his Britiſh majeſty's preſent was brought, and ſet out to the beſt advantage, conſiſting of a large cryſtal ſconce with twelve branches; eleven bales of coarſe cloth, each bale containing three pieces; three boxes of ſuperfine cloth, containing fifteen pieces; one box of French linen, called Britanies; two boxes, containing each fourteen loaves of double refined ſugar; one box of china ware; one box, containing eighteen pounds of tea; one box, containing three large china jars of ſweetmeats; one box of toys; one box with brocades, ſilver, tabbies, threads, ſatins, and gold lace; one caſe, containing a gun, and a pair of piſtols; four cheſts of Florence wine, and one box containing hollands and cambrics.

After waiting here about an hour, they were conducted to an open gallery, which gave the proſpect of a fine meadow within the palace, over the middle of which there is a terrace walk from the one end to the other, thick ſhaded with vines, ſupported by an arched frame. Having paſſed in a continual crowd ſtill a great way further, they were at length ſtopped, and given to underſtand the emperor was in the next room. Whereupon the baſſa, his brothers, and ſeveral other great officers, immediately pulled off their alhagues, their outward veſts, or habits of diſtinction, as well as their ſlippers, and each of the baſſa's brothers took a China jar of ſweet-meats, part of the preſent, to carry in to the emperor; and all the reſt of the preſent was carried in and placed in the emperor's ſight, before the ambaſſador was admitted: then two great doors were flung open, and they ſaw his majeſty ſitting under a canopy, in an open gallery, and at his feet, his favourite brother, Muley, with his prime miniſter, baſſa Empſael, a great fat negro.

When the ambaſſador was led up to the throne, he pulled off his hat, and made three bows; and having delivered the king of Great Britain's letter, tied up in a handkerchief, into the emperor's own hand, and a gold watch in another, he put on his hat and made a ſpeech, expreſſing the great eſteem his maſter had for his imperial majeſty, condoling with him on his father's death, and congratulating with him on his acceſſion to the throne, which was interpreted, our author obſerves, to very little purpoſe; for the emperor was ſo drunk, he could ſcare hold up his head: however, it ſeems, he underſtood ſo much by the ſpeech and the preſent, as to be very well pleaſed, and anſwered, "Buono, buono," ordering the alcaide of the Chriſtians to ſee they did not want wine and roaſt pigs every day, charging the prime miniſter to let the Chriſtian miniſter, the ambaſſador, have whatever he demanded. Then the courtiers proſtrated themſelves on their faces, and crawled upon their hands and knees to kiſs his feet: ſoon after which, his majeſty's eunuchs, finding him much out of order, carried him away and the court retired. While the ambaſſador waited to be admitted, there was ſuch a noiſe and diſturbance among the drunken courtiers, that he could compare it to nothing elſe but the common ſide of a goal; though, at their audience, things were a little compoſed.

This emperor, Muley Hamet Duhebby, was upwards of ſix feet high, about fifty years of age, of a fierce countenance, and much pitted with the ſmall pox, his face bloated, and his fore teeth out, and being a Mulatto of a tawny complexion, made a very indifferent figure: it being cold weather, he had a black cloak over a white alhague, or veſt; his turban was a green ſilk ſaſh, which being tied careleſly about his head, ſhewed he was drunk. All he had about him worth admiring, was a fine ſcymetar in a gold ſcabbard, richly ſet with precious ſtones.

After they had carried away the emperor, the confuſion among his drunken courtiers was as great as before; neither was there any care taken to conduct the ambaſſador back again to his houſe: they were puſhed and ſhoved about, and in danger of being trodden under foot, and inſtead of being aſſiſted by the officers of the court, the gates were ſhut againſt them, and extravagant ſums demanded for permiſſion to go through them. In the mean time the throng was very great, and their very buttons were cut off their cloaths before they could get away, and they expected every moment to be ſtripped by the mob: however, by bribing the porters very handſomely, they were ſo fortunate, at length, to eſcape out of the palace and get to their houſe. But to return to the emperor: It was uſual with him, it ſeems, to drink with his miniſters till he fell down dead drunk, and then was carried to bed by his eunuchs: and when he awaked again, he was ſure to give ſome examples of his cruel and fierce diſpoſition; inſomuch that his ſervants fled, and dreaded to come near him, and happy was the miniſter that could make an excuſe to be abſent, and eſcape the effects of his fury.

During the Engliſh ambaſſador's ſtay at Mequinez, the ſame emperor ſhot two men that waited on him, and endeavoured to kill his prime miniſter with his own hand: but this courtier keeping out of the way till his murdering rage was over, was then taken into favour again. He commanded two young Jewiſh women to be brought to his bed; and when he ſent them home again, hearing that their huſbands had preſumed to go to bed to them, he ordered both

both the men to be put to death. One of his miſtreſſes diſobliging him, he ordered all her teeth to be drawn out; and inquiring of her afterwards, being told ſhe was not recovered from the illneſs that operation had occaſioned, he ordered the man's teeth, who drew them, to be likewiſe pulled out, and ſent to her by way of ſatisfaction. For any trifling offence, or for his humour, he would order a man to be toſſed; that is, thrown up into the air by four luſty ſlaves, as they could, and then let fall again, whereby ſometimes the perſon was killed and at others made a cripple of: and ſuch feats as theſe, it ſeems, were his ſport and diverſion. We need not therefore wonder that the Engliſh ambaſſador haſtened to be diſmiſſed from ſuch a court as this, which is deemed the moſt faithleſs, and the people in general the moſt perfidious and baſe of any in the univerſe.

The demands Mr. Ruſſel was inſtructed to make at the court of Morocco, were, to get all ſuch captives releaſed as had been taken under Britiſh colours; to get reſtitution made to ſuch merchants, whoſe ſhips had been robbed by the Sallee pirates ſince the laſt peace, and to confirm that peace with the preſent emperor. But he was ſoon given to underſtand, that there was no reſtitution to be expected from this court; and with reſpect to the captives, they conſented to releaſe about a dozen of them, of which four were Engliſh, and for theſe the ambaſſador paid a great deal more than their ranſom could have been valued at. The prime miniſter, the favourite women, and every officer concerned in his diſpatches, were bribed again and again; nor was there a ſervant about the court but was perpetually begging ſomething of him, under pretence of ſome good offices they had done him during his reſidence there.

The Britiſh ambaſſador, after this, took his leave of the court of Mequinez, and began his march to Tangier, under a Mooriſh guard, commanded by officers, who had money allowed them by their ſuperiors to defray the whole expences of the journey, but which they put in their pockets, and made the ambaſſador pay his own and their charges upon the road; and beſides, forced the country people to furniſh proviſions, without allowing any thing for them. When the ambaſſador came to Tangier, he was under apprehenſions of being detained there by the baſſa, under pretence of ſome further demands: but the baſſa being then treating with the governor of Gibraltar for powder and other warlike ſtores he wanted, was ſo good as to permit the ambaſſador to embark for Gibraltar, where he arrived February 7, 1728. He had been promiſed two fine Barbary horſes, and a lion, by the court of Mequinez; but it ſeems they never intended to gratify him in this particular, unleſs he would have paid double the price for them, as he did for every thing elſe: and he was very glad to make his eſcape from that barbarous court without the preſents.

If a renegado, after he has profeſſed himſelf a diſciple of Mahomet, apoſtatizes, and turns Chriſtian again, he is burnt without mercy: murder, theft, and adultery, alſo, are puniſhed with death: and crimes againſt the ſtate are puniſhed with great cruelty; as impaling, dragging the priſoner through the ſtreets at a mule's heels till all his fleſh is torn off, throwing him from a high tower upon iron hooks, hanging him upon hooks till he dies, crucifying him againſt a wall.

Their forces, were they aſſembled in one place, would certainly conſtitute a very numerous and formidable army. It is computed, that the black cavalry and infantry do not amount to leſs than forty thouſand men; and the Mooriſh horſe and foot may be as many, but being diſperſed in ſeveral parts of this large empire, are not ſeen in ſuch numerous bodies as the negroes, who live in Mequinez, and have the guard of the emperor's perſon: the blacks are eſteemed their beſt horſe. The Europeans have experienced their bravery and military ſkill, both at Oran and Ceuta: they have fire arms as well as ſwords and lances: their troopers ride very ſhort, and their ſaddles have long peaks before and behind: their ſtirrup-irons are ſhaped to the foot, ſo that they can ſtand up and ſtrike when they make their blow; and no men ſhew more dexterity in riding, wheeling, or firing: their horſes are very ſwift, beautifully made, but not ſo ſtrong and heavy as ours.

They chiefly rely upon their cavalry both in their civil wars, and thoſe with foreigners. Their infantry, indeed, are numerous, and carry fire-arms; but are not diſciplined, and obſerve no manner of order; five hundred of their foot will fly before fifty horſe: nor do they underſtand how to attack or defend a town, which may be the reaſon they have ſcarce one place of ſtrength in the country, and but few guns mounted on the walls of their towns. They ſeem very ignorant in the management of great guns and bombs. Theſe are altogether left to the ſkill of the renegado Chriſtians, of whom there are ſome thouſands in their armies. They have a train of one hundred and fifty braſs guns in the palace of Mequinez, beſides ſeveral mortars, which are ſometimes drawn out in times of danger; but I do not find there are any mounted upon the walls.

Captain Blaithwait relates, concerning their ſhipping, that when he was there in the year 1727, their whole naval force conſiſted but of two twenty gun ſhips, the biggeſt not above two hundred tons, and a French brigantine they had taken, with ſome few row boats; and yet with theſe, being full of men, they iſſue from Sallee and Mamora, which lie on the Atlantic Ocean, near the ſtraights mouth, and make prize of great numbers of Chriſtian merchant ſhips, carrying their miſerable crews into captivity. Though they are at peace with Britain, they make no ſcruple of ſeizing and carrying their ſhips into Sallee, if they find a paſſenger on board, belonging to a nation at war with them; however they are uſually ſo good as to diſmiſs the ſhips, and their crews, after they have robbed them of ſome of their merchandize. The charge of theſe piratical cruizers, is borne intirely by private adventurers; though the emperor has a tenth of all the prizes and captives they make, which leads me to enquire into the revenues of this prince.

Theſe are either from the labour of the huſbandmen, and the fruits of the earth: or by duties upon goods imported and exported: the emperor has a tenth of all the corn, cattle, honey, wax, hides, rice, fruits, and produce of the ſoil. After his tythe is deducted, he is at liberty to purchaſe the remainder of the priſoners, if he thinks proper, at only fifty crowns per head. This produces immenſe profit to him, either by their ranſom or labour, for he makes them work, and ſupplies them with nothing but a ſcanty allowance of coarſe bread and oil. If they fall ſick, he gives them no aſſiſtance but leaves them to the fathers of a Spaniſh convent, who ſupply them with neceſſaries and medicines; but even the benevolence of theſe is taxed, as they pay him a conſiderable annual ſtipend, for a toleration to act with humanity to their fellow-creatures. The Jews pay a capitation tax, and all the commodities in which the Chriſtians deal are heavily aſſeſſed.

They have no ſhipping to carry on a foreign trade by ſea. But the Europeans bring them whatever they want from abroad; as linen and woollen cloth, ſtuffs, iron wrought and unwrought, arms, gunpowder, lead, and the like; for which they take in return, copper, wax, hides, Morocco leather, wool (which is ſuperfine), gums, ſoap, dates, almonds, and other fruits. Their trade by land, is either with Arabia or Negroland: to Mecca they ſend caravans, conſiſting of ſeveral thouſand camels, horſes and mules, twice every year, partly for traffic, and partly upon a religious account, great numbers of pilgrims taking that opportunity of paying their devotions to their great prophet. The goods they carry to the eaſt, are woollen manufactures, Morocco ſkins, indigo, cochineal and oſtrich feathers: and they bring back from thence, muſlins and drugs. By their caravans to Negroland, they ſend ſalt, ſilk and woollen manufactures; and bring back gold and ivory in return, but chiefly negroes; from hence it is, that their emperor recruits his black cavalry, though there are alſo great numbers born in the country, for they bring thoſe of both ſexes very young from Negroland; the females for breeders, and the males for ſoldiers, as they grow up: they firſt carry a muſket, and ſerve on foot, and after ſome time are prefered to be cavaliers; and as theſe have no other hopes or dependence but the favour of the emperor, they prove much the moſt dutiful and obſequious of all his ſubjects; and indeed ſupport the prince in his tyranny over the reſt, who would not probably have borne the barbarous cruelties of the two laſt reigns, if they had not been governed with a rod of iron in the hands of theſe negroes; who, like other foreign mercenaries, never enquire into the reaſonableneſs of their prince's commands, but execute his inhuman decrees without remorſe.

Their gold coin is a ducat, reſembling the ducat of Hungary, worth about nine ſhillings ſterling, and they uſually give three of them for a moidore. Merchants accompts are kept in ounces, an imaginary coin, ten of which make a ducat in merchants accompts; but in payments to the government, it is ſaid, they will reckon ſeventeen ounces and a half for a ducat. They have alſo a fleece, which is a copper coin leſs than a farthing, twenty of which

make a blanqueen; this laſt is a ſilver coin of about two-pence value.

In Morocco, learning is chiefly confined to reading, writing, and arithmetic, as few attempt any thing higher, except the prieſts and doctors of the law. The favourite ſcience of the two latter orders, and what the people ignorantly admire, is, aſtrology; ſo that a ſuperſtitious belief in omens, predictions, &c. is general throughout the nation. Moſt of the towns have ſeveral public ſchools and academies, in which children are taught to read, write, caſt accounts, and repeat a ſhort catechiſm, which contains the principles of their religion.

Every Friday, which is their ſabbath, both ſexes viſit the ſepulchres of their anceſtors and relations, in blue habits, blue being their mourning colour. They greatly venerate the dead, embelliſh their tombs as much as their circumſtances will afford, and permit no Chriſtian to approach within a certain diſtance of them. They are very particular in the obſervation of the three following whimſical notions: 1. To place victuals and drink upon the tombs of their anceſtors and relations, at certain times, that the dead may not ſtarve in their graves. 2. To bury gold, ſilver, jewels, &c. with the corpſe, that the perſon may not be in bad circumſtances in the other world. 3. To dig the grave very wide, that the deceaſed may not be incommoded for want of room. They have another notion, equally ſingular and abſurd, which is, never to bury two perſons in the ſame grave, leſt they might have ſome difficulty in finding their own bones on the reſurrection-day. The prevailing opinion of the Moors is, that all perſons of any nation or religion, and of either ſex, are ſecure of ſalvation prior to the age of fifteen: but after that period they imagine that none but Muſſulmen can be ſaved. They enforce the attendance on public worſhip with great rigour; for the firſt neglect, the perſon is rendered incapable of being a witneſs in a court of juſtice; for the ſecond, fined; and for the third, burnt as an heretic: but they exclude women from theſe places. Games of chance are ſtrictly forbidden; and thoſe who are detected playing for money, are liable to be ſeverely puniſhed.

With reſpect to the hiſtory of Morocco and Fez, the Mauritania of the antients, no material tranſactions occur concerning it, till conquered by the Romans, who found, that the prevailing mode of government throughout Barbary was abſolute monarchy; and that Bogud (the firſt prince of whom we have any authentic account) was cotemporary with Julius Cæſar. This country, on the death of Bogud, became a Roman province, and was afterwards beſtowed by Auguſtus on the younger Juba, whoſe ſon Ptolemy was put to death by the tyrant Caligula. The Goths then over ran the country, and poſſeſſed it till they were driven out by the Saracens in the year 600. Theſe were again ſubdued by the Arabians, who divided Barbary into many kingdoms, till 1068, when they were all united into one ſovereignty under the family of the Almoravides; for Joſeph, the ſecond monarch of that race, founded Morocco, and not only ſubdued Fez, but the Mooriſh dominions in Spain. His grandſon, Albo Hali, was a great friend to learning; but a taſte for literature died with him. Mahomet, the fourth of this ſucceſſion, loſt the Mooriſh conqueſts in Spain; and after the reign of three ſucceeding monarchs, whoſe reigns were remarkable for nothing but domeſtic broils, the race of the Almoravides became extinct; after which, the race of the Merins raiſed themſelves to the regal dignity.

The Merins were a ſet of unhappy monarchs, all meeting with untimely ends. Alboacen, the ſixth of them, with an army conſiſting of four hundred thouſand foot, and ſeventy-five thouſand horſe, was defeated by the kings of Caſtile and Portugal at the head of only twenty thouſand foot and fourteen thouſand horſe. The race of the Merins becoming extinct in 1540, the Shariffs, or Cheriffs, the ſuppoſed ſucceſſors of Mahomet, were advanced to the imperial dignity, or rather by artifice and cruelty obtained the ſovereingty.

Amet, who was the firſt monarch of this line, was depoſed by his brother Mahomet, who, after a reign of continual inteſtine broils, was murdered by his own guards; and ſucceeded by his ſon,

Abdallah, who, for his ſecurity, put to death ten of his brothers out of twelve, and died unexpectedly, juſt at a time when a plot was ready to be put in execution for deſtroying him.

Mahomet, the ſon of Abdallah, fled immediately to Don Sebaſtian, king of Portugal, who together with the two competitors for the ſovereignty of Morocco, were ſlain in 1578, at the famous battle of Alcazár.

The reigns of the three ſucceeding princes of this line contained nothing remarkable; but the eighth monarch, named Sidan, reſtored peace to his country. However, a gang of pirates, in his reign, poſſeſſed themſelves of the port of Sallee, when not having maritime ſtrength ſufficient to diſlodge them, he applied for aid to the court of England. The reigning monarch, Charles I. complied with his requeſt, and ſent ſome ſhips to his aſſiſtance, and all the pirates were taken or deſtroyed; and the emperor, in return, ſent three hundred Chriſtian ſlaves as a preſent to his Britannic majeſty. This worthy monarch died in 1630, and was ſucceeded by his eldeſt ſon,

Muley Abdelmelech, who was remarkable for his cruelty and drunkenneſs, and was, after having reigned four years, murdered by a Chriſtian ſlave. He was ſucceeded by his brother,

Muley Elwaly, a prince of ſweet diſpoſition and generous ſpirit, who began his reign by releaſing all ſtate priſoners, and increaſing the pay of his troops. He died much regretted, after having enjoyed the crown twelve years.

Muley Hamed Sheik ſucceeded his brother Muley Elwaly; but being murdered by the Arabs, they raiſed one of their own chiefs, named Crumel Hack to the crown, who was, on his demiſe, ſucceeded by Shariff Muley, king of Tafilet. The latter engaging in a war with Sidi Omar, prince of Illoch, was defeated, taken priſoner, and cloſely confined; during his captivity, he was attended by a negro woman frightfully ugly, with whom he nevertheleſs cohabited, and ſhe bore him two ſons; the eldeſt named Muley Archy, ſucceeded in the kingdom of Tafilet. The reign of this prince was but ſhort; for being uſed to drink immoderately, he one day mounted a ſpirited horſe when intoxicated, and riding furiouſly into a grove of orange-trees, he was thrown againſt the trunk of a tree, fractured his ſcull, and expired of the wound. His nephew Hamet cauſed himſelf to be proclaimed ſovereign at Morocco, while his half brother (by a white woman) took the ſame ſtep at Tafilet; but Muley Iſhmael, his full brother by the negro woman, proved too hard for both, for he wreſted the crown from them, and began his reign in the year 1672.

Muley Iſhmael was remarkable for an odd jumble of policy and abſurdity, cruelty and religion. His ſtrictneſs during his whole reign was ſuch, that he would never drink any wine or ſtrong liquor; he obſerved the ramadan, or Mahometan lent, four whole months every year, and with a more than ordinary abſtinence. He was no leſs a ſcrupulous obſerver of the uſual waſhings, public prayers, and other branches of his law; and never undertook any thing of moment, without proſtrating himſelf a good while upon the ground, and praying for the divine protection and aſſiſtance, fully ſatisfied that Mahomet would obtain it from heaven; ſo that whatever was the reſult of his devotions, he conſtantly believed that prophet was the immediate cauſe and director of it.

Though he was eaſy of acceſs, and very rigid and impartial in the execution of juſtice, yet he would ſometimes run into wild extravagancies, of which the following is an inſtance: A poor farmer of the Berebers race, having complained that ſome of his negroes, (whom by the way, he was noted for keeping at ſhort allowance) had ſtolen from him a yoke of oxen, which were his ſole dependence, he ordered all the negroes to paſs before him, and ſhot every one whom the farmer accuſed: but aſking him afterwards, what amends he could make him for the loſs of ſo many ſtout negroes, and the man being at a loſs what to anſwer, he made him undergo the ſame fate. He was for ever building and pulling down again; alledging, that he did it to keep his ſubjects ſo buſy, that they might have no time to mutiny or rebel; for, ſays he, "I have a bag of rats: unleſs I keep the bag ſtirring, they will eat their way through it." He had three thouſand wives, five thouſand concubines, nine hundred ſons, and three hundred daughters; all of whom, at times, felt the effects of his cruelty and capricious temper. He would frequently ſhoot, ſtab, or behead both ſlaves and ſubjects for his amuſement; and was ſo avaricious, that he ſpent his whole life in plundering his people, and amaſſing wealth: and indeed every thing was made ſubſervient to his miſerable temper.

When any body complained to him of having been robbed or defrauded, the criminal was firſt ordered to make reſtitution of the property in queſtion, not to the perſon aggrieved, but to himſelf, as he aſſerted that he was the only ſufferer, his dignity being inſulted by the crime; and then a conſiderable fine was levied upon the culprit, as a recompence to offended juſtice; but all went into his own

 coffers.

coffers. He extorted vaſt ſums of money from his ſubjects by unjuſt and cruel means; and was ſo ſordidly mean, as to keep the ſervants of his houſhold at ſhort allowance, and not allow his ſoldiers any thing to ſubſiſt on, telling them in a ſurly tone, that his mules, camels or other beaſts, aſked him for no maintainance, and therefore they might get theirs where they could find it, thus licenſing his army to plunder all that came in their way.

In proceſs of time, one of his ſons, Muley Mahomet, (who was the moſt accompliſhed, and indeed the only one of them who had a princely education), raiſed a rebellion againſt him; but being taking priſoner by his brother Muley Sidan, his right hand and left foot were cut off by the emperor's order, of which wounds he died; and Muley Sidan was appointed heir to the crown; but his cruelty and drunkenneſs were ſuch, that he was murdered by his own wives, before the death of his father. At length Muley Iſhmael, one of the moſt infernal monſters of cruelty and avarice that ever exiſted, died a natural death in 1727, having reigned fifty-five years; which, in a country where inſurrections, dethronements, and aſſaſſinations, were ſo common, is a circumſtance truly remarkable and aſtoniſhing.

On the death of Muley Iſhmael, his ſon Muley Hamet Deby ſucceeded to the crown: having been appointed to that dignity by his father merely becauſe he was the moſt diſſolute of all his children; for Muley Iſhmael fancied that his ſon's drunkenneſs and intemperance would be foils to ſet off his own ſobriety and abſtemiouſneſs; for he imagined that his temperance in eating and drinking made amends for his inſatiable avarice, unbounded cruelty, and exceſſes with reſpect to women. Muley Hamet was depoſed by his favourite eunuch, and his brother Abdelmelech proclaimed emperor: but the latter ſoon rendering himſelf odious by his cruelties, Muley Hamet was again reſtored to the throne: Abdelmelech was kept in cloſe confinement for ſome time, but at length ſtrangled, by order of his brother; and Muley Hamet, five days after, died by exceſſive drinking, being March 22, 1729.

The next ſucceſſor was Abdalla, another of the ſons of Muley Iſhmael; when the duke de Ripperda, having been driven from Spain, offered his ſervices to Abdalla, who accepted them, made him a baſſa, and careſſed him as his chief favourite. Ripperda then laid a plan before the emperor, which was, to drive the Spaniards from their poſſeſſions on the coaſt of Africa, and even to invade Spain; but his deſigns were fruſtrated by the bravery of the Spaniards, and the ſuperior ſkill of their engineers. Abdalla at length increaſed daily in cruelty, killed multitudes of people, attempted the life of his own mother, who, to be out of his reach, made a pilgrimage to Mecca: this monſter was heard to expreſs theſe ſentiments, "My ſubjects have no other title to their lives but my will; and my greateſt pleaſure is, to kill them with my own hand." His cruelties at length rendered him ſo odious, that he was depoſed by the black army, and his brother Muley Ali, raiſed to the throne in his ſtead. But this prince, being almoſt continually ſtupefied by an immoderate uſe of a ſadorific herb called archicha, they deemed him unfit to reign, and therefore deprived him of the crown, and, in 1736, reſtored it to his brother, who was now unbounded in his cruelty, ſacrificing many hundreds to his revenge, anger, or caprice, without the leaſt regard to rank, age or ſex. This occaſioned Abdalla to be again depoſed, and Muley Sidi, another prince of the blood royal, was placed on the throne. Abdalla, however, raiſed an army, gave battle to and defeated his rival, and once more reſumed the ſovereignty.

The ſiege of Ceuta, which commenced October 23, 1774, and that of Melille, which took place on the 8th of December of the ſame year, by the troops of Morocco, are the moſt recent tranſactions of which we have any certain account relative to this empire. The court of Spain had for ſome years paſt greatly neglected theſe places; ſo that neither the garriſon or fortifications were in a proper condition to ſuſtain a ſiege; but thoſe diſadvantages were overbalanced by the conduct of the Spaniſh officers, the bravery of the men, and the total want of diſcipline and experience in the Mooriſh troops, which occaſioned the emperor's army not only to fail of ſucceſs in their attack upon thoſe two places, but even to be repulſed by the ſmall garriſon of Penon de Velaz, a leſs conſiderable fortreſs upon that coaſt. Warlike preparations were continued on both ſides, though little was effected on either; and Melille was either blockaded or beſieged till the middle of March, when the Moors thought proper to abandon the enterprize.

SECT. IV.

Containing the Deſcription and preſent State of the Kingdom of ALGIERS, and its principal Towns.

THIS kingdom (which takes its name from its metropolis) is four hundred and eighty miles in length from eaſt to weſt, and one hundred miles in breadth, where wideſt, and is ſituated between thirty and thirty-ſeven degrees north latitude, and one degree weſt, and nine degrees eaſt longitude, being bounded by the Mediterranean, on the north; mount Atlas, on the ſouth; the kingdom of Tunis, on the eaſt; and the river Mulvia, which ſeparates it from the empire of Morocco, on the weſt.

The principal rivers, which riſe in mount Atlas, and run northward into the Mediterranean, are, 1. The river Areſgola, or Hartegol, which falls into the Mediterranean, about ſeven leagues to the weſtward of Oran. 2. Aſſafran, which diſcharges itſelf into the ſea, five leagues to the weſtward of Algiers. 3. Chilef, which falls into the ſea, near Moſtagan. 4. Sofaya, which runs into the ſea, to the eaſtward of the city of Algiers. 5. Sef Gomar which runs by Conſtantina, into the Mediterranean. 6. Zinganor, or Major, which falls into the ſea, near Bugia. And, 7. Mira, which diſcharges itſelf into the Mediterranean, near Arzea. None of theſe have a very long courſe, riſing but in the mountains of Atlas, or other hills in this kingdom: nor do we find that any of them are navigable, at leaſt that there is any navigation upon them: though there are ſome of them large enough, and would probably be made navigable, if any other people but the Turks were poſſeſſed of them; and indeed they appear ſo very indolent here, that they have not one bridge or ferry over any river in the country, but go about frequently ſome miles to find a ford; and, if there happens to fall heavy rains, travellers are forced to wait till the waters are down again, before they can paſs them.

This kingdom is uſually divided into eighteen provinces, namely, 1. Algiers Proper. 2. Tremeſen. 3. Termez. 4. Bujeyah. 5. Angan. 6. Beni Arazid. 7. Miliana. 8. Couco. 9. Labez. 10. Tebeſſa. 11. Human Bar. 12. Hareſgol. 13. Oran. 14. Moſtagan. 15. Bona. 16. Sargel. 17. Irgeri. 18. Conſtantina.

The climate of Algiers is remarkably ſerene and fine, ſo that the country ſeems to enjoy a perpetual verdure, and the people are unacquainted with the extremes of heat and cold. This is to be underſtood only of the parts towards the ſea, the inland parts being principally wild and barren, and very little inhabited except by a great variety of wild creatures, particularly lions, tygers, leopards, buffaloes, wild boars, ſtags, porcupines, monkies, oſtriches, &c.

The provinces beforementioned, into which Algiers is divided, are comprehended under three general heads: I. The eaſtern, or Levantine; II. The weſtern; and, III. The ſouthern government. The towns in the firſt are, Bona, Conſtantina, Gigeri, Bugia, Steſſa, Tebef, Zamoura, Biſcara, Necanz, and Couco. The ſecond contains Oran, Tremeſen, Moſtagan, Tenez and Sercelli. The third, or ſouthern government, has no houſes in it, the inhabitants being almoſt wild, and living in tents, which they remove at pleaſure.

Bona, ſuppoſed to be the antient Hippo, a ſea-port, built by the Romans, was once the capital of the province of its name. It lies on the Mediterranean, latitude thirty-ſeven, about ninety miles north-eaſt of Conſtantina; and near it is a coral-fiſhery. It is a poor mean place, thinly inhabited, and much expoſed to the incurſions of the Arabs. The only fragments of its antient grandeur are the ruins of a noble cathedral or monaſtery. Near this is a famous ſpring, called St. Auſtin's well, and reſorted to by French and Italian ſailors. The fortreſs hath a garriſon of three hundred Turks, commanded by an aga, who is governor of the town. The celebrated St. Auſtin is ſaid to have lived and died here. Charles V. took this town, among others, in his expedition againſt Tunis, but it was recovered by the Turks not long afterwards.

Conſtantina is ſituated on a river forty-eight miles from the ſea, and about ninety miles ſouth-eaſt of Bugia, latitude thirty-five. It was the Ciſta-Numidiæ of the Romans, and received its preſent name from Conſtantina, the daughter of Conſtantine the Great, who rebuilt it with great magnificence: the ſituation is on a peninſula, difficult of acceſs, except towards the ſouth-weſt. It is one mile in circumference, well fortified, and contains many antique fragments, particularly a noble bridge, near which is a large

large ſubterraneous aqueduct, that terminates in a caſcade, into which ſtate criminals are thrown, and receive their deaths by being daſhed to pieces againſt the rocky bottom. The bey of the eaſtern government reſides here, and has under his command three hundred Turkiſh horſe, and one thouſand five hundred Mooriſh ſoldiers. The inhabitants are opulent, haughty, and ſpirited. The neighbouring mountainous territory contains a robuſt, hardy, and brave people, tenacious of their liberty, civilized, and humane. They furniſh the neighbouring towns with great quantities of fruit and other proviſions, and are able to raiſe forty thouſand fighting men; on which account the bey of Conſtantina ſtands in great awe of them. They are, however, deſtitute of fire-arms, and have only lances and arrows to annoy the enemy with. On the ſea coaſt, at a ſmall diſtance from Conſtantina, ſtand the ruins of a Roman colony, antiently called Colo. It is ſituated on a high rock, and has a garriſon under the command of an aga: adjoining to it is a French factory, where the Moors bring hides, wax, and wool for ſale; and at no great diſtance are the remains of the antient city of Stora, the bay of which is ſtill good. Conſtantina was the reſidence of the kings of the province of the ſame name, till 1520, when it was conquered by Barbaroſſa, who annexed it to the territory of Algiers. Some noble ruins are found in and about this town.

Gigeri is ſituated on the ſea coaſt between Bona and Bujeyah, at about the diſtance of fifteen miles from each. The town (which contains about one thouſand five hundred houſes, inhabited by very poor people) is defended by a fort and a ſmall garriſon. The whole territory contains no other town, the natives living in a roving wild manner, robbing all they can come at, plundering any ſhip that is ſo unfortunate as to be wrecked upon the coaſt, and treating the crew with the moſt ſavage ferocity. The dey himſelf cannot reduce them to any kind of order, as they fly to places inacceſſible to all but themſelves, and ſet the Algerine army at defiance. The French were fortifying themſelves here in the year 1666; but were driven from thence by the Algerines, and obliged to leave their cannon and moſt of their effects behind them.

Bugia, formerly the capital of a kingdom of the ſame name, is ſituated at the mouth of the river Major, about twenty leagues to the eaſtward of Algiers. It now lies in ruins, and contains nothing remarkable but the ſepulchre of Seedy Buſgree, the titular ſaint of the place. Here are three caſtles, two at the port, and one upon a rock. The inhabitants deal in iron-works, particularly plough ſhares, oil, wax, &c. The Engliſh admiral, in 1671, took or deſtroyed nine Algerine men of war here, which the caſtle was not able to protect from his attack.

Steſſa, or Steffa, is ſituated in a fertile valley, about ſixty miles to the ſouth of Bugia, and fifteen from the ſea: it exhibits only the melancholy ruins of its former magnificent buildings, containing now about three hundred families, who are miſerably poor.

Tebef, is at preſent quite decayed, and very thinly inhabited, though it was antiently a flouriſhing city.

Zamoura, is reduced to as deſpicable a ſituation as the two former, by the tyranny of the Algerine government, though the territory is one of the moſt fertile ſpots in all Barbary. It is defended by a fort with a good garriſon; and has a market every Monday, which is frequented by the Arabs.

Biſcara, ſituated in five degrees fifty minutes eaſt longitude, and thirty-five degrees ten minutes north latitude, has a fort and garriſon to keep the inhabitants of the neighbouring diſtrict in awe. The people here are very ignorant, and lead a wandering kind of ſavage life; but their chief employ is catching and taming wild beaſts, particularly lions and tygers, which they carry for ſale to Algiers.

Necanz, is one of the pleaſanteſt towns in Barbary, being ſituated about ſixty miles to the ſouth of Steſſa. It is watered by an agreeable river, whoſe banks are adorned with a variety of beautiful trees. The inhabitants in general are polite, the women handſome, the houſes neat, the gardens well laid out, and the neighbouring territory fertile. The town contains a magnificent moſque, and a large well endowed college for the education of Mahometan youth.

Couco, is ſituated between Algiers and Bugia. It was formerly the metropolis of a kingdom of the ſame name; but the ſovereigns entering into frequent alliances with the Spaniſh court, the Algerine government, in the beginning of the ſeventeenth century, laid waſte the whole country, and deſtroyed every town in it. The inhabitants are independent, and dwell in the mountains, which are very fertile: the Algerines keep them miſerably poor, by preventing them from carrying on any kind of commerce, as they formerly did.

The weſtern, or ſecond Algerine government is divided into the five following places: the firſt is,

Oran, ſituated on a bay of the Mediterranean ſea, latitude thirty-ſix degrees, eaſt longitude one, about two hundred and fifty miles weſt of Algiers. It lies partly in a plain, and partly upon the aſcent of a hill, and is about a mile and a half in circumference, as well fortified as the ground about it will permit; but, it being commanded by ſome of the neighbouring hills, if there be not a garriſon of ten or twelve thouſand men to defend the avenues, diſtant caſtles, and redoubts, as well as the town itſelf, it cannot ſuſtain a long ſiege.

As the Spaniſh coaſts and merchant ſhips had ſuffered much from the corſairs or rovers of this town, Ferdinand, king of Spain, ſent over an army, under the command of his prime miniſter, Cardinal Ximenes, in the year 1509, to beſiege it; who having a correſpondence with ſome of the inhabitants, when the Moors ſallied out with the beſt part of the garriſon againſt the Chriſtian army, their friends in the town ſhut the gates againſt them, and the cardinal obtained an eaſy conqueſt, killing above four thouſand Moors, and delivering at the ſame time twenty thouſand Chriſtian ſlaves out of captivity: the Turks of Algiers made ſeveral attempts to recover this town from time to time for near two hundred years; but were always repulſed till the year 1708, when they made themſelves maſters of it, by the treachery or cowardice of the governor, as the Spaniards give out, and remained in poſſeſſion of Oran till the year 1732. But king Philip, having at this time no other enemy to contend with, and a fine army of veteran troops, that had no other employment, embarked a good body of them at Alicant, about the middle of June 1732, under the command of the Conde de Montemar, who landed near Oran, on the 29th of the ſame month, with very little oppoſition; and, having afterwards gained the height of the mountains above Oran, the garriſon abandoned the place, without waiting to be beſieged in form: of which tranſaction we received repeated advice in our common news-papers; but the account the Turks give of this enterprize affords ſome further particulars. According to them, the dey of Algiers, believing that this armament of the Spaniards was intended againſt his capital, did not ſend ſuch reinforcements to Oran as he would have done, if he had expected they would have attempted that city: However, the bey or viceroy of Oran had aſſembled an army of twenty thouſand men, for the defence of the place, moſt of them horſe; with which he endeavoured to hinder the deſcent of the Spaniards; but his troops were diſordered by the continual fire of the cannon of the enemy from their men of war and gallies. He attacked them alſo after they were landed; but, the ground being unfit for cavalry, and his horſe ſtill galled by the Spaniſh artillery, he was obliged to retire; and thereupon determined to wait for a reinforcement of four thouſand Turks, and ſix thouſand Moors, which he daily expected from Algiers, before he engaged the Chriſtians again: and, in the mean time, for fear of the worſt, removed all his effects, his treaſure, and his women, out of Oran to a place of ſecurity: whereupon the garriſon and inhabitants were in the greateſt conſternation; imagining they ſhould be ſoon abandoned by the governor, and ſacrificed to the Chriſtians; and thereupon packed up all that they had, after the baſſa's example, and kindly quitted the town to the Chriſtians without a blow; leaving in it an hundred and forty-ſix pieces of cannon, beſides mortars, and at leaſt fifty ſhip-loads of proviſions, which contributed very much towards the preſervation of the conqueſt; for the ſea was ſo tempeſtuous they could receive nothing from their fleet for ſeveral days.

However, the baſſa attacked the Spaniſh army as they were marching into the place; and, though he found it impoſſible then to ſave the town, ſo obſtinate was the engagement, that the Spaniards loſt near five thouſand men; and were afterwards ſo much harraſſed by the Turks, before they could put the place in a poſture of defence, that great part of their army was cut off, and amongſt them their new governor the marquis of Santa Cruz, and ſeveral of their beſt generals. But to proceed:

This city was the reſidence of a bey, and, though greatly fallen from its priſtine ſplendor, is ſtill the beſt fortified place in the kingdom, except the city of Algiers. About ſix miles from Oran, ſtand the ruins of the antient city of Batha, where a little chapel is built to the memory of a

marabout, who ſaved up money enough to maintain five hundred diſciples, whoſe ſole buſineſs was, to repeat a long Mahometan litany, by the help of their beads, at certain hours. Oran, is ſtill in the poſſeſſion of the Spaniards.

Tremeſen (the province), is bounded on the north, by the Mediterranean ſea; on the eaſt, by a province called Africa; on the ſouth, by the deſert of Saharah; and on the weſt, by the kingdom of Fez; it is above three hundred and ſeventy miles in length, and one hundred and twenty-five in breadth. The capital town, of the ſame name, is ſituated ninety miles ſouth-weſt of Oran, and ſurrounded by a ſtrong wall, well fortified; has five gates with draw-bridges before them, and a ſtrong caſtle containing very handſome barracks for the janiſaries who are in garriſon. Tremeſen, while the metropolis of the kingdom of the ſame name, was a noble city, but is now fallen greatly to decay; for out of one hundred and fifty moſques and one hundred and ſixty baths, there are remaining only eight of the former, and four of the latter; and the place exhibits little but the fragments of its antient magnificence, among which, the remains of a reſervoir, or baſon for water, are the moſt conſpicuous. The inhabitants are extremely indigent. The territory contiguous to it is dry, barren, and mountainous, except on the north ſide, where there are plains abounding in corn, fruits, and paſtures.

Moſtagain, is ſituated fifty miles eaſt of Oran. This town is built in the form of a theatre opening to the ſea, and ſurrounded on every other ſide with rocks that hang over it. The ruins of an old Mooriſh caſtle ſtand in a ſpace between the rocks, and there is a ſtrong ſtone wall towards the port, with a modern built caſtle, garriſoned by a number of Turks. The citadel is erected upon the ſummit of one of the rocks, and commands both city and territory: the haven is commodious, and the town is well ſupplied with freſh water. The neighbouring mountains are inhabited by a people called Magarabas, who live in tents, poſſeſs a great number of flocks, and pay to the dey of Algiers twelve thouſand crowns annually. There is a handſome moſque in this town.

Tenez, is ſituated about one hundred miles to the eaſtward of Oran, and twenty miles eaſt of Moſtagan, and at a league diſtant from the ſea, where it has a convenient port. Here is a caſtle that was once a royal palace, and in which the governor reſides. The fortifications are ſtrong, the garriſon numerous, and the neighbouring territory fertile. This was ſuppoſed to have been the Julia Cæſarea of the antients.

Sercelli, lies between Tenez and Algiers, about twenty-four miles to the weſtward of the latter. It is defended by a Turkiſh garriſon, and has a little port, which will only admit of ſmall veſſels. This was antiently a large populous city, but is at preſent a very poor deſolate place.

The third Algerine government, being the ſouthern diſtrict, is inhabited by a wild ſet of people, who like ſome of the Tartars, roam from place to place, and live in tents while they reſide in any particular ſpot. The territory itſelf is hilly, a part of mount Atlas running through it: the only riches of the people are their numerous flocks and herds. The government exacts a tribute from them, but the bey is obliged to come annually at the head of an army to collect it; and many of them retire to inacceſſible places till the troops are withdrawn, in order to evade the payment.

We ſhall now proceed to give a particular deſcription of the metropolis and chief city in the kingdom.

Algiers is ſituated in latitude thirty-ſeven, weſt longitude three and a half, on a bay of the Mediterranean ſea, a little to the eaſtward of the river Safran: it is built on the ſide of a mountain; the houſes flat roofed, terraſſed, and white-waſhed; and, riſing gradually from the ſea-ſhore up the hill, forms a kind of amphitheatre, and appears very beautifully on the approaching it by ſea; but this, like moſt other Turkiſh towns, looks better at a diſtance than when we are in it: The moſques, domes, ſpires, caſtles, and palace ſtanding in full view, give us a great idea of the place; but, as the ſtreets are extremely narrow, and the private houſes but mean, our expectations are not anſwered when we come to examine it cloſely: however, there is this convenience, that the inhabitants can viſit each other from the tops of the houſes almoſt all over the town, without going into the ſtreets. The walls are about a league in circumference, defended by ſome baſtions and ſquare towers between them: the port is ſecured by a pier or mole, in length about five hundred paces, extended from the continent to a ſmall rocky iſland, where ſtands a caſtle, called the Lantern, with three tier of braſs cannon, beſides other fortifications, lately erected for its defence, ſince the French bombardment: the town has five gates; and in it are ten great moſques, or Mahometan temples; fifty leſſer moſques, three colleges, and abundance of ſchools, where the children are brought up with the utmoſt prejudice to Chriſtianity. It is computed, there are about an hundred thouſand ſouls in the city.

The fortifications towards the ſea are much ſtronger, and more conſiderable, than thoſe on the land ſide: The mole was the work of Cheredin, the ſon of Barbaroſſa, as well as many of the other fortifications; for that monarch employed all the Chriſtian ſlaves in the improvement of the old, and conſtruction of new fortifications in and about Algiers; and, by perſonally inſpecting their proceedings, had the ſatisfaction to ſee the whole completed in the ſpace of three years.

To the ſouth, there is another fortreſs with three batteries to defend the entrance of the harbour. The ſlaves are continually employed in bringing ſtones from a quarry in the neighbourhood which they lay on the ſand, to defend the mole from the impetuoſity of the waves; and this laborious work is obliged to be repeated continually, becauſe the ſea conſtantly waſhes them away, and makes a perpetual ſupply neceſſary. The embraſures of the caſtle and batteries are in good repair; and the cannon, with their carriages, and all other neceſſary utenſils, are kept in excellent order.

This city is ſuppoſed to contain one hundred thouſand Mahometans, and one thouſand five hundred Jews, two thouſand Chriſtians ſlaves, and ſome renegadoes. There is one ſtreet, which is broad and handſome, and paſſes quite through the town from eaſt to weſt, in which the houſes and ſhops are elegant and capacious, and the markets are kept here; but all the other ſtreets are narrow, incommodious, and dirty. Some travellers have accounted for the narrowneſs of the ſtreets, by aſſerting that they were ſo contrived to keep off the extreme heat of the ſun, and others attribute their being built in that manner to the frequency of earthquakes, on which account the ſtreets are not only contracted, but the houſes low, and propped by pieces of timber paſſing acroſs the ſtreets from one to the other.

The houſes appearing one above another, make a very fine appearance from the ſea: they are about fifteen thouſand in number, are built either of ſtone or brick, upon a ſquare plan, with a paved court in the centre. Round the court is a double range of galleries one above the other, and both ſupported by columns. The tops of the houſes are all flat: for which reaſon they walk upon them in the evening to take the air; and many embelliſh them with pretty gardens, placing a neat ſummer-houſe in one corner. The people are obliged, by the laws of the place, to white-waſh their houſes inſide and out, at leaſt once a year; but all who can afford it, do it much oftener. Their furniture is exceeding mean, conſiſting only of a few wooden and earthen utenſils, a mat, and two quilts laid upon a few boards to ſerve as bed and bedſtead. As there are no ſquares or large vacancies throughout the city, the inhabitants may paſs from one end of it to the other over the roofs of the houſes, and moſt of them viſit each other this way. Though the houſes in general are mean, many of the principal people have very fine edifices, the pillars and pavements of which are of a very beautiful marble, and the cielings and folding-doors finely carved, painted, and gilt. Of theſe, the palace of the dey ſtands in the center of the city, and is the moſt magnificent building therein. It has two grand halls, in one of which the divan meets every Sunday, Monday, and Tueſday. This building is very extenſive, and ſurrounded by two ſuperb galleries, one above the other, ſupported by marble pillars.

Here are noble ſtructures erected as barracks for the Turkiſh troops: they are adorned with fountains, and contain many ſpacious and convenient apartments. Married men are not permitted to lodge here, but take up their reſidence either in private houſes, or in one of the four ſendacas of the place; the latter being large commodious buildings, conſiſting of ſeveral ranges of apartments, warehouſes, &c. which are let indiſcriminately to all who chuſe to take them, and ſerve inſtead of caravanſeras or inns. Chriſtian ſtrangers, if of any conſideration, are uſually accommodated at the conſul's houſe, according to the nation they belong to, but the poorer Levantine, or other traders, lodge at the abovementioned places, and may eat and drink according to their circumſtances or inclinations

tions, as there are many cook-ſhops, taverns, and other public-houſes, kept either by the Chriſtian ſlaves of the dey, or by the Jews, who will accommodate any perſon, or deal in any commodity. Here are one hundred and ſeven moſques, ſuperbly built, and chiefly ſituated near the ſea ſide; the baths are numerous, and in general large, ſumptuous, paved with marble, and well furniſhed with all requiſite conveniences. The Mahometans are obliged by their religion to uſe them five times daily, but their pleaſure often prompts them to go ſtill more frequently. A number of baths are appropriated to the uſe of women only, who do not reſort to them for the benefit of bathing alone, but alſo for the ſake of intriguing; for though the moſt dreadful puniſhments attend detection, yet the Algerine women venture every thing, that they may purſue their inclinations. There is a law enacted here, which is ſtrictly put in execution, purſuant to which, any woman who is convicted of being engaged in a criminal correſpondence with a Chriſtian, is ſentenced to be thrown into the ſea, with her head tied in a ſack, in caſe her lover does not turn Mahometan. Examples of this ſevere puniſhment are frequently ſeen; notwithſtanding which, the married women and maidens are fired with a moſt violent paſſion for the Chriſtians, and there are perhaps as many intrigues in Algiers as in any city in Chriſtendom.

About ſixty of the baths are uſed for bathing; but, beſides theſe, ſix others are converted into priſons for the Chriſtian ſlaves, in each of which there is a chapel for the free exerciſe of their religion. Every ſlave is let out at a certain hour in the morning, and muſt be punctual at night to the time limited for their return to be locked up; each of them is allowed a mattraſs and a rug for a bed.

There are ſeveral tolerable edifices without the walls of the town, which add to the beauty of the environs, particularly the marine officer's public hall, a marabout's ſuperb dwelling, and a variety of Turkiſh ſepulchres and monuments; among the latter, ſix magnificent tombs of a circular figure are the moſt conſpicuous: theſe were erected to the memory of ſix deys, who were ſucceſſively elected, and then murdered in the divan within a few days. It is to be obſerved, that the tombs of deys and baſſas are diſtinguiſhed by a ſtone, on which a turban is carved in relievo; thoſe of the aga's and other military officers, by a pile fixed in the ground cloſe to the coffin; thoſe of the ſea captains, by a ſtaff with a gilded ball at the top; and ſtones, in the form of a coffin, are laid on the graves of the common people.

The city of Algiers had formerly none but rain water, and the inhabitants were often greatly diſtreſſed upon that account: till a Moor, who had been driven from Spain, contrived, by means of two aqueducts, to introduce as much into the city as was requiſite to ſupply one hundred fountains with water. This water, which is allowed to be excellent, is brought thither by a long courſe of pipes and conduits, from a great variety of rivulets that have their ſources on the adjacent mountains.

The circumjacent country is very fertile, and the gardens, groves, and country ſeats numerous; in their gardens they uſe but little art, but truſt to nature in moſt productions of the earth, which occaſions a wild exuberance to prevail throughout the whole, and many of the fruits and vegetables not to arrive at the perfection they might be brought to by means of ingrafting, pruning, tranſplanting, &c. gardens are not walled, but ſurrounded by incloſures of Barbary fig-trees, which, from their compactneſs and prickles, are more ſecure than any other kind of fence. Among other rich ſpots in Algiers Proper, the great plain of Metijah is admired for its aſtoniſhing fertility: it is fifty miles in length, and twenty in breadth, includes many delightful villas, fragrant groves, and pleaſant gardens, and produces ſuch a profuſion of the moſt delicious fruits of all kinds, rice, roots, and grain of every ſpecies, that the inhabitants enjoy every year two, and frequently three crops.

The hot baths of Meereega are the only natural curioſities in the vicinity of this city; the principal of them is twelve feet ſquare, and four deep; the waters are exceeding hot; and, when they have filled the larger baſon, diſcharge themſelves into a ſmaller, where the Jews bathe, as they are not permitted to uſe the ſame bath as the Mahometans. Theſe hot baths proceed from the great quantities of ſulphur, nitre, and other inflammable bodies in the bowels of the earth; from whence likewiſe are cauſed the frequent earthquakes that the kingdom in general, and the city of Algiers in particular, are ſubject to.

SECT. V.

Of the Cuſtoms, Manners, Languages, &c. of the Inhabitants, alſo the Civil and Eccleſiaſtical Hiſtory of ALGIERS.

THE moſt antient poſſeſſors of Algiers were ſtiled Berebers; but the preſent inhabitants are compoſed of a mixture of theſe, with the Moors or Moreſcos driven from Spain, Arabians, Levantines, Turks, Jews, Chriſtian ſlaves of various nations, and the children deſcended from all the above combinations of people; the Moors and Arabians are the moſt numerous: the former are divided into two orders; namely, thoſe who live in towns and follow piracy, or various profeſſions by land or ſea, and others who wander about, not being poſſeſſed of either land or riches. The firſt are the citizens of the kingdom, the latter the bulk of the people.

We ſhall firſt deſcribe the wandering ſort, who are diſtinguiſhed into various tribes, each forming an itinerant village, and every family living in a portable tent; they ſubſiſt by the produce of the lands which they farm of thoſe of the firſt order; they pay their rent to their landlords in corn, herbs, fruit, honey, wax, &c. and a tribute to the dey, according to the number of the family in each moving camp. Their tents are mean, their utenſils trifling, their circumſtances poor, and their manner of living filthy. The family, and all domeſtic animals, lie promiſcuouſly in the hut together, except the dogs, which are placed on the outſide as guards. They live chiefly on rice, bread, fruit, and plain water, and their principal employ is huſbandry, or breeding bees and ſilk-worms.

The dreſs of the men is only a long piece of coarſe cloth wrapped round their ſhoulders, and falling down to their ancles, and a cap of the ſame. The women wear a piece of woollen ſtuff that covers them from their ſhoulders to their knees; they braid their hair, and adorn it with glaſs beads and fiſhes teeth, they deck their arms and legs with bracelets of ivory, horn, and even wood; and blacken their cheeks, foreheads, arms, legs, &c. The children are ſuffered to go naked till ſeven or eight years of age, when they cover them with a few rags, rather for ornament than decency. The ſheik or chief of every tribe wears a cap of fine cloth, and a ſhirt and cloak all of one piece, hanging from the ſhoulders half way down the leg. Theſe Arabs profeſs the ſame religion, cuſtoms, and manners, as thoſe of Arabia.

Theſe people are of a ſwarthy complexion and robuſt habit of body, both which may be aſcribed to their roving and abſtemious life. The men are active, the women fruitful, and the children healthy. When a youth would marry, he drives a number of cattle to the hut where the intended bride reſides. The girl and her parents, on viewing the ſtock immediately conſent; all the young women of the adowar or village are then invited to the feaſt: the bride is afterwards placed on a horſe of the bridegroom's and led home amidſt the ſhouts of all preſent. When ſhe arrives at the door of the bridegroom's hut, a mixture of milk and honey is given her to drink, while a nuptial ſong is ſung. She then alights, and is preſented with a ſtick, which ſhe thruſts into the ground, and repeats ſome lines to the following purport. "As this ſtick is faſtened in the earth, ſo I am in duty bound to my huſband: as nothing but violence can remove it, ſo death alone ſhall force me from his love." She then drives his flock to water and back again, to ſhew her willingneſs to perform any duty he may aſſign her. Theſe previous ceremonies being ſettled, all the company enter the hut, and the evening concludes with the greateſt feſtivity that theſe poor people are capable of enjoying. Subſequent to the marriage, the wife is obliged to wear a vail, and never ſtir from the hut for the ſpace of a month, and is excluded from all concern in and knowledge of public affairs ever after that time.

The Moors here are armed with a zagay or ſhort lance, and a ſcymitar, or broad cutlaſs: they are of a warlike diſpoſition, excellent horſemen, and ſometimes give the government great trouble: but are alſo great thieves, ſo that it is dangerous travelling without a marabout or prieſt in company, to whom they ſhew ſuch reſpect, that when they ſee a perſon thus attended, they will not attack him.

Of all the pirates in Africa, the Algerines are the moſt cruel and dangerous: they are alſo baſe, perfidious, and rapacious to the laſt degree; no oaths or ties, human or divine, will avail to bind them, when their intereſt interferes; in ſhort, notwithſtanding the reſpect they pretend to pay to Mahomet their prophet, gold is the only idol

they worſhip. The people who reſide on the coaſt are equally ſavage to ſuch as unfortunately fall into their hands by ſhipwreck: ſo that it appears the Algerines are as much ſtrangers to humanity as they are to an elegant taſte or polite behaviour.

Algiers retains the title of a kingdom, though in fact it is but a republic, as their public ordinances evince, which run thus: "We the great and ſmall members of the mighty and invincible militia of Algiers," &c. This alteration was cauſed by the tyranny of the Turkiſh baſſas, who were at length depoſed by the militia and janiſaries, who put up a dey of their own chuſing: when the Ottoman Porte, that they might not run the riſque of loſing Algiers intirely, found themſelves under a neceſſity of ratifying this regulation. The janiſaries now became extremely powerful, as they formed themſelves into a divan, and always elected a dey; but this dignity is a very precarious ſtation, for by the manner of election a dey is ſeldom choſen without much tumult and bloodſhed; he is always in danger, from the nature of his office; and ſeldom dies a natural death, which is owing to the diſpoſition of thoſe about him.

The aga of the janiſaries is the next officer in dignity and power: he only enjoys his poſt two months, and then retires upon a penſion. The other officers of importance are, a ſecretary of ſtate, twenty-four chiah baſſas, or colonels ſubordinate to the aga; eight hundred bolluk baſſas, or ſenior captains, and four hundred oldak baſſas, or lieutenants. In all theſe officers, the right of ſeniority is ſtrictly obſerved in Algiers; for a ſingle infringement in this eſſential point would immediately cauſe a revolt among the ſoldiery, and perhaps coſt the dey his life. Beſides the above, there are purveyors to the army, a body of guard to the dey, &c. and the officers to the Turkiſh forces, who are diſtinct from the reſt.

The people of Algiers in general uſe a compound of Arabic, Moreſco, and the remains of the antient Phœnician languages; but all public buſineſs is tranſacted, and records are kept in the Turkiſh tongue, though moſt of the Algerines of all denominations underſtand the Lingua Franca.

Though moſt of the Algerines are fond of the piratical trade, yet they admit free Chriſtians, Jews, Arabians, Moors, &c. to trade in ſilk, wool, cotton, leather, carpets, &c. in the country. They are alſo allowed to import gold and ſilver ſtuffs, damaſks, cloths, ſpices, tin, iron, braſs, lead, quickſilver, linen, cordage, ſail-cloths, bullets, rice, alum, tartar, cochineal, ſugar, ſoap, cotton raw and ſpun, aloes, copperas, brazil, logwood, arſenic, vermillion, gumlack, opium, ſulphur, aniſe and cummin ſeeds, ſarſaparilla, frankincenſe, galls, honey, paper, combs, cards, dried fruits, &c. And they are allowed to export oſtrich feathers, wax, hides, wool, copper, rugs, ſilk ſaſhes, embroidered handkerchiefs, dates, and Chriſtian ſlaves, who, for large ranſoms, are permitted to be ſent home. But commerce is greatly injured by the oppreſſions of the government, the ſuſpicions of the merchants, who are always afraid of being deprived of their properties, and the perfidy of thoſe who carry on the trade.

The three chief eccleſiaſtics are extremely reverenced by all: theſe are the mufti, the cadi, and the grand marabout. The firſt is the high-prieſt of their religion: the ſecond the ſupreme judge in eccleſiaſtical cauſes, and ſuch civil matters as the civil power does not interpoſe in; and the grand marabout, their great living ſaint, or hermit, or rather the general of that order who profeſs themſelves hermits or marabouts: the laſt have an inconceivable influence both on the government and the affairs of every private man in the kingdom, as upon all occaſions they take advantage of the weakneſs and ſuperſtition of the people, and enrich themſelves by their folly. The three eccleſiaſtics may be diſtinguiſhed by the largeneſs of their turbans: they ſit in the divan, a little below the dey, on his right hand; and when they enter the aſſembly, he riſes up and embraces them; but though they are adviſed with upon important occaſions, they have no vote here. The divan conſiſts of near two thouſand officers and ſoldiers, and of none but the Turkiſh ſoldiery.

Juſtice is venally adminiſtered, favour publicly ſold, and corruption ſo general, that it is not looked upon as a vice.

The uſual puniſhment at Algiers for offences not capital, is the baſtinado, which conſiſts often of ſome hundreds of blows over the ſoles of the feet, the calves of the legs, the buttock or belly, with an unmerciful cudgel. In capital caſes the Turks are ſtrangled with a bow-ſtring, which two people pull different ways with all their ſtrength: but the various deaths the poor Chriſtian ſlaves are put to, that offend theſe barbarous pirates, are almoſt innumerable; impaling, and burning, or rather roaſting, the unhappy ſufferers alive, are but too frequent on their attempting to make an eſcape, eſpecially if any Turk is killed in the ſcuffle; but the worſt of all deaths, is the throwing them off the walls of the town upon iron hooks, on which they are catched by the jaws, by the ribs, or ſome other part of the body, and hang in the moſt exquiſite torture for ſeveral days before they expire; but this, it is ſaid, has not been executed for many years: however, we find there have been inſtances of the crucifying Chriſtians, and nailing their hands and feet to the walls within theſe few years; to which they have been provoked by reports that were ſpread of ſome of their Chriſtian neighbours having been equally cruel to the Turks they had taken. A Moor convicted of burglary hath his right hand cut off, and faſtened about his neck, and then he is led through the city on an aſs with his face towards the tail; perſons of diſtinction, for crimes againſt the ſtate, are placed between two boards, and ſawn aſunder. Women detected in adultery are faſtened by their necks to a pole, and held under water till they are ſuffocated. And this leads us to give ſome account of the condition of the Chriſtian ſlaves at Algiers.

The corſair, or pirate, it ſeems, no ſooner takes a prize, but he examines into the quality and circumſtances of all his priſoners; and, if he imagines they do not give him a juſt account of themſelves and their comrades, he orders them to be baſtinadoed on the ſoles of their feet till they do. Having got what information he can, he brings them on ſhore after he has ſtripped them almoſt naked, and carries them to the dey's houſe, whither the European conſuls immediately repair, to ſee if there be any of the priſoners who belong to their reſpective nations, who are at peace with Algiers; for, in that caſe, they reclaim them, provided they were only paſſengers: but, if it be proved the priſoners ſerved for pay on board the ſhips of any nation at war with this government, there is no way to get them releaſed, but by paying the full ranſom.

The matter being ſettled between the dey and the conſuls, which of the priſoners ſhall be ſet at liberty, and which of them deemed ſlaves, the dey has his choice of every eighth ſlave, and generally takes the maſters, ſurgeons, carpenters, and moſt uſeful men belonging to the reſpective prizes: and, beſides his eighth, he lays claim to all ſuch priſoners as are of any quality, for whom a ſwinging ranſom may be expected: the reſt are left to the captor and their owners, and uſually carried to the beſiſtan, or ſlave market, where the crier proclaims the quality, the profeſſion and circumſtances of each of the unhappy captors, and the reſpective prices ſet upon them. They are led afterwards to the court before the dey's palace, and ſold by auction in his preſence to the beſt bidder; but whatever is given beyond the firſt price ſet upon them belongs to the government: the captors and owners have no more than the firſt price, which is divided equally between them.

The women throw a vail over them when they go abroad, ſo that they are unknown, to all but the ſlaves who attend them. Some are carried in litters made of oſier twigs and covered with painted cloth, but ſo low that they are obliged to ſit croſs legged in them: this mode of travelling is uſed by both ſexes in long journies, particularly pilgrimages, as the traveller can ſee and not be ſeen, and travel without being annoyed by wind, duſt, rain, heat, &c. The women in general lead a life of indolence, their principal employment being dreſſing, lolling on their ſofas, bathing, chatting, viſiting the tombs of their relations, and ſauntering in their gardens. The men ſpend moſt of their time with the women in their gardens, in converſation, drinking, coffee, ſmoaking, &c.

The Algerines, by their law, may have as many wives as they pleaſe, but they uſually content themſelves with two or three at the moſt. They ſeldom ſee them before marriage, but have their deſcription from a female go-between. When the marriage is agreed upon, the bridegroom ſends a preſent of fruits and ſweetmeats to the bride, and gratifies her relations with a feaſt and a muſical entertainment. On the nuptial day ſhe is conveyed, richly dreſſed, to the houſe of the intended bridegroom, where another entertainment is provided, and the marriage concluded.

When any of the Algerines are ſick, they are attended and nurſed by perſons of their own ſex. The phyſicians are very ignorant; and if they find their patients on the point of death, they turn them towards the eaſt. On the death of a perſon, the corpſe, after being waſhed, and clad in a ſhirt, drawers, ſilk robe, and a turban, is laid in a kind

of

of ſquare coffin, and carried on mens ſhoulders by means of poles to the grave, attended by the relations, friends, &c. Mourning is expreſſed by the women going veiled for ſome days, and the men wearing their beards for a month; during three days after the interment of the body, the neareſt relations viſit the tomb, diſtribute alms to the poor, and ſuffer no fire to be lighted in their houſes: the better ſort of people have epitaphs, or ſuitable paſſages from the koran upon their tomb-ſtones, in which, as with us, the dead are complimented with virtues which they never poſſeſſed, that the living may be flattered in the ſuppoſed merits of their deceaſed relations and friends.

The militia who elect their dey, are all natural Turks or renegado Chriſtians, admitted into thoſe troops generally denominated janiſaries, and amount to above twelve thouſand men: theſe are, by ſome, ſtiled the nobility of Algiers; and certain it is, that the frequent revolutions that happen at Algiers, are brought about by this claſs of people chiefly: they are but few in number indeed, compared with the native Moors: and yet they do tyrannize over the natives in a moſt inſolent manner. On the contrary, in the empire of Morocco, the Moors govern every thing, and will not ſuffer the Turks to have any ſhare in the government. The Moors here are ſaid to be a cowardly and mean-ſpirited people, in compariſon of the Turks; who have defeated armies of them, both in Morocco and Tunis, of ſix times their number, and ſtormed and plundered both their capitals within a very few years, compelling their reſpective princes to accept of ſuch terms as the deys of Algiers were pleaſed to impoſe on them. The reaſon of which ſuperiority is ſuppoſed to proceed either from that ſubmiſſion the Turks have always exacted from the Moors, whereby the latter are in a manner diſpirited; or that the Algerine Turks, being all men of ſword, engaged perpetually in the moſt deſperate ſervices by ſea and land, and, dreading no dangers, are an over-match for all their neighbours, who endeavour to live in peace: but, from what cauſe ſoever this ſuperiority proceeds, it is ſurprizing to obſerve, that leſs than ten thouſand of the Algerine Turks ſhould dare to march through great part of the empire of Morocco, and make themſelves maſters of the capital city of Fez one year, and afterwards of Tunis the next. But, it is certain, the native Moors have as great a dread of theſe pirates by land, as our defenceleſs merchants have of them at ſea, and tremble at the very name of an Algier Turk. Part of the Algerine ſoldiery ſerve as marines on board their veſſels; about one thouſand of them do garriſon duty, and part are employed in fomenting differences among the neighbouring Arab princes. The dey can bring one thouſand Mooriſh horſe into the field; but as they are enemies to the Turks, they are little truſted.

The Algerines are more formidable at ſea, than any other power on the coaſt of Barbary; and the ſea-fearing people are in great eſteem, on account of the prizes they frequently bring in; but ſtill they have no ſhare in the election of a dey: the fathers of the trinity aſſure us, that the Algerines have no leſs than five and twenty ſhips of war, from eighteen to ſixty guns, beſides a multitude of ſmaller cruiſing veſſels; and, as they have very little timber in the country, nor any naval ſtores whatever, their ſhips are either thoſe they take as prize, or in part built, and rigged out of the materials of ſuch ſhips as are taken: however, they never ſuffer the number of their ſhips of war to be diminiſhed; but, if any of them are loſt, or decayed, they immediately add as many more, by means of the military ſtores with which they are ſupplied by the Europeans, who purchaſe their friendſhip with the implements of miſchief, and court them not to make depredations on their trading ſhips, by furniſhing them with the power to do it: the Engliſh conſul, in particular, provides them with powder, balls, bombs, fire-arms, anchors, cordage, &c. takes in return, corn, oil, proviſions, and other neceſſaries for the garriſon of Gibraltar; we muſt however confeſs, that the ſuccours afforded from time to time to this place have been of unſpeakable ſervice to it during the late tedious ſiege of that fortreſs by the Spaniards. The Algerine ſailors are compoſed of Couloglies, Moors, renegadoes, Chriſtian ſlaves, &c. but all the officers muſt be Turks. The ſailors in general are extremely filthy, and even boaſt of their naſtineſs, pretending to deſpiſe the nicety found in moſt of the veſſels belonging to the Chriſtians.

We ſhall now proceed to give ſome account of the hiſtory and revolutions that have happened in Algiers, from the time that the Romans were expelled the Algerine territories by the Vandals and other northern barbarians, who held them from the year 427 to 558, when they were conquered by Beliſarius, the emperor Juſtinian's celebrated general.

From the above-mentioned period, they continued ſubject to the Greek emperors till the year 663, when the whole country was over-run by the Arabs, who remained maſters of it till 1051, when Abel Texein, of the Zinhagian tribe, expelled them, and took the reins of government upon himſelf, which continued in his family till the twelfth century, when the Zinhagians were driven out by the marabouts. This prieſtly race was ſoon diveſted of power by the Benimerini, who in the thirteenth century, were likewiſe deprived of what they had conquered, by the ſharifs of Haſcen, who divided Algiers, and other parts of Barbary, into ſeveral petty kingdoms; but falling out among themſelves, Ferdinand V. king of Arragon, took advantage of their civil diſſentions; and in the year 1505, by advice of his prime miniſter cardinal Ximenes, ſent a powerful armament to Algiers, under the command of the count of Navarre. This nobleman ſoon made himſelf maſter of Oran, Bugia, and ſome other places. In this exigency the Algerines applied to Selimi Eutemi, an Arabian prince, for aſſiſtance; but though he aided them to the utmoſt of his power, he could not prevent the count from making the city of Algiers tributary to the court of Spain. This ſubjection continued till the death of king Ferdinand, which happened in 1516, when the famous pirate Barbaroſſa undertook their deliverance; but, inſtead of vanquiſhing their enemies, he conquered the kingdom of Tenez and Tremeſen, and eſtabliſhed his power ſo firmly as to be dreaded not only by the neighbouring ſtates, but by the Europeans; till, in 1517, the emperor Charles V. prepared to oppoſe him, and to ſet the young king of Tremeſen on the throne, of which he had been deprived by Barbaroſſa. The Spaniards and Arabs reconquered the kingdom of Tremeſen, after having totally defeated the army of Barbaroſſa, who was himſelf ſlain, and his head carried from the field of battle in triumph upon a lance.

Barbaroſſa's defeat and death occaſioned great conſternation at Algiers; but the people determined to chuſe his brother Hayradin Barbaroſſa king and high admiral in his room. But Hayradin, fearing that he ſhould not be able to ſupport himſelf againſt the numerous enemies that ſurrounded him, and his own domeſtic foes, applied to the Grand Signor, and propoſed to cede the Algerine kingdom to him, on condition that himſelf ſhould continue to rule it as viceroy, and be aſſiſted with ſome Turkiſh forces. Theſe propoſals were gladly accepted by Selim I. and a body of forces immediately diſpatched to the aſſiſtance of Hayradin.

Being now become formidable to the Moors and Arabians by land, and the Chriſtians by ſea, Hayradin laid ſiege to the Spaniſh fort, which was a continual thorn in his ſide, and took it by ſtorm, after a brave reſiſtance. Being now ſecure from enemies, he turned his thoughts to improve the harbour of Algiers; which he did effectually, by building a ſtrong mole for the ſafety and convenience of the ſhipping. Upon this great work, thirty thouſand Chriſtian ſlaves were inceſſantly employed till the whole was completed: he afterwards repaired the fort, and put a ſtrong garriſon in it, and thus rendered Algiers more ſecure than ever it had been, againſt the attack of an enemy.

Hayradin was now raiſed by the grand Signor to the dignity of captain baſſa of the Ottoman empire, and Haſſan, a Sardinian renegado, appointed baſſa of Algiers in his ſtead. The latter purſued his piracies with great ſucceſs, and even made depredations on the coaſts of the eccleſiaſtical ſtate. This induced the pope to exhort the emperor Charles V. to put a ſtop to the ravages of the Algerines; which that monarch immediately undertook, and ſoon ſet ſail at the head of a formidable armament, conſiſting of one hundred and twenty ſhips, twenty gallies, a large train of artillery, thirty thouſand ſoldiers, and a great number of volunteers of ſeveral nations, among whom were many knights of Malta. Theſe forces being landed, the emperor built a fort on an eminence, which to this day goes by the name of the emperor's fort; he then cloſely inveſted the city, and greatly diſtreſſed the inhabitants, by turning the courſe of the ſtreams that ſupplied it with water.

After theſe operations, the Algerines looked upon their condition as ſo deſperate, that the members of the divan were upon the point of ſurrendering the city, when a poor eunuch, named Yuſef, who was looked upon as a lunatic, appeared in their preſence, and thus addreſſed them: "My lords, I am the poor Yuſef, the ſlave of ſlaves, and moſt abject of Muſſulmen, perſecuted by the great, re-

preſented as a madman by our marabout, on which account not only my advices have been rejected, but myſelf treated ignominiouſly; the cadi, who is the judge of the law, hath often made me undergo very ſevere public puniſhments; and why? Becauſe the Almighty, whoſe ways are to us unſearchable, hath ſometimes given to me an inſight into futurity; and what I have hitherto foretold, hath been thought unworthy of their regard. I have remained ſilent towards them that deſpiſed me, but have informed thoſe poor people, who pitied and relieved me, of things of the greateſt moment to them: but at this juncture, Haſſan, being ruler of our city, the public danger forces me to ſpeak: here is a powerful fleet of infidels, whoſe veſſels are crouded with armed men, and who have come as ſuddenly upon us as if they had riſen out of the ſea. We are deſtitute of every means of defence, and our only hope is placed on an equitable capitulation, if equity can be expected from Chriſtians. But God, who laughs at the machinations of men, hath quite other thoughts; he will releaſe his people out of the hands of idolaters (for ſo the Mahometans call the Roman Catholics) in ſpite of all their ſaints, be they ever ſo many. Lord Haſſan, and you his miniſters, and great men of the kingdom, and learned men in the law, I call upon you to take courage, rely for this once upon the deſpiſed and abject Yuſef; and be aſſured, that before the end of this moon God will diſplay his glory to the utter confuſion of the Chriſtians. Their ſhips and army will periſh in your ſight, and our city be victorious and free. Their arms and equipage will fall to our ſhare: and as they have already employed a vaſt number of hands in erecting forts for our future defence againſt themſelves, ſo a ſmall number only of thoſe blind and hardened people ſhall be permitted to return to their own country, but ſhall continue ſlaves to us in the place they thought to conquer."

The members of the aſſembly were diverted by this ſingular ſpeech from their intended deſign of delivering up the city: and what is ſtill more extraordinary, every circumſtance of the prediction was verified within the month, the greateſt part of the emperor's fleet being deſtroyed by a violent tempeſt, and his army greatly diſtreſſed by the inceſſant rains, which occaſioned torrents of water to pour down from the mountains, and overwhelm his camp. Theſe diſaſters obliged him to raiſe the ſiege, which he did with precipitation, leaving behind him tents, baggage, artillery, &c. and betaking himſelf to his ſhips; which the Algerines no ſooner perceived, than they fell upon his troops while they were embarking, cut many to pieces, and took a great number of priſoners. In fine, the emperor's whole loſs amounted to one hundred and twenty ſhips and gallies, three hundred officers, and above twelve thouſand ſoldiers or ſailors killed or drowned, and near as many taken priſoners; with reſpect to the latter, the Algerines in deriſion put many of them up to public ſale, at an onion per head. The Algerines rewarded Yuſef liberally, looking upon him as a ſaint; and they have ever ſince been great admirers of the art of divination, and much addicted to the ſtudy of aſtrology.

Not long after this event, Haſſan died, and was ſucceeded by Haji, an officer of the militia, who was, however, obliged to reſign in favour of Haſſan, the ſon of Hayradin, the brother of Barbaroſſa; the latter being nominated by the Ottoman Porte. In the beginning of the reign of this prince, the Spaniards obliged the Algerines to evacuate Tremeſen; but a few years afterwards they ſubdued and plundered it. Haſſan was afterwards, by the intrigues of the baſſa Ruſtan and Salha Rais, depoſed, and a creature of theirs advanced to the throne in his ſtead. This prince rendered tributary ſeveral Numidian provinces, and returned with fifteen camel loads of gold duſt, and other valuable ſpoils; he afterwards died of the plague, and was ſucceeded by a Corſican renegado, called Haſſan Corſo, who was murdered by Tekelli, a Turk. This latter tyrannized but a ſhort time, being killed by Yuſef Calubres, who ſucceeded him, and reigned only ſix days, being ſuddenly carried off by the plague.

The ſupreme dignity was now held in truſt by Chajah, a Turk, till the pleaſure of the Porte was known; when Haſſan, who had been depoſed by means of Ruſtan and Satha Rais, was reſtored by the Grand Signor's order, and Chajah quietly reſigned the government to him. This prince invaded Tremeſen, but was totally defeated: the enſuing year, however, made ſome amends, for, the Spaniards making an attempt upon Moſtagan, he gave them a dreadful overthrow. In the fight, the brave count d'Æcondela and his ſon Don Martin de Cordova, with many other officers, and a great number of private men, were ſlain, and twelve thouſand Spaniards, including ſeveral noblemen and gentlemen, were made captives; but Haſſan, becoming obnoxious to the janiſaries, was again depoſed, and ſent to Conſtantinople in irons; when Boſnoc Huſſan, aga of the janiſaries, and Couza Mahomet, the general of the land-forces, took upon them jointly the office of deputies, to ſuperintend the affairs of government. Soon after a new viceroy, named Achmet, arrived at Conſtantinople, who began his reign by ſending the two deputies to that city, where they were beheaded. Achmet died in four months; and his lieutenant Yajat governed the kingdom four more, till the will of the Ottoman court could be known, when Haſſan was a third time appointed to the ſovereignty; ſuch was the friendſhip which Solyman II. entertained for him, and the eſteem which he always profeſſed for his father and uncle, the two famed Barbaroſſas.

Haſſan was no ſooner reinſtated on the throne of Algiers, than he raiſed a greater armament than had ever been collected by any of his predeceſſors; his army conſiſted of fifteen thouſand Turks, renegadoes, &c. one thouſand ſpahis, and ten thouſand horſe; and his fleet of thirty-two gallies and galliots, and three French veſſels laden with proviſions; with this force he intended to make himſelf maſter of Marſaquiver, and drive the Spaniards from thence, this he had nearly effected, when a powerful fleet appeared upon the coaſt, under the command of the celebrated Genoeſe admiral Doria, which obliged him to raiſe the ſiege with precipitation. The court of Conſtantinople now growing jealous of him, he was obliged finally to reſign his dignity; when retiring to that city with all his wealth, he died about three years after, in the eighth year of his baſſaſhip, and the fiftieth of his age.

Mahomet, the ſucceſſor of Haſſan, was a public-ſpirited prince, and became very popular on many occaſions; in particular, he incorporated the janiſaries and Levantines, which proved the firſt ſtep towards rendering Algiers independant of the Ottoman Porte. In this prince's reign, a bold Spaniſh adventurer, named Gaſcon, made a romantic attempt on Algiers; but, being taken priſoner, he was put to a cruel death. The Grand Signor, however, thought proper to depoſe Mahomet, and appoint a renegado, called Ochali, or Halibaſſa, in his room. This prince ſubjected Tunis, took three rich Malteſe gallies, and in the famous battle of Lepanto was the only Mahometan chief who gained the leaſt reputation: he was nevertheleſs ſoon after depoſed by the Porte, and Arab Achmed appointed to the government in his ſtead. Within three years the latter was recalled, and Rumardan Sardo placed in his room, who contributed to the expulſion of the Spaniards from moſt parts of Barbary, and aſſiſted Muley Moloch in the conqueſt of Fez; but being recalled from Algiers, he was ſent as baſſa of Tunis, and, in his ſtead, Haſſan Verſedic was appointed to the kingdom of Algiers. This prince reigned better than three years; and being recalled, on account of his uncommon extortions, an Hungarian renegado, named Jaffer, ſucceeded him, and arrived at Algiers about the end of Auguſt 1580, when that city ſuffered a dreadful famine, occaſioned by his predeceſſor's having monopolized the principal neceſſaries of life.

Jaffer, by the moſt prudent methods, relieved the diſtreſſes of the people, and acted with great equity upon all other occaſions; yet the rapacious Haſſan found means to make ſo many friends at the court of Conſtantinople, that the juſt Jaffer was recalled, and himſelf again appointed to the government of Algiers. The firſt thing he did, after his reſtoration, was, to fit out a conſiderable fleet, with which he made irruptions on the coaſts of Sardinia, and plundered other parts of Chriſtendom; but becoming once more diſpleaſing to the Ottoman Porte, he was again recalled, and poiſoned ſoon afterwards.

The above tyrant was ſucceeded by Mommi Arnaud, who grew ſo bold, that he effected what no corſair had ever before been confident enough to attempt, that is, to paſs the ſtraights of Gibraltar. After entering the Atlantic Ocean, he proceeded to the Canaries Iſlands, which he plundered, and returned to Algiers in ſafety, notwithſtanding a Spaniſh fleet of eighteen ſhips was ordered to watch his return; but he took the opportunity of repaſſing the ſtraights in a ſtormy night when the Spaniards ſought ſhelter in different ports. He was ſucceeded by Achmet, being ſoon afterwards ordered from Algiers to the Tuniſian government.

Achmet invaded the Chriſtian territories, reigned three years, and then was ordered to the government of Tripoli, to make room for Hidir baſſa, who, in the year 1592, was recalled, and ſucceeded by Shaabanbaſſa; the latter

ruled Algiers about three years; when being ordered to Conſtantinople, his kinſman Muſtapha was placed on the throne. This prince was ſupplanted four years afterwards in favour of Hidir baſſa, who was re-appointed to the government of Algiers by the Porte. Hidir had no ſooner regained his power, than he extorted fifteen thouſand ducats from Muſtapha, before he ſet ſail for Conſtantinople, and ruled the Algerines with his uſual tyranny, oppreſſing the poor, and plundering the rich with the utmoſt rapacity. All theſe things Muſtapha, on his arrival at Conſtantinople, repreſented with ſuch energy, and painted Hidir's character in ſuch glaring colours, that the Ottoman miniſtry thought proper again to recall that tyrant and to re-appoint Muſtapha once more. The latter ſoon returned to Algiers, ſtripped Hidir of the principal part of his ill-got wealth, ſent him to Conſtantinople, and afterwards ruled the people with ſo much juſtice and moderation, and acted upon all occaſions with ſuch generoſity and humanity, that he was beloved by all ranks of people, and the nation was never more proſperous or happy than while he conducted the public affairs.

We have now brought the hiſtory of the Algerines down to the latter end of the ſixteenth century: all that now remains worthy of notice, is, that in 1682 the Algerines made a treaty of alliance with England, and in the ſame year plundered the French coaſts; which occaſioned the court of France to ſend a fleet againſt them under the command of the marſhal du Queſne, who cannonaded Algiers; but a ſtorm ariſing, his ſhips received ſome conſiderable injuries which obliged him to return home. He was no ſooner gone, than the Algerines ſallied forth, put to ſea, ſailed for France, and committed the moſt dreadful ravages on the coaſt of Provence. This new inſult ſo much exaſperated the French monarch, that he ordered the marquis du Queſne, and the marquis d'Amfreville to ſail for that city, in order to puniſh thoſe pirates for their audacity. The French ſquadron came before Algiers in May 1683, and poured in ſuch a ſhower of bombs, that the place was ſoon in flames: the dey's palace, many moſques, and other public buildings, with a vaſt number of private houſes, were deſtroyed; the ſlain and wounded were very numerous, and the people greatly diſtreſſed. This occaſioned them to ſue for peace; when one of the principal articles inſiſted upon by the marquis, was, the delivery of all Chriſtians taken under French colours. This was aſſented to, and one hundred and forty-two of them brought on board the next day, with a promiſe of ſending the remainder: but unfortunately the negotiation broke off, and the Algerines again hung out the bloody flag. The marquis accordingly renewed the bombardment, when great deſtruction and ſlaughter enſued; to revenge which, the Algerines had recourſe to the moſt bloody and ſavage cruelty, murdering all the French captives, and firing off the conſul of that nation from the mouth of a mortar. This inhumanity the French admiral puniſhed by deſtroying all the ſhipping and fortifications, and all buildings in the lower, with moſt of thoſe in the upper part of the city; that is in fact, all that his cannon or bombs could reach. Having done as much miſchief as he intended, he ſailed home, and a peace was ſoon after concluded between the two nations.

The Algerines, in 1686, entered into a treaty with the Engliſh (or rather renewed one entered into in 1682,) which was often broke, and often renewed in ſubſequent years, till it was thought proper to chaſtiſe them for their perfidy; when captain Beach attacked ſeven of their frigates, drove them on ſhore, and burnt them. This brought them to their reaſon: the treaty was revived in 1700, with the addition of three articles; and ſoon after two other articles were added, in a treaty with Sir George Byng, afterwards lord viſcount Torrington. But the Algerines were never punctual in the performance or due obſervance of their treaties with us, till we became poſſeſſed of the important fortreſſes of Gibraltar and Minorca, the latter of which has lately fallen by conqueſt into the hands of the French and Spaniards; for till we had poſſeſſion of thoſe places, their faith was a farce, and their words but wind; but our having command of the ſtraights, by means of thoſe important acquiſitions, obliged them to do thoſe things through fear, which they would never be prompted to from motives of integrity.

Admiral Baker, in 1716, renewed and ratified all the former treaties with Algiers, in the ſame manner as he did with the ſtates of Tunis and Tripoli, of which we ſhall take notice in the ſequel.

In July 1775 the Spaniards attacked Algiers with a very formidable fleet and army; but, by the miſconduct of their principal officer, the Algerines obtained a conqueſt, and the Spaniards were obliged to retire with great precipitation, after a loſs of about eight hundred killed, and two thouſand wounded; and no other attempt has been made ſince that time, though they have continued their preparations.

SECT. VI.

Treating of the preſent State of the Kingdom of TUNIS, its Bounddries and Extent, chief Towns, Inhabitants, their Cuſtoms, &c.

THE kingdom of Tunis is bounded by the Mediterranean ſea, on the north; by the ſame ſea and Tripoli, on the eaſt; by mount Atlas, on the ſouth; and by the river Guadilbarbar, which ſeparates it from the kingdom of Algiers, on the weſt; lying between thirty and thirty-ſeven degrees and a half north latitude, and extending near two hundred miles from weſt to eaſt. This kingdom was antiently the republic of Carthage.

The chief rivers are, The Guadilbarbar, already mentioned, which riſing in mount Atlas, runs northwards, and diſcharges itſelf into the Mediterranean near the iſland of Tabarca. The Capes, or Capitla, which riſes alſo in the mountains of Atlas, and runs north-eaſt, falling into the ſea near the town of Capes. Mejerada, which riſes in Mount Atlas, and running northwards, divides the kingdom of Tunis almoſt in two equal parts, diſcharging itſelf into the Mediterranean near the town and iſland of Goletta. There is alſo the Zaine, which ſeparates the Tuniſian from the Algerine dominions; the Miliana, which forms the bay of Tunis; and the Gabbs, or Triton of the antients.

The chief towns are, Cairvan, or Kayr-wan, ſituated on the river Mejerada, latitude thirty-two, ſaid to be the firſt town the Saracens built in this country, and moſt remarkable at preſent for being the burying place of the Mahometan princes and great men. Urbs, or Tuburbo, ſituated in a fine plain, on a river that falls into the Guadilbarbar, latitude thirty-five, about one hundred and fifty miles ſouth-weſt of Tunis; remarkable for the marble pillars, images, and other Roman antiquities found here. Africa, or El-Melidia, ſituated on the Mediterranean, in latitude thirty-five, ninety miles ſouth-eaſt of Tunis, ſaid to be the Adrumetum of the Romans. Suſa, or Ruſpina, ſituated partly on a flat, and partly upon the aſcent of a rock on the Mediterranean, twenty-five miles to the eaſtward of Tunis: it lies in ruins at preſent, and is ſaid to contain more antiquities than any town in the kingdom: here is a ſmall harbour, where the gallies and ſmall ſhips belonging to Tunis frequently lie. Modern geographers divide this kingdom into eight diſtricts, viz. Tunis Proper, Byrſa, or Carthage and Goletta, El-Medea, Suſa, Kayr-wan, Ramamet, Bizerta, Porto Farino. We ſhall deſcribe the principal provinces, towns, and cities.

The city of Tunis, the capital of the kingdom, is ſituated on a fine plain near a ſpacious lake, in thirty-ſix degrees and a half north latitude, almoſt over-againſt the iſland of Sicily, and but a few miles from the place where the famous city of Carthage ſtood. It is about three hundred miles from Algiers, and three or four leagues diſtant from the Mediterranean, is a large, populous city, and a place of ſome trade; the walls about a league in circumference, but of no great ſtrength. The baſſa's palace, the moſques and bagnios are the moſt remarkable buildings in it. The houſes are all of ſtone, and but one ſtory high; thoſe belonging to the better ſort of people are built about little ſquares, adorned with pillars, galleries and fountains; but have no other light than what they receive from the doors that open into the ſquares; and the roofs of the houſes are flat and terraced, as in other Mahometan countries. When Charles V. took it in the year 1535, it is ſaid to have contained an hundred thouſand men, beſides women and children: but this, we preſume, muſt comprehend all ſuch Moors as fled thither for protection on this invaſion of the Chriſtians: certain it is, the numbers are not near ſo great at preſent.

The grand moſque is remarkable for its bigneſs and magnificent tower, but in other reſpects it merits not attention, as the architecture is intirely in the Turkiſh taſte. The city has five gates, viz. Vaſonk, Carthage, Elboar, Aſſeya, and Elinenar-gate; and without the walls are the Turkiſh ſepulchres, which have an agreeable look from the intermixture of marble tombs, and flower-plats. The bey's palace is a magnificent ſquare ſtructure, with four ſuperb gates, one at each front, and turrets at each end. The galleries are rich and elegant, the courts capacious, and the apartments very ſpacious, and handſome; but

the gardens, though large, are laid out in a bad taſte. In the treaſury chamber, beſides other valuable articles, the book containing the Tuniſian code of the laws, is kept. The city is defended by a ſtrong caſtle erected on an eminence, by the fort of Goletta, and by a fortreſs built on an iſland in the neighbouring lake. The colleges and academies, are numerous and large; the janiſaries barracks ſpacious, the cuſtom-houſe tolerably handſome, and the exchange for the merchants very convenient. The dock is tolerable, and the arſenal pretty well ſtored with materials for the building of gallies.

There is a very capacious piazza in the ſuburb, that formerly contained about three thouſand ſhops, but their number at preſent is much diminiſhed. The ſtaple commodities are woollen, and linen, in which articles the manufactures excel all others in Barbary.

The inhabitants of Tunis are a mixture of Turks, Moors, Arabians, Jews, and Chriſtians of various nations, but their general character does them ſingular honour, as they are reputed to be more polite and juſt, rather kinder to their ſlaves, and much leſs haughty, inſolent, and mercenary than moſt of the other inhabitants of Barbary; in fine the generality of them prefer the fruits of honeſt induſtry to unlawful plunder, and rather than ſeek wealth from piracy, endeavour to obtain it by commerce. Both ſexes are clean in their perſons, and neat in their dreſſes, uſe perfumes very much, and bathe frequently: the women, when they go abroad, are vailed, but at home they are permitted to be ſeen by, and converſe with ſtrangers.

Palms, figs, dates, citrons, lemons, olives, &c. are very plentiful in Tunis, but there is a great ſcarcity of corn, and the inhabitants are not ſecure of what little they raiſe; for it is no uncommon thing, in harveſt time, for the Arabs to come ſuddenly upon the huſbandmen, and plunder the whole territory of the ripe grain. The rich, however, are ſupplied by commercial means with wheat, with which they make fine cakes, and an excellent kind of vermicilli. The poor are obliged to content themſelves with barley, and even that they cannot at all times procure; but when they are ſo happy as to obtain a little, they regale themſelves, by making it into a dumpling, which they eat without cooking, only dipping it into a little oil and vinegar, or plain water if thoſe are not to be got; they have, however, plenty of honey and fruits, but ſeldom eat meat, except upon feſtivals, or ſome very ſingular occaſion.

Nabel is ſituated in a low ground, at about a mile and a half from the ſea ſhore, and nine miles from Tunis. It is famous for its potteries, and a flouriſhing town.

Marſa or El-Merſa, was ſuppoſed to have been founded by queen Dido, one hundred and forty-one years before the building of Rome. Its name implies a haven. It is ſituated where a part of antient Carthage ſtood; and contains a magnificent moſque, a capacious college, about eight hundred houſes and ſeveral palaces, built by the moſt conſiderable Tuniſians for pleaſure, as the territory is exceedingly agreeable and fertile. This pleaſant diſtrict was once the ſeat of the celebrated city of Carthage, the center of commerce, miſtreſs of the ſea, and rival of imperial Rome, when that city was in its moſt flouriſhing ſtate.

Kommart, ſtands at a little diſtance from the ruins of antient Carthage, and about nine miles north of Tunis; it is a walled town, inhabited by fiſhermen and gardeners, who ſupply Tunis with fiſh, fruit, and ſugar canes.

Ariana, is about three miles diſtant from Tunis: it is a ſmall village, and inhabited by poor gardeners, who bring to ſale to that city their fruits and herbs.

Arradez, is famous for its fine ſprings and excellent baths: it is ſituated on the road between Tunis and the gulf of Goletta.

Sonſa, or Suſa, is one of the moſt conſiderable cities in the kingdom, and the capital of the province of the ſame name. It has a flouriſhing trade for oil, linen, wax, honey, and pickled fiſh. The town is ſituated on a high rock, behind which runs an extenſive plain country, fertile in barley, figs, olives, fruit, and paſturage. Though it hath greatly dwindled from its priſtine grandeur, it is ſtill wealthy and populous, and the inhabitants are polite and courteous to ſtrangers. A Turkiſh baſſa reſides here; the ſuperior people are merchants, warehouſemen, and mechanics; the lower claſs are huſbandmen, herdſmen, and potters. It has a good port, and pays twelve thouſand ducats to the governor of the province.

Monaſteer, is a flouriſhing city, ſurrounded by ſtout walls, and ſituated on the extremity of a cape; the houſes are handſome, but the inhabitants are extremely poor. This city was famed in the Roman and Carthagenian times.

Scarce any veſtiges are now remaining of Heraclea, a city on the ſea-coaſt, built by the Romans, but ſince deſtroyed by the Arabians.

Kayrwan, or Carvan, though ſituated in a barren deſart, deſtitute of freſh water, and without the leaſt article for the ſuſtenance of life, except what is brought in carts from ſeveral miles diſtance, is nevertheleſs one of the moſt populous and flouriſhing towns of the kingdom, and the capital of a province of the ſame name. It is twenty-four miles from Sonſa, and has, about half a mile from the town, a reſervoir and a pond for the reception of rain-water; the inhabitants are ſupplied from the firſt, and the caſtle by the laſt; the waters of both, but more particularly of the latter, are unwholeſome, and occaſion many diſorders, not only in the beaſts, but in the human ſpecies. This city was rebuilt by Hukba, generaliſſimo of Ottoman or Hatman's forces, which laſt was the ſucceſſor of Mahomet III. calif of Damaſcus, in the year 652, and had ſent him from Arabia into theſe parts to make what conqueſts he could in them. Hakba having landed his forces in ſome of the neighbouring ports, made choice of this barren and deſolate ſpot for the place of their rendezvous, and of the ruinated city for his retreat, which he accordingly cauſed to be ſurrounded with lofty and ſtrong brick walls, flanked with ſtately towers; and, among other noble edifices, built a moſt magnificent moſque, ſupported by an incredible number of ſtately columns of the fineſt granate, two of which were of ſo exquiſite and lovely a red, beſpangled all over with little white ſpots like the porphyry, that their price was reckoned ineſtimable, and the whole ſtructure the moſt magnificent in all Africa. It had likewiſe a very conſiderable revenue and endowments, and the title and privilege of a head metropolis, as being the firſt Mahometan moſque built in this part of the world, upon which account it is likewiſe become the burial place of the Tuniſian monarchs; and not only they, but all the grandees and wealthy men of the kingdom, are ambitious of having their remains depoſited in it, from a ſuperſtitious notion, that the prayers of the head pontif and ſucceſſor of Mahomet will procure them a plenary pardon for their ſins, and ſend them by the neareſt way into Paradiſe. The very city itſelf is held ſo ſacred among them, that thoſe great perſonages uſually pull off their ſhoes before they enter it, and cauſe ſome ſtately chapels and oratories to be erected over the graves of their deceaſed relations, and ſettle a yearly ſum on ſome perſons, not only to keep them in repair, but likewiſe to retain a number of idle prieſts and monks to reſort thither at proper times. It is moſt probably upon the account of this ſuperſtitious concourſe, and vaſt donatives, that this city is ſtill ſo thriving, notwithſtanding proviſions are very dear and ſcarce.

Tobulba, is now but a very poor village, though it was once a conſiderable city; and Gables or Capes, once a noble city, is in much the ſame condition. The iſland of Jerba, which is the ſouthern boundary of the baſſa's ſummer circuit, is about twelve miles ſouth of the latter.

Hamamet, is fifty-one miles from Tunis by land, and ſixty leagues by ſea: it is a ſmall but opulent city, ſituated upon a promontory near the ſea, and ſo well ſecured on the land ſide by rugged and inacceſſible rocks, that a very ſmall expence would render it totally impregnable.

Biſerta is ſituated near the place where Utica formerly ſtood; thirty-ſeven miles north-weſt of Tunis, and two hundred and forty weſt of Algiers; it is well fortified, particularly on the ſide neareſt the ſea, and contains two towers to defend the haven, a conſiderable magazine, and two large priſons for ſlaves; it has plenty of freſh water, and is well ſupplied with fiſh. Eight inconſiderable villages belong to the governor of this place, whoſe inhabitants, as well as thoſe of Biſerta itſelf, are miſerably poor, though the territory is pretty fertile; their only dreſs is coarſe cloth wrapped round their bodies, and another about their heads in lieu of a turban. They are, however, admirable horſemen; but they do not ſhoe their horſes, or uſe either bridles or ſaddles. The Biſertans are deemed by all travellers the moſt ſuperſtitious people in the kingdom of Tunis, and by ſome in all Barbary. They will not undertake the moſt trivial affair without hanging a great number of amulets or charms about them; and if they travel, they load their horſes with the ſame kind of ſuppoſed ſecurities, which are only pieces of parchment or paper inſcribed with ſtrange characters, and ſewed in leather or ſilk. It is ſituated in forty degrees ten minutes eaſt longitude, and twenty-ſeven degrees twenty minutes north latitude.

Porto Farino is ſeated to the weſt of the ruins of Carthage, and thirty miles north of Tunis; this place is

much fallen from its antient ſplendor, and is at preſent only remarkable for its fine cotton, where the Tuniſian navy is kept. The town is called by the natives Gar-el-Mailah, or the Cave of Salt, from the ſalt works in the vicinity. Lewis king of France, commonly called St. Lewis, died here on his expedition to the Holy Land: it is ſubject to the dey of Tunis, and lies in nine degrees eaſt longitude, and thirty-ſix degrees thirty minutes north latitude.

Tuburbo, or Urbs, is inhabited by Andaluſian Moors: it is ſituated one hundred and eighty miles ſouth of Tunis, has a caſtle with ſome cannon, and a garriſon. Many veſtiges of its former ſpendor are here found; and Maham bey, from the ruins of a magnificent theatre, cauſed a very lofty bridge, or rather dam to be erected, in order to raiſe water from the river Mejerda ſufficiently high to water a beautiful plantation of oranges, lemons, citrons, pomegranates, nectarines, peaches, apricots, dates, figs, and other fruit-trees, which were ſet in different ſpots, that they might grow without intermixing with each other. Between the caſtle and the town, a chryſtalline ſtream of freſh water ran through an alabaſter conduit, and turned ſeveral mills in its courſe, but this valuable work is now entirely gone to decay.

Along ſome part of the coaſts of this kingdom, there are the ſand banks, which hydrographers denominate *ſyrtes*, being very dangerous, as ſhips which approach too near are drawn in by the vortex, and often loſt. The hot ſprings in many parts of the country likewiſe deſerve mention. The water of thoſe of Meſkoutean and Meereeg, are exceedingly hot, particularly thoſe of the firſt; but their exceſſive heat renders them unfit for bathing. The baths of Jereed, Caſſa, and Zozer, are only lukewarm; but thoſe of Seedy-Ebli and Elelma-el-Hammah are juſt of a proper temperature.

There are ſeveral ſalt lakes and marſhes in this kingdom, and a mountain of ſalt, named Jibbel Hadileſſe, which is as hard as a rock, of a dark red colour, and bitter; but when it is waſhed from the precipices by the rains, it loſes its bitterneſs, and becomes ſoft and white; beſides the above, there are ſome ſmall rocks of a bluiſh caſt, the ſalt of which ſells at a high price, and is much admired.

In this kingdom ſome artificial curioſities are found, beſides thoſe already mentioned, particularly a threefold moſaic pavement, which is a noble piece of workmanſhip, exhibiting a great number of objects in the animal and vegetable creation, beautifully diverſified, finely variegated with the moſt admirable colours, and wrought with a ſymmetry that is truly aſtoniſhing; this place is called Seedy-Donde, or the Sanctuary of David; for the natives imagine that it is the ſepulchral monument of a celebrated Mooriſh ſaint of that name. However, from the nature of the workmanſhip, it evidently appears to be the fragment of a Roman prætorium, which is alſo the opinion of Doctor Shaw.

The amphitheatre of Jemine, or rather its fragments, is another magnificent piece of Roman antiquity: they conſiſt of ſixty-four arches, and four orders of columns, but have ſuffered conſiderably from one of the beys, who ordered four of the arches to be blown up; they have likewiſe ſuſtained great injury from the Arabs.

The mauſoleum near Hamamet is an admirable building, in the form of a cylinder, vaulted beneath, and ſixty feet in diameter; and the remains of the triumphal arches of Spaitla evince their antient magnificence.

Having thus given an account of the moſt remarkable cities and towns in the kingdom of Tunis, according to their modern ſtate; we ſhall proceed to deſcribe the antient and celebrated city of Carthage, the centre of commerce, miſtreſs of the ſea, and rival of imperial Rome, when that city was in its greateſt ſplendor.

Carthage was ſuppoſed to have been founded by queen Dido, one hundred and forty-one years before the building of Rome. This city ſtood on a gulf, in a peninſula of between forty and fifty miles in circuit. In the centre of it was the citadel, called Byrſa, on the ſummit of which was a temple dedicated to Æſculapius. On the land ſide the city was defended by a very high triple wall, flanked with towers four hundred and eighty feet diſtant from each other. The towers, walls, &c. contained ſtables, ſtorehouſes and barracks for twenty thouſand foot, four thouſand horſe, and three hundred elephants, with the requiſite food, fodder, &c. which, though lodged within the walls, did not in the leaſt incommode the trading part of the inhabitants.

This extenſive city had two harbours which communicated with each other, and had only one common entrance of ſeventy feet in breadth. The one was for merchant-ſhips, and the other for ſhips of war. The latter harbour, and the iſland of Cothen in the midſt of them, had appertaining to them many magnificent warehouſes full of ſtores.

The number of inhabitants in the city of Carthage, at the beginning of the third punic war, was ſeven hundred thouſand; a prodigious number, conſidering the many terrible blows they had received from the Romans during the firſt and ſecond punic wars, as well as from their own mercenaries betwixt theſe wars, and in their deſtructive broils with Maſiniſſa: the force they could bring into the field, as well as their power by ſea, was very formidable; the fleet conſiſted of more than two thouſand ſhips of war, and above three thouſand tranſports; and the troops under Hamilcar, againſt Gelon, of three hundred thouſand men.

We are told by a modern author, that Carthage at this time was twenty-three miles in circuit, and that the temple of Apollo was lined with plates of gold, and the image of that fabulous deity was of maſſy gold: the temple of Juno likewiſe, built by queen Dido herſelf, was extremely magnificent; but the treaſures belonging to them, as well as many other valuable articles, became the plunder of the Romans, when Scipio ſacked the city.

The Carthagenians were addicted to the groſſeſt idolatry; and their ſacrifices were replete with the moſt horrid cruelties. Diodorus Siculus relates, that their principal deity was Chronus, the Saturn of the Romans, to whom they ſacrificed the children of the beſt families, as a certain law enjoined them to offer up none but ſuch as were nobly born: At length, however, they ſubſtituted the children of ſlaves, priſoners, &c. to gratify their ſuppoſed bloody idol, till Agathocles made war upon them, and reduced them to the utmoſt extremity; when fancying that their misfortunes were owing to the improper offerings made to Chronus, they barbarouſly ſacrificed two hundred well-deſcended children; but their abſurd cruelty availed them nothing, for their army was ſoon after totally defeated. This ſo ſurpriſed them, that they imagined the ſacrifice was not ſufficiently bloody; whereupon, influenced by the ſame ridiculous idea, three hundred of the principal citizens voluntarily offered up their lives as oblations to the ſanguinary idol; their cruel ſacrifices were however uſeleſs; for their misfortunes, inſtead of diminiſhing, increaſed more.

From the abominable practice of ſacificing children to Chronus or Saturn, the fable of Saturn's devouring his children originated. But the cuſtom was ſo ſhocking to humanity, that the Roman poets and fabuliſts thought proper to drop the literal meaning for an allegorical one; and therefore changing the mythological Saturn into Time, the idea appeared without any horror annexed to it; and they repreſented thereby a pleaſing and inſtructive fable; for Saturn was ſaid to conſume all things, devour his own children, and vomit them up again. This alludes to Time, which conſumes all things that it produces, till they are revived, and as it were again renewed; thus days, months and years, are the children of Time, which he conſtantly devours, and re-produces.—However, the inhuman cuſtom of ſacrificing children did not ceaſe with the deſtruction of Carthage, but continued among the Africans till the time of Tiberius, who was ſo ſhocked at the horrid practice, that he not only prohibited it under ſevere penalties, but deſtroyed the idols, and put the prieſts to death.

Scipio Æmilianus finally deſtroyed this extenſive, opulent, and populous city, in the third year of the one hundred and fifty-eighth olympiad, in the year of the world 4159, and one hundred and forty-ſeven years before Chriſt, and no veſtiges of it remain at preſent, except ſome fragments of the noble reſervoirs which received into the city freſh water for the uſe of the inhabitants, and the ruins of the expenſive aqueducts, by which the water was conveyed; the latter reach above thirty miles into the country, are near twelve yards over, finely arched, coated with a ſtrong cement, and in moſt places faced with ſtone.

SECT. VII.

Containing the Political and Civil Hiſtory of, and the various Revolutions that have taken place in, the Kingdom of TUNIS, from the Conqueſt of it by the Romans, &c.

THE ſovereign of Tunis is independent both of the Ottoman Porte and his own divan, though a nominal reſpect to the perſons of both is ſtill affected to be kept up.

up. The government is deſpotic and hereditary, but not to the eldeſt ſon only, for the bey is at liberty to name for his ſucceſſor which ſon he pleaſes, or even to exclude all his ſons, and nominate a brother, nephew, or any other relation. A Turkiſh baſſa reſides here, and a divan is frequently aſſembled, but the former is a mere cypher, and the latter without the leaſt authority.

Through motives of fear, the beys of Tunis keep up a good correſpondence with their neighbours the ſtates of Algiers and Tripoli; and, from policy, aim to cultivate a friendſhip with the ſubjects of England and France, though they are at perpetual variance with the Spaniards, Sardinians, Venetians, Malteſe, the ſubjects of the eccleſiaſtical ſtate, and other neighbouring powers.

The Tuniſian forces are compoſed of renegadoes, and the militia of the country; the firſt form the bey's guard, and garriſon the metropolis, and the latter garriſon all the other ſea-ports and fortreſſes. This is the peace eſtabliſhment; but in war they are able to increaſe their army with ſtrong bodies of Arabians and Moors, though there is not much dependence to be placed upon the fidelity of theſe auxiliaries. Their maritime power is much leſs than what might be imagined, conſidering their admirable ſituation for commerce of every kind. Their capital ſhips are but four in number, the largeſt carry only forty guns; beſides which, they have about thirty galliots of various burdens, that are manned with from twenty to one hundred and twenty men each, who are renegadoes, Turks, and Coulouglies, or ſons of married ſoldiers; the command is, however, almoſt always given to renegadoes. The four large ſhips cruiſe twice a year, and are furniſhed with biſcuit, butter, oil, and vinegar, by the bey. The galliots are fitted out by private perſons, who pay a certain ſtipulated quota of whatever they acquire to the bey. The mercantile veſſels are very numerous, and the merchants purſue traffic with great avidity. The whole of their marine may be diſtinguiſhed into, 1. Ships, of four maſts; 2. Patachas, of three maſts; 3. Palachas; 4. Ketches; 5. Barks; 6. Pinks; 7. Tartans; 8. Canoes. When a ſhip brings in a prize, the half of the veſſel, and half of the cargo, after all expences are deducted, belong to the bey, and the remainder is divided between the captain and the ſhip's company. The bey has moreover one half of the priſoners taken, and the privilege of purchaſing the reſt, if he chuſes it, at one hundred piaſters per head, every tenth perſon excepted who becomes the property of the divan; but the members of that aſſembly do not dare to claim their right to this allotment. The revenues of Tunis conſiſt of cuſtoms ariſing from imports and exports, and the tributes paid by the Arabians and Moors.

When Chriſtian merchant ſhips arrive here, they always ſalute the caſtle with three guns: but men of war wait to be ſaluted according to their rate, when they return the compliment with the ſame number of guns. During the whole time that a Chriſtian ſhip of war is in the road, the conſul, and the merchants of the nation to which it belongs keep colours flying on the tops of their houſes. If a ſlave eſcapes, and gets on board a man of war, the bey cannot reclaim him; on which account it is uſual, as ſoon as a ſhip of force appears in the road, to keep all the Chriſtian ſlaves very cloſe confined, and abridge them of their liberty at other times allowed them, till her departure; previous to which, the bey ſends to the commander a preſent of oxen, ſheep, poultry, and other refreſhments. The French paſſports to theſe ſeas are limited to three years, but the Engliſh extend to fourteen, and are not loaded with ſo many reſtrictions as the former.

The Tuniſians export corn, oil, wax, wool, hides, morocco leather, beans, lentiles, &c. and import Spaniſh wool, Languedoc cloth, pepper, ſugar, vermilion, cloves, wine, brandy, hardware, iron, ſteel, paper, gold and ſilver tiſſue, damaſks, ſilken and woollen ſtuffs, &c. They likewiſe trade for a variety of articles to Egypt, Arabia, the Levant, and the neighbouring piratical ſtates. The Engliſh, French, Dutch, Genoeſe, and Germans, have their conſuls in Tunis, who are treated with great reſpect there.

Commerce is carried on here in that jargon of tongues known by the name of Lingua Franca; all public writings are in the Arabic language, which is in this country much corrupted from its original purity and elegance.

Jews are very numerous in this kingdom, and it is affirmed there are upwards of ten thouſand in Tunis only: but as they are much addicted to cheat all with whom they deal, keep falſe weights and meaſures, make fraudulent bankruptcies, and adulterate moſt articles in which they trade, the laws are particularly levelled againſt them, and they are, when detected, more ſeverely puniſhed than any other foreigners. Beſides Jews, here are renegadoes of all nations.

The religion, cuſtom, manners, laws, &c. of the Tuniſians being exactly the ſame with thoſe of the Algerines already deſcribed, we therefore refer the reader to the article of Algiers, and ſhall only add here a few circumſtances peculiar to theſe people. If a ſlave is caught in attempting to eſcape, or murders his patron, his limbs are all broken, and then he is faſtened to a horſe's tail, and dragged through the ſtreets till he dies. If a renegado ſhould turn Chriſtian again, they wrap him up in a cloth dipped in pitch, and burn him; or elſe pile ſtones, mud, mortar, &c. all round him, and having walled in all but his head, they rub that over with honey, which attracts waſps and other inſects, that torment the poor wretch with their ſtings till he expires, which ſometimes does not happen for ſeveral days.

With reſpect to the revolutions that have happened in this country hiſtorians of undoubted credit relate, that it was alternately ſubjugated and over-run by the Romans, Goths, Vandals, Saracens, and Arabs; at length Abdul-Hedi, a Mooriſh officer of Seville, came with a conſiderable force, landed at Tunis, obliged the Arabs to evacuate the towns and villages, and ruled the kingdom, in quality of viceroy to the emperor of Morocco, with great reputation, till his death, when he bequeathed the government to his ſon Abu-Zechariah, a martial yet prudent prince, who extended the Tuniſian territories, and raiſed contributions in all the countries to the confines of Negroland. On his demiſe, he left the kingdom and an immenſe treaſure to his ſon Abraham, or Abu-Ferez. This prince, finding himſelf ſufficiently powerful, revolted from the emperor of Morocco, aſſumed the title of king of Africa, ſtrengthened and embelliſhed Tunis, and gave it the name of the metropolis of Africa. At his death, he divided the kingdom between his three ſons, giving Tunis to one, Bugia to another, Numidia to the third. But Hutman, or Autman, who reigned over Tunis, ſoon diſpoſſeſſed his brother Hamar of Numidia, and left both to his ſon Abu-Bar, who was afterwards deprived of them by Subajah, one of the deſcendants of the caliſs of the Saracens.

Muley-Mahmet, one of the ſucceſſors of Subajah, had many children, but they were all, except the youngeſt, ſo profligate and wicked, that he appointed him to ſucceed him. This young prince, who was the celebrated Muley-Haſſan, was ſcarce ſettled on the throne, before his eldeſt brother attempted to make his eſcape from the priſon in which he was confined; but failing in his attempt, he was put to death, with ſeveral of his other brothers, and many perſons who were ſuſpected of adhering to their cauſe, for ſuſpicion in theſe caſes, is frequently as fatal as conviction. But one of his brothers, named Aſraſhid, fled to the king of Numidia, who raiſed an army in his favour, marched againſt Haſſan, and totally defeated him: but being without artillery, it was impoſſible to take Tunis. Aſraſhid, therefore burnt the ſuburbs, took leave of his Arabs, and repaired to Algiers, to engage in his cauſe the famous Barbaroſſa, who governed that kingdom for the Grand Signor.

This prince was conducted by Barbaroſſa to Conſtantinople, where he was apparently well received, and promiſed redreſs: he was, however, detained there as a kind of hoſtage, while Barbaroſſa ſailed for Tunis with a ſtrong armament, having taken Biſerta, Porto Farino, &c. he appeared before the fortreſs of Goletta. This ſo terrified Haſſan, who was hated by his ſubjects, that he fled in the utmoſt conſternation, leaving all his treaſures behind him. But he was no ſooner gone, than the principal people, imagining that prince Aſraſhid was in the Turkiſh fleet, releaſed his wife and ſon from confinement, paid them the moſt profound reſpect, and ſent two horſes finely capariſoned to Goletta, one for Aſraſhid, and the other for Barbaroſſa, that they might make their public entry into the city. Perceiving their diſpoſition and miſtake, the artful Barbaroſſa took care not to undeceive them, but gave them to underſtand that Aſraſhid was with him, and ſhould immediately land to receive their allegiance and homage.

Immediately hereupon ſixty royal gallies were filled with Turkiſh troops to the number of nine thouſand, who landed, and inſtantly took poſſeſſion of the city and caſtle. The people were rather ſurpriſed not to ſee Aſraſhid with Barbaroſſa; but how greatly was their conſternation increaſed, when, inſtead of even mentioning him, the politic Turk talked of nothing but their ſubmiſſion to the will of the Grand Signor. This apparent treachery ſo irritated the inhabitants, that they flew to arms: ſome went after Haſſan, to bring him back to their deliverance;

while others attacked the caſtle, but were repulſed with great loſs; and the Tuniſians were at length compelled to acknowledge the Grand Signor for their ſovereign, and Barbaroſſa as governor.

In order to regain his dominions, Haſſan had recourſe to a very unaccountable expedient, which was, making application to the Chriſtian emperor Charles V. to whom he promiſed to become tributary. This rendered him ſtill more odious to his own ſubjects, and obnoxious to all Mahometans in general. The emperor entered heartily into the enterprize, and prepared a powerful armament accordingly; while Barbaroſſa did all that an able commander could do upon ſuch an occaſion: he put Tunis into the beſt ſtate of defence poſſible: invited all the Mooriſh and Arabian princes to join him, who readily gave him aſſiſtance, as they imagined that it was a general cauſe, in which all Mahometans were concerned, and perſuaded moſt of the Levantine cruiſers to aid him with all their ſtrength: however, the court of Conſtantinople could afford him but little aſſiſtance, being then involved in its Atlantic wars.

At length the emperor's fleet, conſiſting of one thouſand four hundred ſhips of various ſizes, appeared on the Tuniſian coaſt, when the numerous forces were immediately landed, and the caſtle of Goletta inveſted in form, which, after a very ſtout reſiſtance, and great loſs on both ſides, was taken by ſtorm. The emperor then proceeded towards Tunis, while Barbaroſſa marched out on his approach, and drew up his army in order of battle in the plain of Cazar-Menevi, which is about three miles from the metropolis. The two armies preſently came to an engagement, when the Arabs ſoon giving way, Barbaroſſa ſuſtained a total overthrow. After retreating to Tunis, he now thought of nothing but eſcaping with his treaſure, though he did all he could to conceal his intentions from even his own people; but his deſign was perceived, both from his hurry to remove his riches from the caſtle, and the order he gave to blow up all the Chriſtian ſlaves. This diabolical order, however, none of his officers had the cruelty to put into execution.

Among the Chriſtian ſlaves was one named Paul Simoni, a brave Malteſe, who had behaved ſo gallantly againſt the Turks, that Barbaroſſa would never ſuffer him to be ranſomed on any account. This gentleman, having an intimation of Barbaroſſa's deſign, found means privately to procure ſome hammers and files, when he immediately releaſed himſelf and the reſt of the Chriſtian ſlaves from their chains, to the amount of ſeven thouſand, and jointly breaking into the caſtle armoury, they furniſhed themſelves with weapons, with which they ſallied out, and killed or routed all the Turks who guarded the avenues to the caſtle. They then ſecured the place, and waved a white banner from the battlements, inviting the Chriſtians to come to their relief. The tumult this occaſioned brought Barbaroſſa to the place, who demanded entrance into the caſtle, but was anſwered only by a volley of muſquetry; when perceiving how matters went, he cried out, "I am undone! theſe Chriſtian dogs have got poſſeſſion of the caſtle, and all my treaſure;" and fled with the utmoſt precipitation, ſo that he got ſafe to the city of Barca, before the emperor Charles knew of the revolution in his favour. Simoni, however, ſent him word of Barbaroſſa's flight: and as ſoon as he entered the city, preſented himſelf before him at the head of the newly emancipated Chriſtians; when the monarch tenderly embraced the Malteſe knight, ſaying, "My dear friend, bleſſed for ever be that noble reſolution which enabled you to break off your fetters, to facilitate my conqueſt, and encreaſe the glory of the Malteſe order." This gentleman was afterwards ſent to Malta loaded with favours, and was moſt cordially received by thoſe of his order. Thus the Chriſtians became poſſeſſed of Tunis; but we are ſorry to add, that the cruelties which they indiſcriminately excerciſed upon the poor Tuniſians of all ranks and ages, and of either ſex, tended greatly to tarniſh the laurels they had gained by their courage and conſtancy.

Haſſan was now re-ſettled upon the throne by the emperor, under the following conditions: 1. That the fort of Goletta ſhould remain in the emperor's hands as a pledge, though Haſſan ſhould be obliged to repair the fortifications at his own expence. 2. That a garriſon of the emperor's troops ſhould remain in it, but Haſſan ſhould maintain and pay them. 3. That prince Mahomet, Haſſan's ſon, ſhould remain in the emperor's power, as an hoſtage for the fidelity of his father. 4. That all Chriſtian captives, of whatſoever nation, ſhould be releaſed without any ranſom. 5. That the Chriſtians ſhould have a free commerce throughout the whole kingdom. 6. That they ſhould be allowed to ſettle in it, to build churches and monaſteries, and enjoy the free exerciſe of their religion. 7. That no corſair, Turk, or Moor, ſhould be allowed to come to any ſea port, be furniſhed with any proviſions, or be aſſiſted or favoured in any caſe by the Tuniſians. 8. That the whole coral fiſhery ſhould belong to the emperor and his heirs for ever. 9. That the kings of Tunis ſhould hold themſelves vaſſals and dependents on the crown of Spain, and ſend thither yearly, in token of it, ſix horſes and twelve falcons; in conſideration of which, they ſhould be intitled to the protection of that crown, on any emergency.

Theſe ſtipulations were exceedingly diſagreeable to the Mahometan powers; and rendered Haſſan not only hated by them, but very contemptible in their eyes. As ſoon as the emperor returned to Europe, this general diſlike began to evince itſelf by the revolt of ſeveral of the cities, which either put themſelves under the protection of the Turks, or erected themſelves into little commonwealths: Barbaroſſa, at the ſame time, having raiſed a conſiderable army and fleet in Algiers, began a new attack upon Tunis. Haſſan, being harraſſed on every ſide, ſent to Europe for ſuccours, which were liberally promiſed him, but the performance was ſo ſlow, that he was determined to go and ſolicit them perſonally.

While he was in Europe upon this errand, his ſon Hamida revolted againſt him, and raiſed him a dangerous commotion at home, making the following ſpecious motives the pretext for his unnatural rebellion: 1. That his father was gone to the emperor, in order to turn Chriſtian. 2. That Haſſan's deſign was, to cut him off from the ſucceſſion, becauſe he was a friend to Mahometaniſm; and to place the crown upon his brother Mahmed's head, who had a great propenſity to Chriſtianity. The governor of Tunis, however, ſeverely reprimanded him for his unnatural proceedings, which repulſe ſo much chagrined the prince, that he retired to a country houſe at a ſmall diſtance from Tunis, where he mourned in private his precipitate conduct: but the people, who were more prepoſſeſſed in his favour than he imagined, really fancied that Haſſan was dead, according to ſome flying reports; and that the governor would conſpire with the Spaniſh garriſon in the Goletta to crown prince Mahmed, and thereby force a Chriſtian king upon them: theſe notions operated ſo powerfully upon the minds of the vulgar, that they tumultuouſly went to the place of prince Hamida's retirement, and made him an immediate offer of the crown. This exactly ſuiting his ambitious temper, he accepted of the propoſal, and, putting himſelf at the head of the malecontents, he proceeded to the caſtle, where he cauſed the old governor to be murdered, and committed ſeveral other enormities and exceſſes.

This revolution having reached the ears of Haſſan, he returned home, with about two thouſand Italian forces; but his ſon defeated him, took him priſoner, and deprived him of his ſight. However, Haſſan's brother Abdulmelech drove Hamida from Tunis, and aſſumed the reins of government himſelf; but dying in a very ſhort time, the Spaniſh government of Goletta had one of his ſons crowned king, inſtead of Haſſan's ſon Mahmed, who ought in juſtice to have been advanced to the throne. The unfortunate Haſſan himſelf found means to make another voyage to Europe; when applying to the emperor Charles V. he was kindly received, much pitied, and promiſed redreſs; but the promiſe was the only comfort he ever had, for it was never performed by the emperor. In the mean time, Hamida had been ſo ſucceſsful in forming alliances with the Arabian and Mooriſh princes, and chiefs, that he recovered Tunis, and reigned without moleſtation till the year 1570, when he was again diſpoſſeſſed of it by Halli, baſſa of Algiers.

During this interval, Haſſan remained in the emperor's court, till that monarch had prepared a powerful armament to drive Barbaroſſa, and other formidable pirates, from the places they poſſeſſed on the Barbary coaſt. The command of the Chriſtian fleet was given to the famous Doria, a great Genoeſe admiral, who was ordered to begin his operations by diſlodging the celebrated pirate Dragut from the places of which he had poſſeſſed himſelf on the Tuniſian coaſt; for Dragut not only commanded the piratical, but the Turkiſh fleet, Barbaroſſa having reſigned in his favour, that himſelf might have more leiſure to purſue all manner of debaucheries, as his inclination for every ſpecies of libertiniſm ſeemed to increaſe, inſtead of diminiſhing with his years, till he fell a martyr to exceſs at upwards of fourſcore years of age. At length the grand imperial Chriſtian fleet arrived on the coaſt of Africa with

the unfortunate Haſſan, old and blind, and his ſons Mahmed and Muley-Rubekar on board: but the wretched monarch ſoon after died of a fever in the camp of the Chriſtians, and was buried with his anceſtors at Kayrwan. He was of a majeſtic appearance, black complexion, brave, wiſe, and politic; but cruel, and to the laſt degree vindictive.

Admiral Doria in a ſhort time made himſelf maſter of moſt places on the ſea coaſt, particularly Mahodia, in which he got an immenſe plunder; but the emperor afterwards ordered that place to be totally demoliſhed, and the Chriſtians to evacuate their poſſeſſions on the Barbary coaſt, the Goletta excepted, having occaſion for his troops in Europe, when Hali the Turk poſſeſſed himſelf of Tunis; but Sinan baſſa made a total conqueſt of the kingdom in the reign of Selim II. and deſtroyed all the Chriſtians but fourteen whom he ſent in chains to Conſtantinople. Having brought the whole beneath the Ottoman yoke, he appointed for its government a baſſa or viceroy, a divan, ſeveral governors or beys over the different provinces, four thouſand janiſaries, and a number of garriſons in the different cities, towns, and fortreſſes. This revolution terminated the ſplendor of the kings of Tunis, after three hundred and ſeventy years continuance, from its firſt eſtabliſhment by Abu-Ferez, in 1204.

At this period the kingdom of Tunis began to be governed by deys choſen by the divan; but the ſtate was in ſuch confuſion, the jealouſies ſo great, and the intrigues ſo various, that new deys were frequently elected, almoſt all of them being either murdered or dethroned; ſo that in the ſpace of one hundred and twenty years no leſs than twenty-three reigned, the whole of whom, except five, were dethroned or murdered. The people in general were ſo diſſatisfied at the very firſt with the baſſa that Sinan had placed over them, that they petitioned the Porte to aboliſh that office, and permit them to elect a dey to govern them, as was done at Algiers. This requeſt was granted, and they immediately elected a popular perſon, of whom they were wonderfully fond at firſt, but they murdered him within the twelvemonth. One Ibrahim was their next choice; and they would have ſerved him in the ſame manner, if he had not luckily given them the ſlip, and fled to Mecca.

Theſe frequent and bloody revolutions gave an opportunity to the beys or officers of the ſecond rank to uſurp an authority over the deys, and to render the divan, or ſenate itſelf, ſubſervient to their pleaſure. The ſublime Porte, alarmed at the deſpotic power of the Tuniſian beys, determined to revive the office of baſſa, that they might have a perſon upon the ſpot to be a check upon the former: but ſo jealous was this politic court, that, fearing its own baſſa ſhould become as powerful, arbitrary and troubleſome as the bey himſelf, it never permitted that officer to reſide above two years at Tunis.

This kingdom, during the reigns of the ſeveral deys, muſt be conſidered rather as involved in anarchy and confuſion, than as a well regulated government; and we are leſs acquainted with their hiſtory at that period, than at any other. But, ſubſequent to the year 1681, we are better acquainted with the Tuniſian affairs; for at this time the bey Morat II. dying, left three ſons, viz. Mahomet, Hali, and Ramadan, who for ſome time maintained a bloody conteſt for the ſucceſſion; but Ramadan at length, greatly to his honour, declined his pretenſions, and gave up all his right to his brothers, perſuading them at the ſame time, in pity to the people, to compromiſe matters, and put a ſtop to their ſanguinary proceedings: but his brothers, more ambitious and leſs humane than himſelf, continued the diſpute for a conſiderable time by frequent appeals to the ſword, till Mahomet, growing tired of the conteſt, gave it up, and retired to Kayrwan, where he reſigned himſelf to a life of devotion; but the war was ſoon after rekindled by the perfidy of Hali; for Mahomet, when he went into retirement, intruſted his ſon Achmet to the care of his brother, that he might be brought up in the court in a manner ſuitable to his birth: but the treacherous Hali, inſtead of protecting, baſely murdered his nephew. This ſo exaſperated Mahomet, that it drew him from his ſolitude; and being informed that the perſons who had adviſed Hali to murder the young prince were fled, he purſued, overtook, and ſacrificed them to his reſentment. Hali himſelf had been driven from Tunis by the citizens, ſome of whoſe privileges he had attempted to infringe, but was now in full march to lay ſiege to that place, in order to reduce it to obedience.

This ſeemed a favourable opportunity for Mahomet to obtain the crown: but an ambitious and artful perſon, named Cheleby, had the addreſs to prejudice the people equally againſt both brothers ſo that Mahomet appeared as obnoxious to them as Hali. This, however, occaſioned a reconciliation to take place between the two brothers, who united their forces, and inveſted Tunis; when Cheleby making a ſally, totally routed their troops; but he had not the prudence to make a proper advantage of his ſucceſs, by purſuing the brothers, who ſoon rallied, recruited their forces, and ſtrengthened their army by the addition of forty thouſand Algerines, whom they hired of Ibrahim dey of Algiers. With theſe troops they ſoon made themſelves maſters of Tunis, and took Cheleby priſoner, whom they put to death. The Algerines, committed many horrid cruelties and depredations in the city, till they were paid, and ſent home, and Mahomet was univerſally acknowledged as bey: but this prince ruling in a very arbitrary manner, the people called in the Algerines to expel him from the government; which they did, and made Ben-Choukee, his brother-in-law, bey in his ſtead; but this change availed them nothing, for the latter was as arbitrary and rapacious as the former; ſo changing their minds again with their uſual facility, they reſtored Mahomet, and dethroned Ben-Choukee.

Ramadan was ſoon after made bey, on the death of his brother Mahomet; but this prince, having lived always a recluſe life, knew nothing of public buſineſs, or of mankind, and was conſequently very unfit to govern a kingdom; but, what was ſtill worſe, inſtead of taking any trouble to qualify himſelf for the ſovereignty, he was intirely devoted to pleaſure, and made an Italian fiddler his prime-miniſter, leaving the whole adminiſtration of affairs to him. This occaſioned ſeveral commotions, and at length ſo much exaſperated the people, that they ſtrangled Ramadan, and tore in pieces his prime miniſter.

Morat, the nephew of the former bey, ſucceeded his uncle, and proved a monſter of cruelty; but being murdered by Ibrahim, the captain of his guard, the aſſaſſin was advanced to the throne, and, after an unfortunate but ſhort reign, was killed in a ſea engagement (occaſioned by an inſurrection among his ſubjects) and was ſucceeded by

Haſſen-Ben-Hali, a politic and formidable prince, who freed himſelf from a dependence on the Porte, rendered himſelf ſo powerful as to ſtand in no awe of his neighbours the Algerines or Tripolitans, reſtrained his ſubjects from acts of piracy, and concluded many commercial treaties with the Chriſtian powers, particularly the Dutch and Engliſh: the ſtipulated articles between the Tuniſians and the latter were concluded with admiral Baker, and are nearly the ſame as thoſe agreed upon between the Engliſh and the people of Tripoli. Nothing that deſerves particular notice has happened in Tunis ſince that period.

SECT. VIII.

Deſcription of the Kingdom or Republic of TRIPOLI, its Boundaries, chief City, Towns, &c.

TRIPOLI is bounded on the north by the Mediterranean ſea: on the ſouth, by the country of the Beriberies; on the weſt, by the kingdom of Tunis, Biledulgerid, and a territory of the Gadamis; and on the eaſt, by Barca, and the kingdom of Egypt. It extends nine hundred and twenty-five miles along the ſea coaſt; but the breadth is various. Excluſive of the creeks and projections of the ſhore, its extent on the coaſt is from ten degrees thirteen minutes, to twenty-five degrees twenty-ſeven minutes eaſt longitude.

The moſt accurate geographers divide the whole kingdom into ſix provinces; namely, Tripoli Proper, Meſrata, Haicha, Benoleſa, Gulf of Sidra, and Ouguela. The towns on the ſea coaſt are the moſt conſiderable, and the beſt known, thoſe of the inland parts of the country are ſo little known, and ſo trifling, that they have ſcarce been deemed worthy of attention by either antient or modern travellers: the inhabitants of both, however, are equally addicted to robbing, the former being profeſſed pirates; and the latter, whenever they can find opportunity, make no ſcruple to plunder their neighbours.

The antients diſtinguiſhed the city of Tripoli, which is now the capital of the whole country, into Old and New; the former was built by the Romans, ſubdued by the Vandals, and deſtroyed by the Mahometans. The new city aroſe out of the ruins of the old.

The preſent city of New Tripoli is populous, but ſmall; and the natives, though barbarous, are flouriſhing. It is ſituated on a ſandy ſoil, near the margin of the ſea; ſurrounded by ſtrong walls, defended by formidable ramparts, and

and flanked by pyramidical towers. Here are but two gates, the north gate towards the ſea, and the ſouth gate towards the country; and the whole city is in the form of a creſcent, the concave part of which incloſes the haven. At the extreme points of the harbour, which is very commodious, are ſome military works; thoſe to the eaſtward are in bad conditon, but on the weſtward there is a caſtle well fortified. The houſes in general are very mean, and low built, and the ſtreets narrow and crooked; yet ſome remaining monuments of magnificence ſeem to confirm the prevailing opinion of the inhabitants, that it was once remarkable for the ſplendor of many of its public buildings; among theſe, are the fragments of a triumphal arch, which is nearly buried in the ſand, but exhibits a ſufficient part above ground to give ſome idea of its elegance when perfect, and ſtanding in its proper ſituation.

This city labours under two very great inconveniencies, which are, the ſcarcity of corn, and want of ſweet water, the ſandy ſoil making it difficult to cultivate the firſt, and the want of rivers, ſprings, &c. rendering it impoſſible to procure the latter, without the diſagreeable neceſſity of catching rain in ciſterns and reſervoirs. The deficiency of freſh water, and great ſterility reſpecting grain, are both ſuppoſed to have been occaſioned by the encroachments of the ſea, which has frequently been known to overflow the neighbouring territory to a very conſiderable diſtance: but theſe inundations, though they may have eſſentially injured them in the above reſpects, have conſiderably benefited them in another particular, that is, the amazing increaſe of lothus trees, which thrive beſt in a ſaline clay or ſandy ſoil, and produce both food and drink, as the fruit eats excellently well, and makes a moſt delicious wine. Yet, after all, the inhabitants of Tripoli could not ſubſiſt upon the produce of their country, without the additional proviſions continually brought in by their piratical veſſels, which are conſtantly cruiſing in the Mediterranean ſea.

The people of Tripoli truſt the guarding of their city, in the night time, to maſtiffs, which are ſhut up during the day, in one of the baſtions of the ramparts. Theſe maſtiffs diſcharge very faithfully the duties of their functions; they patrole through the ſtreets of the city, and if they happen to meet with any perſon, they are ſure to tear him to pieces. As ſoon as day breaks, they go of themſelves to the door of their priſon; and bark when they hear any perſon approach their habitation, and their roaring is heard in all the quarter of the city where they are confined. This city is frequently viſited by the plague; on which account the Franciſcans, who are ſettled here, have beſides their church and convent, an hoſpital, in which they adminiſter relief to the Tripolitans, as well as to thoſe of their own religion.

It has been remarked by a reputable writer, that Tripoli is far leſs conſiderable than Algiers, and not comparable to Tunis. The government is the ſame with that of the reſt of the cities of Africa; the Moors are in as little credit here as at Algiers; the Nazarene (i. e. Chriſtian) renegadoes enjoy the greateſt ſhare of authority of any ſect of people in this country, and fill the chief employments; indeed there are a vaſt number of renegadoes here, many of whom the perſon abovementioned had converſed with; and that they all appeared to be as ignorant of the religion they had embraced, as of that quitted by them: moſt of the perſons in queſtion having been ſo poorly educated, that they were ſcarcely acquainted with the rudiments of their belief, and indeed, ſays he, they aſſign the moſt trifling reaſons poſſible for quitting their religion; whereas in other countries, ſlaves are commonly prompted, from the ill treatment they meet with from their maſters, to turn Mahometans; but here, on the contrary, they are brought over by gentleneſs. Of all the corſairs of Barbary, none are leſs cruel than the people of Tripoli, though none are ſo much addicted to theft.

The country adjoining to Tripoli abounds with villas of the principal Tripolitans, the gardens belonging to which, are uſually managed by the Chriſtian ſlaves, who are however, all confined in a ſingle bagnio or goal in the city itſelf, during the night time.

Cabes, or Gabes, is ſituated near the gulf of the ſame name, and on the antient river Triton, to which the moderns have given the ſame name as the town Being the frontier town between Tripoli and Tunis, it is large and well fortified, and in its neighbourhood are found the ruins of the antient city called by the Romans Tacapa. Cabes, however, is but poor, and thinly inhabited by fiſhermen and a few huſbandmen; the latter of which cultivate a ſmall quantity of barley, a conſiderable number of palm trees, and a root which reſembles a potatoe. The natives are as black as negroes, and ſo poor, that they look upon a few pecks of barley, and half a dozen of palm trees, as a conſiderable fortune. The river Cabes riſes in a ſandy deſart, and diſembogues itſelf into the Mediterranean; hence the waters are ſo hot, that they cannot be drank till they have been put for about the ſpace of two hours, into a cool place. This town lies in ten degrees fifty-five minutes eaſt longitude, and thirty-nine degrees north latitude.

El-Hammah, is ſituated in ten degrees fifty-one minutes eaſt longitude, and thirty-four degrees north latitude, near a lake called the Lake of Lepers, becauſe it cures that diſeaſe. The inhabitants are a few fiſhermen, who are pirates when occaſion offers; and ſome huſbandmen, who are thieves at all opportunities. It was never remarkable but for its Roman walls, its hot ſulphureous ſprings, the aqueducts by which they are conveyed, and of which ſcarce any veſtiges remain.

Zoara, ſixty miles weſt of Tripoli, is well fortified, and has a good harbour. It is ſurrounded by an old wall, almoſt in ruins: the inhabitants, who are but few in number, live by fiſhing, and burning quick lime or pot-aſh, or, when opportunity ſerves, by piracy. This town is ſuppoſed to be the antient Pitidau, and lies in thirteen degrees twenty-five minutes eaſt longitude, and thirty-two degrees forty-five minutes north latitude.

The towns above deſcribed, which are ſituated on the weſtern coaſts of the gulf of Sidra, are the beſt in the country; thoſe on the eaſtern ſide, and within the gulf, are in a moſt wretched condition, and preſent a dreadful picture of the deva ſtations of time.

The various inundations of Goths, Vandals, Arabs, Mahometans, &c. who have over-run the country at different times, have ſubjected theſe parts of Africa to a great number of revolutions: they have alſo ſuffered much from the depredations of the Europeans, and tyranny of the government. The iſland of Malta is a perpetual thorn in the ſides of the piratical ſtates, particularly thoſe of Tripoli and Tunis, from the vicinity of the ſituation; and the Malteſe knights merit the thanks of all commercial nations, for having ſo greatly circumſcribed the power of the Barbary rovers, and reſtrained their piracies.

The Moors, after they were driven out of Andaluſia in Spain, built the town of Derne, on the weſtern ſide of the gulf of Sidra, which indeed is the only place worth mentioning in the diſtrict of that name. It is ſituated at the diſtance of about half a mile from the ſea, and is better ſupplied with ſweet water than moſt of the towns in the Tripoline territories; nevertheleſs the inhabitants are few in number, and miſerably poor in circumſtances. The moſt remarkable produce is great quantities of honey, the delicacy of which is occaſioned by the bees feeding upon a kind of ſhrub peculiar to this country, which bloſſoms all the year, and bears a fragrant yellow flower.

The province of Meſrata, is at preſent much reduced, though it was antiently very flouriſhing: it contains, however, a few towns on the ſea coaſt and ſome ſcattered villages, and upon an emergency can raiſe ten thouſand men fit to bear arms. The inhabitants retain their former ſpirit, for they appear at preſent to be as impatient of the Tripolitan, as they were antiently of the Tuniſian yoke: they pay a tribute, though reluctantly, to the bey of Tripoli, and are often at war with the wild Arabs.

With reſpect to the inland diſtricts, we may obſerve, that they are leſs populous, leſs known, and have fewer towns, than any of thoſe deſcribed. Indeed Anguela, or Ouguela, though in many parts a barren deſart, contains a few ſpots that are fertile, particularly in paſturage and dates.

The revenues are raiſed by an impoſt on the corſairs, which are uſually about eight in number, by a tax on commercial imports and exports, and by a ſubſidy which the Jews are obliged to furniſh. The bey likewiſe taxes the wild Arabs and inland Moors; but theſe frequently refuſe to pay the tribute, when he is obliged to ſend his flying camp of janiſaries among them, to reduce them to obedience: but neither the Porte, or the Turkiſh baſſa trouble themſelves about the government, provided the bey pays with punctuality his ſtipulated tribute to the firſt, and gratifies the avaricious cravings of the laſt. The beys of Tripoli are not mere nominal vaſſals to the Turkiſh government, like thoſe of Algiers and Tunis, but are obliged to pay a conſiderable tribute, which puts them under the neceſſity of tyrannizing over the poor people, and reducing them to the utmoſt indigence and miſery, in order to obtain a ſufficient ſum to diſcharge their quota.

Their

Their chief article of commerce is in ſlaves, which are taken by the corſairs at ſea, or ſtolen by the wild Arabs and Moors from the neighbouring ſtates. Both are, however, uſually ſent to Turky, and ſold there as the beſt market, unleſs it is imagined that they belong to a diſtinguiſhed family, when they are kept in expectation of a conſiderable ranſom for them:

The only article of trade worth mentioning, beſides the above, is the ſale of aſhes, which are diſpoſed of to the Europeans for the purpoſe of making ſoap and glaſs. It is neceſſary to remark, concerning this regency, that, with reſpect to commerce and treaties, the people are much better obſervers of their word, and perform their promiſes with more punctuality, than any of the political ſtates who live near them.

SECT. IX.

The Hiſtory of, and various Revolutions in the Kingdom of TRIPOLI, &c.

WE find the firſt accounts of Tripoli in ſome of the Roman hiſtorians, who ſpeak of it as a very flouriſhing ſtate. In the decline of that empire, after the inhabitants had thrown off the Roman yoke, they were ſucceſſively ſubdued by the Vandals, Saracens, and the ſovereigns of Morocco, Fez, and Tunis. At length, in the reign of Bucamen, king of Tunis, who ruled the Trepolines very deſpotically, the inhabitants thought proper to revolt, and conſtituted one of their own people king of Tripoli; but the new monarch, turning tyrant, was poiſoned, and ſucceeded by Abubacer, who had been one of his officers, but, turning marabout, quitted the military for the hermetical life.

Tripoli was beſieged, in the beginning of this king's reign, by an army of fifteen thouſand Spaniards, who ſoon took the place, and ſent Abubacer, with his whole family, priſoners to the emperor Charles V. who was then at Palermo; but this monarch reſtored him to his kingdom, on condition of his becoming vaſſal and tributary to him.

Abubacer was ſovereign of Tripoli till the knights of Rhodes were driven from that iſland, and obliged to retire to Syracuſe, when the beforementioned emperor granted them the iſland of Malta, together with the city and caſtle of Tripoli, which lay oppoſite to it. They accordingly garriſoned the latter, but were ſoon diſpoſſeſſed of them by the famous Barbaroſſa. They were, however, ſoon after retaken by the emperor, who put the knights of Malta again in poſſeſſion of them.

The Turks, under the command of the baſſa Serai, in the reign of ſultan Solyman, beſieged Tripoli, when it was ſurrendered to him, as is imagined, by the cowardice or treachery of the governor, who was a Frenchman, after it had been forty years in the hands of the Chriſtians. It continued for ſeveral years under the government of a ſangiac, deputed by the Porte to rule the people, and collect the revenues, the caſtle being garriſoned by Turks, and the city inhabited by Moors. At length the Turkiſh deſpotiſm and extortions became ſo intolerable, that a marabout, named Sid Hajah, found an opportunity to cauſe a general revolt about the cloſe of the ſixteenth century: he was, however, repeatedly defeated by Haſchen baſſa, and at length aſſaſſinated by ſome of his own party.

Mahomet Beygh, a Greek renegado, was then ſent by the Porte to govern Tripoli; but this officer was no ſooner eſtabliſhed in his government, than he refuſed to receive any baſſa from the Grand Signor; he indeed acknowledged himſelf the vaſſal of the Porte, and voluntarily ſtipulated to pay a certain annual tribute, but he alledged, that in common prudence it was requiſite for him to defend himſelf from the fate of many other governors dependent on the Porte, who had been put to death upon the moſt unjuſt and oftentimes frivolous pretences, without being ſo much as allowed to vindicate their conduct.

The following are the only remarkable tranſactions which now remain to be taken notice of relative to the kingdom of Tripoli; namely, the bombardment of the capital city by the French, in the reign of Lewis XIV. and the treaty of peace and commerce between the Tripolitans and Engliſh, in the year 1716. The firſt of theſe occurrences took place in conſequence of the Tripolitans having taken a ſhip under French colours, and detained ſeveral French ſubjects in a ſtate of ſlavery. This occaſioned Lewis to order his officers to make repriſals upon the veſſels of Tripoli, wherever they met them. Theſe orders were ſtrictly obeyed by the French captains; in particular, M. d'Amfreville attacked ſix of their veſſels near cape Sapiença. Three of the corſairs fled in the beginning of the engagement; and the other three, after having been much ſhattered in the fight, took refuge at the iſland of Chios. The French commodore, M. Du Queſne, who commanded in the Levant, having intelligence thereof, immediately proceeded to block them up with ſeven ſhips of war: but, previous to the commencement of hoſtilities, he ſent a meſſage to the governor aga, to the following purport: "That his maſter was in perfect amity with the Chians, and the Porte of Conſtantinople, but came in ſearch of ſome Tripolitan pirates, who, contrary to the moſt ſolemn treaties, had committed the moſt outrageous depredations on the ſubjects of France, and therefore hoped that the aga would not protect ſuch infamous robbers." The aga, however, refuſed to give up the pirates; which ſo exaſperated the French commodore, that he began immediately to bombard the place, againſt which he threw upwards of ſeven thouſand bombs; made a dreadful havock both of the houſes and Tripolitan ſhips, and killed a great number of the people; but he could not enter the port on account of a ſtrong ſtaccado which the Tripolitans had contrived to lay in his way. The court of Conſtantinople thought proper to interfere, in order to get matters adjuſted, when at length it was agreed between the grand viſir, and the Gallic ambaſſador, that matters ſhould be compromiſed agreeable to the tenor of eight articles, which were drawn up for that purpoſe.

The abovementioned articles, however, which were framed greatly to the advantage of the French, were rejected with the utmoſt diſdain by the regency of Tripoli, who at the ſame time prudently prepared for the worſt. On the other hand, the French monarch ordered a powerful armament to ſail immediately to Tripoli, under the command of the famous marſhal D'Etrees, vice admiral of France, who being joined by the ſquadrons under the marquis d'Amfreville and captain Neſmond, appeared before Tripoli on June 15, 1685, with his whole fleet. On the 22d in the evening the bombardment began, and was carried on with great ſucceſs under the immediate direction of the celebrated M. Tourville. The marſhal D'Etrees then had the port every where ſounded, in order to find the moſt convenient place to raiſe a battery, which might effectually deſtroy both town and fortifications; this, with the number of houſes already deſtroyed, and people killed with the bombs, ſo terrified the Tripolitans, that they diſpatched a venerable old man, of near one hundred years of age, to ſue for a peace, which they were willing to receive upon any terms, when they at length agreed upon the two following articles: 1. That the Tripolitans ſhould pay two hundred thouſand crowns as an equivalent for all the captures made of French merchantmen; and, 2. That they ſhould reſtore all the Chriſtian captives they had taken fighting under French colours.

The terms propoſed occaſioned ſeveral delays, which aroſe chiefly from the difficulty of raiſing ſo large a ſum of money: it was, however, agreed to reduce the demand to five hundred thouſand livres, but even that could not be paid till the dey and principal people had ſtripped their wives of their bracelets, rings, jewels, &c. The whole was at length paid either in money or valuables. The French ſlaves were ſet at liberty, and two of the principal people of Tripoli were obliged to go to France, to do homage to the king of that nation.

A treaty of peace and commerce was concluded, in 1716, between the regency of Tripoli, and the Britiſh admiral Baker on the part of the king of Great Britain; the articles of which we ſhall give at full length, as they nearly concern England as a commercial nation, and reſemble thoſe agreed on with other Barbary ſtates.

"Articles of peace, and commerce between his moſt ſacred Majeſty king George, &c. and the moſt excellent lords, Mahamed Bey, Yuſef Dey, the Divan, and the reſt of the officers, and people of the city and kingdom of Tripoli, renewed, concluded, and ratified on the 19th of July, A. D. 1716, by John Baker, Eſq; vice-admiral, &c. &c.

"I. In the firſt place, it is agreed and concluded, that from this time forward for ever there ſhall be a true and inviolable peace between the moſt ſerene king of Great Britain, and the moſt illuſtrious lords and governors of the city and kingdom of Tripoli in Barbary; and between all the dominions and ſubjects of either ſide; and if the ſhips and ſubjects of either party ſhall happen to meet upon the ſea, or elſewhere, they ſhall not moleſt each other, but ſhall ſhew all poſſible reſpect and friendſhip.

"II. That

" II. That all merchant ſhips belonging to the dominions of Great Britain and trading to the city or any part of the kingdom of Tripoli, ſhall pay no more than three per cent. for all kinds of goods they ſhall ſell; and as for thoſe they ſhall not ſell, they ſhall be permitted freely to embark them again on board their ſhips without paying any duty whatſoever, and ſhall depart without any hindrance or moleſtation.

" III. That all ſhips and other veſſels, as well belonging to the ſaid king of Great Britain or to any of his majeſty's ſubjects, as thoſe belonging to the city and kingdom of Tripoli, ſhall freely paſs the ſeas, and traffic where they pleaſe, without any ſearch, hindrance or moleſtation from each other. And that all perſons or paſſengers, of what country ſoever, and all manner of monies, goods, merchandizes, and moveables, to what people or nation ſoever belonging, being on board any of the ſaid ſhips or veſſels, ſhall be wholly free, and ſhall not be ſtopped, taken, or plundered, or receive any harm or damage whatſoever from either party.

" IV. That the Tripoline ſhips of war, or any other veſſels thereunto belonging, meeting with any merchant ſhips, or other veſſels of the king of Great Britain's ſubjects (not being in any ſeas belonging to his majeſty's dominions) may ſend on board one ſingle boat with two ſitters, beſides the ordinary crew of rowers, and no more than the two ſitters, to enter into the ſaid merchant ſhips, or any other veſſels, without the expreſs leave of the commander of every ſuch ſhip or veſſel; and then upon their producing to them a paſs, under the hand and ſeal of the high admiral of England, or of the commiſſioners for executing the ſaid office; the ſaid boat ſhall depart, and the merchant ſhip or ſhips, veſſel or veſſels, ſhall freely proceed on its or their voyage; and though the commander or commanders of ſuch merchant ſhip or ſhips, or veſſels, &c. produce no paſs from the high admiral of England, or the commiſſioners for executing the ſaid office; yet if the major part of the ſhip's or veſſel's company be ſubjects of the ſaid king of Great Britain, the ſaid boat ſhall preſently depart, and the merchant ſhip or ſhips, &c. ſhall freely proceed on their voyage. And any of the ſaid ſhips of war, or other veſſels of his ſaid majeſty meeting with any ſhip or ſhips belonging to Tripoli, if the commander or commanders of any ſuch ſhip or ſhips, &c. ſhall produce a paſs ſigned by the governors of Tripoli, and a certificate from the Engliſh conſul reſiding there; or if they have no ſuch paſs or certificate, yet if the major part of the ſaid ſhip's or veſſel's company be Turks, Moors, or ſlaves belonging to Tripoli, then the ſaid Tripoli ſhip, veſſel, &c. ſhall freely proceed on their voyage.

" V. That no commander, or other perſon, of any ſhip belonging to Tripoli, ſhall take out of any ſhip or veſſel of his ſaid majeſty's ſubjects any perſon or perſons whatſoever, to carry them any where to be examined, or upon any other pretence, nor ſhall uſe any torture or violence unto any perſon of what nation or quality ſoever, being on board any ſhip or veſſel of his ſaid majeſty, upon any pretence whatſoever.

" VI. That no ſhipwreck belonging to the ſaid king of Great Britain, or to any of his ſubjects, upon any part of the coaſt belonging to Tripoli, ſhall be made or become a prize, and that neither the goods thereof ſhall be ſeized, nor the men made ſlaves: but that all the ſubjects of Tripoli ſhall do their beſt endeavours to ſave the ſaid men and their effects.

" VII. That no ſhip nor any other veſſel of Tripoli, ſhall have permiſſion to be delivered up, or to go to any other place at enmity with the king of Great Britain, to be made uſe of as corſairs againſt his majeſty's ſubjects.

" VIII. That if any ſhip or veſſel belonging to Tunis, Algiers, Tetuan, Sallee, or any other place being at war with the king of Great Britain, bring any goods or veſſels of his ſaid majeſty's ſubjects to Tripoli, or any other port or place of that kingdom, the governors there ſhall not permit them to be ſold within the territories of Tripoli.

" IX. That if any of the ſaid king of Great Britain's ſubjects ſhall happen to die in Tripoli, or any of its territories, his goods or monies ſhall not be ſeized by the governors or any miniſters of Tripoli, but ſhall remain with the Engliſh conſul.

" X. That neither the ſaid conſul, nor any other ſubject of Great Britain ſhall be bound to pay the debts of any other Britiſh ſubject, unleſs they become ſurety for the ſame by a public act.

" XI. That the ſubjects of his ſaid Britiſh majeſty in Tripoli, or its territories, in matters of controverſy, ſhall be liable to no other juriſdiction but that of the dey or divan, except the difference be between themſelves, in which caſe they ſhall be liable to no other determination than that of the conſul.

" XII. That in caſe any ſubject of his Britannic majeſty being in any part of the kingdom of Tripoli, ſhall happen to kill, wound, or ſtrike a Turk or Moor; if he be taken, he ſhall be puniſhed in the ſame manner, and with no greater ſeverity, than a Turk ought to be for the like offence; but if he eſcape, neither the Engliſh conſul, nor any other Britiſh ſubject, ſhall be in any ſort queſtioned or troubled on that account.

" XIII. That the Engliſh conſul now, or at any time hereafter, reſiding at Tripoli, ſhall be there at all times with intire freedom and ſafety of his perſon and eſtate, and ſhall be permitted to chuſe his own interpreter and broker, and freely to go on board any ſhip in the roads, as often as he pleaſes, and to have the liberty of the country, and ſhall be allowed a place to pray in; and that no perſon ſhall do him any injury in word or deed.

" XIV. That not only during the continuance of this peace and friendſhip, but likewiſe if any breach or war happen to be hereafter between his ſaid Britiſh majeſty and the city and kingdom of Tripoli, the ſaid conſul, and all other his majeſty's ſubjects inhabiting in the ſaid kingdom of Tripoli, ſhall always and at all times, both in peace and war, have full and abſolute liberty to depart, and to go into their own or any other country, in any ſhip or veſſel of what nation ſoever they ſhall think fit, and to carry with them all their effects, goods, families, and ſervants, though born in the country, without any moleſtation or hindrance.

" XV. That no ſubject of his Britannic majeſty, being a paſſenger from or to any port, ſhall be moleſted or meddled with, though he be in a ſhip or veſſel at war with Tripoli.

" XVI. That if any of his ſaid Britannic majeſty's ſhips of war come to Tripoli, or to any other port or place of that kingdom, with any prize, they ſhall have liberty to ſell it, or otherwiſe diſpoſe of it at their own pleaſure, without any lett or moleſtation; and that his ſaid majeſty's ſhips of war ſhall not be obliged to pay any cuſtoms whatſoever; and that if they ſhall want proviſions, victuals, or any other things, they may freely buy them at the market price.

" XVII. That when any of his Britannic majeſty's ſhips of war ſhall appear before Tripoli, upon notice thereof given to the Engliſh conſul, or by the commander of the ſaid ſhips to the chief governor of Tripoli, public proclamation ſhall be immediately made to ſecure the Chriſtian captives; and if, after that, any Chriſtians whatſoever make their eſcape on board any of the ſaid ſhips of war, they ſhall not be required back again; nor ſhall the ſaid conſul or commander, or any other Britiſh ſubject, be obliged to pay any thing for the ſaid eſcaped Chriſtians.

" XVIII. That all the merchant ſhips coming to the city or kingdom of Tripoli, though not belonging to Great Britain, ſhall have free liberty to put themſelves under the protection of the Britiſh conſul, in ſelling and diſpoſing of their goods and merchandize, if they ſhall think proper, without any moleſtation.

" XIX. That all the Britiſh ſhips of war carrying his majeſty's flag, upon their appearing before the city of Tripoli, after due notice given of it by the Britiſh conſul, ſhall, in honor of his Britannic Majeſty, be ſaluted with twenty-ſeven cannon fired from the caſtle of the city, and the ſaid ſhip ſhall return the ſame number to it.

" XX. That no merchant ſhip belonging to Great Britain, or any other nation under the protection of the Britiſh conſul, being in the port of Tripoli, ſhall be detained from proceeding to ſea on her voyage longer than three days, under pretence of arming the ſhips of war of this government, or any other whatſoever.

" XXI. That no Britiſh ſubject ſhall be permitted to turn Muſſulman in the city and kingdom of Tripoli, being induced to it by any ſurprize whatſoever, unleſs he voluntarily appear before the dey or governor, with the Engliſh conſul's interpreter, thrice in twenty-four hours, and every time declaring his reſolution to become Mahometan.

" XXII. That his Britannic majeſty's conſul, reſiding in Tripoli, ſhall at all times when he pleaſes, have liberty to put up his ſaid majeſty's flag on the top of his houſe, and there to continue it diſplayed as long as he pleaſes; and likewiſe that the ſaid conſul ſhall have the like liberty of putting up and diſplaying the ſaid flag on his boat, when he paſſes on the water; and no man whatſoever to

oppoſe, diſturb, or injure him therein either by word or deed.

" XXIII. That whereas the iſland of Minorca, and city of Gibraltar, have been yielded to his Britannic majeſty by the king of Spain, as well as ſeveral other powers of Europe engaged in the late war; it is agreed and concluded, that from this time forward for ever, the ſaid iſland of Minorca and city of Gibraltar ſhall be eſteemed in every reſpect, by the government of Tripoli, to be part of his Britannic majeſty's dominions, and the inhabitants thereof ſhall be deemed his natural ſubjects, as if they had been born in Great Britain; and they, with their ſhips carrying Britiſh colours, ſhall be permitted freely to trade and traffic in any part of the kingdom of Tripoli, and ſhall paſs without any moleſtation, either on the ſeas or otherwiſe, in the ſame manner, and with the ſame freedom and privileges, as have been ſtipulated in this and all former treaties, in behalf of the Britiſh nation and ſubjects.

" XXIV. And whereas in the treaty concluded in the reign of king Charles II. A. D. 1676, by Sir John Narborough, an article was inſerted, by which the ſhips of Tripoli were excluded from cruiſing before or in ſight of the port of Tangier, then belonging to his majeſty; it is now ratified and concluded, that none of the ſhips or veſſels belonging to Tripoli ſhall cruiſe or look for prizes before or in ſight of the iſland of Minorca and Gibraltar to diſturb or moleſt the commerce thereof, in any manner whatſoever.

" XXV. That all and every article in the treaty ſhall be inviolably kept and obſerved between his ſacred majeſty &c. and the moſt illuſtrious lords, &c. of the city and kingdom of Tripoli; and all other matters not particularly expreſſed in this treaty, and provided for in any former, ſhall ſtill remain in full force, and ſhall be eſteemed the ſame as if inſerted.

" Dated in the preſence of Almighty God, in the city of Tripoli, on the 19th day of June, in the year 1716 of the Chriſtian æra; and of the Mahometan hegira 1128."

We ſhall cloſe our deſcription of this country with obſerving, that the kingdom of Tripoli was once the richeſt, moſt populous, and reſpectable of all the ſtates on the coaſt; but it is now much reduced; and the inhabitants, who are ſaid to amount to between four and five hundred thouſand have all the vices of the Algerines.

Barca, which is included in the kingdom of Tripoli, is ſituate between ten and thirty degrees eaſt longitude, and thirty and thirty-four degrees of north latitude, is ſtiled by the few Arabs who inhabit it, Ceyart Barca, or the deſart of whirlwinds and hurricanes, extends four hundred miles from north to ſouth, and three hundred from eaſt to weſt. This inhoſpitable country compriſes thoſe diſtricts which the antients termed Marmarica and Cyrenaica. It was better known to the antients than the moderns, and is particularly mentioned by Virgil, on account of the ferocity of the people, in the ſpeech which that poet puts into the mouth of Anna, queen Dido's ſiſter, when ſhe is recapitulating the ſtates that ſurround Carthage.

The territory about the towns and villages produce a ſcanty pittance of corn, millet, and maize; all other parts of this wretched region, are totally barren; and the whole labours under a great ſcarcity of water. Small as the quantity of grain is, the poor people are under the neceſſity of bartering ſome of it for camels, ſheep, dates, &c. Perhaps the moſt pleaſant place in the whole country is that ſmall diſtrict upon which the temple of Jupiter Ammon formerly ſtood; yet this is ſurrounded by horrid plains of burning ſands, which move under the traveller's feet like waves, or, being raiſed by the winds, overwhelm him with clouds of duſt. If any are obliged to travel through this diſagreeable region, they muſt travel with a compaſs, or they would be loſt in the deſart, and wander about till they periſhed with hunger and thirſt.

The antient Cyrenaica, is the deſart part, and that called Marmarica the habitable diſtrict; thoſe who live near the ſea coaſt are all given to piracy; and the maritime part itſelf is called the coaſt of Dernha, from the chief city remaining, all the other towns known to the ancients being either totally ruined, or dwindled to the moſt inconſiderable villages; ſo that what condition they are in, what commerce they carry on, or how and by whom governed, we cannot give any ſatisfactory account of; and can only farther add, that the people are the moſt determined, ferocious, and cruel robbers, both by ſea and land; and they are ſo poor, that in order to augment their means of ſubſiſtence, and get rid of all that they may deem an incumbrance, they are frequently obliged to ſell their wives and children to the Sicilians.

SECT. X.

Giving a general and ſupplementary Account and Deſcription of BARBARY, its Seaſons, Soil, Produce, Huſbandry, Cattle, Inhabitants, &c.

BARBARY is bounded by the Mediterranean, on the north, which ſeparates it from Europe; on the eaſt, by Egypt; on the ſouth, by the deſerts of Zaara: and on the weſt, by the Atlantic Ocean; being in length from eaſt to weſt, about two thouſand two hundred miles; and in breadth, from north to ſouth, where wideſt, about ſix hundred miles.

This country enjoys a wholeſome temperature of air, neither too hot in ſummer, nor too ſharp and cold in winter. The winds are generally from the ſea, i. e. from the weſt (by the north) to the eaſt. Thoſe from the eaſt are common at Algiers from May to September, at which time the weſterly winds take place, and become the moſt frequent. Sometimes alſo, particularly about the equinoxes, we very ſenſibly experience that force and impetuoſity, which the antients have aſcribed to the Africus, or ſouth-weſt wind, called labetch by the mariners of theſe ſeas. The ſoutherly winds, which are uſually hot and violent, are not frequent at Algiers. They blow ſometimes for five or ſix days together, in July and Auguſt, rendering the air ſo exceſſively ſuffocating, that during their continuance, the inhabitants are obliged to ſprinkle the floors of their houſes with water. The winds from the weſt, the north-weſt, and the north, are attended with fair weather in ſummer, and rain in winter: but the eaſterly winds, no leſs than the ſoutherly, are for the moſt part dry, though accompanied by a thick and cloudy atmoſphere in moſt ſeaſons.

Rain is very uncommon in this climate during the ſummer ſeaſon: and in moſt parts of the Zaara, or Deſart, on the ſouth of Algiers, particularly in the Jereed, they have rarely any rain at all. The firſt rains fall ſome years in September; in others a month later; after which the Arabs break up their ground, and begin to ſow wheat, and plant beans. This commonly falls out about the middle of October: but the ſowing of barley, and the planting of lentils and gravances, is a fortnight or three weeks later, or not till the end of November. If the latter fall in the middle of April (as they uſually do) the crop is reckoned ſecure; the harveſt following in the latter end of May, or in the beginning of June, according to the preceding quality of the ſeaſon.

Two buſhels and a half of wheat, or barley, are judged here to be ſufficient to ſow as much ground as a pair of oxen will plow in one day, which we have always found to be, a little more or leſs, equal to one of our acres. We could never learn that any part of Barbary afforded yearly more than one crop, one buſhel yielding ordinarily from eight to twelve, though ſome diſtricts may afford a much greater increaſe. There is but one kind of wheat and barley cultivated in this country. In ſome diſtricts, where they have a command of water during the ſummer ſeaſon, the natives cultivate rice, Indian corn, and particularly a white ſort of millet, which the Arabs call drah, and prefer it to barley for the fattening of their cattle. Oats are not cultivated at all by the Arabs (the horſes of this country feeding altogether upon barley) neither is big (or winter wheat) ſo much as known in this climate.

The Moors and Arabs continue to tread out their corn, after the primitive cuſtom in the eaſt. After the grain is trodden out, they winnow it, by throwing it up into the wind with ſhovels, lodging it afterwards in mattamores or ſubterraneous magazines.

Beans, lentils, and gravances (the latter of which is a cicer or chich pea) are the chief ſorts of pulſe that are cultivated in theſe kingdoms. Peaſe, till of late, were known in the gardens only of the ſeveral Chriſtian merchants. They are ſown with the firſt rains, and bloſſom in the latter end of February, or the beginning of March. Beans are uſually full podded at that time, and being boiled up with oil and garlick, are the principal food of perſons of all diſtinction during the ſpring. After them lentils and gravances begin to be gathered. Of roots, pot-herbs, and the fruits of the country, there is not only a great plenty and variety, but a continuance or ſucceſſion at leaſt of one kind or other throughout the whole year.

Palm

Palm trees are very numerous in this country; as are alſo almond trees, plumbs, cherries, mulberries, apples, pears, peaches, nectarines, pomgranates, prickle pears, olives, walnuts; but no hazel filberts, currants or gooſeberries.

Their grapes ripen towards the latter end of July, and are cut for the vintage in September. The wine of Algiers, before the locuſts in 1723 and 1724, made ſuch deſtruction of the vineyards, was not inferior to the beſt Hermitage, either in briſkneſs of taſte or flavour. But ſince that time it greatly degenerated, and has not for many years recovered its uſual qualities; but at preſent it may diſpute the preference with the wine of Spain or Portugal. The lemon (and ſometimes the civil orange) tree, is always in a ſucceſſion of fruit and bloſſoms; but the China, as it is commonly called, is a foreigner, and bears only towards the latter end of autumn.

With reſpect to their gardens, there is nothing laid out with method, beauty, or deſign; the whole being only a medley or confuſion of trees, with beds of cabbages, turnips, beans, gravances, &c. nay, ſometimes of wheat and barley diſperſed among them. Fine walks, parterres, and flower-plats, would be to theſe people the loſs of ſo much profitable ſoil; as planting in order and regularity, the ſtudy of ſoil and compoſts, or the aiming at any new improvements and diſcoveries, would be ſo many deviations from the practice of their anceſtors, whoſe footſteps they follow with the utmoſt attachment and reverence.

The ſoil, from which theſe vegetables are produced, is for the moſt part of ſuch a looſe and yielding contexture, that an ordinary pair of oxen is ſufficient, in one day, to plow an acre of the ſtiffeſt ſort of it. The colour of it is not always the ſame; for in the plains of Zeidouſe it is blackiſh, whilſt in thoſe of Elmildegah, &c. it inclines to be red; though all of them are alike impregnated with great quantities of ſalt and nitre, and are equally fruitful.

The banks of ſeveral rivers, to the depth ſometimes of two or three fathoms, are ſtudded, in ſummer time, with nitrous and ſaline knobs and exudations, which, beſides the depth of the ſoil, ſhew us likewiſe how well it is ſaturated with theſe minerals. In the ſalt-petre works at Tlemſan, they extract ſix ounces of nitre from every quintal of the common mould, which is there of a dark colour; and at Douſan, Kair-wan, and ſome other places, they have the like quantity from a loamy earth, of a colour between red and yellow. To this grand and inexhauſtible fund of ſalt we may in a great meaſure attribute the great fertility for which this country has always been remarkable, and ſtill continues to be ſo, without any other manuring than the burning, in ſome few places, of the ſtubble; though it is ſomewhat extraordinary that the province of Byzacium, which was formerly held in ſo much repute for its fertility, ſhould be at preſent the moſt barren and unprofitable part of theſe kingdoms.

Salt is the chief and prevailing mineral of theſe kingdoms, as well from the ſeveral ſalt ſprings and mountains of ſalt, as from the great number of ſaline ſhibkahs that are to be met with in every diſtrict. The ſalt pits of Arzew lie ſurrounded with mountains, taking up an area of about ſix miles in compaſs. They appear like a large lake in winter, but are dry in ſummer, the water being then exhaled, and the ſalt left behind cryſtallized. In digging, they paſs through different layers of this ſalt, whereof ſome are an inch, others more in thickneſs; in proportion, we preſume, to the quantity of ſaline particles the water was impregnated with, before their reſpective conerations. This whole area is made up of a ſucceſſion of ſimilar ſtrata heaped one upon another: and in the ſame manner are the ſalinæ between Carthage and the Goletta, thoſe of the Shott, and of other places, bordering upon or lying within the Saara.

Jebbel Had deſſa is an intire mountain of ſalt, ſituated near the eaſtern extremity of the lake of Marks. The ſalt of it is of a quite different quality and appearance from that of the ſalinæ, being as hard and ſolid as ſtone, and of a reddiſh or purple colour. Yet what is waſhed down from theſe precipices, by the dews, acquires another colour, becoming as white as ſnow, and loſing that ſhare of bitterneſs, which is in the parent rock ſalt. The ſalt of the mountains, near Lwotaiah and Jibbel Miniſs, is of a grey or bluiſh colour, and, without ſubmitting to the like accidental purification as at Had-deſſa, is very agreeable to the palate; the firſt eſpecially being ſold for a penny an ounce at Algiers.

The ſalt of the lake of Marks (called likewiſe Bahirah Fharuoune), and of other leſſer plains of the ſame nature, is of the like quality and flavour. Theſe are uſually called Shibkah, i. e. ſaltiſh plats of ground, being commonly overflowed in winter (at the ſame time they appear like ſo many extenſive lakes), but are dry all ſummer (when they may be taken for the like number of bowling-greens prepared for the turf). Some of theſe ſhibkahs, have a hard and ſolid bottom, without the leaſt mixture of gritty mould, retaining the ſalt that lieth cryſtallized upon them after rain. But others are of a more ouzy, abſorbent nature, ſeldom preſerving any ſaline incruſtations upon the ſuface.

But, beſides the ſalt ſprings and rivulets, already mentioned, theſe countries abound in hot and ſulphurous ſprings and baths. Some of theſe waters are little more than lukewarm; others of more intenſe heat, and very proper to bathe in, while the Hammiam-Meſkouteen, and the upper bath at Mereega, are much too hot for that purpoſe; the former boiling a large piece of mutton very tender in a quarter of an hour.

Beſides the hot mineral effluvia that are continually diſcharged by the thermæ, there ſtill remain below the ſurface ſome vaſt and inexhauſtible funds of ſulphur, nitre, and other inflammable bodies, of which the freqency and violence of the earthquakes, anno 1723 and 1724, ſhook down a number of houſes, and cloſed up the courſe of ſeveral fountains: but by one of theſe violent concuſſions, anno 1716, a large patch of ground at Wamre, lying in an eaſy deſcent, with a well, a few trees, and a farm houſe, glided all down together for the ſpace of a furlong, till they were, one or other of them, ſtopped by the channel of the Harbune. Several of the branches, together with ſome pieces of the houſe turned upſide down, and lying a diſtance from each other, are to this day ſtanding monuments of this cataſtrophe. I was likewiſe informed, that the like accident happened at the ſame time in ſome of the mountainous diſtricts near Boujeiah and El-Khadarah. The great ſhock in anno 1724, was perceived from Miliana to Bona, the air being then very clear and temperate, and the quickſilver ſtanding at the greateſt height, whilſt, upon enquiry, other concuſſions were only found to be local, or of ſmall extent; the quickſilver, in theſe caſes, obſerving no certain period, and the air being, as at other times, either calm or windy, hazy or ſerene.

Earthquakes, at Algiers, generally fall out a day or two after a great rain, at the end of the ſummer, or in the autumn. The cauſe, perhaps, may ariſe from the extraordinary conſtipation or cloſeneſs of the ſurface at ſuch times, whereby the ſubterraneous ſtreams will be either ſent back or confined; whereas the whole country being full of deep chinks and chaſms, the inflammable particles have an eaſier eſcape.

Lead and iron are the only metals that have yet been diſcovered in Barbary; the latter is white and good, but in no great quantity. Their lead ore is very rich, and might be obtained in large quantities, if their mines were under a good regulation.

Beſides the horſe, the mule, the aſs, and camel, uſed in Barbary for riding and carrying burdens, Dr. Shaw (from whoſe travels into theſe parts this account is chiefly taken) mentions another animal, called the kumrah, a little ſerviceable beaſt of burden, engendered betwixt an aſs and a cow, being ſingle hoofed like the aſs, but the tail and head (except the horns) like a cow, and a ſkin ſleeker than that of the aſs.

In this country, the neat cattle are generally very ſmall and ſlender, the fatteſt of them, when brought to the ſtall, rarely weighing above five or ſix quintals, or hundred weight: neither is their milk in proportion to their ſizes, for notwithſtanding the rich herbage of this country from December to July, the butter never has a ſubſtance or richneſs of taſte equal to what our Engliſh dairies afford us in the midſt of winter. Abdy baſſa, dey of Algiers, was no leſs ſurpriſed than his miniſters, when admiral Cavendiſh acquainted him, that he had a Hampſhire cow on board the Canterbury (then in the road of Algiers) which gave a gallon of milk in a day; a quantity equal to what half a dozen of the beſt Barbary cows would yield in the ſame time. The Barbary cattle have likewiſe another imperfection, which is, that they always loſe their calves and their milk together.

The dairies here are alſo in ſome meaſure ſupplied by the ſheep and goats, as the Moors and Arabs chiefly make cheeſe of their milk. Inſtead of runnet, they make uſe (in the ſummer ſeaſon particularly) of the flowers of the great-headed thiſtle, or wild artichoke, to turn the milk, putting the curds thus made into ſmall baſkets of ruſhes, or palmetta leaves, and binding them afterwards and preſſing them. Many of theſe cheeſes weigh about two or three

three pounds, being uſually of the ſhape and ſize of a penny loaf. They have no other method of making butter, than by putting their milk or cream into a goat-ſkin, which being ſuſpended from one ſide of the tent to the other, and preſſed to and fro in one uniform direction, quickly occaſions that ſeparation of the unctuous and wheyey parts which is requiſite.

We may obſerve further, that, beſides the great variety of the cattle of this country, each ſpecies are very numerous and prolific. Several Arabian tribes can bring into the field only three or four hundred horſes, at the ſame time that they are poſſeſſed of more than ſo many thouſand camels, and thrice that number of ſheep and black cattle. The Arabs rarely kill any of their flock, living chiefly upon their milk and butter, or elſe upon what their wool brings them in exchange for foreign commodities.

With reſpect to cattle that are not naturally tame and domeſticated, theſe kingdoms afford large herds of the neat kind, called bekker-el-waſh by the Arabs. This ſpecies is remarkable for having a rounder turn of body, a flatter face, with horns bending more to each other than in the tame kind: theſe agree in colour with the red deer, and are of the ſame ſize.

The lion and panther are among their wild beaſts: the tyger is not a native of Barbary. The dubbah is an animal about the bigneſs of a wolf, but of a flatter body, and naturally limps upon the hinder right leg. Beſides theſe animals, it has others in common with other countries, as red and fallow deer, the gazel or antelope, the bear, the ape, the ichneumon, porcupine, hedge-hog, fox, ferret, weaſel; alſo the mole, rabbet, hare, and wild boar, which are every where in great numbers. The lion is ſuppoſed to prey chiefly upon the latter, which notwithſtanding hath ſometimes been known to defend itſelf with ſo much bravery, that the victory hath inclined to neither ſide, the carcaſes of them both having been found lying dead together all in a gore, greatly torn and mangled.

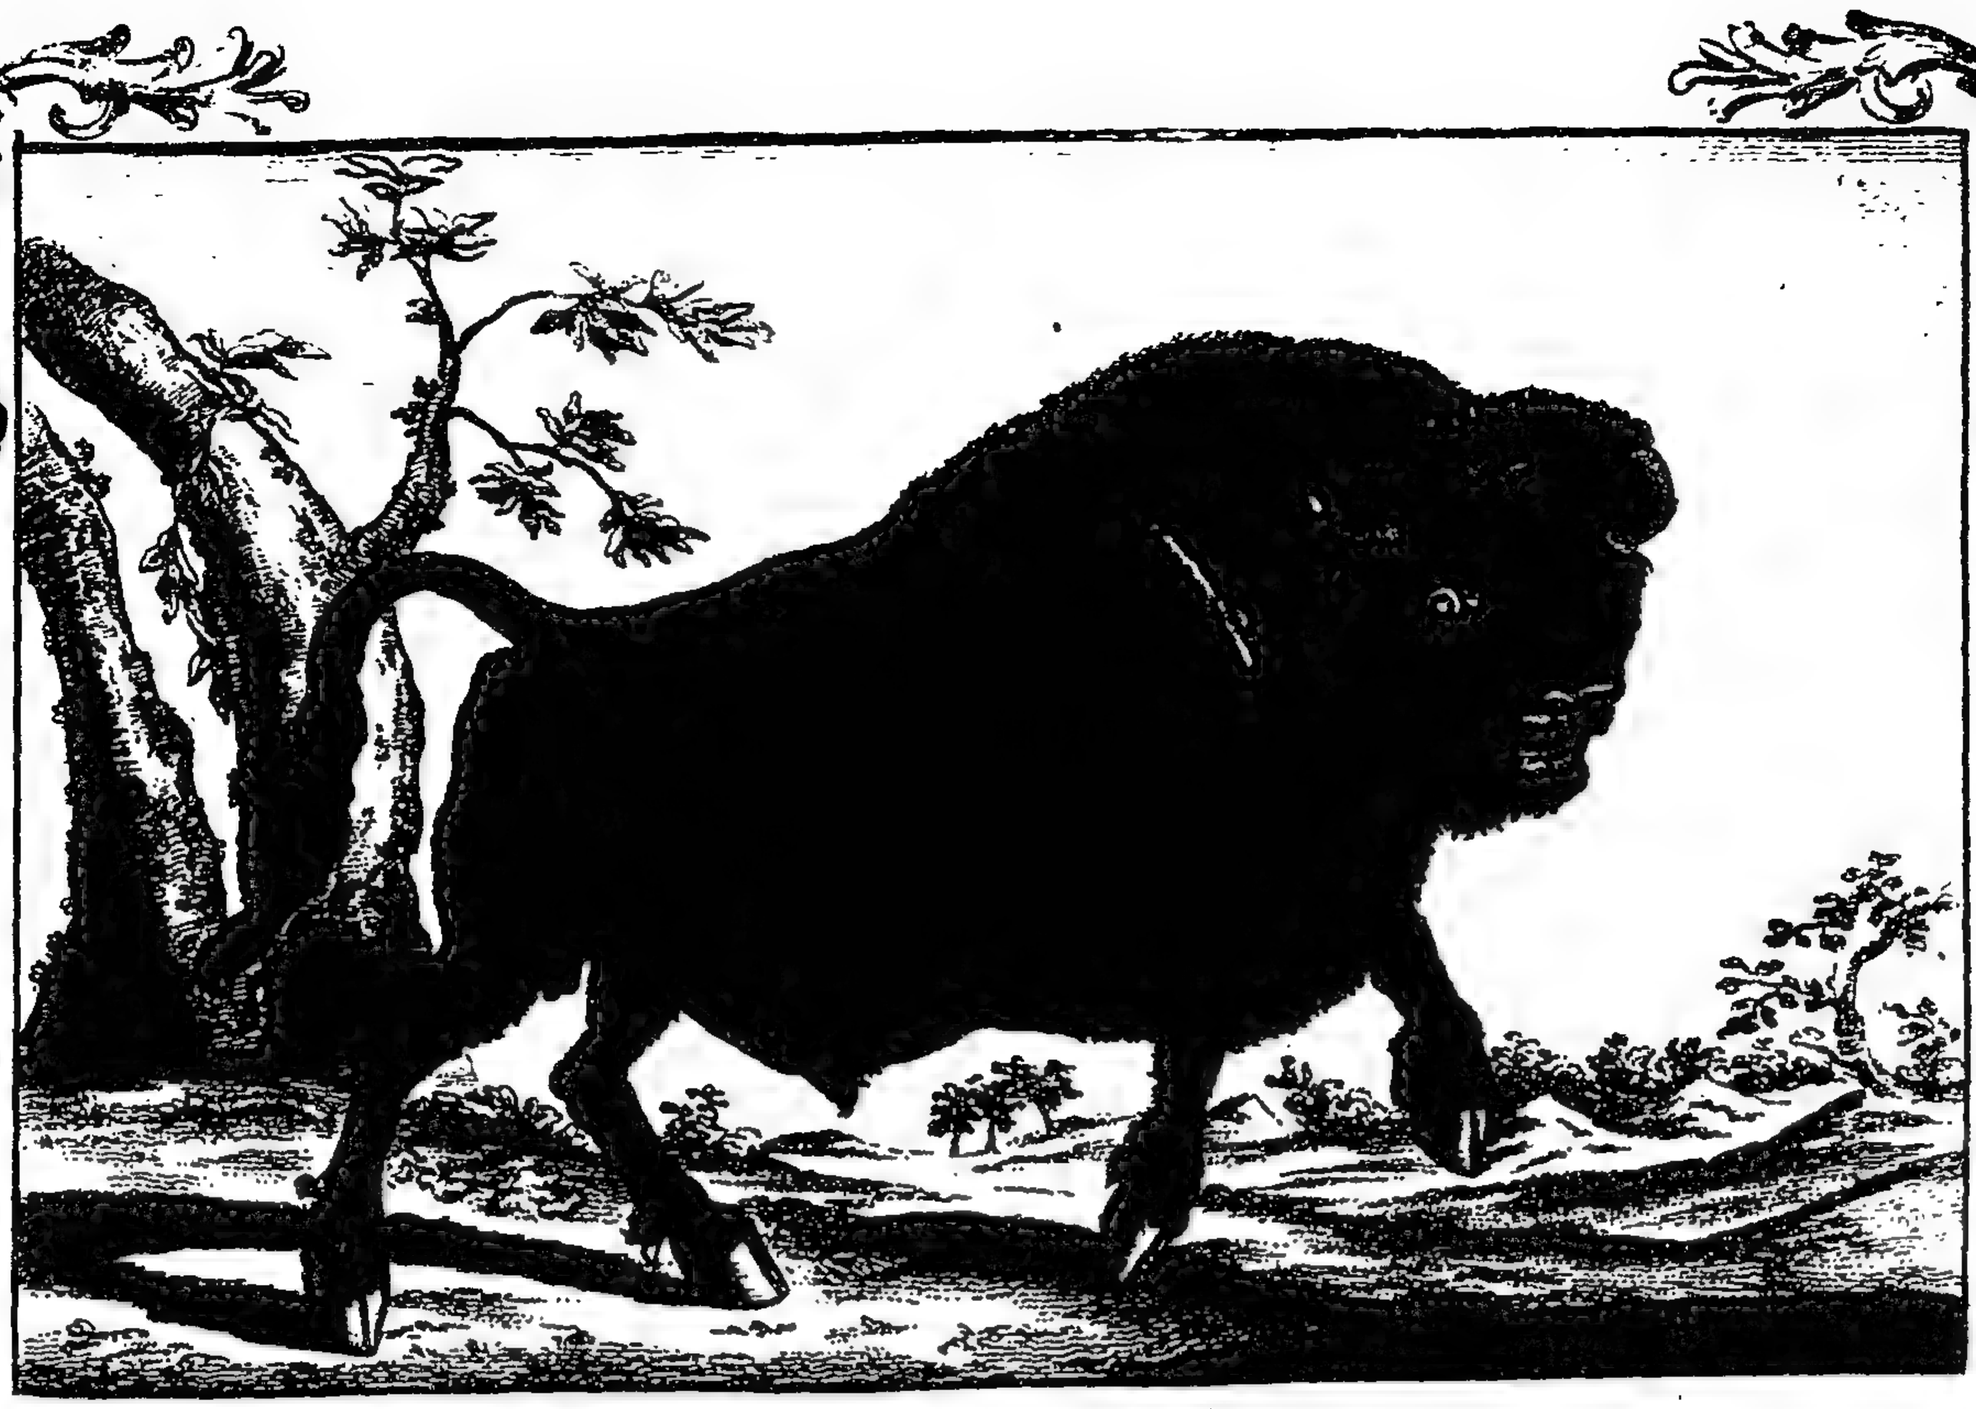
The abovementioned traveller obſerves, that the locuſts which he ſaw in the years 1724 and 1725 were much bigger than our common graſshoppers, having brown ſpotted wings, with legs and bodies of a bright yellow. Their firſt appearance was towards the latter end of March, the wind having been for ſome time ſoutherly; and in the middle of April their numbers were ſo vaſtly increaſed, that, in the heat of the day, they formed themſelves into large bodies, appeared like a ſucceſſion of clouds, and darkened the ſun: about the middle of May, when their ovaries were turgid, each of theſe bodies began gradually to diſappear, retiring into the metijah and other adjacent plains, to depoſit their eggs. Accordingly, in the month following, their young broods began gradually to make their appearance, and it was ſurprizing to obſerve, that no ſooner were any of them hatched, than they immediately collected themſelves together, each of them forming a compact body of ſeveral hundred yards ſquare, which marching afterwards directly forward, climbed over trees, walls, and houſes, and eat up every plant in their way, letting nothing eſcape them.

The inhabitants, to ſtop their progreſs, made trenches all over their fields and gardens, and filled them with water; or elſe placing in a row great quantities of heath, ſtubble, and ſuch like combuſtible matter, they ſet them on fire on the approach of the locuſts. But all this was to no purpoſe, for the trenches were quickly filled up, and the fires put out by infinite ſwarms ſucceeding one another, whilſt the front ſeemed regardleſs of danger, and the rear preſſed on ſo cloſe, that a retreat was impoſſible. A day or two after one of theſe bodies was in motion, others were already hatched to glean after them, gnawing off the young branches, and the very bark of ſuch trees as had eſcaped before with the loſs only of their fruit and foliage; ſo juſtly hath the inſpired writer compared them to a great army, and obſerved, that the land is as the garden of Eden before them, and behind them a deſolate wilderneſs.

Having, in this manner, lived near a month upon the ruin and deſtruction of every thing that was green and juicy, they arrived at their full growth, and threw off their worm-like ſtate by caſting their ſkins. To prepare themſelves for the change, they clung by their hinder feet, to ſome buſh, twig, or corner of a ſtone, when immediately, by an undulating motion, uſed upon the occaſion, their heads would firſt appear, and ſoon after the reſt of their bodies, after which they lay in a languiſhing condition; but as ſoon as the ſun and air had hardened their wings, and dried up the moiſture that remained upon them, after the caſting off their ſloughs, they returning again to their former voracity, with an addition both of ſtrength and agility: but they continued not long in this ſtate, before they were intirely diſperſed, as their parents had been before, after the laying of their eggs; and as the direction of their marches, and flights of them both, was always to the northward, it is probable they periſhed in the ſea, a grave, which according to thoſe people, they have only in common with other winged creatures. Theſe inſects, ſprinkled with ſalt, and fried, are not much unlike the river crayfiſh in taſte.

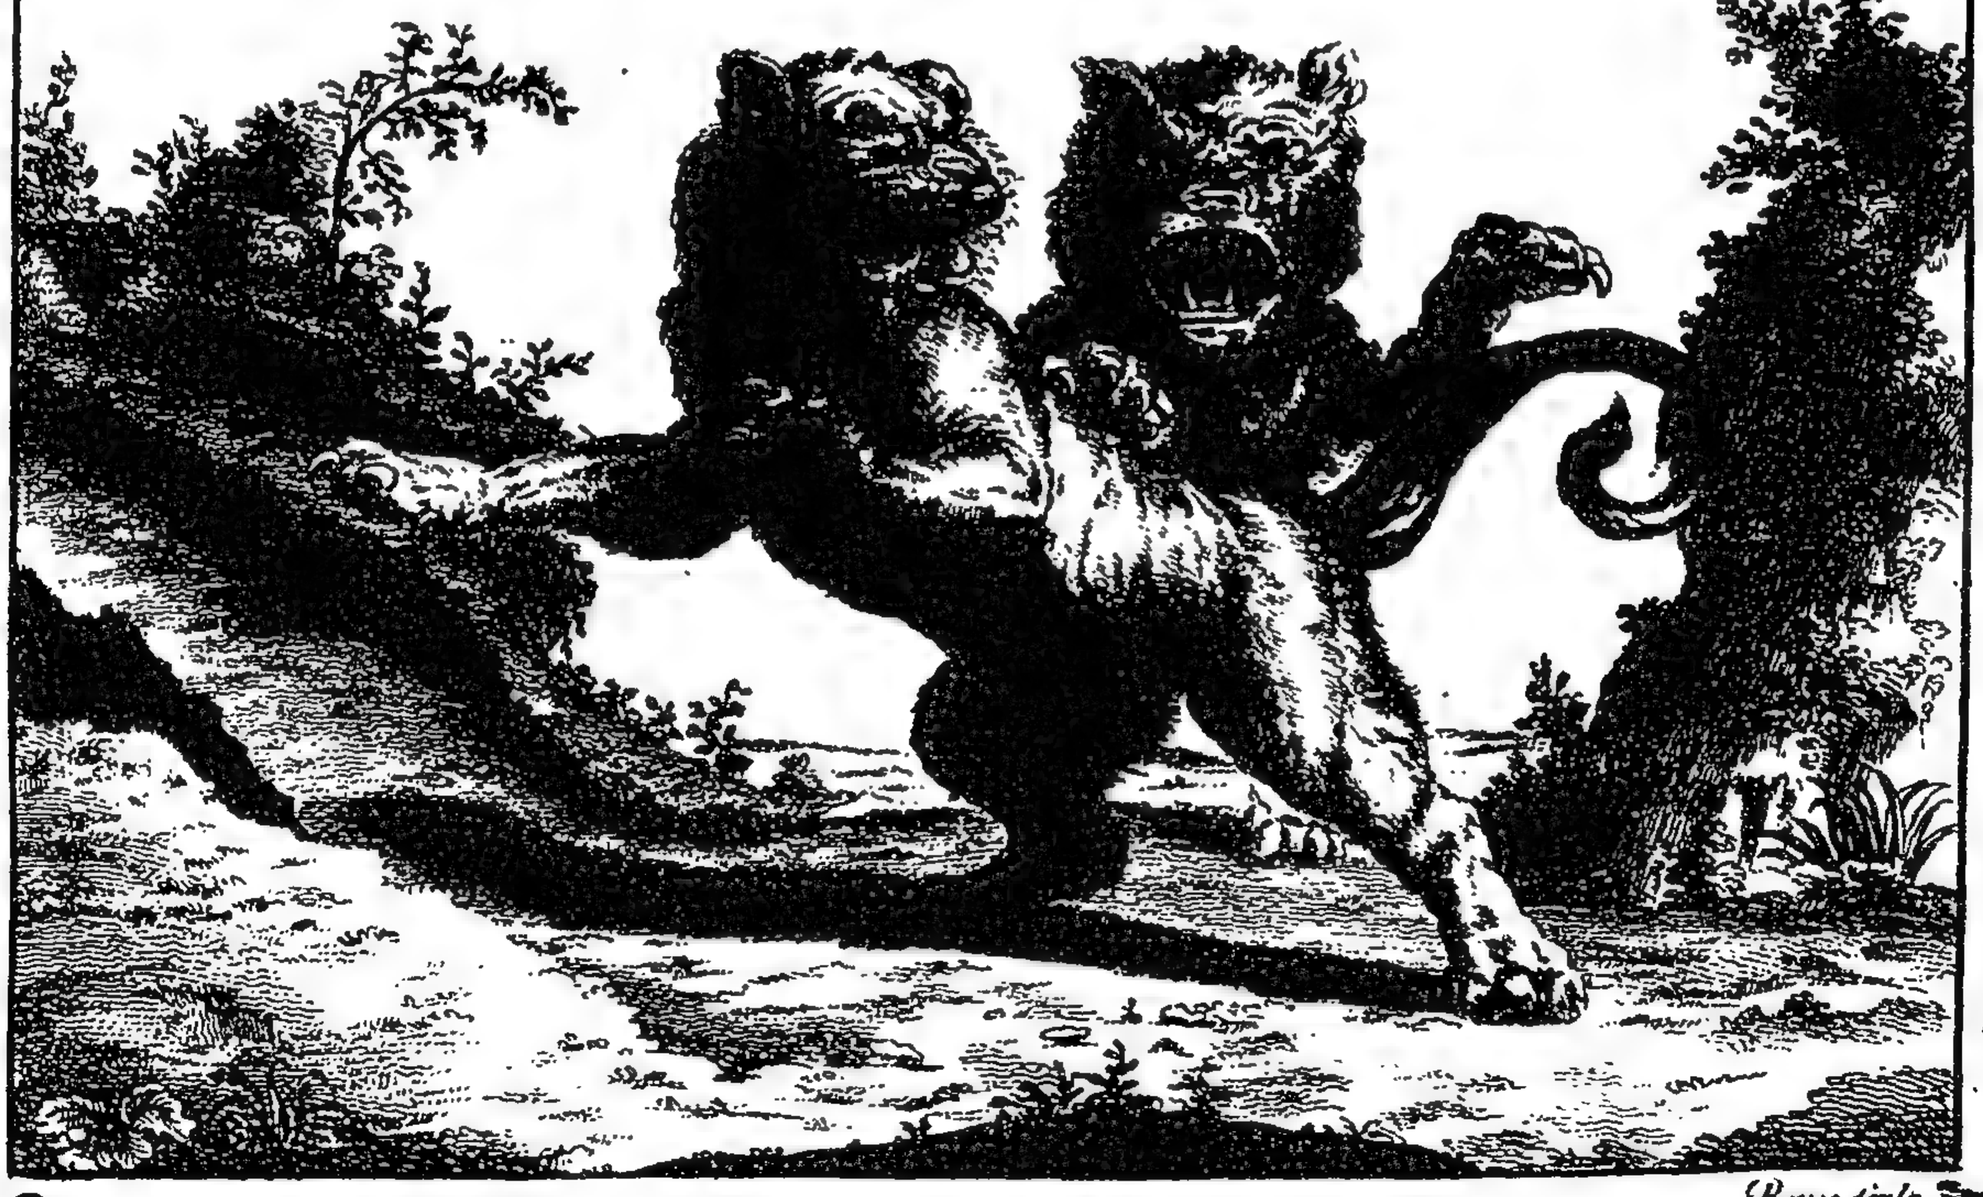
Africa produces few monſters: according to the ſame author, the natural and ordinary courſe of things is much the ſame in Barbary, as in other places; each ſpecies, as far as he could be informed, keeping inviolably to itſelf; for if, ſays he, we except the mule and kumrah, (which two are produced from animals under the direction of mankind, and therefore not ſo properly left to themſelves) few, it is preſumed, if indeed any inſtances, can be fairly urged in favour of the old obſervation, that Africa is always producing ſome new monſters.

Arts and ſciences are little known or encouraged in Barbary: beſides their koran, and ſome other enthuſiaſtic comments upon it, very few books are read or enquired after, by thoſe few perſons of riper years, who have both time and leiſure for ſtudy and contemplation. All that variety of learning which they formerly either invented themſelves, or adopted into their own language, may be reduced, at preſent, to a few ſheets of blundering geography, or to ſome tireſome memoirs of the tranſactions of their own times; for ſuch branches of hiſtory as are older than their prophet, are a medley only of romance and confuſion.



The ſame writer obſerves, that, upon his arrival at Algiers, he made it his chief buſineſs, to be acquainted with ſuch perſons as had the character of being learned and curious; and though it is very difficult (as well from their natural ſhyneſs to ſtrangers, as from a particular contempt they have for Chriſtians) to cultivate any real friendſhip among them; yet in a little time, it was perceived that the chief aſtronomer (who had the ſuperintendance and regulation of the hour of prayer) had not trigonometry enough to project a ſun-dial; that the whole art of navigation as it is practiſed at Algiers and Tunis, conſiſted in nothing more than what is called the pricking of a chart, and diſtinguiſhing the eight principal points of the compaſs. Even chemiſtry is no farther applied at preſent than to the diſtilling of roſe water; though this was formerly the favourite ſcience of theſe people.

Notwithſtanding the extreme ignorance of theſe people in general, there are, however, ſeveral perſons who preſcribe in phyſic, play upon a variety of muſical inſtruments, and are concerned in other actions and performances, which ſeem, at leaſt, to ſuppoſe ſome ſkill in mathematics; yet all this is learnt merely by practice, long-habit, and cuſtom, aſſiſted, for the moſt part, with great ſtrength of memory and quickneſs of invention; for no objection can be made againſt the natural parts and abilities of theſe people, who are certainly ſubtil and ingenious, and only want time, application, and encouragement, to cultivate and improve them.



As the people believe in ſtrict and abſolute predeſtination, few of them will either admit of advice or medicine; whilſt others, who are leſs ſuperſtitious reſpecting religion, prevent the aſſiſtance of both by their ill conduct and management, leaving all to the ſtrength of nature, or elſe to mager-eah, as they call charms and enchantments, concerning which they are very credulous.

There is ſcarcely one perſon in twenty thouſand that is verſed in numeral arithmetic or algebra, notwithſtanding their forefathers, if we may judge from the name, ſeem to have been the inventors of the one, as they have given to all Europe the characters of the other. However, the merchants, beſides being frequently very dextrous in the addition and ſubtraction of large ſums by memory, having a ſingular method of numeration, by putting their hands into each other's ſleeve, and then touching one another with this or that finger, or ſuch particular joint of it (each of them denoting a determined ſum or number), they will tranſact affairs of the greateſt value, without ſpeaking to one another, or being at all underſtood by the byeſtander.

The Arabs are more addicted to ſuperſtition than any other nation in the world, or even than the Mahometans in general. They hang about the childrens necks the figure of an open hand, which the Turks and Moors paint upon their ſhips and houſes, as an antidote and counter charm to an evil eye; for five, with them, is an unlucky

Exact likeness of the BUFFALO, *or Wild Bull.*

Natural representation of LIONS *found in* AFRICA.

lucky number. They who are grown up, carry always about with them ſome paragraph or other of the koran, which, as the Jews did their phylacteries, they place upon their breaſt, or ſew under their caps, to prevent faſcination and witchcraft, and to ſecure themſelves from ſickneſs, and other misfortunes they are expoſed to.

The people ſuppoſe the virtue of theſe charms and ſcrolls to be ſo far univerſal, that they hang them upon the necks of their horſes, and other beaſts of burden. They alſo place great confidence in magicians and ſorcerers; and upon ſome extraordinary occaſions, particularly in a lingering diſtemper, they uſe ſeveral ſuperſtitious ceremonies in the ſacrificing of a cock, a ſheep, or a goat; by burying the whole carcaſe under ground, or by drinking a part of the blood, or elſe by burning or diſperſing the feathers: for it is a prevailing opinion all over this country, that a great many diſeaſes proceed from ſome offence or other that has been given to the jenoune, a ſort of creatures placed by the Mahometans betwixt angels and devils. Theſe, like the fairies of our fathers, are ſuppoſed to frequent ſhades and fountains, and to aſſume the bodies of toads, worms, and other little animals, which, being always in our way, are liable every moment to be hurt and moleſted. When any perſon, therefore, is ſick or maimed, he fancies that he has injured one or other of theſe beings, and immediately the women, who are dextrous in theſe ceremonies, go upon a Wedneſday with frankincenſe and other perfumes, to ſome neighbouring ſpring, and there ſacrifice as we have already hinted, a hen or cock, an ewe or a ram, &c. according to the ſex and quality of the patient, and the nature of the diſtemper he is afflicted with.

SECT. XI.

Containing a Deſcription of the MEDITERRANEAN SEA.

AS the ſeveral provinces and diſtricts of Barbary, lately treated of, have the Mediterranean for their northern boundary, it will be therefore neceſſary to give a particular deſcription of that celebrated ſea, before we proceed with our account of the other parts of Africa; eſpecially as there are many particulars relating to it, too curious to be overlooked in a work of this nature, and which we ſhall now give our readers in as ſuccinct a manner as the ſubject will admit of.

The Mediterranean ſea is ſo called on account of its being ſurrounded by the land on all ſides, except at the two ſtraights at the end of it, viz. that of Gibraltar, on the weſt, and the Boſphorus on the eaſt, which laſt lets the Euxine or Black ſea, as the former doth a conſtant current from the weſtern ocean into it. The antients called it the Heſperian ſea, from the word Heſper, or Veſper, ſignifying the weſt. It was alſo ſtiled Mare magnum, or the Great ſea; and Mare infernum, or Lower ſea. The former was given to it by the ſacred books of the Old Teſtament, in oppoſition to the ſea of Galilee, and the Dead ſea, which, though dignified with the name of ſea, were but ſmall lakes in compariſon of it; and the Latter or Lower ſea was given it by the Romans, from the coaſt of Genoa to thoſe of Sicily. Thoſe of Internum, Interius, and Inteſtinum, were given it on the ſame account with that of Mediterranean. The Spaniards call it Mar di levanto, or the Eaſtern ſea, by reaſon of its ſituation with reſpect to them.

This ſea is parted from the weſtern ocean by the ſtraights of Gibraltar abovementioned: from the Red ſea by the iſthmus of Suez; and from the Propontis, by the ſtraights called Dardanels. It is bounded by Europe, on the north; by Africa, on the ſouth; by Aſia, on the eaſt; and by the ſtraights of Gibraltar, on the weſt. Its utmoſt extent from north to ſouth, where wideſt, that is from the gulf of Sidra, in Tripoli, to that of Venice, reaches from thirty, twenty, forty-ſix, forty, that is, upwards of ſixteen degrees, or three hundred and twenty leagues, or nine hundred and ſixty miles. Its length from eaſt to weſt, is ſtill much greater, viz. from five degrees weſtern, to thirty-ſix eaſtern, or forty-one degrees of longitude, making in all ſeven hundred and ten leagues, or two thouſand one hundred and thirty miles. During this long courſe, though it retains the general name of Mediterranean, yet it hath a variety of appellations given to its ſeveral parts, according to the countries it touches on each ſide; ſuch as the ſea of Genoa, the Tuſcan or Etruſcan, the Sicilian ſea, &c. and that branch of it which runs northward from the Cape Otranto, quite up to Venice, is ſtiled the Adriatic ſea, or gulf of Venice; and ſo of the reſt.

The Mediterranean hath abundance of theſe gulfs. The moſt conſiderable of them are, that of Venice, laſt ſpoken of; that of Lions, on the coaſt of France; the Archipelago, in the Levant; and that of Sidra, on the coaſt of Barbary. It hath likewiſe a real number of peninſulas, of which we ſhall only mention the three principal ones, viz. Italy, Greece, and Anatolia. The moſt conſiderable of its iſlands are thoſe of Sicily, Sardinia, Corſica, Majorca, Minorca, Corfu, Cephalonia, Zante, Candia, Rhodes, Cyprus, thoſe of the Archipelago, and many others; an account of which the reader will find at the cloſe of the quarter to which they reſpectively appertain.

It is allowed on all hands, that a continual current flows from the Atlantic ocean into it, at the ſtraights of Gibraltar; and another as conſtantly flows into it at the Boſphorus, from the Euxine or Black ſea. Captain Bolland, who lived nine years at Tangier, and made his conſtant obſervation on the former, tells us, that he never ſaw it fail, during all that time; but that the ſhips in the middle of the ſtraight were always carried by the ſtream into the Mediterranean, unleſs hindered by contrary winds; and it is well known, that at Conſtantinople a ſtrong rapid ſtream ſets always in from the Black ſea; notwithſtanding which, and the prodigious quantities of water that are likewiſe thrown into it, many of which are very large and deep, this ſea is never obſerved to overflow, or even riſe beyond its uſual height. What becomes of all the water that is thus thrown into it, by two ſuch large and conſtant currents; the one of which is computed about four miles broad, and the other about two, is a queſtion, that is much more eaſily aſked than reſolved, though the learned have formed many conjectures concerning it. The moſt received opinion, is, that which ſuppoſes the middle ſtream to flow into it, whilſt the two ſides, by a contrary courſe, diſcharge themſelves out of it into the ocean. And indeed it is obſervable, that though in the middle of the ſtraight there be a rapid current always ſetting in, yet, on the ſides, there is a ſtream of about a third part of that breadth, that flows ſix hours, and ebbs ſix, every day; and that a ſtill narrower ſtream along the ſhore doth likewiſe ebb and flow full twelve hours, but at contrary times from the other: ſo that on the firſt day of the moon it is flood at one of the clock, and ebb at ſeven, in the two intermediate ſtreams next to the middle current; and, on the ſame day, it is flood at ten, and ebb at four, in the two outermoſt ſtreams next to the ſhore: or rather, as the abovementioned captain Bolland aſſures us, it flows at ten, and ebbs at four, on the African ſhore; and flows at eleven, and ebbs at five, on the European ſide.

We ſhall now only add that ſurpriſing phœnomenon of its oppoſite currents; as difficult to be accounted for, as that we have been ſpeaking of concerning the Mediterranean. Theſe currents have been long ſince taken notice of by Procopius, who lived in the ſixth century, and tells us, that the fiſhermen who frequented it, eſpecially that part which is ſtiled the abyſs, obſerved, that their nets, when flung into it, were dragged by the upper current directly from north to ſouth from the ſurface downwards to a certain depth, after which they bent viſibly a quite contrary way; whence they concluded, that the lower current was quite oppoſite to the upper. M. Tournefort, who hath examined the truth of this obſervation, endeavours to account for this contrary courſe, by ſuppoſing that the waters moving violently againſt ſome hollow rock, and meeting with a ſtrong repulſe from it, muſt of conſequence be beaten back with an oppoſite motion to what they had before. However, that judicious author is far enough from being ſatisfied that this is the true cauſe of this wonderful phœnomenon, and only propoſes it as a conjecture of his own, which may excite others to ſeek out for a better. Several other ingenious men have alſo carefully examined the fact, and owned it altogether ſurpriſing, particularly Mr. Gilles, and count Marſilly; but neither they, nor any other, have ventured to give their opinion about the cauſe of it. Thus much ſhall ſuffice for the deſcription of this ſea, which has been ſo remarkable both in antient and modern hiſtory.

CHAP. II.

THE NEW HISTORY AND DESCRIPTION OF

NEGROLAND.

SECT. I.

Treating of the Situation and Boundaries of the River GAMBIA, Settlements thereon, the Kingdom of MUNDINGO, the GUM DESART, Country of the PHOLEYS, &c.

NEGROLAND, or Nigritia, is ſituate between eighteen degrees weſt, and fifteen degrees of eaſt longitude, and between ten and twenty degrees of north latitude. The great river Niger or Senegal is ſuppoſed to run through the whole length of it, falling, by ſeveral channels, into the Atlantic ocean: on the banks of this river, as alſo on the borders of the river Gambia, are ſeveral ſettlements belonging to the Engliſh. This extenſive country is bounded, on the eaſt, by Abyſſinia and Nubia; on the north, by the deſart of Zaara; on the weſt, by the Atlantic ocean; and on the ſouth, by Guiney and the kingdom of Benin. It extends about eight hundred miles in the broade part, from north to ſouth; and is upwards of two thouſand two hundred miles from eaſt to weſt.

The river Gambia lies in thirteen degrees twenty minutes north latitude, and in fifteen degrees twenty minutes weſt longitude, from whence it is little to be wondered at that the climate ſhould be exceſſively hot. The rainy ſeaſon uſually begins with the month of June, and continues till the latter end of September, and ſometimes the beginning of October: the firſt and laſt are generally the moſt violent. The wind comes firſt, and blows exceſſive hard for the ſpace of half an hour, or more, before any rain falls, inſomuch that a veſſel may be ſuddenly ſurprized and overſet by it; but then a perſon may be aware of it a good while before it comes, for it looks dark, and the lightning breaking out of the black clouds, as they move ſlowly on, makes it appear very dreadful. During the rainy ſeaſon, the ſea breezes ſeldom blow, but inſtead of them eaſterly winds right down the river, which in the months of November, December, January and February generally blow very freſh, eſpecially in the day time. Four months of the year are unhealthful. The greateſt heats are in May, three weeks or a month before the rainy ſeaſon begins.

The river Gambia is divided by a number of iſlands and ſand-banks, and in the wideſt part is about nine miles acroſs. It is navigable for ſmall veſſels upwards of ſix hundred miles, the ſides reaching to that diſtance from its mouth. The land on each ſide is chiefly flat and woody; but there are ſome parts very open, on which the natives plant rice, and in the dry ſeaſon they produce paſture for the cattle. The wild beaſts conſiſt of lions, tygers, and elephants, and there are great numbers of crocodiles in the river.

On this river, the Engliſh, French, and Portugueſe have ſettlements. The chief belonging to the Engliſh is in a ſmall place called James's iſland, which lies about ten miles from the north of the river. There is alſo another conſiderable factory at Gyllifree, a large town on the north bank of the river, near the beforementioned iſland; and a third at Joar, higher up the river in the kingdom of Barſally, which we ſhall more particularly treat of hereafter. Between James's fort and the mouth of the river, at a place called Albedra is the chief ſettlement of the French.

Gold, elephants teeth, bees-wax, and ſlaves, form the principal part of the trade carried on here; the latter of theſe are either priſoners taken in war, or perſons ſtolen or condemned for crimes. The gold is of an excellent quality, and much finer than ſterling gold. The ivory, or elephants teeth, called by the natives morphel, is either found in the woods, or got by hunting and killing the beaſts; and the larger the teeth the more valuable the ivory: ſome of them are quite white, others yellow, but the difference of colour neither adds to, or diminiſhes the value. Bees wax is ſold in great quantities about the river, and is made in cakes from twenty to one hundred and twenty pounds weight. Gum dragon is alſo brought from this country: it comes from a tree called bois de ſang, or blood wood, from whence an inciſion being made in the tree, the red liquor oozes out drop after drop, till ſeveral lumps are formed, which are afterwards dried in the ſun.

Several ſorts of people inhabit the banks of the river Gambia; they are known under the following appellations; namely, the Mundingoes, the Jolloifs or Jalofs; the Pholeys or Fouleys; the Floops or Faloops; and the Portugueſe; of all which, together with the manners and cuſtoms of the inhabitants, we ſhall now proceed to give an account.

Mundingo is much larger than any other kingdom ſituated on the banks of the Gambia, and the inhabitants of it are much more numerous. The Portugueſe conquered this kingdom in the beginning of the fourteenth century, when ſome of them ſettled in it, and their deſcendants have ever ſince intermixed with the natives, ſo that there is little difference between them either as to their colour or ſhape, the former of which is quite black, and the latter thick and clumſy; but as they ſtill retain a corruption of the Portugueſe language, and as they chriſten and marry by the help of the prieſt ſent annually from St. Jago, one of the Cape de Verd iſlands, they conſider themſelves as different from the Mundingoes, as if they were really natives of Portugal; and as the term Negro is only uſed by them for the ſlaves, they eſteem it the greateſt affront that can be offered, to apply it to them.

The kingdom of Mundingo is of conſiderable extent, but its exact diſtance cannot be aſcertained. The natives are quite black, and have very diſagreeable features, their lips being exceedingly thick, and their noſes remarkably broad and flat. They are rational and humane in their diſpoſitions, and are particularly civil to ſtrangers. They are in general very briſk and lively; but, if affronted, are impetuous and revengeful; nor can any quarrel be adjuſted, otherwiſe than by the deſtruction of one or other of the perſons contending.

Theſe people have a great ſenſe of pride, the wealthier part of them keeping a prodigious number of ſlaves; but they treat them in ſo humane a manner, that it is ſometimes difficult to know the ſervant from the maſter: they are frequently much better cloathed, particularly the women, who are ornamented with necklaces, bracelets, and ear-rings made of coral, amber, and ſilver, to a conſiderable value. Several of the natives have many ſlaves born in their families; and though in ſome parts of Africa theſe are ſold, yet in Mundingo it would be thought not only indiſcreet, but very wicked; nor is ever any family ſlave ſold, except for ſuch crimes as would have authorized its being done had he been free. If indeed there are many ſlaves in the family, and one of them commits a crime, the maſter cannot ſell him without the conſent of the reſt; for if he does they will deſert him, and fly to a neighbouring kingdom for protection.

In moſt of the towns of this kingdom they have a kind of drum of a very large ſize, called a tangtong, which they only beat on the approach of an enemy, or on ſome very extraordinary occaſion, to call the inhabitants of the neighbouring towns to their aſſiſtance; and when this is beat

beat in the night time, it may be heard at ſix or ſeven miles diſtance.

If any of the natives ill treat an European, he applies to the alcaid, or head man of the town, who is appointed to do juſtice on ſuch occaſions; he is called the white man's king, and has otherwiſe great power: he has the firſt voice in all conferences relative to public tranſactions, and decides all quarrels.

There are ſeveral perſons called lords of the ſoil, in this and the other kingdoms: they are conſidered as kings in the reſpective towns where they reſide; to them belong alſo the palm and ciboa-trees, which are here in great abundance; and no one dare uſe any leaves, or draw any wine from them, without firſt obtaining their conſent. They who have the liberty of drawing the wine, acknowledge the obligation by giving two days produce in a week to the lord of the ſoil; and white men are under the neceſſity of making a ſmall preſent to them before they can cut leaves or graſs to make coverings to their houſes.

Having mentioned the palm and ciboa-tree, it may not be improper in this place, to give a particular deſcription of them. The palm tree is very ſtrait and ſmooth, and ſome of them grow to the height of one hundred feet. From the trunk of the tree the natives extract a liquor called palm wine, which in colour greatly reſembles whey: to effect this they make an inciſion at the top of the trunk, to which they apply goard bottles, and the liquor is conveyed into theſe by means of a pipe made of leaves. The wine is very ſweet in its taſte, and if drank as ſoon as drawn is very purgative; but if kept two or three days, it ferments, grows ſtrong, and becomes not only palatable, but alſo very wholeſome. The natives climb theſe trees with ſurpriſing agility, in the following manner: They take a piece of the bark of a tree, formed in the ſhape of a hoop, with which they incloſe themſelves and the tree, the hoop being afterwards ſecured; they then fix the hoop under their arms, and reſting their back againſt it, and their feet againſt the tree, they climb up with ſurpriſing expedition. Sometimes indeed they meet with a fatal accident, which either ariſes from the bark, on which they reſt, not being properly ſecured, or from miſſing their ſtep in climbing. The ciboa, or palmetto tree, greatly reſembles the palm tree, and runs alſo to a very conſiderable height; the wine extracted from it taſtes ſomething like that from the palm tree, but is not quite ſo ſweet; and they make coverings of the leaves which grow on the top.

Their buildings, eſpecially thoſe of the common people, are very low and mean, of a conical form, and have no other light but what is admitted by the door, which is ſo low, that they are obliged to ſtoop in entering it; they are formed of a kind of wicker work plaiſtered over with earth, and covered with leaves of the palm tree on the top.

With reſpect to their furniture, they have only a few common neceſſaries, ſuch as earthen diſhes for their food, wooden bowls, plates, diſhes, &c. They have neither chairs, tables, or beds, a mat ſupplying the place of all three; for on that they ſit, eat, and ſleep. Among the better ſort indeed the maſter of the houſe is diſtinguiſhed by having a bed, which conſiſts of a kind of hurdle laid upon pieces of wood, and elevated about two feet from the floor: on the top of it is laid a mat, on which, they ſleep; but they have no kind of covering, nor any ſheets.

Rice, pulſe, and Indian corn are their principal food, which they mix with boiling water, or broth made from the fleſh of crocodiles: they like the latter the beſt, and are not only fond of the fleſh of crocodiles, but alſo their eggs; their greateſt dainty, however, is fiſh dried in the ſun, or ſmoked, and the more it ſtinks the better they like it; in ſhort, they are far from being delicate in their appetites, as they will not only eat what is already mentioned, but alſo ſnakes, monkies, alligators, or any other thing that comes in their way. Their common drink is water; but they ſometimes uſe palm wine and mead, and they will not refuſe rum and brandy if they can meet with it. They make two meals a day, one about noon, and the other in the evening. They ſit at their meals, and take up the victuals with the fingers of the right hand only, conſidering it indecent to touch with the left either their food or lips.

Poor people among them go almoſt naked, having only a piece of linen faſtened round the waiſt with a girdle, in which they always carry a long knife. The richer ſort wear a kind of ſhirt, with drawers made of cotton; and they have alſo ſandals to their feet, which are faſtened on the inſtep with ſtrings. Some of them carry a long dart, others have bows and arrows, and ſome have a ſword ſlung over the right ſhoulder.

The women have a piece of cotton tied round the waiſt, from whence it reaches to the knees. The upper part of the body is naked, but, by way of ornament, it is ſtained or painted with figures of various colours. Some indeed have a looſe piece of cotton thrown over their ſhoulders, but that is conſidered as a particular kind of extravagance. Both ſexes wear a large bunch of keys hanging at the end of their girdles; which is an addition they are extremely proud of.

The people marry their daughters very young in this, as in moſt other hot countries: ſome of them are even contracted as ſoon as they are born, and the parents can never afterwards break off the engagement; the men, however, can refuſe accepting them when at a proper age; neither dare the girl marry any other without his conſent. Before a man takes his wife he is obliged to make a preſent to her parents of two hundred cola: two iron bars, and two cows; the cola is a fruit that grows in the inland parts of the country, and ſomewhat reſembles a horſe cheſnut. When a man takes home his wife he makes a grand entertainment, to which they who think proper come, without the ceremony of a formal invitation. The bride is brought on mens ſhoulders, with a vail over her face, which is not removed till the marriage is properly conſummated; and during this time the company ſing, dance, and exhibit every kind of the moſt ridiculous mummery imaginable.

The men are allowed to take as many wives as they pleaſe; and if any one of them proves falſe, the huſband is at liberty to ſell her as a ſlave. If any diſlike ariſes, he may turn off his wife, and make her take all her children with her, unleſs he is inclined to keep any of them himſelf, in which caſe he generally chuſes ſuch as are able to aſſiſt him in the buſineſs he follows. He has alſo the liberty of going any time after they have parted, and taking any of the other children from her.

A very diſtinguiſhed reſpect is paid by the women to their huſbands, inſomuch that if buſineſs calls them a day or two from home, their wives, when they return, ſalute them on their knees; and they farther ſhew their humility, by always placing themſelves in that poſture when they give them drink.

And their lordly huſbands, in order to render their power as complete as poſſible, compel their wives to obedience by all the force of fear and terror. For this purpoſe, they have a figure about eight feet high, made of the bark of trees, and dreſſed in a long coat, with a whiſp of ſtraw on the head, made in the form of a cap. It is called a mumbo jumbo; and when any controverſy ariſes between a man and his wife, this ſtrange figure is ſent for to determine the diſpute, which generally terminates in favour of the man. When the women hear him coming, they run away and hide themſelves; but if you are acquainted with the perſon concealed in the mumbo jumbo, he will ſend for them all to come, make them ſit down, and afterwards ſing or dance, as he pleaſes; and if any refuſe to come, he will ſend for, and whip them. The people alſo ſwear by the mumbo jumbo, and the oath is eſteemed irrevocable. Moſt towns of note have one of theſe objects of terror in it.

They dip a new-born child in cold water ſeveral times in the day, at each of which, after having dried up the water with a cloth, they rub the infant over with palm oil, particularly the back-bone, ſmall of the back, elbows, neck, knees, and hips. When born, they are of an olive complexion, and ſometimes do not become black, till they are two months old. They are not born with flat noſes; but as that ſhape is greatly admired, their mothers or nurſes, whenever they waſh them, preſs down the upper part of their noſe with the finger, and, from its natural tenderneſs at that time, the compreſſure has the wiſhed-for effect. They give their children a name about a month after they are born: ſhaving the head, and rubbing it well over with palm oil, is the only ceremony attending this.

They circumciſe their male children a ſhort time before the commencement of the rainy ſeaſons: after the ceremony is over, theſe children wear a peculiar habit adapted to the occaſion. From the time of circumciſion to that of the rains, they have the privilege of committing any kind of outrage, without being called to account: but they muſt lay aſide thoſe follies, throw off the dreſs of circumciſion, and put on the habit of the country, when the firſt rain begins.

On the death of any perſon, all his friends and acquaintance come and cry over him for two days; and ſuch of his relations as are not on the ſpot, when they hear of it, though at a conſiderable diſtance will teſtify the ſame

kind

kind of lamentation as if they were really preſent with the deceaſed. When they bury the corpſe, they dig a hole about ſeven feet long, three deep, and about two feet in breadth. The body is wrapped in white cotton cloth, and at the time it is put into the grave, the whole aſſembly bow, and give one univerſal ſhriek. After the corpſe is depoſited, they lay ſticks acroſs the grave even with the ſurface of the earth, on which they place ſtraw, or the leaves of trees, ſo thick as to prevent the mould from getting into the grave, and on the top of theſe they lay the earth, which they trample hard down with their feet, preſſing it very cloſe.

Theſe people have a language peculiar to themſelves, which is more generally ſpoken on both ſides the river, than any other; one who is well acquainted with this language, may travel from the mouth of the river quite to the country of the Joncoes, or merchants, ſo called from their yearly buying a vaſt number of ſlaves, and bringing them to the lower parts of the river for ſale. The natives have alſo a corrupt kind of Portugueſe, which, when they trade with the Portugueſe, is generally uſed by them.

The Mundingoes are chiefly Mahometans, and preſerve many maxims of the moſt ſuperſtitious nature. When an eclipſe of the moon happens, they believe it is occaſioned by a large cat putting one of her paws between the earth and the moon; and during the time of its progreſs, they pay reverence to Mahomet. They keep their ſabbath on the Friday, when they pray three times, but on the other days of the week only twice.

They have neither temples nor moſques, but are ſummoned to their devotions under the ſhade of a large tree by their marabouts, or prieſts, of which there is one to every village. They pay the greateſt reverence to their prieſts, inſomuch that if perſons of the firſt diſtinction happen to meet with one of them, they immediately form a circle round him, and, falling on their knees, ſolicit his benediction.

From their ſuperſtitious notions, they have ſuch faith in their prieſts, that if they can but obtain a charm, or, as they call it a griſgris, they think themſelves ſecure from any kind of danger. This griſgris conſiſts of nothing more than a few Arabic characters drawn on a piece of paper, or the figure of lizards, ſerpents, or ſome other animal, which they wear about them as the moſt valuable poſſeſſion. They have ſuch an opinion of the utility of this ſuppoſed charm, that the pooreſt negro will not be without it; and he is particularly careful to have it about him whenever he engages in any hazardous enterprize, as ſuppoſing it a preſervative from every danger: however, when it happens to prove ineffectual, which is ſometimes the caſe, the marabout attributes it not to any defect in the charm, but to the bad conduct of him who poſſeſſed it. The prieſts reap conſiderable benefits by the ſale of theſe charms, as they fix the price in proportion to the circumſtances of the purchaſer; and ſome of them carrying on the richeſt commerce of the country, not only by trading largely in theſe articles, but alſo in gold, ſlaves, elephants teeth, &c.

There is a ſort of people on the borders of the kingdom of Mundingo, called Floops, who are in a manner wild, and inveterate enemies to their neighbours. Their country is of conſiderable extent, but they have not any king, and are intirely independent of each other; notwithſtanding which, they are ſo numerous, that the Mundingoes, with all their force, cannot conquer them. Their towns are ſurrounded with a kind of fortification made of ſticks driven into the ground cloſe together, and covered with clay. They have the character of being very grateful when they receive any favour; but if any injury is offered them, they will never forgive the party, or ſuffer it to paſs unrevenged, when an opportunity preſents itſelf.

About one hundred miles from fort St. Lewis is ſituated the Gum Deſart, which is the place where the trade is carried on with the Moors. It is a large plain, ſurrounded at a conſiderable diſtance by hills of red ſand, and ſo barren, that it produces only a few ſtraggling ſhrubs. Near the ſide of the river is a large palmetto-tree; and there are a few huts built by the French, to ſecure their merchandize from the depredations of robbers: they are ſurrounded by a ditch ſix feet in breadth, and encompaſſed with a kind of rampart and palliſadoes. This part of the country may properly be called the Deſart, for it is generally deſtitute of inhabitants, and is only viſited at ſuch times as the Moors have an opportunity of bringing gum to ſell to the French, who then go down to it, and purchaſe what they bring, how great ſoever the quantity may be.

There is a place called Engerbel, about twenty miles to the eaſt of this Deſart, where the king of the Jolloi's has his palace, which conſiſts only of a large number of huts, built much like thoſe of the other negroes, but only more ſpacious. They are incloſed with palliſadoes made of reeds, and in the center is an open place well planted with trees, round which are the king's ſtore-houſes, ſtables, and apartments for his women and officers. The gate that leads to the palace is always guarded by a number of negroes armed with piſtols and ſabres, who are relieved by others at certain times. This whole country, from the northern bank of the river Gambia, to the lake Cajor, is called in general the kingdom of the Jolloiſs, though divided among ſeveral petty princes. It extends from north to ſouth about three hundred miles, and is near four hundred from the ſea coaſt eaſtward.

The people who inhabit this country, called Jolloiſs, are blacker than the Mundingoes, and much better featured, their noſes not being ſo broad, nor their lips ſo thick. Their dreſs conſiſts of a looſe garment made of callico, which reaches from the ſhoulders to the knees, and is faſtened about the middle with a girdle agreeably ornamented. Both ſexes are fond of decorating their hair, wearing bracelets and anclets on their legs and arms, and rings in their ears.

The king is abſolute, and the greateſt reſpect is paid to him and his family; for when any perſons come into their preſence, they muſt immediately proſtrate themſelves with their faces to the ground. No one, except the king, is allowed to ſleep under tendres (that is, clothes to keep off flies and muſquetoes), on pain of being ſold as ſlaves, ſhould it come to the knowledge of the king. They alſo are ſubject to the ſame puniſhment, who preſume to ſit on the ſame mat with the royal family unleſs licenſed ſo to do. His ſubjects are naturally courageous, and addicted to arms; notwithſtanding which, they are good natured, modeſt, and hoſpitable, particularly to ſtrangers.

It is needleſs to mention here the manners, cuſtoms, ceremonies, religion, &c. of theſe people, they being nearly the ſame as thoſe in the kingdom of Mundingo.

The kingdom of the Pholeys, or Fouleys adjoins to that of the Jolloiſs: many of the natives of it are diſperſed throughout the different kingdoms and provinces of the whole country of Negroland. This kingdom extends along the river Gambia, from eaſt to weſt, near ſix hundred miles; but its diſtance from north to ſouth cannot be aſcertained with any certainty, on account of its deſolate ſtate.

The people of this country are much like the Arabs, but not ſo white, nor yet ſo black as the negroes, being rather of a tawny complexion. They generally ſpeak the Arabic language, though they have one peculiar to themſelves. The men are of a middle ſize, well ſhaped, and have good features; but the women are very ſhort, and at the ſame time remarkably thin. They are all naturally of a weak conſtitution, notwithſtanding which, they are very aſſiduous in their profeſſions, which principally conſiſt in taking care of their cattle, and cultivating their lands. They live in hords or clans; and form their buildings on ſuch a conſtruction, that they are eaſily removed from one place to another. Their country is very fertile and produces plentiful crops of large and ſmall millet, cotton, tobacco, peaſe, rice, corn, potatoes, yams, &c. They have great numbers of cattle: their goats and ſheep are extremely fine; and their own oxen ſo large, that the French buy up all their hides at a very great price. They plant tobacco near their houſes, and round their towns they plant cotton, beyond which are their corn fields. The corn is of four ſorts, viz. maize or Indian corn, rice, and the larger and leſſer Guiney corn, the latter of which is called by the Portugueſe, manſaroke.

The Pholeys are very fond of European merchandize, and treat the traders that bring them with great civility. They uſe a variety of muſical inſtruments, and are very fond of dancing. The dreſs of both ſexes conſiſts of a kind of wrapper made of ſeveral ſlips of cotton, which is faſtened round the waiſt, from whence it reaches to the knees; and they adorn their arms and legs with anclets and bracelets of amber, gold, pearls, and glaſs beads of various colours. Their houſes are of a round form, terminated by a cone; they are built in rows at ſome diſtance from each other, and are placed with great uniformity.

They are very temperate in their living, and remarkably induſtrious and frugal. As they raiſe much more corn and cotton than they conſume, they ſell it at a reaſonable

price to ſtrangers, to whom they are very civil and hoſpitable when they come to viſit them. They alſo ſupply the wants of their neighbours; and have been even known to diſtreſs themſelves in aſſiſting the Mundingoes, who in ſome bad ſeaſons would have otherwiſe been expoſed to the ravages of dreadful famines. But though they are remarkable for the mildneſs of their temper, yet they are far from being deficient in courage, for they are as brave as any people in Africa.

Their arms conſiſt of the lance, bows and arrows, ſhort cutlaſſes and muſquets, all which they uſe with great dexterity. They are very expert in the management of cattle, and are excellent huntſmen; they not only kill lions, tygers, and other wild beaſts, but they alſo go in companies together to hunt elephants, whoſe teeth they ſell, and dry the fleſh in the ſame manner as bacon is cured in England. They frequently remove their dwellings from one place to another; but commonly chuſe a ſpot near the Mundingoes, who think themſelves happy in having ſuch uſeful neighbours, and indeed there is hardly a Mundingo town of note up the river, that has not a Pholey town in its neighbourhood.

The monarch of this country is very powerful, and not only receives homage from the king of the Jolloiſs, but all the great men of that kingdom are his vaſſals, and pay him every fourth year a number of ſlaves, and as many oxen. He keeps a ſtanding force of cavalry, and his infantry are armed with ſabres, lances, and bows and arrows. The governors or principal men of his kingdom are diſperſed in the ſeveral parts into which it is divided, and they are obliged when commanded by the king, to join their forces with his; in which caſe they have a right to make ſlaves of all the negroes they meet with in their march, though the king has not that liberty over any of his ſubjects, unleſs they are convicted of an offence of a capital nature.

In this kingdom, the following are the moſt remarkable places; namely,

1. Queda; which is a village ſituated on a ſmall river that runs from the lake Cajor into the Senegal; and Cajor, another village, which receives its name from the ſaid lake. Theſe two places have each their particular lord, who are vaſſals to the king of this country.

Terrier Renge, lies to the eaſt of Queda, and is famous not only for the gum trade, but alſo for elephants teeth, oſtrich feathers, hides, and ambergris.

Hovalade, is another trading place, farther to the eaſt, and ſituated on the northern bank of the Senegal. The whole country between theſe two places is exceeding pleaſant, being laid out in large meadows, which abound with the beſt of cattle, and are very fertile.

Guiorel, is ſituated about ſixty leagues from Hovalade; it is a large village, and the trading place of the ſirotic, or king of the Pholeys, though he has not any houſe there. His palace, or place of reſidence, is ſituated about thirty miles to the north eaſt of this village; near a large river, that ſwells much at the ſame time as the Senegal, and, overflowing its banks, forms a large marſh, where the negroes plant rice, millet, pulſe, &c. after the waters are dried up.

Boucar, is another conſiderable village, and belongs to the eldeſt ſon of the king of the Pholeys: it is about eight miles from Guiorel, towards the north-eaſt, and ſituated on a hill in the center of a large plain, where the wind blows from all quarters, which renders the climate ſerene and wholeſome. The whole country is well cultivated, and beſides other things, produces a great quantity of cattle. The inhabitants are very numerous, and carry on a good trade with thoſe who live near them.

Laca, is the laſt place of any note in this kingdom, and lies about twelve miles north of Guiorel; it is a very conſiderable village, and belongs to a near relation of the king, who is called lord of this part of the country. His huts or habitations are at ſome diſtance from the village, ſituated on a riſing ground, planted with lofty trees that ſecure them from the violent heat of the ſun. The whole building conſiſts of three ſpacious courts, the firſt of which contains ſtables for ſeveral kinds of cattle, and is incloſed on three ſides with reeds and thick briers: in the ſecond court are the lord's huts, thoſe of his wives, and ſome of his ſervants: the reſt have huts in the third court, where there are alſo others uſed as warehouſes. Between Guiorel and Laca are ſeveral other villages, which almoſt join each other; and the whole country in this part is well cultivated, and very populous.

Thus having deſcribed the principal places in this country it will not be improper here to introduce a remarkable ſtory of one Job Ben Solomon, of the race of the Pholeys, and ſon to the high prieſt of Bundo, in Forta, who was ſold as a ſlave, came to England, and received diſtinguiſhed honours from the royal family and nobility. Mr. Moore deſcribes the particular circumſtances of this amiable African; and as that gentleman was in company with him after his return to his own country, his relation of him muſt be therefore the moſt genuine and credible.

As this perſon was travelling, in the year 1731, on the ſouth ſide of the Gambia, with a ſervant, he was robbed and ſeized by order of a king of a country a little within the land, who ſold both him and his man for ſlaves to one captain Pyke, who ſailed with them to Maryland. The Pholeys, his humane countrymen, would have redeemed him, had he not been carried out of the river before they had notice of his being a ſlave. Job, on his arival at Maryland, was ſold to a planter, who, finding he had very diſtinguiſhed abilities, treated him with great reſpect; and at the expiration of twelve months, Job had the good fortune to have a letter of his own writing, in the Arabic tongue, conveyed to England. This letter coming to the hands of Mr. Oglethorpe, he ſent it to Oxford to be tranſlated, which being done, it gave him ſuch ſatisfaction, and inſpired him with ſo good an opinion of the author, that he immediately ſent orders to have him bought of his maſter.

Mr. Oglethorpe ſoon after this ſet out for Georgia; and before his return from thence Job arrived in England, where, being brought to the acquaintance of Sir Hans Sloane, he was found to be a perfect maſter of the Arabic tongue, by his tranſlating ſeveral manuſcripts and inſcriptions on medals. Sir Hans Sloane recommended him to the duke of Montague, who being pleaſed with his genius and capacity, the agreeableneſs of his behaviour, and the ſweetneſs of his temper, introduced him to court, where he was graciouſly received by the royal family and moſt of the nobility, who honoured him with many marks of their favour. After he had continued in England about fourteen months, he determined to return to his native country, from an earneſt deſire he had to ſee the high prieſt his father.

On his leaving England, he received many noble preſents from her majeſty queen Caroline, his royal highneſs the duke of Cumberland, the duke of Montague, the earl of Pembroke, ſeveral ladies of quality, and the royal African company; the latter of whom ordered their agents to ſhew him the greateſt reſpect. On the 8th of Auguſt 1734, he arrived at James's fort, at which time Mr. Moore, then employed in the ſervice of the African company, was at that place; and finding the veſſel came from England, he immediately went on board. Mr. Moore thus relates what followed after the firſt interview; and which we ſhall give in his own words:

"Job," ſays he, "deſired that I would ſend a meſſage to his country, to let his friends know where he was. I ſpoke to one of the blacks whom we uſually employed, to procure me a meſſenger, and he brought me a Pholey, who not only knew the high prieſt his father, but Job himſelf, and expreſſed great joy at ſeeing him returned from ſlavery, he being the only man, except one, ever known to come back to his country, after being once carried a ſlave out of it by white men. Job delivered him the meſſage himſelf, and deſired that his father ſhould not come down to him, obſerving that it was too far for him to travel; and that it was fit the young ſhould go to the old, and not for the old to come to the young. He alſo ſent ſome preſents to his wives, and deſired the man to bring his little one his beſt beloved down with him.

"Job, having a mind to go up to Joar, to talk to ſome of his countrymen, went along with me. We arrived at the creek of Damoſenſa, and having ſome old acquaintances at the town of that name, Job and I went there together. In the evening as we were ſitting under a great tree, there came ſix or ſeven of the very people who three years before had robbed and made a ſlave of him, at about thirty miles diſtance from that place. Job, though naturally poſſeſſed of a very even temper, could not contain himſelf on ſeeing them; he was filled with rage and indignation, and was for attacking them with his broad ſword and piſtols; which he always took care to have about him. It was with great difficulty I could diſſuade him from ruſhing upon them; but at length repreſenting the ill conſequences that would infallibly attend ſo raſh an action, and the impoſſibility that either of us ſhould eſcape alive, I made him lay aſide the attempt, and perſuaded him to ſit down, and, pretending not to know them, to aſk them queſtions about himſelf; which he accordingly did,

did, and they told him the truth. At laſt he inquired how the king their maſter did; they replied; that he was dead: and by farther inquiry we found, that amongſt the goods for which he ſold Job to captain Pyke, there was a piſtol, which the king uſed commonly to wear ſlung by a ſling about his neck; and as they never carry arms without their being loaded, the piſtol one day accidentaly went off, and the balls lodging in his throat, he preſently died. Job was ſo tranſported at the cloſe of this ſtory, that he immediately fell on his knees, and returned thanks to Mahomet for making his perſecutor die by the very goods for which he ſold him into ſlavery. Then turning to me, he ſaid, "You ſee now, Mr. Moore, that God Almighty was diſpleaſed at this man's making me a ſlave, and therefore made him die by the very piſtol for which he ſold me: yet I ought to forgive him, for had I not been ſold, I ſhould neither have known any thing of the Engliſh tongue, nor have had any one of the fine, uſeful, and valuable things I have brought with me; nor have known that there is ſuch a place in the world as England; nor ſuch noble, good, and generous people as queen Caroline, the duke of Cumberland, the duke of Montague, the earl of Pembroke, Mr. Holden, Mr. Oglethorpe, and the royal African company."

"After this, Job went frequently with me to Cower, and ſeveral other places about the country. He always ſpoke very handſomely of the Engliſh; and what he ſaid removed much of that horror the Pholeys felt amongſt them for the ſtate of ſlavery their countrymen had been ſubject to: for they before generally imagined, that all who were ſold for ſlaves, were at leaſt murdered, if not eaten, ſince none ever returned. His deſcriptions alſo gave them an high opinion of England, and a veneration for the Engliſh who traded amongſt them. He ſold ſome of the preſents he brought with him for trading goods, with which he bought a woman ſlave and two horſes. He gave his countrymen a great deal of writing paper, a very valuable commodity amongſt them, and the company had made him a preſent of ſeveral reams. He uſed frequently to pray, and behaved with great affability and mildneſs to all, which attracted the eſteem of every one.

"The meſſenger whom Job had ſent to his father, &c. not returning ſo ſoon as was expected, he deſired me to go down to James's fort, to take care of his goods, and I promiſed not only to ſend him word when the meſſenger came back, but to ſend other meſſengers, for fear the firſt ſhould have miſcarried.

"At length the meſſenger returned with ſeveral letters, and advice that Job's father was dead, but had lived to receive the letters his ſon had ſent him from England, which gave him the welcome news of his being redeemed from ſlavery, and an account of the figure he made in England. That one of Job's wives was married to another man; but that as ſoon as the new huſband had heard of his return, he thought it adviſeable to abſcond; and that ſince Job's abſence from his native country, there had been ſuch a dreadful war, that the Pholeys there had not any cows left, though before Job's departure his country was famed for its numerous herds. With this meſſenger came many of Jobs old friends, whom he was exceedingly glad to ſee; but notwithſtanding the joy their preſence gave him, he ſhed abundance of tears, for the loſs of his father, and the misfortunes of his country. He forgave his wife, and the man who had taken her; For, ſaid he, ſhe could not help thinking I was dead, for I was gone to a land from whence no other Pholey ever yet returned; therefore neither ſhe nor the man are to be blamed. During three or four years he converſed with his friends without any interruption, except to ſleep and eat.

Job took his laſt farewel of Mr. Moore in the moſt affectionate manner, when he embarked on board the company's veſſel for England; and at the ſame time gave him letters to the duke of Montague, the royal African company, Mr. Oglethorpe, and ſeveral other gentlemen in England, telling him to give his love and duty to them, and to acquaint them, that as he deſigned to learn to write the Engliſh tongue, he would, when he was maſter of it, ſend them longer epiſtles. He alſo deſired Mr. Moore, that as he had lived with him almoſt ever ſince he came there, he would let his grace and the other gentlemen know what he had done, and that he would endeavour to produce ſuch an underſtanding between the African company and the Pholeys, that he did not doubt would be of great advantage to the Engliſh, from whom he had received innumerable favours, and by whom he had been redeemed from ſlavery, and brought ſafely home to his country and friends."

SECT. II.

Giving an Account of the EUROPEAN Settlements, and other Places on the River GAMBIA; alſo a Deſcription of the River NIGER or SENEGAL; with the Principal Kingdoms, &c. on its Banks.

THE Engliſh have their principal ſettlement here at St. James's iſland: it is ſituated near the center of the river, which is here at leaſt ſeven miles wide, and about thirty miles from the river's mouth. The iſland, at low water, is about three quarters of a mile in circumference. Though this iſland belongs to the Engliſh, it is nevertheleſs ſubject to a ſmall tribute paid annually to the king of Barrah.

The fort is a ſquare ſtone building, with four baſtions, on each of which are ſeven guns well mounted. Under the walls, facing the water, are two round batteries, on each of which are four large cannon: and between them are planted ſmall guns. Within the fort are convenient apartments for the governor, merchants, factors, and military officers; as alſo magazines and ſtorehouſes. Without the walls of the fort are ſtrong barracks for the ſoldiers, artificers, ſervants, and ſlaves: they are made with ſtone and lime, and are ſurrounded with ſtrong palliſadoes. As a proper ſecurity to the fort, the ſoldiers are conſtantly on duty; and centinels are appointed night and day to patrole round it, and make their report to the governor. They generally keep here three or four ſloops and as many long boats; ſome of which are continually employed in fetching proviſions and water from the main, for the uſe of the garriſon, and the reſt are employed in carrying goods up to the other factories, and bringing from them wax, elephants teeth, and ſlaves.

The company have alſo a factory pleaſantly ſituated at a large town called Gillifree, a little below James's fort; and here are large gardens that ſupply James's fort with all kinds of vegetables. This town is inhabited by Portugueſe, Mundingoes, and ſome Mahometans, the latter of whom have a neat moſque.

On the north ſide, oppoſite to St. James's iſland, and about a mile and a half from Gillifree, is a ſmall place called St. Domingo, conſiſting only of a few round huts belonging to the company, in which ſome of their ſlaves live, who fill the caſks ſent there daily for water, take care of a well, and cut wood for the fort.

Here is alſo another factory belonging to the Engliſh, nearly oppoſite to the ſouth ſide of James's iſland; this is ſituated on a river called Cabata, which falls into the Gambia; but as the chief uſe of the factory is to ſupply James's iſland with proviſions, little trade is carried on here.

The Engliſh have likewiſe another factory about twenty miles above James's fort, at a town called Vintain, ſituated on a river of the ſame name, which falls into the Gambia. The chief commerce of this factory conſiſts in hides, ivory, and wax. The town belongs to one of the kings of Fonia, and is pleaſantly ſituated on the ſide of a hill, near the river. The inhabitants conſiſt of Portugueſe and Mahometans, the latter of whom have a handſome moſque. The town is plentifully ſupplied with proviſions, great quantities of which are brought by the Floops which border upon it.

The people of this town are extremely proud of their hair; ſome or them wear it in tufts and bunches, others cut it in croſſes, and ſome ſtring coral, or beads upon it. The men wear a cloth round their waiſts, which reaches to the knees, and they have another cloth thrown over the right ſhoulder: on their heads they wear caps of cotton cloth, ſome of which are plain, and others adorned with feathers and goats tails. The dreſs of the women conſiſts of a piece of cloth wound round the waiſt, and reaching to the ſmall of their legs; they tie handkerchiefs round their heads, leaving the crown bare, which ſome of them ornament with ſmall horſe bells; and they who have not got handkerchiefs, ſupply their places by uſing a ſlip of blue and white cotton. Their huts are about fifty feet in circumference, built with ſticks and clay, and covered either with long graſs or palmetto leaves. Their furniture conſiſts only of a ſmall cheſt for cloaths, a mat to lie on, which is raiſed about a foot from the floor; a jar to hold water, and a calabaſh to drink it with; two or three wooden mortars, in which they pound their corn and rice, and a few large diſhes, out of which they eat their food with their fingers, ſince they uſe neither knives, forks, or ſpoons.

Theſe people are very fond of ſmoaking tobacco, which

is of their own growth; and ſome of them, being furniſhed with this article, will go two days together without eating. They make their pipes themſelves, the bowl of which is formed of a reddiſh coloured clay, but the ſtems are only a piece of reed, or a ſmall ſtick bored through with a hot iron wire, and ſome of them are ſix feet in length. After they are bored, they poliſh them with rough leaves, till they are ſmooth, white, and handſome. They faſten the bowl and ſtem together with a piece of red leather, and ſometimes they hang a fine leather taſſel to the center of the pipe, as an ornament to it.

The abovementioned town is ſituated in the kingdom of Fonia, which begins where Cabata river falls into the Gambia, and reaches to the river Vintain. It is governed by two kings, who have each their ſeparate diſtricts; but it has not any remarkable place, that deſerves the leaſt notice, except the town juſt treated of.

At Tancrowall, in the kingdom of Caen, about thirty-five miles from James's fort, is the next factory belonging to the Engliſh. This town is about half a mile in length, pleaſantly ſituated by the ſide of the river, and behind it is a fine hill beautifully variegated. It is divided into two parts, one of which is inhabited by Portugueſe, and the other by Mundingoes. The former live in large ſquare buildings, and the latter in round huts made of ſticks and clay; they are about eight feet high, and twenty in diameter, with a roof like that of a bee-hive, made either of ſtraw or palmetto-leaves, and ſo thick as not only to keep the rain from penetrating through, but alſo to ſecure them from the violent heat of the ſun.

This town is the reſidence of a prieſt annually ſent over from St. Jago, one of the Cape de Verd iſlands, who has a church here, in which, during his reſidence, maſs is ſaid almoſt every day. Here are many of the deſcendants of the Portugueſe, who ſend canoes up the river once or twice a year; by which means they have made this town the richeſt on the whole river, and a place of great reſort.

Caen reaches about ſeventy miles along the river, and is governed by an emperor and a king, who are both Mundingoes, and have their reſpective revenues from commodities of different kinds.

Barſally, is the next kingdom we come to: it is a very noted country, governed by a king of the Jolloif nation; and here the Engliſh have alſo a factory at a town called Joar, where they carry on a very conſiderable trade. This town is ſituated in a fine ſavannah ſurrounded with woods, in which are moſt kinds of wild beaſts. It is about two miles from the Gambia, and is inhabited by a few Portugueſe. It is very ſmall, the whole number of houſes not exceedingly twelve, among theſe are included the factory, and a houſe belonging to the king of Barſally, which two take up more ground than all the other buildings. About a mile from the town is a ridge of high and rocky hills, covered with trees, which runs many miles up the country. It is very pleaſant walking on theſe hills in the ſummer; but in the rainy ſeaſons it is extremely dangerous, from the wild beaſts who reſort there in great abundance on account of the low grounds being overflowed. About the ſavannah are plenty of deer, buffaloes, and wild hogs; alſo a great number of partridges, which are exceeding good, and greatly admired by the natives. Here are likewiſe cameleons; and great numbers of crocodiles, which the people kill and eat, conſidering them as their moſt delicious fare.

Cohone, where the king of Barſally uſually reſides, is about eighty miles from the Engliſh fort at Joar. As there are tolerable advantages to be made by the company at this place, provided their ſupercargoes are honeſt, they generally ſend a ſloop thither two or three times in a year. At theſe times the king frequently ranſacks ſome of his enemies towns, makes priſoners of the people, and ſells them for ſuch commodities as he wants, which are commonly brandy or rum, gunpowder, balls, guns, piſtols, and cutlaſſes for his attendants and ſoldiers, and coral and ſilver for his wives and concubines. The king, as well as his people, are of the Mahometan religion, nothwithſtanding which they are greatly addicted to drunkenneſs. The dreſs of the king conſiſts of a garment made like a ſurplice, but reaches no lower than his knees, and a large piece of cloth gathered round his waiſt: he wears no ſtockings, and has only morocco ſlippers on his feet. His head is covered with a ſmall white cotton cap, and he wears large gold ear-rings. His people, as well as himſelf, always wear white clothes and white caps; which being a direct contraſt to their natural colour, makes them look exceeding whimſical. This king's dominions are very extenſive, and divided into ſeveral provinces, over which he appoints governors, called boomays, who come annually to pay him homage; and though they have almoſt an unlimited power, yet they are beloved as well as feared by the people whom they govern.

The country of Yang lies contiguous to the kingdom of Barſally eaſtward: it is very large, divided into two parts, and diſtinguiſhed by the names of Upper and Lower, each of which is under the government of a different king, the one a Mundingo, and the other a Jolloif. In the Lower Yang the company have a ſmall factory at a place called Yanrmarew, which is kept by a black factor, whoſe only buſineſs is to buy corn and rice for the uſe of James's fort. This is the pleaſanteſt fort on the banks of the river, it being delightfully ſhaded with palm and ciboa-trees, the leaves of which the inhabitants uſe for covering their houſes with.

There is a ſmall town in the Upper Yang called Cuttejarr, ſituated about a mile from the river, between which the company had once a factory; but it being overflowed in the year 1725, and great quantities of goods deſtroyed, they removed it to Samy, about eight miles farther, where it has continued ever ſince. This town is noted for a good trade, particularly in ſlaves; and is about twelve miles from the river.

The factory of Fatadenda is higher up the river, which is here exceeding broad, and deep enough to admit veſſels of forty tons burden. The ſides of the river are woody, and the land low; but the factory ſtands on an eminence, and is at leaſt ten miles from any town. On each ſide of the factory is a pleaſant proſpect of the winding of the river for ſeveral miles, and in the front of it is an agreeable view of part of the kingdom of Cantore. The port here ſerves for a landing place to Suteco, a town about nine miles diſtant: but, excepting the factory, it has not any houſe near it.

The Engliſh have alſo another factory near a large town called Brucoe, about half a mile from the river, in the kingdom of Jemarrow. The town is inhabited by a people of the Mundingo race, but they are ſtrict Mahometans. About half a mile below the town is a ridge of rocks that runs three parts acroſs the river, and leaves ſo ſmall a channel, as to render it very dangerous for large veſſels.

Dabocunda, nine miles from Brucoe, is a large town: it is ſituated on the ſouth ſide of the river, and divided into two diſtinct parts; one of which is fortified by a wall made of palmetto-trees fixed in the ground, and clay laid in between, ſo that it is little inferior in ſtrength, to thoſe made of brick and mortar. The other town is only encompaſſed by a fence of canes faſtened together by a number of ſtakes, in which manner moſt of the towns on the Gambia, as well as the factories, are ſurrounded. In peaceable times, the people live in the open town; but in times of war, they ſhut themſelves up in that which is moſt ſtrongly fortified. Theſe are naturally a refractory ſort of people, and have a king of their own, called Suma, who has a great power over all the towns adjacent.

The kingdom of Tomany, is next to that of Jemarrow: this is a very extenſive country, and contains more towns than any other on the whole river. The Engliſh have a factory at a ſmall place called Yamya macunda, where a conſiderable trade is carried on, particularly in dry commodities. The town is on the north ſide of the river; but the factory is on the ſouth, and is defended by a ſtrong fortification. All veſſels that paſs this port pay a duty to the king of Tomany, who is a Mundingo, and lives at a place called Sutimore, about three miles diſtant from Yamyamacunda.

Contoro lies beyond Tomany: this is a large and populous country, with many ſmall towns diſperſed about it, but not any one nearer the river than three miles; and they are all ſo inſignificant as not to deſerve any particular deſcription.

We ſhall now proceed to give an account of the famous river Niger, or Senegal, which takes its riſe in the eaſtern part of Africa, and, after a courſe of three hundred miles nearly eaſt and weſt, divides itſelf into three branches, under the names of the Senegal, the Gambia, and the Sierra Leona; all which, like the Nile, overflow their banks at a particular time in the year.

Geographers have not been able hitherto to aſcertain the whole extent of this great river; but from the farther part that has been penetrated to the ſea, it reaches near two thouſand four hundred miles. It runs eaſt and weſt till within about ſix miles of the ocean, when it ſuddenly breaks off, and forms a curve that runs from north to ſouth about twenty-five leagues,

leagues, when it diſembogues itſelf into the ſea. The mouth of the river is about three miles acroſs, but the paſſage here is often very dangerous, on account of the bar, which is not only continually ſhifting, but alſo chooks it up; and when the north winds blow, the ſtream is ſo rapid, and the waves run ſo high, that it is impoſſible for any veſſel to paſs it. The ſafeſt times for croſſing the bar, are, between the months of March and September when the winds are changeable, and the bar is generally fixed till the rainy ſeaſon ſets in. The banks of this river are very fertile, and beautifully variegated.

Near the river Senegal are lofty trees inhabited by various ſorts of birds, ſome of which are very ſmall, others large, and many of them exceeding handſome, and of the brighteſt colours. There are alſo great numbers of ſquirrels and monkies; and the more diſtant parts abound with lions and elephants, the latter of which have not that ferocity in them that is natural to thoſe in other countries, for they will not attempt to attack any one they meet with, unleſs firſt moleſted. Some parts of the low grounds abound with a ſort of thorny trees which run to a prodigious height, and bear large branches of yellow flowers that have an odoriferous ſcent. The barks of theſe trees are of different colours, ſome being black, others white, green, or red; and whatever colour the bark is of the ſame, and appears to be a ſpecies of the ebony, from its ſubſtance.

On the banks of the Senegal, the following kingdoms and places, being the principal ones, are ſituated; namely,

Guber, which lies forty miles from Niger, and almoſt three hundred miles eaſtward of Gago: between this latter and Guber there is a vaſt deſart, without water. This kingdom is ſurrounded with very high mountains, and contains a great number of villages, many of which are inhabited by people who are employed in taking care of their cattle and ſheep: the whole country abounds with rice, and other grain. There are alſo abundance of artificers and linen weavers, the former of whom make ſandals, and ſell them to the people of Tombuto and Gabo. The whole country is overflowed every year by the inundations of the Niger, and at that time the inhabitants ſow their rice. There is one town, which contains almoſt ſix thouſand families, among whom are many merchants.

Zanfara, lies to the weſtward of the kingdom Zegzeg, and is bounded by Guber on the weſt. It is very large and fertile, the fields producing great quantities of rice, millet, and cotton. The inhabitants are in general very poor, and are chiefly employed in the buſineſs of huſbandry; they are of a tall ſtature, and very black complexion, with broad faces, and moſt ſavage and brutiſh diſpoſitions. This kingdom is very little known to Europeans.

Cano, is bounded by Zaara on the north; by the river Niger, on the ſouth; by the kingdom of Agades, on the weſt; and that of Caſena, on the eaſt. Some of the inhabitants are herdſmen, and others till the ground, and dwell in villages. Some parts of it produce great quantities of rice, corn, and cotton; but other parts of it are very barren, conſiſting of deſerts and woody mountains, in the latter of which are wild citrons and lemon trees. In the center of the province is a large town of the ſame name, ſituated in ten degrees twelve minutes eaſt longitude, and fifteen degrees thirty minutes north latitude. The walls and houſes of this town are made of a kind of clay, and the inhabitants in general are of a civil and obliging diſpoſition; the principal of whom are merchants. Their king was once a powerful monarch, and had a prodigious number of troops always at his command; but he has for many years been tributary to the king of Tombuto; on which account one of that prince's courtiers always reſides in the town, to collect the tribute. This kingdom is ſeven hundred miles ſouth of Tripoli in Barbary.

Caſena, or Caſſena, is ſituated on the eaſt of Cano, and conſiſts principally of fields and mountains, which produce great plenty of millet. There are many villages in the province, but they are very ſmall, and the buildings exceeding low and mean. They alſo had formerly a deſpotic monarch, but he is now ſubject to the king of Tombuto. The inhabitants have broad noſes and thick lips; and their complexions are a jet black.

Zegzeg, is about one hundred and fifty miles from Caſena, from which it is ſeparated by the Niger; it has that of Zanfara on the eaſt; Renin on the ſouth; and the deſarts, on the weſt; and borders on Cano. This country, which is very extenſive, is divided into two parts, one of which is a plain, and the other mountainous: the air of the former is exceeding hot, but in the latter it is intolerably cold, inſomuch that they are obliged conſtantly to keep fires in their houſes; and when they go to ſleep, they put hot coals under their bedſteads. Their fields are in general fertile, and there are many ſprings of excellent water. Theſe people were formerly governed by a king of their own; but he being conquered and ſlain by one of the kings of Tombuto, they are now ſubject to the monarch of that kingdom. Their houſes are poor wretched buildings made of the ſame materials, and much after the ſame manner as thoſe at Caſena.

Guangara, is bounded on the ſouth-eaſt by the province of Zanfara, and is ſituated to the north of the Niger. It is a large and populous country, and contains a great number of villages chiefly inhabited by huſbandmen. About the center of it is a large town of the ſame name, which is ornamented with many handſome buildings, and the inhabitants carry on ſuch a trade with the neighbouring nations, that many of them are exceedingly wealthy, and live in the greateſt ſplendor. Some parts of the country to the ſouth of Guangara town abound with gold; and when the merchants travel to thoſe parts for that valuable article, their goods are carried by ſlaves, the roads being too rough and dangerous for any beaſt. Theſe ſlaves carry prodigious burdens, with which they will travel upwards of twenty miles a day. The great loads they carry is amazing; for beſides the merchandizes, they are loaded with proviſions for their maſters, as alſo for the ſoldiers that guard them. They are governed by a king, who maintains a garriſon conſiſting of a great number of horſemen and archers, and he receives conſiderable tributes annually from his ſubjects.

Bito, which lies to the ſouth of the Niger, is a ſmall kingdom, and is bounded, on the eaſt, by Temian: on the weſt, by Tombuto; on the north, by the kingdoms of Guber and Zanfara; on the ſouth, by Dauma. The inhabitants are great traders, and many of them ſaid to be exceeding wealthy. This country is large and fertile; but has only one capital town in it, called by the ſame name.

Temian, is bounded on the north, by the Niger; on the eaſt, by the kingdom of Wangria, the deſart of Zaara, and the kingdom of Dauma; on the ſouth, by the kingdom of Guber; and, on the weſt, by that of Bito. The inhabitants of this country, who are ſaid to be very ſavage, are very little known to the Europeans.

Dauma, is ſituated in fourteen degrees thirty minutes eaſt longitude, and eight degrees north latitude. This is alſo a ſmall kingdom, and has not any thing very remarkable to diſtinguiſh it, though the inhabitants are ſaid to be very rich.

Biafana, is ſituated to the ſouth of Dauma; and is bounded, on the north, by the deſart of Seth, which is a large ſpace of barren ground, and reaches as far as the borders of the kingdom of Gago, where it joins another large tract of land called the deſart of Zaara, or Sahara.

Gago, is ſituated four hundred miles ſouth of Tombuto, having Dauma on the eaſt, Melli and the Mundingo country on the weſt, and Guiney on the ſouth, from which it is ſeparated by a ridge of mountains. It abounds with corn and fleſh, but there is ſcarce any wine, trees, or fruits. The villages are paincipally inhabited by ſhepherds and huſbandmen. The people are very illiterate: they go ſtark naked in ſummer, but in the rainy ſeaſon are cloathed with the ſkins of beaſts. The principal village is called Gago, and is of great extent: the king reſides here; but the houſes are very mean buildings, except thoſe belonging to the king and his courtiers, which are more ſpacious and handſome. The country for ſome miles round the town produces great quantities of rice, millet, corn, and cattle, alſo ſome melons and citrons: there are likewiſe many ſprings, which produce excellent water. There are many rich merchants in this town, which is much frequented by people of neighbouring countries, who come to buy cloth brought hither from Barbary and Europe. They alſo carry on a great trade in ſlaves, for they make no ſcruple of ſelling their wives and children.

The people here are in general very poor, owing to the enormous taxes continually laid on them by the king, who has a great number of ſlaves and concubines, the latter of whom are kept in a private place, and attended by eunuchs. His body guards conſiſt of a troop of horſe, and a great number of foot: beſides, which, he has upwards of one hundred archers. The king determines all controverſies between his ſubjects, in the execution of which he attends with great diligence. The place ſet apart for this purpoſe is between the inner and outer gate of the palace; and though

though he is as it were judge himſelf, yet he has his counſellors and other officers; beſides whom, he has alſo ſecretaries, treaſurers, factors, and auditors.

Melli, lies along the banks of a river that runs into the Niger. It is bounded, on the north, by Ghines; on the ſouth, by mountains and deſarts; on the weſt, by large woods and foreſts reaching to the ſea ſhore; and on the eaſt by Gago. It received its name from a large town called Melli, which was once the reſidence of a ſovereign who reigned over the whole kingdom, and at that time the town is ſaid to have contained ſix thouſand families. At preſent, however, the kingdom is divided into different ſovereignties and lordſhips, and but a ſmall part of it retains the original name. The inhabitants are ſaid to be the moſt civilized of all the negroes, and very courteous to ſtrangers; they are likewiſe very induſtrious and frugal. The country produces great quantities of corn, rice, and millet; alſo good cattle, and ſome cotton. The people are generally employed in the buſineſs of huſbandry; but there are amongſt them ſome artificers and merchants, who carry on a conſiderable trade with the neighbouring kingdoms. The religion of the country is a kind of Mahometaniſm. Some affirm that this kingdom is tributary to Tombut. Between Melli and the kingdom of Gago is a large tract of land called Foute Guilon, ſaid to be the original country of the Pholeys; but it is now almoſt uninhabited, and little better than a mere deſart.

There are ſeveral conſiderable places towards the ſea coaſt, the firſt of which is Kachao, called by the French Cachaux. It is a Portugueſe colony, ſituated on the river St. Domingo, or Kachao, which falls into the ſea about ſixty miles below the town. It ſtands in the country of the Papells, an idolatrous people, who ſacrifice dogs to their fetiſh, or idol, which they call Shina. The Papells have frequently been at open war with the Portugueſe, for which reaſon the latter have encompaſſed the town on the land ſide with a ſtrong palliſado, terraced and defended by batteries; and they keep conſtantly a watch for fear of any ſudden enterprize. The town is built on the ſide of a river, and conſiſts chiefly of two long narrow ſtreets, with a few ſmall ones that croſs them in different parts. The houſes are made with earth, and are whitened within and without: in the rainy ſeaſon they are covered with palmetto leaves, but all the reſt of the year they are only covered with a ſail cloth, to keep off the violent heat of the ſun. The houſes are low, not having any ſtory above the ground floor; but they are at the ſame time very ſpacious.

In this town there are but few natural Portugueſe, moſt of them being mulattoes, and ſo black as hardly to be diſtinguiſhed from negroes. The faireſt of them, however, keep their wives under very cloſe confinement, never ſuffering them to go abroad in the day time, not even to maſs; and the better ſort have chapels in their houſes, where, on high feſtival days, they hire a prieſt to perform religious duties. The Portugueſe here particularly pride themſelves in being jealous, and will ſometimes carry that paſſion to the greateſt exceſs. Their black wives, indeed, are not ſo much reſtrained as the others, for they are permitted to go abroad in the day time; but they are ſo wrapped up, that no part of them can be ſeen except their feet.

There is a church and convent in this place, and the ſpiritual government is inveſted in a viſitador, or grand vicar, ſent hither by the biſhop of St. Jago, to whom all the Portugueſe that inhabit this country are ſubject. The convent belongs to the capuchins; but from the unwholeſomeneſs of the country, there are ſeldom more than two or three friars that reſide here; and when any of them die, it is a difficult matter to find another that will ſupply his place.

The civil and military government is under the direction of one called captain-major, who has under him a lieutenant, an enſign, and an adjutant; beſides whom, there are other officers, as, an intendant of the king's duty, a notary, and ſome ſcriveners. The garriſon conſiſts of thirty ſoldiers, who are baniſhed from their own country for the commiſſion of ſome capital crime; and this baniſhment is of the moſt horrid nature, for they are kept at ſuch ſhort allowance, and ſo miſerably cloathed, that if they had not ſome kind of buſineſs to aſſiſt them, they muſt inevitably periſh. Some of them will often follow the profeſſion for which they were ſent here; for after dark they will parade the ſtreets, and rob all they meet; ſo that it is very dangerous to walk after ſun-ſet, unleſs a perſon is well provided with arms; this is alſo practiſed in moſt of the other Portugueſe colonies.

The country on the ſouth ſide, where the town ſtands, conſiſts chiefly of marſhes, with a few fields in which they ſow ſome rice; but they are ſo ſmall, and ſo little cultivated, that they do not produce a ſufficiency for the maintenance of the inhabitants. The river before the town is at leaſt a mile acroſs, and ſo deep as to admit the largeſt ſhips, were it not for a dangerous bar that interrupts them at the mouth of the river. The north bank of the river is covered with mangroves, beyond which are ſome of the fineſt trees in Africa for thickneſs, height, and quality of the timber: the natives make their canoes out of theſe trees, which are all of one piece, and ſo large and ſtrong that they will carry ten ton weight. The Papells are eſteemed the beſt rowers on the whole coaſt, by the Portugueſe. The natives of Cachao employ the principal part of their time in the cultivation of a plant called manioc, which is uſed inſtead of bread, not only here, but in ſeveral other parts of Africa. This plant is alſo cultivated, and brought to no leſs perfection by the inhabitants of the iſland of Biſſao. The paſte of manioc is called caſſava, which is converted into a cake by roaſting, without moving it. It would be dangerous to eat as much caſſava as flour of manioc, becauſe the former is leſs roaſted. Both of them keep a long time, and are very nouriſhing, but a little difficult of digeſtion. Though this food ſeems at firſt inſipid, it is preferred to the beſt wheat by many white people.

Another town, called Farim, is ſituated about ſeventy miles from Kachao, on the ſame ſide of the river: a tolerable trade in wax and ivory is carried on here; and markets are held for the ſale of ſlaves in the months of October and November.

Bot, is a village to the north-eaſt of Farim: moſt of the traders buy rice at this place, where it is very plentiful, and exceeding good in quality; and they ſell millet and oxen at another village a little farther, called Bole.

Geſves, is ſo called from a river of the ſame name: it is a very conſiderable town, and ſuppoſed to contain at leaſt forty thouſand inhabitants, among whom there are not above twelve white families, the reſt being all tawny or black. The trade carried on here conſiſts of wax, ivory, and ſlaves. The natives that live on the banks of this river are partly Papells, and partly Mundingoes. The Portugueſe have a factory on it.

There is a province in this country called by the Portugueſe Kobo, the king of which reſides at a ſmall place about thirty miles eaſt of the town of Geſves: and near the mouth of the river of that name is a ſmall town called Courbali, where a conſiderable trade is carried on in ſlaves, ſalt, and ivory.

The river Caſamanga, whoſe courſe is conſiderably long, and its ſtream very rapid, is ſaid to be an arm of the Gambia, and lies to the ſouth of the river of St. Domingo, or Cachao. The only trade carried on here conſiſts chiefly in ivory and wax, which is all in the hands of the Portugueſe, who have two ſmall forts on the banks of this river, but they conſiſt of little more than a few wretched huts, ſurrounded with ſmall moats; and the principal ſecurity of each lies in the difficulty there is to come at it, for they are both ſituated in marſhy grounds, and are hid by mangroves, defended by legions of muſquetoes.

SECT. III.

Containing an Account of SIERRA LEONA, its Boundaries, Climate, Inhabitants, Animals, Produce, Soil, &c.

SIERRA, or Serra Leona is bounded on the north and ſouth by two famous capes, the former of which is called Cape de la Vega, and the latter Cape Tagrin, or Sierra Leona. This country is rendered conſiderable by the river which gives name to it, whoſe banks are more fertile than thoſe on the weſtern coaſt of Africa. The capes abovementioned form a ſpacious bay, into which the river diſcharges itſelf. The flood in the bay runs ſeven hours, and the ebb five: it is between ſeven and eight fathom deep, and ſhips may ride in any part of it with the greateſt ſafety.

The river is ſaid by ſome to have received its name from the noiſe of the ſea againſt its rocky ſhores, reſembling the roaring of lions; others affirm, that it was firſt called ſo by the Portugueſe, from the great number of lions that infeſt the neighbouring mountains. It alſo goes by the names of Tagrin and Mitomba (from the capes ſo called), the latter of which it preſerves for about eighty miles above the mouth of the river. On the ſouth ſide of it is a town called Las Mageas, where none but the Portugueſe

are permitted to reſide for trade; and when there are any French or Engliſh ſhips in the bay, the natives come down the river to barter for commodities.

A creek called the Bay of France, is near the entrance of the river: there is a baſon or reſervoir of freſh water in it, that falls from the adjoining mountains. It flows down in gentle murmurs or impetuous ſtreams, and, in a country almoſt parched by the heat of the ſun, produces a moſt agreeable ſcene, beſides which, its beauties are conſiderably heightened by the ſurrounding hills, that are covered with lofty trees, that afford a perpetual ſhade, and render the whole one of the moſt delightful ſpots that can be met with in ſuch hot countries. Here are alſo ſeveral ſmall iſlands, the principal of which are Taſſo and Benſe.

Taſſo, is a large flat iſland, near three leagues in circumference, where the company's ſlaves have a good plantation. The chief part of the iſland is covered with wood, among which are ſilk cotton trees of a prodigious ſize; and good indigo is produced in ſome parts of it. And about nine miles from the road is ſituated,

Benſe, where the Engliſh had once a ſmall fort, whoſe advantages aroſe chiefly from its ſtanding on a ſteep rock, the aſcent to which was by a flight of ſteps. The fort was built of lime and ſtone, and before it was a platform with ſix guns. The garriſon generally conſiſted of twenty white men, and thirty gromettoes or free blacks, who lived in a ſmall village under the ſhelter of the fort. This fortreſs, however, was taken by two French men of war in the year 1704, who firſt pundered, and then razed it to the ground: Benſe iſland is much ſmaller than the other: it produces only a ſmall quantity of rice, the ſoil of it being very indifferent.

The climate of this country is in general very unwholeſome, particularly in the mountainous parts; where during four months in the year, it rains, thunders, and is ſo intolerably hot, that the people are obliged to keep cloſe in their huts: and the air is corrupted in ſuch a manner by the lightning, that all animal food is reduced in a few hours to a ſtate of putrefaction. The flat open country, however, is not ſo bad; for though in ſummer the heat is exceſſive in the former part of the day, yet it is very temperate in the afternoon, from the refreſhing breezes that generally come from the ſouth-weſt quarter.

Great numbers of mangrove-trees grow on the banks of the Sierra Leona; the leaves of them exactly reſemble thoſe of an European laurel. The branches of theſe trees are nearly of an equal length, but the ſhoots, growing downwards, as ſoon as they touch the water or the earth, take root, and by that means make a hedge ſo thick as to be almoſt impenetrable.

The whole country abounds in millet and rice, which is the principal food of the natives. It alſo produces great plenty of oranges, lemons, bananas, Indian figs, anynas, pompions, water-melons, yams, potatoes, wild pears, white plums, ſeveral ſorts of pulſe, and the kola fruit. This laſt fruit ſomewhat reſembles a cheſnut, and grows in cluſters of ten or twelve together, four or five in a rind, each divided by a thin ſkin. The outſide of the nut is red intermixed with blue; and the inſide, when out, is of a violet colour mixed with brown. The negroes and Portugueſe uſe it in the ſame manner as the Indians do arek and betel. It makes the water exceeding ſweet, when put into it; and has a harſh ſharp taſte.

There is a variety of large trees on the ſhores, particularly the palm, cocoa, and cotton-tree; and on the mountains are abundance of palm and laurel trees.

Deer, hogs, goats, and fowls, are very numerous here; theſe the natives ſell to the Europeans for a ſmall quantity of brandy, a liquor which they are particularly fond of. In the mountains are great numbers of elephants, lions, tygers, wild boars, and roe-bucks; alſo apes of ſeveral ſorts; and ſerpents, which laſt are ſo large, that it is ſaid they will ſwallow a man whole; but this we do not give intire credit to.

The apes, monkies, and baboons are ſo numerous, that they make great deſtruction in the plantations. There are three ſorts of theſe animals, one of which is of a prodigious ſize, and remarkably ſagacious. When taken young, they are taught to walk upright, and by degrees are rendered very uſeful to the natives: they are taught to pound Indian wheat, to fetch water in calabaſhes or gourds, from the river or ſprings, on their heads, and to turn the ſpit. Theſe creatures are ſuch lovers of oyſters, that, at low water, they go down to the ſhore among the rocks, and when the ſhells open with the violent heat of the ſun, they put a ſmall ſtone between, and take out the oyſter; ſometimes it happens that the ſtone ſlips aſide, or is too ſmall, when the monkey's foot being caught, he is taken and killed by the blacks, who reckon their fleſh, and alſo that of elephants, delicious food.

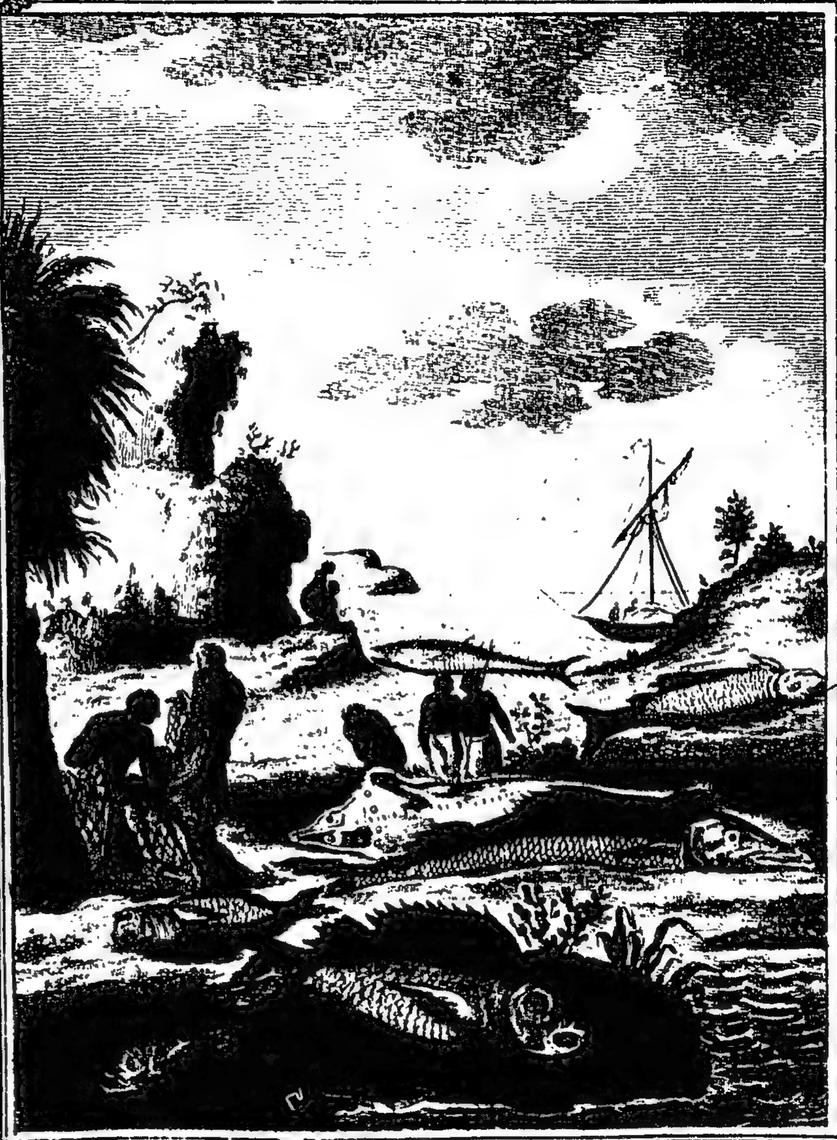
Pigeons, parrots, parroquets, and Guiney hens are in great numbers in the woods, the latter of which are about the ſize of a pheaſant, and beautiful: but it is very difficult to catch them, on account of the thickneſs of the trees. They have alſo other ſorts of fowl, among which are white pelicans as large as ſwans, a bird called ox-eyes, herons, curlews, and boobies.

There is a great variety of fiſh in the bay and entrance of the river, ſuch as raics, thornbacks, and a fiſh called old wives: alſo gar fiſhes, cavalloes, ſharks, and ſword fiſhes, dog fiſhes, and one called ſhoemaker, having on each ſide the mouth pendents like barbel, and they make a noiſe ſomewhat reſembling the grunting of a hog. The moſt common fiſh, however, caught here, are, pilchards, the becune, the monk or angel fiſh, the mullet, and old wives: the latter is ſhaped much like a tench, is about nine inches long, and has large ſcales. It is mottled with red, yellowiſh, and browniſh lines placed alternately, and running from the head to the tail, being five or ſix in number. The ſnout is oblong, and turns upwards, and the lips are thick, fleſhy, and project from the jaws; but the mouth is ſmall. The teeth are ſerated, but not very ſharp, and the fins are mottled with red, blue, and yellow. The tail, when expanded, is roundiſh, and the fiſh is extremely beautiful altogether.

The becune and monk, or angel fiſh, being little known in Europe, we ſhall here give an account of them. The former of theſe greatly reſembles a pike, but only longer, having been frequently caught upwards of eight feet in length. It is a greedy fiſh, and dangerous to be met with in the water, becauſe it can bite much eaſier than the ſhark, and ſo fearleſs, that it will not be driven away by any noiſe that can be made. The fleſh has the ſame taſte as freſh water pike, but there is often great danger in eating it: for unleſs the teeth are white, and the liver ſweet, it is poiſonous. The monk, or angel fiſh, is between a ſhark and a ſkate, and grows to a large ſize, often weighing upwards of one hundred pounds. The colour on the back and ſides is of a duſky aſh, and the belly is white. The mouth is broad and placed at the end of the head, in which it differs from the other flat, griſly fiſh. The head is roundiſh at the extremity, and there are three rows of teeth in each jaw, each row conſiſting of eighteen, ſo that there are one hundred and eight teeth in all. The tongue is broad and ſharp at the end; and the noſtrils are wide, being placed on the upper lip, and filled with a ſort of ſlime. The eyes are of a middle ſize, placed not far from the mouth, and do not look directly up, but ſide ways. Inſtead of gills, it has holes like the thornback. Near the head are two fins that look much like wings, for which reaſon it is called the angel fiſh. On the extremities of theſe fins, near the corners, there are ſhort, ſharp, and crooked prickles; as there are alſo on the lowermoſt fins, which are placed near the vent. Below the vent are alſo two fins, and the tail is forked. The chief value of this fiſh conſiſts in its ſkin, which is uſed in making caſes for inſtruments; but the fleſh is ſo rank, and of ſo diſagreeable a taſte, that it is little uſed.

The European ſailors find the great quantity of fiſh that are in the bay and river of Sierra Leona to be of infinite ſervice to them, not only for proviſions, but alſo for traffick; for the natives are ſo indolent, that they will not be at the trouble to catch them, but content themſelves with ſuch as are left among the rocks by the ebb tides.

Great plenty of oyſters are on the ſides of the bay; and they appear as if growing on the Mangrove trees, which are very numerous here. Many of them hang down in the water, and are ſo thick covered with oyſters, that at firſt ſight it might be imagined they were produced from the tree. Some of theſe oyſters are of ſuch a ſize, that one of them would ſerve a moderate man for a meal: but they are ſo tough as to be ſcarce eatable, unleſs firſt boiled, and then fried in ſmall pieces. The trees that grow on the ſides of the bay make commodious haunts for crocodiles; as alſo for the manatea, or ſea cow, which are here in great abundance. As theſe creatures are little known to Europeans, we ſhall here deſcribe them more minutely.



It is ſuppoſed by ſome, that the manatea, or ſea-cow, is an amphibious creature, but this opinion has been ſufficiently controverted; for it is always found in large rivers and bays, and feeds upon ſea weeds that grow near the ſhore. It is covered with a very thick ſkin, which greatly reſembles the bark of an old oak, for it is rough, wrinkled, without hair, and ſo hard as ſcarcely to be penetrated.

Though the back is the ſmootheſt part, yet it is covered with circular wrinkles from the top of the neck to the tail fin. They are in general about twenty-five feet in length, but the head is very ſmall in proportion to the body. It is flat at the top, and goes off ſloping to the ſnout, which is eight inches in diameter. The head is covered with a black hard ſkin, exceeding rough, but thinner than in other parts. The mouth is ſmall, but large enough for its manner of feeding. The lips both above and below are double, and divided into the inner and outer: the upper lip terminates the ſnout, and appears like a ſemi-circle at the end: it is very thick, being fourteen inches broad, and ten deep; and is white, beſet with tranſparent briſtles about four inches long. The nether lip is alſo double; the outer one is black, and forms a ſort of chin ſeven inches broad, but without briſtles. The inner lip is hairy, and only a little ſeparated from the outer, neither does it appear when the mouth is ſhut. The corners of the mouth are beſet with thick white briſtles an inch and an half long, which keep the water from waſhing away the food while the creature is eating. The briſtles are like ſmall quills, hollow within, and bulbous at the root. The lower jaw, which is only moveable, is ſhorter than the upper, and the lips move in the ſame manner as thoſe of cattle. They have not any teeth, but, inſtead thereof, two ſtrong white bones that run the whole length of both jaws. The noſtrils reſemble thoſe of a horſe, and are parted by a griſtle above an inch thick: they are two inches over, with wrinkles on the inſide, and briſtles half an inch long. The eyes are placed in the centre of the head, between the end of the ſnout and the ears, and are not bigger than thoſe of ſheep. The neck is thick, and ſo ſhort, that it can hardly be perceived, unleſs by its motion in feeding. From the ſhoulders to the navel, the body is large; but from thence to the anus, it grows ſlender. The circumference of the head is ſeven feet, and of the body next the ſhoulder twelve; but where it is largeſt, the circumference is upwards of twenty feet. The fore fins, or arms, are about two feet in length, and conſiſt of two points: they are covered with ſolid fat, intermixed with tendons and ligaments, with a thick ſkin reſembling a horſe's hoof; they are convex on the upper ſide, and flat beneath, and are beſet with rough briſtles about half an inch long. The breaſts are placed between the arms, one under each, and are of a convex form, about a foot and an half in diameter: they are hard, rough, and wrinkled; and when they give ſuck, the teats are four inches long. The ſcull greatly reſembles that of a horſe, and is much about the ſame ſize and thickneſs. The ſtomach is exceeding large, being ſix feet long and five broad; it is ſmooth within, and has a gland about the ſize of a man's head near the inſertion of the gullet.

The manatea, has no voice or cry; and the only noiſe it makes is in fetching its breath. Theſe animals keep together in large companies, and are very careful of their young, which they bring forth in autumn, and have but one at a time. The fat of theſe creatures which lies between the cuticle and the ſkin, when expoſed to the ſun, has a fine ſmell and taſte; it has alſo this peculiar property, that the heat of the ſun will not ſpoil it, or make it become greaſy. The taſte is like the oil of ſweet almonds; and the only effect it has on the body, is that of keeping it open. The fibres and the lean parts are all beef, but more red and harſh, and may be kept a great while in the hotteſt weather without tainting. The fat of the young ones is like pork, and the lean greatly reſembles veal. In the head, are four ſtones of different ſizes, which are ſomewhat like bones, and are uſed in medicine. Hoffman affirms they are exceeding uſeful in caſes of epilepſy; and they are alſo ſaid to be good againſt agues, and to cleanſe the kidnies of gravel.

The method of catching theſe creatures is as follows: The negroes go in a canoe, and paddle towards it with as little noiſe as poſſible, it being exceeding quick of hearing. As ſoon as they find themſelves near enough, the man, who is placed ready at the head of the boat, ſtrikes a harpoon fixed at the end of a long pole into it, and then lets go. The beaſt immediately betakes itſelf to the mangroves, where the water being ſhallow, they follow it cloſe, and renew the ſtrokes till they have wearied it out, when having obtained poſſeſſion of the creature, they drag it aſhore.

With reſpect to the inhabitants of Sierra Leona, they are not ſo black as thoſe of the neighbouring countries; neither have they ſuch flat noſes or thick lips. The men in general are tall and well-made, of a cheerful diſpoſition, and not given to quarrel, but the women are ſhort and robuſt, owing to their being conſtantly employed in labour; for beſides the buſineſs of houſewifry, they work hard in tillage, make palm-oil, and ſpin cotton. The poorer ſort go naked till they are twelve years of age, when they wear a piece of cloth round the waiſt, or a kind of apron made of the leaves of trees. They alſo wear a leathern girdle, to which are faſtened a long knife and a poniard. Perſons of rank, eſpecially when they appear abroad, wear a long flowing robe of ſtriped callico, tied round the waiſt with a ſilken girdle. They adorn their arms with bracelets, and wear a great number of rings on their fingers. Their ears are ornamented with various toys, and on their cheeks they have different figures made with red hot irons. Both ſexes anoint their bodies and limbs with palm oil, and ſome uſe civet in order to give them an agreeable ſcent. They wear no hair on their eye-lids, and they cut that on their head in croſs lines, leaving ſquare tufts ſtanding erect, but the women in general ſhave all cloſe. They are naturally temperate in their living, and very ſober; for though they are exceeding fond of brandy and other ſpirituous liquors, yet they never drink to exceſs, conſidering drunkenneſs as one of the greateſt crimes.

The huts and houſes of theſe people are low, built with wooden ſtockades ſet in the ground, and thatched with ſtraw; ſome of them are round, ſome ſquare, and others oblong; and moſt of them are ornamented in the front with two wings of a ſpiral form. They are kept very clean, being ſwept at leaſt once every day. Their furniture conſiſts of two or three earthen pots to boil their victuals in, a gourd or two wherein to fetch palm-wine, and half a gourd for a cup; a few earthen diſhes, a baſket or two for the wife to gather cockles in, and a knapſack for the huſband, made of the bark of trees, to carry his proviſion in when he goes abroad. Their bedſtead is made of billets of wood laid acroſs each other, on which they lay a mat, and ſleep without any covering. Some of them lie on the ground upon mats made of ruſhes, and have their weapons by their ſides, which, for the moſt part, are, ſwords, daggers, darts, bows and arrows. Some of them have guns, which they are very fond of, and uſe with great dexterity. The points of their arrows are infected with the juice of a poiſonous fruit, which is ſo inconceivably ſubtle and quick, that wherever it ſtrikes, it is ſure to prove fatal.

Roots, herbs, fruits, cockles, and oyſters, are their chief food; and their common drink is water. They plant about their houſes gourds, potatoes, pompions, and tobacco, the latter of which they are very fond of, particularly in ſmoaking. Their pipes are made of clay well burnt, and the bowl is remarkably large. They put a ſmall hollow cane, about a foot and a half long, into the lower end of it, through which they draw the ſmoak and ſwallow it. They ſqueeze the juice out of the tobacco when the leaves are green, from an opinion that it would otherwiſe make them drunk; after which, they ſhred it ſmall, and then dry it on coals.

They are very fond of dancing, and generally ſpend their evenings in that diverſion. They make a ring in the open part of the town, and one at a time ſhews his ſkill in antic motions and geſticulations, but with a great deal of agility; and their muſic conſiſts of two or three drums made of a hollow piece of wood, and covered with the ſkin of a kid or other animal.

The women of this country ſend their daughters, at a certain age, to one peculiar houſe in every town or village, where they are taught for a year to ſing, dance, and perform other exerciſes, by an old man appointed for that purpoſe, and when the year is expired, he conducts them to the market-place, where they publicly exhibit ſuch performances as they have been taught at ſchool. During this time, if any of the young men are diſpoſed to marry, they make choice of thoſe they like beſt, without regard either to birth or fortune. When the man has declared his intention, the parties are conſidered as actually married, provided the bridegroom can make ſome preſents to the bride's parents, and to the old man from whom ſhe received her education.

It is cuſtomary here, when they bury their dead, to put all the beſt goods of the deceaſed into the grave, and erect a roof over it, which they cover with linen cloth. The corpſe is always attended to the grave by a number of people hired as mourners, who howl and lament in proportion as they are paid for their trouble by the relations.

They call the courts of juſtice Pallavers, where the principal or elderly men aſſemble to ſettle differences amongſt them, which generally ariſe in matters relative to trade: each ſalutes the other, at meeting, with a bend of the elbow, and raiſing his hand to his face. When they have heard the parties, they determine the diſpute by vote; and

he

he that has the majority, is accounted the innocent perſon. In caſe of fornication, the party, whether man or woman, is ſold for a ſlave. On a charge of murder, the ſuſpected perſon muſt drink of a red purgative water prepared by the judges, which is called purging the criminal: if he is known to have led a bad life, and to have bore malice to the deceaſed, notwithſtanding a poſitive evidence may be wanting, his judges will give him ſuch a quantity of liquor as to kill him, but if they are inclined to ſpare him, they will give him leſs, or make it weaker, that he may appear innocent to the friends and relations of the deceaſed. If a man has been defrauded by another, he has a right to take from him as much as amounts to his own loſs; but he muſt make it appear before the judges that he has not exceeded thoſe limits, as in that caſe he would be called to a ſevere account.

Attempts have been frequently made by the Mundingo negroes, who are ſtrict Mahometans, to propagate their religion among theſe people; but they have ever rejected it, and ſtill follow their own maxims. They acknowledge one ſupreme Being, Creator of all things, whom they call Kanu: they alſo believe in a future ſtate, but they do not worſhip any living creature whatever, nor even the ſun or moon. They have many ſuperſtitious notions, and pay great reſpect to their fetiſhes, or charms, which they conſtantly carry in a bag about their necks, and other parts of their body. The number of theſe deities is not fixed, every one chuſing his idol according to his own fancy; ſome have a horn, ſome a crab's claw, and others a ſnail's ſhell, a bird's head, or ſome ſuch trifle. To theſe they pray with the greateſt diligence, and at their meals always offer them a part. They never go to ſea or on the rivers without theſe idols, conſidering themſelves by thoſe means ſecured from all accidents; for they ſuppoſe the fetiſh has a particular authority upon a ſea; and, after the voyage, thank it for the care it has taken of them during that time.

This country is ſeparated by the river Sierra Leona into two kingdoms; namely, that of Bulon or Bulm, to the north, and that of Burre to the ſouth. The former of theſe kingdoms lies very low and flat, but the ſoil is fertile, and produces great quantities of rice, millet, and maize, of which they make excellent bread. The natives are very fond of the Engliſh and Portugueſe, many of whom inhabit that part of the country, and they take great pains to imitate the maxims and manners of thoſe Europeans.

Burre, is a much more open kingdom than that of Bulm, and near it is that long ridge of mountains called Sierra Leona, which is the admiration of all ſtrangers. There are ſo many caves and dens about the mountains, that when a ſingle gun is fired from a ſhip in the bay, the echo is ſo often repeated, and the ſound ſo loud and ſharp, that there ſeems to be the report of ſeveral cannon. This is far from being diſagreeable to hear; but when it thunders, the noiſe is at firſt dreadful, each clap being echoed with as much force as the real.

Not far from the mountains abovementioned, there runs out into the ſea weſtward a hilly point, much lower than the above mountains, forming almoſt a peninſula, over which the blacks carry their canoes on their ſhoulders when they deſign to launch out to ſea, as it ſaves them the trouble of rowing round there from the bay. This point, according to the moſt exact obſervation, is ſituated in eight degrees thirty minutes north latitude, and is called Cabo Ledo.

The king of Burre reſides in a town about eight leagues from the mouth of the river. It is compoſed of about three hundred houſes, which are round, and built all one way. The king's houſe, or rather his huts, are in the center of the village, and reſembles thoſe of his ſubjects. Some of them are a little larger, which he keeps for the Europeans, or ſtrangers that viſit him. The king governs his ſubjects with great juſtice and lenity, and is greatly beloved by them.

The huts of the lower claſs of people are made with ſide poſts ſeven or eight feet high, ſupporting rafters that unite at the top in the form of a cone. They are covered with reeds, or palm-leaves interwoven through laths ſo cloſe and thick, as to be impenetrable either to rain or the violent heat of the ſun. The ſide walls are formed of reeds and ſmall branches faſtened between the poſts, over which they lay a coat of lime made of burnt ſhells, which gives their huts a clean look, but does not laſt long, becauſe they mix no ſand with it. The fire-place is in the center, and the ſmoke iſſues through a hole at the top. The doors of the huts are ſquare, the threſhold being raiſed at leaſt a foot from the ground: they are commonly about two feet broad, and three high, ſo that the generality of people muſt ſtoop to go in, and thoſe who are corpulent muſt enter ſideways. Although the climate is hot, yet the nights are cold and moiſt, ſo that the negroes keep fires in their houſes continually.

The dialect of Bulm is the common language of the country; this is a hard, unpleaſing tongue to ſtrangers, and not eaſy to be deſcribed; but about the bay they ſpeak either Portugueſe, or Lingua Franca, and a little Engliſh and Dutch is underſtood by ſome of them.

The Europeans, particularly the Engliſh and Dutch, have long frequented the river of Sierra Leona: here they either trade, or procure refreſhments, in their way to the Gold Coaſt, or Whidah. The goods purchaſed here by way of trade, are, elephants teeth, ſlaves, ſandal wood, gold and bees wax; with ſome pearls, cryſtal, ambergris, long pepper, &c. The gold purchaſed here is brought either from South Guiney by the river Mitomba, or from Mundingo, and other countries towards the Niger.

The merchandize which the Europeans bring hither, is, French brandy and rum, iron bars, white callico, Sileſia linen, braſs kettles, earthen cans, all ſorts of glaſs buttons, braſs rings or bracelets, bugles and glaſs beads of various colours, braſs medals, ear-rings, Dutch knives, hedging bills and axes; coarſe laces, cryſtal beads, red callicoes, oil of olives, guns, muſkets, balls and ſhot, paper, red caps, all ſorts of counterfeit pearls, cotton, &c.

CHAP. III.

THE NEW HISTORY AND DESCRIPTION OF

GUINEY.

SECT. I.

Containing a general Deſcription of GUINEY, its Extent, Situation, Diviſion, &c. alſo an Account of the GRAIN COAST, its Extent, Soil, Produce, Inhabitants, their Trade, Towns, &c.

GUINEY is a very extenſive region, and commonly divided into two large countries, called Upper and Lower Guiney; the latter of which is more properly diſtinguiſhed by the name of Congo. Theſe two together (reckoning from Cape Tagrin, near the mouth of the river Sierra Leona, in nine degrees eighteen minutes of north latitude to Cape Negro, in ſixteen degrees forty-five minutes of ſouth latitude) extend upwards of three thouſand five hundred miles, excluſive of all the turnings, windings, and bays on the coaſt.

Guiney Proper, or Upper Guiney, is ſituated between fifteen degrees weſt, and fifteen degrees eaſt longitude, and between four and an half and ten and an half degrees north latitude, bounded by the unknown parts of Africa, on the

eaſt; by Congo and the Atlantic ocean, on the ſouth; by the ſame ocean, on the weſt; and by Negroland, on the north.

The moſt accurate geographers divide the whole country into four parts, under the appellations of, 1. The Grain, or Pepper Coaſt; 2. The Ivory Coaſt; 3. The Gold Coaſt; and, 4. The Slave Coaſt; in which order we propoſe to treat of it. The principal rivers are, Sherbro, Ceſtre, St. Paul, and Sierra Leona.

The Grain or Pepper Coaſt, begins at Cape Tagrin, from whence it extends upwards of four hundred miles ſouth-eaſt of Cape Palmas. It received its name from the Guiney pepper, called by the Spaniards, Malagueta, which grows here in abundance. It alſo produces another ſpecies of pepper common in the Weſt Indies, and generally known in England by the name of Jamaica pepper. The Engliſh and Dutch purchaſe great quantities of theſe articles: but ivory and ſlaves conſtitute the chief commerce of this country.

Travellers uſually make but two ſeaſons in this country, namely, the wet and dry ſeaſon. From April to September incluſive, is their rainy ſeaſon; and from October to March incluſive, is their drieſt and hotteſt, as well as faireſt weather; though then the ſun is fartheſt from them on the ſouth-ſide of the equator; whereas, the coaſt of Guiney lies five degrees north. But their wet ſeaſon does not always begin juſt at the ſame time: nor is it the ſame at all places on this coaſt: at ſome times, and in ſome places it begins a month or two ſooner than in others, and is ſometimes of a longer, and at others of a ſhorter duration; however, between the vernal and the autumnal equinox, they generally have exceſſive rains, attended with violent ſtorms of wind, as well as thunder and lightning: and, as the winds at this time blow from the ſouthward, and there is not one harbour upon the coaſt, if any ſhipping happens to be there in theſe ſtorms, they are infallibly run on ſhore, unleſs they ſtand out to ſea, or get into the mouth of the river of Sierra Leona, when they find them coming on: and there always ſits ſuch a ſurf, or ſwelling ſea, on this coaſt, that it is very difficult going on ſhore at any time, even during the fair ſeaſon, eſpecially at Whidah.

The moſt violent ſtorms, or travadoes, are in July and Auguſt, and come from the ſouthward. It is obſerved alſo, that during the hot ſeaſon, the winds are periodical on this coaſt, blowing from midnight till one or two in the afternoon, from the land; and then, ſhifting to the ſouthward, blow from the ſea: and that the ſea rages to that degree, on this ſhore, ſome months in the year, that it looks like fire, which makes the ſailors ſtile it, The Burnings, at which times it is almoſt impoſſible to go on ſhore.

The ſoil is tolerably good, and, beſides pepper, produces plenty of vegetables and roots, as alſo various kinds of fruits, particularly oranges, lemons, cocoa-nuts, bananas, and dates. Their cattle conſiſts of cows, which give wretched milk, and very little of it; ſheep, which are cloathed with hair inſtead of wool, make very indifferent food, yet are very dear: they have alſo goats, hogs, hares, and deer, which are much better food than the former: they have a few horſes, but they are very ſmall, and of little uſe. Here are alſo ſeveral kinds of wild beaſts, as lions, tygers, leopards, elephants, buffaloes, wild hogs, wild dogs, foxes, crocodiles, and apes of various ſorts. They have likewiſe a ſpecies of monkey here, ſome of which are five feet high; and are ſo bold and impudent, that they will ſometimes attack men: but they have another ſort of monkies, coal black, with white beards, not above two feet high, and very pretty. Theſe creatures are all very thieviſh here, as well as in other places, plundering gardens and corn fields, but pretty nice in their diet, chuſing the beſt of every kind of grain or fruit. The cameleon is alſo found in this part of Africa; of which it is confidently ſaid, that he often changes colour: the colour he uſually puts on, when he is ſurpriſed, is a fine green, ſpotted brown or yellow, for his ordinary colour is grey, but they never change to a red; and the ſkin is almoſt tranſparent; it is a very ſmall animal, leſs than a rat, but conſiderably bigger than a mouſe, and will live ſeveral months (ſome ſay years) without food; though others are of opinion, that it catches flies, as ſome other creatures do, by putting out its tongue, which is almoſt as long as the body: but the flies muſt light on the cameleon's tongue, if he does catch them, for he is ſo exceeding ſlow in his motion, that he can overtake nothing by running after it. Their poultry conſiſts of geeſe, turkies, and ducks, with plenty of cocks and hens, the latter of which are eſteemed as good in quality as thoſe of Europe.

With reſpect to the natives of this part of the country they are in general tall and well featured, tolerably ſenſible and courteous to ſtrangers, and are ſaid to be the moſt honeſt in their dealings of any on the whole coaſt. The habit of a negro is a paan or pagne, (a cloth) about his waiſt, two feet broad; and thoſe of the better ſort have another cloth of a good length wrapped about them, and thrown over their ſhoulders; but yet ſo as their arms, legs, and a great part of their bodies appear naked, both of the men and women. Their ornaments conſiſt of a multitude of rings, or bracelets, of gold, ivory, or copper, according to their circumſtances, worn on their arms and legs, with necklaces, and girdles of coral, one upon another; but the plaiting and adorning their hair take up the greateſt part of their time, eſpecially of the women: the hair of ſome of the negroes is longer than that of others; and they have a way of pulling it out of the natural curl, and making it ſtrait, by hanging weights to it; after which, they form it into various faſhions, dreſſing it up with little thin plates of gold, copper, tinſel, beads, coral, and ſhells, that make a glittering ſhew; ſome of the women throw a vail over all, to keep off the ſcorching ſun, and ſome of the men have caps; their fiſhermen, particularly, have them made of ſkins or ruſhes, and are very happy if they can get an European hat: but many of the negroes go perfectly bare headed; and their ſcalps, it is ſaid, are ſo hardened by it, that they are not ſenſible of the ſun's intenſe heat.

Rice, millet, fiſh, and fruits, are their common food; and their general drink is water mixed with a little palm-wine, or the milk of cocoa-nuts. Moſt of them are very abſtemious, and will not drink any ſtrong liquors to exceſs; ſuch as do are ſeverely puniſhed, by order of the king, for that practice.

The monarch of this country governs with deſpotic ſway; and with ſuch auſterity, as to ſtrike an awe into his ſubjects, who reverence him more from fear than affection: he is limited by no laws, or any other reſtraints. When he goes abroad, he appears with the greateſt pomp and magnificence; but he is never ſeen in public but upon particular occaſions.

Theſe people are all Pagans, but believe in one ſupreme Being, and ſeem to entertain ſome notions of a future ſtate. The chief part of them are employed in huſbandry; but there are ſome artificers amongſt them, that are excellent workmen, particularly ſmiths, carpenters, and maſons, the former of whom are ſo well acquainted with the nature of tempering ſteel, that they make their various inſtruments to the greateſt perfection. They purchaſe fire-arms, gun-powder, and bullets of the Europeans; but darts, arrows, lances, and broad ſwords, they make themſelves. The carpenters make the canoes of various ſizes with great neatneſs: and they alſo build their houſes or huts, (which are made of wood or clay, and thatched with reeds or branches of the palmetto-tree), in a very regular manner.

Some of the natives of this place are of a mixed breed, called mulattoes. Theſe are an abandoned ſet of people, and have proceeded from the intermixture of negroes and Europeans; for when the Portugueſe firſt diſcovered the ſouth-weſt part of Africa, they not only propagated their religion, but alſo their ſpecies, in many parts of it. Theſe are of a tawny complexion, and profeſs themſelves Chriſtians, notwithſtanding which they retain many of the moſt ſuperſtitious notions of the Pagans. The men are great drunkards, lewd, thieviſh, and treacherous; the women are altogether the moſt abandoned, proſtituting themſelves at all times, and to all ſorts of men, without the leaſt degree of reſtraint. They imitate the Portugueſe in their dreſs, but exceed both them and the negroes in their vices.

The trade is carried on by ſignals from the ſhips; on the appearance of which, the natives immediately go in their canoes, carrying with them their pepper, ivory, &c. for the Europeans have no ſettlement in this part of Guiney.

One of their principal rivers is the Sherbro, called by ſome authors Selbole, and by others Palmas, which diſcharges itſelf into the great bay formed by the capes of Tagrin and Vega. It ſeparates the country called Sierra Leona from that named Seſtos, and has its ſource in Upper Ethiopia; from whence it is conjectured by ſome either to be a branch of the Senegal, or of the river Gambia. Large ſhips go up this river for about ſeven leagues from its mouth, but farther up it grows ſhallow, and is only navigable for canoes. The country round it is very mountainous, and the river has many turnings and windings,

but the ſtream is not rapid, except at two or three cataracts or water-falls, one of which is exceeding large, and makes a prodigious noiſe, the water falling from the rocks upwards of twenty feet perpendicular. The negroes that ſail up this river, before they reach the cataract, are obliged to go aſhore, and land their goods, which, with their canoes, they drag along the mountains till they have paſſed the cataract. The other two water-falls are trifling; notwithſtanding which, they frequently have their canoes overſet, eſpecially when they are heavy laden; but as the cam wood, with which they are generally loaded, is very heavy, it ſinks, and in the dry ſeaſon they go and take it up, there being at that time hardly any water in the river. Their times of going up the river are in the latter end of the rainy ſeaſons, when they cut the cam-wood, and ſearch for elephants teeth; theſe ſeaſons generally continue five months out of the twelve.

There is a ſmall iſland near the mouth of the river, called by the Engliſh Sherbro, and by the Dutch Maſſacoy. It is ſurrounded by rocks, and before it lies a large ſand bank, ſo lofty as to be diſcovered at a conſiderable diſtance from the ſea, The weſt end of this iſland is called St. Ann, and is exceeding pleaſant, being covered with lofty trees on both ſides. The ſoil of the whole is very fertile, and produces plenty of rice, maize, yams, potatoes, bananas, orange and lemon-trees, citrons, pomegranates, and other fruits; beſides which, there are great numbers of poultry, and on the ſides of the ſea are found oyſters that contain ſome of the moſt valuable pearls. The inhabitants practiſe much the ſame maxims as thoſe of Sierra Leona, and are idolaters.

York iſland, lies to the north of Sherbro: the Engliſh had once a factory and a good fort here, but they abandoned it about the year 1727, when they removed to Jamaica, a ſmall iſland about four miles farther to the weſt. This they alſo deſerted, and have not for ſome years had any factory either on the river of Sherbro, or on the iſland of that name.

Seſtre, or Seſtros, which lies to the ſouth-eaſt of Sherbro river, is very rocky at the entrance; but the rocks are all, except two, ſo deep in the water, that moſt veſſels paſs over them, and thoſe two are ſo high above it as to be eaſily avoided. This river is pleaſantly incloſed by lofty trees, and there are ſeveral ſmall ſprings and rivulets that diſcharge themſelves into it. The banks of it are very fertile, and in particular produce great quantities of excellent rice. In different parts are many pretty villages, among which is that where the king reſides, called by the Dutch Koningſdorp, ſituated about twelves miles up the river. It contains about thirty houſes, which are all ſmall buildings, except the king's, and that is not only handſome but ſpacious. About one hundred yards from the mouth of the river is a pleaſant village on a riſing ground, which contains about ſixty houſes, all neatly built; ſome of them may be ſeen many miles from the ſea, as they are very lofty buildings.

There is a large mountainous rock, about eight miles below the river Seſtos, on which grows a remarkable lofty tree: this place is called Little Seſtros or Seſtre; and about four miles from it, farther to the eaſt, a point juts out into the ſea, near which, on the land, appears a great rock, white at the top, which at ſea looks like a ſhip under ſail; it is ſurrounded by large ſand-banks, and is called Cabo Baixos by the Portugueſe.

The natives of this place are very courteous to ſtrangers; but they are idolaters, and practiſe ſome of the moſt ſuperſtitious maxims. Both ſexes go almoſt naked, having only a ſmall piece of cloth faſtened round the waiſt. Their food is the ſame as thoſe above deſcribed. Many of them are employed in fiſhing, and the king has a certain duty of what they catch. When they ſalute each other, they take the fore-finger and thumb into their hands, and putting them into a certain poſture, pull them till they ſnap, when they ſay Aquio, which ſignifies, your ſervant.

They uſe but little ceremonies in their marriages; thoſe who are able to purchaſe a wife, after agreeing with the woman, apply to the parents or relations, and, if they approve of the bargain, the wife is delivered to the huſband, who conducts her to his hut, and his other wives prepare a wedding ſupper. The huſband ſtays all night with his new bride, and the next morning ſhe goes to work with the reſt, no farther ceremony being obſerved on this occaſion. There ſeems, in ſome reſpects, to be little difference between their wives and their ſlaves.

Thoſe that live the eaſieſt amongſt them, are the wives of the merchants, the dealers in wine, and the fiſhermen, who have no lands to manure; for theſe do ſomething towards bringing in a livelihood, and providing for their families; whereas the men of eſtates make their wives manure and cultivate them; and the more wives they have, the greater is their ſtock of corn, rice, and plants, which makes them multiply their wives as faſt as they can. They have one wife called their boſſum, dedicated to their houſhold god, who is exempted from working, and enjoys many other privileges in the life-time of her huſband.

The boſſum is uſually a young beautiful ſlave, purchaſed with a deſign of dedicating her to his god, and with whom he ſeems under ſome obligation of ſpending his time on the night of his birth-day, and of the other day of the week appropriated to the ſervice of their gods. There is alſo another wife, to whom the affairs of the houſe are entruſted, and the government of the reſt is committed, who is exempted from labour; and theſe two the negroes are very jealous of, and endeavour to keep to themſelves; but for the reſt they are not ſo much concerned.

Great diſtinction is ſhewn to the wife who is firſt delivered of a boy, as ſhe thereby becomes the favourite or chief; but ſhe ſometimes pays very dear for the preference given her, being obliged, if her huſband dies firſt, to follow him, and be buried alive in the ſame grave. This ceremony a French writer of credit, who was an eye witneſs of the melancholy tranſaction, has given us the following account of.

"The captain or chief of the village, dying of a hard drinking-bout of brandy, the cries of his wives immediately ſpread the news through the town. All the women ran thither, and howled like furies. The favourite wife diſtinguiſhed herſelf by her grief, and not without cauſe. However, as ſeveral women in the ſame caſe have prudently thought fit to make their eſcape, the reſt of the women, under pretence of comforting her, took care to watch her ſo cloſely, that there was no means of eſcaping. The relations of the deceaſed all came to pay their compliments, and take their farewel.

"After the marabout had examined the body, and declared the perſon died a natural death, he, with his brethren, took the corpſe, waſhed, dried, and then rubbed it with fat from head to foot. After this, they ſtretched it on a mat in the middle of the houſe. His wives were placed round it, and his favourite at the head, as the poſt of honour. Several other women made a circle round them; all theſe endeavoured to outroar each other, tearing their hair, and ſcratching themſelves methodically, like people who knew perfectly the part they acted. Sometimes they left off, and kept ſilent; at others they repeated the praiſe and great actions of the deceaſed, and then began their lamentations afreſh. This mock muſic laſted near two hours, when four luſty negroes entering the houſe, took the dead body, and tied it on a hand-barrow made of branches of trees; then lifting it on their ſhoulders, they carried it through the town, running as faſt as they could, and reeling from time to time as if they had been drunk, with a thouſand ridiculous geſtures, very ſuitable to the exclamations of the wives of the deceaſed, and the other women who attended the proceſſion. In ſhort, the noiſe was ſo great, as would have drowned the loudeſt thunder.

"The parade being over, the body was taken from the hand-barrow, and depoſited in its place; after which, the ſongs, cries, and extravagancies of the women began again. During this, the marabout made a grave deep and large enough to hold two bodies: he alſo ſtripped and ſkinned a goat; the pluck ſerved to make a ragout, of which he and the aſſiſtants ate; he alſo cauſed the favourite wife to eat ſome, who had no great inclination to taſte it, knowing it was to be her laſt. She ate ſome, however, and during this repaſt, the body of the great goat was divided into ſmall pieces, broiled, and eaten. The lamentations began again; and when the marabout thought it time to end the ceremony, he took the favourite wife by the arms, and delivered her to two luſty negroes. Theſe ſeizing her roughly, tied her hands and feet behind her, and, laying her on her back, placed a piece of wood on her breaſt; then holding each other with their hands on their ſhoulders, they ſtamped with their feet on the piece of wood till they had broken the woman's breaſt. Having, thus, at leaſt, half diſpatched her, they threw her into the grave, with the remainder of the goat, caſting her huſband's body over her, and filling up the grave with earth and ſtones. Immediately the cries ceaſing, a quick ſilence ſucceeded the noiſe, and every one retired home with the greateſt compoſure and unconcern."

The common people wink at their wives beſtowing favours on other men; and indeed promote their own diſhonour,

honour, provided they can get money by it: they will contrive with their wives how to draw young fellows into the ſnare, for the ſake of the damages they are entitled to, when another invades their property; for the meaneſt man does not recover leſs than five or ſix pounds ſterling, if he can prove the offence; and they generally find means to have ſome evidence of the fact, beſides the wives: for if the man will take a ſolemn oath that he is innocent, and there can be no witneſs againſt him but the wife, he cannot be convicted. The women that are unmarried, it is ſaid, take very great liberties, which is no reproach to them upon this coaſt, neither does it hinder their getting huſbands; but this is to be underſtood only of the inferior claſs of people.

Circumciſion is practiſed here by the blacks; but they give no other reaſon for it, than that it is an antient cuſtom tranſmitted to them by their anceſtors. They pay great reſpect to their prieſts, who, beſides their eccleſiaſtical function, are looked upon as the moſt able phyſicians, though in general they are very ignorant.

Their principal commodities of traffic are, Guiney pepper, elephants teeth, cattle, and poultry. Their language is ſo unintelligible, that they are obliged to trade with the Europeans by ſigns; and in this they are ſo expert, that bargains and agreements are made without much difficulty.

Cape Monte, is the next conſiderable place we come to: it is ſituated about twenty-five leagues from the mouth of the river Sherbro; it is called by the natives Waſh Kingo, and, when firſt diſcovered at ſea, appears like a lofty iſland. It contains a great number of villages, the inhabitants of which are remarkably induſtrious, particularly in cultivation of rice and boiling of ſalt, which they do not only for themſelves, but alſo for the benefit of their king, to whom they are under ſuch ſubjection, as to be accounted his ſlaves.

Their chief cattle are ſheep; and they have ſome fowls that are exceeding large and good. They have likewiſe a great plenty of various ſorts of fiſh, the catching of which is the chief employment of many of the inhabitants. Wild beaſts, as elephants, tygers, buffaloes, harts, &c. are alſo met with here in great numbers.

The dreſs of the men is a white garment reſembling a ſurplice; but the women have only a narrow piece of cloth faſtened round the waiſt. Both ſexes take great pains with their hair, or wool, which they twiſt into ringlets, and ornament the top of it with gold or precious ſtones. They wear alſo necklaces of ſeveral rows; and on their arms and wriſts they have bracelets, and rings above the ancles, where ſome hang bells of ſilver, the noiſe of which, when they divert themſelves by dancing, they are very fond of.

Though the houſes are for the moſt part mean buildings, yet they are kept exceeding clean. Thoſe belonging to the king and principal men are built long; ſome of them are two ſtories high, with a vaulted roof of reeds or palm-leaves, ſo thick laid as to render rain or heat of the ſun abſolutely impenetrable. At the entrance is the hall of audience, which is alſo their place of eating: here is a kind of ſopha, made of earth or clay, about ſix feet in breadth; and raiſed about twelve inches from the ground; it is covered with fine mats made of graſs or palm-leaves, and dyed of various colours. In this place the principal people ſpend the greateſt part of the day with their wives, and amuſe themſelves with ſmoaking, talking, and drinking palm-wine. Adjoining to the audience-room is the bed chamber, where they have an eſtrade or ſopha, conſiſting of a number of mats laid one on the other, and ſurrounded with pagnes ſewed together, or printed linen like curtains. Their kitchens are ſituated at ſome diſtance from the dwelling houſe, and are very neat.

The people here are in general more cleanly in eating their victuals, than their neighbours. They uſe bowls made of hard wood, and baſons of pewter or copper tinned, which they keep exceeding neat. When they roaſt their meat, they faſten it on a wooden ſpit; but as they have not the means of making it turn round, they firſt roaſt one ſide, and then the other.

A man may marry as many wives as he can keep, for which reaſon ſome of them have a great number, for the expence is very trifling, as they make them work ſo hard, that each nearly earns her own maintenance; they ſeldom quarrel, but in general live very happy; and ſo little jealous are the men, that if their wives beſtow favours on others, it does not give them the leaſt concern.

Their religion conſiſts chiefly in reverencing and obeying their king; and they have ſuch little notions of ambition, that each lives happy in his own way, neither exulting at the downfal of the poor, or envying the proſperity of the rich. Their military weapons conſiſt only of bows and arrows, but they are kept more for ornament than uſe. They never go to war with their neighbours; for if any differences ariſe, they are amicably adjuſted by treaty between the parties.

Many of their mats are bought by the Europeans that trade here: they are of a bright yellow, and exceeding beautiful; alſo great quantities of ivory, which is equally good in quality to that of Sierra Leona: they likewiſe purchaſe the ſkins of lions, panthers, tygers, and other wild beaſts, as alſo a great number of ſlaves, which are brought hither by the Mundingo merchants from the inland parts of Africa. The foreſts yield plenty of ſeveral ſorts of wood fit for dying, particularly camwood, which the natives cut, and bring to the ſhore in blocks of four or five feet in length; the Europeans buy a great deal of it, thinking it much more ſolid and beautiful than Braſil wood, to which they prefer it.

At a ſmall diſtance from cape Monte, is a river called Rio Novo, on the banks of which are ſeveral good villages, and the ſoil is very fertile, producing great quantities of rice, and other grain, with various kinds of fruit, as oranges, lemons, citrons, pomegranates, &c. Here are alſo ſeveral ſorts of quadrupeds, as cows, ſheep, goats, hogs, deer, and horſes. In ſummer, the water of this river is brackiſh about two leagues from the coaſt, on account of the flowing in of the tide; and in the winter it ſometimes ſwells ſo as to overflow its banks; before the mouth of it is a conſiderable ſand bank, which prevents large veſſels from entering it, but ſmall barks paſs it without any difficulty: it is navigable as far as a village called Davaranja, to which place it is very deep, and at leaſt four hundred feet broad. Above this village, the river is encumbered with large rocks, which occaſion conſiderable water-falls, that greatly obſtruct the navigation, and are very dangerous.

Towards the ſouth-eaſt, and about ten leagues from cape Monte, is a prodigious hill called cape Menſurado, though not quite ſo high as cape Monte; it is round and very large, and is almoſt ſurrounded with water; that part next the ſea is very ſteep and high, but that to the land is more gentle and acceſſible. On the eaſt ſide of it is a bay of conſiderable extent, which is terminated by a high land covered with lofty trees. On the weſt ſide is another large bay formed by the river, whoſe mouth is in the center of it. Theſe two bays are ſeparated by a long narrow neck of land. The cape is ſituated in ſix degrees thirty-four minutes north latitude, and that part of it which projects moſt to the ſea runs ſouth-eaſt; from whence there is a ſmall river that falls into the weſtern bay, and is navigable for near forty miles. This river abounds with a great variety of excellent fiſh, but the water is always brackiſh. The top of the mountain is quite level, covered with lofty trees, and commands each of the bays, the beſt of which is that to the north of the cape, about one hundred yards from ſhore, where there is good anchorage in eight or ten fathom water between the point of the cape, and the river's mouth. Before the mouth of the river, along the bay, is a bar, which is dangerous in ſome places, but eaſily paſſed by thoſe who are well acquainted with it.

Near the foot of the cape is an ever-running ſpring, which yields excellent water: it iſſues from a rock in the bank of the ſea, and forms a natural caſcade; and here the ſailors furniſh themſelves with a ſupply of that neceſſary article. To the weſt of this cape are three villages, containing about twenty houſes each; theſe houſes are low, and divided into three apartments; they are built with ſticks and clay, and are covered with ſtraw. In one of them are generally lodged at leaſt forty people, conſiſting of men, women, and children of different families, all confuſedly mixed together.

The people here are very civil and good-natured, and the women remarkably handſome. The men are naturally very indolent, and leave the principal part of buſineſs to be executed by their wives. They are as careleſs about religion as their neighbours at cape Monte, and only attend to the enjoyments of feſtivity and diverſion. They live very peaceably with their neighbours, and are not apprehenſive of any enemy except the Engliſh, their fears of whom aroſe from two large veſſels that once ſtopped here, the crews belonging to which ravaged the country, deſtroyed all their canoes, plundered their houſes, and carried off ſome of the people for ſlaves: ſince which time they have ever been fearful of moſt Europeans, but particularly the Engliſh, and have retained an enmity to them ever ſince.

The garb of the common people is only a piece of cotton wound round the waiſt, and faſtened between the legs: but the better ſort have a ſtriped frock which reaches to the

the knees; and they think themſelves equipped to the greateſt advantage, if they can get an old hat to grace their heads with.

The weapons of theſe people are lances about five feet long, with pointed iron heads; ſmall bows and arrows, the latter of which are poiſoned at the ends; and if they touch the blood, it inevitably kills the object, unleſs the part affected is immediately cut off. Their arrows have neither iron heads or feathers, and they always ſhoot them at random; notwithſtanding which, they ſeldom miſs their mark. They carry ſquare targets of thin board about four feet long and two broad, which are made to hang on their arms, but in ſo convenient a manner, that they can eaſily manage the bow with their hands.

Palm-wine and rice are their chief articles of trade; of theſe they have great quantities, and exceeding good in quality; they procure cowries and ſmall bars of iron, in exchange for theſe commodities.

About eight miles up the river, and near a quarter of a mile from the ſide of it, the king's town is ſituated. This is ſurrounded with woods, and the entrance to it from the river is through a beautiful walk ſhaded with lofty trees. The council-hall is in the center of the town: here the king and his chief people meet to hear all cauſes, diſpenſe juſtice, and ſettle the affairs of ſtate. The floor of this building is of clay raiſed about a foot from the ground, and over it a penthouſe of a circular form ſupported by poſts, and thatched with palm branches, to ſhelter them from the heat of the ſun. The whole is open on all ſides, for the convenience of light and air, and is about twelve yards in diameter.

There are about forty houſes in this town, which, though low buildings, are very neat: they are open on one ſide, and walled on the other three with ſtakes intermixed with red clay, which bind well, and is very laſting. Their kitchens are even with the ground; but the bed chambers are raiſed about a foot from it, to avoid the inconvenience of the dews. The roof is raiſed like a tent, and covered with reeds, or palm-leaves, ſo cloſe interwoven as to admit neither ſun nor rain. In the center of the kitchen is the fire-place, which is raiſed about ſix inches from the ground; and they keep their fires conſtantly burning; in the day-time, for dreſſing their victuals, and the convenience of ſmoaking; and, in the night, to ſecure them from the moiſtneſs of the air, and the cold.

They have, beſides their houſes, buildings for holding their proviſions, as rice, millet, palm-oil, brandy, and other neceſſaries. Theſe buildings are of a round make, with a conic roof, and are ſecured by padlocks, of which the huſband keeps the keys, and diſtributes daily or weekly ſuch proviſion as he thinks neceſſary for his family. This does not give the leaſt offence to his wives, who live amicably together, and ſpend their time in working abroad, or taking care of the children and other neceſſary buſineſs at home. The buildings belonging to each family are covered with reeds or palm-leaves to ſecure them from the inclemency of the weather, and are encloſed with a wall of earth ſeven or eight feet high.

The river called St. Paul runs to the weſt of Menſurado; the entrance of it is about ſix feet deep, and in calm weather it is navigable for veſſels of a tolerable burden. This river takes its courſe weſtward about three miles, and eaſtward to the river Seſtos, whither the natives daily paſs in their canoes, and trade either in the natural produce of the country, or in elephants teeth, which latter article is brought in conſiderable quantities to the river Seſtos.

The river called del Punto or Rio Junck, is to the ſouth-eaſt of cape Menſurado; but the entrance is ſo clogged with rocks, that it is impoſſible for any ſhips to paſs them: however, on the other ſide of them the river is navigable, and runs for ſeveral miles up the country with a fine ſmooth current.

The river St. John is farther to the ſouth-eaſt of that laſt-mentioned: the banks of it are covered with lofty trees; and to the eaſt of this river is a high mountain, in the form of a bow; but it is chiefly barren and uninhabited. Near the ſea-coaſt, a few miles from its mouth, is a village called Tabo Carea, and not far from it, is another, called by the natives Tabo Dagron, and by the French Petit Diappe: there is a river of the ſame name near it.

Seſtre Cro, or Seſtre Crue, is ſituated on the ſouth-eaſt of the river St. Paul; near it there is a large and beautiful village inhabited by people remarkable for being honeſt in their dealings, and preſerving a more regular and prudent conduct than their neighbours. The country here is flat and low; but at ſome diſtance from the village the land is high, and covered with trees that afford excellent timber. Near the ſea are two large rocks about a mile diſtant from each other; and the place is known at ſea by theſe marks. The houſes at Seſtre Cro are built upon piles at leaſt five feet high from the ground, not only to ſecure them from the unwholeſome damp of the earth during the rainy ſeaſons, but alſo from the wild beaſts, which are a conſtant terror to the inhabitants, being very numerous here.

Wappo, is a ſmall village about three miles beyond Seſtre Cro; there is a piece of freſh water in it, that is exceeding good and wholeſome. This place is known at ſea by ſeveral high trees that appear upon a hill behind the ſhore, the tops of which ſeem of a red colour at a diſtance. Before this place is a large rock, which ſeems as it were ſeparated from the ſhore, though actually on it.

There are ſeveral other villages between Wappo and cape Seſtos, the moſt conſiderable of which is Great Seſtro, where there is a large baſon of freſh water ſituated among a number of rocks: but this village contains nothing elſe that is remarkable; and the reſt of them are too inconſiderable to require any particular deſcription.

We ſhall now proceed to take a view of the countries adjoining to the Grain Coaſt, or the interior part towards the weſt and ſouth-weſt. Theſe countries are divided into ſeveral territories or kingdoms; the principal of which are, Quilliga, Quoja, Hondo, Folgia, and Manow, the laſt of which is very extenſive.

Qnilliga, or Quilga, is three hundred miles north of Moſambique; it is a large fertile country, abounding in all the neceſſaries of life, and was diſcovered by the Portugueſe in 1498, to whom it is now tributary.

Quoja, reaches from Sierra Leona to the Grain Coaſt; and contains, beſides Proper Quoja, the kingdoms of Bolm, Giln, Guilliga, and Carredabu. This is a large kingdom, and inhabited by two diſtinct people, namely, the Vey-Berkoma and Quoja-Berkoma, the former of which are the deſcendants of the antient inhabitants of cape Monte, who were once a populous and warlike people, but being conquered by the Quojans, and reduced to ſubjection, are now very inſignificant, and few in number. In this kingdom are many handſome towns and villages, the chief of which are ſituated on the river Maguiba, by which the whole country is plentifully watered.

Great numbers of water-elephants are found in this river, and on its banks; and the natives, when they catch them, preſent them to the king, who claims them as his particular property, but uſually compliments the perſons who bring them with a handſome preſent. This creature is properly called the hippopotamus, or ſea-horſe. It is an animal that feeds upon graſs, but frequently hides himſelf under water, where he continues for ſome time. When he raiſes his head from the water, he looks about to ſee if any danger is near, and can ſmell a man at a conſiderable diſtance. If any thing frightens him, he will immediately hide himſelf in the water, where he will continue for a conſiderable time before he again raiſes his head. As ſoon, however, as he appears, the hunter, who has patiently waited for the opportunity, levels his gun at his head; and if the creature happens not to ſee him, it ſeldom miſſes doing the wiſhed-for execution. If he is killed, the colour of the water will diſcover where he lies, when they go with a boat, hooks, and cords, and drag him aſhore. They then ſkin him, take out his bowels, and convey him away on a carriage; for his weight is very conſiderable, being from two thouſand five hundred to three thouſand pounds, when full grown.

The water-elephant in colour and ſhape greatly reſembles a rhinoceros, except the legs being ſomewhat ſhorter. The head is much like that of a common horſe, but the mouth and noſtrils are much larger. His ears and eyes are ſmall, and his hoof is cloven like that of an ox; but his paſtern being too weak to ſupport the weight of his body, nature has taken care to ſupply that defect, by placing two little hoofs about it, on which he reſts in walking, and they leave on the ground the impreſſion of four points. The body is very ſmooth, but the tail has hair on it, and is ſhort like that of an elephant. The udder of the female hangs between the hind legs like a cow's, but it is very ſmall in proportion to the bulk of the beaſt. The hide is about an inch thick; and ſo hard, that it can ſcarcely be penetrated with a muſket ball, which is the reaſon that they who endeavour to catch them generally aim at the head. The moſt remarkable things about this animal are its tuſks, which are four in number; they proceed from the lower jaw, and riſe out of the mouth to a conſiderable length. They are as thick as the horn of an ox, and weigh about ten pounds each. They are very white, and always retain

retain their colour; for which reaſon, they are much uſed by the mathematical inſtrument-makers for ſcales, ſectors, &c. Beſides theſe, he has in all forty-four teeth, viz. eight inciſors, four in each jaw; four dog teeth, two in each ſide, which are all cylindrical; and thirty-two grinders, of which there are ſixteen above, and the ſame number below. The fleſh of this animal is exceeding good, and in ſome parts is ſold at ſix-pence per pound. The fat is of equal value with the lean, being exceeding wholeſome, and generally uſed inſtead of butter. This creature delights in rivers, where the water is good, and chuſes thoſe parts where the banks are well furniſhed with graſs. They feed chiefly on fiſh, in purſuit of which they go ſeveral of them in a body. Their method is, to plant themſelves at the mouths of large rivers, by which they intercept all the fiſh that come down it. They do not ſleep in the water, but among reeds or ruſhes on the ſides of the rivers; and they frequently ſnore ſo loud, as to diſcover themſelves to their purſuers. They bring forth their young on the land, where they ſuckle and keep them unleſs diſturbed, when they immediately take to the water. The negroes who have huts near the rivers, are obliged to guard their fields day and night, otherwiſe theſe creatures would do great damage to their rice and corn, as well by trampling it down with their feet, as eating it.

Another animal, nearly reſembling the above, is ſometimes found in this river. It is almoſt of the ſame ſize, of a brown colour, with white ſtreaks, a long neck, ſhort body, ſmall legs, and has horns like a bullock. They are only caught in the water; for though they are ſometimes ſeen on ſhore, yet they are too nimble to be overtaken by any beaſt.

There is alſo a great variety of fiſh in this river, among which is a remarkable one called the ſea-woodcock. It is about ten feet long, and five in circumference. It has a large fin on the back, and two of the ſame ſize below the gills. The tail is large, indented, thick, and ſtrong; the eyes full, big, red, and lively. The mouth is wide, armed with ſmall teeth, cloſe ſet, and ſharp; beſides which, it has a bill about twenty inches long, divided into two parts, proceeding from the upper and lower jaw. This bill is hard and boney, ſurrounded with a cartilage covered with a rough ſkin ſomething like ſhagreen. The fleſh of it is intermixed with fat and lean, and is far from having a diſagreeable taſte.

Hondo, is divided into four principalities, the chiefs of which are appointed by the king of Quoja, to whom they all pay annual tribute of red cloth, ſalt, and braſs kettles.

Folgia and Manow, are both very extenſive empires, but the latter is the moſt conſiderable; and the Folgians are in the ſame manner ſubject to the emperor of Manow, as the Quojas are to the Folgians. The emperor's authority extends over all the neighbouring nations, who acknowledge their ſubmiſſion by making him annual preſents of cloth, bugles, iron bars, ſlaves, &c. and he in return teſtifies his reſpect by preſenting them with a certain quantity of red cloth. The Folgians pay the ſame compliment to the Quojas, who do the like to the king of Hondo. The ſubjects of the emperor are called mendi, which ſignified lords; and the Quojas are called mendimonow, that is, "the people of the lord." Each of theſe kings has an abſolute authority over his own diſtrict; and they can make laws, declare war, or proclaim peace, without the emperor's conſent, notwithſtanding their ſubjection to him.

Beſides rice and other grain, theſe countries produce a great variety of vegetables and roots, as alſo plenty of panguavers, bananas, pine-apples, &c. The only cattle they have are ſheep: they are indifferently ſupplied with fowls, except ſmall birds, which they catch in the woods, in which there are alſo great numbers of elephants, tygers, buffaloes, and other wild beaſts.

One of the birds in this country is called kloſi-ſowkegboſſi, and is reckoned an ominous bird by the blacks. When they are on a journey, and happen to ſee one of theſe birds, or hear it ſing, they immediately return home; and if any one dies ſoon after, they ſay, kegboſſi killed him. This bird is about the ſize of a ſparrow-hawk, and black-feathered; piſmires is its uſual food.

They have two other birds, which, beſides the above, the blacks will never touch, but hold them in the moſt ſacred light. The firſt of theſe is called the fenton, and is about the ſize of a lark. When the negroes are hunting in the woods, this bird will place itſelf on a tree near the ſpot where the animal is hid, and on the approach of the hunters will immediately begin to ſing; when ſhe is ſatisfied the people have taken notice of her, ſhe immediately quits her place, and flies to the covert where the animal is ſecreted. The other bird is called a Joxwa, and is nearly of the ſame ſize with the former. It lays its eggs in beaten paths; and the natives believe, that if any body breaks them, that incident will certainly be ſucceeded by the death of one of the family.

The people who inhabit theſe nations, but particularly the Quojas, are in general good-tempered and very obliging to ſtrangers: they are exceeding fond of ſpirituous liquors, particularly brandy; but unleſs it is given them, they ſeldom have any, for they are ſo penurious that they will not purchaſe it.

They build their houſes round, and their villages are alſo in the ſame form; they have two ſorts of the latter, namely, the open and the fortified. The open villages are exceeding pleaſant, being encompaſſed with lofty trees, that join ſo cloſe together as to keep off the heat of the ſun. The fortified villages are called San Siah, and have a fort of baſtions, through which they paſs in and out of the village, by a gate ſo low and narrow, as to admit only one perſon at a time. Theſe villages are incloſed with pales faſtened to the ſurrounding trees, ſo that nothing can be ſeen through the incloſure. At each of the gates is a hut, where a centinel is conſtantly kept on guard; and the people retire promiſcuouſly to theſe villages, as a ſecurity both to their perſons and property, when any danger is apprehended from an enemy.

Rice is the common food of theſe people, who are principally employed in the cultivation of that uſeful grain. Their trade is very inconſiderable, having but few ſlaves to diſpoſe of, and the great number of European veſſels, that paſs along their coaſts, ſoon take off the articles they vend, which conſiſt only of elephants teeth, wax and cam-wood.

Between their harveſts, the Quoja blacks employ themſelves in fiſhing and hunting; but they muſt not follow the latter without permiſſion from the king, who receives a moiety out of every thing they kill. The women have a great ſhare in cultivating their lands, it being their taſk to ſow the rice, and keep it free from weeds. They alſo prepare it for uſe, by beating it in long deep mortars, made of the hollow trunk of a tree.

The inhabitants of theſe countries, both men and women, are ſubject to many diſeaſes; but the moſt fatal is the bloody flux, which often carries off prodigious numbers in a very ſhort time; and they attribute this affliction to the ſovah monow, or ſorcerers. The beaſts are ſubject to a diſorder called ibatheba, which kills a great number of elephants, buffaloes, wild boars, and dogs; they are alſo liable to ſeveral other diſeaſes not known in Europe.

The Quoja language is the moſt common in theſe parts; but the Folgian is the moſt elegant, and is chiefly ſpoken by the better ſort in honour of the king. They often make uſe of allegories that are very judiciouſly applied, and are very circumſpect in their converſation.

They allow polygamy here, as in moſt other negro countries; and the firſt wife has always the pre-eminence. The huſband maintains the boys, and the girls are taken care of by the wives. Their ceremony of marriage conſiſts chiefly in preſents made by the parents of the parties to each other; but the ceremony of naming their children is very particular. When a boy is to be named, the father walks through the village armed with bows and arrows; he keeps continually ſinging; and as he paſſes along, the inhabitants join him with inſtruments of muſic. As ſoon as the people are properly aſſembled, they form a ring, when the perſon appointed to perform the ceremony, taking the child from the mother, lays it on a ſhield, and puts a bow into one hand, and a quiver in the other. He then makes a long harangue to the people; after which he addreſſes himſelf to the infant, wiſhing he may be like his father, induſtrious, hoſpitable, and a good huſbandman. He then names the child, and returns it to the mother; after which the company retire. The men go to hunt for game, and to gather palm-wine, which they bring to the houſe of the perſon belonging to the child, when the mother dreſſes the game with rice, and the evening is concluded with merriment and feſtivity.

The ceremony of naming a girl is as follows: the infant is brought by the mother or nurſe through the village, in the ſame manner as the boy is by the father; and when the people are aſſembled, it is laid on a mat on the ground, with a ſmall ſhaft in one hand. The perſon who is to name it then makes a long harangue, exhorting it to be a good houſewife, and a good cook; to be cleanly, chaſte, and a dutiful wife: that her huſband may love her above all his other wives, and ſhe attend him in hunting. Such wiſhes being pronounced, he names the child, and then de-

livers it to the mother; after which, the whole company diſperſe, except a few ſelect friends, for whom an elegant entertainment is provided, after which they divert themſelves in their uſual manner.

On the death of any perſon, all the friends and acquaintance of the deceaſed immediately aſſemble, and ſurrounding the corpſe, ſing elegies, in which they ſet forth the praiſes and exploits of the defunct. After this ceremony is over, the corpſe is waſhed, and the body ſet upright, ſupported by props at the back and under the arms. If it is a man, they put a bow and arrow in his hand, and dreſs him with his beſt garment. His neareſt relations and friends then make a ſort of ſkirmiſh with their arrows; after which they kneel down with their back to the corpſe, and extend the bowſtring to its utmoſt limits, intimating their readineſs to fight againſt his enemies, or thoſe who ſhall preſume to ſpeak diſreſpectfully of him. While theſe ceremonies are in agitation, the women attend on the widow, to lament and condole with her; in doing of which, they throw themſelves at her feet, and continually keep repeating theſe words, Bgune, Bgune, that is, be comforted, or ceaſe your lamentations. After the whole ceremonies are over, previous to interment, the corpſe is carried on a bier to the grave, which is generally made near the ſepulchres of their anceſtors in ſome deſolate ſpot, and there depoſited about three feet in the ground: they throw into the grave all the kettles, baſons, and principal things the deceaſed was poſſeſſed of; after which, they cover the whole with a mat, and hang his armour on an iron rod, which they faſten in the center of the grave. They generally erect a hut over the grave, to ſecure it from rain, as alſo the better to preſerve the memory of the deceaſed. If a woman is buried, the emblems placed on the rod are, baſons, mugs, and other things neceſſary in houſe keeping.

It is cuſtomary for the releations and friends of a deceaſed perſon, after the funeral is over, to make a vow of abſtinence, which is called Bolli Guwe; this vow, for the common ſort is obſerved ten days; and for the king, or any very conſiderable perſon, thirty. They who keep this faſt, on making the vow, liſt up their hands, and declare they will not eat any rice during that time, nor drink any liquor but what is kept in a hole made for that purpoſe in the ground, as alſo to abſtain from connubial enjoyments; and the women vow to clothe themſelves only with white or black rags, or to go with their hair looſe, and to ſleep on the bare ground. When the time of abſtinence is over, they lift up their hands again, to denote that they have very punctually fulfilled their engagements. After this, the men go to ſeek for game, and if they meet with any, on their return it is dreſſed for regaling the company. All who have kept the faſt are complimented by the neareſt relation of the deceaſed with preſents, conſiſting of a piece of cloth, a baſket of ſalt, an iron bar, &c. but a mat, a ſtaff, or ſome kind of weapon, is generally preſented to thoſe of a more diſtinguiſhed ſort.

When it is ſuſpected that a perſon did not die a natural death, they neither waſh the corpſe, or lament, till they are ſatisfied of their doubts, and the criminal is detected. As ſoon as the ſuſpected perſon is taken into cuſtody, he is chained to a great block, and aſked if he will acknowledge the fact: if he does, he is immediately put to death; if not, they try him by making him ſwallow a large quantity of quony. This is the rind or bark of a tree ſo called, which in preſence of the deceaſed's friends, is pulled off by the ſuſpected perſon, that the ſap or juice may be uſed without any deceit. The bark is pounded, and then put into a large quantity of water, which, after ſome time ſtanding, is of an acid taſte. Of this liquor they make the criminal drink three or four quarts on the following morning, in the preſence of the whole company. If he ſoon diſcharges it from his ſtomach, he is deemed innocent, but if it continues there long he infallibly dies, when they either caſt his body into the river, or burn it.

Although the Quojas Berkoma are ſubject to the king of Folgia, yet that prince confers on the king of Quoja the title of Dondagh, which he alſo preſerves, and which is conferted on him by the emperor of Manow; and the king of the Quojas gives the ſame title to the king of Bulm, who does not pay homage to the king of the Folgias, but to him.

Notwithſtanding the king of Quoja is an abſolute monarch, yet his government is mild, and his councils are formed of the wiſeſt and moſt experienced perſons in the nation: however, he is jealous of his authority and prerogative. When he appears in public, he ſits or ſtands on a ſhield, to denote that he is the defender of the country, the leader at war, and the protector of his people. He keeps a great number of concubines, moſt of whom are brought from the neighbouring kingdoms.

If a perſon of note, who has been diſgraced, is deſirous of obtaining an audience of the king, in order to regain his favour, he firſt delivers preſents to the chief of his wives, conſiſting of ribbands, elephants teeth, &c. theſe ſhe carries to the prince, begging that ſuch a perſon may be admitted. If the king chuſes to grant the petition the preſent is accepted, and the perſon admitted; but if not, the preſent is privately reſtored to the owner. However, he dares not return home, till the king, through the mediation of his friends, gives his conſent, then the preſent is accepted and an audience granted; when he obtains forgiveneſs, provided his crime be not of a very enormous nature.

When a nobleman has been guilty of any miſconduct, he is ſummoned before the king; and if he refuſes to appear, his majeſty ſends his koredo, or ſhield, by two drummers, who are not to ceaſe beating their drums till the party comes with them, carrying in one hand the koredo, and in the other ſome valuable preſent. As ſoon as he comes into the king's preſence, he proſtrates himſelf on the ground, and, throwing earth over his head, begs forgiveneſs, and acknowledges himſelf unworthy to ſit on the koredo; but promiſes amendment in future. The ſhield is ſent to him by way of reproach; intimating, that as he refuſed to obey the mandates of the king, he might come himſelf and take the place of the ſovereign, and bear the fatigues of government. Offenders in criminal caſes, that are ſentenced to death, are executed in ſome wood at a conſiderable diſtance from the village in which they reſided. Here the criminal kneels, with his head bent, and the executioner thruſts a lance through his body; after which, he cuts off his head with an ax or knife, and quarters him, delivering the limbs, to his reſpective wives. If a man is charged with theft or perjury, and the evidence is not ſufficiently clear, he takes his trial by belli, a compoſition made by the belli-mo, or prieſt, with the bark of a tree and herbs, which is laid on the perſon's hand; if it does not hurt him, he is ſuppoſed innocent; if otherwiſe, he is deemed guilty; in which caſe he is ſentenced to death, and executed in the manner abovementioned.

When a woman is accuſed of adultery, ſhe ſwears by the belli, wiſhing that if ſhe is guilty, the ſpirit (jannanin, the ſpirit of the woods) may deſtroy her. If ſhe has ſworn falſely, and is afterwards convicted, ſhe is publicly led by her huſband to the market-place, where the council ſit to hear the merits of the caſe. They firſt invoke the jannanin; after which they cover the woman's eyes, that ſhe may not ſee the ſpirits that are ſuppoſed to be waiting to carry her off; ſhe then receives a ſevere reprimand for the diſorderly life ſhe has led, with the moſt dreadful threats if ſhe ever does the like again. A horrid noiſe then enſues; after which, her eyes are uncovered, and ſhe is diſcharged by the jannanin, on promiſing to live chaſte, and mortifying herſelf for the remainder of her life. If, however, ſhe ſhould relapſe after this, and is again convicted, the belli-mo, with his attendants, go early in the morning to her houſe, and making a ſtrange noiſe with inſtruments adapted for the purpoſe, conduct her to the market-place, where the council again ſit, round which they oblige her to walk three times, that the brotherhood may have an opportunity of properly ſeeing her; they who are not of the order muſt not preſume to appear, nor even ſo much as to look out from their houſes, for fear they ſhould be taken away by the jannanin. After the criminal has walked three times round the market-place, ſhe is conducted to the wood of belli, and is never after heard of. The negroes in general think ſuch women are carried away by the belli; but it is moſt reaſonable to conjecture that they are put to death; and indeed ſome of the more ſenſible part intimate as much, but nevertheleſs aſſert that it is done to appeaſe the indignation of the belli, in order that they may ſtill preſerve their ſuperſtitious notions.

With reſpect to their religion, they believe in one ſupreme Being, though they cannot form any juſt idea of him. They call him Canno, and attribute to him omnipotence, omniſcience, and omnipreſence. They alſo believe that the dead become ſpirits, whom they call jannanin, that is, patrons or defenders, and imagine them able to protect them in all calamities. Thus when a man happens to eſcape ſome imminent danger, he ſacrifices at the grave of his ſuppoſed deliverer ſome kind of beaſt, and makes a feaſt for the entertainment of the relations of the

defunct,

deſunct, as an acknowledgment for the protection he has received. They believe alſo that the jannanin, or ſpirits, reſide in the woods; and when they receive any particular injury, they repair thither, and repeat their grievances with cries and lamentations, intreating Canno and the jannanin to chaſtiſe the malice of the party whom they name. In ſhort, ſuch is their veneration for thoſe ſpirits, that they rely on them as well for their preſent as future welfare. They never drink palm wine without firſt ſpilling a little of it for the jannanin, which cuſtom is alſo practiſed even by the kings themſelves; and indeed their religious worſhip is chiefly directed to thoſe ſpirits, whom they daily invoke, though they appear at the ſame time to pay great reverence to Canno.

Circumciſion is conſidered by them as a divine inſtitution, and therefore they practiſe it with great punctuality. They generally circumciſe their children at the age of ſix months; but ſome defer the operation till they are three years old, that it may be performed with the greater eaſe and ſafety to the child.

On the day of every new moon they keep a feſtival, when they abſtain from all kinds of buſineſs, and will not permit any ſtranger to be with them; and they alledge, that if they were not ſtrictly to obſerve theſe ceremonies, the moon would not only change the colour of their rice, but render it of no uſe or benefit to them.

All the nations of this part of the country have two other ceremonies that are of a very peculiar nature, and are generally practiſed by them. Theſe ceremonies belong to two ſocieties or ſects, the one of men and the other of women, but they are intirely independent of each other. The firſt of theſe is called belli, and is properly a ſchool or college, eſtabliſhed once upon a certain time by order of the king for the education of youth, who are taught to dance, and to ſing often what they call belli-dong, or the praiſes of the belli. When they have completed their education, and gone through all the ceremonies of the ſchool, they are diſtinguiſhed by the title of, The marked of the belli. After this, they are conſidered as perſons of great ſagacity, and are admitted to give their opinion in all matters relative to the good order and government of the ſtate. Theſe ſeminaries are ſituated in a large wood, where proper barracks or huts are built, and the land is cultivated ſo as to produce a ſufficiency for the ſcholars, that they may not have occaſion to go to other places for the common neceſſaries of life. When thoſe who intend to ſend their ſons to the ſchool, have given intimation of their intentions, proclamation is made, forbidding all females to approach the ſacred wood during the continuance of the ſchool, which is generally four years, and ſometimes five, as circumſtances may require.

As ſoon as the ſoggonos, or elders, who are appointed by the king to govern the ſchool, have taken their places, they proclaim the laws to the ſcholars, forbidding them to ſtir out of the precincts of the college, or converſe with any but their fellow-ſtudents, or ſuch as have the mark of the belli, which is the firſt thing they receive after admiſſion. This is done by making ſeveral cuts in the fleſh from each ſide of the neck to the ſhoulder-bone: the operation is painful, but they are ſoon cured by proper ſimples; after which, they obtain ſuperior dignity, and alſo receive a new name.

They are removed from ſchool, when their time of education is expired, to huts built for the purpoſe at ſome diſtance, where they are viſited by their relations, who endeavour to poliſh their manners, and make them fit for ſociety; for, from their long confinement in this retreat, they are ſuch utter ſtrangers to decency and good behaviour, as to be mere ſavages. While under this tuition, they are dreſſed with a particular garment about their waiſts, and their necks are ornamented with ſtrings of beads, intermixed with leopards teeth. On their heads they wear a large cap with flappets, that hang over the face; their legs are loaded with braſs bells and rings, and their bodies are ornamented with feathers of various colours. In this dreſs they are conducted to a place appointed for the purpoſe near the king's palace, where, in the preſence of numerous ſpectators, they take off their caps, and then ſing, dance, and exhibit ſuch other performances as they have learnt while at ſchool; and if any be found deficient, they are ridiculed in a particular manner by the women, who exclaim, "He has ſpent his time in in eating of rice:" the ſame kind of ſtigma is alſo laid on them by the men, and they are afterwards looked upon by both ſexes with the greateſt contempt. When the performance is over, the ſoggonos or teachers, call each their own pupil by the name that was given him on his admiſſion into the ſchool, and then preſent him to his parents: this name he ever after retains.

The ſchool or ſeminary calculated for the improvement of females, is called Neſſogue: the ceremonies attending it are theſe: at a time appointed by the king, a number of huts are erected in the middle of the wood, for the reception of ſuch unmarried women as chuſe to become members of the ſociety. When intimation is given of the number of perſons deſirous of being admitted, the moſt antient woman of the profeſſion is appointed as a governeſs, and is called ſogwilli. As ſoon as the ſcholars are aſſembled, ſhe enters upon her office by giving them a treat, and exhorting them to be ſatisfied with their confinement of four months, which is the uſual time allotted for their tuition. She then ſhaves their heads, and they having, by her orders, ſtripped themſelves naked, ſhe leads them to a brook, where they are waſhed all over, and their bodies anointed with palm-oil; after which they go intirely naked during their continuance in the ſchool. The ſogwilli, or governeſs, teaches them the dances of the country, and to recite the verſes of the Sandi, which gives name to the profeſſion, they being called Sandi Simodiſino, or the daughters of Sandi. Theſe verſes conſiſt of certain encomiums which are chanted; and at the time they exhibit ſtrange geſtures and motions of the body, ſome of which are not only ridiculous, but of the moſt indelicate nature. When the time of their education is nearly expired, the parents ſend them clothes and various trinkets to adorn their bodies with, as bugle ſtrings, braſs bells, rings, &c. On the proper day appointed, they are conducted by the ſogwilli to the village where the king reſides, whither prodigious numbers of people of both ſexes reſort, to ſee them perform the feats they have learnt at ſchool. During the exhibition, the governeſs ſits on the ground, and the daughters of the Sandi dance one after another to the beat of a ſmall drum, when each receives the applauſes of the public in proportion to their merits; after which they are diſmiſſed, and delivered by the governeſs to the care of their parents to whom they reſpectively belong.

We might take notice of other ſtrange maxims which prevail among the negroes of theſe nations; but ſhall only add to their other ſuperſtitious notions, the great faith they have in magicians and ſorcerers, as alſo in a ſort of men whom they call munuſin: theſe they believe can ſuck the blood from the body of either man or beaſt; at leaſt they imagine that they can corrupt it in ſuch a manner, as to occaſion lingering and painful diſeaſes. There are alſo other enchanters called pilli, who, they believe, can prevent the growth of their rice. Such men, they ſay, are poſſeſſed with the ſovah or devil, and that being overcome with melancholy, they ſeclude themſelves from all ſociety, by retiring to the moſt deſolate parts of the woods and foreſts, where the devil ſhews them ſuch herbs and plants as are to be uſed in their enchantments, as alſo the words, geſtures, and grimaces proper for ſuch practices. The blacks are ſo confident of there being ſuch people as theſe in the woods and foreſts, that they will never travel there without company; and they always carry with them a certain compoſition, which they fancy ſecures them from the malicious machinations of the ſuppoſed ſorcerers.

SECT. II.

Containing a Deſcription of the IVORY COAST, its Towns, Rivers, Produce, Inhabitants, their Cuſtoms, &c.

THE Ivory Coaſt derives its name from the great number of elephants teeth purchaſed here by the Europeans, the principal part of which are found on this coaſt, and in its vicinity. It is bounded, on the eaſt, by the Gold coaſt; on the weſt, by the Grain or Pepper coaſt; on the north, by Negroland; and, on the ſouth, by the Atlantic ocean. The whole coaſt, which extends from cape Palmas to cape Apollonia, is about two hundred and fifty miles in length, and is called by the natives the Quaqua coaſt, the word quaqua ſignifying a tooth, in the language of the country.

Cape Palmas is ſituated in eight degrees weſt longitude, and four degrees thirty minutes north latitude. The moſt favourable times of the year on this coaſt, are the months of February, March and April; during which the air is very ſerene, and the breezes gentle; but towards the end of May there ariſe violent ſtorms from the ſouth and ſouth-eaſt, attended with thunder, lightning, and heavy ſhowers of rain, which often continue till the end of

January

January following. To the weſt of this cape are three round hills, and a little further in land is a grove of palm-trees, which, ſtanding on an elevated ground, is ſeen a conſiderable diſtance at ſea, and was the occaſion of this cape being called Cabo das Palmas, or the Palm-tree cape. Behind the cape is a bay, where ſhips ride ſafely at anchor, being ſheltered from the ſoutherly winds. About three miles eaſtward of the bay, is a ſhoal that appears like a long mountain; and oppoſite the weſtern point of the cape is a long range of rocks, even with the ſurface of the water, which reach from ſouth-eaſt to ſouth, about four miles into the ſea. The coaſt here, beſides abounding with rocks and ſhoals, is very muddy, and therefore dangerous for veſſels to paſs along it.

There is a river called Cavadel, about five leagues from cape Palmas, and to the eaſt of it ſtands a very high rock. About twelve leagues north-eaſt is a town called Oſtend, which name it probably received from the Dutch; but it is a very inconſiderable place, not meriting any particular deſcription.

A town of ſome note, called Drewin, was formerly near the mouth of the river St. Andrew; but the inhabitants of the latter having a diſpute with thoſe of Drewin, went to war with them, and burnt their town to aſhes, making priſoners of all the men, women and children, and they ſold them to the Europeans, whoſe ſhips then lay in the river aboſ. mentioned.

St. Andrew is a very large town, and is ſituated on a fine river of the ſame name, which diſcharges itſelf into the ſea about twenty-five miles to the north-eaſt of cape Palmas. This river divides itſelf into two branches, one running north-weſt by weſt, and the other eaſt ſouth-eaſt; at moſt times of the year it is navigable for ſmall veſſels four leagues up; but in the height of the ſummer the entrance is ſo obſtructed by a bar of ſand, that no veſſels can get into it. This town is very large, and ſince the demolition of Drewin has become a place of conſiderable trade. The country about it is eaſily diſtinguiſhed by a number of land-marks and lofty trees, as alſo ſeveral villages, which are ſo cloſe together, that the whole are ſeen at one view. The ſoil is exceeding fertile, and produces great quantities of rice, millet, maize, peas, and a great variety of fruits. The paſturage is excellent for cattle, of which they have great numbers, particularly oxen that are very large, and ſold by the natives at a very cheap rate.

Eaſtward of St. Andrew's river are a great number of red cliffs, which extend many miles along the ſhore, and are very conſpicuous ſeveral leagues at ſea. Between the ſeventh and eighth cliff is a ſmall village called Dromwa Petri, remarkable only for two large trees that ſtand in the center of it, by which it is diſcovered at a conſiderable diſtance. And ſtill farther to the eaſt is cape La Hou or Laho, which is the moſt conſiderable place for trade throughout the whole coaſt, the elephants teeth being not only the largeſt here, but in the greateſt abundance. The town is extenſive, running at leaſt three miles along the ſhore, and is very populous. The country about is fertile, and produces great plenty of moſt kinds of proviſions, which are cheaper and much better than thoſe of St. Andrew. The natives here are very civil, and eaſy to trade with; but they raiſe the price of their commodities in proportion to the number of European ſhips they ſee on this part of the coaſt.

There is a large river, about four miles weſt of Laho, whoſe main channel runs to that of St. Andrew; and the ſmaller branch ſtretches a few leagues eaſtward up the country. And three miles to the eaſt of Laho are two villages nearly together, one of which is called Jack-la-How, and the other Corbi-la-How, but the ſoil about them is very indifferent. Between theſe two villages are ſeveral ſmall rivulets; and to the weſt of the latter, about a league from the ſhore, is a tract of the ſea, called by the Dutch Keel ſonder Grondt, but by others the bottomleſs pit. It received this name from a ſuppoſition that there was no bottom; ſeveral attempts were at different times made by the natives to ſound it, but without ſucceſs; at length, however, it was effected by the Europeans, who found it to be no more than ſixteen fathom in depth.

Cape Apollonia is ſituated at the eaſtern extremity of this coaſt, in four degrees fifty minutes north latitude. It received this name from the Portugueſe, who diſcovered it on the feſtival of that ſaint; and is remarkable for its great height, and the lofty trees that grow on it. The cape runs out a little to the ſouth; and towards the ſhore the ground is flat, but farther back it riſes into three diſtinct hills, which in clear weather may be diſcovered ten leagues at ſea. On the top of theſe hills are ſeveral lofty trees, which, though diſpoſed in a ſtraggling manner, render the proſpect very agreeable. There are three villages near theſe hills, on the ſhore, but the landing is dangerous on account of the ſwelling and breaking of the ſea on the flat ground between the hills and the ſhore. The villages here are inhabited by ſome negro natives, under the government of the Dutch, who prohibit them, under very ſevere penalties, from trading with any other Europeans but themſelves.

Thus have we deſcribed the moſt material places which form that part of Guiney called the Ivory coaſt, which being one of the moſt delightful diviſions of this part of Africa, we ſhall therefore now proceed to take a general view of the country, and deſcribe its various productions, with the cuſtoms and manners of the inhabitants, their method of trade, dreſs, language, religion, laws, &c.

The rocky mountains in this coaſt, which are red, and the conſtant verdure of the trees that cover them, form, by their various colours, an agreeable proſpect, which is greatly heightened by the beauty of the vallies, that contain many villages encompaſſed with groves of lofty trees. The ſoil is in general very fertile, and produces great quantities of rice, millet, maize, and a variety of roots and vegetables; alſo ſeveral ſorts of fruits, as melons, oranges, citrons, cocoa-nuts, &c. Here are likewiſe walnut-trees of a peculiar kind, bearing nuts ſmaller than ours, which are divided in the middle, and taſte like the beſt almonds. Sugar canes alſo grow here very plentifully, and to great perfection, but they are not regarded by the natives, and only ſerve as food for the elephants, which are more numerous here than in any other part of Guiney. They have ſome tobacco, which, if carefully managed, might turn to great advantage. Indigo and cotton are alſo ſo common in this country, that they grow without cultivation.

They have abundance of moſt ſorts of cattle here, as oxen, goats, hogs, ſheep, &c. a good ox is ſeldom ſold for more than a few dozen of knives, and the inferior ones in proportion. They have alſo great plenty of poultry, and the whole coaſt abounds with variety of fiſh. Among the latter, are frequently found three remarkable creatures, namely, the ſea-ox, the zingana, or hammer-fiſh, and the ſea-fiſh; which, for the information of our readers, we ſhall here give particular deſcriptions of.

The firſt of theſe, viz. the ſea-ox, or horned fiſh, is about eleven feet in length, from the ſnout to the end of the tail. The body is about five feet in circumference, and of the ſame thickneſs all over. The ſkin is hard, rough, and without ſcales, but full of unequal points, and marked with large ſpots of various colours. The head is ſhaped much like that of a hog, but has a protuberance at the end, like the trunk of an elephant, by means of which, like that animal, it receives its food. The eyes are exceeding large, and ſurrounded with prominent lids, compoſed of hard, coarſe, and rough hairs. On the fore-part of the head are two horns, of a long ſubſtance; they are ſtrong, rough, and pointed at the ends, and are about ſixteen inches in length; they lay ſtrait and parallel to his back, on the upper part of which, near the ſhoulders, are two excreſcences, that continue from thence to within a foot of the tail. That part of the tail next the body, is very fleſhy, and covered with the ſame kind of ſkin; but the extreme part is compoſed only of a fin, ſtrong and thick, of a brown colour, croſſed with white rays, or parallel lines. This ſeems to ſerve as a defence to the fiſh, who has alſo two ſpurs at the extremity of his belly, each of which is a foot long, round, boney, and pointed like his horns. The gills are large, and to each of them is a fin, ſmall in proportion to his bulk, but very ſtrong. Beſides theſe, and a ſmaller one beneath his belly, between the two ſpurs, he has alſo on his back a riſing lump, which ſupports a fin ſhaped like a fan, about a foot and a half in diameter, and the ſame height. The fleſh is far from having a diſagreeable taſte, and it is very white and fat.

The next is the zingana, or hammer-fiſh, which is a voracious creature, and will feed on any thing it meets with, particularly human fleſh. The head of this animal is flat, and extends itſelf on both ſides like a hammer, from whence it probably derived its name; at the extremity of each of theſe are placed the eyes, which are large and ſparkling; the mouth is formed much like that of a ſhark, and contains two rows of long ſharp teeth; the body is round, and terminates with a long ſloping tail, having a thick ſkin with rough ſpots; the fins are large and ſtrong, and greatly aſſiſt him in ſeizing his prey, which he always attacks with the moſt ſurprizing eagerneſs. The

flesh of this creature is intirely useless, on account of its coarseness, and unpleasant taste.

With respect to the sea-devil, we may reasonably suppose that it is so called from the ugliness of its form, in which it has the pre-eminence above all other creatures in these seas: it has four eyes, and is about twenty-five feet in length, and eighteen in breadth; on each side of it is an angular substance as hard as a horn, and very sharp; the tail is very long and taper, and terminates with a dangerous point: the back is covered with small lumps about two inches high, and sharp at the ends, the head is large, but there is no appearance of any neck, and the mouth is furnished with a great number of sharp-pointed teeth; two of the eyes are near the throat, and are round and large, but the other two are placed above them, and much smaller; on each side the throat are three horns of an unequal length, the middlemost of which is three feet long, and an inch and a half in diameter, but they are flexible, and therefore can do but little harm. The negroes catch this creature for the sake of the liver, from which they extract large quantities of oil; but their flesh is ill-tasted and harsh.

In these seas there is another fish of the same name with that last mentioned: this is only about four feet long, and broad in proportion; it has a bunch on its back covered with thorns and prickles like those of a hedge-hog, and the skin is hard, rough and black, rising with several small bunches, between which there are two small black eyes: the mouth is very wide, and armed with several sharp teeth, two of which are crooked like those of a wild boar: it has four fins, and a broad tail forked at the end; and over the eyes are two sharp horns that bend towards the back. The flesh of this fish is a deadly poison, and it is also an exceeding frightful creature to look at.

The natives of the Ivory coast, called the Quaqua blacks, are tall, lusty, and well featured; but at the first view appear rather frightful, which in all probability is the reason that some writers have described them as a savage and barbarous people: this, however, is a great mistake; for in general they are rational and well-behaved, and are very honest in their dealings, particularly with the Europeans that visit this coast. When they go to trade with any ship, they take some water into their hands, and let a few drops of it fall into their eyes, this is a kind of oath; by which they intimate, that they would rather lose their eye-sight, than cheat those they trade with. They are no less averse to drunkenness than fraud; and though their country produces a prodigious number of palm-trees, yet they will not drink any palm-wine, but only a certain liquor called bordon or tombo-wine, which is much weaker, and, by being mixed with water, is rendered still more so.

The dress of the common people consists of only a small piece of linen close round the waist; but the better sort wear a kind of mantle or large linen sheet wrapped about them, with a scymetar or poniard by their sides. They file their teeth very sharp, but they are in general irregularly placed, and very crooked. They are fond of having long nails, and take particular pride in the length of their hair, which they plait and twist in different forms, and grease it with palm oil mixed with red earth. With this composition they anoint their bodies every day; and continually chew betel, the juice of which they rub about their mouths and chins. As the more rings a man wears, the greater is his quality, so they adorn their legs with a great number of iron rings, in which their chief dignity consists.

The women wear only a piece of cloth before, which hangs from the shoulders to the knees, but their backs are quite naked. They deck their hair with little toys of pure gold, which are of various forms, and generally very thin; but the wives of the rich negroes have such a quantity of them on their heads, as amount to a considerable value. These are sometimes of great use to their husbands, who, when they are unable to purchase goods for want of cash, make no scruple to strip their wives of their ornaments, and turn them into money to defray their expence on this account.

These people use a language that is altogether unintelligible to us, and they speak hastily, and by starts. When they meet each other, they use the word quaqua, at the same time each laying one hand on the other's shoulder, and taking hold of the fore-finger, pull it till it snaps, when they close the salutation by repeating the word quaqua in a low voice.

Though there are several petty princes in different parts of the coast, yet the whole are subject to a king called Soccoo, whom they not only respect, but dread. They look upon all their kings and priests as sorcerers, but particularly the king of Soccoo; and they imagine that he could cause all his enemies to die, if he would only make use of his fetishes or enchantments: they are all idolaters.

A fundamental law of this country is, that every one is obliged to continue all his life-time in the condition wherein he was born; so that for instance, one whose father was a fisherman, can never follow any other trade or profession, but must always remain a fisherman.

At Laho, and some other parts of the coast, they make a pretty sort of cotton stuffs, striped blue and white, about three quarters broad, and three or four ells long. These sell for a good price in most parts of Guiney, and are greatly valued.

Though the native negroes are extremely fond of trade, yet they are very cautious in going on board European ships, particularly those from England. When they see a vessel on the coast, they first examine it; and, if they think they can deal safely, they carry their goods on board, such as gold, ivory, slaves, or provisions. However, they are always mistrustful, and their fears are in some degree justly founded, since the Europeans have trepanned many of them, whom they have sold for slaves. They generally go four or five in a canoe, but only one will go on board first, the others remaining in the canoe, till he has satisfied them of their safety; nor can they, on any occasion whatever, be persuaded to go down between the decks. The most effectual method of alluring them on board, is, for the master, or some of his officers, to take up a bucket of water from the sea, and with their hands sprinkle some of it on their eyes. This they imagine binds them like an oath, looking upon the sea as a deity, or object of religious veneration. It is impossible to conceive what patience is required to trade with most of these people; and, what is worse, they cannot be understood, nor do they understand Europeans; so that all is done by signs and gestures of the hands or fingers, and by setting a quantity of goods against the teeth they offer for sale.

The negroes here, besides the articles of ivory, gold and slaves, carry on a great trade in salt, which they sell to their neighbours, who carry it farther into the inland countries, where it is very scarce, and dispose of it to great advantage.

The largest and best elephants teeth in the universe are found in the inland parts of this coast; Monf. Marchais says, "The quantity of ivory which this country affords is so great, that 10,000l. worth has been sold here in one day. The inland country is so full of elephants, that the inhabitants of the hilly parts are obliged to dig their houses in the backs of the mountains, and to make their doors and windows narrow and low; that they are forced to use all kinds of artifices to drive them from their plantations, or to lay snares for them to kill them. The reason of ivory being so plentiful here is, because the elephants cast their teeth every three years; so that the teeth they get from those they kill are fewer in number than those they find loose in the forests."

Though elephants teeth are as plentiful here now as formerly, yet the blacks have considerably enhanced the price of them, so that the advantages of that trade are much lessened. This, however, is in a great measure owing to the coast being annually visited by prodigious numbers of ships, not only belonging to the English, French and Dutch, but also to the Danes and Portuguese, which has occasioned the trade to become more general, and not so profitable as heretofore.

SECT. III.

Containing a Description of the GOLD COAST, its Boundaries, Situation, and Natural History: also an Account of the Inhabitants, their Persons, Dress, Manners, Customs, Religion, Towns, Villages, Government, &c.

WE cannot pretend to determine why this division of Guiney is distinguished by the appellation of the Gold coast; since the other three parts of the coast produce equally as much gold, and at least as good in its quality. All the inland countries abound with gold mines; and though the natives are not artists enough to follow a vein, yet they find great quantities of it in several of their mines; but they preserve them so secure, that they will not permit any European either to see those they have discovered, or to search for others. Besides

their mines, thoſe who live near the ſea have another method of finding gold, which is this: in the rainy ſeaſons, after a wet night, they go to the ſea-ſhore, each having a couple of bowls or platters made of calabaſhes, the largeſt of which they fill with earth and ſand, ſuch as is driven down from the mountains by the violence of the rain, into the rivers, brooks, &c. They waſh this with many waters, by often turning the bowl round, ſo that the dirt which riſes on the ſurface waſhes over the brim; if there be any gold, it ſinks to the bottom by reaſon of its weight; and thus they continue till they have waſhed all the earth and ſand away, except a ſmall quantity at the bottom, which they carefully take out, and lay by for a minute inſpection. They then fill their platter again and work on, till they have gathered a tolerable quantity of dregs, which they carry home, and there ſearch with great diligence. Sometimes they find as much as is worth ten ſhillings, ſometimes a leſs quantity, and frequently they cannot procure any.

The Gold coaſt is ſituated within the fifth degree of north latitude; is bounded, on the eaſt, by the Slave coaſt; on the weſt, by the Tooth or Ivory coaſt; on the north, by Negroland; and, on the ſouth, by the ocean. It is about one hundred and eighty miles in length, and contains eleven different diſtricts, namely, Axim, Anta, Adom, Jabi, Commany or Commendo, Fetu, Saboe, Fantyn, Acron, Agonna, and Aquamboe. Theſe countries contain ſome one, two or more towns or villages lying on the ſea-ſhore, either under or between the European forts and caſtles. However, theſe villages are only for the convenience of trade and fiſhing, for the principal towns lie within land, and are very populous. Some of theſe diſtricts are independent republics, under the direction of their own magiſtrates; and ſeven of them are kingdoms governed by their reſpective ſovereigns or captains.

The heat here is exceſſive from October to March; but in the other ſix months it is tolerably temperate. The coaſt is very unhealthy, owing to the extreme heat of the day, and the coolneſs of the nights; to which may be added the damp ſulphurous miſts that ariſe every morning from the mountains. Tornadoes are alſo frequent here, particularly in the months of April, May, and June. Theſe are violent ſtorms of wind riſing ſuddenly from the eaſt and ſouth-eaſt, and ſometimes from the north, with a few points to the weſt. They are generally attended with repeated claps of thunder and dreadful lightening, with prodigious ſhowers of rain falling like a flood, and an uncommon darkneſs. They ſometimes laſt an hour, and ſometimes two or more; but as ſoon as they are over, the weather immediately becomes clear and fine. If they happen in the ſummer ſeaſon, which is ſometimes the caſe, they are not ſo violent as in the winter, but they are more incommodious both to land and ſea faring people, being uſually followed by cold rains, ſo heavy and conſtant for ſeveral days together, that they ſeem to threaten to deluge the country.

The native blacks, who live on the coaſt, ſhun rain with the greateſt care, thinking it prejudicial to their bodies: this indeed the Dutch themſelves experience, particularly in the tornado ſeaſon. The rains that fall then are of ſo pernicious a quality, that if a perſon ſleeps in his wet cloaths, he is ſure to contract a dangerous diſeaſe: it has been found, that cloaths laid by wet have in a ſhort time been ſo rotten as to fall to pieces with the moſt gentle touch. The negroes, for this reaſon, avoid the rain as much as poſſible; and when they happen to be caught in it, they cover their ſhoulders with their arms acroſs, to keep it off their bodies. They are ſo fearful of the bad effects of rain, that they always ſleep with their feet to the fire, and anoint their bodies with oil, through a perſuaſion that the frequent unction keeps the pores ſhut ſo that the rain cannot penetrate; for they attribute all their diſeaſes to this cauſe.

We ſhall now proceed to give the natural hiſtory of the Gold coaſt, which in general abounds with a variety of trees, ſome low, and others very large and lofty: there are alſo many beautiful groves, which ſerve to render the malignity of the climate more ſupportable. Some of the trees here grow naturally in ſuch order, as to appear as if placed by art; whilſt others ſtand ſo thick, and extend their boughs ſo wide, as to form the moſt agreeable retreat; and theſe run for many miles into the inland parts of the country. One of the moſt remarkable trees, which ſpecies grows in great abundance all along the coaſt, is the papay-tree, the trunk of which is ſeveral feet thick, and compoſed of a ſpongy wood, or rather root, which it moſt reſembles; it is hollow, and may be eaſily penetrated with an ax. The fruit at firſt is produced at the top of the trunk without any branches; but as the tree grows older, it ſhoots out branches towards the top, which reſemble young ſtocks, whereon fruit likewiſe grows. At the vortex of the trunk and branches ſhoot other ſmall ſprigs almoſt like reeds, a little crooked and hollow; and at the extremity of theſe ſprigs grow large broad leaves, reſembling in their ſhape thoſe of the vine. The fruit is about half the ſize of a cocoa-nut, and of the ſame form: it is green both within and without; but after being ſometime gathered, it turns red, and abounds with white kernels, which are the ſeeds from whence the trees are produced. The fruit in its taſte reſembles that of a pompion, but of the two is rather inferior to it. Theſe trees are of two ſorts, male and female; the males bear no fruit, but are continually full of bloſſoms, conſiſting of a long white flower: the female alſo bears the ſame bloſſom, though not ſo long, neither are they ſo numerous. Some of theſe trees are very large, and run up to a conſiderable height.

With reſpect to the inland countries on the coaſt, they are in general fertile, and produce ſeveral ſorts of grain, particularly maize and millet, which grow in great abundance. They have alſo ſeveral kinds of vegetables and roots, as cabbages, beans, wild purſlain, potatoes and yams. Theſe laſt are extremely beautiful, and, next to rice, of the greateſt advantage to the natives: they grow under the earth like potatoes, and are about two ſpans long, and as much in circumference. They ſhoot out a long green ſtem, almoſt like that of French beans, with little prickles, and they run up ſticks placed by the ſide of them in the ſame manner, by which the negroes know when they are ripe, and then dig them up. They are quite white within, and when boiled or roaſted eat exceeding well, and are uſed inſtead of bread, not only by the natives, but many of the Europeans. The taſte reſembles that of earth nuts, though not quite ſo ſweet, but they are much more ſubſtantial, and alſo drier.

Here are abundance of palm-trees, which are of infinite ſervice to the natives, not only from the wine that flows from the trunk, but the oil which they extract from their nuts. They have plenty of various kinds of fruits, ſuch as plumbs, pears, oranges, citrons, cocoa-nuts, and figs; to which may be added, ananas, water-melons, and the kormantin apple. This laſt fruit is more peculiar to this country than any other: it is about the ſize of a walnut, and has a green huſk; but the outer rind is of yellowiſh caſt, ſomewhat inclining to red. In the core are four large kernels ſeparated by the pulp, which is red and white, of a ſweetiſh tart taſte, but moſt inclining to the latter. It is a very agreeable and refreſhing fruit, and of infinite ſervice to thoſe afflicted with the bloody-flux: for it is very aſtringent, and is not only more ſalutary, but pleaſanter than tamarinds, when boiled with wine and ſugar.

In this country are ſeveral kinds of tame animals, ſuch as bulls, oxen, cows, ſheep, goats, and hogs; but the paſture is ſo indifferent, that they are in general exceeding poor and ſmall: the cows yield very little milk, and one of the beſt, when full grown, is ſo light, that it will not weigh above 250 lb. The ſheep are not above half the ſize of thoſe of Europe; but, inſtead of wool, their bodies are covered with long, ſhaggy hair. The goats are very numerous, but ſmall if compared to thoſe of Europe: however, the fleſh is very fat and ſweet, and greatly preferred to that of the ſheep. Here is alſo a great number of hogs, but their fleſh is very indifferent, and the little fat they have is of an oily nature.

Dogs and cats are their chief domeſtic animals. The negroes frequently eat the former, and are very fond of them, inſomuch that they will not only give a ſheep for one of them, but alſo ſomething to boot. They prefer dog's fleſh to any other, and conſider it in the ſame light as the Europeans do veniſon. The dogs here are much like our foxes, and have long upright ears: their tails are long, but taper, and are without hair; the ſkin is alſo naked; and they never bark, but only howl. They are very diſagreeable to the ſight, but much more ſo to the touch. The blacks call them cabra de matta, which, in the Portugueſe, ſignifies a wild goat; and ſo univerſally are they admired in this country, that in ſome places they breed them for ſale, and they fetch a much better price than the ſheep, when carried to the markets.

The negroes are alſo very fond of cats, but they do not eat them, unleſs out of neceſſity. If they are good mouſers, they value them much, as they are prodigiouſly peſtered with various ſorts of vermin: their cats are called by the natives ambaio, and are in general very handſome.

Among

Among their wild béaſts (of which they have various ſorts, both on the coaſts, and in the inland parts) none are more diſtinguiſhed than the elephants; for though in other parts theſe animals are rendered docile and uſeful, yet here they are never tamed; but, notwithſtanding this, they ſeldom hurt any one, nor is it an eaſy matter to provoke them. The following ſtory of one of theſe animals is related in Mr. Boſman's deſcription of Guiney: "In December 1700, at ſix in the morning, an elephant came to El Mina, walking eaſily along the ſhore under the hill of St. Jago. Some negroes were ſo bold as to go to him without any thing in their hands: he ſuffered them to encompaſs him, and went quietly along with them under mount St. Jago, where one of our officers ſhot him above the eye: but this, and the following ſhot which the negroes now poured on him, did not even make him mend his pace, and he only ſeemed between whiles to threaten the negroes, by pricking up his ears, which were of a prodigius ſize. However, he went on, and ſoon entered our garden. This drew the director general and myſelf thither, and we were ſoon followed by ſome of our people. He had broke down four or five cocoa trees, and in our preſence he broke down five or ſix more; when the ſtrength he ſeemed to uſe in breaking down a tree might be fitly compared to the force exerted by a man in knocking down a child of three or four years of age. While he ſtood here, above an hundred ſhot were fired at him, which made him bleed as if an ox had been killed on the ſpot. But this did not make him ſtir, he only ſet up his ears, and made the men apprehend that he would follow them. At length a negro, going ſoftly behind him, wantonly got hold of his tail, and was going to cut off a piece of it; but the elephant giving the negro a blow with his trunk, and drawing him to him, trod upon him two or three times, and, as if that was not ſufficient, gored two holes in his body with his teeth, large enough for a man's double fiſt to enter. He then let him lie, and even ſtood while two negroes ventured to fetch away the body, without offering to hurt them. At length the elephant, after he had been about an hour in the garden, wheeled about as if he intended to fall on us; whereupon we all fled to the fore door, in order to make our eſcape; but he followed none of us, but going to the back door, threw it to a great diſtance; then turning from it, walked through the garden hedge, and proceeding ſlowly to the river by mount Jago, bathed himſelf. Having thus refreſhed himſelf a little, he came out of the river, and ſtood under ſome trees by our water tubs, where he alſo cooled himſelf, and then broke the tubs in pieces, as he did alſo a canoe that lay by them. The firing was here renewed, till the elephant at length fell; after which, they cut off his trunk, which was ſo hard and tough, that it coſt the negroes thirty ſtrokes before they could ſeparate it, which muſt have been very painful to the elephant, ſince it made him roar, which was the only noiſe I heard him make. He was no ſooner dead, than the negroes fell on him in crouds, each cutting off as much of his fleſh as he could, ſo that he furniſhed great numbers with food. They who pretend to underſtand elephant ſhooting, afterwards told us, that we ought to have ſhot iron bullets; indeed, ours were not only of lead, but too ſmall, and therefore moſt of them had rebounded from his ſide, and very few penetrated his ſkull." Thus far Mr. Boſman. Theſe creatures are ſo very numerous here, that they are very prejudicial to the fruit-trees, eſpecially to the orange, banana, and fig-trees: they not only eat the fruit, but alſo the ſtem of the latter, and totally deſtroy the tree.

Great numbers of tygers are all over this coaſt, ſome of which, being not only large, but of the moſt ferocious nature, are exceeding dangerous. Jackalls are alſo very numerous, and nearly as ravenous and fierce as tygers. They are uſually about the ſize of a ſheep, but have longer legs, which are thick in proportion to their bodies. Their hair is ſhort and ſpotted, their head flat and broad, their teeth exceeding ſharp; and they are very ſtrong. Some wild boars are alſo here; but they are not ſo rapacious as in other countries; and their fleſh is very agreeable to the taſte, and is exceeding good to eat.

Monkies and apes, in great numbers and variety, are to be found in this country. Some of theſe are called by the Dutch bearded monkies, from their having long white beards; the hair on their backs is of a light brown, that on the belly white, and the reſt of the body is covered with ſpots. There are others called white noſes, from that part of them only being white. Theſe animals though of various ſorts, are all very cunning, and ready to imitate what they ſee. They are fond of their young, always in action, and greatly reſemble the human form; ſo that the negroes call them curſed men, and ſay they could ſpeak if they would. They are in general thieves, and ſhew a remarkable ſubtilty in what they ſteal, particularly millet, of which we have the following relation: they take one or two ſtalks in each paw, as much under their arms, two or three in their mouths; and thus laden they march away, continually leaping on their hind legs; but if purſued they hold what they have in their mouth, and let the reſt drop to be at liberty to run. Every ſtalk they pluck is nicely examined, and if they do not like it, they throw it away, and pull another; ſo that this daintineſs occaſions more damage than their thievery.

The natives call one of the moſt remarkable of theſe ſpecies boggo; and the Europeans, mandril: it is different from all others, and approaches much nearer to the human ſhape. The body, when full grown, is as large as that of a man; their legs are much ſhorter, but their feet longer, and their arms and hands are in proportion. The head is very large and the face broad and flat, without any other hair than the eyebrows. The noſe is very ſmall, the lips thin, and the mouth wide. The face is wrinkled as if with old age, and the teeth are broad and yellow. The hands and feet are white and ſmooth, but all the reſt of the body is covered with long hair. They always walk erect; and, when teazed, cry like children. A preſent of one of theſe monkies was made to a gentleman at Sherbro. It was a ſhe-cub about ſix months old, yet larger than a baboon. He gave it in charge to a negro ſlave, who knew how to feed and nurſe it; but whenever he left the deck, the ſailors began to teaze it: ſome loved to hear it cry, others hated its ſnotty noſe. One of them hurt it, for which being checked by the negro ſlave, the former told him he was very fond of his countrywoman, and aſked him, If he ſhould not like her for a wife? To which the negro readily replied, "No this, no my wife; this white woman, this fit wife for you." The owner ſuppoſed that this unlucky wit of the negro haſtened the death of the animal, for it was found dead under the windlaſs the next morning.

There are, beſides the wild beaſts of a voracious nature, others that are much milder, ſuch as harts, antelopes, and hares. The former of theſe are of various ſorts, ſome of theſe being as large as cows, others not bigger than ſheep, and ſome even ſo ſmall as cats. They are in general of a red colour, with a black ſtripe on the back, and ſome of them are beautifully ſtriped with white. Their fleſh is particularly admired by the Dutch; and all the different kinds are good to eat.

Several ſorts of wild cats are to be met with here, ſome of which are ſpotted like tygers, and are very fierce and miſchievous. Among theſe is the civet-cat, called by the negroes kankan, and, by the Portugueſe, gatos de algalia. They are about the ſize of a fox, but longer legged; and the tail reſembles that of a common cat, except being longer in proportion to the body. Their hair is grey, and full of black ſpots; thoſe who keep them for the ſake of the muſk, generally feed them with raw fleſh, or entrails, as they yield much more from that than a drier food. When hungry they are very ravenous, and will even gnaw through the wood of their cage. They are very cleanly, and always roll and tumble on their food before they eat it. They who keep them generally vex and teaze them before they take out the muſk from the bag: for the more the animal is enraged previous to this operation, the better will be the civet. The bag which contains the civet is in the middle betwixt the anus and the pudendum, both in the male and female; but it is much larger in the male. The liquor of which the civet conſiſts, appears to be excreted from certain glands that lie between the coats that compoſe the bag from which the civet is taken. The civet is not of any uſe in medicine, but is valued as a great perfume.

Some porcupines are alſo in this country, which are in general about two feet in height, and their teeth are remarkably ſharp. They are very daring, inſomuch that they will venture to attack the largeſt and moſt dangerous ſnakes. When irritated, they ſhoot their quills at the enemy; and with ſuch violence that they ſometimes prove fatal. Their quills are from eight to ten inches long, and pointed at both ends; they are of a horny ſubſtance, and much reſemble tortoiſeſhell in colour. The negroes eat them, and conſider their fleſh as a great delicacy.

There are ſeveral other animals in this part of the coaſt of Guiney, and, among the reſt, that remarkable one called by the natives potto, but more generally known by the name of ſloth, and is ſaid to be the moſt ugly creature

ture in the univerſe. This animal is ſo ſlow in its motion, that it cannot travel above twenty yards in a day. The head is ſtrangely diſproportioned, and the fore-feet greatly reſemble hands. The hair of the young ones is of a pale mouſe colour; but that of the old is red, and looks more like wool than hair. The female, when big with young, climbs the trunk of ſome old tree, in which there is an hollow, from ſome accidental decay, at a diſtance from the ground. Here ſhe depoſits her young, which are generally two in number: during the time ſhe ſuckles her young, ſhe continues in the ſame hole, and though that period is very ſhort, before it is expired, ſhe becomes almoſt emaciated. When the young are able to crawl after her, ſhe leads them to the neareſt branches of the tree, where they devour the leaves firſt of one and then another. When the tree is quite ſtripped, they are obliged to ſeek a new place of abode: the journey, however, to the next tree, takes up no ſmall time in performing; and though the creature is fat and in good condition, at the time he leaves his former habitation, yet before he has reached his new one he becomes as poor and lean as poſſible; and if the tree is high, or at any diſtance, and he meets with nothing in his journey, he inevitably dies with hunger. While it is thus travelling ſlowly on the ground, any beaſt may kill and devour it, for it is intirely defenceleſs, and, when attacked, only makes a noiſe like the crying of a kitten. It has three claws on each foot, and the fore-feet longer than thoſe behind.

A four-footed animal, called by the negroes quoggelo, lives in the woods. It is almoſt eight feet long, including the tail, and is covered from the neck to the end of the body with ſcales reſembling the leaves of an artichoak; they are placed very cloſe together, and ſecure the creature from the attacks of his enemies, particularly the tygers and leopards, who frequently purſue him, and, as he is not very ſwift, they ſoon overtake him; on which occaſion the animal rolls himſelf up in his coat of mail, when his enemies dare not attack him. It is a very inoffenſive creature, and will not hurt any thing: it lives on piſmires, catching them with its tongue, which is very long and glutinous. The negroes knock them on the head, ſell their ſkins to the Europeans, and eat their fleſh, which they ſay is exceeding white and palatable.

The grano is an amphibious creature, and greatly reſembles the crocodile; but it is very inoffenſive, not hurting any thing except cocks and hens, among which it ſometimes makes great ſlaughter. This animal is about four feet in length, the body is black ſpeckled, the eyes are round and ſharp, and the ſkin very tender. The negroes eat their fleſh, as do alſo the Europeans, and they all agree that it is far preferable to that of their cocks and hens, being very grateful to the taſte.

Cocks and hens, geeſe, ducks, turkies, and pigeons are their tame poultry; their wild ſort are, mallards, pheaſants, and partridges; beſides which, they have peacocks, fieldfares, ring-doves, cranes, &c. Here are alſo great numbers of parrots, parroquets, eagles, kites, green-birds, and ſeveral others. The moſt common are the cocks and hens, which are exceeding plentiful all over the coaſt: in ſome parts they are very fat and good, but in general they are ſo dry and lean, that few people chooſe to eat them.

The beſt birds here for uſe are the wild ducks, which are very plentiful, and little inferior to thoſe of Europe. There are alſo various kinds of ſmall birds, ſome of which are exceeding beautiful; among theſe, there is one that has this remarkable circumſtance attending it, that whenever it moults, it changes its colour; ſo that thoſe which are black this year, become blue or red the next; they will be yellow the following year, and afterwards green; but they never vary from theſe five colours, which are always very bright, and never mixed. The crown bird is more beautiful than thoſe in other parts of Guiney. They are about the ſize of a ſtork, and receive their name from a large tuft that grows on their head, ſome of which are red, others blue, and ſome of a ſhining gold. Their tails are very long; and the negroes pluck their feathers to adorn their heads with. Their bodies are chiefly covered with black feathers; the ſides of their heads are beautified with purple ſpots, and the feathers of their wings and tails are of different colours, as yellow, red, white, and black.

Abundance of reptiles and inſects are on this coaſt, ſuch as ants, bees, beetles, ſpiders, gnats, caterpillars, millepedes, locuſts, cock-roaches, ſcorpions, frogs, toads, and ſnakes: here are alſo ſome camelions, many crocodiles, and great numbers of lizards.

The moſt remarkable of theſe inſects are the ants, which are of various ſorts and colours; ſome are white, others black, and ſome red. The white are as tranſparent as glaſs, and bite very forcibly; but the red are the worſt, their ſting being inflammatory, and the pain it produces is of much longer continuance than that of the millepedes. They make their neſts in the fields, and generally raiſe them at leaſt ten feet from the ground; but ſome build them in high trees, from whence they fly in ſuch ſwarms to the European ſettlements, as to become exceeding troubleſome to the inhabitants. They are very ravenous, and will ſometimes attack a living ſheep, which in a night's time they will reduce to a perfect ſkeleton, leaving not the leaſt thing except the bones. Fowls and chickens frequently ſhare the ſame fate; and even rats, though ſuch active animals, are not able to eſcape. As ſoon as one of theſe animals is attacked by the ants, his deſtruction is at hand, for they gather in ſuch prodigious numbers, that they ſoon overpower him; nor will they quit him till they are ſufficiently reinforced to carry him off to ſome convenient place, when they immediately fall to work, and in a ſhort time reduce it to a mere ſkeleton. It has been remarked, that if theſe little animals have not a language (as many believe they have), yet they have certainly ſome method of communicating their thoughts, which has been experienced in the following manner: when two or three of them have been found ſtraggling on the hunt, a cock-roach has been killed, and thrown in their way. As ſoon as they found what it was, they ſent away for help, while the others ſtaid and watched the dead body, till their comrade returned at the head of a large poſſe; who if they found themſelves too few to carry off the prize, have detached a ſecond meſſenger for an additional force.

Gnats are very numerous near woods and marſhy grounds: they ſting very ſharp, and raiſe prodigious ſwellings, attended with violent pain. They frequently oblige the inhabitants to change their habitations, as they are exceedingly troubleſome in the night ſeaſon.

Millepedes or hog-lice, are alſo very numerous; and though their ſting is not ſo dangerous as that of the ſcorpion, yet it occaſions a very ſharp pain for ſome time. They are flat and red interſected like other worms, and have two ſmall horns or claws with which they ſtrike. Their feet are forty in number, viz. twenty on each ſide; from whence they are called forty-legs by the Engliſh and Portugueſe.

Here are great numbers of locuſts, which ſometimes make great deſtruction among the corn and vegetables. This inſect is about five inches long, and about the thickneſs of a man's little finger; it has a cowl over the neck, and a pyramidal head, from whence there proceed two horns or feeders, almoſt an inch long; the eyes are prominent, and of a dark red colour; the body is oblong, and of a bloody purple colour; and the tail is forked like a ſwallow's. It has four aſh-coloured wings marked with duſky ſpots: the fore-feet and thighs are very ſlender, but the hinder ones are long and thick, and marked with tranſverſe ſtreaks of a blackiſh colour. Beſides the ſort already deſcribed, there are other ſpecies of this inſect, ſome of which are not above three inches in length; theſe are of the cowled or hooded kind; the lower wings are finely chequered with brown and ſcarlet, and the upper are of a light green ſtreaked.

Cock-roaches are in general about two inches long, of a dark brown colour, and in ſhape ſomewhat like a beetle. They are ſaid to be great enemies to bugs.

Scorpions are in general about three inches in length; they have four legs on each ſide, beſides two claws armed with ſnippers, between which is the head. The body conſiſts of nine joints, and the tail of ſix, which has a hooked weapon at the end. There are ſome on this coaſt as big as ſmall lobſters, and have the ſame ſort of claws and feet; but their bodies are covered all over with long black hair. All of them have a ſmall bladder full of deadly poiſon at the end of their tails, which they diſcharge either at man or beaſt.

Toads are remarkably large here; and ſome of them ſo ſtrong and venomous, that they frequently engage and kill ſerpents.

Snakes not only infeſt the woods, but alſo the houſes of the negroes, and even the European forts and ſettlements. Moſt of them are very large and venomous; but there is one of a peculiar nature, and ſo inoffenſive that it will neither hurt man or beaſt. It is called the horn-ſnake, from a horn, or rather a tooth, that riſes from the upper jaw, and projects through the noſe. It is about five feet in length, variegated with black, brown, yellow, and white ſtreaks very agreeably mixed. The head is broad and flat,

and the horn is white, hard, and ſharp-pointed. The negroes often tread upon them; for they ſometimes ſo glut themſelves with food, that they ſleep extremely ſound, ſo that the greateſt noiſe will not awake them. The negroes often eat them, and account their fleſh a very delicious fare.

There are on the Gold coaſt great quantities of various kinds of fiſh in the ſea and rivers. Thoſe of the former are, doradoes, bonitas, cod, tunny, thornbacks, the flying-fiſh, &c. There are alſo lobſters, crabs, prawns, ſhrimps, and muſſels. The principal freſh-water fiſh are of three ſorts; the firſt of which is called carmon, and is a white fiſh about two feet long; but they are very fat and oily, otherwiſe their fleſh would be extremely agreeable. The ſecond is the mullet which differs from the former only in its ſize, and not having ſo thick a head, and the fleſh is of much the ſame quality. The third ſort is called batavia, the largeſt of which are tolerably good, but they are apt to taſte muddy: they are about a foot in length, and very proportionably ſhaped. There are alſo ſome plaice; and flounders are exceedingly plentiful, but they are not ſo good as thoſe in Europe, and differ greatly in their ſhape.

The dorado is the beſt fiſh of thoſe caught in the ſea, the fleſh of which is exceeding delicate, and in taſte ſomewhat reſembles that of a ſalmon. They are generally about four or five feet long, and have a ſort of creſt on the head, which joins to a large fin that runs to the extremity of the tail; there is alſo another that is ſhorter, and runs only from the vent to the tail. The belly fins reach almoſt to the vent, which is placed in the center of the body; and the mouth is of a middle ſize, having ſmall ſharp teeth in the jaws, palate, and tongue. The eyes are large, the ſcales exceeding ſmall, and the colour of a bluiſh green. The liver dried and pulverized, if taken in wine, is a cure for the dyſentery. They greatly reſort about ſhips, and are eſteemed the ſwifteſt fiſh that ſwims.

The king-fiſh is reckoned, when in ſeaſon, one of the beſt on the coaſt. They are in general about five feet in length, with a long forked tail, and the back and ſides are full of brown ſpots, but the belly is white. They continually harbour among rocks; and ſometimes get into ſuch ſhallow waters, that they are caught with very little difficulty.

The horn-fiſh, called by ſome the cat-fiſh, received the firſt name from having an horn on the top of its head, or beginning of the back: it is about a foot long, with a very large head, and ſmall mouth; the back is bluiſh, the belly white, and the fins and tail yellow. It is much eſteemed, and the fleſh reckoned very wholeſome.

The moon-fiſh is of a flat form, and would be almoſt oval, were it not for its tail, which is large and hollowed. It is about two feet long, one broad, and near two inches thick. The mouth is ſmall, and contains two rows of teeth; over it is a little riſing, which appears like a noſe with noſtrils, and the part above that looks like a forehead, with large wrinkles. The eyes are round, and very red: it has only two fins, but they are large, and placed at the ſides of the gills, with two briſtles, one about the middle of the back, and ending at the tail, and the other running in the ſame direction beneath the belly. The fleſh is particularly admired by the Europeans, and is white, firm, and well-taſted.

The bonito is a good fiſh, but inferior to the dorado, above deſcribed. It is about three feet in length, and two in circumference, and has a ſharp head, a ſmall mouth, large gills, full eyes, and a tail like a half moon. It has not any ſcales, except on the middle of the ſides, where there is a line of gold colour, that runs from the head to the tail. The back and ſides are of a greeniſh colour, but the belly is white, and ſhines like ſilver. It has ſeven fins, two on the back, two at the gills, two on the belly joint below the gills, and one in the center of the belly, oppoſite to the largeſt on the back. From the laſt on the back proceeds a ſmall narrow one, that reaches to the tail, and another that extends from the laſt on the belly to the tail in like manner. They are caught in places where the ſea is rougheſt. The ſailors catch them with a hook baited with a white rag, which they ſnap at with great eagerneſs.

The albicore is in general about ſix feet in length, and has yellowiſh eyes, with a forked tail, the bottom of the belly is blue, inclining to green; and near the tail, on the under part, are ſeveral ſhort fins. The ſkin is ſmooth and white, and they have but one bone, which extends through the body: the fins are of a yellowiſh colour, and the fiſh, when in the water, appears exceeding beautiful. It reſembles in ſome reſpects the bonito, but the fleſh is drier, and not ſo well taſted.

There are, beſides the fiſh already mentioned, others of a much larger ſize that infeſt the Gold coaſt, particularly grampuſes, ſharks, and porpoiſes; but theſe are ſeldom caught by the natives. Here are alſo two ſorts of ſprats, which only differ in their ſize, one of them being much larger than the other: but the ſmaller are the beſt, and, when either pickled or dried, eat very agreeably.

With reſpect to the blacks inhabiting the Gold coaſt, they are in general of a middling ſtature, and well proportioned: they have ſparkling eyes, ſmall ears, and lofty eye-brows; their teeth are white, and tolerably well ranged, their lips are red, and not ſo thick as thoſe of the inhabitants in the other parts of Guiney. They are broad-ſhouldered, have large arms, thick hands, and long fingers. They anoint their bodies every morning with palm-oil, ſo that their ſkin is very ſmooth and ſleek; but, excluſive of this, they conſider that as a very wholeſome practice; and, as they are naturally apt to breed vermin, reckon it a preſervative from them.

The men are very quick of apprehenſion, and in general have excellent memories; but they are naturally ſlothful and indolent, ſo that they are only induſtrious from neceſſity. They tranſact their affairs with great compoſure of mind, and always appear indifferent whether they riſe to proſperity, or ſink into adverſity; and though they are naturally covetous, yet the loſs of any conſiderable property does not ſeem in the leaſt to affect them. This, however, does not appear to be real, or well-grounded; for they are very proud, cunning, deceitful, and greatly addicted to theft; and ſo envious and ſelfiſh, that they will quarrel among themſelves on the moſt trifling occaſion. Thoſe of conſequence walk with their eyes fixed on the ground, ſeldom looking about, or taking notice of any one, except it be a perſon of higher rank; but to their inferiors they ſhew ſuch contempt, that they will not even deign to ſpeak to them. They are generally very complaiſant to ſtrangers, but they do that for the ſake of its being returned, which is a diſtinguiſhed gratification of their pride. They pay great reſpect to the Europeans, and are highly pleaſed with their accuſtomed civilities; but of theſe they frequently take advantage, by laying ſome ſcheme either to plunder or defraud them.

The women, though not ſo tall as the men, are very ſtrait and well-proportioned; they have fine ſparkling eyes, ſmall mouths, and beautiful teeth; their noſes are in general high, and a little crooked, and they have all long curling hair. They are good houſewives, very cleanly in their perſons, and have excellent conſtitutions. They are naturally ſober and induſtrious, but at the ſame time proud, artful, and covetous. Their dreſs is much ſuperior to that of the men; and they are very careful of their cloaths, for they have two ſorts, one of which they only wear when they go abroad. Their common dreſs conſiſts of a large piece of linen wound round the body, from the breaſt to the knees, and faſtened with a girdle of red, blue, or yellow cloth, to which they hang their knives, purſes, keys, &c. Their better dreſs is formed of a large piece of ſilk or ſtuff wound round the waiſt, and reaching from thence to the ancles: their favourite colours are red, blue, or violet, and they have generally a bunch of keys at their girdle, with bracelets of ivory or gold. They wear ſmall ear-rings of braſs, copper, pewter, or tin, artificially wrought, and on their arms and legs they have bracelets and rings of copper or braſs: they take great pains with their hair, which they form into various ſhapes, and decorate it with gold, coral, and ivory; and in honour of their fetiſh, they wear round their necks ſtrings of beads, beautified with ſmall pieces of gold.

The common people have only a piece of cloth wound round the waiſt, and another between the thighs faſtened with a girdle. The better ſort, however, wear a piece of ſilk taffaty, or Indian damaſk, two or three ells long, folded round the waiſt, the ends hanging down to their ancles. Sometimes they wrap another piece of ſtuff about them, which either reaches from the breaſt to the calf of the leg, or is thrown acroſs their ſhoulders like a mantle. They adorn their neck, arms, and legs, with ſtrings of gold, ſilver, ivory, ſhells, &c. ſome of which are of very conſiderable value. They take great pride in their hair, which they diſplay in various forms: ſome have it long and ſtrait, others curl and plait it together, or tie it up to the crown; and all of them ſmear it with palm-oil, and decorate it with various toys, the moſt diſtinguiſhed of which is a kind of coral, called conta de terra, and by them eſteemed more valuable than gold.

These people are very cleanly in their persons, and where opportunity offers, wash themselves several times a day, for which purpose they generally build their villages near the sea, or on the banks of rivers. This custom is exceeding necessary, as it not only cleanses them from the lice and fleas, to which vermin they are naturally subject, but also helps to take off the disagreeable scent of the palm-oil with which they anoint themselves.

On the coast, their towns and villages are composed of a number of huts, irregularly placed; but those in the inland parts are much better, and more uniform, than those near the sea. Their houses are generally of a square form, and very low; they are made of wood, and covered with square mats of palm-leaves, or bulrushes. The door-way is so low, that a man must bend himself almost double to enter. The floor is smooth, made of red clay, as hard as if laid with stone, and in the center of it is laid the fire-place. Some of their villages are so constructed as to form narrow lanes, in the center of which is an open place, adapted not only as a place of diversion for the inhabitants, but for the more necessary purpose of a market for the sale of provisions and other commodities.

The people of higher rank have their houses generally situated near the market, and separated from other buildings. They are built of the same materials as those of the common people, but are more lofty and spacious. In the center is a portico open on all sides, but covered with a sloping roof made of the leaves of trees, to shelter them from the heat of the sun; and here they divert themselves at their leisure hours.

The houses of the common people are built at a very small expence; the materials, which consist only of timber, clay, and leaves, being taken by the slaves wherever they can find them. They commonly erect a house in six or seven days, and the expence to the carpenters seldom exceeds forty shillings. Each family has a granary or store-house, where they keep their wheat, millet, and other grain: these are without the town.

With respect to their furniture, a few stools, some earthen pots to hold water and dress their victuals in, and a few small wooden cups, compose the whole. The poorer sort have only a mat to lie on, which they spread on the ground, and some of them cover themselves with the skins of beasts. The better sort use quilts made of rushes, on which they lay a fine mat with a bolster, and by it a large kettle with water to wash them.

In their diet, they are very filthy, and prefer either flesh or fish that stinks to that which is sweet and wholesome. Their common food is a pot full of millet boiled to the consistence of bread; or instead of that, yams and potatoes, over which they pour a little palm-oil, and mix with it some herbs, and a small quantity of stinking fish. They have another dish called malaghetta, which is composed of fish with a handful of Indian wheat, the same quantity of dough, and some palm-oil, all boiled in water. This they esteem excellent, and indeed it is far from being disagreeable, provided the fish be sweet.

At their meals, they use neither knives, forks, or spoons, but take up their victuals with their fingers, and eat it very greedily. They lay it on a mat on the ground, and sit cross-legged, leaning on one side, or else with both their legs under them squatting on their heels. The husband generally eats alone in his own hut, and his wives separately in theirs, except when he happens to invite his chief wife, or pays a visit to his favourite one. They make but two meals in a day, one at sun-rising, and the other at sun-set. At their morning's meal they drink water, or poyton, which is a kind of small beer, and they drink palm wine in the evening.

The chief employment of the men is abroad, either in trade, fishing, or making palm-wine, great quantities of which are every day sold in the markets; and the profits they get from their labour they give to their wives, who dispose of it in a very frugal manner, as they are in general excellent housewives.

The women are chiefly employed in providing for the family, under the direction of the principal wife. The first thing they attend to, in the article of diet, is, to make the bread. In the evening they set by the quantity of corn thought necessary for the family the succeeding day. This they beat in the trunk of a tree, hollowed for that purpose like a mortar, or in deep holes of rocks, with wooden pestles; they then winnow and grind it on a flat stone; after which, they mix it with flour of millet, and knead it to a sort of dough, which they divide into small round pieces, and boil like dumplings. Of the same dough they also make a sort of biscuit, which will keep for several months, and with this the large canoes are victualled when they go long voyages. They are also very careful in bringing up their children, particularly their daughters, whom they instruct in every thing that may tend to make them good and prudent wives, and acquaint them with every branch of domestic œconomy.

Their marriage ceremonies are in general much the same as those all along the coast, except in a few particulars. When a father finds his son is able to get his own living, he seeks out for a wife for him, unless the latter should disappoint him by providing for himself. When the parties are agreed, the father of the bridegroom communicates it to the parents of the young woman, who readily agree to the marriage. A priest is then sent for, who, after administering the fetish, or oaths, obliges the woman to promise she will love her husband, and be faithful to him: the husband, in return, promises to love her, but omits the point of fidelity. After this ceremony is over, the parents make mutual presents, and the whole company spend the day in feasting and mirth. In the evening the husband leads his wife home, attended by some other relations or friends, who stay with her a whole week to bear her company; after which, they leave her, and she enters on the employment appointed for her.

The negroes sometimes dispose of their daughters when they are too young to consummate the marriage, the ceremonies attending which are as follow: on the day appointed for the wedding, all the kindred on both sides meet at the house of the bride's father, where an elegant entertainment is provided. In the evening the bride is taken to the bridegroom's house, and put in her husband's bed between two women, where she remains all night; after which the bride is sent back to her father's house, and there kept till she is of age for the marriage to be consummated.

Polygamy being allowed among them, some have from twenty to thirty wives: for the greater the number, the more they are respected; but the common sort have seldom more than ten. All their wives are employed in tilling the ground, and managing the affairs of the family, except two, who, if the husband is rich, are always exempted from labour: the principal of these is called the muliere grande, or the great wife; and the second is called the bossum; but having taken occasion to mention these favourite wives, in the former part of our general account of Guiney, to avoid repetition, we shall only add, that when the husband thinks proper to sleep with one of his other wives, he gives her private intimation of it, in order to prevent jealousy, when she retires to her apartment with the greatest privacy, and the matter is kept a profound secret from the rest of them.

They name their children as soon as born; which are naturally of such strong constitutions, that little care is required in nursing them. The poorer sort of women fasten them to their backs when they go to their daily labour, and suckle them at different times, by raising them up to their shoulders, and turning their breasts over to them. They take great pains in washing them every night and morning, when they rub them well with palm-oil, which makes their joints flexible, and greatly facilitates their growth. They go quite naked till they are ten or twelve years of age, when they wear a kind of clout fastened round the middle. When they arrive at that age, the father takes the boys under his care, and brings them up to his own business. The girls are taught to grind corn, bake bread, and carry it to market for sale; as also to weave baskets, mats, caps, purses, and other things. The boys are chiefly brought up to fishing or agriculture, but some of them are put to trades, the principal of which are, smiths, carpenters, and goldsmiths.

The smiths make all sorts of tools for husbandry and household uses; and though they have no steel, yet they make them with great neatness. Their chief tools are a hard stone instead of an anvil, a pair of tongs, and a small pair of bellows with three or four nosels, which is an invention of their own, and blows very strong. Their files are of various sizes, and well tempered: they purchase their hammers of the Dutch.

They chiefly employ their carpenters in making canoes, and the frame or timber-work of houses, the roofs being made by others called thatchers, who have a peculiar method of ranging the leaves of palm-trees, the straw of Indian wheat or rushes, which they bind and fasten together on poles of different sizes. These they sell ready-made in the markets; so that they who have occasion to rebuild or repair a house, are at no loss to supply themselves with a roof, as they are fabricated in all sizes and forms.

Their

Their goldſmiths make a variety of articles of pure gold; ſuch as breaſt-plates, helmets, bracelets, idols, hunting-veſſels, pattins, plates, ornaments for the neck, rings, buttons, &c. They alſo caſt, in the moſt curious manner, the figures of all ſorts of tame and wild beaſts, the heads and ſkeletons of lions, tygers, oxen, deer, monkies, and goats. They are, indeed, excellent artiſts; but their greateſt ingenuity is ſhewn in the gold and ſilver hat-bands made for the Europeans, the thread and texture of which cannot be excelled by any artiſt in Europe or elſewhere.

There are alſo among them ſome good potters, who have learnt that art from the Portugueſe. Though their earthen-ware is thin, yet it is very ſubſtantial, and equally good for uſe as any made in Europe. Their veſſels will endure the moſt violent heat, and are made of a clay of a dark colour.

They have a variety of muſical inſtruments, all which they make themſelves. They conſiſt of copper baſons, blowing horns, ſnappers or caſtenets, and an inſtrument with ſix ſtrings, reſembling a guittar; alſo hand-bells, flutes, and flagelets. The blowing-horns are made of elephants teeth, and ornamented with the figures of birds, beaſts, fiſhes, &c. They blow at the ſmall end, and reduce the ſound to a kind of tune, by varying it as their fancy directs. Their drums are of ſeveral ſorts, and are moſtly made of hollow trunks of trees covered at one end with a ſheep's ſkin, but the other is left entirely open. They ſometimes hang them about their necks with ſtrings, but in general ſet them on the ground like kettle drums. They beat them with two long ſticks, and ſometimes only with their hands; but the noiſe is very harſh and diſagreeable either way.

They always uſe theſe inſtruments at their dances; which is a diverſion ſo delighted in by both ſexes, that it is the cuſtom for them to aſſemble every evening at the market-place for that purpoſe: On theſe occaſions, they dreſs themſelves in their beſt attire; the women have a number of ſmall bells hanging at their feet and legs, and the men carry ſmall fans in their hands made of the tails of elephants or horſes. They who compoſe the dance divide into couples oppoſite to each other, and the dance commences by their throwing themſelves into many wild and ridiculous poſtures, advancing and retreating, leaping, ſtamping on the ground, bowing their heads to each other as they paſs, and muttering ſome ſtrange noiſe. The men then ſtrike each other alternately with their fans; and the women lay large circles of ſtraw on the ground, into which they firſt jump, and dance round them, then throw them up into the air, and catch them with their hands. Thus they divert themſelves for about an hour, when they break up the dance, and retire to their reſpective habitations. This is their manner of dancing in general; but they have ſome dances adapted to peculiar times and circumſtances, particularly thoſe in honor of their fetiſhes, which are of a very ſerious and ſolemn nature. In ſome towns they have public dances inſtituted by order of their kings, which are held annually for eight ſucceſſive days, when people of both ſexes reſort to it from all parts of the country. This is called the dancing ſeaſon, and during the whole time of its continuance the greateſt mirth and feſtivity is preſerved amongſt them.

The natives of the Gold coaſt are troubled with few diſeaſes, notwithſtanding the unwholeſomeneſs of the climate. That with which they are moſt afflicted is, the canker, or fleſh worm; they breed between the fleſh and the ſkin, where they extend themſelves till they force a paſſage; and not only men and women, but alſo cattle, are ſubject to this diſorder. Various conjectures have been formed relative to the cauſes of theſe worms: ſome attribute them to the great quantities of fiſh the negroes eat, and others to the palm-wine; but the moſt reaſonable opinion is, that they are occaſioned by the unwholeſomeneſs of the water, which is generally taken out of pools or ponds. This appears the moſt likely, as it is certain, from that cauſe alone the inhabitants of the iſle of Ormus are afflicted with the ſame diſeaſe; and to prevent it, they drink freſh water, which is procured at ſea eighteen fathoms deep, by the help of divers. Theſe fleſh worms are of different ſizes, but in general run about a foot in length, and are not thicker than a hair. While they remain in the body, they occaſion the moſt excruciating pain, inſomuch that ſome can neither ſtand or walk, others are incapable of ſitting or lying down, and others again are thrown into a ſtate of inſanity.

Theſe canker worms diſcloſe themſelves by various ſymptoms, ſometimes with cold ſhiverings, and at others with burning heats: in ſome they are accompanied by a large ſwelling, under which they may be plainly ſeen; and in others they break out in carbuncles and ulcers. They come in different parts of the body, but in general thoſe that are the moſt muſcular and fleſhy. The negroes do not uſe any remedy for them, but let them come out freely, and afterwards treat the part either by waſhing it with ſalt water, or anointing it with freſh butter intermixed with ſalt. As ſoon as the worm appears ſo far out as to be taken hold of, they faſten that end to a ſmall ſtick, to prevent its ſhrinking in again: when it moves forward, a corrupted matter iſſues from the ſore, which increaſes in proportion as the worm advances. During its progreſs, the greateſt care muſt be taken in winding it round the ſtick; for if it ſhould be forced, and by that means happens to break, the ſwelling grows dangerous, and is often attended with fatal conſequences. It ſometimes happens that when one worm is extracted, another will immediately preſent itſelf at the ſame opening, and many people have ſeveral of them at a time in different parts of the body, in which caſe the pain they feel is not to be conceived; inſomuch that, as one obſerves concerning them, the pains occaſioned by theſe worms is ſo exceſſive, that rather than endure it, a man would for ever renounce all the profit of trading on this coaſt.

The negroes here are likewiſe ſubject to other diſtempers, namely, the lues venerea, the head-ach, and fevers; but as theſe are very ſpeedily cured, by compoſitions made of herbs and other ſimples, they are under no uneaſy apprehenſions concerning them.

On the death of any perſon, the relations and friends immediately aſſemble, and, ſurrounding the corpſe, expreſs the moſt hideous lamentations; they then wrap the body in an old cotton cloth, and put it into a coffin made of the bark of a tree, covering the face over with the ſkin of a goat; in this manner they expoſe it in the open air for half a day, the favourite wife ſitting by it all the time, and rubbing the face with a whiſp of ſtraw. If the deceaſed is a woman, the huſband uſes the ſame ceremonies. During this time the neareſt relations appointed on the occaſion ſing mournfully, and beat their braſs baſons, till the bearers come to remove the body, and every thing is ready for the proceſſion. In the interim, however, an old woman goes from houſe to houſe, and collects ſomething for the funeral charges, towards which every perſon in the town or village is obliged to contribute, in proportion to their circumſtances: with the money then collected they purchaſe a cow or an ox, which they preſent to the prieſt, that he may obtain repoſe for the deceaſed, and aſſiſt him in his journey to the other world: this beaſt the prieſt ſacrifices, and ſprinkles the fetiſh of the deceaſed with its blood, which with them is conſidered as a propitiatory offering for the departed perſon.

The previous ceremonies being over, the corpſe is laid on a board, and the company for a ſhort time ſing and dance round it, after which it is carried to the grave by men, but only women are ſuffered to attend as mourners. The chief or favourite wife walks immediately after the corpſe; and if the deceaſed be a woman, the huſband only follows it, no other man being permitted to attend. When they come to the place of interment, the body is immediately lain in the grave, which is generally made about four feet deep; it is incloſed with ſtakes, and over it they raiſe a ſhed or covering, ſo that neither rain or beaſts can come near it. When the body is depoſited, the women creep beneath this ſhed, and renew their lamentations by way of a concluſive farewel. They then raiſe a ſquare heap of earth over the body, on which they lay the principal tools and inſtruments uſed by the deceaſed in his life-time, and alſo his cloaths and weapons. The friends of the departed alſo bring their gifts, as tokens of their affection, which they either lay in the grave, or place over it.

But the moſt exceſſive lamentations, and tokens of ſorrow are expreſſed, when the king dies; for as his condition and dignity require great attendance, he is provided with ſervants not only to accompany him in his journey, but alſo to wait on him in the other world. To effect this, each of his grandees, or chief men, preſent him with a ſlave; others give one of their wives, and ſome one of their children, ſo that there is always a conſiderable number, who are all ſacrificed previous to the interment of the royal corpſe. The perſons thus deſigned for victims are inſnared by ſtratagem, for, on the day appointed for the funeral, they are ſent on a pretended errand to ſome remote place, where people choſen for the purpoſe lie in wait, and eaſily diſpatch them. Their bodies are brought

to

to the palace, and publicly expoſed, as a teſtimony of the great reſpect in which the king was held by his ſubjects; after this, they are beſmeared with blood, and carried with the royal corpſe in great ſolemnity to the grave, which is previouſly made in a wood, or ſome other place equally private. Their bodies only, however, are interred, for their heads are ſevered off, and fixed on poles round the grave, which is conſidered as an honourable ornament. Beſides theſe, the king's favourite wives requeſt to be ſacrificed, that they may be laid with him in the ſame grave, in order to accompany him in the other world. They bury alſo with him his cloaths and weapons, with ſuch other things as he eſteemed moſt valuable; and near the grave they place veſſels containing victuals and drink, which, as ſoon as empty, they change, and bring others in their ſtead.

We ſhall here give an account of the ceremonies obſerved at the funerals of the kings of Fetu, which, though not exactly the ſame as thoſe abovementioned, tend to ſhew the ſtrange notions theſe people have of paying reverence to the dead. When one of theſe kings dies, the people expreſs their grief by mournful ſongs and outcries. They waſh the corpſe, dreſs it magnificently, expoſe it to public view, and ſerve up victuals to it at the uſual hours, as if the deceaſed were living. When the body begins to corrupt, four ſlaves bear it, without ceremony, and inter it in the woods, for ever concealing where they put it. If any of the wives of the deceaſed follow them, they kill them, and bury them along with him. In the ſame grave they lay his fetiſhes, his cloaths, his arms; in ſhort, whatever he was fondeſt of when alive, with victuals and drink. When the ſlaves have covered up the grave, they return to the palace, and without ſpeaking, kneel down at the gate, ſtretching out their necks to the executioner, that they may go and ſerve their maſter in the other world; in full perſuaſion that he will reward their fidelity, by giving them the firſt poſts in his new kingdom. While the ſlaves are buſy in the interment, the people make a cruel ſlaughter of thoſe they think may be uſeful to the deceaſed in his preſent ſtate. Some kings who have been well beloved, have had four or five hundred perſons of both ſexes maſſacred on this occaſion. This barbarous cuſtom is practiſed, more or leſs, all along the coaſt of Guiney; as M. Marchais relates, in his voyage to theſe parts.

The negroes on the Gold coaſt are in general idolaters, notwithſtanding which, they believe in a ſupreme Being, and have ſome ideas of the immortality of the ſoul. Every one has a fetiſh or charm, to which they pay the greateſt reverence; for thinking themſelves too inſignificant to be permitted to offer their petitions to God, they addreſs themſelves to their fetiſh, ſuppoſing that to be a mediator in their behalf. Theſe fetiſhes are formed of different things, according to each perſon's fancy: ſome have the tooth of a dog, tyger, elephant, or civet-cat; others have an egg, the bone of ſome bird, the head of a fowl, ox, or goat; and others again, the bone of a fiſh, the end of a ram's horn, or a bunch of cords made of the bark of trees. Their regard to the fetiſhes is ſo great, that whatever they promiſe them, they perform in the ſtricteſt manner. Some, to ſhew their reſpect to them, abſtain from wine, others from brandy; ſome deny themſelves certain meats, or kinds of fiſh; and others, rice, maize, or fruit. In ſhort, all without exception, ſo reverence their fetiſh, that they deprive themſelves of ſome pleaſure by way of mortification, and they will ſooner die than violate their engagement. They are very punctual in bringing their fetiſh every morning a part of the beſt proviſions in the houſe, believing that if they failed in this point, their exiſtence would be but of ſhort duration. They have alſo ſeveral days in the year ſet apart in honour of their fetiſh, which they celebrate by dreſſing it, and making ſome offering or ſacrifice to it.

There are, beſides the fetiſhes of particular perſons, others common to each kingdom; theſe are generally ſome large mountain or remarkable tree, which if any perſon ſhould be ſo indiſcreet as to cut or diſfigure, they would be put to the moſt cruel death. Each village has alſo its guardian fetiſh, dreſſed at the common expence, to which they pray for general benefits; and for this patron they erect, in the moſt public place, a kind of altar made with reeds, and covered with a roof of palm-leaves. Theſe kind of altars are frequently met with in woods, and other private places; they are generally loaded with all ſorts of fetiſhes, and before them are plates or pots filled with maize, rice, and fruits. When the negroes want rain, they place pitchers before them; if they are at war, they lay ſabres and poniards to aſk victory; if they want fiſh, they offer fiſh-bones; to intreat for palm-wine, they leave the ſmall chiſſel with which they cut the tree; and ſo with reſpect to other things, being firmly perſuaded the fetiſh will grant their requeſt, and beſtow upon them what they have occaſion for. Each prieſt has his peculiar idol or fetiſh, which chiefly conſiſts of a large wooden pipe filled with earth, oil, blood, the bones of men and beaſts, feathers, hair, and other ſuch trifling articles: an oath taken before one of theſe fetiſhes is deemed of the moſt ſolemn and obligatory nature. Theſe people live in great dread of the devil, to whom they aſcribe all their misfortunes, and even tremble at his name. The notions of the prejudices they receive from this fiend, are ſuch, that they have an annual cuſtom of baniſhing him from every town and village: the ceremonies attending which are thus deſcribed by a perſon who was twice an eye-witneſs of them: "This proceſſion is attended by a feaſt of eight days, ſpent in all manner of ſinging, ſkipping, dancing, mirth, and jollity; in which time a perfect lampooning liberty is allowed, and ſcandal ſo highly indulged, that they may freely chant out all the faults, villainies, and frauds of their ſuperiors, as well as inferiors, with impunity. The only way to ſtop their mouths, is, to ply them well with drink, which immediately alters their tone, and turns their ſatires into panegyrics on the good qualities of him who has ſo nobly treated them. On the eighth day in the morning they hunt out the devil with a diſmal cry, all running one after another, throwing excrements, ſtones, wood, or any thing they can come at, as thick as hail, at ſatan's poſteriors. When they have driven him far enough out of town, they all return; and thus conclude their eight days ceremonies. To make ſure that he does not return preſently to their houſes, the women waſh and ſcour all their wooden and earthen veſſels very neat, to free them from all uncleanneſs, and the devil."

The ſame perſon adds, "Beſides theſe notions of the devil, they ſtedfaſtly believe the apparition of ſpirits and ghoſts, and that they frequently diſturb and terrify ſome people; ſo that when any, eſpecially a conſiderable perſon dies, they perplex one another with dreadful fears, from an opinion, that he appears near his late dwelling ſeveral nights ſucceſſively."

The blacks have generally two days of worſhip in the week, one of which is dedicated to their fetiſhes, and the other is called their boſſum day, being that on which they were born. On the latter day they clothe themſelves in white, and beſmear themſelves with earth of the ſame colour, as emblems of innocence. The fetiſh-day, however, is obſerved with the greateſt devotion: on theſe days, they waſh themſelves more carefully than on others; and, putting on their beſt cloaths, aſſemble at a particular place, in the middle of which is a large tree. At the foot of this tree a table is ſet, the feet of which are dreſſed with ſeveral garlands made of boughs, and on it they ſpread rice, millet, maize, fruit, meat, and fiſh, with palm-wine and oil, as offerings to their fetiſhes. In the middle of the table ſits the prieſt, called fetiſſero, who makes a long harangue to his auditors, which they hear with great attention. Near him is placed a pot of water, with a living lizard in it, and when the harangue is over, he ſprinkles or waſhes the table with ſome of this water, during which the people repeat certain words with a loud voice clapping their hands, and crying out, jom jore; which concludes the ceremony.

The prieſts are the only people that are exempt from labour; and indeed they have but little occaſion to work: for they are fed at the public expence, and gather conſiderable poſſeſſions by the ſale of their fetiſhes, the prices of which they fix in proportion to the circumſtances of the purchaſer. The negroes believe that the fetiſſeroes or prieſts converſe with the fetiſhes, whom they ſeem to conſider as intelligent beings, and that they are acquainted with their moſt diſtant and private tranſactions; for this reaſon they always approach their prieſts with the greateſt reſpect and reverence, and reſerve for them their choiceſt dainties.

There are five degrees, or diviſions, into which the natives of the Gold coaſt are diſtinguiſhed: the firſt are their kings. The ſecond are their nobility, who are men that have acquired great reputation by their wealth. The third may be called civil magiſtrates, their province being only to take care of the city or village, and to appeaſe ſuch tumults as may ariſe among the inhabitants. The fourth are the common people, employed in agriculture, fiſhing, &c. The fifth and laſt are the ſlaves, who are either taken in war, become ſo by poverty, or are ſold by their relations.

We

We may conſider the different kingdoms either as monarchies or republics, whoſe kings are in general hereditary, but ſome of them are elective. The government of moſt of them conſiſts of two parts; the firſt of which is the body of the kaboſhirs, or chief men; and the other the manſores, or young men; all ordinary affairs fall under the adminiſtration of the latter; but the national concerns are determined by both parties together. Their chief juſtices, or judges, as well in kingdoms as republics, are commonly choſen from amongſt the moſt wealthy, and particularly the governors of towns and villages. Theſe take cognizance of all civil and criminal caſes; but as the parties have liberty to appeal to the king, their judgment is not abſolutely deciſive.

Offences of a criminal nature are generally puniſhed by fine. A murderer indeed is ſentenced to death; but ſuch perſons are ſeldom executed; for if he has either effects himſelf, or friends to pay the fine, he eſcapes; but if not, he ſuffers. In the latter caſe, as ſoon as ſentence is paſſed, he is delivered to the executioner, who blinds his eyes, and ties his hands behind him; after which, he leads him to ſome field without the town, where he makes him kneel down, bending his head forward, when he thruſts a ſpear through his body. This done, he cuts off his head with a hatchet, and dividing the body into four parts, leaves it expoſed in the open air, to become a prey to birds and beaſts.

The murdering of a ſlave is generally puniſhed by a fine of thirty-ſix crowns, and that of a free negro by one of five hundred; but the relations of the perſon murdered frequently mitigate the fine.

Thieving is commonly puniſhed by a reſtoration of the goods, and paying a fine, which is levied in proportion to the value of the goods, and the circumſtances of the offender.

On the coaſt, adultery is puniſhed only by fine, for which reaſon many women, by conſent of their huſbands, beſtow their favours merely to take advantage of thoſe who have been fooliſhly captivated by their charms.

But there is more ſtrictneſs obſerved by the inland negroes, in caſes of adultery, than by thoſe on the coaſt. He that debauches a negro's wife is not only intirely ruined, but his relations often ſuffer with him; and if the perſon injured be a man of property, the fine will not ſatisfy him, but he muſt alſo have the life of the offender. If the criminal be a ſlave, his death is inevitable, and that in the moſt cruel manner; beſides which, a fine is levied on his maſter. A woman caught in adultery is alſo in great danger of her life, unleſs her relations pacify the enraged huſband with a ſum of money, or ſome valuable preſent; and ſhe who is caught with her huſband's ſlave is infallibly put to death, as alſo the ſlave her paramour; beſides which, her relations are obliged to pay a conderable ſum of money to the huſband.

They puniſh the ſtealing of men with great ſeverity, and ſometimes with death; as alſo the ſtealing of hogs, ſheep, or other cattle. In thoſe parts which are independent of the Europeans, they will much ſooner put a man to death for ſtealing a ſheep, than for murder.

The negroes, in all caſes of injury, are reſponſible not only for their children, but alſo their relations, who in ſuch caſes help one another by a mutual contribution, each giving ſomething towards the fine, according to his circumſtances, otherwiſe the offender would be condemned either to ſlavery or death. In like manner every maſter is obliged to make good the injury done by his ſlave; for whatever crime he commits his maſter muſt alſo pay the fine.

An exceeding heavy fine is impoſed on a very rich man who commits an offence: they aſſign two good reaſons for the levying of it: firſt, that he was not urged to it by neceſſity; and, ſecondly, that he can better ſpare the money. On this account, many negroes, though rich, will always plead the greateſt poverty; as by that means, if either they or their relations ſhould commit any offence, the fine levied is but ſmall, compared to what it would be if the magiſtrate knew their real circumſtances.

As the ſovereigns of the different kingdoms on the Gold coaſt are naturally proud and ambitious, contentions frequently break out amongſt them; on which occaſions war is formally declared, and the kings, by their governors, appoint a day for their ſubjects to aſſemble in arms. This being done, a herald is ſent to announce it to the enemy, at the ſame time fixing the day, the place, and hour of battle. The grandees, or nobles, then repair to court, and, after complimenting the king, proceed to the war, taking with them their wives and families; and if the motives of the quarrel be great, before they ſet out, they deſtroy their houſes and towns, that the enemy, if victorious, may gain the leſs advantage of their conqueſt.

The kings have a great number of guards, who conſtantly attend their perſons either at home or in the field. Theſe are well furniſhed with arms, and have a moſt formidable appearance: they paint their faces with red, white, or yellow ſtreaks, marking their breaſts and the reſt of their bodies with various figures of the ſame colour, and acroſs their ſhoulders they hang a fetiſh ſtring of glaſs beads as a preſervative againſt danger. They carry a poniard in their girdle, and in their left hand they have a long broad ſhield that covers their whole bodies, with a dart or lance in their right hand. Round their necks they have a large collar made of the boughs of trees, to keep off the blows of their enemies weapons; and on their heads they have caps made of the ſkins of leopards.

The chief poſts in the army are occupied by the nobles, who wear their ſabres before them, with large knives hanging by their ſides. Their ſlaves march by their ſides or behind them, and are armed with bows and arrows, and cutlaſſes. The common ſoldiers have long ſabres and hatchets; their ſabres are faſtened in a belt girt round their waiſt, and they have caps or helmets made of ſkins of crocodiles, adorned behind with a tuft of horſe-hair, and on each ſide with a red ſhell.

Muſkets or carbines are their only fire-arms, with which they are furniſhed by the Dutch, and they are very expert in the uſe of them. Some of their ſabres are made with two edges, and have broad wooden handles covered with thin plates of gold. They have alſo two ſorts of aſſagayes or lances, the ſmalleſt of which are thrown like darts, but the latter are long and are very ſubſtantial, being chiefly compoſed of ſolid iron. Theſe they continually keep in their right hand, and while they are uſing it againſt their enemy, they defend themſelves with their ſhield in the left.

Their ſhields are in general made of the bark of trees interwoven, though ſome of them indeed are made of leather: they are about ſix feet long, and four broad, and ſtrengthened within by a croſs of wood plated with iron. Some of them are covered with the hides of oxen, others with gilt leather, and ſome with the ſkins of tygers. They are very expert in the uſe of this defenſive weapon, which, with their ſabres, they brandiſh in ſuch a manner, as ſecures them almoſt intirely from the ſtroke of an enemy.

They uſe their bows and arrows with ſuch nicety, that they will hit a very ſmall mark at a conſiderable diſtance. They are made of hard, tough wood, and the ſtrings are formed of the bark of trees. The arrows are feathered at the head, and pointed with iron; and their quivers, in which they carry them are made of goat ſkins.

The negroes engage their enemy in battle, without paying the leaſt regard to order: each commander has his men cloſe together in a crowd, himſelf being hid in the midſt of them, and in this manner they engage one heap of men againſt another. In caſe a few are killed, the reſt immediately run away, unleſs ſurrounded by the enemy; and ſo natural is cowardice to them, that when one officer ſees another enthralled, inſtead of advancing to aſſiſt him, he conſults only his own ſafety by a ſpeedy flight. As ſoon as they have diſcharged their guns, they immediately run back to load them, and then return, and reſume the fire. They do not ſtand upright in battle, but ſtoop, that the bullets may fly over their heads.

In caſe of the defeat of one of the parties, the victors make as many priſoners as they can, which is the chief end of all their wars. They who cannot raiſe their ranſom, are either kept or ſold as ſlaves; if a perſon of rank is taken, he is well guarded, and his ranſom is fixed very high; but if the perſon who occaſioned this war falls into their hands, they will not admit of any ranſom for him; he is ſure to be put to death, as the moſt effectual means of preventing his raiſing any diſturbances or ruptures for the future.

When the war is ended, and a treaty of peace agreed on, the contending princes conſent to meet each other on a certain day, to proclaim their determinations. The place is generally a large open plain, and each party appears as if armed for battle, bringing with them their fetiſhes. The prieſts, who are always the principal people in theſe ceremonies, make the chiefs ſwear reciprocally to ceaſe hoſtilities, to forget what has paſſed, and, as a ſecurity for their promiſes, to give mutual hoſtages. As ſoon as theſe oaths are taken, the drums and trumpets begin to ſound, the parties throw down their arms, and embrace each other with the greateſt cordiality; after which, they paſs the remainder of the day in ſinging and dancing, and commerce

is carried on between them as it was before the quarrel commenced.

We ſhall deſcribe the provinces and kingdoms that form the Gold coaſt; and the different ſettlements in each belonging to the Europeans: in treating of theſe, we ſhall begin at the moſt weſtern part, namely the kingdom of Axim, ſituated about twenty miles eaſt of cape Appollonia.

This is a very plentiful country; for the land being naturally good, and the inhabitants very attentive to cultivat on, it produces proviſions of moſt kinds in great abundance. Rice in particular is ſo plentiful here, that it is exported to all other parts of the coaſt, and the inhabitants bring millet, yams, potatoes, and palm-oil in return.

Ackombone is the chief village or town here: it is very populous, and pleaſantly ſituated. Near it is the Dutch fort of St. Anthony, which once belonged to the Portugueſe, from whom it was taken by the former in the year 1642; and having been ceded to the Dutch India company by the enſuing peace between Portugal and Holland, it has ever ſince remained in their poſſeſſion. This fort is ſituated on a rock, and, though ſmall, is yet very commodious. It has two batteries on the land ſide, and one on the ſea, with proper outworks, which, as well as the walls, are all made of black ſtone found in the country. The gate of the firſt is low, and well ſecured by a ditch eight feet deep cut in the rock, over which is a drawbridge, defended by two patteraros. The firſt mounts twenty-two large iron guns, beſides ſeveral ſmall ones, and the garriſon uſually conſiſts of twenty-five whites, and the ſame number of blacks, who are under a ſerjeant belonging to the company. The chief factor's houſe is neatly built of brick, of a triangular form, and very lofty: it has three fronts, before one of which, is a ſmall ſpot of ground planted with orange and palm trees.

The dreſs, cuſtoms, manners, religion, &c. of the natives of Axim, are the ſame as on the Gold coaſt in general, and therefore need not be repeated here. The people are for the moſt part rich, from their carrying on a conſiderable trade with the Europeans, for gold, which they chiefly diſpoſe of either to the Engliſh or Dutch. With reſpect to their laws, they are ſubject to the chief factor, as governor of the fort, who maintains a kind of ſovereign authority throughout the whole country. He determines all cauſes among the negroes, and the fines being paid into his hands, he diſtributes them to the injured perſons, firſt deducting his own fees, which are very conſiderable. If a black, for inſtance, is fined one hundred crowns, the governor's dues amount to two thirds, and the other third goes to the aſſembly of kaboſhirs, or elders among the blacks. But in caſes of murder, robbery, or debt, three fourths of the whole belong to the plaintiff, and the other fourth is for the kaboſhirs and the factor, who divide it into three parts, the former taking one, and the latter two. He alſo obtains conſiderable ſums from the fiſhermen, who are obliged to give him an eighth part of all the fiſh they catch.

There is a large beautiful fort called Frederickſburgh, about ſeven leagues ſouth-eaſt of Axim; which was built by the Brandenburghers, but now belongs to the Dutch. It has four large batteries furniſhed with ſeventy-ſix pieces of ordnance, and the gate leading to it is exceeding magnificent. The walls are thick, ſtrong, and high, and within are ſeveral ſpacious dwellings for the officers and ſoldiers, as alſo good warehouſes for the reception of their merchandize. The fort is well known by the name of Conny's caſtle, which it obtained from the following circumſtances: when the Pruſſians who were firſt poſſeſſed of it left the coaſt of Guiney, they committed the care of the fort to one John Conny, a black, with ſtrict orders not to deliver it up to any nation but the Pruſſians. Soon after their arrival in Europe, the king of Pruſſia ſold all his intereſt on the coaſt of Guiney to the Dutch India company, there being another fort belonging to him, ſituated upon cape Three Points. When the Dutch came to demand this fort, John Conny refuſed to deliver it up to them, which produced a war that continued for ſome years, and coſt the Dutch much money, and a great deal of bloodſhed. On the other hand, Conny, fluſhed with his repeated victories over the Dutch, became a mortal enemy to them, and conſidered them in the moſt obnoxious light; to ſhew his hatred to them, he had a ſmall path, that led from the outer gate to the inner apartment of his caſtle, paved with the ſkulls of Dutchmen who were ſlain in battle; and, as a farther mark of contempt, he had one ſkull tipped with ſilver, which he uſed as a punch-bowl. However, in 1724 he was completely conquered, when he fled into the country, and the Dutch took poſſeſſion of the fort, in whoſe hands it has remained ever ſince.

This fort is one of the beſt ſituated on the coaſt; and the anchorage and landing are both ſafe and convenient. The climate is tolerably wholſome, and the country rich and well-improved. The negroes here are more civilized and honeſt than in moſt other parts of the coaſt, and the government is well regulated. They carry on a great trade not only in gold, but alſo in ivory and ſlaves.

Cape Puntas, or Three Points, conſiſts of three little heads or hills that lie at a ſmall diſtance from each other (from which circumſtance it derives its name), and between them are two convenient bays. The hills are ornamented with groves of lofty trees, which are viſible a conſiderable diſtance at ſea; the whole country about the cape is exceeding woody.

A ſmall fort, called Dorothea, ſtands about three leagues eaſt of the Cape: this formerly belonged to the Pruſſians, from whom it was taken by the Dutch in the year 1683. The apartments within are very numerous, and moſt of them not only conveniently diſpoſed, but very elegantly furniſhed. The fort itſelf conſiſts only of a large houſe with a flat roof, on which are two ſmall batteries containing ten guns.

Anta, which is another country on the Gold coaſt, extends almoſt thirty miles from eaſt to weſt, and is full of hills covered with large trees, between which are ſeveral conſiderable villages. The ſoil is well watered, and produces great quantities of excellent rice, the beſt ſort of maiz, ſugar-canes, and potatoes. It alſo yields plenty of palm-wine and oil, cocoa-nuts, ananas, oranges, and ſmall lemons. In the mountainous parts are great numbers of wild beaſts, particularly elephants and tygers, the latter of which are ſo rapacious, that they frequently viſit the Engliſh and Dutch forts in the night, to the great terror of the inhabitants, who ſometimes ſuſtain conſiderable injury in the loſs of their cattle, ſheep, &c.

Dickſcove is the firſt remarkable place we meet with in the kingdom of Anta: it is ſituated about eight leagues to the north eaſt of cape Three Points. Here the Engliſh have a fort, which is a handſome and regular building, and is well defended with four good batteries, on which are mounted twenty pieces of ordnance. This and all the other Engliſh forts are ſubordinate to cape Coaſt caſtle, as no other than the St. George's flag is allowed to be hoiſted by them.

There are two villages near Dickſcove, that are commanded by one and the ſame cobocero, who always diſplays the St. George's flag at his houſe, whenever that at the fort, in honor of the Engliſh, is hoiſted.

Batenſtein is a fort belonging to the Dutch, and lies at a ſmall diſtance from the abovementioned villages. It is ſituated on a very high hill, and is built of an oblong form; it is a ſmall building, and has only two batteries, on each of which are planted four guns. At the foot of the hill is a village called Boutrou, or Boutri, the inhabitants of which are particularly diſtinguiſhed for their honeſty in all matters relative to trade. This village is watered by a river that comes down from the country, and diſembogues itſelf into the ſea by the Dutch fort. The banks of it are exceeding pleaſant, being adorned with lofty trees; and the ſides of it are lined with mangroves, whoſe boughs are plentifully ſtocked with excellent oyſters. This river affords great plenty of fiſh; but it is hazardous to catch them, owing to its being infeſted with prodigious numbers of crocodiles. It is navigable only about four miles from its mouth, for though it reaches much farther, yet it is impaſſable, owing to the violent water-falls that pour down from the rocks.

Tokorari is ſituated on the top of a high hill, which juts to the ſouth-eaſt into the ſea, and is ſurrounded with ſeveral rocks. This is a pleaſant village; and the country behind it is very agreeable, conſiſting of delightful vallies and plains, adorned with lofty trees, between which are agreeable paths covered with white ſand. There was formerly a fort here, which was at different times poſſeſſed by the Engliſh, Dutch, Danes, Swedes, and Pruſſians; but in 1665, the Dutch blew it up as a place of no conſequence, and there are not any remains of it now to be ſeen. The natives here are famous for making the beſt and largeſt canoes on the coaſt; ſome of which are at leaſt thirty feet long, and will carry about ten tons of goods. The price of one of the largeſt is about 50l. ſterling: ſhips bound from the Whidah generally provide themſelves with theſe.

The

The village of Sakkundi, or Sacundee, is about four miles eaſt of Tokorari: the Engliſh and Dutch have each a fort here, the latter of which is called Orage, and, like the former, is ſituated on the top of a hill. That belonging to the Dutch is very ſmall, and poorly defended; but the Engliſh fort is large, and mounted with twenty pieces of cannon. The French had formerly a ſettlement here, but not finding it anſwer their expectations, they deſerted it. The country round is admirable, being diverſified with hills and dales covered with lofty trees, which grow with ſuch uniformity as to appear as if placed by art. This village is very rich in gold, and is as healthy a place as any on the coaſt.

Two ſmall villages lie between Sakkundi and Sama; the one called Anta, and the other Beari; but they are not of any note for trade, except in the article of palm oil, great quantities of which are exported to moſt of the neighbouring parts.

Sama is watered by a ſmall river called St. George, which runs into the ſea near the foot of the hill on which it is ſituated. It contains about two hundred houſes or cabins, ſo placed as to form three ſeparate villages. The place is populous, but the inhabitants are very poor, and chiefly employed in agriculture and fiſhing. The Dutch have a fort here, about the ſize of that at Boutrou, and mounted with the ſame number of guns. It is called St. Sebaſtian's, which name was given it by the Portugueſe, who were firſt maſters of it, but the Dutch afterwards took it.

Adom and Jabi are two countries very fertile in maize, and have ſeveral mines of gold; but they have no villages in them that deſerve particular notice, neither are there any European ſettlements in them.

Commenda, or Commany is divided into two parts, diſtinguiſhed by the names of Great and Little Commany, the inhabitants of which are chiefly fiſhermen, or brokers, it being a place of conſiderable trade for gold and ſlaves. In this diſtrict are two European forts, one belonging to the Engliſh, and the other to the Dutch. The former is a large quadrangular building with three ſquare baſtions, and one round; and within the fort is a large tower built of ſtone and lime. It mounts twenty-four guns, and has a garriſon of twenty-five whites, and the ſame number of blacks. The Dutch fort is called Vredenburgh, and was built in the year 1688. It is a ſquare building, ſtrengthened by good batteries, on which might be conveniently mounted thirty-two guns within ſo many parts of the breaſt-work, though at preſent it contains only twenty that are mounted.

Fetu is a fine plentiful country, extending about one hundred and ſixty miles in length, and about the ſame number in breadth. The principal part of the inhabitants are employed in agriculture, ſowing corn, and drawing wine from the palm-tree; others in fiſhing, and boiling ſalt; and ſome trade as brokers for the inhabitants of the inland countries, or on their own account.

The town or village of El-Mina is the principal place in this kingdom: it is ſituated about nine miles from the Dutch fort of Vredenburg, and is remarkable for the caſtle of St. George, another ſtrong fort belonging to the Dutch, who took it from the Portugueſe, in the year 1638. It is a large ſquare building, with very high ſtone walls, ſo ſtrong, that they are ſaid to be cannon-proof. It has four large baſtions or batteries within, and one very ſtrong one on the outworks. Two of the baſtions within lie to the ſea, and are very lofty, the point of the peninſula on which they ſtand being a high flat rock; but the other two are low, the ground deſcending gradually from the rock. Theſe batteries are mounted with forty-eight pieces of fine braſs cannon, and that on the outworks is filled with iron pieces, which are only fixed as ſtatues, or on days of public rejoicing.

This fort, towards the land, is adorned with two canals cut in the rock, which are always furniſhed with rain or freſh water ſufficient for the garriſon and ſhips. The inſide of the fort conſiſts of a large quadrangle, ſurrounded with handſome ſtorehouſes of brick and ſtone. The general's lodgings are in the upper part of the caſtle, the aſcent to which is by a large ſtair-caſe of black and white ſtone, defended at top by two ſmall braſs guns, and four patteraros of the ſame metal, commanding the place of arms, and a corps-de-guard. Next to this is a great hall full of arms, and beyond it a large gallery wainſcotted, and ornamented at the end with large glaſs windows. This gallery leads to the general's apartments, which conſiſt of ſeveral handſome rooms and offices belonging to the ramparts. On one ſide of theſe rooms is a very neat chapel, where ſervice is not only performed on Sundays, but every day in the week, when all the officers of the garriſon are obliged to attend, under the penalty of twenty-five ſtivers, and double that ſum on Sundays and Thurſdays. An hoſpital for the ſick, large enough to contain at leaſt one hundred people, is erected on the ramparts.

Mina is ſituated juſt under the caſtle, and is a tolerably long and populous town. The houſes are in general very ſpacious and convenient, and are built with rock ſtone. Trade, huſbandry, and fiſhing, are the uſual employments of the inhabitants, who are a warlike people, and, from their long correſpondence with the Europeans, are the moſt civilized on the coaſt. This town is watered by a ſmall river called Bonja, which ſeparates the two kingdoms of Commenda and Fetu; on the north ſide of which, oppoſite to St. George's caſtle, is the fort of Conradeſburg, belonging alſo to the Dutch, and ſituated on a high hill called St. Jago; it conſiſts of a handſome quadrangle, ſtrengthened with four good batteries; the walls are twelve feet high and ſtrong, having four leſſer batteries mounted with twelve guns. Within the fort is a large tower, with convenient apartments for the garriſon, which conſiſts in general of twenty-five men, who are relieved from El Mina once in twenty-four hours. The aſcent to the fort is eaſy on the ſide of El-Mina, but on that towards Commenda it is ſteep and difficult. The bridge over the river Bonja has a drawbridge in the center as well for ſecurity, as to admit ſmall ſhips to go up the river.

At the foot of St. Jago hill are ſeveral tombs and monuments, which are ſuppoſed to have been erected by the natives to the memory of their kings, or other diſtinguiſhed perſonages. On the north ſide of the hill is a large garden belonging to the general of the fort; it is divided by ſpacious walls; and is ſtocked with rows of excellent orange trees, alſo lemon, cocoa, palm, and other ſorts of trees and uncommon plants of the country; as alſo a variety of European herbs, pulſe, and roots: in the center of the garden is a large ſummer-houſe, round and open, with a cupola roof, and the aſcent to it is by a handſome ſtair-caſe.

A place called by the Portugueſe Cabo Corſo, but cape Corſe, or Coaſt, by the Engliſh, is ſituated at a ſmall diſtance from St. Jago hill: it is formed by the ſhore jutting out a little, and making an angle whoſe ſouth and eaſt ſides are waſhed by the ſea. On this cape is ſituated cape Coaſt Caſtle, which is the moſt important fortreſs of any belonging to the Engliſh on the coaſt of Guiney; it ſtands on a large rock that projects into the ſea, and was erected by the Portugueſe, who firſt ſettled here about the year 1610. In a ſhort time after the Portugueſe had built it, they were diſpoſſeſſed of it by the Dutch, from whom it was taken by the Engliſh under admiral Holmes, in 1664. By the treaty of Buda, it was ſtipulated that the firſt ſhould remain in the poſſeſſion of the Engliſh, and a charter being afterwards granted by king Charles II. to the African company, they immediately ſet about enlarging it, and gave it the elegant form which it now retains.

The walls of this fort are very high and thick, particularly on the land ſide; they are partly built of rock ſtone; and partly of brick; the parade is twenty feet perpendicular above the rock, and forms a kind of quadrangle, being open on the eaſt ſide towards the ſea, which renders it very pleaſant, and affords a delightful proſpect of Queen Anne's point, and the ſhips in Anamaboe road; on this ſide are thirteen pieces of heavy cannon, which command the road and paſſage leading to the fort; the other three ſides contain many ſpacious apartments and offices, particularly on the ſouth ſide, where there is a very neat chapel, the back part of which joins to the caſtle wall, having the great body of the rock called Tabora on the outſide of it. On the battlements are ten guns, and twenty-five on the flankers, which are four in number. On the rock Tabora, which is about twenty paces from the caſtle, is a round tower, containing ſix twelve pounders, and ſerves to keep in awe the blacks of the adjacent town. The entrance to the caſtle is by a large well-ſecured gate that opens into the ſquare, which is large enough for five hundred men to be drawn up and exerciſed in. The apartments for the agents and officers are very ſpacious and convenient, as are alſo the barracks for the ſoldiers. The apartment of the general communicates with the chapel, which is ſometimes uſed as well to dine in as for the performance of divine ſervice; in the front of the firſt ſtory is a ſpacious balcony that extends the whole length of the buildings, and in the center of it is a very elegant and commodious ſtair-caſe. Here are alſo ſpacious ſtorehouſes, and convenient

convenient compting houſes for the factors and other officers. Under the ſquare is a ſpacious wall cut in the rock, where thoſe ſlaves are confined that have been purchaſed for exportation; and at a ſmall diſtance from the gate of the caſtle is a priſon for the confinement of criminals.

There are very extenſive gardens belonging to the caſtle, which are near eight miles in circumference, and are without any ſort of incloſure, except on the ſouth ſide: they produce almoſt every thing natural to hot climates, particularly oranges, lemons, citrons, guavas, plantains, bananas, cocoa-nuts, cinnamon, tamarinds, pine-apples, &c. with ſeveral ſorts of European vegetables, as ſallads of various kinds, cucumbers, pumpkins, water-melons, and purſlain; they have ſometimes good turneps raiſed from Engliſh ſeed; but their beſt roots are yams and potatoes.

The town at Cape Coaſt Caſtle, which is inhabited by the negroes, is large and populous; and the inhabitants, though Pagans, are very civil and induſtrious; ſome of them are employed in getting gold, others in fiſhing, and ſome attend to agriculture, and ſupply the reſt with the neceſſaries of life by their induſtry and labour.

Two ſmall forts are erected in the neighbourhood of Cape Coaſt Caſtle: theſe alſo belong to the Engliſh, and are juſt three quarters of a mile from the caſtle: one of them is called Phipps's tower, and the other fort Royal, or Queen Anne's fort; the former is a ſmall round tower ſituated on the eminence of a ſteep hill by the ſide of Cape Coaſt gardens, and was built by General Phipps, from whom it received its name; it ſtands north-weſt from the town, and mounts ſeven guns. Fort Royal ſtands near a ſmall village called Manfrow, and is built on a hill named Daenſtein, or the Daniſh mount, becauſe the Danes had formerly a fort on the ſame ſpot; it is a ſquare brick building, and has eighteen guns, ſeven of which are mounted on the top of the fort, and eleven on the platform. The garriſon are daily relieved from Cape Coaſt Caſtle, and conſiſts of ſix whites, and twelve blacks.

Manfrow, is ſituated beneath the fort; and is almoſt inacceſſible by means of the great rocks that ſurround it; it is a very ſmall town, and the few inhabitants that live in it, are chiefly ſalt boilers, labourers, or fiſhermen.

The ſmall kingdom of Sabu, or Saboe, begins from the laſt-mentioned town: it extends two leagues along the coaſt, and four in land to the north: however, it is a plentiful ſpot, and the inhabitants of it are reckoned the moſt induſtrious on the coaſt.

Queen Anne's Point, a ſmall fort belonging to the Engliſh, is the firſt place we meet with here: it is ſituated on a hill, about a mile from fort Royal to the weſt, and two miles from a Dutch fort, called Naſſau, to the eaſt; it has a garriſon of five whites, and the ſame number of blacks, and mounts five guns.

Naſſau fort, belonging to the Dutch, ſtands on a hill, near a ſmall village called Mowri: it is almoſt ſquare, and has four batteries, mounted with eighteen pieces of cannon; the walls are higher than thoſe of any fort on the coaſt, that of El-Mina excepted: two of the batteries, which are next the ſea, are incloſed by a very ſpacious and convenient curtain; and the angles are ornamented with four beautiful ſquare towers. It was built by the Dutch, and was their chief ſettlement when El-Mina was in the poſſeſſion of the Portugueſe.

Mowri, is a ſmall village containing about two hundred houſes; the inhabitants are chiefly fiſhermen, and pay, as a tribute to the Dutch factor, a fifth part of what they catch.

The territory of Fantyn, extends about ten miles along the coaſt, and contains many villages well inhabited: it has no king, but is under the government of a braffo, or leader, whoſe power is greatly reſtrained by the old men, or counſellors, who frequently act agreeable to their own inclinations, without paying any regard to the braffo. The inland people are chiefly employed in agriculture, and ſupply the markets with fruit, corn and palm-wine; but the inhabitants of the coaſt carry on a great trade in gold, fiſh, and ſalt.

Anamaboe is the moſt important place we firſt meet with in this diviſion, and where the Engliſh have a ſmall, but very neat fort: it is ſeated on a rock about fifty yards from the ſea, and is built of ſtone and brick; next the ſea it is defended by two flankers, and on the other ſide by two turrets; it mounts twelve guns, and the garriſon conſiſts of thirty people, twelve of whom are whites, and the reſt blacks: within are ſeveral good warehouſes, and the apartments for the principal officers are very elegant and conveniently diſpoſed. The landing here is very dangerous, the ſhore being lined with rocks; ſo that the goods from the ſhips are carried aſhore in canoes to a narrow ſandy beach under the fort, incloſed with a mud wall about eight feet high, within which the blacks and other ſervants of the company, have apartments provided for them.

Anamabec town is very large and populous, containing at leaſt as many people as are in the two kingdoms of Sabu and Commenda; the inhabitants are very ſtout and warlike, but at the ſame time the greateſt cheats on the whole coaſt, and very treacherous and deſperate. The circumjacent country abounds with hills, five of which are cloſe together, and very lofty, ſo that they make an excellent land-mark, being very conſpicuous many miles at ſea: the hills are cloathed with a great variety of trees, which render the proſpect exceeding pleaſant; but the palm-trees are the moſt numerous, and the wine extracted from them is ſaid to be ſuperior to all other in this part of Africa.

Two villages, called Great and Little Cormantin are ſituated about two miles from Anamaboe; the latter of theſe is a very inconſiderable place, but the Dutch have a ſmall fort near it, called Amſterdam. It is a ſquare building of rock ſtone, ſtrengthened with three ſmall and one large battery, and is mounted with twenty pieces of cannon. In the center is a large tower, the upper part of which is formed like a cupola, and on the top of it is the flag-ſtaff; within are convenient apartments for the officers of the garriſon, which conſiſts of twenty-five whites, and the like number of blacks. The proſpect from the top of the tower is exceeding pleaſant, as it not only commands the ſea, but an extenſive view of the adjacent country. In 1665, the Dutch admiral de Ruyter took this fort from the Engliſh, to whom it once belonged.

The village of Great Cormantin is ſituated on a hill, about half a mile below the fort; it is very large and populous, containing at leaſt eight hundred people. The inhabitants about both villages are chiefly employed in agriculture and fiſhing, and the lands near them are very fertile.

Tantumquerri lies a little to the eaſt of theſe villages. It is pleaſantly ſituated near the ſea ſide, but the landing-place is inconvenient and dangerous. The Engliſh have a ſmall but regular fort here, having four flankers, on which are mounted twelve pieces of ordnance.

The territory of Acron extends from the borders of the Fantynean country to a famous place called the Devil's mount, it is divided into Great and Little Acron; the former of which, being farther inland, is a kind of republic; and the latter, a kingdom; and, notwithſtanding they are independent of each other, the inhabitants live in perfect amity. They are a very induſtrious people; and apply themſelves with ſuch diligence to agriculture, that great quantities of grain are exported from hence to other parts of the coaſt. The Dutch have a fort here, called fort Patience, and under it is the village, inhabited only by fiſhermen.

Agonna, is a very fertile and pleaſant country; and the inhabitants are diſtinguiſhed for their ingenuity in making various articles in gold and ſilver. It contains ſeveral remarkable villages, the firſt of which is called Winneba, or Wimba, and is pleaſantly ſituated, being ſurrounded with beautiful lofty trees. Here the Engliſh have a fort, of much the ſame ſize and form with that at Tantumquerri. It ſtands on a riſing ground about fourteen yards from the ſea ſide, from whence there is a handſome avenue encompaſſed by trees, that leads to the outer gate. It has alſo a large ſpur, which is of infinite ſervice, as it not only contributes to the ſtrength of the fort, but is a ſecurity to them from the ravages and incurſions of the wild beaſts by night.

It is remarkable, that the kingdom of Agonna has always been governed by a woman, who, to preſerve the ſovereignty in her own hands, lives unmarried; but that ſhe may not want a proper companion, ſhe generally purchaſes one of the handſomeſt ſlaves ſhe can meet with, who is prohibited, on pain of death, from ever intriguing with any other woman. Her eldeſt daughter is next heir to the crown, the ſons being all ſold as ſlaves, or otherwiſe diſpoſed of, ſo as not to interrupt the ſucceſſion in the female line. The daughter is taught the ſame political maxims practiſed by her mother, and, when of proper age, is allowed the ſame indulgence of having ſuch a male companion as ſhe thinks proper to make the object of her choice.

The country of Aquamboe, which is the laſt place that remains to be deſcribed on the Gold coaſt, is of conſiderable extent, and chiefly ſituated within land. The ma-

ritime part of it is called Acra, and was formerly a kingdom of itſelf; but in 1680, or 1681, it was conquered by the inhabitants of Aquamboe, to whom it has ever ſince been tributary. The country is not ſo fertile as the other parts we have mentioned, there being very little fruit, or any kinds of grain; and what cattle they have, are brought from other parts: it is, however, a good ſporting country, and abounds with hares, rabbits, ſquirrels, red and fallow deer, wild goats, pintado hens, and other fowls. The hares are ſo plentiful, that the blacks kill them with ſticks as they paſs along on their ordinary occaſions.

Among their deer, on this part of the coaſt, is one ſpecies that are exceeding beautiful, and perhaps the moſt delicate animals that are to be met with in the univerſe. It is about eight or nine inches in height, and the legs ſo ſmall, as not to exceed the circumference of a gooſe's quill. The males have two horns turning back on their head, about three inches long without branches or antlers; they are crooked and of a ſhining black colour. They are very tame and familiar, but of ſo tender a nature, that they cannot bear the ſea, for not one could ever yet be brought to Europe, though the attempt has been ſeveral times made, and every means poſſible uſed to convey them thither.

The Engliſh and Dutch have each of them a fort at Acra. That belonging to the former is called fort James, and is a ſtrong, ſpacious building. It is ſituated on the top of a ſteep rocky cliff that hangs over the ſea, and has a battery of twenty pieces of cannon juſt under the wall; beſides which, the fort has ſeveral large flankers mounted with twenty-ſeven pieces of ordnance. The walls, which are of ſtone, are very thick and lofty, and in the center of the fort is a ſquare tower, with a ſmall ſpire, on the top of which is the flag-ſtaff. The garriſon conſiſts of twenty whites, and thirty blacks. Near the fort is a ſmall village called Soko, the inhabitants of which from a peculiar attachment to the Engliſh make a point of trading only with them.

The other fort of Crevecœur belongs to the Dutch, and is ſituated on a rocky headland, about a muſket-ſhot from fort James; and though boats can come up to the ſtrand with ſafety, yet the landing may be eaſily oppoſed by the guns of the fort, and the ſmall arms of the garriſon. The building is of a ſquare form, with four batteries, which, with the curtains, are of ſtone, but they are neither ſo thick or high as thoſe of the Engliſh fort. Within is a large flat, ſquare houſe, with a platform, and the apartments are convenient both for the officers and garriſon, which conſiſts of fifteen white men, and twenty-five negroes.

Chriſtianſburgh, a fort belonging to the Danes, ſtands at a ſmall diſtance from Crevecœur, and is the only one they have on this coaſt. It is a ſquare building ſtrengthened with four batteries, planted with twenty guns. It appears very beautiful, and ſeems like one continued battery; for the cannon may be removed to any part of it, the roof being intirely flat.

We may here remark, that, conſidering the warlike diſpoſition of the blacks on this part of the coaſt, it is ſtrange they ever permitted the Europeans to build three ſuch good forts ſo cloſe together: but ſo great is the power of money even in this golden country, as well as in other parts of the world, that one of the kings of Acra being gained by conſiderable preſents which the Danes and Dutch made him, granted them that liberty; at firſt, they aſked to build each of them a ſtore-houſe to ſettle a factor in, under the obligation of ſeven marks of gold yearly for each houſe. The houſes thus built, the Dutch and Danes conſtantly inſinuated to the natives, that whereas they were continually expoſed to the aſſaults of their mortal enemies the Aquamboes, it would be for their ſafety to allow theſe houſes to be turned into forts to protect them and their families with their cannon. By theſe means they prevailed on the people to permit theſe places to be put into the condition above deſcribed.

The European forts are chiefly ſupplied with proviſions brought from cape Coaſt, Anamaboe, and Cormantin. The country round Acra is exceeding pleaſant, not being ſo woody as other parts of the coaſt; but it is much leſs fertile, owing to its being almoſt depopulated by the frequent wars with the Aquamboes.

A market is held three times a week, at a village called Abeno, about twenty miles from the coaſt, for the ſale of gold and ſlaves, of which commodities the trade chiefly conſiſts: hither the negroes reſort from the inland countries. The gold is reckoned as good in quality as that at Axim, or any other part of the whole coaſt, and the ſlaves being ſo numerous, is occaſioned by the frequent wars with the neighbouring nations, which being very populous, moſt of the priſoners taken on both ſides are ſold as ſlaves to the Europeans. The goods they take in return for the ſlaves, conſiſt of cowries, woollen cloth, Sileſia linen, chintz, powder, fire-arms, knives, red and yellow bugles, &c.

The Gold coaſt has for its eaſtern boundary, the river Volta, ſo called from its rapid flux and reflux. It diſcharges its waters with ſuch violence into the ſea, that it is ſometimes viſible ſeveral leagues from the ſhore. The extent of its courſe in land cannot be aſcertained, as it is impoſſible to penetrate it. From its amazing rapidity, numbers of whole trees are frequently brought down with it, which ſticking at the mouth of the river, occaſion violent agitations of the waves: ſo that it can only be paſſed at certain times in the year, which are generally betwixt the months of April and November, this being the dry ſeaſon and the reflux of the river not ſo rapid. At the mouth of it is a ſmall iſland, ſteep on each ſide, and covered with lofty trees. On each ſide the river, a few miles from the mouth, the country is open, and adorned with a great number of palm-trees planted at equal diſtances; but farther up it is woody, and riſes into hills, and very ſteep mountains. The ſhore is bordered all along with a large ſandy ſtrand, forming ſeveral ſmall bays, which, about a league to the ſea, are at leaſt nine fathoms deep.

SECT. IV.

Treating of the SLAVE COAST, and the ſeveral Kingdoms thereunto belonging; comprehending an Account of the different Places, the Inhabitants, their Manners, Cuſtoms, Trade, &c. and various Revolutions.

THAT part of the coaſt of Guiney, which goes under the appellation of the Slave coaſt, is very extenſive; but as it is remarkably winding, we cannot properly aſcertain its diſtance in a ſtraight line. It commences at the river Volta, from whence to the river Banais, are about one hundred and ninety-five miles; from thence to cape Formoſa, one hundred and thirty-five; and from thence eaſtward to the mountains of Ambriſes, one hundred and ſixty-five; and thence ſouthward to the river San Bonto, the utmoſt boundary of the country, one hundred and twenty; in all ſix hundred and fifteen miles. It is bounded on the eaſt, by the kingdom of Benin; on the weſt, by the Gold coaſt; on the north, by Biafara, with the deſart of Seth; and by the Atlantic ocean, on the ſouth.

The four following kingdoms are on this coaſt; namely, Coto, Popo, Whidah, and Ardrah; but the principal of them are the two laſt.

Coto (by ſome called the Land of Lampi) begins at the river Volta, and extends eaſtward to Little Popo, a diſtance of about fifty miles: it is a flat, ſandy, and barren country, and the only trees to be found in it are the palm and wild cocoa. The town or village of Coto, otherwiſe called Verbon, is about fourteen miles from the river Volta, and was formerly the reſidence of the king. The inhabitants of the kingdom are poor and illiterate; and their chief traffic conſiſts in ſlaves, whom they ſteal from the inland countries, and ſell to the Europeans. They practiſe much the ſame cuſtoms and manners as thoſe on the Gold coaſt, except being more fond of their fetiſhes, in the number of which conſiſts their principal wealth.

Popo, extends about thirty miles, and is divided into two parts, by the names of Great and Little Popo. The laſt is remarkably ſandy; and ſo barren, that the inhabitants are ſupplied with all their proviſion from Whidah; they chiefly live by plunder and ſtealing ſlaves, in both which they exceed their neighbours of Coto, being of a more courageous and warlike diſpoſition. They are alſo great cheats, and frequently take advantage of the Europeans, by deluding them on ſhore in expectation of ſlaves, at a time they have not one to diſpoſe of, when they not only fleece them, but ſometimes detain them for ſeveral months, before they can procure the number wanted, and then exact upon them, by fixing an exorbitant price on thoſe they purchaſe.

Little Popo, is ſituated on the ſhore, about ten miles from Coto. It is a poor miſerable place, and conſiſts only of a number of ſtraggling huts, inhabited by people whoſe lives are chiefly ſpent in concerting meaſures for the enſlaving and miſery of their fellow creatures, whom the dictates of humanity ſhould excite them to relieve and defend.

Great Popo, is not ſo barren as thoſe already mentioned; for in the inland parts are great plenty of various kinds of fruits, as alſo cattle and poultry. The town ſtands on an iſland formed by marſhes, and is divided into three parts, each diſtinct from the other. It is the reſidence of the king, whoſe palace is very large, conſiſting of a number of huts, incloſed by lofty trees. The paſſage to the royal apartment is through three courts, each of which is guarded by a number of ſoldiers. In the fartheſt of theſe is the king's audience room, where his nobles and principal officers occaſionally aſſemble, to conſult his majeſty on affairs relative to the government of the nation. The king has a great number of concubines, two of whom conſtantly ſtand by him with fans to cool and refreſh him. His dreſs conſiſts only of a long gown of brocade, with an oſier cap on his head, and ſandals on his feet. He is very fond of tobacco, and ſpends the principal part of his time in ſmoaking, and converſing with his concubines.

The only place in the kingdom that merits the leaſt notice is the town of Great Popo, the reſt being only ſmall hamlets of five or ſix inſignificant buildings, whoſe inhabitants immediately retire to Great Popo, on the leaſt apprehenſion of danger.

In this kingdom alſo there prevails a great addictedneſs to plunder and rapine, neither are they very difficult in the objects they pitch on; for as they are thieves by profeſſion, they will as readily ſteal from a friend as a foe. They carry on ſome trade in ſlaves, but their chief advantages ariſe from the fiſh caught in the rivers, which they not only ſell to their neighbours, but export great quantities of them to other countries.

There was formerly a ſettlement belonging to the Dutch here, but trade being greatly interrupted by the frequent wars between Popo and Whidah, they ſuddenly left it, and have not traded there for many years.

The French, ſince that time, have eſtabliſhed a ſmall factory at Popo, with two agents and ſome negroes, who are ſubordinate to the director-general at Whidah, from whom they receive goods, and to whom they remit ſlaves. This trade is carried on by land, and every precaution is uſed to prevent the property being loſt by the way: the uſual method is, to oblige the perſon who ſells the goods, to convey them to the frontiers at Whidah, where they are ſure to be ſafe; but the ſeller is ſubject to the loſs, in caſe of any accident before delivery.

SECT. V.

Contains an Account of the Kingdom of WHIDAH: its Provinces, Produce, Animals, Inhabitants, Laws, Cuſtoms, &c.

THE kingdom of Whidah next demands our attention. It extends about ten leagues along the ſhore, and in the middle reaches ſix or ſeven in land, after which it divides itſelf like two arms, being in ſome places thirty or forty miles broad, and in others much more. It is bounded, on the eaſt, by the kingdom of Ardrati; on the weſt, by the river Volta; on the north, by the country of Dahomy; and, on the ſouth, by the gulf of Guiney. It is a fine, populous, and fertile country, being watered by two excellent rivers, both of which take their riſe in the kingdom of Ardrah. The ſouthernmoſt of theſe runs within about a league and a half of the ſea, and is called the river of Jakin, from a town of that name in the kingdom of Ardrah; it is only navigable for boats, ſome parts of it not being more than three feet deep. The other river is called Euphrates; it runs about a league to the ſouth of Xavier or Sabi, the capital of Whidah, and is much deeper than the former. The water is exceeding good, and the river would be navigable, were it not for the banks and ſhoals in the channel. The road where the ſhips ride is at the mouth of this river, but in the months of April, May, and July, the landing is exceeding dangerous, on account of the prodigious ſwell of the ſea at thoſe times.

This country is acknowledged by all Europeans to be one of the moſt delightful ſpots in the univerſe, and that its fertility is greatly promoted by the above-mentioned river. The coaſt is agreeably diverſified with a variety of lofty and beautiful trees, which are planted in ſuch order as to form the moſt agreeable retreats. The country riſes from the coaſt with a fine eaſy aſcent for the ſpace of fifty miles, commanding, in moſt parts of it, a fine proſpect of the ſea. The fields are every where cultivated, and, inſtead of hedges or other fences, are divided by beautiful groves of trees: in ſhort, the beauties of this ſpot may be much more eaſily conceived than deſcribed, as the whole country appears like one continued garden.

Whidah is divided into twenty-ſix provinces or governments, which are given to the grandees of the country, and are hereditary in their families. The king is at the head of theſe, and has the government of the province of Xavier, ſo called from the capital of the kingdom: each of theſe provinces has ſeveral ſmall villages or hamlets ſubordinate to it; ſo that the whole kingdom appears to be one large and populous town divided by gardens, lawns, and groves, into different parts.

The fertility of this country is amazing, inſomuch that as ſoon as one harveſt is over, the ground is ſown with ſome other grain; ſo that they have two, and ſometimes three crops in a year. They plow their land in ridges, by which means, the dews falling in the hollows, and the ſun heating the ſides, whatever is planted, ſoon comes to perfection. The grain conſiſts of rice, millet, and maize, or Turky corn. The negroes are ſo induſtrious, that they will not ſuffer any ſpot of ground to lie uncultivated; even the incloſures of their houſes and villages are planted with melons and other fruits; and they have only ſmall paths that lead through the fields from one village to another, inſtead of highways.

Oranges, lemons, bananas, ananas, pine-apples, watermelons, citrons, and tamarinds, grow here in great plenty, as alſo prodigious numbers of palm-trees; but theſe laſt are chiefly cultivated by the natives for the ſake of the oil, as few of them take the trouble to draw the wine, which they are not very fond of. They have likewiſe cabbages, carrots, turneps, radiſhes, parſley, and various kinds of ſallads, all of them little inferior in quality to thoſe of Europe; beſides which, all the roots produced on the Gold coaſt grow here.

They have one ſpecies of pea of a very peculiar nature; producing ſmall trees like thoſe that bear the pimento or red pepper, but they have no flower, and ſeldom exceed ſix feet in height; the peas grow in a bag or membrane, almoſt as ſtrong as parchment, placed beneath the ſtem amongſt the roots, which yield nouriſhment to the plant; the bag contains in general one hundred and fifty peas; when the leaves begin to grow yellow, they pull up the plant with the roots, open the bag, and extract the peas; but if they chuſe to have them very tender, like thoſe of Europe, they pull up the plant while the leaves are green. They are as well taſted as thoſe of Europe, are eaſy of digeſtion, and make excellent ſoup. They ſow theſe peas at the end of the rainy ſeaſon, and they grow ſo faſt, that they are fit to gather in ſix weeks.

As the people in general take care to leave no part of the country about Whidah uncultivated, they are therefore ſeldom troubled with wild beaſts; but in the more inland parts there are elephants, buffaloes, and tygers. There are many deer and hares, the latter of which are much like thoſe of Europe; they have alſo a greater plenty of all ſorts of apes and monkies than in any other part of Guiney. Their tame beaſts are oxen, cows, goats, ſheep, and hogs, all of which are much larger, and the fleſh better taſted than thoſe of the Gold coaſt; the hogs in particular are exceeding large, and the fleſh as white and ſweet as thoſe of England. This indeed is little to be wondered at, for the poorer ſort of negroes pay more regard to their hogs than to themſelves, and feed them much better. Their tame poultry conſiſts of cocks and hens, geeſe, ducks, and turkies.

They have great plenty of wild fowl, as partridges, pheaſants, thruſhes, pintadoes, wild ducks, teal, woodcocks, ortolans, and ring-doves. There are alſo many parrots, which are chiefly grey, with ſome red feathers on the head, and the tips of their wings and tails. The crown bird is likewiſe found here, but is not ſo beautiful as thoſe of the Gold coaſt; however, here are ſeveral other ſorts of birds, which we ſhall here give a particular deſcription of, on account of their peculiarities.

The kurbalot, or fiſher, is a ſmall bird, about the ſize of a ſparrow, and its plumage beautifully variegated; the bill, which is as long as the body, is very ſtrong and ſharp, and is furniſhed on the inſide with ſmall teeth, not unlike thoſe of a ſaw. They build in high trees by the ſides of the rivers, and their neſts are compoſed of earth mixed with feathers and moſs: they make their neſts at the extremity of the moſt ſlender branches, where they hang by a reed or ſtraw about a foot long; they are of an oval form, and are entered by a projection at the top that bends a little, ſo that the inſide is perfectly ſecure from the weather. Theſe birds are exceeding numerous, and breed ſo faſt, that ſometimes a dozen neſts are found on the ſame tree. They not only fly in the air, but ſkim on the ſurface of the water with prodigious ſwiftneſs.

The

The pintado, or Guiney hen, has a round back, with a tail turned downwards like a partridge; and the feet are furniſhed with membranes or webs, like water-fowls. The head is covered with a kind of helmet, and the whole plumage is black, or dark grey, ſpeckled with white ſpots. It is the ſize of a common fowl, and the helmet on the middle of the head is of a horny ſubſtance, and a duſky red colour. Under the bill are wattles, but they do not proceed from the lower chap as in hens; they grow from the upper, and the head is bare of feathers, but on the upper eye-lids there are long black hairs that turn upwards. The bill is like that of a common fowl; but in ſome of them, at the root of it, there is a ſmall tuft conſiſting of twelve or fifteen threads, one third of an inch in length, as thick as a pin, and in ſubſtance nearly reſembling the briſtles of a hog. On each ſide of the bill there is a bluiſh ſkin, which extends towards the eye, and ſurrounds it, but becomes black in that place. This ſkin forms the eye lids, and, being lengthened, and becoming double, make the appendices or wattles of the cheeks. They are of different ſhapes, ſome being oval, ſome ſquare, and others triangular: they are of a red colour in the female, and blue in the male. The ears are placed behind the wattles, and are quite uncovered; but the apertures are very ſmall. The feet are of a greeniſh colour, and covered with large ſcales before, but behind there is only a rough ſkin, like ſhagreen leather; and the hinder toe is ſhort. They feed their chickens indiſcriminately, each attending to thoſe that come firſt in their way. They commonly go together in large flocks.

The Numidian damſel is a very delicate bird in its conſtruction: the body is long and taper, as are alſo the legs. The feathers on the upper part of the wings and back are of a light colour, but the tail, which is long and ragged, is black. The ſides of the head are white, and from the top of it behind hangs a long tuft, which reaches for ſeveral inches down the back part of the neck. This bird is very much eſteemed by the blacks: the fleſh of it is firm, and of an agreeable taſte.

The monoceros is a voracious bird, and lives chiefly on fiſh: it is alſo very ugly, and the fleſh of it harſh and diſagreeable. It is ſhort and thick, of a dark colour, except the wings and upper part of the back, which are white. The back is long and very thick, and the tips of the wings reach to the upper part of the legs. The neck is ſhort and thick, as are alſo the legs, and the claws in particular are remarkably large.

Buſtards here are about the ſize of the Guiney hen. The bill is of a whitiſh colour, and much longer than thoſe of Europe. The eyes are large, the iris hazle coloured, and the eyelids of an aſh colour. The ſides of the head, all round the eyes, are of a bright brown, but the top of the head, and the whole neck, are covered with black feathers hanging a little looſe, with narrow points. The back, rump, and tail, are of a bright brown; and the feathers of the latter have tranſverſe black bars. The quills, or greater wing feathers neareſt the back are browniſh, with white ſpots, and the middle quills white, with tranſverſe bars of black. The legs are long, and the toes ſhort in proportion, being void of feathers ſome way above the knees. They have only three toes, all of which ſtand forward, and they are covered with ſcales of a white colour, but the claws are duſky. The fleſh of this bird is exceeding good.

The bird called the aigret is of the heron kind, but is remarkable for the colour of its legs and feet, which are of a deep red: the body is about the ſize of a gooſe, and the feathers are of a darkiſh colour intermixed with white; the neck is long, but the tail is remarkably ſhort; the bill near the head, is of a bluiſh colour, but towards the point it is black. As their fleſh is dry and ill-taſted, they are little uſed by the negroes.

Swans differ greatly in the ſhape here from thoſe of Europe; their fleſh too is coarſe, and diſagreeable to the palate. They are white from the head to the ſhoulder of the wings; but from thence to the tip the colour is a dark brown, as is alſo the tail. The legs are long and taper, and the back is alſo long, and very thick, but terminates with a ſharp point.

The ſea, though it runs very high in the road of Whidah, abounds with fiſh, which the natives take with lines, they being ſtrangers to the uſe of nets. Among the fiſh caught here is a remarkable one, called by the natives the ape or monkey-fiſh. It is in general about ten feet long, and between three and four broad, from the extremity of the neck, till within a third of its length, when it diminiſhes inſenſibly, ending in a long round tail. The head is round, the eyes ſmall, and the chin ſhort; and the upper lip is furniſhed with hair like whiſkers. The neck is very diſtinct from the body, and on that part of it next the head is a round excreſcence like a crown. It has four fins which reſemble the beard or whiſkers of a whale: the two foremoſt are ſo ſituated, that they ſupply the place of hands, for he can convey any thing with them to his mouth. The hinder fins are placed beneath the middle of the belly, and are leſs than the former. It has no ſcales, but a ſkin ſpotted with ſmall pimples like that of the ſhark. It is of a black colour, and ſhines when firſt taken out of the water; but, when dead, loſes its luſtre. It is a lively fiſh, and ſwims very ſwift. When it appears firſt on the ſurface of the water, before he takes the hook, his motions are truly diverting. He comes gently near it, looks at it, takes it with the edge of his lips, and then quits it. After ſeveral evolutions, he at length ſwallows it; and, when he is entangled, he throws himſelf into ſuch poſtures, as to afford a very laughable ſcene to the ſpectators. The fleſh is tolerably good, and in its taſte greatly reſembles lean beef.

Great plenty of various kinds of fiſh are found in their rivers, particularly eels, mullets, ſoles, thornbacks, and a ſort of white fiſh, in ſhape much like our pike. They have alſo great quantities of ſhrimps, cray fiſh, lobſters, and other ſhell-fiſh. The latter are reckoned much better than thoſe caught in the ſea; they are found near the mouths of the rivers, where the water is brackiſh.

They have great numbers of ſnakes or ſerpents, but they are chiefly of two ſorts. The firſt of theſe is black and poiſonous, but the other is quite harmleſs, and worſhipped by the natives, as their greateſt fetiſh. The poiſonous ſort is about twelve feet long, and three inches in diameter. They have a flat head, with two large crooked teeth, they attack their enemies with great eagerneſs; and always creep with their head erect, and their mouth open. The fetiſh ſnake has a large round head, with beautiful eyes: the tongue is ſhort, and pointed like a dart, and their motion is exceeding ſlow: their tail is ſlender and ſharp, and the ſkin is very beautiful, the ground of it being white, with waved ſtreaks or ſpots of yellow and brown agreeably intermixed. They are ſo gentle, that they will not hurt any creature except the venomous ſerpents, to whom they have the greateſt enmity, and ſeem to take a pleaſure in deſtroying them. Both negroes and whites handle and play with them without the leaſt danger; but ſhould either a negro or a white man kill one of them, whether on purpoſe or by accident, his life would pay for it. When the Engliſh firſt ſettled at Whidah, a captain of that country having landed and houſed his cargo, his men found one night a ſnake in the lodge, which they inadvertently killed, and threw out before the door. The blacks next morning ſeeing the dead ſnake, and the Engliſh innocently owning they had killed it, the natives maſſacred all that were in the lodge, ſet fire to it, and deſtroyed all the goods. The Engliſh, deterred by this cruelty, forbore going to trade there for ſome time; but at length, ſome of them again venturing, on their arrival, the negroes ſhewed them ſome of theſe ſnakes, and deſired they would not hurt them, as they were ſacred. The Engliſh readily obeyed this requeſt, and their commerce was renewed.

The veneration of the Whidaians for theſe ſnakes is ſo great, that they will not hear any think ſpoken in deriſion of them, ſtopping their ears, and running away, if any European pretends to laugh at their ſuperſtitious reverence for them. Boſman relates, that a hog happening to devour one of theſe ſnakes, a proclamation was immediately iſſued for deſtroying all the hogs in the country, and abundance of them were ſlaughtered on the occaſion; but at the inſtance of ſome of their rich owners, and ſome preſents made to the king, the ſevere decree was revoked; but it ſeems that ſo many of them were deſtroyed for this offence, that hog's fleſh became very dear while he was there.

With reſpect to the perſons of the Whidah blacks, both ſexes are generally tall, luſty, and well proportioned, but their colour is not ſo ſhining a black as thoſe of the Gold coaſt. Their dreſs conſiſts of three or four ells of a ſtuff called paen, which is wrapped round the waiſt, and then deſcends to the middle of the leg. The ladies wear a ſilk garment, with two or three rows or fringes, the bottom of it covering the feet. Sometimes they wrap themſelves round with a piece of the abovementioned ſtuff paen, and bring part of it over the head and round the ſhoulders like a mantle. The better ſort of the men are diſtinguiſhed by their hats, which they purchaſe of the Europeans; the larger they are the better they like them, and are particularly

particularly proud of them after they are old and ruſty; others have bonnets made of deer or dog-ſkins. They wear ſtrings of pearls or coral on their necks, and on their arms and wriſts have bracelets of the ſame materials.

The negroes here are more polite and civil than any other people on this part of the coaſt, though in general they are very illiterate. When two perſons of equal condition meet, they both fall down on their knees, clap their hands, and mutually ſalute, by wiſhing each other a good day. They pay particular reſpect to their ſuperiors; for when they chance to meet them they immediately fall on their knees, and kiſs the earth thrice, clapping their hands, and addreſſing them by wiſhing them a good day or night, which the ſuperior returns, by gently clapping his hands together, but without altering his poſture; all which time the inferior continues on the ground till the other departs. The ſame kind of ceremonies are alſo uſed by the wives to their huſbands, the children to their fathers, and the younger to the elder brother.

The blacks of Whidah not only differ in good behaviour and colour from thoſe on the Gold coaſt, but alſo in point of induſtry; for as the latter are naturally ſlothful and indolent; ſo the former are cleanly and aſſiduous in buſineſs; nor will they ever leave any work they undertake till it is thoroughly completed. Beſides being employed in agriculture, the men make calabaſhes, wooden utenſils, hardware, and ſeveral other things, which they execute with great neatneſs. The women are employed in ſpinning, and in planting and ſowing their corn, yams, potatoes, &c. The Whidah cloth is of various colours, but that moſt in uſe is either white or blue: they make it about two yards long, and a quarter of a yard broad. Thoſe that are very wealthy, beſides huſbandry, in which their wives and ſlaves are employed under them, carry on a very conſiderable trade in other commodities, particularly in ſlaves.

Polite and induſtrious as theſe people are, yet, next to the Chineſe, they are the moſt artful thieves in the univerſe; and, like them, are extremely addicted to gaming. When they have loſt their money and other property, they will play for their wives and children; and when they have loſt them, ſtake their own liberty, and thus become the property of their countrymen, who ſometimes ſell them to the European traders.

Moſt of the cuſtoms here are the ſame as thoſe practiſed by the inhabitants of the Gold coaſt. One of the moſt material that differs from them, and perhaps from all other countries in the univerſe, is, the indulgence given to polygamy. It is no uncommon thing here for a poor man to have forty or fifty wives; a chief, or grandee, three or four hundred; and a king as many thouſands. Theſe wives, however, may be conſidered only as ſo many ſlaves, and indeed the principal part of thoſe belonging to the great people are probably captives that happen to pleaſe their maſters, who therefore, rather than ſell them to the Europeans, chuſe to maintain them.

With reſpect to their marriages, little ceremony is uſed. When a man fancies a young woman, he applies to her father, and deſires her for his wife, which is ſeldom refuſed. He then preſents her with a fine pagne, or garment, as alſo necklaces or bracelets; after which he provides a grand entertainment, which concludes the ceremony. If a ſlave has a mind to marry a girl who is the ſlave of another, he aſks her of her maſter, without applying to her parents. The maſter of the girl claims the boys of this marriage, as his property.

In this country, the women may be conſidered in no other light than as ſlaves. They are in general obliged to till the ground for their huſbands; and even the favourites, who are kept at home, are not exempt from work; beſides which, they are obliged conſtantly to attend on their huſbands, and behave with the greateſt ſubmiſſion to them.

We need not wonder that ſuch a prodigious number of ſlaves are to be had here; for from the multiplicity of wives each man has, a great number of children muſt reaſonably be expected. It is no uncommon thing to ſee fathers who have two hundred children living at the ſame time; and it often happens that a man has half a dozen children born in one day, for they never cohabit with their wives while pregnant, which indeed is the only reaſon that can be given for their being permitted to take ſo many. A man's principal wealth conſiſts in the number of his children, whom he can diſpoſe of at pleaſure, except his eldeſt ſon.

On the death of the father, the eldeſt ſon inherits not only all his goods and cattle, but his wives, which he retains as his own, except his mother, for whom, in caſe ſhe deſires it, he provides a ſeparate ſubſiſtance and apartment. This cuſtom prevails with the king and grandees, as well as amongſt the common people.

The people here are equally fond of dancing with thoſe on the Gold coaſt; and the methods they uſe in that exerciſe are much the ſame. Their muſical inſtruments are alſo of the like kind, but are much better made, and their ſound is not ſo harſh.

They practiſe circumciſion in Whidah as in moſt other parts of Guiney; but the time of performing the operation is uncertain, ſome doing it at the moſt infant ſtate, and others not till the children are five or ſix years of age.

The natives are liable to ſeveral kinds of diſeaſes, particularly malignant fevers, and the fleſh-worms, which latter we have already deſcribed in our laſt ſection. Their fevers are moſt prevalent in the months of June, July, and Auguſt, and diſcover themſelves by violent pains in the head and reins, an inclination to vomit, bleeding at the noſe, and ſuch a thirſt that the tongue appears quite black. However, they have excellent phyſicians; ſo that though theſe diſorders are frequent, yet they ſeldom prove fatal. The worſt and moſt difficult diſorder to cure is the dyſentery, which attacks people at all ſeaſons of the year. It commonly ariſes either from their making too free with ſpirituous liquors, or from eating the country fruit to exceſs. They are greatly alarmed at the approach of ſickneſs; and the mention of death hath ſuch an effect upon them, that it frequently accelerates their illneſs. Even to ſpeak of it before the king, or any great man, is accounted a capital crime.

There is little difference between the religion of the Whidah blacks and thoſe of the Gold coaſt, except that the number of the fetiſhes of the former is much more conſiderable. Their chief deity is a ſerpent of a particular ſpecies, whoſe bite is not mortal; and is ſo well uſed by his votaries, that he ſcarce ever attempts to hurt them. They addreſs themſelves to this animal on the moſt important occaſions; as for ſeaſonable weather, the preſervation of their ſtate, or whatever elſe concerns the public welfare. They have alſo a grand temple erected in Whidah, dedicated to this ſerpent; and a leſſer in almoſt every village, with prieſts and prieſteſſes to officiate in them. The king annually makes preſents and offerings to the great temple, conſiſting of gold, cattle, pieces of ſilk, and all manner of meat, drink, fruits, and European merchandize to obtain a plentiful harveſt, and the proſperity of his kingdom; and if they apprehend any calamity like to befal them, theſe offerings are frequently repeated.

In this temple, it is ſaid, they always keep a ſerpent of a monſtrous ſize, worſhipping the creature in perſon, and not in effigy: and formerly, the king uſed to go on pilgrimage with his whole court, annually, to adore this ſerpent; but, of late, deputes a certain number of his wives, to perform this act of devotion in his ſtead. Once every year it is pretended, that the virgins, and young women of the country, are ſeized by this ſpecies of ſerpents, and worked up to a kind of religious frenzy; whereupon they are carried to the ſerpents temples in the reſpective villages, and obliged to remain there for a certain time, till they return to their ſenſes. Theſe are uſually the wives and daughters of the principal men of the place, who thereupon make preſents to the prieſts and prieſteſſes; but our author looks upon the whole to be a pious fraud to get a little money out of the people: and, it ſeems, if any one refuſes his wife or daughter to go to this idol temple, when they pretend to be thus inſpired, he does not only incur the reputation of a prophane perſon, and an enemy to their religion, but is in danger of being ruined by the influence and ſuggeſtions of the prieſts: and that they may be ſupported by the government in their pretenſions, the king, it ſeems, is allowed to ſhare the profits which the prieſts gain by this pretended inſpiration of the females, who, when they are diſmiſſed from the ſerpent's temple, are required not to divulge what has happened to them there, under the ſevereſt penalties; but this ſeems to be needleſs, becauſe the women are fond of going to theſe temples on ſuch occaſions, being allowed to take greater liberties there, than they could at home.

The next thing the Whidahs pay divine honours to, are fine lofty trees and groves. To theſe they apply in their ſickneſs, or on any private misfortune; all the ſerpents temples are in ſome grove, or under ſome ſpreading tree.

The ſacrifices offered to the trees conſiſt of loaves, of millet, maize, or rice, placed at the foot of the tree: if the

patient

patient compliments the prieſt with a pecuniary preſent, he leaves them to be devoured by the beaſts and birds; if not he takes them home, and converts them to his own uſe.

The ſea is another of their principal gods, to whom they ſacrifice, when the winds and waves are ſo tempeſtuous, that no foreign merchant can viſit their coaſt; which uſually happens in July and Auguſt, and ſometimes in other months: then they throw in all manner of goods, meat, drink, and cloathing, and alſo a ring, to appeaſe the enraged element. But the carcaſe of the beaſt ſacrificed on this occaſion is the property of the prieſt, who diſpoſes of it in ſuch manner as he thinks proper; ſometimes he divides it among the people, but in general he appropriates it to himſelf.

Beſides theſe public objects of adoration, every man has a numerous ſet of gods, of his own chuſing, at Whidah. Every thing they meet with on going abroad, animate, or inanimate, they introduce into the number, after it has undergone the following trial: they pray to it for ſomething they ſtand in need of, and if they obtain their deſire by any means, they aſcribe their ſucceſs to the influence of this new god; but if they are diſappointed, the blame is generally laid on themſelves, and not on the deity.

Another of their public fetiſhes, called agoye, is made of black earth or clay, and in form ſomewhat reſembles a negro ſquatting. It is placed on a kind of pedeſtal ornamented with a ſlip of red cloth bordered with cowries: the head is crowned with lizards and ſerpents, intermixed with red feathers; and from the top iſſues the point of an aſſagaye that goes through a larger lizard, beneath which is a ſilver creſcent. This idol is placed on a table in the houſe of the grand ſacrificer; before it ſtand three wooden bowls, or half calabaſhes, in one of which are a number of ſmall earthen balls. The people generally conſult this idol before they commence any capital undertaking, for which reaſon he is called, the god of councils. Thoſe who adviſe with this fetiſh, addreſs themſelves to the ſacrificer, informing him of the buſineſs they are about to undertake; after which, they preſent their offerings to agoye, and give the prieſt, his interpreter, the fee. If the prieſt is ſatisfied with the preſent, he takes the bowls, and, after ſeveral grimaces, throws the balls at random out of one bowl into another. If the number in each appears to be odd, the undertaking is declared proſperous, and the perſon who applies for advice returns home perfectly ſatisfied. This oracle, however, frequently proves erroneous, in which caſe, ſuch is the preposſeſſion of the negroes, that they lay the blame intirely on themſelves, and acquit agoye.

Prieſts and prieſteſſes have an uncommon reſpect ſhewn them in the kingdom of Whidah: their perſons, and all that belong to them, are held ſacred and inviolable; and though the wives of other men are little better than ſlaves to their huſbands, the huſband of a prieſteſs is obliged to be all obedience at his peril. Both the eccleſiaſtical and civil government would reſent his aſſuming any authority over ſuch a wife, which makes the natives very cautious of marrying a prieſteſs. Nor would they ever conſent that their wives ſhould be admited into the order of the prieſthood, if they could help it. For as I apprehend it, there is a certain tribe amongſt them who are prieſts and prieſteſſes by inheritance; but then there are others admitted by that tribe into this order upon ſpecial occaſions.

The prieſts, as well as prieſteſſes, are eaſily known by the ſcars and marks on their bodies, made at the time they were initiated into the religious order. In other reſpects they differ but little more from the laity, their habit being much the ſame, though they have the privilege of dreſſing themſelves like the grandees. They trade like other people, and gather conſiderable poſſeſſions by the ſale of cattle and ſlaves; but their greateſt gain ariſes from the credulity of the people, from whom they extort offerings and preſents for the great ſerpent, which their deluded devotees imagine is religiouſly beſtowed, whereas it only contributes to the emolument of the prieſts, for they convert them to their own uſe; and in this they are ſo diligent, that they ſometimes even leave the poor ſerpent without victuals.

The Whidah blacks have imperfect and confuſed notions of heaven and a future ſtate; and ſome of them mention a local hell for the puniſhment of the wicked, but ſeem to regard it as little as Chriſtians do. Some of them believe, that both black and white men were created by the ſupreme God at the ſame time; while others aſcribe the creation to a great ſpider they call anaſie. Every thing relating to religion, they denominate fetiſh; but to the idol of their hearts, or favourite god, they give the title of boſſum; and to this god, the beloved wife is always dedicated, and alſo aſſumes that name.

Each prieſt, or fetiſher, hath a different god, to whom the people, under his care, apply on public occaſions, or common calamities. When they are debating on war and peace, they bring ſacrifices, and conſult the god by their prieſt, who ſometimes performs the ceremony alone, and returns an anſwer to thoſe who come to enquire of him; at other times he conſults the idol in their preſence; from whom, however, they expect no vocal anſwer: but the prieſt throws up ſome nuts or ſmall pieces of leather, and as they fall nearer or farther from each other, he fortells good or bad ſucceſs to the undertaking. They take every ſolemn oath alſo before an idol, drinking a draught after it, and praying their god may ſtrike them dead, or the liquor may burſt them, if they do not perform their engagements, or if the thing be not true which they atteſt: however, it ſeems, the prieſt has power to abſolve them from theſe oaths; to prevent which, upon great occaſions, they make the prieſt ſwear, that he will not abſolve the party, or diſpenſe with his oath, requiring the moſt dreadful imprecations from the prieſt to confirm it: and the negroes believe, that whoever drinks the dreadful cup with ſuch imprecations, and afterwards breaks it, will infallibly burſt or die ſoon after.

If the weather is unſeaſonable, either exceſſive wet or dry, the whole town or country conſult their prieſt how the vengeance of heaven may be appeaſed: and he generally adviſes them to offer certain ſacrifices, which is readily complied with: and every village has a ſacred grove ſet apart, where the ſacrifices are killed, and divine worſhip performed, and theſe they will not ſuffer to be profaned or cut down upon any occaſion. But beſides the idol that belongs to the prieſt, every perſon has his particular houſhold god, before which he conſtantly performs his devotions on the day of the week he was born. This they call their boſſum, as they do the day itſelf, and drink no wine or ſtrong liquor on that day before ſun-ſet: they are alſo then habited in white, or their ſkins coloured with a whitiſh earth or paint. There is another day of the week alſo ſet apart for divine worſhip; when the poor ſacrifice poultry, and the rich a ſheep to their god, without the aſſiſtance of a prieſt, which is eaten by the man and his friends, but the guts and inwards, boiled in the blood, is reckoned the moſt delicious morſel here, as well as at the cape: and there are few families in Guiney, but what are obliged by antient cuſtom (which they think themſelves religiouſly bound to perform) to abſtain from certain kinds of meat; ſome from the fleſh of goats, others from that of hogs, and a third perhaps, from tame white fowls; and their reſpective children and poſterity never deviate from the rules preſcribed by their anceſtors, among which, at Acra, on the Gold coaſt, circumciſion is one; but from whence they received it, or how long they have uſed this rite, we cannot aſcertain, as none among them could give us any ſatisfactory information concerning it.

What notion they have of the deities they worſhip is alſo uncertain, any farther than that they look upon them as beings veſted with great power, and that carefully obſerve their behaviour, and reward and puniſh them in this life according to their demerits: they have no great expectation, or dread of futurity; it is ſaid, the rewards they expect are multitudes of wives and ſlaves, health and wealth, and other proſperous circumſtances in this world; and the puniſhments they apprehend, are a deprivation of theſe. The greateſt calamity that can befal them, and what they dread moſt is death. Murder, adultery and theft, according to our author, are venial crimes, and may be atoned for with gold, &c. But their eating forbidden meats, and drinking prohibited liquors, and a neglect of their holidays, they think can never be pardoned, but will (with deliberate and wilful perjury) be puniſhed with death. Moſt of them, as has been obſerved, believe little of future rewards and puniſhments; though they ſeem generally to agree, that the ſouls of good men ſurvive after death; and ſome few of them talk of a paradiſe not unlike the elyſian fields, whither good ſpirits are ſent; that is, ſuch as have kept their holidays, inviolably abſtained from forbidden meats, and obſerved their oaths: and they that have been deficient in any of theſe particulars are drowned in a certain river, and a period put to their exiſtence; but ſcarce any of them ſeem to have any notion of a wicked man's being puniſhed eternally. Thoſe that have are ſuppoſed to have learned it from the Chriſtians, with whom they have converſed upwards of two hundred years: and there are thoſe that imagine their ſouls after death paſs into the bodies of white men, and undergo an unlimited tranſmigration.

Though all the negroes worſhip ſome creature or other, yet they have not all idols or images in their houſes; and ſome of the natives of the mountainous inland country, it is ſaid, worſhip a living man, as the Tartars near China do; of whom they relate ten thouſand miracles, and believe he dooms them to happineſs or miſery after death, according to their deſerts.

Having thus given an account of the religion of the Whidah negroes, we ſhall next proceed to deſcribe their government, with the ſeveral kinds of puniſhments inflicted on offenders.

The king of Whidah, to uſe the words of one of the Dutch factors, is feared and reverenced by his ſubjects as a demi-god, who always appear in his preſence, either kneeling, or proſtrate on the ground: when they attend him in the morning, they proſtrate themſelves before the gate of his palace, kiſs the earth three times, and clapping their hands together, uſe ſome expreſſions that look more like the adorations of ſome deity, than compliments paid to an earthly prince; and they even tremble at the ſight of him; he has his viceroys, governors, generals, and other officers, as European princes have, of whom, he conſtantly maintains four or five thouſand with meat and drink; ſome of whom frequently are permitted to eat in his preſence. But no perſon whatever is permitted to ſee his majeſty eat, or to know in what part of the palace he ſleeps, unleſs his wives, of whom the king ſeldom has leſs than one thouſand. Theſe continually ſurround him: they are his life-guards, and are frequently ſent on his embaſſies, and employed in executing ſuch commands and ſentences as ſeem much more proper for men; as to puniſh criminals, pull down their houſes, and the like. Boſman relates, that a little before he arrived at Whidah, a negro officer of his acquaintance having been unjuſtly accuſed to the king, orders were iſſued to demoliſh his houſe, and deſtroy all that he had: of which the man having received ſome notice, when a detachment of two or three hundred of the king's wives came to execute the ſentence, they found him placed near a heap of gunpowder, with a lighted match in his hand, profeſſing his innocence, but threatened to blow both them and himſelf up, if they did not give him time to repreſent his caſe to the king; which being agreed to, he had the good fortune to convince his Whidaian majeſty of his innocence, and to get the ſentence reverſed.

When the king goes abroad, five or ſix hundred of his wives run before him, or attend him; he has not, it is ſaid, a ſingle man in his train; but he ſpends the greateſt part of his time at home in his palace, adminiſtering juſtice to his ſubjects, and tranſacting affairs of ſtate, or converſing with the European factors or merchants, who find him, uſually, in a ſtately hall of audience, richly habited in gold and ſilver ſtuffs: his wives, alſo, when they attend him, are richly clothed and adorned with gold, coral, and glittering trifles, eſpecially their hair; and though the king never eats before company, it is ſaid he will drink very plentifully both with the Europeans and his own ſubjects, at certain times.

The cabeceros are the chief magiſtrates under the king, theſe he conſults in ſtate affairs, and concerning peace and war: and by theſe, he uſually adminiſters juſtice to the people. Travellers make two claſſes of nobility in every government in Guiney: 1. The cabeceros laſt mentioned, who are the grandees of every kingdom or ſtate. 2. The inferior nobility, an order of knights, who being poſſeſſed of conſiderable fortunes, either by deſcent or purchaſe, and having obtained ſome reputation in their reſpective countries, are allowed to have ſeven trumpets, or hollow elephants teeth, ſounded before them, when they go abroad. The king of Whidah has ſeveral viceroys under him, whom he appoints at pleaſure, and who, in his abſence, have an unlimited power. He has alſo grand captains, who are viceroys over certain diſtricts; beſides theſe, there are a great number of honorary captains, and another ſort that are entruſted with the care of the markets, ſlaves, priſons, &c.

Notwithſtanding there be no written laws in Guiney, yet they have particular puniſhments appropriated to certain crimes by cuſtom. Murder is uſually puniſhed with death, if the perſon killed was a free-man: but for the murder of a ſlave, a fine only is exacted. Adultery is alſo puniſhed with death, where it is committed with any of the king's wives, or the wife of a great man. But of the puniſhments for theſe crimes, we ſhall ſpeak more particularly, before we quit this ſubject.

In criminal caſes, the king aſſembles a council, when he opens the indictment, and requires every perſon to declare his opinion what puniſhment the offender deſerves; and, according to the verdict, the puniſhment is immediately inflicted.

For the murder of a free ſubject, the criminal is cut open alive, his entrails taken out and burnt, and his body fixed on a pole erected in the market place, where it continues for ſome days, and is then carried to ſome remote place, to be devoured by birds or wild beaſts.

Adultery is no leſs ſeverely puniſhed than murder, eſpecially when it is committed with one of the king's wives. If the guilty couple happen to be ſurpriſed, the king pronounces ſentence of death immediately; the manner of executing, according to the abovementioned author, is thus performed; the king's officers cauſe two graves or pits to be dug, ſix or ſeven feet long, four broad, and five deep, ſo near each other, that the criminals may ſee and ſpeak together. In the middle of one they plant a ſtake, to which they faſten the woman, tying her arms behind the poſt: her legs are alſo tied at the knees and at the ancles. At the bottom of the other pit the king's wives lay bundles of ſmall faggots, after which they retire; and two forks of wood being faſtened by the officers at the ends, the man ſtark naked, is tied to an iron bar, like a broad ſpit, with iron chains, that he cannot ſtir, and laid acroſs the two forks. They then ſet fire to the wood, ſo that the flames may juſt reach the body, which is thus roaſted by a ſlow fire. This cruel puniſhment would be very lingering, if they did not take care to turn the criminal ſo with his face downward, that the ſmoke ſuffocates him before he is quite broiled. When they no longer perceive ſigns of life, they untie the body, fling it into the pit, and fill it up with earth. When the man is dead, women iſſue from the palace, to the number of fifty or ſixty, richly dreſſed as on a feſtival day. They are guarded by the king's muſketeers, accompanied by his drums and flutes. Each carries on her head a large pot of ſcalding water, which they pour one after another on the head of the female criminal, dead or not dead, and throw the pot after it. This done, they looſen the body, take up the ſtake, and caſt them both into the pit, which they fill up with ſtones and earth.

When it happens that the wife of a grandee is taken in adultery; the huſband is at liberty to uſe his own diſcretion, either to put her to death, or ſell her as a ſlave to the Europeans. If he determines on the former, ſhe is ſtrangled or beheaded by the executioner, and the king is ſufficiently ſatisfied on being made acquainted with what has paſſed. The injured huſband, however, has not any power over the man that diſhonoured him, unleſs he happens to catch him in the fact, when he has liberty to kill him on the ſpot. If otherwiſe, he muſt apply to the king, for juſtice, who uſually ſentences the criminal to death. The Chevalier Marchais, who was preſent at one of theſe executions in the year 1725, gives us the following account of it: "A grandee complained to the king, that a private perſon had debauched his wife. His majeſty, upon hearing the witneſſes, paſſed ſentence, that the offender ſhould be beaten to death wherever he could be found, and his body expoſed for food to the beaſts and birds. The officers belonging to the governor of Sabi immediately went in ſearch of him, and found him almoſt entering his own door, where they ſoon diſpatched him with their clubs, and left the body as the king had ordered. The neighbours went to acquaint the captain of the ſeraglio, that the body would infect all that quarter, before it corrupted, and intreated he would obtain the king's orders to have it taken from thence, or thrown into the ſewer, where it could not affect any body. The officer repreſented their complaint to the king, who replied, "If I did not puniſh adultery with ſeverity, no perſon in my kingdom could be ſafe. The body ſhall lie there till it be devoured or rotten. The people ſhall ſee it; and learn, at the expence of this wretch, how they invade their neighbour's bed. All I can grant, is, that in the day-time they may throw a mat over the body, leaving the face uncovered, that the criminal may be known as long as his features can be diſtinguiſhed." Not content with this, the king gave to the grandee, whom the deceaſed had injured, all his effects, to ſell or diſpoſe of as he thought proper, and alſo his wives and ſlaves."

The puniſhment of crimes of a more trifling nature is left to the viceroys, who generally order ſome kind of penance, or a pecuniary mulct, which the king always receives.

The crown of Whidah, on the death of the king, deſcends to his eldeſt ſon, unleſs the grandees have reaſon to reject him; in which caſe they appoint the younger brother in his ſtead. Theſe ſons, however, muſt be born

after

after their father's acceſſion; thoſe born before being excluded.

As ſoon as the king's eldeſt ſon is born, he is always removed from the court, and placed in the hands of ſome private perſon, who lives remote from the palace, and with whom he remains unacquainted with his birth, or the rank he is deſigned for. The perſon in whoſe hands he is placed, is told the ſecret, which he is obliged to conceal from him on pain of death. By theſe means it often happens, that when a prince is called to the throne, he is at the very time employed in ſome of the moſt menial offices; and it is with great difficulty he can be perſuaded to give credit to thoſe who inform him of his elevated ſituation. This is a political manœuvre of the grandees, in order to preſerve the government, at leaſt for ſome time, in their own hands; for from the obſcure ſituation in which the prince has been brought up, he is obliged to conſult the grandees upon every occaſion, being himſelf deſtitute of all knowledge of government.

The new king is immediately brought to the palace on the death of the old one; but the time of his coronation is uncertain, reſting in the grandees, who fix it as beſt ſuits their reſpective intereſts: it is in general ſome months, and frequently ſeveral years; but ſeven years is the longeſt term for which it can be delayed. During this interval the government is rather in the hands of the grandees, than thoſe of the king, for they execute all public buſineſs within themſelves, and never conſult him even upon the moſt important occaſion. In every other reſpect, however, he is treated like a prince; only with this diſtinction, that he muſt leave the palace previous to the time of his coronation; which when the grandees have fixed, they give immediate intimation of it to the king, who aſſembles them in the palace; and, after the council have deliberated on the meaſures to be uſed in celebration of it, notice is given thereof by a diſcharge of cannon, and the whole kingdom is ſoon made acquainted with the news.

The grand ſacrificer goes the next morning to the palace, and demands of the king, in the name of the great ſerpent, the offerings due on the occaſion. Theſe offerings generally conſiſt of an ox, a horſe, a ſheep, and a fowl, which are ſacrificed in the palace, and afterwards carried in great ceremony to the middle of the market-place. As ſoon as they arrive there, the grand ſacrificer erects a pile nine or ten feet long, at the end of which is a piece of linen in imitation of a ſtandard or flag, and round the victims are placed ſmall loaves of millet, rubbed over with palm-oil. After ſome trifling ceremonies, the company retire, and leave the carcaſes expoſed to the birds of the air, no perſon being permitted to touch them on pain of death. As ſoon as they arrive at the palace, about twenty of the king's wives march in proceſſion from thence to the place of ſacrifice, the eldeſt or chief, carrying a large figure made of earth, repreſenting a child ſitting, which ſhe places at a ſmall diſtance from the victims. They are attended by a number of muſketeers, with a party of the king's flutes and drums; and both coming and going they keep continually ſinging, the people proſtrating themſelves as they paſs, and expreſſing their joy by the loudeſt acclamations and tokens of applauſe.

The grandees, at the concluſion of theſe ceremonies, repair to the palace, dreſſed in their richeſt apparel, and atttended by their ſlaves. When the king is not preſent, they enter it without ſtripping, and, after having proſtrated themſelves before the throne, they retire. This part of the ceremony continues for fifteen days, during which the king's women make the palace reſound with their ſhouts, and the public joy is announced by the firing of cannon, and an almoſt continual diſplay of rockets from every quarter.

When the fifteen days have elapſed, the grandees depute one of their number to go to Ardrah, with a magnificent retinue, to requeſt one of the nobles of that kingdom (in whoſe family the right has continued time immemorial) to come and crown the king. The greateſt reſpect is paid to this nobleman by all ranks of people, and the expences of his journey are defrayed by the grandees of Whidah. When he arrives at the laſt village next the capital, he and his retinue muſt continue there four days; during which he receives viſits from the principal people of the kingdom, who make him preſents, and divert him with various kinds of entertainments; the king's wives alſo, preceded in a pompous manner by a guard of fuſileers, and his majeſty's band of muſic, carry him proviſions twice a day from the royal table.

After the expiration of four days, the grandees, attended by their uſual train, and a prodigious concourſe of people, go to the village, and conduct the Ardrah nobleman in great ſtate to Sabi, where he is received by the firing of the king's cannon, and the univerſal acclamations of the people. After this, he is conducted to the apartments prepared for him near the king's palace, where he is ſplendidly entertained by the king's principal officers, and receives viſits from all the grandees. He continues here five days, on the third of which he enters the palace, with the chief of his train, without taking off any part of his dreſs or ornaments, and ſpeaks to the king ſtanding, and without proſtrating himſelf. On the evening of the fifth day nine guns are fired at the palace, to give the people notice that the king will be crowned the following day, and that he will ſhew himſelf in public, ſeated on his throne, in the court of the palace deſtined for that purpoſe; and the gates of it will be open for the admiſſion of all ranks of people. At the ſame time he ſends one of his officers to acquaint the directors of the European factories with the time and place, and to invite them to be preſent at the ceremony of his coronation.

The king ſets out from his ſeraglio, about five o'clock in the evening of the ſixth day, attended by forty of his favourite wives dreſſed in the moſt ſumptuous manner, and rather loaded than ornamented with gold necklaces, pendants, and bracelets, foot chains of gold and ſilver, and the richeſt jewels. The king is dreſſed in the moſt magnificent manner, and on his head he wears a gilt helmet, decorated with red and white feathers. He is attended alſo by his guards, and proceeds from the ſeraglio to the throne, which is placed in an angle of the court to the eaſt of the palace, and is called, The Court of the Coronation. The throne conſiſts of a large gilt arm chair a little elevated, with a velvet cuſhion richly laced with gold, on which the king ſits, having another of the ſame quality at his feet. On the left hand of the king are placed his forty favourite women; on the right, his principal grandees, and in a line with them the chief Europeans of the Engliſh factories. One of the grandees holds in his hand an umbrella, which is more for ornament than uſe, as the ceremony is performed at night. It is made of the richeſt cloth of gold, the lining embroidered with gold, and the edges adorned with gold fringes and taſſels. On the top of it is the figure of a cock as large as the life, and the pole that ſupports it is about ſix feet long, and gilt. Another grandee kneels before the king, and keeps fanning him during the whole ceremony. Oppoſite to his majeſty are two of his dwarfs, who alternately repreſent to him the good qualities of his predeceſſor, extol his juſtice, liberality, and clemency, and exhort the king not only to imitate, but ſurpaſs him; and conclude their harangue with wiſhes for the king's happineſs, and that he may enjoy a long and proſperous reign.

Theſe ceremonies being ended, the grandee from Ardrah is ſent for, whoſe office is to crown the king. When he arrives at the outer gate of the palace, the cannon are diſcharged, and the muſic plays. He enters the court with his attendants, who guard him to a certain diſtance, when he leaves them, advances ſingly to the throne, and ſalutes the king by gently bowing his head, but without proſtrating himſelf. He then makes a ſhort ſpeech to the king, relative to the ceremony he is to perform; and, taking the helmet off his head, which he holds in his hands, he turns to the people. A ſignal is then made, at which the muſic immediately ceaſes, and a total ſilence enſues. The grandee of Ardrah then, with a loud voice, repeats the following words three times: "Here is your king, be loyal to him, and your prayers ſhall be heard by the king of Ardrah, my maſter;" after which, he replaces the helmet on the king's head, makes a low bow, and retreats: the cannon and ſmall arms are immediately fired, the muſic ſtrikes up, and the acclamations are renewed. The grandee of Ardrah is then conducted in great ſtate to his apartments; after which, the king, attended by his wives, his guards, and the Europeans, return to the ſeraglio, where the ladies make their compliments to him as he enters the gate. The next day the king ſends a handſome preſent to the Ardrah grandee; after which he muſt return home, not being allowed to remain three days longer in the kingdom. The rejoicings that follow the coronation continue for fifteen days, and the whole is cloſed with a grand proceſſion to the houſe or temple of the great ſerpent; the manner of which is thus related by the Chevalier Marchais, who was a ſpectator of it.

Immediately on notice being given of theſe proceſſions, the crowds are ſo great from all parts of the kingdom, that it would be impoſſible to paſs, if care was not taken to range them in order on each ſide. For this end, a great number

number of beadles, or conſtables, with large rods or ſwitches in their hands, go foremoſt to keep order, and make way. Theſe oblige the people, gathered near the temple gate, to ſit on their heels and keep ſilence. Next follow forty of the king's muſketeers, four and four, with their captain at their head: then the king's trumpet-major, with twenty trumpets; and after him the drum-major, with as many drums, beating as loud as they can; next, the chief player on the flutes, with twenty muſicians, on the ſame inſtrument. Theſe three bands are the king's chamber-muſic; and ſometimes play ſeparately, ſometimes together. Twelve of the king's wives, two and two, carrying the king's preſents to the ſerpent, which conſiſt of bujis, brandy, linen, callico, and ſilk: the king's valet-de-chambre alone, with a cane in his hand, bareheaded, and cloathed like the grandees, his pagne trailing on the ground; twenty-one trumpets, three and three; forty ſoldiers with muſkets, four and four; twenty drums, two and two; twenty flutes, two and two; twelve of the king's wives of the third claſs, with large baſkets of reeds on their heads, with victuals for the ſerpent, from the king; three of the king's dwarfs richly dreſſed, and long pagnes trailing behind them, which makes them look more diminutive; the grand maſter of the ceremonies bareheaded, his cane in his hand, dreſſed like the grandees; forty muſketeers, four and four; twenty drums; twenty trumpets; twenty flutes; twelve of the king's wives, carrying the queen-mother's preſents to the ſerpent; three valets of the queen-mother carrying her arm-chair; the foremoſt has the back of the chair faſtened to his ſhoulder, the two other carry the feet; three of the king's dwarfs, dreſſed like the former; after them comes the queen-mother, walking alone, her cane in her hand, magnificently dreſſed, her pagnes trailing behind, and on her head a reed hat, neatly wrought; three ladies of the palace rich dreſſed but bare headed; twelve women trumpets, two and two; twelve women drums; twelve women flutes; the grand ſacrificer, bareheaded, his cane in his hand, richly dreſſed, like a grandee; laſtly, a body of forty muſketeers cloſing the proceſſion, with ſome beadles or conſtables, to keep off the populace, and preſerve the peace.

When theſe ſeveral bodies arrived at the place of the ſerpent, without entering the court, they proſtrated themſelves with their faces to the earth at the gate, clapping their hands, throwing duſt on their heads, and giving extraordinary ſhouts of joy. Mean time the men and women muſicians, ranged on each ſide, made a horrible noiſe, while the ſoldiers kept continually firing with their muſkets. The king's wives, who carried his preſents and thoſe of the queen-mother, waited, ranged in a line in the outer court, till that princeſs entered, and delivered theſe preſents to the grand ſacrificer. In doing this, ſhe was aſſiſted by the king's valet-de-chambre, the maſter of the ceremonies, and the three ladies of the palace, who were the only perſons admitted into the temple. This princeſs it ſeems, was not admitted to ſee the ſerpent, for that is a favour not even allowed to the king, who is not ſuffered to enter the firſt hall, but makes his addreſſes to the ſerpent by the mouth of the grand ſacrificer, who brings back ſuch anſwers as he thinks proper. After this, the proceſſion returned to Sabi with the ſame order and attendants that it ſet out with, from the palace.

We need not wonder, that the exalted character of a monarch of this country, after the obſcure manner in which he has been brought up, ſhould dictate to him the paths of eaſe and diſſipation; and that he ſhould enjoy a peculiar reliſh for thoſe pleaſures, with which, had he been progreſſively familiar, he would in all probability, have been ſatiated. He lives almoſt in a ſtate of indolence, ſeldom going abroad, and only attending his grandees occaſionally when they are aſſembled in the hall of audience for the adminiſtration of juſtice: all the reſt of his time is ſpent in the receſſes of the ſeraglio, attended by his wives. Theſe are exceeding numerous, and divided into three claſſes; the firſt conſiſts of the moſt beautiful among them, whoſe number is not limited. She who bears the firſt ſon is the chief, and is diſtinguiſhed from the reſt by the name of queen, or, as they term it, the king's great wife. She has the ſole management of all affairs belonging to the ſeraglio; nor dare any perſon controul her, except the king's mother, whoſe authority is ſuperior to that of any other ſubject whatever. She has a ſeparate apartment, with a ſettled revenue for her ſupport; but ſhe is under this reſtriction, that ſhe muſt remain a widow during the reſt of her life. The ſecond claſs of the king's wives conſiſts of thoſe that have had children by him, but, either from age or other cauſes, are rendered incapable of contributing any farther to his future amuſements; there is no limited number of theſe. The third and laſt claſs conſiſts of thoſe who ſerve as ſlaves to the king, and his other wives; and though they are employed in theſe menial offices, yet it is death for them to leave the ſeraglio, without permiſſion from the king, or to have connexions with any other men.

The king is extremely jealous of his wives; ſo that ſhould a man meet one of them in the ſtreets, and only touch her by accident, ſhe is never permitted to enter the ſeraglio again, for both ſhe and the man are immediately ſold as ſlaves. If it appears there was any premeditated deſign in their touching each other, the woman is ſold, but the man is put to death, and all his effects confiſcated to the king. For this reaſon, ſuch as have occaſion to go to the palace, call out immediately in their entrance "Ago," which ſignifies, "Make way, retire, or take care;" when the women place themſelves on a range on one ſide, and the men walk as cloſe as they can on the other. In like manner, when the king's wives go to work in the fields, whoever meets them muſt inſtantly fall on their knees, and continue in that poſition till they have paſſed. But though the people are obliged to pay ſuch deference to the king's wives, yet his majeſty has very little reſpect for them himſelf; they attend him on all occaſions like ſervants, and inſtead of ſhewing any affection, he generally treats them with the moſt haughty contempt.

As the king conſiders his wives only as ſlaves, ſo on the moſt trifling occaſions, he will ſell a number of them to the Europeans; and even ſometimes, when ſhips are waiting on the coaſt for ſlaves, he will ſupply them with whatever number they want to complete their complement. The deficiencies are ſupplied by the aſſiduity of his captains, or governors of the ſeraglio, who go about the ſtreets, and ſeize ſuch girls as they think will be pleaſing to the king; and as they are the handſomeſt they can ſelect, his majeſty is ſometimes particularly attracted by their beauties. When this happens to be the caſe, the object that moſt ſtrikes his fancy is honoured with his company for two or three nights, after which ſhe is diſcarded, and obliged to paſs the remainder of her life in a ſtate of obſcurity; for which reaſon the women are ſo little deſirous of becoming wives to the king, that they would rather prefer a life of celibacy to that honour.

The palace of this monarch is magnificently furniſhed, and abounds with all the elegancies and luxuries of life. On all public occaſions he obſerves great ſtate; at which times he is dreſſed in ſilk and gold, and is attended by his principal officers, or thoſe who hold employments under him. No ſubject is permitted to ſee him, unleſs his buſineſs be of a peculiar and urgent nature, and he has obtained the royal permiſſion; in which caſe he is uſhered in by the high prieſt, before whom he muſt proſtrate himſelf, as well as to the king. Even his grandees (except when a general council is called) find ſome difficulty in obtaining an audience; and when they do, they muſt appear before him in the moſt humiliating form: they advance creeping to a certain diſtance, till the king, by clapping his hands ſoftly, gives them leave to ſpeak, which they do in a low tone, with their face almoſt to the ground, after which, they retire in the ſame manner in which they advanced. The captain of the ſeraglio, and the grand ſacrificer or high-prieſt, are the only perſons that are allowed to enter the ſeraglio without permiſſion firſt obtained from the king; but if they want to ſpeak to him, they muſt pay the ſame homage as any other ſubject.

The Europeans reſiding here are exempted from theſe ſlaviſh ceremonials, and are granted an audience whenever they deſire it. They always ſalute the king in the ſame manner as they would do an Engliſh nobleman; and he receives them with a diſtinguiſhed familiarity. He takes them by the hand, makes them ſit down, and drinks to them: if it be the firſt viſit, and the perſons be directors, or commanders of ſhips, they are generally ſaluted with five or ſeven guns, when they leave the palace. In the audience-chamber are two benches, one of which is broader than the other, covered with a cloth, and by it is an oval ſtool, whereon the king ſits during the conferences. The other bench is covered with mats, on which the Europeans ſit bareheaded, not by order, but from a voluntary deſire of ſhewing proper reſpect to the ſovereign, who entertains them in the beſt manner he is able during their ſtay, and endeavours to make his company as agreeable to them as poſſible. If they dine or ſup with him, the table is ſet out and ſerved with great elegance. While they are feaſting, the king's grandees proſtrate themſelves before him, and ſeem readily and cheerfully to accept what proviſions are left by the Europeans to be given them.

When

With reſpect to the king's revenues, they are very conſiderable; for, beſides what ariſes from his lands, he receives a duty on all commodities ſold in the markets, or imported in this country. His lands not only furniſh him with proviſions for his houſhold, but alſo for exportation, great quantities being annually ſold to the neighbouring nations. His property in this reſpect is not confined to the borders of Sabi alone, for his lands extend into ſeveral of the provinces. Theſe are under the cognizance of the governors, who take care of their being tilled, get in the harveſt, and, without the leaſt expence to the king, lay up the produce in the royal magazines.

One moiety of all the tolls and fines in the vice-royalties, becomes alſo the property of the king; but this is inconſiderable, from the iniquity of his collectors, who make ſuch depredations on their truſt, that ſcarcely one-fourth of it comes to his majeſty; though if any of them ſhould be detected, they are ſubject to be ſold, and their family and effects confiſcated to the king's uſe.

In Whidah, ſeveral fairs or markets are kept, not only for the ſale of ſlaves, but alſo for moſt other commodities. Two of theſe are kept weekly, one at Sabi, and the other in the province of Aplogua, both of which are reſorted to by prodigious numbers of merchants. But the moſt conſiderable market is kept about a mile from Sabi, and is held twice a week, that is, on Wedneſdays and Saturdays. The king's ſecond wives have liberty to go to theſe markets to ſell their clothes, and other trading articles, in the making of which thy chiefly employ their time.

Theſe markets are ſubject to great regulations; for when they are kept, a proper place is allowed for the ſale of every different commodity. In order to prevent diſorder and confuſion among the buyers and ſellers, the king appoints a judge or magiſtrate to attend, who, with four officers well armed, inſpect the markets, hear all complaints, and in a ſummary way decide all differences, having power to ſeize and ſell as ſlaves all who ſhall violate the peace. Beſides this magiſtrate, there is another appointed to inſpect the money, which is ealled Toqua, conſiſting of ſtrings of ſhells. to the number of forty; and the whole are forfeited to the king, if one of theſe ſtrings happen to be deficient of a ſingle ſhell.

Booths are erected round the markets: ſome of them are occupied by cooks or ſutlers, who ſell proviſions ready dreſſed, as beef, pork, goats fleſh, &c. others are for the ſale of rice, millet, maiz, and bread; and in ſome are ſold palm-wine, brandy, and pito, a kind of beer.

The principal commodities ſold at Whidah, are, ſlaves, oxen, ſheep, goats, poultry, and moſt kinds of fowls; monkies, and other animals; various ſorts of European cloth; linen, and woolen, printed callicoes, ſilks, grocery goods, china, gold in duſt or bars, iron in bars or wrought. The country manufactures, of this part of the coaſt, are Whidah cloth, mats, baſkets, jars, calabaſhes of various ſorts, wooden bowls and cups, palm-oil, ſalt, red and blue pepper, &c.

We ſhall here give an account of the trade in general on the Guiney coaſt, as it ſtood about the beginning of the preſent century.

"The African company, in its flouriſhing condition, gained annually to England nine hundred thouſand pounds, whoreof in teeth, camwood, wax, and gold, only one hundred thouſand pounds, and the reſt in ſlaves, which, in the infancy of their trade, were in very great demand over all the American plantations, to ſupply their own wants, and carry on a clandeſtine commerce with the Spaniſh Weſt-Indies. On computation, Barbadoes wanted annually four thouſand negroes; Jamaica ten thouſand; Leeward Iſlands ſix thouſand; and becauſe the company could not ſupply this number, having only imported forty-ſix thouſand three hundred and ninety-ſix ſlaves, between the years 1680 and 1688, interlopers crept in, and contended for a ſhare. From this time the company viſibly decayed; inſomuch, that in eight following years they only imported to the Weſt Indies ſeventeen thouſand ſeven hundred and ſixty ſlaves, and the ſeparate traders, in that time, ſeventy-one thouſand two hundred and ſixty-eight.

Finding their trade under great diſadvantages, (though private traders were obliged to pay them ten per cent.) they reſolved to make the beſt ſhare they could in this money, by leſſening their expences about the forts: they accordingly withdrew all ſupplies from the garriſon, leaving them to ſubſiſt by their own management, or ſtarve; Charles fort, at the mouth of the river Gambia, haying only twelve men, was taken by a privateer of eight guns in 1709. Sierra Leona had but thirteen men; Sherbro four; and theſe were not any charge to the company, being poſſeſſed by ſuch, as having a long time reſided in that ſervice, by help of thoſe fortifications, were capable of doing ſomething for themſelves; and ſo the private traders, by degrees, got entirely quit of this duty, the reaſon in a manner ceaſing for which it was firſt impoſed.

About the year 1719, their affairs ſeemed to revive again, under the auſpices of the duke of Chandois, who became a very great proprietor in their ſtock, and promiſed, from his figure and intereſt, a renewal of their privileges: more ſhips were employed than for many years paſt; but whether it were their too large expence, or curruption of their chief officers, who too often in companies think they are ſent abroad purely for their own ſervice, they ſoon felt, that, without a ſeparate act, they were incapable of contending with private traders; they applied to parliament for relief, but inſtead of finding any, were diſſolved, and a new company erected, by act of parliament.

The favourers of companies ſuggeſt, that if that trade be allowed, it ſeems better for the public, that ſome rich and powerful ſet of men ſhould have excluſive powers to encourage and enable them to maintain forts and garriſons, to awe the natives, and preſerve the trade from being engroſſed by our dangerous rivals; for here the French and Dutch, as we relinquiſh any place, ſeize it and thereby obtain an opportunity of fixing what price they pleaſe upon any goods imported from thence.

We now proceed to our method of trade. Private trading ſhips bring two or three boats with them upon this coaſt for diſpatch; and while the mates go away them, with a proper parcel of goods and inſtructions, into the rivers and bye-places, the ſhip is making good her trade at others near hand.

The ſucceſs of a voyage depends, firſt, on the well ſorting, and on the timeing of a cargo. Secondly, in a knowledge of the places of trade, what, and how much may be expected every where. Thirdly, in dramming well with Engliſh ſpirits, and conforming to the humours of the negroes. Fourthly, in timely furniſhing proper food for the ſlaves. Fifthly, in diſpatch; and, Laſtly, in the good order and management of ſlaves when on board; of each a word or two.

Firſt on the timeing of a cargo: this depends, at ſeveral places, much upon contigencies, from the fanciful and various humours of the negroes, who make great demands one voyage for a commodity, that, perhaps, they reject next, and is in part to be remedied, either by making the things they itch after to paſs off thoſe they have not ſo much mind to, or by ſuch a continual traffic and correſpondence on the coaſt, as may furniſh the owner, from time to time, with quick intelligence, to be done only by great merchants, who can keep employed a number of ſhips: that like a thread unites them in a knowledge of their demands, and a readier ſupply for them, as well as diſpatch for their maſter's intereſts, by putting the purchaſe of two or three ſhips into one. Mr. Humphry Morrice was formerly the greateſt private trader in this way; and, unleſs providence had fixed a curſe upon it, he muſt have gained exceedingly.

Secondly, of the ſorting: this may be obſerved in general that the windward, and leeward parts of the coaſt are as oppoſite in their demands as is their diſtance. Iron-bars, which are not aſked for to leeward, are a ſubſtantial part of the windward cargoes: cryſtals, corals, and braſs-mounted cutlaſſes, are almoſt peculiar to the windward coaſt; as are braſs-pans, from Rio Seſtos to Apolionia; cowries (or bougies) at Whidah; copper and iron-bars at Calabar; but arms, gunpowder, tallow, old ſheets, cottons of all the various denominations, and Engliſh ſpirits are every where called for: ſealing wax and pipes are neceſſary in ſmall quantities; they ſerve for daſhees (preſents) and are a ready purchaſe for fiſh, a goat, a kid, or a fowl.

Many places on the African coaſt are rendered dangerous, from the tricks and panyarrs the traders have firſt practiſed upon the negroes; a mutual jealouſy now keeping each ſide very watchful againſt violence. When we trade on board the ſhip, we keep our ſailors in cloſe quarters abaft; and at night we keep a good watch, ſome negroes, attempting now and then to ſteal with their canoes athwart our hawſe, and cut the cable. They ſtranded Captain Cummins, at Whidah, in 1734. They are as often diffident of coming nigh us, and will ply for hours together, in their canoes about the ſhip, before they dare venture.

In this winding part, it has been obſerved, they have a ſuperſtitious cuſtom of dropping with their finger a drop

of ſea-water into their eye, and are pleaſed when anſwered in the ſame manner. This paſſes for an engagement of peace and ſecurity: and yet, after all this ceremony, they will ſometimes return to ſhore; if hardy enough to come on board, they appear all the time ſhy and frightened, and from the leaſt appearance of a panyarr, jump all overboard.

Downwards to Baſſam, Aſſince, Jaquela, cape le Hou, Jaque, Jaques, cape Apollonia, and Three Points, or where they have gained a knowledge of the Engliſh factories, there is a better underſtanding and ſecurity. Theſe are places that ſell off a number of ſlaves, managed, however, wholly on board the ſhips which anchor before the town, hoiſt their enſign, and fire a gun; or when the natives ſeem timorous, do it by their boats caſting along the beach, and pay at ſome of them a ſmall duty to the chief cabiccers.

When a ſhip has gathered up all this trade, ſhe makes up the deficiency of her freight at Anamaboe, three leagues below cape Corſo, where they conſtantly ſtop, and are ſometimes two or three months in finiſhing. It is a place of very conſiderable trade itſelf; and beſides, the company have a houſe and factor, keeping always a number of ſlaves againſt thoſe demands of the interlopers, who they are ſenſible want diſpatch, and therefore make them pay a higher price than any where on the whole coaſt, ſelling at ſix ounces and half a ſlave (in exchange for goods) though the poor creatures look as meagre and thin as their writers.

Thirdly, giving way to the ridiculous humours and geſtures of the trading negro, is no ſmall artifice for ſucceſs. If you look ſtrange and are niggardly of your drams, you frighten him; Sambo is gone, he never cares to treat with dry lips; and as the expence is in Engliſh ſpirits, of two ſhillings a gallon, brought partly for that purpoſe, the good humour it brings them into, is found diſcounted in the ſale of the goods.

Another article is, the wholeſome victualling and management of ſlaves on board. The common, cheapeſt, and moſt commodious diet is vegetables, horſe-beans, rice, Indian corn, and farine, or flour; the former, ſhips bring with them out of England; rice they meet to windward about Seſtos; Indian corn at Montford, Anamaboe, &c. and further ſupplies of them, or farine, at the iſlands of St. Thomas and Princes, maſters governing themſelves in purchaſing, according to the courſe they deſign to ſteer. This food is accounted more ſalutary to ſlaves, and nearer to their accuſtomed way of feeding than ſalt fiſh. One or other is boiled on board at conſtant times twice a day into a dab-a-dab (ſometimes with meat in it) and have an overſeer, with a cat-of-nine-tails, to force it upon thoſe that are ſullen and refuſe to eat it.

When there was that great trade for ſlaves at Whidah, the commanders, with their ſurgeons, always attended on ſhore, where they purchaſed them, in what they called a fair and open market. The mates kept on board, receiving from time to time their maſter's directions, as to the goods wanted, and to prepare the ſhip for the reception and ſecurity of the ſlaves ſent him: where this is a rule always obſerved, to keep the males always a-part from the women and children, to handcuff the former (Briſtol ſhips triple ſuch as are ſturdy with chains round their necks); and to keep your own men ſober, and on a barricaded quarter-deck; though the natural cowardice of theſe creatures, and no other proſpect upon riſing, but falling into the hands of the ſame ſort of rogues that ſold them, very much leſſens the danger: nevertheleſs it is adviſeable, at all times to have a diligent watch on their actions, yet (bating their fetters) to treat them with all gentleneſs and civility.

The bulk of them are country people, ſtupid in proportion to their diſtance from the converſe of the coaſt negroes; eat all day, if victuals is before them, or if not, let it alone without complaint; part without tears with their wives, children, and country, and are more affected with pain than death: yet in this indocile ſtate the women retain a modeſty; for though ſtripped of that poor clout which covers their privities (as we know the Whidahs generally do) they will keep ſquatted all day long on board, to hide them.

Whidah ſlaves are more ſubject to the ſmall pox and ſore eyes; other parts to a ſleepy diſtemper; and to windward exomphalos's. There are few inſtances of deformity any where; even their nobles know nothing of chronical diſtempers, nor their ladies of the vapours. Their flattiſh noſes are owing to a continual grubbing in their infancy againſt their mother's backs, being tied within the tomee, whether upon travel, or buſineſs, for a year or two, the time of their ſucking.

When we are ſlaved, ſays our author; and out at ſea, it is commonly imagined the negroes ignorance of navigation, will always be a ſafeguard; yet, as many of them think themſelves bought to eat; and more, that death will ſend them into their own country, there has not been wanting examples of riſing and killing a ſhip's company diſtant from land, though not ſo often as on the coaſt; but once or twice is enough to ſhew, a maſter's care and diligence ſhould never be over till the delivery of them. Some negroes know well enough, that their preſerving one white man may anſwer their purpoſe in an exchange: however, generally ſpeaking, we allow greater liberty in our paſſage; as conducive to their health, we let them go at large on the ſhip's deck, from ſun-riſe to ſun-ſet; give ſuch as like it pipes and tobacco, and clean and air their dormitories every day.

Slaves differ in their goodneſs: thoſe from the Gold coaſt are accounted beſt, being cleaneſt limbed, and more docile by our ſettlements than others: but then they are for that very reaſon more prompt to revenge, and murder the inſtruments of their ſlavery, and alſo apter in the means to compaſs it.

To windward, they approach in goodneſs, as is the diſtance from the Gold coaſt; ſo as at Gambia, or Sierra Leona, to be much better than at any of the interjacent places.

To leeward from thence, they alter gradually for the worſe: an Angolan negro is a proverb for worthleſſneſs, and they mend (if we may ſo call it) in that way, till you come to the Hottentots, that is to the ſouthernmoſt extremity of Africa.

We have obſerved how our trading is managed by ſlaves, when obliged to be carried on aboard the ſhip. Where there are factories (as at Gambia, Sierra Leona, the Gold coaſt, Whidah, Calabar, Cabenda, and Angola) we are more at large; they are ſold in open market on ſhore, and are examined by us in like manner as our brother trade do beaſts in Smithfield; the countenance and ſtature, a good ſet of teeth, pliancy in their limbs and joints, and being free of venereal taint, are the things inſpected, and governs our choice in buying."

Before we conclude this account of the ſlave-trade, we ſhall give ſome further particulars relative to the unhappy ſituation of theſe wretches while on board the veſſels, which is truly deplorable: they are all put in irons two by two, ſhackled together, to prevent their mutinying or ſwimming aſhore. Such is the horror of their minds at the thoughts of leaving their own country, that they frequently leap out of the canoe, boat, or ſhip, into the ſea, and keep under water till they are drowned, to avoid being taken up and ſaved by their purſuers. Captain Philips, who was commander of a Liverpool ſlave ſhip to the coaſt of Guiney, after narrating the ſhocking ſufferings of a great number of negroes, who were chained and confined on board a ſmall ſhip, and the horrid barbarities exerciſed on ſome of them for a conſpiracy to murder the crew, and recover their liberty; makes this reflection: "Will not Chriſtianity bluſh at this impious ſacrilege! May the relation of it ſerve to call back the ſtruggling remains of humanity in the hearts of thoſe, who, from a love of wealth, partake in any degree of this oppreſſive gain; and have ſuch an effect on the minds of the ſincere, as may be productive of peace, the happy effect of true repentance for paſt tranſgreſſions, and a reſolution to renounce all connection with it for the time to come!"

Among other of the dreadful conſequences ariſing from this diabolical traffic, we ſhall only take notice of the following memorable, but tragical event, which happened a few years ago on board a ſhip from Liverpool, then lying at anchor about three miles from ſhore, near Acra fort. They had purchaſed between four and five hundred negroes, and were ready to ſail for the Weſt-Indies. The men were ſhackled two and two, each by one leg, to a ſmall iron bar; theſe were every day brought on the deck for the benefit of the air, and leſt they ſhould attempt to recover their freedom, they were made faſt to two common chains, which were extended on each ſide the main deck; the women and children were looſe. Such was the ſituation of the ſlaves on board this veſſel when it took fire from the careleſſneſs of a perſon who was drawing ſpirits by the light of a lamp; the caſk burſting, the fire ſpread with ſuch violence, that in about ten minutes the ſailors apprehending it impoſſible to extinguiſh it before it would reach a large quantity of powder they had on board, concluded it neceſſary to throw themſelves into the ſea, as the only means

means of ſaving their lives. However, they firſt endeavoured to looſe the chains by which the negromen were faſtened to the deck, but in the confuſion, the key being miſſing, they had but juſt time to looſe one of the chains by wrenching the ſtaple, when the vehemence of the fire ſo increaſed, that they all but one man jumped overboard when immediately the fire having gained the powder, the veſſel blew up with all the ſlaves who remained faſtened to the one chain, and ſuch others as had not followed the ſailors examples. There happened to be three Portugueſe veſſels in ſight, who, with others from the ſhore, putting out their boats, took up about two hundred and fifty of thoſe poor ſouls who remained alive, of which number about fifty died on ſhore, being moſtly of thoſe who were fettered together by iron ſhackles, which as they jumped into the ſea, had broke their legs; and theſe fractures, being inflamed by the violence of their ſtruggling, mortified, and occaſioned their deaths. Thoſe who remained alive were ſoon diſpoſed of to other purchaſers, for the benefit of the owners.

The Europeans pay for the ſlaves in gold duſt, but the payments for other commodities are in ſtrings of cowries, which, as we obſerved above, contain each forty in number. Five of theſe ſtrings make what the natives call a fore; and fifty fores make an alkove, which weighs about ſixty pounds.

As the negro traders bring their gold from diſtant places, ſo they do the ſlaves they furniſh us with, many of which are captives taken in war by the negro kings; and having agreed with the European merchants for the price of the goods they are to take in exchange, a ſhip is ſoon diſpatched, if they deal fairly; but if a merchant delivers his goods before he has his ſlaves, they will ſometimes make him wait a great while, and, perhaps, put hard conditions upon him. It is computed, by travellers, that about forty years ago there were annually exported from the whole coaſt of Guiney, ſeventy thouſand ſlaves and upwards, by the Engliſh, Dutch and Portugueſe; but the country where the greateſt number of ſlaves were purchaſed, till of late years, was the kingdom of Whidah, or Fida, for that reaſon uſually called the Slave coaſt.

The revenues ariſing from the ſlave trade are very conſiderable, the king receiving three rix-dollars for every ſlave ſold in his dominions. Every European veſſel alſo pays him a pecuniary duty, excluſive of preſents, which they make to the king for the liberty of trading, and his protection.

SECT. VI.

Treating of the Revolution in the Kingdom of WHIDAH, by the Conqueſt of it, and that of ARDRAH, by the King of DAHOME.

WE ſhall now give a relation of the conqueſt of the kingdom of Whidah by the king of Dahome, and the revolution that happened there in the year 1726.

Sabi, the chief town in the kingdom of Whidah, is ſituated about ſeven miles from the ſea-ſide. In this town the king allowed the Europeans convenient houſes for their factories, and by him we were protected in our perſons and goods, and when our buſineſs was finiſhed, were permitted to go away in ſafety. The road where ſhips anchored, was a free port for all European nations trading to thoſe parts for negroes. And this trade was ſo very conſiderable, that it is computed, while it was in a flouriſhing ſtate, there were above twenty thouſand negroes yearly exported.

The land was well ſtocked with people, the whole country appeared full of towns and villages; and being a very rich ſoil, and well cultivated by the inhabitants, it looked like a garden. Trade having flouriſhed for a long time, had greatly enriched the people, which, with the fertility of their country, had unhappily made them ſo proud, effeminate, and luxurious, that though they could have brought at leaſt one hundred thouſand men into the field, yet ſo great were their fears, that they were driven out of their principal city by two hundred of their enemies, and at laſt loſt their whole country to a nation they formerly contemned.

The king of Dahome, a far inland prince, who for ſome years paſt had rendered himſelf famous by many victories gained over his neighbours, ſent an ambaſſador to the king of Whidah, requeſting to have an open traffic to the ſea-ſide, and offering to pay his uſual cuſtoms on negroes exported, which being refuſed, he reſented the affront, and invaded Ardrah, the moſt northern province of the kingdom of Whidah, of which a great lord, named Appragah, was hereditary governor, who forthwith ſent to the king for his aſſiſtance: but through the intereſt of his enemies at court, who wiſhed his deſtruction, he was refuſed; ſo having made a little reſiſtance, he ſubmitted to the king of Dahome, who received him with every demonſtration of kindneſs.

The conqueſt of Ardrah gave the king an eaſy entrance into the heart of the country, but he was obliged to halt there by a river, which was about half a mile to the northward of the principal town of the Whidahs, called Sabi, the reſidence of their king. Here the king of Dahome encamped for ſome time, not imagining he could have found ſo eaſy a paſſage and conqueſt as he met with afterwards. For the paſs of the river was of that nature, it might have been defended againſt his whole army by five hundred reſolute men; but inſtead of guarding it, theſe cowardly luxurious people, thinking the fame of their numbers ſufficient to deter the Dahomes from attempting it, kept no ſet guard. They only went every morning and evening to the river ſide to make ſetiſh, as they call it; that is, to offer ſacrifice to their principal god, which was a particular harmleſs ſnake they adored, and prayed to on this occaſion, to keep their enemies from croſſing the river.

In the mean time the king of Dahome, ſent to the Europeans, then reſiding at Whidah, to aſſure them, if they ſtood neuter, and were not found in arms, they ſhould receive no damage in their perſons or goods, in caſe he proved conqueror; and he would eaſe their trade, and remove divers impoſitions laid on it by the king of Whidah: on the contrary, if they appeared againſt him, they muſt expect his reſentment. They would gladly have retired from Sabi to two mud-walled forts, belonging to the Engliſh and French African companies, which are within three miles of the ſea ſide; but finding it would have been reſented by the king of Whidah, as a diſcouragement to his people, they were obliged to remain in the town, never ſuſpecting the inhabitants would have run away in that cowardly manner they did, or that they ſhould ſhare the fate of war with them.

The paſs of the river being left wholly to the care of the ſnakes, whom the enemy little feared, and they having obſerved for ſeveral days, that the Whidahs kept no ſet guard there, it encouraged the king of Dahome's general to ſend two hundred of his ſolders to ford the river; which having done without oppoſition, and being bold fellows, they marched towards the town of Sabi, ſounding their muſical inſtruments. This was about three o'clock in the afternoon, and the out-guards of the town were almoſt all aſleep; but being rouſed by the noiſe of the enemies muſic, and ſhouts, they fled into the town, reporting that all the Dahome army was got over the river, which ſoon reaching the king's ear, he immediately fled with all his people, making no reſiſtance. The white people, then in the Engliſh and French forts, affirmed that about five o'clock the ſame afternoon, they ſaw ſuch numbers of people flying from all parts of the country, towards the ſea-ſide, that it was very ſurprizing: for the fields were covered with them many miles round, and their black colour made them the more conſpicuous in a clear ſun ſhining day, on a fine, flat, champaign country. The king, with a great number of his ſubjects, fled to an iſland on the ſea-coaſt, which was parted from the main land by a river, having ferried over in canoes; but a great many that could not have the ſame benefit, being hurried on by their fears, were drowned in the rivers, in attempting to ſwim to the iſland lying near Popo, which was the next country to their own on the ſea coaſt to the weſtward, and where they might have been ſecure from their enemies. Many thouſands of theſe poor people, that ſheltered themſelves up and down the country, among the buſhes, periſhed afterwards by ſword and famine.

But to return to the Dahome ſoldiers: when they firſt came to Sabi, it ſeems they marched directly to the king's court, where, not finding him they ſet it on fire, and then ſent their general word what had happened, who brought the whole army over the river that evening. He was in ſuch ſurprize at his good fortune, that he could hardly believe what he ſaw; and the white gentlemen were as much amazed to ſee the great cowardice of theſe people, who had vapoured ſo highly, and as ignominiouſly quitted the town, without oppoſing their enemies in the leaſt, leaving them entirely in the power of the conquerors, with all their riches. The day after the taking the town of Sabi, the white men taken priſoners were ſent into the country to the king of Dahome, who then lay encamped with another

their army, about forty miles off in the kingdom of Ardrah; ſome hammocks being provided for the principal white people, which is the uſual way of travelling in this country for gentlemen, either white or black.

Some few days after their arrival in the king of Dahome's camp, the Europeans were ſet at liberty, and ſuffered to return to the Engliſh and French forts, the principal gentlemen being preſented with ſlaves; and the king aſſured them, as ſoon as his affairs were ſettled, he ſhould encourage trade, and have a particular regard to their intereſts.

Captain Snelgrave relates, that he arrived at Whidah in the latter end of March 1726-7, about three weeks after this conqueſt, and found that fine country, lately exceeding populous now deſtroyed by fire and ſword; that the ſlaughter of the inhabitants was a moſt moving ſpectacle, the fields being in a manner covered with their carcaſſes.

From the road of Whidah, the captain ſailed to Jaqueen, a port about ſeven leagues to the eaſtward of it; this people having ſubmitted to the king of Dahome, and were then under his protection.

The king of Dahome, hearing of captain Snelgrave's arrival on the coaſt, with an intent to trade, invited him to his camp, which then lay about forty miles up the country, whither the captain went, being furniſhed with horſes, hammocks, ſervants, and all manner of accommodations for his journey. The day after his arrival at the camp, he had an audience of his negro majeſty, of which the captain gives the following account, (viz.) "The king was in a large court, paliſadoed round, ſitting (contrary to the cuſtom of the country) on a fine gilt chair, which he had taken from the king of Whidah. There were held over his head, by women, three large umbrellas, to ſhade him from the ſun, and four other women ſtood behind the chair of ſtate with fuſees on their ſhoulders. It was obſerved that the women were finely dreſſed from the middle downward (the cuſtom of the country being, not to cover the body upwards of either ſex). Moreover, they had on their arms many large manelloes or rings of gold, of great value, and round their necks, and in their hair, abundance of their country jewels, which are a ſort of beads of divers colours, brought from a large inland country, where they are dug out of the earth, and are held in the ſame eſteem by the negroes, as diamonds among the Europeans.

"The king had a gown on, flowered with gold, which reached as low as his ancles, an European embroidered hat on his head, with ſandals on his feet. We being brought within ten yards of the chiar of ſtate, we paid his majeſty the reſpect of our hats, bowing our heads at the ſame time very low, as the interpreter directed us. Then I ordered the linguiſt to acquaint the king, 'That on his majeſty's ſending to deſire me to come up the his camp, I forthwith reſolved on the journey, that I might have the pleaſure of ſeeing ſo great and good a king as I heard he was, relying entirely on the promiſes his meſſenger had made me in his majeſty's name.' The king ſeemed well pleaſed with what I ſaid, and aſſured us of his protection and kind uſage. Then chairs being brought, we were deſired to ſit down, and the king drank our healths, and then liquor being brought us by his order, we drank his majeſty's. After this, the interpreter told us, "It was the king's deſire we ſhould ſtay ſome time with him, to ſee the method of paying the ſoldiers for captives taken in war, and the heads of the ſlain.

"It ſo happened, that in the evening of the day we came into the camp, there were brought above eighteen hundred captives, from a country called Tuffo, at the diſtance of ſix days journey.

"The king, at the time we were preſent, ordered the captives of Tuffo to be brought into the court; which being accordingly done, he choſe himſelf a great number out of them to be ſacrificed to his fetiſh, or guardian angel; the others being kept for ſlaves for his own uſe, or to be ſold to the Europeans. There were proper officers who received the captives from the ſoldiers hands, and paid them the value of twenty ſhillings ſterling for every man, in cowries (which is a ſhell brought from the Eaſt Indies, and carried in large quantities to Whidah by the Europeans, being the current money of all the neighbouring countries far and near) and ten ſhillings for a woman, boy, or girl. There were likewiſe brought by the ſoldiers ſome thouſands of dead people's heads into the court; every ſoldier, as he has ſucceſs, bringing in his hand one, two, three, or more heads hanging in a ſtring; and as the proper officers received them, they paid the ſoldiers five ſhillings for each head: then ſeveral people carried them away in order to be thrown on a great heap of other heads that lay near the camp, the linguiſt telling us, his majeſty deſigns to build a monument with them, and the heads of other enemies formerly conquered and killed."

The captain afterwards went to ſee the manner of ſacrificing their enemies. "Our guard, ſays he, made way for us through the crowd, till we came near four ſmall ſtages, which were erected five feet from the ground: we ſtood cloſe to them, and obſerved the ceremony, which was performed in the following manner:

"The firſt victim we ſaw was brought to the ſide of the ſtage: it was a comely old man, between fifty and ſixty years of age; his hands were tied behind him, and in his behaviour he ſhewed a brave and undaunted mind, nothing like fear appearing in him. As he ſtood upright by the ſtage, a fetiſher, or prieſt, laid his hand on his head, ſaying ſome words of conſecration, which laſted about two minutes: then he gave the ſign of execution to a man that ſtood behind the victim, who, with a broad ſword, immediately ſtruck him on the neck with ſuch force, that the head was ſevered at one blow from the body: whereupon the rabble gave a great ſhout. The head was caſt on the ſtage, and the body, after having lain a little while on the ground, that the blood might drain from it, was carried away by ſlaves, and thrown into a place adjoining to the camp. The linguiſt told us, the head of the victim was for the king, the blood for the fetiſh, or god, and the body for the common people. We ſaw many other perſons ſacrificed in this lamentable manner, and obſerved, that the men went to the ſide of the ſtages bold and unconcerned; but the cries of the poor women and children were very moving. 'I told an officer,' I wondered they ſhould ſacrifice ſo many people, of whom they might otherwiſe make good advantage by ſelling them.' He replied, 'It had ever been the cuſtom of their nation, after any conqueſt, to offer to their god a certain number of captives, which were always choſe out from among the priſoners by the king himſelf; for they firmly believed, ſhould this be omitted, no more ſucceſs would attend them: and he argued for the neceſſity and uſefulneſs of their doing it, from the large conqueſts they had made within a few years, without any defeat.' Then I aſked him, 'Why ſo many old men were ſacrificed in particular?' He anſwered, 'It was beſt to put them to death; for being grown wiſe by their age and long experience, if they were preſerved, they would be ever plotting againſt their maſters, and ſo diſturb their country; for they never would be eaſy under ſlavery, having been the chief men in their own land: moreover, if they ſhould be ſpared, no European would buy them on account of their age.' I then obſerved to him, 'That I had ſeen ſeveral handſome young people ſacrificed, who I was ſure the Europeans would gladly have bought.' He replied, 'They were deſigned to attend, in the other world the king's wives, whom the Tuffoes, their countrymen, had ſlain.' In the evening (ſays our author,) we paſſed by the place where the ſacrificed bodies were thrown; there were two heaps of them, conſiſting of four hundred perſons, who had been choſen out by the king that very morning." But to proceed:

Whidah being thus completely conquered by the king of Dahome, he has preſerved the authority he then attained, ever ſince. It is at this time conſidered only as a province, and its king as a tributary prince, though the inhabitants are under the ſame laws and government as before it was conquered, and alſo poſſeſs the ſame indulgences in religious matters.

Sabi, the capital of Whidah, is very ſmall in compariſon to what it was before its being reduced to aſhes by the king of Dahome. At that time it was at leaſt four miles in circumference. The houſes were neatly built, and the ſtreets were long, ſpacious, and uniformly diſpoſed. The houſes belonging to the factors were built in the European taſte, and contained many neat and commodious apartments: on the firſt floor of each was a ſpacious hall, with an elegant balcony in front; and beneath on the ground-floor, were warehouſes for the ſtowing and preſervation of their goods. The town was ſo exceeding populous, that notwithſtanding the breadth of the ſtreets, it was ſometimes a difficulty to paſs them. Markets were daily held in different parts of the city, where various ſorts of European as well as African commodities were expoſed to public ſale, as alſo abundance of all kinds of proviſions. Near the European factories was a ſpacious place ornamented with lofty and beautiful trees, under which the merchants and governors of the forts every day aſſembled to tranſact buſineſs. But there is not now a ſingle rem-

nant left of the magnificence and ſplendor that once graced this populous city, ſince all theſe fine places were deſtroyed by the king of Dahome's army.

There is a ſmall town called Whidah, ſituated about four miles to the ſouth of Sabi; the Europeans generally land at this place when they come to trade on the Slave coaſt. Here the Engliſh have a large fort, called fort William, conſiſting of four ſtrong batteries, on which are mounted ſeventeen pieces of cannon. At a ſmall diſtance from this is another belonging to the French, which is encompaſſed by a thick mud wall, as is alſo that belonging to the Engliſh. It would be a difficult matter for an enemy to ſurprize theſe two forts without alarming the garriſon, as there is a deep and broad ditch to each of them, at ſome diſtance from the wall.

SECT. VII.

Of the Boundaries and Extent, Produce, Inhabitants, their Cuſtoms, Religion, Laws, &c. of the Kingdom of ARDRAH; alſo an Account of the Kingdom of DAHOME, its Climate, Inhabitants, Animals, &c.

THE kingdom of Ardrah, or Arder, is bounded on the eaſt by the kingdom of Benin; on the weſt, by that of Whidah; and on the ſouth, by the gulf of Guiney; but how far it extends northward, and what country it borders upon that way, is not known. It is very narrow towards the ſea, but widens conſiderably, and is divided into two parts, diſtinguiſhed by the names of Great and Little Ardrah. It lies in three degrees five minutes eaſt longitude, and five degrees north latitude.

This kingdom is not ſo conſiderable as that of Whidah, but is very populous and contains many good towns and villages. The country in general is very flat, and being well watered by ſeveral ſmall rivers in different parts of it, the ſoil is exceeding fertile, and produces great quantities of Indian wheat, millet, yams, potatoes, as alſo ſeveral kinds of fruits; particularly pine-apples, bananas, cocoa-nuts, oranges, and lemons.

The manners, cuſtoms, religion, &c. of the inhabitants of this kingdom differ little from thoſe of Whidah. The dreſs of themen conſiſts of ſeveral cloths, the manufacture of the country, wound round the waiſt, and faſtened with a girdle: but the better ſort wear two ſhort petticoats, made of taffety, or other ſilk, and have ſilk ſcarfs in the form of ſhoulder-belts. They moſtly go with their heads and feet bare, though they are permitted to wear ſandals, and hats or bonnets, except in the king's preſence. The women of rank alſo wear petticoats and ſcarfs, but, like the men, they have not any covering either to their heads or feet. The poorer ſort have only ſhort cloths tied about their waiſt, the other parts of their body being intirely naked. Both ſexes are exceeding cleanly in their perſons, waſhing their bodies every morning and evening in pure water, and anointing themſelves with civet, or ſome perfume of an aromatic flavour.

Rice, pulſe, herbs, and roots, with beef, mutton, and dog's fleſh is their common food: their ordinary drink is the beer called pito, which they generally mix with water: palm-wine is the drink of the better ſort.

Fiſhing, boiling of ſalt, and trading, are the employment of thoſe who live near the ſea-ſide; but the inland inhabitants dedicate their time to the breeding of cattle, and the cultivation of their lands.

Theſe people are in general exceeding illiterate; few of them can either read or write; for which reaſon, in buying and ſelling of goods, they make uſe of cords tied in knots, each of which has a particular ſignification known only to themſelves, and thoſe who are accuſtomed to deal with them. Some few of the richer ſort underſtand the Portugueſe tongue, which they not only ſpeak fluently, but alſo read and write with great accuracy and propriety.

They allow polygamy here as at Whidah, every man being allowed to take as many wives as he thinks proper. As no difference is paid to birth or fortune, the pooreſt man has liberty to pay his addreſſes to a woman of the greateſt quality; but if ſhe rejects him on the firſt viſit, he is not allowed to make a ſecond. Little ceremony is uſed in their marriages, the chief thing conſiſting in the mutual conſent of the parties, and their reſpective parents: when this is obtained, the bridegroom preſents his bride with a callico paan, and invites all her relations, and his own, to an entertainment: when he declares to the company, that he takes the woman for his wife, and this public acknowledgment conſtitutes the marriage.

Men of condition marry girls at ten or twelve years of age, but they do not conſummate the marriage till they have kept them ſeveral years in the character of ſervants: when the time is fixed for cohabiting, they preſent their brides with a piece of cloth, or a ſhort frock, and the relations of both parties are invited to an elegent entertainment.

In burying their dead, they uſe nearly the ſame ceremonies as thoſe practiſed at Whidah, except in this particular, that they generally bury the deceaſed in a vault under the houſe he inhabited in his life-time; the king is the chief perſon exempted from this cuſtom; he is buried in ſome place remote from the palace; and many unhappy ſlaves are ſacrificed at his interment.

The religion of the people pretty much reſembles that of their neighbours in Whidah, only they do not worſhip the ſerpent; on the contrary, they not only kill them, but are exceedingly fond of their fleſh. Though they are ſuch groſs idolaters, they acknowledge one ſupreme Being, who, they believe, appoints the time when every perſon ſhall come into, or go out of the world; notwithſtanding which, they tremble at the very mention of death, and are greatly alarmed at ſickneſs.

If a perſon is taken ill, he ſends for a prieſt, who immediately goes to him, and ſacrifices ſome animal for the recovery of his health. The prieſt rubs the patient's fetiſh with the blood, but throws away the fleſh of the animal.

The high-prieſt appoints the fetiſhes belonging to the king and court: theſe are birds of a black hue, not unlike the crows in England; prodigious numbers of them are kept in the gardens of the palace, and it is equally criminal to pay diſreſpect to them here, as it is to the grand ſerpent at Whidah. The common people's fetiſhes conſiſt of a particular ſtone, a piece of wood, or ſome other inanimate ſubſtance, which they always keep hid in their houſe under an earthen pot: once in every ſix months they make an offering to the prieſt in honour of their fetiſh, at the ſame time aſking the idol ſeveral queſtions relative to their future welfare. If the prieſt thinks the offering too inſignificant, he tells the people that the fetiſh does not like it, and will not anſwer his queſtions till he has one to pleaſe him. On this the perſon enlarges his offering, and then the anſwers are delivered by the prieſt in a low voice, which the ſuperſtitious blacks imagine to be effected by ſome ſecret impulſe of the fetiſh. The oracle thus delivered, the prieſt covers the idol with the pot, and ſprinkles it either with beer or meal. The like is done to every perſon preſent on this occaſion.

The people conſider the prieſts in general in the moſt reſpectable light; but the great marabout, or high-prieſt, is perfectly adored by them. They imagine him to be an infallible diviner, and that he can foretel things by converſing with an awkward image, which he keeps in his hall of audience, where he receives viſits from his credulous devotees. This image is painted white, and repreſents a child, which the marabout tells them can communicate to him ſuch circumſtances as ſhall ariſe from their future conduct. When they go to conſult the marabout, they preſent him with the beſt offering their circumſtances will afford; and the intelligence of their future ſucceſs or misfortunes is principally directed in proportion to it.

As to their laws, whoever diſobeys the king's commands is beheaded, and his wives and children become the king's ſlaves. Inſolvent debtors are left to the mercy of their creditors, who have liberty to pay themſelves by ſelling them for ſlaves. The ſame puniſhment is alſo inflicted on him who has debauched another man's wife. The ſame puniſhments as at Whidah are inflicted on women convicted of adultery, and other crimes.

Aſſem is the moſt diſtinguiſhed place in Ardrah; but the Europeans call it Great Ardrah. It is the capital of the kingdom, and is ſituated about ſixteen leagues inland to the north-weſt from Little Ardrah, a ſpacious road leading from the one to the other. It is encompaſſed with four walls of earth, which are very lofty and ſubſtantial: each wall has a large and deep ditch, but they are all within, and over them are wooden bridges. The houſes are in general well built, and the ſtreets regularly formed. The king's palace is a ſpacious edifice, though greatly inferior to the original building, which the king of Dahome deſtroyed in the year 1726. At that time the palace conſiſted of many large courts intirely ſurrounded with porticoes, above which were apartments that had ſmall windows. Some of the floors of theſe apartments were covered with mats, and others with large Turky carpets, and the furniture conſiſted of eaſy chairs, cabinets, and porcelain brought from China. There was not any glaſs

in the windows, but only frames of white linen, and taffety curtains. The gardens belonging to it were very extenſive, and laid out in long viſtas of thick and lofty trees, which afforded a cool and ſhady retreat when the ſun was intenſely hot. The preſent palace, however, is far from being contemptible.

The king's court is kept with great ſplendor, though his majeſty, like the ſovereign of Whidah, is dependent on the king of Dahome. He ſeldom goes abroad, and when he does, it is in ſo private a manner, that few of his ſubjects ſee him. He keeps a great number of women, with whom his time is chiefly employed; the principal of theſe has the title of queen; with this prerogative, that ſhe has the liberty to ſell ſome of his other wives to ſupply her wants, in caſe his majeſty denies her any thing ſhe has occaſion for.

No perſon whatever eats in company with the king; and when he drinks, an officer makes a ſignal, by ſtriking two ſmall rods of iron together, in order that all who are within ſight may turn away, and not look at his majeſty; for it is a capital offence for any one to ſee him drink, and is puniſhed with death. An inſtance of this was once ſeen in an infant, who being aſleep by the king, was awakened by the noiſe of the rods; and his majeſty obſerving that the child caſt its eyes at him while the cup was at his mouth, ordered it to be put to death immediately.

When a perſon preſents any thing to the king, it is offered kneeling; and the like reſpect is ſhewn even to the proviſions ſet on the table. They who happen to be in the way of the officers who carry them, proſtrate themſelves with their faces to the earth, and dare not riſe till the diſhes are carried out of their ſight to the king's table.

The king of Ardrah treats the Europeans with a very diſtinguiſhed reſpect. When any one goes to Aſſem, to obtain an audience of his majeſty for liberty to trade (which muſt be done by every one that comes for that purpoſe,) he is lodged in the palace, and a genteel proviſion is daily made for him at the king's expence. On the day fixed for the audience, he is introduced to his majeſty by the captain of commerce: when he enters the hall where the king is ſeated, his majeſty immediately riſes, and advances ſome ſteps to meet him; he then takes him by the hand, preſſes it in his own, and three times ſucceſſively touches his fore-finger, which is the greateſt token that can be given of amity and friendſhip. After this, he deſires him to ſit down by his ſide on neat mats ſpread on the floor; which being complied with, he then lays his preſents before the king, and, by an interpreter, communicates his buſineſs; the anſwers to which, the king returns through the ſame channel. As ſoon as the audience is over, the European goes, with his attendants, to the houſe of the high-prieſt, who, in reſpect to the king, provides an elegant dinner on the occaſion; after which, he ſends for his wives, and entertains his gueſts with dancing, muſic, and ſuch other diverſions as are uſually practiſed in this part of the country. The following day a licence is granted to the European for liberty to trade, and the ſame is made known by the public crier, who receives forty braſs rings, a goat, and a piece of cloth, for his trouble.

Slaves are the chief commodity the Europeans purchaſe here; and the articles they ſell the natives conſiſt of cowries (which are the current coin of the kingdom,) flat iron bars, gilt leather, white and red damaſk, red cloth, copper bowls or cups, braſs rings, beads or bugles of ſeveral colours, looking-glaſſes, gunpowder, muſkets, firelocks, &c.

The town which is called by the Europeans Little Ardrah, and by the natives Offra, is large and populous, and, like the capital, is incloſed with mud walls. The Dutch had once a fort here; but their factor being killed and the land laid waſte by the inhabitants of Popo, they fled, and for ſome time deſerted it; however, they have now a factor there, as have alſo the Engliſh, each of which has a very large and elegant houſe; and they both, but particularly the Dutch, carry on a conſiderable trade in ſlaves.

The town of Jacken, or Jackin, ſituate between Great and Little Ardrah, is of conſiderable extent, and incloſed with a thick and lofty mud wall. Here the Engliſh have a factory; and the governor's houſe is a ſpacious building, and very neat.

Grand Foro, a large village, lies a little to the north of Jacken, and is remarkable for having a kind of inn for the accommodation of travellers; as there is not, in any other part of Guiney, a convenience of that ſort to be met with.

Dahome, whoſe powerful king ſubdued Ardrah and Whidah, as related above, is ſituated to the north of the Slave coaſt, and extends a conſiderable way in land. Its boundaries on the weſt, north, and eaſt, are uncertain. This is a very wholeſome country, as it lies high, and is daily refreſhed by fine cooling breezes; and the kingdom of Great Popo, though at a conſiderable diſtance, may be ſeen from it.

Abomay, is ſituated two hundred miles up in the inland country: the king has his palace in this town. He is a very powerful prince, and always keeps a conſiderable ſtanding army; but it conſiſts only of foot ſoldiers. He has for his enemies a nation called Joes, who live a great way to the north towards Nubia, and all fight on horſeback. Theſe two powers have been frequently at variance with each other; but they have been upon good terms, ſince the treaty, which was unanimouſly agreed to, was formed between them ſome few years ago.

Adjoining to Ardrah is the kingdom of Benin, which extends about ſix hundred miles from eaſt to weſt; but its extent from north to ſouth cannot be aſcertained. It is bounded on the eaſt by the kingdoms of Mujac and Makoko; on the weſt by Ardrah, and part of the gulf of Guiney; on the ſouth, by Congo; and on the north, by part of Gago and Biafara.

This is in general a very low and woody country, but well watered with rivers, the moſt diſtinguiſhed of which is that called by the Engliſh and French the river Benin; but by the Portugueſe Rio Formoſa, or the Beautiful River. Its length and ſource are not known, but its branches are ſuppoſed to extend through moſt parts of the neighbouring countries. Its banks are exceeding pleaſant, being ornamented with lofty trees, and many ſmall but neat villages.

The noxious vapours exhaled from the low grounds by the heat of the ſun render the climate of this kingdom rather unwholeſome, but the ſoil is tolerably fertile, and well adapted for the produce of millet and rice; but as the inhabitants are not fond of thoſe grains, little of them are cultivated. Their principal attention is directed to the produce of yams, which they uſe inſtead of bread; and they have alſo great plenty of potatoes and other roots. The chief fruits here are oranges, lemons, and bananas; and they have ſome cotton and pepper-trees; the latter of which produce a tolerable commodity; but not in ſuch quantities, neither are the corns ſo large, as thoſe of the Eaſt-Indies.

In this country, the wild beaſts are, tygers, leopards, bears, and monkies. The tame ones conſiſt of horſes, cows, ſheep, dogs, and cats: the two latter of which the natives prefer to any kind of fleſh whatever. They have alſo great plenty of poultry, and the woods abound with game, as harts, hares, turtle-doves, pheaſants, partridges, &c.

The people inhabiting this kingdom have each their particular king; all of whom, except the king of Overri, are ſlaves or vaſſals to the king of Great Benin. The natives in general are good-natured and obliging, particularly to Europeans; and if the latter compliment them with preſents, their liberality is ſure to be doubly returned. When any favour is aſked of them, they will uſe their utmoſt endeavours to grant it, even though it may in ſome degree be prejudicial to themſelves. To uſe gentle meaſures, is the only way to ſucceed in whatever is wanted; and in that caſe it is their greateſt pleaſure to oblige the perſon that applies to them: on the contrary, if they are treated with violence, no people in the world can be more refractory; and then they will take as much pains to injure, as they would at other times to ſerve you. Among themſelves, they carry the appearance of civility and complaiſance, but in reality they are very cloſe and reſerved, eſpecially in their dealings, not caring to truſt each other. The traders are very attentive to buſineſs, and remarkably tenacious of their old cuſtoms; and a foreigner may eaſily deal with them, if he complies in this particular.

There are four claſſes of inhabitants in this kingdom; the firſt of which is compoſed only of three perſons, called great lords, or great men, who are always near the king's perſon; and whoever wants to obtain any favour from his majeſty, muſt apply to theſe people, who acquaint the king with their deſires, and return his anſwer. As there is no intermediate perſon between theſe, the king, and he who ſolicits favours, they act on theſe occaſions in ſuch manner as beſt ſuits their own intereſts; ſo that in reality the whole government is intirely in their hands. How contradictory ſoever their conduct may be to the intentions of the king, yet it can never be known, as no other perſons are admitted into his preſence, except thoſe in a public capacity.

The ores de roes, or road chiefs, who are of four ſorts, are the ſecond rank or claſs of people here: the

meaneſt preſide over ſlaves; thoſe a degree higher over the low rabble; the third inſpect the conduct of thoſe concerned in huſbandry and agriculture; and the fourth, or ſuperior order, ſuperintend the military. Theſe people are very numerous, and from them are choſen the viceroys and governors of thoſe countries ſubject to the king. They are all under the command of the three great men, and are reſponſible to them on all occaſions. They obtain their poſts by the recommendation of theſe three lords; and the king; as an enſign of their honour, preſents each of them with a ſtring of coral, which they are obliged continually to wear about their necks. They are made of a ſort of pale earth or ſtone well glazed, and greatly reſemble variegated marble. The poſſeſſors muſt be very careful of them; for if any one ſhould loſe this badge of honour, whether by accident or otherwiſe, the conſequence would not only be degradation, but he would be put to death for it.

The fiadors, or brokers, are the third claſs: they are appointed by government to ſee that all matters of commerce are fairly tranſacted between the reſpective parties; and their buſineſs is to treat with the Europeans on behalf of the traders of Benin.

The commonality form the laſt claſs. The generality of theſe are very indolent, nor will they go to work but when neceſſity obliges them: the laborious part of their buſineſs is executed by the wives, ſuch as tilling the ground, ſpinning of cotton, weaving of cloth, and other handicrafts. Smiths, carpenters, and leather-dreſſers, are the principal artificers amongſt them.

The negroes here (particularly the better ſort) dreſs in a white callico or cotton cloth, which is faſtened round the waiſt, and neatly plaited in the middle, but the lower and upper parts of the body are intirely naked. The dreſs of the meaner ſort is of the ſame form, and only differs in the quality of the ſtuff it is made with.

Callico paans are worn by the wives of the grandees: thoſe wove in this country, are very fine, and beautifully variegated with different colours: they are faſtened round the waiſt, and the upper part of the body is covered with a piece of cloth about a yard long, which ſerves inſtead of a vail. Their arms, legs, wriſts, and fingers, are ornamented with copper or iron rings; and they wear necklaces of coral agreeably diſpoſed.

The men let their hair grow in its natural form, and take but little pains with it, except buckling it in two or three places, in order to hang a great coral to it: but the women's hair is artificially formed into large and ſmall buckles, and divided on the crown of the head, ſo that the latter are placed with great uniformity. Some of them oil their hair, by which means it loſes its black colour, and in time turns to a ſort of green or yellow, which they are very fond of, but to a ſtranger it has a diſagreeable appearance.

In this country, when a great man goes abroad, he is attended by a number of ſervants, all of whom are armed, ſome with ſpears, others with long darts, and ſome with bows and arrows. He uſually rides on horſeback, and ſits on the beaſt ſideways, as the women do in England. One of his attendants holds an umbrella over his head, to ſhelter him from rain, or the violent heat of the ſun; and another goes before leading the horſe. The only ſecurity of the rider conſiſts in his reſting the left hand on the ſhoulder of one of his attendants, for they uſe neither bridles nor ſaddles.

There are very ſpacious and lofty buildings in moſt of the towns in this kingdom, but they are differently conſtructed, ſome of them being ſquare, and others of an oblong form. The doors are made high but narrow, and the windows are few in number and exceeding ſmall. They are all made with a flat roof, on the top of which is a covering raiſed ſeveral feet, to keep off the heat of the ſun; and when they pay a viſit to each other, they frequently regale themſelves here.

Perſons of condition live well, but not luxuriouſly: their principal diet conſiſts of beef, mutton, or chickens, and for bread they uſe yams, which, after being boiled, are beat fine, and made into cakes. Their common drink is water, but ſometimes they mix brandy with it. The poorer ſort live on dried fiſh, yams, bananas, and pulſe; and their drink is water, or a kind of beer, ſomewhat reſembling that drank on the Slave coaſt, called pito.

They allow polygamy here, with the ſame latitude as on the coaſt of Guiney; and their marriage ceremonies conſiſt only in the conſent of the parties, and an entertainment for the gueſts on both ſides. The great men are exceeding jealous, for which reaſon the wives of the poor people enjoy a pleaſure to which thoſe of the better ſort are intire ſtrangers, for while the wives of theſe latter are cloſe confined, to obviate all opportunities of tranſgreſſion, the former have the full enjoyment of their liberty.

All the boys born in this country are preſented to the king as his property, for which reaſon all the males are called the king's ſlaves; but the females are the property of the father, who has liberty to diſpoſe of them as he pleaſes. If a woman happens to be delivered of two children at a birth, immediate information of it is given to the king, who orders public rejoicings to be made on the occaſion. Such circumſtances are conſidered as happy omens in all the territories of Benin, except at a place called Arebo where they are productive of the moſt horrid cruelties: for the people there generally ſacrifice both the woman and children to a certain dæmon, which they ſay inhabits a wood near the town. Sometimes, indeed, they will ſpare the wife, by the huſband's offering a female ſlave in her ſtead, but the children are condemned without redemption.

It is affirmed by Boſman, that while he was at this town in 1699, he knew a merchant's wife thus redeemed, but her children were deſtroyed, whoſe ſad fate ſhe often deplored with tears. The following year, ſays the ſame writer, the like happened to the wife of a prieſt: ſhe was delivered of two children, whom, with a ſlave in his wife's room, the father was, by virtue of his office, himſelf obliged to ſacrifice with his own hands. This ſhocking cuſtom ſtill prevails in that town; but of late years, they that are enabled to defray the expence, avoid the conſequences, by ſending their wives to a more humane part of the country, when they draw near the time of their delivery.

Circumciſion is practiſed on both ſexes, which is performed when the children are about a fortnight old; but they can give no reaſon for this cuſtom, only ſaying, that it was handed down to them by their anceſtors. They alſo inflict another puniſhment on the children by pinking their bodies; that is, making inciſions in different parts, in a ſort of regular order, and leaving the marks of birds, beaſts, and other figures. The girls undergo the greateſt puniſhment in this particular, being much more marked than the boys; for their parents are very liberal in beſtowing theſe marks, which are conſidered as the greateſt ornaments they can have.

The thoughts of death are not ſo terrifying to the negroes of Benin as to their neighbours on the coaſt of Guiney. When a perſon falls ſick, he immediately applies to the prieſt, who alſo acts in the capacity of phyſician, and furniſhes him with medicines; but if theſe prove ineffectual, he has recourſe to ſacrifices. If the patient recovers, the prieſt is rewarded for his aſſiſtance; but no farther regard is paid to him: ſo that the prieſts here are generally poor, having little other dependence than what ariſes from their abilities as phyſicians; for without applying to the prieſt, each man offers his own ſacrifices to his idols, and think they ſufficiently acquit themſelves of their religious duties.

On the death of a perſon, the corpſe is kept only one day before interment, except he happens to die at a diſtance from his general place of reſidence; in which caſe, in order to preſerve it for conveyance, it is dried over a gentle fire till all the moiſture is extracted, when it is put into a coffin, and publicly expoſed; after which, it is carried on men's ſhoulders to the place of interment. When the funeral is over, the neareſt relations go into mourning, and bewail their loſs by cries and lamentations. The ſhew of mourning conſiſts only in ſhaving their heads, ſome half-way, and others half-over; and the men ſhave off their beards on this occaſion.

Many ſlaves are ſacrificed at the burial of a grandee; but the greateſt number fall victims on the death of a king. The ceremonies attending a royal funeral in this country are very ſingular, and thus deſcribed by Barbot, who was once an eye-witneſs of them: "As ſoon, ſays he, as the king of Benin expires, they dig a large pit in the gound at the palace, ſo deep, that the workmen are ſometimes in danger of being drowned by the quantity of water that ſprings from the earth. This pit they make wide at the bottom and very narrow at the top. They firſt let down the royal corps into it, and then ſuch of his domeſtics, of both ſexes, as are ſelected for that honour, for which there is great intereſt made. Theſe being let down into the pit, they ſhut up the mouth with a large ſtone, in the preſence of a crowd of people who wait day and night at the place. The ſtone is removed the next morning and ſome proper officers aſk the perſons encloſed, If they found out the king? If they anſwer, the pit is ſhut up again, and the following

following day opened with the like ceremony, which continues 'till the perſons are dead, and no antwer returned. After this, the chief miniſters inform the ſucceſſor, who immediately repairs to the pit; and cauſing the ſtone to be removed, orders all ſorts of proviſions to be laid on it for the entertainment of the populace. After they have regaled themſelves, they run about the city in the night, committing the greateſt outrages, and killing all the men, women, and children they find. They chop off their heads, and leave them in the ſtreets, but they bring their bodies, and throw them into the pit, with their garments, houſhold goods, &c. as preſents to the deceaſed king." This ſtrange cuſtom, we are told, is ſtill preſerved in the ſtricteſt manner; and they who are allotted to fall victims on the occaſion are ſo far from lamenting their fate, that they reckon it the higheſt mark of honor they can be favoured with.

Theſe people worſhip various kinds of idols, ſome of which are made of elephants teeth, claws, dead mens heads, ſkeletons, &c. Each is his own prieſt, and addreſſes himſelf to ſuch of his idols as he likes beſt. Many, however, have a tolerable idea of the ſupreme Being; for they aſcribe to God the divine attributes, and believe that he governs all things by his Providence. As he is inviſible, they ſay it would be abſurd to attempt to make any corporeal repreſentation of him, for that could not be effected, as it would be impoſſible to make any image of what was never ſeen. The images of their idol gods they conſider as ſubordinate deities, and believe that they are mediators between them and God. They believe alſo in the devil, and think themſelves obliged to reverence him, leſt he ſhould hurt them. They make their offerings to him by the ſame idols as to the higher power; ſo that one image ſerves them in two capacities. Such are the ſtrange abſurdities and inconſiſtencies of their religion!

It is generally believed by theſe negroes, that the apparitions of their anceſtors viſit them, but it is only when they are aſleep. They call the ſhadow of a man paſſadoor or conductor, which they believe really to exiſt, and that it will ſome time or other give teſtimony whether they have lived well or ill. If the former, they are to be raiſed to great dignity; but if the latter, they are to periſh with hunger and penury.

Daily offerings are made by the poorer ſort to their idols, which conſiſt only of a few yams mixed with oil; ſometimes they offer a fowl, but they only ſprinkle the blood of it on the idol, for the fleſh they convert to their own uſe. The great men make annual ſacrifices, which are very expenſive, and they provide an elegant entertainment for their friends, that laſts ſeveral days; beſides which, the poor have always handſome preſents made them on theſe occaſions.

The time is divided by them into years, months, weeks, and days, each of which is diſtinguiſhed by a particular name; but in their diviſion they make fourteen months to the year. They keep their ſabbath every fifth day: which is ſolemnly obſerved, particularly by the better ſort, who on the occaſion ſacrifice cows, ſheep, and goats; while the poorer ſort kill dogs, cats, chickens, or whatever they are able to purchaſe. In order that the feſtival may be univerſally kept, thoſe who are ſo diſtreſſed as not to be able to obtain any of theſe, are aſſiſted by the others.

They keep two other annual feſtivals, beſides thoſe held on the ſabbaths. The firſt of theſe is in commemoration of their anceſtors, when they not only ſacrifice a great number of beaſts, but alſo human beings; but the latter are generally malefactors ſentenced to death, and reſerved for theſe ſolemnities. If it happens that there are not ſo many criminals as are requiſite on theſe occaſions (the number of which is twenty-five,) the king orders his officers to parade the ſtreets, and ſeize indifferently ſuch perſons as they meet not carrying lights. If the perſons ſo ſeized are wealthy, they are permitted to purchaſe their redemption; but if poor, they are ſacrificed on the day appointed. The ſlaves of great men ſo ſeized may be alſo ranſomed, on condition that the maſters find others to ſupply their place. This cuſtom contributes greatly to the emolument of the prieſts, it being their province to redeem the perſons ſo taken, from whom they are ſure to receive a very handſome compliment

But the moſt conſiderable is their ſecond annual feſtival, which is called the coral feaſt. It is celebrated in the month of May; and the king appears in public the day on which it is held. A perſon who was preſent at this feſtival, gives the following account of the ſingular ceremonies attending it: "On the day appointed, the king came magnificently dreſſed into the ſecond court of the palace, where, under a rich canopy, a ſeat was placed for him, as alſo others for his wives and a great number of his principal officers. Soon after the king was ſeated, the proceſſion began, which being ended, the king removed from his throne in order to ſacrifice to the gods in the open air, and thereby begin the feaſt. This action was accompanied with the univerſal and loud acclamations of the people. After paſſing a quarter of an hour in this manner, he returned to the former place, where he ſat two hours, in order to give the remainder of the people time to perform their devotions. This done he returned into the palace. The reſt of the day was ſpent in coſtly treating and feaſting, the king cauſing all kinds of proviſions to be liberally diſtributed to the populace, and the grandees following his example, ſo that nothing but joy was to be ſeen throughout the city. The reaſon why this is called the coral feaſt, is, becauſe at this time the king beſtows the ſtrings of coral on thoſe whom he advances to any preferment, which he never does but on this feſtival, unleſs a very extraordinary occaſion urges the contrary.

The kingdom of Benin, which lies contiguous to Ardrah, is ſubject to an arbitrary monarch, and his will is an abſolute law; but the chief direction of government is veſted in the three great lords. Their laws are in general very mild, and not attended with thoſe diſtinguiſhed impoſitions to which the inhabitants of ſome other countries are ſubject. When a perſon of property dies, the right of inheritance devolves to his eldeſt ſon, but he is obliged to preſent a ſlave to the king, and another to the three great lords, with a petition that he may ſucceed his father in the ſame quality, which the king accordingly grants, and he is declared the lawful heir to all the poſſeſſions left by his father. He is not compelled to make any allowance to his younger brother, that being wholly left to his own diſcretion: but if his mother be alive, he muſt allow her a maintenance ſuitable to her rank. He takes his father's other wives home, eſpecially thoſe that have not had children, and if he thinks proper he makes them his own; thoſe he diſapproves of are obliged to work for their maintenance under his inſpection, but he never cohabits with them. If the deceaſed leaves no children, the brother inherits the effects; and in caſe of failure of ſuch heir, the next of kin; but the whole becomes the property of the king if no lawful heir appears.

Criminals are puniſhed in proportion to the nature of their offence. From the particular reſpect they pay to foreigners, the injuring of any European is conſidered as a capital crime, and the puniſhment for ſuch offence is thus executed: they take the offender, tie his hands behind his back, and blindfold him. After this, the judge raiſes him up, ſo that his head hangs towards the ground, which the executioner cuts off with a hatchet, and ſeparating the body into four quarters, leaves it for the wild beaſts and birds to devour.

When a perſon is found guilty of theft, he is obliged to reſtore the goods and pay a fine; and if he is unable to pay the latter, he ſuffers corporally. If the robbery is committed on a grandee, the puniſhment is death. But theft is ſeldom committed here, the natives not being of ſo pilfering a diſpoſition as thoſe of the neighbouring nations.

They puniſh murder with death, except the crime be committed by the king's ſon, or a grandee, in which caſe the offender is baniſhed to the moſt diſtant part of the kingdom, and never permitted to return. But murders ſeldom happen here. If a perſon kills another by accident, he may purchaſe his life, by firſt burying the deceaſed, and afterwards producing a ſlave to ſuffer in his ſtead. When the ſlave is ſacrificed, the offender muſt bend his body, and touch the ſlave's knees with his forehead; after which he muſt pay a fine to the three great lords, when he obtains his freedom, and the relations of the deceaſed think the offence has been ſufficiently atoned for.

They have various ways of puniſhing adultery, in proportion to the circumſtances of the parties. If a common perſon ſurprizes his wife in the fact, he is entitled to all the effects of the perſon that has injured him; and the woman, after being ſeverely drubbed by her huſband, is totally diſcarded, being left to ſhift for herſelf the remainder of her life. In theſe caſes, the better ſort avenge themſelves much in the ſame way; but the relations of the offending party, in order to avail themſelves of the ſcandal that might accrue to their family, frequently bring about a reconciliation, by paying a large pecuniary compliment to the injured huſband, who after this ſatisfaction,

tion, huſhes up the matter, and the unreaſonable liberality of his inconſtant ſpouſe is apparently forgot.

Crimes of an inferior nature are puniſhed by fine, which is proportioned to the nature of the offence; and the criminal is ſubject to corporal puniſhment, if he is not able to pay the fine levied. The fines on theſe occaſions are thus diſpoſed of: the perſon injured is firſt ſatisfied; after which, the governor has his ſhare, and the three great lords have the remainder of the fine.

We ſhall now point out the moſt remarkable places in this kingdom, the principal of which is the town or city of Benin, the uſual reſidence of the king. It is a large town, pleaſantly ſituated on the banks of the river, about forty miles from its mouth. It contains a great number of ſtreets, moſt of which are very ſpacious, and the houſes uniformly built. The principal ſtreet is exceeding broad, and at leaſt three miles in length; it is interſected by many croſs ſtreets and lanes, all of which are ſtraight, and of conſiderable extent; and the whole city is at leaſt nine miles in circumference. The houſes of the grandees are much higher than thoſe of the commonalty, and are aſcended by ſteps. At the entrance of each is a veſtibule, or porch, which is every morning cleaned by the ſlaves, and ſpread with ſtraw mats. The inner chamber is ſquare, with an opening in the center for the admiſſion of light; and in theſe apartments they both ſleep and eat, though they dreſs their victuals in other places ſeparate, having many offices under the ſame roof. All their buildings are made of red earth tempered with water, which being dried by the ſun, forms a ſolid wall, and they are covered with reed, ſtraw, or the leaves of trees. The houſes of the common people are entered by a ſmall door, which is in the center, and level with the ground; and light is admitted from an opening in the roof, inſtead of windows.

A market is kept every day, in the principal ſtreet of the city, for the ſale of proviſions and merchandize. The former conſiſts of dogs, of which they are very fond, roaſted baboons and monkies, bats and large rats, parrots, hens, lizards dried in the ſun, fruits and palm-wine. Their merchandize conſiſts of cotton, elephants teeth, wooden platters, cups, and other houſhold ſtuff; cotton cloth, iron inſtruments for fiſhing and tilling the ground, lances, darts and other weapons. The merchandize is all diſpoſed with great uniformity, and a place is allotted for each ſort.

The royal palace is very extenſive, and conſiſts of ſeveral large ſquares ſurrounded with galleries, each of which has a portico or gate, guarded by ſoldiers. The firſt gallery, on entering the palace, is very long, and ſupported on each ſide by lofty pillars. At the end of this gallery is a large mud wall, with three gates, the center one of which is ornamented with a turret about ſeventy feet high, terminated with the figure of a large ſnake, caſt in copper, and very ingeniouſly carved. Theſe gates open to a large plain about a quarter of a mile ſquare, incloſed by a mud wall. At the end of this plain is another gallery much like the former; this is terminated by a gate that opens to a third, the pillars of which are carved with human figures, and in one part of it, behind a cotton curtain, are eleven mens heads caſt in copper, on each of which is an elephant's tooth. Leaving this you enter a large plain, where there is a fourth gallery, beyond which are the king's apartments. The firſt of theſe is the king's audience-chamber, where he receives the nobility, foreign ambaſſadors, &c. The ſides of it are hung with tapeſtry, and the floor is covered with carpets of European manufacture. At one end of the room is the king's throne, which is made of ivory, it is aſcended by three ſteps, and over it is a canopy made of the richeſt ſilk. All the other apartments are very ſpacious, and the furniture of them exceeding elegant and coſtly.

This city is intirely inhabited by the natives, no foreigner being permitted to reſide in it. Some of them are very wealthy, and ſpend their whole time at court, leaving trade and agriculture to be executed by their wives and ſervants. Theſe go to the circumjacent villages, and either trade in merchandize, or ſerve for wages, and are obliged to bring home the greateſt part of what they get, otherwiſe they would be ſold for ſlaves by their maſters.

Some years ago the city of Benin was much more populous then it is at preſent. Its decay was owing to the avaricious diſpoſition of the then king, who, in order to increaſe his coffers, cauſed two of his road chiefs to be put to death, under pretence of their having conſpired againſt his life. The wealth he accumulated by theſe two, prompted him to make the like attempt upon a third; but this man was ſo univerſally beloved, that he had timely notice of the king's reſolutions, and accordingly betook himſelf to flight, attended by the principal part of the inhabitants. As ſoon as the king heard of this, he diſpatched an army to purſue them, and oblige them to return, but the army met with ſuch a repulſe, that they were obliged to return without having effected the buſineſs on which they were ſent. The king, irritated at this, made a ſecond attempt; by ſending a much more conſiderable army: but here he alſo failed, for many of them being killed, the reſt took ſhelter in the city.

Elated with this ſucceſs, the road chief determined to be revenged of his ſovereign, and marched with all his men to the city, which he plundered, ſparing no place except the king's palace. After this he retired, but continued for ſeveral years to rob thoſe inhabitants of Benin that happened to fall in his way; till at length, at the interceſſion of ſome Europeans, a peace was concluded between him and the king, by which he was pardoned, and intreated to return to his former habitation. Fearful, however, of the integrity of his majeſty, whom he ſtill conſidered as his moſt inveterate enemy, he did not think proper to comply, but ſettled at a place about three days journey from Benin, where he kept a court, was highly reſpected by the people that adhered to him, and lived with as much ſplendor and dignity as the king himſelf. Some few of the citizens returned to the capital, and were not only received by the king with great friendſhip, but were preferred to honourable offices, in order to reduce the reſt to follow their example: the multitude, however, were not then to be deluded; they preferred a life of eaſe and freedom to that of tyranny and oppreſſion; nor could the moſt preſſing intreaties made uſe of by the king prevail on them to return. Such were the circumſtances that occaſioned the reduction of the inhabitants of this city, whoſe number is now at leaſt one third leſs than before this conteſt broke out.

Moſt of the other towns in this kingdom are ſituated on the river Benin, and are chiefly remarkable for trade. The principal of theſe is called Awerri, or Ouwerree, and belongs to a king, who is the only one that is independent of the king of Benin. The Portugueſe have a church and factory in this town, which ſtands about ſix miles from the mouth of the river.

Boedodoe, is a trading village, at a ſmall diſtance from Awerri: it contains about fifty houſes, built with reeds and mud, and covered with the leaves of trees. It is governed by a viceroy and ſome grandees, whoſe authority extends only to trifling matters, as civil cauſes, and the raiſing of taxes for the king; but they muſt ſtate the matter to the court, and wait their determination, in caſe any thing conſiderable happens.

The village of Ogatton, near the mouth of the river, is pleaſantly ſituated on a high iſland in the center of it, and ſurrounded with moſt kinds of fruit trees. This was once a conſiderable place, but it ſuffered ſo much in the wars, that it was almoſt laid waſte; however, from its delightful ſituation, the buildings of late years have conſiderably increaſed, and it ſeems as if its original ſplendor would in time be reſtored.

Arebo, is the greateſt place of trade on the river Benin, and is ſituated about fifty miles from its mouth. It is a large populous town, and the inhabitants of it are remarkably honeſt in their dealings. The Dutch and Engliſh have both factories here; but the latter having neglected their trade, the lodge fell down, and has never ſince been rebuilt; ſo that the only European ſettlement in this part of the country now belongs to the Dutch.

The town of Meiberg, is a ſmall but very neat place, and the houſes are built with great uniformity. The Dutch had once a factory here, and were greatly reſpected by the natives; but during their ſtay a melancholy circumſtance happened, occaſioned by the indiſcretion of the principal factor, that intirely ruined their affairs; which was this: N. Beeldſnyder, their laſt factor, having caſt a wanton eye on one of the negro governor's wives, raviſhed her; which ſo enraged the injured huſband, that he came with a body of armed men, and reſolved to kill the adulterer, who narrowly eſcaped on board a ſhip; but in the flight was ſo wounded, that, through the ſurgeon's unſkilfulneſs, he died. The company's director-general on the coaſt, not being rightly informed of the caſe, ſent a veſſel from El Mina, well manned to Benin, with ſtrict orders to revenge the murder. Theſe ſoldiers ſo exceeded their commiſſion, that they killed or took priſoners every perſon in the town, who could not eſcape. The king being informed of this, and the occaſion of the maſſacre, commanded the negro-governor to be brought before him; and though he had done nothing but what might be juſtified, in defending

the honour of his family, yet the king cauſed him and his whole race to be put to death in the moſt cruel manner. The dead bodies of theſe miſerable wretches were expoſed to be devoured by the beaſts, and their houſes were razed to the ground, with ſtrict orders that they ſhould never be rebuilt. The Dutch, however, from theſe circumſtances, made no farther attempt, and ever ſince that time there has not been any European factory in this town.

There are, in this kingdom, ſeveral other conſiderable rivers, beſides Benin; particularly the river Rio del Rey, which is very ſpacious and extenſive, but the ſhore on each ſide is low and marſhy. It takes its ſource from the north, and is very wide for a conſiderable way up the country. On its banks are a great number of villages inhabited by people divided into two nations, one of which dwell along the upper part of the river, and the other towards the mouth; but they are always at enmity with each other. They are a ſtrong, robuſt people, but poor, diſhoneſt, and treacherous; and are very filthy both in their houſes and perſons. They go quite naked, ſmearing their bodies with oil intermixed with a red colour: they plait their hair in various forms, file their teeth, and adorn their foreheads with ſtrange marks made with hot irons or pincers. In ſhort, they are mere ſavages, and their only employment is fiſhing; for the mechanical arts or agriculture they are total ſtrangers to.

Another large river is called the Kamarones; its inhabitants are governed by a chief of their own, called Moneba. His ſeat, or palace, is ſituated on a delightful ſpot that commands the adjacent country, which is exceeding fertile, and produces great quantities of yams, bananas, palm, and other fruits. The people here carry on a conſiderable trade with the Europeans, having plenty of elephants teeth and ſlaves, which they ſell at very reaſonable rates. The goods ſold by the Europeans, in exchange, conſiſt chiefly of iron and copper bars, braſs pots and kettles, bugles or beads, ox horns, and ſteel files. The natives here have a remarkable ſmooth ſkin, and are luſty, tall, and well-ſhaped.

About fifteen leagues from cape de Lopo Gonſalvo, or the utmoſt point of the gulf of Benin, is ſituated the river Gabon, which is very large, and the mouth of it is at leaſt ſix miles acroſs. About nine miles up the river are two iſlands, one of which takes its name from the king, and the other from the prince of this river, two great lords of Benin. But theſe iſlands have now but few inhabitants, the king having left one, and the prince the other, each of them living on particular parts of the river. The river is navigable for ſmall ſhips ſeveral leagues up, but its ſpring and courſe cannot be aſcertained. There are many villages on its banks; and the trade carried on here conſiſts in elephants teeth, honey and wax.

The people who dwell near this river, are with reſpect to their perſons, very large, robuſt, and well-ſhaped, but they are fierce and cruel in their diſpoſitions. The men are greatly addicted to thieving; and the women are ſo abandoned, that they care not on whom, or in what manner, they beſtow their favours. They are divided into three claſſes: the firſt of which are under the government of the king; the ſecond under that of the prince; and the third are totally independent. The two former are always at variance; and though they will not engage in a war, yet they make depredations on each others property as opportunity preſents itſelf.

The dreſs of the men conſiſts of mats faſtened round the waiſt, made of the bark of trees, and painted red; beſides which, they are ornamented with the ſkins of monkies, or other wild beaſts. Moſt of them go bareheaded, having their hair ſtrangely cut, or tied up: ſome have ſmall caps made of twigs, or the bark of the cocoa; and others have feathers faſtened on their heads with iron wire, or plates of iron. They dye their bodies red, and have great quantities of rings in their noſes and ears. The women wear mats of reed round their waiſts, and have bracelets of copper or pewter on their necks and arms. Some of them ſleep on mats made of ſtraw, but the generality lie on the bare ground. Their food conſiſts of yams, potatoes, and bananas, with fiſh and fleſh dried in the ſun. Their houſes are very ingeniouſly made of reeds and canes, covered with leaves of the banana-tree.

The dreſs of the king differs greatly from that worn by his ſubjects. It conſiſts chiefly in beads of bone, and ſhells dyed red, and ſtrung together like a chaplet round his arms, legs, and neck. The royal palace is larger than the other buildings. Before the gate of it is planted a braſs cannon, with ſeveral ſmall guns, the appearance of which ſtrikes an awe into his ſubjects, who are very obedient, either from fear, or other motives.

Cape Lopo Gonſalco is ſituated about eighteen leagues from the river Gabon, and is the utmoſt boundary of the gulf of Guiney. It appears like a low flat iſland, but it is a long, narrow peninſula, ſtretching from the continent ſeveral leagues to ſea. It has a good harbour either for anchoring or careening ſhips, eſpecially for thoſe, homeward-bound, proviſions being not only plentiful, but alſo very cheap. On the ſhore are ſeveral huts, where the natives occaſionally reſide, as the European veſſels ſtop for the above purpoſes; but the town they belong to is called Olibati, and is ſituated about ſix miles from the cape. It is the reſidence of a king; and the town contains about three hundred houſes, which are made with bulruſhes interwoven, and covered wih palm-leaves. The natives are much more civilized than thoſe at the river Gabor, but they differ little in their dreſs, manners, and cuſtoms. The country abounds with wild beaſts, as elephants, buffaloes, wild boars, apes, monkies, &c.

As ſoon as a veſſel arrives at the cape, it fires off four guns, to alarm the country, and give notice of their arrival; when the people immediately repair from Olibato, and other inland places, to the cape, and carry with them ſuch articles as they have to diſpoſe of, the principal of which are water, wood for fuel, and proviſions. They always keep a ſtock of wood by them, that they may be ready to ſupply ſuch veſſels as ſtop at the cape: they cut it into billets about two feet long, a boat load of which they generally ſell for a bar of iron. They get their water out of a large pond near the cape: it is allowed by moſt ſeamen to be exceeding wholeſome, and preſerves its good quality at ſea.

The Europeans alſo purchaſe here elephants teeth, wax, honey, and cam wood; and the articles ſold to the natives, are, firelocks, powder, ball, and ſhot, knives, iron bars, beads, old ſheets, axes, and braſs baſons.

CHAP. IV.

THE NEW HISTORY AND DESCRIPTION OF

CONGO.

SECT. I.

Containing a general Deſcription of the Kingdom of CONGO, or LOWER GUINEY; alſo an account of that Diviſion of it called BENGUELA.

THE kingdom of Congo is ſituated between the equinoctial line, and eighteen degrees of ſouth latitude. It is bounded on the north by the kingdom of Benin; by the inland parts of Africa, on the eaſt; by Mataman, on the ſouth; and by the Atlantic ocean, on the weſt. It extends upwards of one thouſand ſeven hundred miles from north to ſouth.

In order to give a more clear and diſtinct deſcription of this extenſive country, we ſhall divide it into four parts; namely, 1. Benguela; 2. Angola; 3. Congo Proper; and, 4. Loango; and ſhall treat of them ſeparately, as there is in each of theſe kingdoms ſeveral things worthy of notice, and which are peculiar to itſelf.

Benguela,

Benguela, is bounded on the weſt, by the Ethiopic ocean; on the north, by Angola; on the ſouth, by the kingdom of Mataman; and, on the eaſt, by that of the Jaggas, from whence it is ſeparated by the river Kuneni. It is about four hundred and thirty miles in length, from eaſt to weſt, and one hundred and eighty from north to ſouth. The coaſt part begins near the mouth of the river Coanza, and extends to cape Negro. About the center of it is the bay of Cows, which, though not very large, is nevertheleſs a good harbour, and capable of receiving moſt ſhips of burden. It receives its name from the many herds of that ſort of cattle which are bred within its environs. The country is plain, and produces moſt kinds of proviſions. Different ſorts of metals, particularly ſilver and lead, are found in ſome parts of it.

With reſpect to the climate, it is ſo exceeding unwholeſome, and prejudicial to ſtrangers, that few chuſe to land there. Even the proviſions are affected by the quality of the air, ſo that they who eat of them at their firſt coming, run the hazard of their lives, and, if they eſcape, generally contract ſome diſagreeable and laſting diſtemper. The Europeans that reſide here look more like companions of the dead than the living, the unhealthineſs of the place rendering them mere ſpectacles.

Among the few places in this kingdom that merit any particular notice, the moſt material is Old Benguela from whence the kingdom receives its name, and is ſo called to diſtinguiſh it from New Benguela, a ſmall town built by the Portugueſe, on the north ſide of the bay of Cows. Old Benguela is ſituated in ten degrees thirty-five minutes ſouth latitude, and thirteen degrees ten minutes eaſt longitude. Beſides the kingdom, it gives name alſo to a province, which extends about ten leagues along the coaſt, from cape St. Bias, to the bay of Pullets and Fowls, ſo called from the great numbers of poultry found there. The land here is very low, but the ſoil is fertile, and produces abundance of cattle, as alſo ſeveral kinds of grain and roots. Here the Portugueſe have built a ſtrong fortreſs, called fort Benguela, in which they maintain a garriſon to keep the ſavage Jaggas in awe, who would otherwiſe ruin the whole country. The fort is ſhaded with orange, lemon, banana, and other fruit trees, and is ſurrounded with houſes.

There are ſeven villages in the neighbourhood of Old Benguela, the moſt conſiderable of which is called Mani-Kaſomba, and is ſo large and populous, that the inhabitants can raiſe three thouſand men at a very ſhort notice in caſes of emergency.

The bay is ſituated to the ſouth of the town of Benguela, is about two leagues broad at the entrance, and ſo deep, that ſhips of burden may find good anchorage in it.

A village called Manikicongo lies about twenty miles from the mouth of the bay: at this place the Portugueſe have a warehouſe for the reeeption of various commodities. The village ſtands at the foot of a hill, and is very large and populous. The chief articles ſold here by the Portugueſe to the natives, are guns, gunpowder, fine linens, and cotton cloths.

The mouth of the river called Caton-belle (which is formed by two or three ſmall rivers united together) is to the ſouth of the above village. The water here is extremely brackiſh, ſo that the natives convey it into ditches, where they let it evaporate, till it becomes ſalt. Though this ſalt is of a very inferior quality, yet it is in ſuch eſteem, that the merchants load their veſſels with it for exportation. The mouth of the river is ſheltered from the wind; and it being at leaſt fifteen feet deep, and quite clear of rocks, ſhips anchor in it with the greateſt ſecurity.

A bay, called by the Dutch the Good Bay, on account of its ſafe anchorage, is a little to the north of the river Caton-belle. The coaſt here is low and fertile; and the inhabitants breed great plenty of hogs and black cattle.

The face of the interior part of the country is covered with foreſts, which are inhabited by prodigious numbers of wild beaſts, particularly lions, tygers, elephants, rhinoceroſſes, and wild mules.

But the moſt remarkable animal found here, and which is peculiar only to this country, is called by the natives abada. It is of the wild kind, very ſhy, ſwift-footed, and of the ſize of a half grown colt: but what renders it more ſingular, is, its having two horns, one of which grows on the forehead, and the other on the nape of the neck: the former is about three feet in length, and ſharp at the point, but near the root it is about the thickneſs of a man's leg, and bends downwards; that on the nape of the neck is flatter and ſhorter, of a blackiſh or dark brown hue. The head is not ſo long in proportion as that of a horſe: it is ſhort and flat, like that of an ox, only more hairy, and the hair much ſtronger. Its tail is alſo like that of an ox, though not quite ſo long, and the hair more like that of the horſe: the feet are cloven like thoſe of a ſtag, but they are much larger: when this creature is young, the front horn is ſtraight, but as it advances in age, the horn bends gradually up like the tuſk of an elephant. The natives hunt it for the ſake of the front horn, which they eſteem as an excellent antidote againſt poiſon. They look on the virtue of it to be greater or leſs, according to the age of the animal when killed; and the Portugueſe, in order to know the goodneſs of it, make uſe of the following expedient: they ſet the horn upright on the ground, and ſuſpend a naked ſword over it point to point; if the horn be good and hard, the point of the ſword will not penetrate it, whereas when the horn is ſoft and young, the ſword immediately ſinks into it, which ſhews that it is not arrived at its full perfection, and of courſe greatly leſſens its value. They alſo make a poultice of the pulverized bones of this creature mixed with water, which they ſay is a ſovereign remedy againſt all achs and pains of the body, by drawing away the peccant humours from the whole maſs of blood, as well as from the part affected.

Glaſs beads about an inch long, and of various colours, are the current coin of this kingdom: theſe they alſo uſe as ornaments about their arms, legs, and other parts of the body.

As the manners, cuſtoms, religion, &c. of the inhabitants of Benguela are much the ſame with thoſe of Congo, we ſhall omit the mention of them till we come to treat of that kingdom, and in the mean time proceed to a deſcription of thoſe countries and nations that border on Congo and Angola, beginning with the kingdom of Anſiko.

SECT. II.

Deſcribing the Kingdom of ANSIKO, its ſavage Inhabitants, &c. and the Country of the Jaggas, their Incurſions, Ravages, Horrid Cruelties, and barbarous Cuſtoms.

ANSIKO, is bounded on the eaſt, by the river Umbre, which runs into the Zaire; on the weſt, by the borders of Loango; on the north by ſome of the deſarts of Nubia; and on the ſouth, by the province of Songo. It is one hundred and eighty miles in breadth, from north to ſouth; and two hundred and eighty-five miles in length, from eaſt to weſt.

There are many copper-mines in this kingdom, of which the Portugueſe make conſiderable advantages. It is in general a very barren country, and the inhabitants of it mere ſavages. They have no lands or inheritance, but wander like Arabs, from one place to another, regardleſs of life, and intrepid in their undertakings. They pay no attention to agriculture, nor do they uſe any endeavours to preſerve their exiſtence, but by plundering all who happen to fall in their way, ſome of whom they kill, and others they keep as ſlaves. They are dreaded for their extreme brutality; and are ſo irrational, that few Europeans can trade with them. Their language is barbarous; and ſo unintelligible, that even the inhabitants of Congo cannot underſtand it.

In order to preſerve their health, they all anoint their bodies with a compoſition made of white ſandal-wood pounded, and palm-oil. Both ſexes go naked from the waiſt upwards; but the better ſort diſtinguiſhed themſelves by wearing red and black caps made of Portugueſe velvet.

The Anſikans are perfect cannibals, their chief food being human fleſh; and there are public markets where bodies are hung up and expoſed for ſale. They believe themſelves poſſeſſed of an abſolute right to diſpoſe of their ſlaves; and thoſe taken in war are fattened, killed, and either uſed by their conquerors, or ſold to the butchers. However ſhocking theſe relations may appear, yet they are indiſputable facts; for the people of this country feed on each other with as much indifference as thoſe of other countries do on the reſpective animals appropriated by Providence for the ſuſtenance of mankind. Here diſcontented ſlaves offer themſelves for food to their maſters: fathers and ſons, brothers and ſiſters, reciprocally feed upon each other without the leaſt remorſe; and infants juſt born, are eat by their unnatural and inhuman parents. Here are no graves for the dead, except the bellies of the living, who eat the deceaſed ſoon after their departure.

Their weapons are battle-axes, and ſmall but very ſtrong bows, ſtrengthened and adorned with the ſkins of ſerpents; the ſtrings are made of ſupple and tender ſhoots of trees, and the arrows of a hard but very light wood, pointed at the ends with iron. They ſhoot with the

the moſt ſurprizing agility, inſomuch that they will diſcharge near a dozen arrows from the bow, before the firſt falls to the ground. They manage the battle-ax with equal dexterity: one end of this inſtrument is very ſharp, and the other flat like a mallet, with a handle between about half the length of the iron, rounded at the end and covered with the ſkin of a ſerpent, with the flat end they ſcreen their bodies, and ward off the darts of their enemies. They have daggers alſo in ſcabbards made of the ſkins of ſerpents which they carry in leathern girdles faſtened by their ſides.

It may be reaſonably ſuppoſed that their religion is groſs idolatry. They worſhip the ſun as their chief deity, whom they repreſent in the figure of a man, and the moon under that of a woman. They have alſo an infinite number of inferior deities, each keeping one peculiar idol, to whom he offers ſacrifices, and conſtantly invokes before he engages in any enterprize of importance.

Zimbis, or ſmall ſhells, are the current coin of theſe people: theſe they gather on the coaſt of Angola, in exchange for which, as alſo ſalt, ſilk, glaſs, knives, and other merchandize, they give ſlaves.

The Jaggas, are a ſavage and cannibal people, inhabiting a ſmall kingdom called Matamba, to the ſouthward of Anſiko, and have alſo conſiderable territories to the ſouth-eaſt of it. It is uncertain from whence theſe people originated, but they are ſuppoſed to have firſt ſettled about the kingdom of Anſiko, and from thence ſpread themſelves along thoſe ſpacious waters that lie between Anſiko and Loango. From thence it is imagined they ſpread by degrees along the eaſtern frontiers of Loango, Congo and Angola, and from thence eaſtward to the kingdom of Matamba, of the latter of which, with the territory adjoining, they made themſelves complete maſters, and to the great injury of their more rational and peaceful neighbours, have ever ſince preſerved.

Theſe people poſſeſs territories which extend from north-eaſt to ſouth-weſt, along Matamba and Benguela, about nine hundred miles; but they are very narrow in proportion, being in ſome parts one hundred and fifty, and others not above one hundred miles broad. They are incloſed between the kingdoms of Matamba and Benguela, from whence they are ſeparated by the great river Kunerio, on one ſide, and by the empire of Moni-Muji on the other. The only town throughout all theſe dominions is called Kaſſarii, and is ſituated on the north part of them, near the frontiers of Matamba, where the great jagga, or king, occaſionally reſides. Having neither towns nor houſes beſides, they roam from place to place with tents, removing as inclination directs, or neceſſity obliges them to ſhift their quarters.

They live entirely by plundering their neighbours, and ſeize every thing that comes in their way; conſequently they neither ſow nor plant: in their perſons, they are tall, luſty, and ſtrong, yet nimble and ſwift of foot, climbing up the ſteep mountains and craggy rocks with the moſt aſtoniſhing agility. Their women are ſtout, well-ſhaped, fertile, warlike, and active; and both ſexes are ſo intrepid, that no enterprize is thought too hard or dangerous for them to venture upon; and whenever they meet with an opportunity of plundering, they ruſh on their adverſaries at all hazards, and with a fearleſs unconcern for their own lives. They conſider it as the greateſt mark of bravery to attack the fierceſt and ſtrongeſt creatures, and a ſtill greater one to be more fierce and inhuman; and this ſavage diſpoſition not only extends to the people of the nations they invade, but to thoſe of their own, and even to their relations and children, whom, when they are in want of other food, they make no ſcruple to butcher and eat.

They build their kilombos, or camps, of ſuch materials, and on ſuch a conſtruction, that they are eaſily removed on the ſhorteſt notice. When they go on any capital expedition, they are always accompanied by the great jagga, and his court; at which times their camp is formed in the following manner: the officers, who are the chief directors of them, having pitched upon a proper ſpot, divide it into ſeven diſtinct quarters, each of them under the government of its own particular commander; in the center one is the royal pavillion, ſurrounded by thoſe of the miniſters, officers, and ſervants belonging to the court, the whole of which compoſes a ſpacious ſquare, and is encompaſſed by a ſtrong hedge, ſo diſpoſed as to appear more like a labyrinth than a circular fence.

The kalambo, or general of the army, inhabits the next quarter in rank: this officer is ſtiled muta-aita, or chief of the war, and on theſe occaſions is the next in authority to the king; he orders and directs all military expeditions, encampments, engagements, and retreats; and muſt therefore be an experienced and intrepid warrior, cruel, and deſtitute of the leaſt ſenſation of humanity.

The third quarter is occupied by an officer called tendela; he commands the ecoona, or rear-guard, and is the chief of all the electors, as well as ſupreme officer during an interregnum; for which reaſon, next to the king, he is held in the higheſt eſteem.

The fourth quarter is commanded by an officer called mani-lumbo: he is the chief engineer of all the fences and hedges with which the camp is fortified, and particularly that part of it belonging to the royal family: he is the only perſon who is permitted to come into the royal preſence whenever he thinks proper; and is particularly reſpected at court on account of this diſtinguiſhed privilege.

The officer who commands the fifth quarter is intruſted with all private commiſſions, and charged with the execution of them: in caſe of any failure, he is immediately put to death, and another appointed to ſucceed him.

The ſixth quarter is commanded by an officer called illunda, or the captain of the baggage, whoſe buſineſs it is to take care that every thing is in proper order for the uſe of the army. In times of peace, which ſeldom happen, he is intruſted with the care of filling the magazines with arms, and is to keep them in proper order to be delivered to the ſoldiers, on any ſudden and emergent call for them.

Another illunda, or keeper of the royal wardrobe and baggage, commands the ſeventh or laſt quarter. As this place is conſidered of great truſt, it is generally given to one of the king's relations, who has particularly diſtinguiſhed himſelf for his courage and loyalty in the ſervice of his ſovereign.

There is alſo another great officer belonging to the camp, called the manicurio, or ſuperintendant of the proviſions, who is uſually choſen for his ſingular dexterity in the art of plundering; he hath a great number of officers and ſlaves under him, who are all equally qualified for that buſineſs. It is to be obſerved, however, that this officer is only purveyor to the court; for as to the ſoldiers, they are obliged to provide for themſelves. They generally do this by force; but ſometimes they purchaſe proviſions from the Europeans in exchange for ſlaves, who often give their new maſters the ſlip, before they can be properly ſecured.

The piumbis, or fore-runners, are the laſt officers belonging to the camp. Theſe are a ſort of ſpies whoſe buſineſs it is to be in continual motion, and to endeavour to diſcover the ſituation, ſtrength, and number of the enemy; to ſkirmiſh, oppoſe, or even attack them, as occaſion offers, and to ſupport the van on the firſt onſet. They fight with the moſt determined reſolution, being uſually choſen out of the moſt intrepid of the whole army.

The ſoldiers belonging to the Jaggas are neither well diſciplined, armed, or cloathed. Their offenſive weapons are bows and arrows, ſpears, darts, daggers, and clubs; but they are taught rather to uſe their defenſive weapons than their miſſive ones, being particularly inſtructed to cover their bodies, which are almoſt naked, with their large oval ſhields made of thick hides; and this method is ſingularly ſerviceable in a retreat, as it preſerves them from being wounded by the arrows and lances of their purſuing enemy. Their chief excellency conſiſts in ſtrength and activity of body, in the artfully covering themſelves, and the throwing their miſſive weapons, by which they generally annoy the enemy, and make them ſpend their ſhot againſt their ſhields: after this they renew the onſet with ſuch vigour, as ſeldom fails of putting the enemy to flight, which is always followed by a general ſlaughter; for they pay no reſpect either to perſons or ſex when victory declares in their favour.

If they happen to invade a country where any conſiderable oppoſition is expected, they intrench themſelves very quietly for ſome time, and only alarm the inhabitants with frequent ſkirmiſhes, till they think they have ſufficiently harraſſed them; or, if theſe aſſault them, they ſtand on the defenſive for two or three days, till the others have ſpent their ſtrength and fury; when the commanding officer ſends out a large detachment in the night, to lie in ambuſh at ſome diſtance from the enemy's camp. On the following morning they begin the attack, when the poor natives, being ſuddenly ſurprized, are eaſily put to the rout, and leave their country to the mercileſs invaders, to plunder and ravage at their pleaſure.

The ſovereign of the Jaggas, who though a man of

great courage and reſolution, never undertakes any thing in war without previous enchantments, and conſulting his mokiſſo, or devil, by ſacrifices, from whence he pretends to foreknow the event of his enterprize. On theſe occaſions he riſes before day-break, and ſets himſelf on a ſtool, attended by two of his conjurors, one on each ſide, and about fifty women ſtanding in a circle round him, waving the tails of beaſts, and ſinging. In the center is kindled a great fire, over which is placed an earthern pot containing ſome white powder or paint, wherewith his conjurors beſmear his forehead, temples, breaſt, and belly, uſing at the ſame time many enchanting terms, and continuing their ridiculous ceremonies till ſun-ſet; at which time they bring his caſengala, or hatchet, and put it into his hands, bidding him be ſtrong againſt his enemies, for the mokiſſo is with him. A male child is then brought to him, which he immediately kills; after which four men are brought to him, two of whom he ſlays, and orders the other two to be killed without the camp. He alſo orders ten cows to be killed, five within, and five without the camp, with the ſame number of goats and dogs: the blood of theſe animals is ſprinkled on the fire, but the fleſh is eaten with great feſtivity and triumph. The ſame ceremonies are likewiſe uſed by the inferior officers of the army on the like account: but as they pretend that the mokiſſo frequently appears and ſpeaks to them, ſo neither they nor their chief make uſe of idols on theſe or any other occaſions.

An extraordinary degree of reſpect is paid to the great jagga, or king, no perſon being permitted to ſit before him, except the kalambo, or head general, who is ſupreme judge in all caſes, whether civil or criminal. This officer is allowed to ſit in a chair with a back to it; but the tendela, who likewiſe ſits as judge, is only allowed a ſmall ſtool about a foot high. Thoſe of a certain rank are permitted to ſit in the king's preſence on a carpet, but they muſt ſpread it with their own hands. They who obtain audience of the king, muſt ſpeak to him with their bodies bent almoſt double; and, if of an inferior rank, muſt proſtrate themſelves on the ground. If the king happens to ſneeze, cough, or break wind, the whole aſſembly muſt wiſh him health and long life; and they who are neareſt to his perſon, muſt give notice to thoſe at at diſtance to do the ſame; on which they all expreſs their good wiſhes, by bending their bodies and clapping their hands.

That our readers may have a proper idea not only of their dreſs, but alſo the importance of the moſt dignified among theſe people, we ſhall preſent them with the following account, as extracted from Battel, of the dreſs, &c. of the kalambo, or head-general, under whom he ſerved for ſeveral months. "He wore (ſays this writer,) long hair, ſet off with many knots of bamba ſhells. His neck was adorned with a collar of maſos, which are another kind of ſhells found along the Ethiopic coaſt, and ſold among them for about the value of twenty ſhillings. His middle was incircled with a girdle of larders, or beads made of oſtrich eggs, and under it a palm-cloth, as fine as ſilk. His body was painted with various figures, and anointed every day with human fat. He wore acroſs his noſe a piece of copper about two inches long, and two others of the ſame ſort in his ears. He had about thirty wives, who followed him when he went abroad, one of whom carried his bow and arrows; and four others his cups and drinking veſſels; and whenever he drank, they all kneeled down, clapped their hands and ſang. He kept his men under the ſtricteſt diſcipline; and if any of them turned his back to the enemy, he was condemned to death, and his body eaten, and the more effectually to deter them from cowardice, he uſed to make an oration from a kind of ſcaffold every night, in diſpraiſe of it, and in commendation of courage and valour."

We have alſo, from the ſame writer, a deſcription of the method in which they bring up their young ſoldiery. "Theſe (ſays he) are not their own offspring, but the children of ſuch captives as they make in their excurſions; for though they allow themſelves many women, and theſe are no leſs fruitful than thoſe of other African nations, yet they ſuffer few of them to rear up their children, but order them to be buried alive as ſoon as born; and, in lieu of them, make choice of ſuch as are the moſt promiſing from among thoſe of their priſoners, to be trained up to arms, and to the plundering trade. Theſe they commonly chuſe at about the age of twelve or thirteen years, the females for procreation, and the males for war. The latter are no ſooner enrolled, than they have a collar hung about their necks, in token of ſlavery, which is to be worn by them till they bring home the head of an enemy, when it is publickly taken off, and they declared freemen of the cannibal commonwealth. The remainder of the captive train of both ſexes are inhumanly reſerved to be killed and eaten, not in time of ſcarcity of cattle and other proviſions, but out of cruel wantonneſs, and in preference to all other fleſh. This privilege of being accounted men, and freed from their badge of ſlavery, ſeldom fails of inſpiring the youths ſo choſen with an uncommon ambition to attain it at all hazards, and to face the greateſt dangers with an intrepid boldneſs for the ſake of it. By this method they keep up their number complete, and the fierce ſavage nature of the Jagga republic from recoiling into compaſſion and humanity."

In this country the common people of both ſexes go almoſt naked, having only a piece of cloth faſtened round the waiſt, which is ſo ſmall, that it barely covers half their thighs. Perſons of rank indeed dreſs themſelves in gaudy apparel, adorning their hair, neck, arms, and legs, with ſhells and beads of various ſorts; but their additional dreſs ariſes more from pride than any affectation of modeſty. They have a ſtrange cuſtom of pulling out four of their teeth, two above and two below; and they who refuſe or neglect to do this are ſo deſpiſed by the reſt, as to be deemed worthy to be excluded their ſociety.

Theſe people have no ceremonies of marriage among them, intermixing with each other according to their inclination. But they have ſome particular cuſtoms in the interment of their dead, eſpecially thoſe of the male kind, and which evince farther tokens of their ſavage cruelty. The deceaſed is not only waſhed, anointed, and bedecked with all his moſt valuable finery, but accompanied by two of his moſt beloved women, who are conveyed with him to his grave, with their arms broken. The body is carried to the grave in a chair, between two men, and placed in it as if ſtill alive, and the two women, one on each ſide of it. As ſoon as they are thus depoſited, the grave, which is commonly very deep, is covered on the top with earth; and the relations, who are there preſent, ſprinkle it with the blood of ſlain goats and palm-wine; after which they make a funeral lamentation over it for ſeveral ſucceeding days. Thoſe of high rank are interred with more pomp; and the ceremonies and libations, according to the rank of the deceaſed, are reiterated a longer or ſhorter number of days, weeks, &c.

We ſhall next proceed to give ſome account of the country of the Jaggas, a nation of cannibals and ſavages; previous to which we muſt remark, that though what is handed down to us of the hiſtory of this people is but of recent date, yet the circumſtances are ſo ſurpriſing, and the events ſo intereſting, that it would be unpardonable not to record them; as they will at once gratify the curioſity of the reader, and fully evince what we have already advanced concerning the ferocious diſpoſition of this nation of ſavages.

Hiſtorians relate, that about the middle of the fifteenth century, one Zimbo, who was at that time a principal leader among them, formed a deſign of invading the vaſt empire of China. The people, in hopes of enriching themſelves by the plunder of thoſe nations, readily approved of his propoſal, and elated at the proſpect, flocked to him in ſuch numbers, that he readily found himſelf at the head of a numerous army, who all promiſed to obey him in every thing, and to follow him wherever he thought proper to lead them. He took with him a favourite woman named Tem-ban-dumba, who ſerved him at once as a concubine and a counſellor; and with theſe he penetrated without any conſiderable oppoſition, to the very center of the Congoeſe empire, committing the moſt dreadful ravages and ſlaughter wherever he came, leaving nothing behind him but deſolation and deſtruction. What added to the inhumanity of their proceedings, was, being accuſtomed to feed on human fleſh, they made no leſs havock among the unhappy people that fell into their hands, and, in order to give a higher reliſh to the fleſh, they wantonly put them to moſt excruciating deaths.

This monſter, by his ſucceſs, gained a daily increaſe to his army, the wretched Congoeſe flocking to him, in hopes of preſerving themſelves from the famine and deſtruction with which they were threatened. Zimbo accordingly grew more powerful, till having one day muſtered up all his forces, and finding them too numerous to continue longer in one body, he thought proper to divide them into ſeveral parts; and, having ſet ſome of his moſt enterprizing officers over them, diſperſed them into various parts of Ethiopia, enjoining them to ſpread deſolation wherever they went. One of thoſe officers, named Quizzuva, a

man no leſs brutiſh than martial, had the inſolence to go and attack the Portugueſe at one of their fortreſſes named Teto in the kingdom of Monoemugi: but he there met with the fate he juſtly merited, being totally defeated and killed, with a great number of his men; the reſt being either taken priſoners, or put to flight by the victors.

Zimbo, who had heard of the defeat of his officer and men, being determined to revenge the inſult, marched in all haſte to the fort with a freſh ſupply of forces, engaged the Portugueſe commander, and, after an obſtinate ſtruggle on both ſides, defeated and killed him, making alſo a moſt dreadful ſlaughter among the reſt of his forces. Thoſe whom he took priſoners underwent a more cruel fate, being put to the moſt horrid deaths, particularly their chaplain, whom he had obſerved to be ſingularly active during the engagement. He ordered all their heads to be ſtuck on lances, and carried away as trophies, together with all their church veſtments, and, dreſſing himſelf in a prieſtly habit, in deriſion of their religion, he marched at the head of the proceſſion.

Elated with this ſucceſs, Zimbo made a deſcent upon the iſland of Quiloa, where, after plundering the place, he put three thouſand of the inhabitants to the ſword: the reſt he took priſoners, ſome of whom he ordered to be ſacrificed to his idols, and made ſlaves of the reſt.

The kingdom of Melinda, was the next object of this ferocious adventurer; the inhabitants of which at the firſt news of his approach, determined to ſave their lives and properties, by betaking themſelves to the woods. They were prevented, however, from carrying their deſign into execution, by their noble-ſpirited monarch, who repreſented to them, in the ſtrongeſt terms, the impropriety of abandoning their country to a ſet of robbers, who had neither religion, honour, nor humanity; proteſting at the ſame time, that whatever they might reſolve on with regard to their own ſafety, he was determined to meet and engage them, and to defend his country and ſubjects to the laſt drop of his blood.

This declaration ſo animated the people, that they determined, one and all, to ſtand by him to the laſt man; and the king, having made every neceſſary preparation, ſet out with them to engage the enemy. Having accordingly advanced ſome diſtance from the capital, he met Zimbo at the head of his victorious cannibals, who immediately engaged the king's troops with his uſual fierceneſs and aſſurance of ſucceſs. The engagement laſted ſeveral hours, during which it was ſo obſtinate and bloody, that prodigious numbers were killed on both ſides. At length, however, the ſavages, deſpairing of ſucceſs, betook themſelves to flight; when the king thinking it moſt expedient, if poſſible, to extirpate ſo diabolical a race, ordered his men to purſue, and kill all that fell into their hands; which orders they ſo readily obeyed, that very few, except ſome of the moſt active, eſcaped their fury.

Zimbo the general, who was among the fugitives, retired with the ſcattered remains of his army into the woods, where he continued ſome time, in expectation of recruiting his army; and during his ſtay here, he formed a reſolution of making a tour round the coaſts of Africa, in which there was a proſpect of daily increaſing his army from amongſt the ſavages, and enriching himſelf with ſuch ſpoils as might fall in his way. Accordingly he ſet out, and ſteered his courſe ſouthward to the cape of Good Hope, without meeting with any oppoſition or diſaſter: and, as he found his army conſiderably augmented, he divided them into ſeveral columns, for the better convenience of ravaging; but charged them not to ſeparate further, than that they might, in caſe of an emergency, be immediately aſſembled together for action.

Leaving the cape, after a ſhort ſtay there, he proceeded northward as far as the river Cuneva, on the banks of which he formed a camp, diſtributing his men into ſeveral bodies under proper commanders, and reſerving to himſelf the ſupreme command over the whole. In a ſhort time he greatly increaſed his army; which ſo animated him, that he made all neceſſary preparations for ſome grand expedition, when death put an end to all his projects, and likewiſe ſoon carried off the faithful companion of all his travels, his favourite concubine Tem-ban-dumba.

The ſurviving commanders, on the death of Zimbo, not chuſing to ſubmit, or become dependent on any other chief, readily agreed to diſſolve the community, and each of them accordingly took upon him the command of his own troops. Some of them went in queſt of new ſettlements, while others continued in their former ſtations.

One of the chiefs that ſeparated from the reſt, was named Dongis: he was principally remarkably for being the father of the moſt infernal virago that ever lived. She was born at the camp which Zimbo choſe for his laſt retreat, and was named Tem-ban-dumba, in compliment to the late general's favourite concubine. Dongis, her father, removed with his ſmall army to the province of Ganghella, ſituated on the ſouth ſide of the kingdom of Matamba, where dying ſoon after, his wife Muſſaza, a bold and enterpriſing woman, took the command into her own hands; and having been brought up in the plundering trade from her youth, gave them ſuch manifeſt proofs of her intrepidity, that they readily ſubmitted themſelves to her conduct, and followed her in the moſt dangerous expeditions. She always appeared armed and dreſſed like a male warrior; and perceiving her daughter to be poſſeſſed of natural courage, ſhe dreſſed her in the ſame manner, and took the young virago with her in all her excurſions, hoping thereby the more effectually to train her up in the infernal buſineſs ſhe was then proſecuting, and had been ſo well practiſed in.

Tem-ban-dumba, though at this time very young, diſcovered ſuch prudence and preſence of mind on the greateſt emergencies and difficulties, that Muſſaza, her mother, made no heſitation to entruſt her with the command of ſome of her forces, while ſhe herſelf led the reſt on to ſome important exploits. The young virago was ſo elated at this, that ſhe began to think herſelf of too much conſequence to be under any kind of ſubjection to her mother. She therefore ſoon found an opportunity to diſplay that infernal diſpoſition, which afterwards diſtinguiſhed her as the moſt inhuman and abandoned of her ſex, and claimed an independent power.

This heroine, being of no leſs amorous than warlike temper, had indulged herſelf in the embraces of ſeveral gallant youths of her army, of whom, through her natural fickleneſs, ſhe no ſooner became tired, then ſhe cauſed them to be privately put to death, to make way for new ones. For this imprudent, as well as inhuman conduct, ſhe had been often ſeverely reprimanded by her mother; till at length, being no longer able to bear ſuch conſtraint, ſhe broke out into an open rebellion againſt her. This reſolute ſtep, added to the intrepid bravery ſhe had ſhewed on many occaſions, made her the more admired, as well as dreaded, by the whole ſavage army, who began to think her ſomething more than human, and expreſſed the utmoſt eagerneſs to come and fight under her banner; ſo that the greateſt part of her mother's forces came gradually over to her, and ſhe ſoon found herſelf at the head of a numerous army, who, as they imagined her to excel all others in prudence and magnanimity, obeyed her more punctually that they would have done any general of the other ſex.

The more effectually to inſpire her men with veneration and dread for her, ſhe ordered her whole army to be drawn up in arms before her, and appearing in her maſculine dreſs, ſhe harangued them in a long ſpeech, in which ſhe acquainted them with her ſanguinary views of making them victorious and happy under her conduct, and by their valour and aſſiſtance, to lay the foundation of a powerful and glorious kingdom. The better to accompliſh her future projects, ſhe told them, ſhe muſt and would inſtruct them in the laws and rights of the antient Jaggas, their anceſtors, as the moſt infallible means to make them no leſs ſucceſsful than their late leader Zimbo, without the danger of expoſing them to the ſame misfortunes. To convince them how much ſhe was in earneſt, and expected to be obeyed, ſhe told them, ſhe would immediately ſet them an example worthy of their attention, unleſs they were greatly degenerated from the natural courage and intrepidity of their celebrated race; and that if they were it would infallibly revive it in them.

Having thus far raiſed their expectations, while they fixed their attentive eyes and ears on her, ſhe ordered an only ſon, whom ſhe had by one of her paramours, to be brought to her, together with a large peſtle and mortar; in which, inſtead of beſtowing on it the careſſes of a young and tender mother, as might naturally have been expected, ſhe, to their great ſurprize, and without the leaſt ſhew of remorſe, pounded the innocent babe alive, till ſhe had reduced the bones, fleſh, &c. into a pulp, among which ſhe mixed ſeveral kinds of powders, herbs, roots, oil, and other ingredients; and thus, having formed the whole into a kind of ointment, ſhe ſtripped herſelf, and ordered ſome of her maids to anoint her with it from head to foot, before all her men. After this was done, ſhe reſumed her martial dreſs; and told them, that was the ſovereign balſam that would render them not only ſtrong, and fit for martial

martial exploits, but invincible, and conſequently a terror to other kingdoms. This inſtance of diabolical heroiſm was univerſally approved by her barbarian ſubjects, who immediately followed her example, by murdering many thouſands of male infants in the ſame horrid manner.

Tem-ban-dumba, after this, made ſeveral laws, which ſhe ſtrictly enjoined her ſubjects to obſerve; among theſe, one of the moſt deteſtable was, that none of her ſubjects ſhould undertake any thing of conſequence, or even conſult about any enterprize, till they had previouſly anointed themſelves with the ſhocking compoſition above deſcribed, which ſhe ſaid would inſpire them with wiſdom to chuſe, and courage and reſolution to execute, all their projects with undoubted ſucceſs: and that there might never be wanting a ſupply of it, ſhe enacted ſome other edicts, by which ſeveral ſorts of male children were excluded from being admitted into the camp, or even from being brought up; ſome of which, that were either deformed or defective, ſhe ordered to be thrown to the dogs, and others to be pounded or boiled for the uſe abovementioned.

Fearing, however, that ſuch barbarity might at length terminate in a general diſcontent, or perhaps in open rebellion, ſhe found herſelf, in the courſe of time, under the neceſſity of reducing the force of ſuch of her laws as were either detrimental to the increaſe of the male kind, or too ſhocking to natural affection of parents; and, inſtead thereof, ſhe introduced others more agreeable to the natural cruelty of the people, among which was that of feeding on human fleſh, and preferring it to every other kind of diet. In this law, however, ſhe made an exception againſt the killing or eating any of her own ſex.

She made, beſides theſe, ſeveral other laws, all of which were of the ſame inhuman nature, and calculated to encourage and enure her ſubjects to all manner of rapine, bloodſhed, and remorſeleſs cruelty. In ſhort, ſhe had at length ſo hardened all her ſubjects in their deſtructive trade, that they ſpread fire and ſlaughter all over the weſtern parts of Ethiopia, without mercy, or almoſt any oppoſition: and if at any time ſhe met with a repulſe, or even defeat, from her warlike neighbours, inſtead of being diſcouraged, ſhe only grew more fierce and deſperate, reinforced her army with all poſſible ſpeed, and fell upon her enemies with ſuch eagerneſs and fury, that every thing was forced to give way to her, or flee from her victorious arms. What effectually animated her troops to follow her through the moſt arduous and dangerous enterprizes, was, the applauſe and recompence they were ſure to meet with on their return to the camp, eſpecially with reſpect to the diſtribution of the plunder and ſlaves, which ſhe divided amongſt them, without reſerving to herſelf any of the moſt valuable part thereof.

This deſperate and blood-thirſty monſter, after having filled the greateſt part of Ethiopia, with terror, blood and ſlaughter, at length fell a victim to luſt and inconſtancy. After ſhe had murdered great numbers of her paramours in order to prevent the diſcovery of her private debaucheries, ſhe at length grew enamoured of a freſh one, in whom, though then only a private ſoldier, ſhe diſcovered ſuch excellencies, as made her overlook the great diſparity between herſelf and him. His name was Kulambo; he was in perſon, tall, ſtrong, and well-ſhaped; in his diſpoſition bold and fearleſs, and no way inferior to his miſtreſs in craftineſs and cruelty. As he was not ignorant of the fate that had attended ſo many of his predeceſſors, ſo neither did he accept of her condeſcending offers, but with a fixed reſolution to retaliate it upon her, as ſoon as he found her affection for him in the leaſt to decreaſe. In the mean time, however, he uſed every means he could project to pleaſe her, and in a ſhort time ſo worked up her paſſions, that he prevailed on her to marry him. The nuptials were accordingly celebrated with great pomp, after their manner, that is, with the death of a great number of human and other victims, for the entertainment of their numerous gueſts; yet neither could this, nor the many other favours ſhe heaped upon him, prevent his keeping ſo watchful an eye over her, that he became more and more apprized of her fickle, lewd, treacherous, and tyrannic diſpoſition; inſomuch that he at length perceived he was become at leaſt indifferent, if not wholly diſagreeable to her, in ſpite of all her female art and addreſs.

Kulambo now thought it high time to ward off the blow that threatened him, by renewing and redoubling his careſſes to her, by ſumptuous banquets, and ſuch other entertainments and diverſions as he knew were moſt likely to ſuſpend her treacherous intentions againſt him. He ſupplied her in particular with a variety of European wines, and with moſt delightful cordial water, till he found an opportunity of conveying a ſtrong doſe of poiſon into one of them, of which ſhe had no ſooner drank, than ſhe expired in his arms, according to his expectation.

He appeared, after this event, ſo highly afflicted, and conducted himſelf with ſuch artful ſucceſs, that he paſſed altogether unſuſpected of having had any hand in the death of a ſpouſe, whoſe loſs he ſeemed ſo deeply to lament, that he affected to attempt, in order to diſſemble the better with thoſe who might ſuſpect him, more than once to ſheath the ſword in his own breaſt. This counterfeited exceſs of grief, joined to his well-known courage, made ſo deep an impreſſion on the minds of the Jaggas, that he was declared her ſucceſſor, and ſoon after raiſed, by proclamation, to the ſovereign authority over them.

That Kulambo's new ſubjects might have a freſh proof of his pretended affection for his late ſpouſe, he buried her with the moſt diſtinguiſhed magnificence. The place which he choſe for her interment was on a diſtant eminence, where he cauſed a ſpacious cave to be dug, and divided it into ſeveral large apartments, all of which were hung with ſome of the richeſt cloths of Europe, and the floors covered with the fineſt furs, and moſt curious mattings. That deſigned for the corpſe was well ſtored with the choiceſt meats and liquors. She was bedecked with all her coſtly ornaments, and ſeated on a throne in a commanding attitude. The throne was carried by the firſt miniſters of ſtate, guarded by the ſoldiery, and followed by the king and his whole court, who accompanied it with their moſt dreadful outcries, heightened by the ſound of all their martial muſic. The proceſſion was cloſed by the unhappy human victims, which were either to be butchered over her grave, or buried alive in it with her corpſe.

On their arrival at the cave, the body of the deceaſed queen was depoſited in the apartment prepared for it, amidſt the moſt hideous cries of the court and ſoldiers, and the horrid ſound of the martial inſtruments, after which, the victims were ſlain, and their blood ſprinkled plentifully on the corpſe. Thoſe victims that were deſigned to ſerve her in the other world, then went down into the grave, the bodies of the ſlain were thrown in, and the whole place immediately filled up with earth. As ſoon as the ceremony was over, the new monarch aſſumed the reigns of government, and the company retired to the camp.

The beginning of Kulambo's reign was remarkable for his frequent excurſions and ravages; but he was ſoon ſtopped in his career. He became captivated with a beautiful ſlave, who ſoon perſuaded him to change the martial trade for the pleaſures of the matrimonial life. He ſent his officers and forces upon new exploits, while he enjoyed himſelf at eaſe with his queen, till he at length ſuddenly expired in her embraces, and was afterwards honoured as an inferior deity by her and all his ſubjects.

Chingarii was appointed the ſucceſſor of Kulambo: he was not only equal in valour to his predeceſſor, but of a more ſavage diſpoſition. The ravages he committed were attended with much greater cruelty than had been exerciſed by any of the former princes; and ſuch was the thirſt after this ſhocking buſineſs, that he did not heſitate to engage in the moſt hazardous enterprizes, till at length, venturing to try his bravery againſt the Portugueſe at Angola, he was defeated and ſlain, and a great part of his army made captives.

Caluximbo ſucceeded Chingarii. This prince was a man of great courage and conduct, but of ſo gentle and humane a diſpoſition, that he could never be prevailed upon to eat any human fleſh either before or after his election. His barbarian ſubjects, from this circumſtance only, conceived an invincible averſion againſt him; and under pretence that their late queen Tem-ban-dumba reſented his open violation of her laws (a notion which the prieſts induſtriouſly propagated) he was aſſaſſinated to appeaſe her anger, and at his funeral obſequies three hundred victims of each ſex were ordered to be butchered.

The ſeveral ſucceſſors of Caluximbo committed in general, in a greater or leſs degree, the uſual ravages of their predeceſſors, leaving nothing behind them, where ever they went, but the melancholy marks of ſlaughter and deſolation. Of theſe Calanga was the moſt diſtinguiſhed: he was a man of no leſs prudence than courage. This chief having entered into an alliance with the Portugueſe governor of Angola againſt queen Zingha, who then headed another party of deſperate Jaggas in the kingdom of Matamba, was prevailed upon by that governor to aboliſh ſome of the laws made by queen Tem-ban-dumba, particularly ſuch as related to the deſtroying their own children,

dren, and bringing up in their ſtead thoſe which they brought away captives in their excurſions. This depredation was ſo ill approved of by the ſavage Jaggas, that it coſt Calanga his life; for he was ſoon after aſſaſſinated by one of his ſons, and interred with the uſual ceremonies. The parricide, however, did not long enjoy the high dignity he had ſo infamouſly acquired; the Jaggas, according to their laws, claimed their right of election, and ſet up another ſon of the deceaſed in his ſtead.

This prince was named Caſſange-Canguin-Gurii; and entertained ſo high an opinion of the Portugueſe, that, in order to obtain their friendſhip, he cauſed himſelf to be inſtructed in the principles of the Roman-Catholic religion, and was baptized by the name of Don Paſcale. But, whether through fear of being dethroned, or from a natural predilection for the Jagga cuſtoms, he ſoon after relinquiſhed his new perſuaſion, became more cruel and blood-thirſty, and committed greater ravages than any of his predeceſſors, his footſteps being every where marked with death and deſolation.

We have no particular account of any king of the Jaggas, after this: all we know farther is, that different tribes of theſe people under their reſpective chiefs, ſtill infeſt thoſe parts of Africa already deſcribed, and, that they ſtrictly preſerve their antient and infernal maxims.

SECT. III.

Containing a Deſcription of the Kingdom of ANGOLA; its Boundaries, Situation, Nature of the Country, Rivers, Provinces, Towns, Inhabitants, Trade, Government, &c.

THE natives originally called this kingdom Dongo, but the Portugueſe afterwards called it Angola, in compliment to the prince of that name, who firſt uſurped it from the king of Congo; this name it hath ever ſince retained. It is bounded by the kingdom of Matamba, on the eaſt; by the Ethiopic ocean, on the weſt; on the north, by Congo, from which it is ſeparated by the river Danda; and, on the ſouth, by the kingdom of Benguela. It lies between ſeven degrees thirty minutes, and ten degrees forty minutes of ſouth latitude, and between thirty-two and forty-one degrees of eaſt longitude, being about two hundred and fifty miles broad from north to ſouth, and about three hundred and ſixty in length, from eaſt to weſt.

This is in general a very mountainous country, there being but few plains to be met with, except on the maritime ſide, and between the ridges of the mountains. It is however well watered with rivers, the moſt conſpicuous among which are the Danda and Coanza. The former of theſe is very large, and capable of receiving veſſels of one hundred tons. It is well ſtored with moſt kinds of fiſh, but it is dangerous to catch them on account of the river being greatly peſtered with crocodiles. The Coanza is alſo large, deep and rapid, and empties itſelf into the ſame ocean with the Danda, about nine degrees twenty minutes ſouth latitude, and about twelve leagues ſouth of Loanda San Paullo, the capital of the kingdom. It is navigable as far as a place called Cambamba, which is about one hundred and fifty miles from its mouth, where the Portugueſe have a fortreſs, or ſettlement, under the direction of a governor ſtiled by them captain. It hath a good depth of water all the way to the above place, but afterwards it is full of rocks and dreadful caſcades, which render its courſe ſo rapid, that it is impoſſible for any veſſel to advance much farther. It receives many rivers in its courſe, the chief of which are the Mocos, the Luente, and the Calucala. It forms alſo ſeveral iſlands that are pleaſantly ſituated, and very fertile. The principal of theſe are the Meſſander and Motchiama, the former of which is about nine miles long, and two broad. The ſoil of it is ſo fertile, that they have generally three crops a year of maize, millet, and other grain. It produces alſo great quantities of the manioc root, which the inhabitants uſe inſtead of bread; as alſo numbers of palm and other fruit trees. The other iſland is five miles in length, and one in breadth, it is moſtly level; there is on it great plenty of cattle, and a variety of roots and herbs. But the natural produce of this kingdom in general, as well as the perſons, manners, cuſtoms, religion, government, &c. of its inhabitants, being nearly the ſame with thoſe of Congo Proper, which we ſhall treat of, the reader is therefore referred, for an account of them, to that diviſion, in order to avoid unneceſſary repetition.

Angola, is diviſed into ſixteen provinces; namely, 1. Chiſſama; 2. Sumbi; 3. Rimba; 4. Scetta; 5. Bembea; 6. Temba; 7. Oacco; 8. Cabezzo; 9. Lubolo; 10. Loanda; 11. Benga, or Bengo; 12. Danda; 13. Moſeche; 14. Illamba; 15. Oarii; 16. Embacca.

The province of Chiſſama is ſituated in eleven degrees ſouth latitude, near the mouth of the river Coanza, and has a ſettlement belonging to the Portugueſe. It is divided into three parts, each of which is governed by a perſon appointed by the king; and theſe exerciſe ſo deſpotic a power, that they behave more like tyrants than inferior officers over the natives. From this cauſe it is, in all probability, that the country, which is very mountainous, is ſo poorly cultivated, the principal part of it being entirely barren. However, it is famous for producing a peculiar ſalt made by the natives from a briny kind of water, which they dig for, and which, being congealed, they form into oblong ſquare cakes like bricks, about ſix inches in length; and theſe they exchange with the Portugueſe for meal, oil, and other commodities. The merchants make conſiderable advantages by exporting this ſalt to moſt parts of Ethiopia, as it is not only excellent to be uſed with food, but alſo in phyſic, it being a very pleaſant diuretic. This province alſo abounds with fine honey and wax; but it labours under conſiderable diſadvantages from the want of freſh water, as they have ſeldom any rain from May to October, and their mountains are without ſprings or rivers. They who live near the Coanza, fetch it from that river, but it is very dangerous, as that part of the country is infeſted by great numbers of wild beaſts.

Sumbi, is for the moſt part flat, and well watered by ſeveral ſmall rivers, particularly thoſe called Rice, Caiba, and Calacombola. The natives are tall and ſtrong; but ſo lazy and indolent, that they will not be at the trouble of cultivating the lands, though the ſoil is naturally ſo well calculated not only for breeding cattle, but alſo producing various kinds of grain. The moſt induſtrious part of them are thoſe towards the mouth of the river Calacambola, the ſoil of which is remarkably fertile, and the country freer from wild beaſts than any other part of the province. The inhabitants breed vaſt quantities of cattle, with which, and other proviſions, they ſupply their more indolent neighbours: their lands alſo are well cultivated, and produce ſeveral ſorts of excellent grain.

Rimba, is divided into twenty-eight lordſhips or diſtricts, whoſe governors always keep a great number of militia. This province is bounded on the eaſt, by Temba; on the north, by Lubolo; and on the ſouth, by Scetta. The land is fertile, and produces great quantities of grain, with plenty of cattle; and the rivers abound with moſt kinds of fiſh. The inhabitants are induſtrious, very tractable, and not addicted to any particular vice, but are chiefly idolaters.

The province of Scetta is one of the moſt rocky and mountainous in all the kingdom, particularly on one ſide of it, where a ridge of perpendicular rocks covers a ſpace of thirty miles in length without interruption: the ſurface of theſe rocks, however, is well inhabited and cultivated, enjoys a ſerene and wholeſome air, and is plentifully ſupplied with freſh water. The low lands are alſo well watered, and produce excellent paſture for cattle, great numbers of which are bred by the inhabitants; but they often ſuſtain conſiderable loſs from the number of wild beaſts that infeſt this part of the country. The torrents that flow from the hills bring with them great quantities of iron ore, which the inhabitants carefully gather, by laying ſtraw and other ſuch materials acroſs the ſtreams to receive it; and, afterwards, by means of fire, convert it into excellent iron. Great quantities of a kind of tranſparent ore, which the natives call tarc, are alſo found in this country, and which, when wrought, is in appearance much ſuperior to iron. The governor of this province is one of the moſt powerful in the whole kingdom; he has twenty-two inferior officers under him: his reſidence is on the declivity of a high mountain called Lombo, on the frontiers between this and the province of Rimba.

Bembea, extends itſelf on one ſide along the ſea, and on the other divides the kingdom of Angola from other nations on the ſouth. The great river Sucano, or San Franciſca, waters moſt part of this province; but it is of little other uſe, for though it abounds with fiſh, yet the inhabitants dare not venture to catch them, owing to its being infeſted with great numbers of crocodiles, ſea-horſes, and monſtrous ſerpents, which not only deſtroy great quantities of fiſh, but alſo do conſiderable miſchief to the adjacent grounds. The country is very large and populous, and abounds with ſmall cattle, the hides of which the inhabitants convert into garments, and anoint their heads

and bodies with the fat. Theſe people are much more ſavage than their neighbours, are almoſt all idolaters, and have a language peculiar to themſelves. They are very artful, and uſe a ſingular ſtratagem in war, which is, to drive great numbers of cattle towards that ſide on which the enemy is expected, whilſt they ſecrete themſelves at a ſmall diſtance, either by lying flat on their bellies in the high graſs, or among the heath or copſes: the cattle ſeldom fail of exciting the enemy to advance in order to make a capture, when they ſuddenly riſe, and furiouſly fall on them with their armed clubs: this ſcheme is generally attended with ſucceſs, the enemy ſoon ſurrendering; after which, they are ſold for ſlaves to the Europeans by their conquerors.

The province of Temba, is in general flat and low, and is well watered by a number of ſmall rivers. The Rio Longo, or Long River, is the moſt remarkable; it ſprings out of a rock, on the top of which the Portugueſe have a fortreſs that defends the whole diſtrict. This province is divided into twelve lordſhips, whoſe chiefs, though under the protection of the Portugueſe, live free and independent, being only obliged to furniſh them with a certain number of ſoldiers in caſes of emergency. The whole country abounds with wild cows and mules, which the inhabitants hunt and kill for food; it alſo produces ſeveral excellent roots, among which one in particular reſembles parſneps, but is much finer in taſte, and is ſaid not only to attenuate phlegm, but to be an admirable purifier of the blood. Some of the inhabitants have been converted to the Roman Catholic religion, which they ſtrictly adhere to; but moſt of them are idolaters.

Oacco, is bounded on the ſouth-weſt, by Lubolo; and, on the north-eaſt, by the river Coanza. It is beautifully diverſified with hills and plains; and is ſo well watered with rivers and ſprings, that it is one of the moſt delightful provinces in the kingdom. Theſe advantages, however, are of little uſe to the natives, who are reſtrained by the lords from cultivating any more of the land than what is abſolutely neceſſary to furniſh proviſions for their own families. This is one of the moſt formidable provinces in the whole kingdom, as the chief governor of it has twenty others under him, whoſe principal buſineſs is, to diſcipline and exerciſe the military.

There is a diſtemper which the natives of this province are ſubject to, and which is peculiar to the climate of this part of the country. It generally begins with a violent headach, and vertigo, and is followed by convulſions, which ſoon reduce the patient to a mere ſkeleton. The medicine for this diſeaſe is made from a plant ſomething like our hyſſop, which they pulverize, and drink the infuſion: they alſo extract an oil from it, with which they anoint the parts convulſed. They are likewiſe ſubject to a kind of ſwelling, that begins at the mouth, and ſpreads all over the neck, which often ſwells to the bigneſs of the head, and is frequently attended with ſuffocation. It is generally cured by anointing the parts affected with ſome of the abovementioned oil.

A very ſingular inſect is found in this province; it ſomewhat reſembles our dragon fly; its ſting is ſo dangerous, that if a quantity of blood be not immediately drawn from the affected part, the perſon is thrown into a violent fever, attended with exceſſive tortures, that commonly end in a total delirium, and, if not ſpeedily relieved, in convulſive death. The moſt remarkable circumſtance attending this is, that when a perſon is cured, he ſeldom fails of a relapſe, owing merely to the remembrance of what he felt during the time he was affected; and ſome of them undergo ſuch excruciating torture, that they cloſe their miſeries, by putting an end to their exiſtence. But we rather think that this relapſe is owing to the unſkilful manner in which they extract the poiſon by bleeding, which being imperfectly done, may occaſion the return of the diſorder.

The poor idolaters, when ſtung by theſe poiſonous inſects, have recourſe to their prieſts, who ſeek out for any inſect of the ſame kind; which having found, they dig a hole in the earth, and put it in, adding ſundry fumigations, exorciſms, and ſuperſtitions, known only to themſelves; after which, they fill the hole with water, and repleniſh it as the liquor ſinks, ſtirring it, and letting the earth ſettle again ſeveral times; at length, without ſtaying till it is quite clear, and diveſted of its diſagreeable earthy taſte, they give the patient plenty of it to drink. This occaſions a violent fit of vomiting, by which ſo great a part of the poiſon is thrown out, that the natural ſtrength of the patient enables him to get rid of what is left behind. Many, however, who are cured by this ſtrange method, are ſome time after ſeized with pains and convulſions in their nerves, which ſometimes terminate in a dead palſy, but more frequently in a ſettled lameneſs. The Europeans themſelves will in ſpite of the expreſs prohibition of the church, have recourſe to the above method of cure, however ſuperſtitious, from its being ſometimes ſucceſsful.

The province of Cabezzo is very populous and fertile, producing not only abundance of cattle, but alſo moſt kinds of proviſions. In one part of it is a hill, called The Iron Mountain, from the yielding great quantities of that metal, which the Portugueſe have taught the natives to puriſy, and work into various kinds of inſtruments. In this province are many large and lofty trees, particularly palm and cocoa-trees: there is alſo one ſort that greatly reſembles our apple-trees, the bark of which being cut with a knife, yields an odoriferous juice of the colour and conſiſtency of honey: it is very uſeful in medicine; but muſt be firſt qualified by ſome cooling drug, being in itſelf of a very hot nature.

Great pains have been taken by the Portugueſe to propagate the Roman Catholic religion in this province; and not without ſucceſs, for there are more idolaters in moſt other parts of Angola, than are to be found here.

Lubolo, is ſituated on the ſouthern banks of the river Coanza, between the provinces of Cabezzo and Quiſſama. Its climate is very wholeſome, and the ſoil remarkably fertile, producing great plenty of moſt ſorts of proviſions. It is chiefly noted for its excellent palm-trees, which produce better wine, oil, and timber, than are to be met with in all the other parts of the kingdom. This province is tributary to the Portugueſe, and the greater part of the people are of the Romiſh religion.

The province of Loanda, which is ſituated in eight degrees thirty minutes ſouth latitude, and thirteen degrees ſix minutes eaſt longitude, is one of the moſt conſiderable places belonging to the Portugueſe ſettlements on this ſide of Africa, and is remarkable for having in it the capital of the whole kingdom of Angola. It is a large city, pleaſantly ſituated on the declivity of a hill, near the ſea coaſt. It is ſtrongly defended by a ſpacious fortreſs, in which is a church dedicated to St. Amaro, and a convent of Ciſterlians, beſides ſeveral bulwarks that ſerve to guard the entrance of the port. This city is called by the Portugueſe San Paulo de Loanda, and was built by them in the year 1578, under the direction of Paulo dias de Novais, the firſt governor of this part of Angola. It is very populous, and greatly reſorted to; not only on account of its being the reſidence of the Portugueſe governor, but alſo for its containing the chief courts of judicature for the whole kingdom.

The churches and other public buildings are ſumptuous, as are alſo thoſe of the merchants and officers, both ſpiritual and temporal. The ſtreets are ſtraight, wide, and regular, and always kept exceeding clean. The houſes belonging to the Portugueſe are built of ſtone, and moſt of them very elegantly furniſhed; but thoſe of the natives are very mean, being built only of earth, and thatched with ſtraw. In the center of the city is a large convent belonging to the jeſuits, who are here held in the higheſt eſteem. It is a ſtately edifice, and endowed with a conſiderable revenue. On one ſide of it is an hoſpital called the Miſericordia, which hath twenty-four wards or rooms for patients, beſides convenient apartments for the directors, phyſician, ſurgeon, apothecary, and other attendants. On the other ſide of the convent is a church belonging to the fraternity of St. John the Baptiſt. At a ſmall diſtance from theſe three buildings is the cathedral, which is a large ſtately ſtructure dedicated to Our Lady of the Conception, under which is another dedicated to the Holy Sacrament. Here are alſo many monaſteries and chapels belonging to the capuchins, carmelites, and friars, which, with other parochial churches ſo ſurround the city, as to ſerve inſtead of fortifications and walls to defend it.

Prodigious numbers of ſlaves are kept in this city, who are employed in tilling the ground, carrying burdens, and fetching water from ſprings in an adjacent iſland called Loanda; the city not having the convenience of being watered by any other kind of means. On the north ſide of the city, at a ſmall diſtance from it, is a lofty hill, on which the original city ſtood. It ſtill bears the name of San Paulo, and upon it are ſome fine houſes, together with the ruins of a monaſtery which formerly belonged to the jeſuits. The preſent city ſuffered much by the Dutch, who took it from the Portugueſe in the year 1641; but the latter ſoon after retaking it, reſtored it to its primitive grandeur. Notwithſtanding the want of water, the country round is very fertile, well cultivated, and beautifully diverſified with a variety of fruit-trees, gardens, and villas.

About half a mile from the city is ſituated the iſland of Loanda, or Loando, which is very diſproportionate in its form, being fifteen miles long, and only one broad. The Portugueſe have many houſes on it, as alſo a great number of gardens, which they keep well-ſtocked with moſt ſorts of fruit-trees, and vegetables. They have alſo on this iſland ſeveral handſome churches; beſides which, there is a ſpacious convent belonging to the Jeſuits, who have at leaſt two thouſand ſlaves in this place. In the neighbourhood of the capital (which is called by the name of the iſland) are many elegant ſeats and villas belonging to the Portugueſe, moſt of which are richly furniſhed, and adorned with gardens, orchards, and other embelliſhments: in ſome of them are alſo very handſome chapels in which ſervice is performed by prieſts, who are allowed a ſufficient ſalary for that purpoſe. The city, which contains about three thouſand houſes, built of ſtone and covered with tiles, is well ſupplied with moſt kinds of proviſions, particularly mutton and pork, the latter of which is greatly eſteemed by the Europeans.

Here are plenty of fiſh, which they take on the coaſts of the iſland of Loanda. The bread uſed by the Europeans is made of millet and Indian wheat; but that uſed by the natives is made from the meal of the manioc root. The latter alſo prefer dog's fleſh to any other, for which reaſon numbers of thoſe animals are fattened up, ſlaughtered, and expoſed to ſale in the public markets.

In this place ſmall payments are made either in zimbis (the ſhells of a ſmall fiſh) or elſe beads, the latter of which are of various ſizes, colours, and faſhions, and are worn by ſome of the natives as ornaments to their arms, necks, and wriſts. Larger payments are made with pieces of cloth of their own manufacture, of a ſtated length and breadth; and goods are uſually paid for in ſlaves, where the ſum is conſiderable.

Benga, or Bengo, is divided into many diſtricts, the chiefs of which are natives, though tributary to the Portugueſe. It is ſituated on a river of the ſame name; and is bounded, on the weſt, by the ſea; and, on the eaſt, by the province of Moſeche. Here are eight churches, three of which are called parochial; and one of them belongs to the jeſuits, who celebrate their feſtivals in it with the greateſt pomp and magnificence. The country is fertile, and produces great plenty of maize and millet, as alſo a prodigious number of banana and bacova trees.

The province of Danda is ſituated to the north of Bengo, on the ſouth ſide of the river of that name, which ſeparates the kingdom of Angola from that of Congo. As this country is well watered, it is very fertile, and produces plenty of grain, with various kinds of fruits; but it is greatly infeſted with crocodiles and large ſerpents, which harbour in the river Bengo. The jeſuits take great pains to bring over the unconverted to a ſenſe of Chriſtianity; and as the inhabitants are for the moſt part Chriſtians, here are ſeveral churches regularly ſerved by ſecular prieſts. The chief of theſe is ſituated at the mouth of the Danda: and at ſome diſtance from it is another, as alſo ſeveral churches and chapels, all which belong to the jeſuits.

Moſeche is ſituated on the northern banks of the river Coanza. In this province are two conſiderable fortreſſes, called Maſſanguno and Cambamba, each of which is under its particular commander. The two have twelve ſovas, or native chiefs, under them, who are obliged to maintain a numerous ſoldiery, not, as is generally ſuppoſed, for the defence of the kingdom, but for the ſervice of their Portugueſe maſters. The ſoil is very fertile, and, beſides grain, is remarkable for producing the manioc root, which is ſo plentiful, that large quantities of it are annually ſent to the city of Loanda.

Mines of various kinds of metal are found in this province, particularly in the government of Cambamba. What is very remarkable, each mine tinges the complexion of the inhabitants who live in that territory; for though they are all naturally black, yet thoſe near the ſilver mines differ in their complexion from thoſe who live near the mines of gold and lead; which cannot be otherwiſe accounted for, than from the effluvia which exhale from the different metals found in them.

Here are a great number of churches, the moſt conſiderable of which are thoſe at Maſſanguno and Cambamba. Theſe bear the title of royal chapels, and the prieſts that belong to them are endowed with many diſtinguiſhed privileges. The inhabitants are chiefly Chriſtians.

Illamba, is divided into two parts, diſtinguiſhed by the names of Higher and Lower. The former is ſituated between the rivers Bengo and Calucata; and the latter between the Danda, on the north, and the Bengo on the ſouth. They both pay a tribute to the Portugueſe, are very fertile, and the natives chiefly Chriſtians. The Higher Illambo hath mines of excellent iron, and is almoſt covered with ſmall hills. In the center of it is a large mountain, from the ſummit and ſides of which flow a prodigious number of ſprings and rivulets of clear and wholſome water, which is not only exceeding good to drink, but of infinite ſervice in contributing to fertilize that part of the country. This province pays a conſiderable tribute to the king of Portugal, and the governor is obliged to maintain a numerous militia for the ſervice of that prince.

The province of Oarii, is ſituated on the northern banks of the river Coanza, and adjoins to the province of Moſeche. It is watered by a great number of ſmall rivers that fall into the Coanza, but which, in the time of the great rains, become large, rapid, and dangerous. The Portugueſe have two fortreſſes in this province, at each of which they keep a ſtrong garriſon. One of theſe is built at Quitongo, an iſland of great importance on the river Coanza, and the other at a place called Maopongo.

This laſt-mentioned fortreſs is ſituated on the top of a number of large rocks, and appears, at a diſtance, like a conſiderable city ſurrounded with high walls, and diverſified with ſteeples, turrets, pyramids, obeliſks, triumphal arches, and other eminent ſtructures: on a nearer approach, however, it ſhews itſelf to be no more than a heap of gigantic rocks, parted from each other by intervals of a vaſt depth, and ſeveral fathoms wide; and the ſummit of it, excluſive of a ſmall part round the fortreſs, is a large, barren, and uncultivated plain.

Though this place is near one hundred leagues from the ſea, yet it abounds with a variety of ſprings of brackiſh water, very proper for making ſalt, and which, riſing and falling with the tide, mount up at high water in large ſtreams above the level of the plain. A circumſtance ſtill more ſingular than this, is, that theſe ſprings are intermixed with an equal number of freſh ones, the waters from which are both clear and well-taſted. The ſepulchres of the antient monarchs of Angola, called by the Portugueſe Las Pubuillas de Cobazzo, are ſtill to be ſeen about ſix miles from this place.

The province of Embacca, or Membacca, which is the laſt we have to mention, is ſituated on the north ſide of the river Lucala, and between that and the Higher Illamba. It is wholly ſubject to the Portugueſe; for though the lord who governs it, aſſumes a claim to a kind of independence, yet it is granted him only on condition that he ſhall maintain at his own expence, a numerous body of ſoldiers for their ſervice. Theſe troops, though idolaters, are ſtout, warlike, and well-diſciplined, never betraying any fear of death when they engage an enemy, for which reaſon they are highly valued by the Portugueſe.

The reader will eaſily perceive, from what we have obſerved in deſcribing the above provinces, that form the kingdom of Angola, that the Portugueſe are maſters of the chief part of it: we ſay, the chief part, becauſe ſome of them neither pay tribute to, nor acknowledge any dependence on them, except when they want their aſſiſtance in caſes of emergency. The following, namely, Danda, Moſeche, Bengo, Higher and Lower Illamba, Oarii, Embacca, Scetta, Cabezzo, Lubolo, and Oacco, acknowledge a real ſubjection to the king of Portugal.

The purchaſing of ſlaves conſtitutes the chief trade carried on in this kingdom by the Portugueſe and other Europeans; and indeed this inhuman commerce firſt invited the Portugueſe to this part of Africa. The commodities brought in exchange, are, broad cloths, crimſon and other ſilks, velvets, cambricks, and hollands of all ſorts, gold and ſilver lace, broad and narrow ſtriped tickings, black ſerges, Turkey carpets, threads and ſilks of all ſorts and colours, Canary and other wines, brandy and other ſpirituous liquors, oil, ſpices of all ſorts, loaf-ſugar, knives, fiſhing-hooks, pins and needles, fire-arms, ſwords, cutlaſſes and other weapons, ſmall bells, variety of other trinkets and baubles, glaſs beads of all ſizes and colours, rings of the ſame or other materials, &c.

It is uſual here, to divide the inhabitants of every province (called by the natives Mirindo) into four different claſſes. The firſt is that of Macotas, who are a kind of noblemen. The ſecond conſiſts of thoſe ſtiled the children of Mirindo, who are the original natives of the country, of either ſex, whether merchants, artificers, or huſbandmen. The third is that of the Quiſicos, or ſlaves, who are the property and inheritance of the lords of that province, which devolves, like all other real eſtates, to their heirs and ſucceſſors. And the laſt is the Mabicas, who

are

are the ſlaves either taken in war, purchaſed, or condemned to forfeit their freedom for ſome miſdemeanor or crime they have committed.

The kingdom of Angola was formerly ſubject to Congo, but it does not at preſent acknowledge any ſuch dependence; and the king, from the protection he receives from the Portugueſe, preſerves an abſolute authority. He obliges all the lords under his dominion to maintain a certain number of troops for the common ſervice of the realm; but they are very indifferent either with reſpect to their diſcipline or bravery, their arms or accoutrements. They are only a kind of national militia, in which every man that is able to bear arms is obliged to be enrolled; and they ſeldom appear before their commanders, except when they are ſummoned on any particular expedition, at which time the agreeableneſs of their appearance ariſes chiefly from their number. When they are about to engage an enemy, they divide themſeves into three bodies, at certain diſtances from each other. In the center one is the general, who directs all their motions by the ſound of ſeveral warlike inſtruments. They then move forwards, retire, or wheel about as thoſe direct, and fall on the enemy with great fury; making at the ſame time a moſt hideous noiſe. If they find themſelves like to be worſted, they betake themſelves to flight (for they are arrant cowards,) nor is it poſſible for their general to rally them: ſo that the firſt onſet determines the ſucceſs of the battle.

They have ſeveral kinds and ſizes of muſical inſtruments which they uſe in war. One of the loudeſt of them reſembles the drums in Congo; it is covered at one end with the ſkin of a wild beaſt, and is beaten with ivory ſticks, with which it gives a greater and more warlike ſound. They have another inſtrument that reſembles an inverted pyramid, with the point fixed on the ground, and conſiſts of a certain quantity of pieces of metal, thin and round, like bells turned upſide down. This inſtrument is of ſuch importance in an engagement, that the perſons who touch it with wooden ſticks frequently crack the metal by endeavouring to give a loud and more dreadful ſound. The third ſort is made of elephants teeth: they are of various ſizes, and in their form ſomewhat reſemble our German flutes. This inſtrument is much more muſical than either of the former two; it gives a ſound like that of the cornet, but has a greater variety of notes, and when played on by a ſkilful hand, affords very agreeable muſic. This inſtrument is ſuppoſed either to have been firſt introduced, or elſe greatly improved by the Portugueſe, who have alſo introduced the uſe of kettle-drums, trumpets, hautboys, and other inſtruments; but thoſe principally uſed in war are the three firſt mentioned.

The largeſt of their inſtruments are appropriated to the head general, whoſe orders, by means of theſe, are heard by the whole army. The next in ſize are uſed by thoſe who command the ſeveral bodies into which it is divided, and the leſſer ſizes are for the uſe of the captains and other inferior officers; ſo that the ſound of the larger inſtrument is no ſooner heard, than all the others anſwer in concert, and by this method the whole army is made acquainted with the orders of the general.

The military officers are dreſſed in a very grand manner; and they appear much taller than they really are, as well as more terrible, by the length and variety of oſtrich, peacock, and other feathers, with which they adorn their caps. They wear about their necks ſeveral links of iron chain, to which are faſtened great numbers of rings that make a loud jingle at every motion; for the ſame purpoſe alſo, they hang a number of bells about their middle, the noiſe of which they ſuppoſe animates the ſoldiers to fight with more ardour, and at the ſame time give themſelves a greater air of pomp and grandeur. They wear buſkins on their legs, after the manner of the Portugueſe. Their weapons are the bow, ſword, target, and dagger; thoſe, however, who carry the bow, are allowed only to wear the ſword and dagger, but not the target.

Some of the common ſoldiers uſe broad ſwords, muſkets, and piſtols, which they purchaſe of the Portugueſe; but thoſe who go naked from the waiſt upwards, fight only with bow and dagger, and wear large crooked knives in their girdles.

With reſpect to the language of the people of Angola, it is radically the ſame with thoſe of Congo; but the dialects of the different provinces vary ſo eſſentially in pronunciation, that it is difficult for thoſe born in places remote from each other to converſe together. This, however, is not to be wondered at, in a country where there is no regular grammar, ſince England and France, which abound in poliſhed writers, labour under the ſame inconveniencies, as the jargon ſpoken in many of the countries of the former: and the ſeveral provincial dialects of the latter, render it impoſſible for the natives of the ſame country to be underſtood by a pure ſpeaker of either.

We ſhall conclude our account of the particulars relative to this kingdom, with the deſcription of a remarkable ridge of mountains which extends itſelf north-eaſt from cape Negro. Some of theſe, on account of their prodigious height and coldneſs, are called by the Portugueſe Monti Freddi; and ſome others, which are ſtill higher, they call Monti Nevoſi, on account of their ſnowy tops, the water of which, falling in great plenty during the ſummer ſeaſon, form a conſiderable lake below. But the moſt conſiderable one of all is that called Cambambo, on which there is a mine that produces excellent ſilver. The Portugueſe have long ſince made themſelves maſters of this place; and, in order to ſecure it, have built a very ſtrong fortreſs. This place, which, by reaſon of its vicinity to the great river Coanza, is very conveniently ſituated for the great trade carried on in ſlaves, is under the direction of a governor appointed by the Portugueſe.

SECT. IV.

Deſcribing CONGO PROPER, its Situation, Boundaries, Rivers Provinces, Natural Hiſtory of the Country, Natives, Government, Laws, Trade, &c.

CONGO Proper, is ſituated between the ſecond and eleventh degrees of ſouth latitude, and between the thirty-ſecond and forty-firſt degrees of eaſt longitude, extending in length, from north to ſouth, five hundred and forty miles, and in breadth, from eaſt to weſt, about four hundred and twenty. It is bounded, on the eaſt, by the kingdoms of Makoko and Matamba; on the north, by the river Zaire; on the ſouth, by Angola, from which it is ſeparated by the river Danda; and, on the weſt, by the ocean.

The moſt conſiderable of its rivers is the Zaire abovementioned, called by the natives the great river of Congo. This river is ſituated in five degrees forty minutes ſouth latitude, it is three miles broad at the mouth, and runs with a very ſtrong current into the ſea. It is navigable for large veſſels about ſeventy miles up the country; but beyond that it cannot be paſſed, owing to a prodigious number of rocks that lie in the centre of it. From this river run ſeveral ſmall brooks, which not only water the country, but are alſo very convenient for the merchants and other inhabitants, who can go in canoes from one village to another. In the courſe of this river are ſeveral ſmall iſlands, the inhabitants of which are under the government of lords appointed by the king of Congo. Thoſe called Bommo and Quintella, are the two principal, and are ſituated near the mouth of the river, the firſt of which is remarkable for having many mines of iron.

Though the iſlands above-mentioned are all inhabited, yet there is not a houſe to be ſeen, the ground being ſo low and marſhy, that it is conſtantly under water; for which reaſon the negroes live chiefly in their canoes, or under trees, round which they build their huts, raiſed ſeveral feet above the ground. Theſe iſlanders are a ſtrong and reſolute people, but they are very unpoliſhed in their manners. They have no marriage or betrothing, but from their youth form ſuch alliances as their inclinations direct, without any ceremony. They are governed by particular chiefs and officers, who are choſen by a majority of voices in the aſſembly.

The other of theſe iſlands, namely, Quintella, is remarkable for having an idol, which no one dare approach but the perſons appointed to attend, and who ſecure it from being diſcovered. To effect this, they are themſelves obliged, as often as they go thither, to take ſuch a path as they think no other perſon can find out. Many perſons, particularly in caſes of ſickneſs, make rich offerings to this idol, all which are totally deſtroyed; for as ſoon as they are dedicated, the perſon attending conveys them to the idol, which is placed on a large plain, ſurrounded with a wall made of elephants teeth, where they are hung on poles, and there left till they are entirely deſtroyed by time.

Three lakes communicate water to the river Zaire; the firſt of which is the Zambre, the ſecond the Zaire, and the third a great lake, from whence the Nile is ſuppoſed to have its ſource. The Zambre, however, is the moſt conſiderable, being, as it were, the center from whence all the rivers in this part of Africa proceed.

The Umbre or Vambre, Brancare or Bancare, Barbele

bele or Varbele, Lelunda, Ambrifi, Encocoquematari, Onza, Libongo, or Lemba, and Danda, are the other rivers in this kingdom, but they are all too inconfiderable to merit particular notice.

Congo is divided into fix provinces, the fituations, names, and titles of which, are as follow; viz. the county or earldom of Songo, and the great duchy of Bemba, along the coaft; the duchy of Sundi, and the marquifate of Pango, to the north eaft; the duchy of Bala, eaftward; and the marquifate of Pemba, in the middle. We may add to thefe provinces, the territories or lordfhips of Amalaca, Dambi Ambuila, Dembo Quingengo, Dembo Angona, the little duchy of Ovando, and the territory of Sova Cavanga; but thefe diftricts are fo trifling, as not to require any particular defcription.

The province or county of Songo, is bounded, on the eaft, by Pango and Sundi; on the weft, by the Ethiopic fea; on the north, by the river Zaire; and, on the fouth, by the Lelunda. The foil is dry and fandy, and were it not for the great quantities of falt which are gathered on the fea-coaft, the governor or count's income would be very trifling. The chief produce of the inland parts are palm-trees, the fruit of which is the principal fubfiftence of the inhabitants.

Banza, or Banza-Songo, the capital of this province, is fituated about nine miles from cape Padrono, on the fouth fide of the mouth of the Zaire. It contains about 400 houfes, which are built fo irregular and ftraggling, that they take up a large compafs of ground. They are generally thatched, and the fides of them are fenced with palm-branches, or leaves neatly interwoven. The infides are hung with mats of various colours, and the ceilings are made of ruthes. The count of Songo's palace, which is made of wood, is very fpacious, and diftinguifhed from the reft, not only for its fize, but is always painted with a mahogany colour, or nearly refembling it.

There is a church in this town, which is remarkable for its antiquity, it being fuppofed to have been built ever fince the Portugueſe firft came into the provinces, which was about the year 1482. If this fuppofition is juftly founded, it is an extraordinary circumftance, the edifice conſiſting only of timber, plaiſtered on both fides with clay. But befides the above, there are three other churches in this town, the firft of which ftands within the inclofure of the count's palace, and is dedicated to the Virgin Mary; the fecond is fituated at fome diftance from it, and is the burial place of thofe governors; and the third, which is dedicated to St. Anthony, adjoins to a monaftery belonging to the capuchins, and ferves them not only as a chapel, but alfo as a parifh church. Here are feveral other inferior chapels, as well as in other parts of the province; every fova, or inferior governor, being obliged to maintain one in the place of his refidence.

The count maintains, in his court, a dignity and fplendor little inferior to thofe of the king: he has many petty lords under him, who were formerly independent, but are now fubject to his government; and he might be ftyled an abſolute monarch, were he not tributary to the king of Congo. His dreſs differs according to the various feaſt days, as alſo on other particular occaſions, which we ſhall here particularize.

His uſual habit is a garment of ſtraw cloth, girt cloſe about him, but of ſuch workmanſhip, that no other perſon dare preſume to wear the like, without firſt having obtained his permiſſion. This garment reaches from the ſhoulders to the ancles, over which is a long baize cloak, that hangs trailing on the ground. On the feaſt days he changes this cloak for a ſhort ſcarlet one, fringed all round with the ſame cloth, pinked. On the moſt ſolemn days he puts on a ſhirt of the fineſt linen, as likewiſe yellow or crimſon ſilk ſtockings, and a cloak of flowered ſilk. When he goes to communicate at the altar, he has a cloak all white, which is ſo long, that it trails on the ground as he walks. In going to church, which is at leaſt three times a week, he has a velvet chair and cuſhion carried before him, being brought himſelf in a net, on the ſhoulders of two men, each with a ſtaff in his hand, one all ſilver, and the other ebony tipped. The hat he then wears, is covered firſt with taffety, and above that a ſort of very fine feathers, under which he has a ſmall white cap, neatly ſtitched with ſilk. On his breaſt is a large brafſy croſs; and from his neck hang ſeveral ſtrings of coral, with a large chain of pure gold. Before him march a number of muſicians, one of whom is diſtinguiſhed above the reſt, by having ſeveral ſmall round bells fixed to an iron about a yard long, which he keeps continually jingling as he walks. On each ſide of him is a man holding an umbrella fixed on the top of long poles, to ſhelter him from the heat of the ſun. After maſs, his guards, who always attend him, fire a volley, which is followed by the ſound of drums, and other inſtruments of war.

Nine or ten of the principal men in the province elect the count to the earldom; theſe generally attend his perſon. The choice is always made between the death of the former count and his interment; but the government is in the hands of the electors during the vacancy.

On the death of the count, it ſometimes happens that his ſon, or ſome other perſon in the family, will raiſe a faction in the province, in order to obtain poſſeſſion of the throne, and exclude the electors from their accuſtomed privilege; for which reaſon, the euchariſt has been ſometimes omitted to be adminiſtered to him, for fear of diſcovering his ſituation by the prieſt's going to court; and his death is always concealed as much as poſſible from the public.

All the count's ſubjects, on the feaſt of St. James, ſhew their allegiance by complimenting him with ſome preſent, in proportion to their circumſtances. On the ſame day the civil offices are diſpoſed of to thoſe who are thought worthy of holding them; and ſuch as have miſbehaved in their employments are diſcarded.

The duchy of Bemba is the ſecond province of Congo Proper; it is ſituated between the rivers of Ambriſi and Loza, the latter of which ſeparates it from the marquiſate of Pemba on the eaſt, and the former from the county of Songo on the north. Along the ſea-coaſt it extends itſelf much farther; viz. on the ſouth, to the river Danda, which parts it from the kingdom of Angola, and northward to the river Lelunda.

Bamba is one of the largeſt and richeſt provinces in the whole kingdom: its ſoil is naturally fertile, and would produce abundance of all the neceſſaries of life, were the natives induſtrious in cultivating and improving it. The ſea coaſts produce likewiſe a prodigious quantity of ſalt, inſomuch that they have not only a ſufficiency for their own conſumption, but they alſo export it to foreign countries, which makes the article yield an extraordinary revenue to the crown. The inhabitants in general profeſs the Romiſh religion, and keep ſeveral jeſuits, and other prieſts, for religious purpoſes.

Banga, or Panga, the capital of this country, is ſituated about thirty miles from the ſea-coaſt. It is a large town, but the houſes, like thoſe in Songo, are built in a very ſtraggling and irregular manner. It ſtands in a hilly country, and is watered by two rivulets. Here are ſeveral churches, but they are all very mean buildings, the tops being covered with thatch, and the walls made of clay.

The greateſt reſpect is paid at court to the lord of Bamba, who is alſo captain general of his majeſty's forces, and the moſt powerful of all his vaſſals.

The duchy or province of Sundi begins about forty miles north-eaſt of St. Salvador. It is bounded on the eaſt, by the province of Pemba; on the weſt, by that of Pango; on the north, by the river Zaire; and, on the ſouth by the duchy of Batta. Its capital is called Banza Sundi, which name was given it to diſtinguiſh it from Banza (now called St. Salvador) the capital of the whole kingdom.

There are ſeveral diſtinct governments in this province, moſt of which being far diſtant from the capital, and in places ſurrounded with mountains almoſt inacceſſible, the people pay obedience to the governor according to their own diſcretion. They are always armed, and keep the whole province in a conſtant ſtate of trouble and agitation; for, as the Portugueſe have not been able to propagate their religion amongſt them, they are more refractory than any other people in the whole kingdom of Congo.

If this province was well cultivated, it would be one of the moſt fertile ſpots in the univerſe, it being watered with ſeveral rivers; but the inhabitants are ſo indolent, that they rather chuſe to live almoſt in want, than apply themſelves to labour: and therefore they purchaſe from the adjoining provinces what proviſions they have occaſion for.

The moſt precious metals abound in the mountains here; but, by reaſon of the turbulent ſpirit of the inhabitants, they are not ſuffered to be dug for. They work only the iron mines, and one mine of copper which is found in the mountains on the north ſide of the Zaire. This laſt is of a beautiful yellow, and the inhabitants of Loango purchaſe great quantities of it.

Pango, was formerly called Panga Logos, at which time it had the title and prerogative dignity of kingdom; but it hath loſt both ever ſince the kings of Congo ſubdued and reduced it to the rank of a province. This marquiſate

ſate is bounded on the eaſt, by the mountains of the ſun; on the weſt, by Pemba; on the north, by Sundi; and, on the ſouth, by Batta. Its capital is called Banza Pango, and is ſituated on the banks of the river Barbela, which runs through the center of the province. The nature of the inhabitants, as alſo their diſpoſitions, cuſtoms, and manners, are the ſame in general as thoſe of Congo, nor has the town, or the province itſelf, any thing remarkable in them.

The province or duchy of Bata, or Batta, is ſituated on the ſouth-weſt of Pango, and hath the ſalt petre mountains on the eaſt; on the ſouth, it is bounded by the Montes Quemados, or Burning Mountains; and, on the weſt, by the province of Pemba. It is of conſiderable extent, and was formerly a kingdom of itſelf, till it voluntarily ſubmitted to the kings of Congo, for which reaſon it enjoys more privileges than any other province in the kingdom, and a perſon deſcended from the antient kings of that country is always appointed governor of it.

This province has a very fertile ſoil, which produces ſeveral ſorts of excellent grain; the inhabitants are more civilized and affable than their neighbours; and were more eaſily converted to chriſtianity, the principles of which they have ever ſince ſtrictly retained and adhered to.

Batta, is the capital city of this province: but it is not conſiderable for any thing except its being the reſidence of the governors of the province, who are allowed to have a number of muſketeers in pay to defend it from the incurſions of the wild Jaggas, who inhabit near its eaſtern frontiers beyond the mountains of the Sun and Salt Petre, living chiefly by ravaging their neighbours on all ſides, and would do the ſame by this, were they not over-awed by thoſe troops. The road between this capital and that of the whole kingdom hath a great number of houſes and hamlets on both ſides, a circumſtance very uncommon in theſe countries. The boundaries of this capital are extremely fertile.

The governor of this province, who is ſtiled manibarta, is conſidered as the ſecond perſon in the kingdom. Whatever he ſays, muſt not be controverted by any of the reſt; and on the failure of the royal line, the ſucceſſion devolves upon him. His court and attendants are little inferior to thoſe of the king, for when he goes abroad on any public occaſion, he is preceded by trumpets, drums, and other martial inſtruments. He ſometimes alſo eats at the king's table, which is a privilege not granted even to the king's ſons.

The marquiſate of Pemba is the laſt province that remains to be mentioned in this kingdom, which, though ſmaller in extent than any of the reſt, hath always had this ſingular advantage, that its capital hath always been the native reſidence and burial place of all the kings of Congo, whether idolaters or Chriſtians. This province is well watered, not only by the Lelunda, which runs quite through it from eaſt to weſt, but alſo by the river Ambriſi and ſome others, which equally contribute to its fertility, and the riches and happineſs of its inhabitants. The conſtant reſidence of the king and his court, which is very numerous, emulates the people to induſtry, whilſt the great conſumption of proviſions, and other merchandizes, improves their commerce, encourages their diligence, and increaſes their wealth; the fruit of which they quietly enjoy, without being expoſed to the extortions of foreign viceroys, or (being ſo happily ſituated in the heart of the country) to the incurſions of barbarous neighbours.

We ſhall now give a particular deſcription of the city of St. Salvader, the capital of the kingdom of Congo, which is ſituated almoſt in the center of this province of Pemba. It was (as we before obſerved,) formerly called Banza, which in the language of the country, ſignifies, court, from its being the uſual reſidence of the kings. It received its preſent name from the Portugueſe, by which it has for many years been known to all other Europeans. It ſtands about one hundred and fifty miles from the ſea, on a large and high mountain, which is almoſt all rock: on the top is a plain about ten miles in circumference, which commands a moſt extenſive and delightful proſpect, and is beautifully ſhaded with a great variety of fruit trees, as palm, tamarind, plantain, kola, lemon, and orange-trees. The air is alſo exceeding wholeſome, which was one of the motives that induced the kings to fix their ſeats here; another reaſon was, its lying in the center of the kingdom, by which means, if particular circumſtances required it, relief might be quickly ſent to any other part: a third reaſon was, the great elevation of the land, which renders it almoſt inacceſſible to an enemy, and conſequently neither eaſy to be ſurpriſed or attacked. The mountain hath alſo ſome iron mines, which are of ſingular uſe to the inhabitants, who fabricate it into weapons and inſtruments of agriculture. It is therefore little to be wondered at, that the Congo monarchs ſhould have choſen for their uſual place of reſidence, a ſpot which is rendered valuable by ſo many conveniencies. The city is very populous, the number of inhabitants being computed at forty thouſand.

On an angle of the hill towards the ſouth-eaſt, ſtands the town, which is ſo ſtrongly ſituated by nature, that it hath not any walls, except on the ſouth-ſide. The ſurface of the hill is covered with houſes, moſt of which belong to perſons of quality, who have ſuch a number of apartments and out-buildings belonging to them, that each houſe appears, as it were, a town of itſelf. Thoſe belonging to the inferior people run in a ſtraight line, and form very handſome ſtreets: moſt of them are ſpacious, though they appear mean from their conſtruction, being built only of clay and ſtraw: but thoſe belonging to the Portugueſe, which are covered with thatch, are built of brick.

The royal palace is large and ſpacious, ſurrounded with four walls, one of which is made of ſtone, but all the reſt of ſtraw: the walls of the inner apartments are made of the ſame materials, but covered with hangings or mats curiouſly wrought. Adjoining to the inner court (where the king ſpends moſt of his time) are large gardens and orchards, adorned with arbours and pavilions, which are very commodious.

Excluſive of the palace, the moſt conſiderable buildings in the city, are, twelve churches, of which one is the cathedral, a college belonging to the Jeſuits, where four of them are conſtantly employed in teaching the Latin and Portugueſe, and in catechiſing the people; and laſtly, the Portugueſe fort, which is a ſtrong and ſpacious edifice. The churches, and other public buildings, except the Jeſuit's college, have ſtone foundations, but the roofs are very mean, being covered only with ſtraw; and they are indifferently provided with utenſils for the celebration of divine offices in public worſhip.

Two excellent fountains afford a plentiful ſupply of freſh water to the city: the one is in a place called St. James's ſtreet, and the other within the walls of the court; beſides which, there is, on the eaſt ſide, near the foot of the hill, a ſpring of excellent water called the veſe, which falls into the river Lebemda, and is extremely ſerviceable to the adjacent country and environs of the city.

There is a ſpacious ſquare before the great church, on one ſide of which a large market is kept every day for the ſale of proviſions. The reſt of the ſquare is ſurrounded with elegant houſes, chiefly inhabited by noblemen.

In the vallies below the city, as alſo in the adjacent plain, are produced ſeveral ſorts of grain, the chief of which is an exotic brought thither from the banks of the Nile, called leuco, in ſhape and ſize like the millet; the meal of which, when ground, makes excellent bread, and is preferred by the natives to that of wheat, which laſt they uſe only at the performance of maſs. Here alſo grow quantities of maize, called by them mazza congo, or corn of Congo; but they only uſe this article as food for their hogs. A greater number of cattle are fed here than in any other part of the kingdom, as their paſture-grounds yield excellent graſs for them.

Conſidering the equatorial ſituation of the kingdom of Congo, its climate is much leſs ſultry than might naturally have been expected. Their winter months are April, May, June, July, and Auguſt, during which they have almoſt continual rains, whereby the rivers are ſo ſwelled as to overflow the principal part of the country.

The winds, in winter, blow from north to weſt, and from north to north-eaſt. Theſe winds drive the clouds towards the mountains, where being gathered and compreſſed, they at length condenſe into water. In the ſummer, the winds blow from the ſouth to the ſouth-eaſt; and as they clear the ſouthern ſkies, ſo they drive the rain into the northern regions. Theſe winds are of infinite ſervice in cooling the air, which otherwiſe would be ſo hot as to be almoſt inſupportable; for even as it is, they are obliged, in order to keep off the violent heat, to hang coverings over their houſes.

The ſoil is exceeding fertile, and produces ſeveral ſorts of grain, particularly rice and maize, and the whole country is well watered with rivers. They have alſo a great plenty of a grain called luko, which in its form reſembles muſtard-ſeed, but when ground produces flour little inferior to that from wheat. The manioc-root is likewiſe cultivated here, and much admired by the Portugueſe, who, inſtead of making it into bread, bruiſe it very ſmall,

and either eat it raw, or else boil it in broth. They have likewise great plenty of various sorts of vegetables, most of which are cultivated with very little labour. Among these are turnips, cabbages, potatoes, radishes, cauliflowers, carrots, and spinach, besides others not known in Europe. They have also several useful herbs, as balm, sage, mint, hyssop, thyme, sweet-majoram, and divers others.

Among the trees most distinguished for medicinal qualities, is one called Angaria, the root of which, boiled in water, is an infallible remedy for violent pains in the side. Another tree of medicinal virtue is the khiseka, any part of which being reduced to powder, and mixed with water, is good against fevers; and in case of fainting, if applied either to the forehead or temple, is equally efficacious as hartshorn. The Jakassa-tree, which grows very tall, and is of a red colour, has the virtue of curing the tooth-ach and sore gums; but it is very pernicious to birds; for they soon fall dead to the ground, after having settled on its branches.

A tree which bears a fruit resembling a lemon, likewise grows here. This very singular production of nature, called mignamigna, possesses two opposite occult qualities in the most eminent degree, being at once a deadly poison and powerful antidote. If a person is infected by the fruit, the leaves are a certain cure; if by the leaves, the fruit has the same effect; and the wood is deemed both as pernicious and salutary as either the leaves or the fruit.

Among the wild animals of this country, are elephants, lions, tygers, leopards, buffaloes, bears, wolves, large wild cats, cameleons, apes, and monkies; besides which, they have great numbers of stags, fallow-deer, roebucks, hares, and rabbets. Their tame animals, are, oxen, cows, sheep, goats, and hogs.

This country abounds with poultry, particularly fowls, geese, and ducks. They have also abundance of wild fowl, as partridges, pheasants, woodcocks, pigeons, doves, hens, &c. The wild hens are much more beautiful, and the flesh better tasted than the tame ones, but they are not esteemed by the natives. The birds of prey, are eagles, falcons, and sparrowhawks. In some parts of the kingdom are ostriches; and on the borders of Angola is a wood encompassed with walls, where peacocks are bred for the use of the king. The feathers of these birds, mixed together, and made in the form of an umbrella, are used instead of banners and ensigns in war.

There are great numbers of parrots in the woods, most of which are very large, and either of a grey or green colour; but there is one species exceeding small, not being larger than sparrows, and their feathers are beautifully variegated: the most admired among the small birds are those called birds of music; they are about the size of a canary-bird, but differ greatly in the colour of their feathers: some are all red, and others green, with their feet and bill only black; some again are all white, grey, dun, or black. These last are kept in cages by the better sort of people, merely for the sake of their song, as they have the most agreeable note.

They have several kinds of reptiles here, as scorpions, millepedes, vipers, snakes, serpents, &c. Among the snakes, there is one species so amazingly large, that we are told it will swallow a whole sheep. It is called the great water-adder, from its being chiefly found in the rivers. It goes, however, on land in search of prey, and climbs the trees, where it lies in wait for the cattle that come to pasture. As soon as a sheep or hog arrives near the place, the snake immediately descends, and winding its tail round the hinder parts of the animal, secures it from moving, when he kills and devours it. When he has gorged his prey, he becomes for some time stupid; but as soon as he recovers, he immediately makes for the water, where he continues till hunger prompts him to seek for a fresh supply of food.

A great variety of fish is found in the seas and rivers: among others, in the former, are prodigious quantities of sardimas and anchovies; and in the latter are plenty of sturgeons, soles, barbel, trout, tench, and other excellent fish. They have also, particularly at the mouths of the rivers, several kinds of shell-fish, as oysters, muscles, cockles, and large crabs.

There are mines of several sorts of metal in this kingdom, especially iron and copper; and in the mountainous parts are large quarries, that produce not only excellent stone, but marble of various colours, also porphyry and jasper.

With respect to the natives of Congo, they differ in their persons, according to the respective provinces in which they are born: some of them are very tall and robust, but the generality are of a middling stature; some again are of an olive complexion, while others are quite black. They have all black curling hair, but their noses are not so flat, neither are their lips so thick, as those of the negroes in general. In their dispositions, they are proud and haughty among themselves, but to strangers they are very affable and courteous. They have a natural propensity to theft; and whatever they get, either by stealing or otherwise, they spend in liquors, of which they are very fond, and frequently drink to the greatest excess. They have naturally a ready turn of wit, and, when sober, will converse with great circumspection. They are, however, very revengeful; and whenever they think themselves offended, nothing will satisfy them but destroying the object of their resentment, which they generally effect by poison.

The dress of the common people consists only of a loose garment made of cloth, which is fastened round the waist, from whence it reaches to the middle of the leg, and some have the bottom ornamented with a fringe. The upper part of the body is intirely naked, nor do they wear any sort of covering on their heads. The richer sort have long and broad cloaks made of cloth or serge, and in form much like those worn by the Portuguese, under which they have a white shirt, or a kind of damask or sattin petticoat, which reaches from the waist to the ancles: they have also gold or silver sashes, with necklaces of red coral, and on their heads they wear caps made of white cotton. Some of the ladies have a veil over their heads, and a velvet cap richly ornamented with jewels under it.

The great men, when they travel, are carried in hammocks made either of net-work, or strong sluns; the manner of which is thus described: the hammock is fastened to a long pole about a foot from each end; and when a person has got into the hammock, two men, one before and the other behind, take up the pole, and lay it on the shoulders, carrying the person in this manner a considerable way without resting. When they go long journies, they have four men who relieve each other, in the doing of which they are so expert, that they never stop, but shift as they walk, at the same time keeping their usual pace. This is a very easy method of travelling, the person sitting or lying in the hammock as he thinks proper; and in order to shelter themselves from the heat of the sun, they have sometimes a piece of callico thrown over the pole.

They have likewise another method of travelling, which is, that instead of a hammock, they fasten two ropes to the pole, one of which is much shorter than the other: they are each tied in two parts, and hang like swings; in the former the person sits, and at the bottom of the latter is a square piece of board, on which he rests his feet. The person carried generally holds an umbrella in his hand, to shelter him from the heat of the sun, or the inclemency of the weather. The reason of their travelling in this manner, is from the want of horses, there not being in the whole kingdom any of those useful animals.

Their buildings here pretty much resemble those in the other parts of the western coasts of Africa: they form little towns or villages, by erecting several houses together in the midst of an inclosure. These buildings are made of wood, and covered with the branches of trees: each house is divided into several apartments, the innermost of which is adapted for the women: they are all on the ground floor, and are without windows; the only light they have being admitted at the door, which is so small, that they are obliged to stoop when they pass it. The inclosure of the houses is formed by trees, which grow so close together, that they keep off the violent heat of the sun, at the same time that they serve for a fence.

Their houses are very thinly stocked with furniture, the whole of which consists only of a few necessary utensils, as pots, kettles, calabashes to hold their provisions, a mill to grind their corn, a hatchet to fell timber, and some instruments of agriculture. Some of them have beds made of coarse cloth stuffed with straw, or the leaves of trees, but loose straw spread on the ground serves the generality of them to lie on.

The common people live chiefly on rice, fish, potatoes, and other roots; but persons of higher rank have also flesh and fowl. They sometimes regale themselves with palm-wine, or brandy mixed with water; but their common drink is water only.

The natives who reside near towns, live chiefly by trade; but in the country they are principally employed in agriculture, and the keeping of cattle. About the river

Different ways of Carriage & Travelling in CONGO.

Zaire ſome of them ſubſiſt by fiſhing, ſome by drawing palm-wine, and others by weaving. Towards the eaſtern borders of the kingdom are ſome excellent artiſts, who get conſiderable wealth by making various ſorts of cloths, as cloths of tiſſue, ſattins, taffata, damaſks, ſarſenets, velvet cut and uncut, &c. The yarn is made of the leaves of palm-trees, which trees they always keep ſhort, every year cutting and watering them, that they may grow ſmall and tender againſt the next ſpring. The threads drawn from theſe leaves, are very fine and even, and with thoſe that are longeſt they weave the largeſt pieces. Theſe ſtuffs are woven in ſeveral forms; ſome like velvet on both ſides; others, called damaſks, are made like leaves, or the figures of birds and animals. Their brocades are by far the beſt; but leave muſt be firſt obtained from the king, before any perſon is permitted to wear them.

The Congoeſe are extremely fond of diverſion and feſtivity. In moſt villages the people aſſemble every evening at ſome open place, where they form a ring, in the corner of which is placed a large wooden platter full of proviſions. The eldeſt of the company who is called Makaluntu, gives to each his portion, which he divides with ſuch exactneſs, that no perſon has the leaſt reaſon to complain. They do not make uſe either of cups or glaſſes, but only a large flaſk, which, when any one wants to drink, the makaluntu holds to the perſon's mouth; and when he thinks he has drank enough, he takes the flaſk away. It is remarkable, that if any ſtrangers happen to come by at the time of theſe feſtivities, they are equally welcome to participate with the reſt of the gueſts, and always take their place in the ring, without being aſked who they are, or from whence they came.

On ſeveral particular occaſions they have alſo feaſts, ſuch as gaining a law-ſuit, a marriage, the birth of a child, or any ſingular advancement in life. At theſe feaſts they dance, and ſing love-ſongs, which are attended with a variety of muſical inſtruments, conſiſting of flutes, pipes, ivory trumpets, and drums, the latter of which are made of this wood, and covered with the ſkin of a beaſt. One of their moſt ingenious inſtruments, and the moſt common in uſe, is called the marimba. It conſiſts of ſixteen calabaſhes of ſeveral ſizes, placed uniformly between two boards joined together on a long frame, which is hung about a man's neck with a thong. Over the mouths of the calabaſhes are thin ſlips of red wood, which being ſtruck with two ſmall ſticks, produce a ſound, ſomewhat reſembling that of an organ, and which is very agreeable.

Another favourite amuſement is the kaſſubo. It conſiſts of a hollow piece of wood about a yard long, covered with a board cut like a ladder, or with croſs ſlits at proper diſtances; on theſe they gently draw a ſtick, which produces a harſh ſound, and is diſtinguiſhed from the reſt of the muſic as tenor. This inſtrument is always uſed in concert.

They have alſo an inſtrument called the Congo, which is made with two iron bells, joined with a piece of iron archways, and is ſounded by ſtriking it with a ſmall ſtick. This inſtrument is always carried before princes when they make public proclamations to the people, in the ſame manner as the trumpet is among us.

Their marriages are celebrated according to the rites of the Romiſh church, ſome of the natives of Congo having embraced that religion; but moſt of them preſerve their antient idolatrous maxims, are married by their own prieſts, have a number of wives, each taking as many as he thinks he is able to maintain. Their contracts of marriage are thus performed: when two parties approve of each other, the parents of the young man ſend a preſent to thoſe of the girl, at the ſame time requeſting that they will let his ſon have her for a wife. If the parents of the young woman retain the preſent, it is a token of compliance; in which caſe the young man with his relations and friends, goes immediately to the houſe of his miſtreſs's father, and conducts her to his own, when a prieſt is ſent for, the marriage ceremonies are performed, and the evening is concluded with joy and feſtivity. When the father of the girl receives the marriage preſent he muſt not complain be it ever ſo trifling, as that would be conſidered in the light of ſelling his daughter; for which reaſon, and to prevent ſuch a crime, a tax is ſettled, what every man ſhall give according to his circumſtances in life.

If the huſband afterwards diſcovers any material imprudence in his wife, or has reaſon to be diſguſted with her, he ſends her back to her parents, and has the preſents reſtored: but if the fault appears to be on his own ſide, he cannot recover any thing. A man who is detected in having a criminal converſation with another's wife, is obliged, as a compenſation for the injury, to give the value of a ſlave to the huſband; but the woman receives no other puniſhment than aſking pardon of her huſband for the offence ſhe has committed. Thoſe who are detected in cohabiting together without the ceremonies of marriage, are puniſhed with a fine, which is levied in proportion to the offender's circumſtances.

The pagan prieſts here, the ſame as in Loango, lay certain injunctions on young people, ſuch as obliging them to abſtain from eating ſome ſorts of poultry, the fleſh of certain beaſts, fruits of different kinds, roots either raw or boiled after this or that manner, with the like ridiculous obligations, which they call kejilla. Theſe rules are as inviolably kept as they are ſtrictly enjoined; they would ſooner faſt till they periſhed, than taſte the leaſt bit of what has been forbidden; for they think, if they commit the leaſt treſpaſs againſt the kejilla, they ſhall certainly die in a very ſhort time. The prepoſſeſſion of their minds on this head will be evident from the following ſtory mentioned by Merolla, in his voyage to Congo: "A young black, ſays he, upon his journey (who had received the kejilla), coming to a friend's houſe at night, his hoſt next morning had for breakfaſt a wild fowl, which is much better than a tame one. The gueſt hereupon demanded if it was a wild hen? and being anſwered in the negative, he ſat down and ate very heartily. Four years after, theſe two meeting together again, the country black aſked his friend, who was not yet married, if he would eat a wild hen? The young man anſwered that he had received the kejilla, and therefore could not; the other laughed, and aſked, What made him refuſe it now, when he had eaten it at his table ſo many years before? At hearing this, the other began to tremble, and in leſs than twenty-four hours died, by the mere effects of imagination."

The method they take to cure the head-ach, is, by bleeding the patient in the temples; in doing of which, they firſt cut the ſkin with the edge of a ſhell ſharpened, and then applying a ſmall horn to the part, ſuck out the blood. For complaints in other parts of the body, they perform the ſame operation.

On the death of any perſon, a number of hens is immediately killed by the relations, who ſprinkle the houſe both within and without, with the blood, from a ſuppoſition that it will prevent the apparition of the deceaſed from viſiting any of the future inhabitants. As ſoon as this part of the ceremony is over, they ſhew their lamentation by howling over the corpſe for ſome time; after which they regale themſelves; and the corpſe, being wrapped up in a piece of cotton cloth, is carried on men's ſhoulders to the grave, which is made in ſome remote ſpot at a conſiderable diſtance from the village in which the deceaſed lived. A kind of memorial, according to the quality of the perſon interred, is placed over the grave: ſome have a large heap of earth raiſed on them; others a long and ſtrait horn of ſome ſtrange beaſt, an earthen platter, bowl, or any other veſſel; and no other perſon is ſuffered to touch theſe things, which are held in a ſacred light.

Previous to the interment of any perſon of conſequence, they ſtrew the way with leaves and branches of trees: he muſt likewiſe be carried in a ſtraight line to the grave, ſo that if any houſe or wall happens to interrupt the paſſage, it muſt be immediately pulled down. On theſe occaſions ſeveral ſlaves were formerly ſacrificed to ſerve their maſter in the other world; but ſince the Portugueſe have worked a reformation among the moſt diſtinguiſhed part of theſe deluded people, that practice has been intirely laid aſide; and it is only preſerved by thoſe who ſtrictly adhere to their original Pagan maxims. Theſe, however, are obliged to do it by ſtealth; for, ſhould it be known, they would not only be rebuked, but ſeverely puniſhed by thoſe of ſuperior power, who are ſtrenuous maintainers of the Roman Catholic religion.

The king of Congo is an abſolute monarch, the lives and property of his ſubjects being intirely at his diſpoſal. They approach him on all occaſions, in the moſt ſubmiſſive manner; and whoſoever neglects paying proper reſpect and obedience to him, is puniſhed with perpetual ſlavery. He has a council, conſiſting of twelve perſons, who are his favourites, and with whom he adviſes in all matters relative to the affairs of ſtate. All orders of a public nature are alſo made known by them, to which the people are obliged to pay the ſame obedience as if they were iſſued by a royal proclamation.

A ſtrong guard is always kept by the king, which is intended not only for the dignity of his court, but for the ſecurity of his perſon, and he is always attended by a number of the nobility, who dwell in and about the palace, beſides his domeſtics, and other officers of his houſhold.

He

He gives public audience twice a week, but no one is permitted to ſpeak to him except his favourite nobles.

The king's dreſs is very rich, being for the moſt part cloth of gold or ſilver, with a long velvet mantle. He generally wears a white cap on his head, as do alſo his favourites; but if any of the latter come under the diſpleaſure of the king, he orders the cap to be taken off, which is the higheſt mark of indignity they can receive; this white cap being conſidered here as a badge of diſtinction or knighthood, and no eſs honourable than the ſtar and garter among the nobility in England..

His Majeſty is attended, when he goes abroad, by a numerous retinue; for not only his nobles accompany him, but likewiſe all the principal men in the city; ſome of whom go before, and others behind. The king is preceded by muſicians, and a numerous guard, ſome of whom are armed with muſkets, and others with lances, or bows and arrows. When he goes to the cathedral, the Portugueſe, both temporal and ſpiritual, as well as the grandees, muſt wait on him; and return with him to the palace; but the Portugueſe are not obliged to attend him on any other occaſion. At theſe times the king is dreſſed in his richeſt robes, which conſiſt of a long mantle, or cloak of ſilk, ornamented in the moſt elegant manner. He wears a bordered cap on his head, and round his neck are chains of gold intermixed with the fineſt coral: his arms and wriſts are decorated with bracelets of gold, and he has a ſort of half boots on his legs.

The pomp and grandeur of the king are alſo particularly diſplayed at other times; and theſe are, when he gives a public treat to ſuch of his nobles as have diſtinguiſhed themſelves in his ſervice. On theſe days he cauſes all the noblemen, then in the bounds of the palace, to be numbered, and a proviſion is made accordingly. The entertainment is prepared in the largeſt apartments of the palace; and the proviſions are brought in pots, ſome of which contain boiled beans, others fleſh and fiſh, and ſome are filled with millet, ſeaſoned only with ſalt and palm-oil. When every thing is ready, the king ſends to the greateſt lords each his meſs in a wooden platter, with a ſmall flaſk of palm-wine; but the others are called up by their names, ſix or ſeven together, and ſuch proviſions are given to them as the king thinks proper to direct; with which they retire to an adjoining apartment. As ſoon as they have done eating, they come all into the king's preſence, and, falling upon their knees, clap their hands, and bow their heads, in token of thanks and ſubmiſſion; after which, they depart home, except the king's favourites, who during the remainder of the day, ſmoke tobacco and drink wine with him.

This monarch has but one lawful wife, who is called mani-membada, that is, queen; beſides whom, he keeps a great number of concubines, in violation of the principles of that religion he ſeems otherwiſe ſo ſeriouſly to profeſs. The queen is maintained at the expence of the public, there being an annual tax, called pinteſſo, gathered for that purpoſe from every houſe in the kingdom. This tax is collected on the king's wedding-day, when the proper officers of each province go to the reſpective houſes, and meaſure the length and breadth of every bed, the owners of which are taxed according to its breadth, viz. for every ſpan, he gives either a ſlave, or the value of one; for which reaſon, they who uſe beds have them exceeding ſmall, but moſt of the common people lie on the ground.

A great number of ladies attend alternately both day and night upon the queen, and the king's concubines are obliged to pay her the greateſt homage; for ſhould they behave to her in the leaſt diſreſpectfully, they would be puniſhed with perpetual ſlavery. She lives with great ſplendor, having apartments in the palace peculiarly appropriated to her uſe.

With reſpect to the royal revenue, it conſiſts chiefly in the tribute that is paid to him by ſeveral vaſſal princes, as thoſe of Angola, Loango, and ſome other inferior ones, and which the main, or governors of the ſix provinces, are obliged to gather for him. Others make him a kind of free-will offerings, ſome of cattle, others of grain, wine, palm-oil, and the like, as acknowledgements for the lands they hold under him. He is alſo proprietor of all the zimbis, or cockle-ſhells (the current coin of this and other neighbouring kingdoms), which bring him, in exchange, ſlaves, elephants teeth, ſanders, ſtuffs, cattle, millet, and other commodities. Fines and confiſcations, likewiſe bring him a conſiderable income; to which may be added his power in levying taxes on his ſubjects as often as he pleaſes; but this he ſeldom does, except in caſes of neceſſity, the poverty of his ſubjects being ſo great, that it might prompt them to revolt, and conſequently produce ſome diſagreeable conſequences, were he often to repeat ſuch oppreſſions.

The military of this kingdom are not very numerous, nor are they either well cloathed or diſciplined. The beſt of them are the muſketeers, who, having been taught by the Portugueſe the uſe of fire-arms, ſtill retain the art of handling them with ſurpriſing dexterity. All the king's ſubjects may be ſaid to be ſoldiers; for, whenever there is occaſion, and he thinks proper to command, they muſt all attend. Sometimes he orders a general review of them, when he attends himſelf; but their figure and variety of arms make them appear more uncouth than can be conceived. Some of them are armed with bows and arrows of different makes and ſizes, others with broad ſwords, daggers, and cutlaſſes; ſome without any other cloaths or arms than their long targets; others with their bodies covered with ſkins of different kinds of beaſts, from the girdle to the knee; ſome have their face and body painted with figures of animals, birds, &c. In ſhort, all of them are armed and accoutered according to their fancy or ability, and they who cannot obtain a broad ſword of metal, will get one made of heavy wood. What contributes towards making them look ſtill more deſpicable, is, that their colours are generally little better than dirty rags torn and mangled, their ſteel and iron weapons eaten up with ruſt, and their wooden ones very indifferently ſhaped. Their heads are dreſſed with feathers of various colours, and in almoſt as many different faſhions as there are men; and all of them have ſome emblem of the buſineſs they follow, beſides their particular weapon.

When they engage, the ſoldiers are taught to fall on the foe with a dreadleſs kind of fury, which they accordingly do on all occaſions; but as their arms are of little uſe in ſuch violent and irregular onſets, for want of better diſcipline, they are ſometimes put to the rout; and when that happens, they are ſeldom able to rally; ſo that the breaking of the very firſt body is moſtly attended with the loſs of the battle. The flight of one army generally animates the other to an eager purſuit, the conſequences attending which are dreadful, the carnage being always great. When the conquerors think proper to give over the purſuit, they return and plunder the enemy's camp, ſeize all the men, women, and children, they meet with, and ſell them to the Europeans for ſlaves. They look upon this as the moſt conſiderable part of the ſpoil, and therefore haſten them as ſoon as poſſible to the ſea ſide, or to ſome inland market. Few of thoſe wounded in the battle ſurvive, their arrows and darts being infected with ſo deadly a poiſon, that if they draw blood, it is ſure to cauſe a ſpeedy and unavoidable death, if the perſon is not provided with ſome powerful antidote.

Terms of peace are propoſed by the victor after a conqueſt; and theſe, though favorable on his own part, are generally accepted by the vanquiſhed; but they are no longer attended to by the latter, than while he becomes ſufficiently formidable to recommence hoſtilities.

No order is obſerved reſpecting the ſucceſſion to the crown of Congo, neither legitimation nor ſeniority taking place farther than the ruling nobles think proper, who eſteem all honourable alike, and chuſe him from among the king's ſons for whom they have the greateſt reſpect, or think the moſt proper to govern. Sometimes they give the crown to a brother, nephew, or ſome diſtant relation, ſetting aſide all the children.

As ſoon as a ſucceſſor is pitched upon, and the day appointed for the coronation, all the grandees are ſummoned to appear on a plain near the metropolis; from whence, with the male children and relations of the deceaſed king, they proceed with great pomp to the cathedral, which, on theſe occaſions, is richly ornamented. At one end of it is erected an altar, by the ſide of which is a ſtately throne for the biſhop or prieſt, and at the other end is a chair of ſtate for the principal officer, who is ſurrounded by the reſpective candidates for the kingly office; but the perſon to be elected is concealed from the officer and people.

Before the perſon is named by the principal officer, the latter riſes from his chair, and proceeds to the altar, where he kneels down, and makes a ſhort prayer; after which he reſumes his ſeat, and makes a long harangue to the people on the duties of a monarch, and the neceſſary care that is required to diſcharge ſo important a truſt. He then declares to the aſſembly, that he and the other electors, having maturely weighed the merits of each reſpective candidate, think ſuch a one the moſt proper to be elected to the ſovereign dignity. After this, the officer takes the new monarch by the hand, and leads him up to the altar, where they

The KING of CONGO

Surrounded by his Attendants, giving Audience

they both proſtrate themſelves before the prieſt, who gives the king a ſhort but pathetic admonition, in which, among other duties, he exhorts him to be a protector of his people, obedient to the Catholic church, and a ſtrenuous promoter of Chriſtianity. The king then receives the uſual oaths, after which he is conducted to the throne by the prieſt, who puts the royal ſtandard into his hand, and the crown upon his head. This done, the whole aſſembly proſtrate themſelves on the ground, and acknowledge him for their king, which is teſtified by the clapping of hands, and the ſound of martial inſtruments. And when the whole ceremony is over, the king, preceded by his principal nobles, and followed by all that attended the coronation, proceed to the place, where his chief nobles throw earth and ſand upon him, not only as a token of joy, but alſo as an admonition, intimating, that he muſt in time become duſt and aſhes, though he is now raiſed to ſo elevated a character.

After the coronation of the king, he does not ſtir from his palace for eight days; in which time all the nobility, and the Portugueſe, come to pay their reſpects, and wiſh him ſucceſs. The blacks do him homage on both knees, by clapping their hands, and kiſſing the king's right hand: the Portugueſe and clergy do it only on one knee.

When the eight days are expired, the king appears in the market attended by his nobles, where he makes a ſpeech to the people, declaring his reſolution to perform what was propounded to him at his coronation; and aſſuring them, that it ſhall be his conſtant ſtudy to promote the welfare of his kingdoms, and alſo to propagate the Romiſh religion, of which he is a member.

That juſtice may be properly adminiſtered throughout his dominions, the king appoints a judge in every particular province, who is to hear and determine all cauſes, whether of a civil or criminal nature. Theſe are called royal judges; from whom, however, an appeal may be made to the king, who preſides twice a week at the ſupreme court for that purpoſe.

Twelve aſſiſtants are allowed to each of the royal judges, and they are conſidered in the ſame light as the juries in England. In civil caſes, the plaintiff and defendant are the only pleaders, each of whom repreſents the ſtate of the diſpute in the beſt manner he is able to the judge, who alſo examines the evidences, on both ſides, with great deliberation. When all parties have been fully examined, the judge addreſſes himſelf to his aſſiſtants, and, after recapitulating the whole of the evidence on both ſides, aſks their opinion, from whoſe anſwer ſentence is generally pronounced, and the parties diſmiſſed. The perſon in whoſe favour judgment is given, pays a fee to the judge, and then, in token of gratitude, proſtrates himſelf with his face to the ground.

How plauſible ſoever the appearance of equity may be in the determination of all affairs in theſe courts, yet in reality it is all a deception, for the principal matter reſts in pecuniary compliments paid to the judge previous to trial, who, if any diſputes ariſe among his aſſiſtants, can readily bring them over to his ſide. Thus are the poor ſacrificed to the ſuperior wealth of their opponents, while real juſtice is ſuppreſſed!

Treaſon and murder are the only two offences that are deemed capital here: in both which caſes, the puniſhment is ſolely veſted in the king, who generally condemns them to loſe their heads and eſtates, the latter of which are confiſcated.

Sorcery, or the ſuppoſed art ſo called, is very prevalent among the lower ſorts of people in the unconverted parts of the kingdom; and when any one is convicted of that pretended crime, he is ſeverely puniſhed by the Chriſtians, being burned alive immediately after condemnation.

Offenders in trifling matters are puniſhed various ways: if they are poor, they are either baſtinadoed or whipped; but if rich, as in moſt other arbitrary governments, they are puniſhed by fines, which are levied at the diſcretion of the judge, who is always a conſiderable ſharer of the money paid by the guilty perſon.

In this kingdom, the poorer ſort are ſubject to many inſtances of cruelty and oppreſſion from their ſuperiors, owing to the great defect of their laws: among theſe are the following: if a poor man happens to contract a debt with a rich one, he is not only liable to be ſtripped of all he hath (not excepting his wife and family, who, in ſuch caſes, are often ſold for ſlaves,) but alſo to be baſtinadoed, dragged to a goal, and there inhumanly treated, in order to induce his friends to procure his liberty at an exorbitant rate.

If an inſolvent debtor ſecretes himſelf from his tyrannic creditor, or flies into ſome other country, either to avoid a goal, or being ſold for a ſlave, it is looked upon as a flagrant crime; in which caſe the creditor makes no heſitation to ſeize on ſome wealthy relation of his, and impriſon him in his ſtead, till he hath extorted, by the moſt cruel uſage, a ſufficient ſum from his other friends to ſatisfy him for the debt. Which is a circumſtance no leſs unjuſt than the former.

The ſame arbitrary power extends even to debts contracted by gaming, a vice to which the people of Congo are greatly addicted; for ſhould one of the lower rank happen to loſe two or three piſtoles with a ſuperior, and not be able to pay him, he would be expoſed to the ſame hardſhips and ill-treatment as if he had given his bond for ſo much money borrowed.

Very diſtinguiſhed privileges are enjoyed by the Portugueſe here, and ſuch as are not granted to any other Europeans. They are allowed a judge of their own nation, who not only determines all controverſies among themſelves, according to the laws of Portugal, but alſo between them and the native inhabitants.

The principal reſidence of the Portugueſe is at St. Salvador, where they carry on a conſiderable traffic with moſt other parts of the kingdom. The goods they ſell to the natives are, various ſorts of grain, fruits, plants, and other proviſions, which they bring from Brazil. The articles from Europe, are, Engliſh cloth, and ſeveral kinds of ſtuffs; copper and braſs veſſels, divers ſorts of earthen ware, and other ornaments; tobacco, wine, brandy, and other ſpirituous liquors; light ſtuffs made of cotton, linen, and woollen; with a great variety of utenſils and working tools.

In return for the above, the Portugueſe obtain from the natives, elephants teeth, furs, and other commodities of the country; but the chief article is ſlaves, prodigious numbers of which they annually export to the plantations in America. The beſt and moſt ſerviceable of theſe are brought from Angola, the country of the Jaggas, and other adjacent parts, where they are naturally very robuſt and ſtrong; whereas thoſe in the provinces of Congo, being for the moſt part brought up in ſloth and indolence, either die in the paſſage, through miſery and ſickneſs, or ſoon after their arrival, through the change of climate, or the ſevere treatment they receive from thoſe to whom they are ſold, which we have already given ſome account of.

We ſhall now proceed to take notice of the manner in which the reformation effected by the Portugueſe in this country originated; which was as follows: Don John IV. king of Portugal, being deſirous of diſcovering the coaſt of Africa, and finding out the way to the Eaſt Indies, fitted out a fleet for that purpoſe, the command of which was given to Don Diego Cam, a gentleman of the moſt enterpriſing genius, and one of the ableſt ſeamen in his ſervice. Cam, after many difficulties, at length arrived in the mouth of the river Zaire, where he caſt anchor, not doubting, from the appearance of the country, but there muſt be inhabitants on both ſides of it. Theſe conjectures he ſoon found to be juſt; for going with ſeveral of his people ſome way up the river, he met with a number of natives, who, ſo far from being alarmed, were highly pleaſed with the ſight of theſe ſtrangers, and not only teſtifying their ſatisfaction by their methods of addreſs, but alſo by preſenting them with fruits and other refreſhments.

Cam was for a conſiderable time at a loſs how to underſtand them, but at length, however, by ſigns and motions, he diſcovered that there was ſome powerful king in the country, to whom they were ſubject. Pleaſed with this information, and deſirous of knowing who this powerful prince was, he prevailed on five of the natives to accompany the ſame number of his men to the king, with whom he ſent conſiderable preſents, and limited a certain time for their return. The men, however, not returning as expected, Cam, after waiting double the time allotted took four of the natives, whom he found to be men of ſome rank and abilities, aboard his ſhip, and, promiſing to bring them back within fifteen moons, ſailed for Portugal, without ſtaying for the return of his men.

Theſe blacks, from the care Cam took of them during the voyage, and their quick conceptions, became tolerably well acquainted with the Portugueſe tongue; ſo that when they arrived at the court of Portugal, they were able to anſwer ſeveral important queſtions put to them by the king. This ſo pleaſed John, that after making them ſeveral conſiderable preſents, he ordered Cam to take them back to their own country; and at the ſame time told him to uſe his

utmoſt endeavours in exhorting the African king to become a convert to the Romiſh church, and to prohibit idolatrous worſhip throughout his dominions.

While Cam was abſent from Congo, the men he had left behind were treated with no leſs reſpect by that king, than the natives were by the king of Portugal. And on his arrival the ſecond time at Congo, he firſt ſent a formal meſſage to the king, while the natives he had brought back related, in every place they came to, the ſplendor of the Portugueſe nation.

Cam, a few days after, paid a formal viſit to the king, by whom he was treated with great cordiality, and entertained with all the ſplendor and magnificence of an African court. The king aſked him many queſtions relative to the grandeur of the Portugueſe dominions, all which Cam anſwered in the moſt ample manner; and particularly informed him of the nature of their religion, which he ſaid the king his maſter earneſtly intreated he would not only profeſs himſelf, but alſo propagate it amongſt all his ſubjects.

Such was the iſſue of this conference, that the African king conceived the higheſt eſteem for the Portugueſe, and intimated a deſire of becoming a proſelyte to the Romiſh religion. An alliance was immediately formed between the two crowns, which was continued from that time to the preſent, though often ſuſpended by intervening wars.

On Cam's departure from Congo, the king appointed one of the young nobles, who had been with him before to Portugal, to go now as an ambaſſador from his court to his Portugueſe majeſty, requeſting that he would immediately ſend proper perſons to inſtruct him and his ſubjects in the principles of the Chriſtian faith. The African ambaſſador was accompanied by ſeveral other nobles, who went in order to be properly educated; and with them the king ſent to his Portugueſe majeſty ſome valuable articles as a preſent.

On their arrival at Liſbon, Cam preſented the ambaſſador and his companions to the king, who received them in ſuch a manner as fully evinced the ſatisfaction he felt at the ſucceſs of the expedition. They continued for ſome time in Portugal, during which they were educated in a manner ſuitable to their rank, and particularly inſtructed in the princi- of the church of Rome. The ambaſſador, at the requeſt of the king, was baptized at Baja, the ceremony of which was performed with great magnificence; and the king himſelf vouchſafing to ſtand godfather, the ambaſſador was chriſtened in his name.

A ſhort time after this, the king ſent the Africans to their own country, in a ſhip which he ordered to be fitted out for that purpoſe under the command of one Gonzalez de Souza, a man of no leſs rank and abilities than Cam; and with them he alſo ſent ſeveral prieſts, together with fonts, mitres, chalices, and other neceſſaries proper for diſcharging the ceremonies of the Romiſh perſuaſion. An accident, however, happened on their paſſage; for the plague having for ſome time raged violently at Liſbon, the contagion was carried on board the ſhip by ſome of thoſe who had embarked, when ſeveral of them died, among whom was the commander; but this loſs was ſoon remedied, for Gonzalez de Souza, a near relation of the deceaſed, was appointed in his ſtead, by conſent of all the officers.

Arriving at the river Zaire, they landed at Songo, where they were received with great joy by the governor of the province, who was uncle to the king, and had his fixed reſidence in that capital for the ſake of carrying on a commerce with the Portugueſe, and had been ſo well inſtructed by them in the principles of the Romiſh church, that he was baptized ſoon after their landing, by the name of Emanuel, which was that of the brother of his Portugueſe majeſty.

Gonzalez, ſoon after this ceremony was performed, went to the king's court, where he informed his majeſty of the converſion and baptiſm of his uncle; at which he was ſo highly pleaſed, that he gave him abſolute power to deſtroy every thing that tended to paganiſm throughout his dominions. The Portugueſe commander then informed the king of his commiſſion, and of the holy veſſels and ornaments he had brought with him. The king appeared greatly pleaſed at this information, but much more ſo, when, at his requeſt, they were brought to him, and expoſed to the view of the whole court, amidſt crowds of his ſubjects, who all beheld them with the greateſt veneration, particularly the croſs, before which the Portugueſe falling on their knees, the king and nobility followed their example by proſtrating themſelves before it. His majeſty was very particular in examining every veſſel and veſtment, and paid the moſt ſerious attention to the explication the prieſt gave of every article; the reſult of which was, that he immediately reſolved on building a magnificent church in his capital for the reception of the prieſts and utenſils; and though he was obliged to get the chief materials for it from ſome of the remoteſt parts of the kingdom, yet his zeal for the execution of it was ſo great, that by the number of hands employed, the edifice was completed, in three months, and the name of the holy croſs was given to it at its conſecration.

Another ſolemnity no leſs important ſucceeded this laſt, namely the public baptiſm of the king and queen, with ſeveral of the nobility, which was performed in the new erected church, with great magnificence. The king was chriſtened by the name of John, and the queen by that of Eleonora, in compliment to their Portugueſe majeſties.

A great number of the king's ſubjects of both ſexes followed the example of their ſovereign; and the king the more ſtrongly urged the people in general to become converts, on account of his being then at variance with a neighbouring prince. The king being determined to engage his enemy in perſon, Souza, the Portugueſe ambaſſador, gave him a royal ſtandard, on which was the figure of a croſs, and at the ſame time exhorted him to place his confidence in the protector of that religion he had ſo lately embraced, and to rely ſolely on his aſſiſtance for the ſucceſs of the expedition. He alſo engaged to accompany him with an hundred of his men, and would endeavour to facilitate a conqueſt over his enemies, by contributing every thing in his power towards it.

The ſpirited behaviour of Souza highly pleaſed the king, who marched at the head of his troops to attack the enemy, who had planted themſelves on a large plain in his territories. The engagement was but of ſhort continuance; for, as ſoon as it began, the king's troops made ſuch havock in the front of the enemy, that thoſe in the rear precipitately fled, leaving all their ammunition in the field. Thus did the king obtain a complete victory over his enemies, and had the ſatisfaction to ſee his newly converted troops behave with an intrepidity they had never before ſhewn. After the battle was over, the king began to march with his troops to the enemies territories, in order, as is the cuſtom of the country, to puniſh them with the greateſt ſeverity; but from this he was diverted by Souza, who informed him, that ſuch conduct would be inconſiſtent with the principles of that religion he now profeſſed. The king readily taking the advice of Souza, the enemies territories were preſerved from deſtruction through his mediation.

Souza departed in a ſhort time after from Congo, leaving behind him a number of miſſionaries to propagate the new religion: and the Portugueſe have ever ſince laboured with the utmoſt care to baniſh idolatry from the country. To effect this they have eſtabliſhed ſeveral perſons as ſchoolmaſters, by whom the inhabitants are taught to read and write, and are inſtructed in the principles of the Romiſh religion. Several Portugueſe and Mulatto prieſts, who officiate according to the rites of the church of Rome, are alſo maintained here.

We muſt however obſerve, that though the inhabitants of the chief places in this kingdom appear outwardly to profeſs the Romiſh religion, yet the principal part of them are ſtill idolaters in their hearts, and ſecretly purſue their antient ſuperſtitious notions. To ſpeak more plainly, they are mere hypocrites, appearing only to be Chriſtians when they are in the preſence of the Europeans; they openly carry their beads and croſſes, and ſecretly their heatheniſh charms and amulets. Such of them as live near churches, and in the ſight of the Portugueſe, are married according to the ceremonies of the church of Rome; but they will not fulfil their engagements, ſince every one takes as many concubines as he can maintain, as we have already intimated. Nevertheleſs the inhabitants of Congo are reckoned rather better Chriſtians, than thoſe of any other part in the whole kingdom; they have a greater number of churches, where ſervice is every day performed: their clergy are alſo more numerous; and the people are apparently ſuch zealous Catholics, that they never appear abroad without being loaded with beads, croſſes, medals, and other religious utenſils. However, even theſe are not without preſerving the remembrance of their idolatrous cuſtoms; for they ſeldom fail of addreſſing themſelves to their heatheniſh deities, if the ſaints to whom they apply, do not grant their petitions.

Upon the whole, we may conclude, that notwithſtanding the great pains taken by the Portugueſe to eſtabliſh their religion in this country, yet few of the people ſe-

rioufly profefs it, and even thefe appear to do it more from policy, than being affected by religious fentiments. The chief of thofe who feem really attached to it are the king and thofe belonging to his court, as alfo the governors and principal officers of the refpective provinces; but as for the lower clafs, more efpecially thofe in the eaftern parts of the kingdom, they ftill retain their old maxims; nor can the Portugueſe prevail on them to renounce their idolatrous principles, notwithſtanding they employ their utmoſt artifices and endeavours for that purpoſe.

SECT. V.

Giving an Account of the preſent State of the Kingdom of LOANGO, its Boundaries and Extent, Climate, Produce, principal Provinces, Animals, Inhabitants, their Religion, &c. alſo a particular Deſcription of the City of LOANGO, and the King's Palace there; and the State and Dignity of the King, his Government, Laws, Revenues, &c.

THE kingdom of Loango, is the moſt northern diviſion of Congo in general: it is bounded, on the eaſt, by the kingdom of Makoko; on the weſt, by the Atlantic ocean; on the north, by the kingdom of Benin; and on the ſouth, by Congo Proper; it is upwards of four hundred miles long, and three hundred in breadth. The principal provinces it contains, are, Loangiri, Loango-Mongo, Chilongo, and Piri. Beſides theſe, there are others much ſmaller that chiefly lie on the coaſt, and are frequented by the Europeans.

This kingdom is ſituated near the center of the torrid zone; notwithſtanding which, the climate is far from being unwholeſome, and as it is watered by a number of ſmall rivers, the ſoil is tolerably fertile; but it might be turned to much greater advantage than it is, were it not for the natural indolence of its inhabitants. However, it produces ſeveral ſorts of grain, of which they have three crops annually; alſo peas and beans not inferior to thoſe of Europe; with great plenty of yams and potatoes. Oranges, lemons, bananas, pompions, cocoa-nuts, the kola fruit, &c. are likewiſe produced here.

The province of Loangiri is large and populous, and well watered by ſeveral brooks and rivers, which render the ſoil exceeding fertile. The inhabitants live chiefly on fiſh, and employ themſelves in making cloth and linen. They are more addicted to war than their neighbours, being in general a more courageous people.

The province of Loango-Mongo, is a large mountainous country, and particularly abounds with palm-trees. The inhabitants are merchants, and, like thoſe of Loangiri, employ themſelves chiefly in making cloth and linen. The city of Loango, which is the uſual reſidence of the ſovereign of the kingdom, is in this province.

Chilongo is a more extenſive province than either of the other three. Some parts of it are very mountainous, but in others there are large and extenſive plains, which are very fertile, and produce good grain, as alſo abundance of palm-trees; it is a very populous part of the country; and though the inhabitants are not ſo well poliſhed as their neighbours, yet they carry on a conſiderable trade, particularly in elephants teeth and cloth. The governor of this province is abſolute, and the people have the liberty, at his deceaſe, of chuſing a fit perſon to ſucceed him.

The province of Piri, is a very flat country, but it is well peopled, and produces great plenty of moſt ſorts of proviſions, particularly cattle and poultry. The woods are well ſtocked with timber; beſides which there are fruit trees in abundance. Some of the inhabitants are great traders, and they are all diſtinguiſhed for being very quiet and affable in their diſpoſitions. They live chiefly on milk, and beaſts which they kill in the woods.

The moſt diſtinguiſhed of the other provinces, which are much ſmaller than thoſe already mentioned, are Majumba, Sette, Kilongo, Cagongo, and Angoy. They are all maritime places; and their coaſts being frequented by European ſhips, makes them better known than the larger ones.

The firſt of theſe provinces, called Majumba, is ſituated to the weſt of Piri, between the third and fourth degrees of ſouth latitude, and extends weſtward to the ſea coaſt, where there is a high promontory called cape St. Catherine. The bay or port of Majumba lies two leagues to the ſouth of cape Negro; and the great river Banne, on which are ſeveral ſmall iſlands inhabited chiefly by fiſhermen, runs into this bay.

The principal part of the country conſiſts of woods and groves, the former of which abounds in various kinds of wild animals, particularly baboons, apes, and ſeveral ſorts of monkies. The ſoil of the province is in general very barren, not producing any kind of corn or grain, ſo that the natives live on plantains, roots, nuts, and fiſh; and ſometimes they catch elephants, whoſe fleſh they greatly admire.

There is only one long ſtreet in the town or village of Majumba; and this is built ſo near the ſea, that the waves often oblige the inhabitants to deſert their houſes. On the north ſide of it is a river that is remarkable for producing great quantities of oyſters. This river is very narrow at the mouth, and not above ſix feet deep; but higher up it is both broader and deeper, and is navigable for large canoes. It is very convenient for thoſe who trade with the inhabitants of Sette, as it extends at leaſt fifty miles up the country. In this town is a mokiſſo called maramba, which is kept in a large houſe, or temple. It reſembles the figure of a man, and ſtands upright in a high baſket made like a bee-hive. When the lord or governor of the province goes abroad on any particular occaſion, the image is always carried before him; and the firſt cup is poured at the feet of the idol when the governor drinks palm-wine.

The province of Sette is ſituated about ſixteen miles north of Majumba, and is watered by a river of the ſame name. It abounds with millet, palm-trees, and a kind of red wood, called by the inhabitants takuel. This wood is of two ſorts, the beſt of which is very hard, and of a bright red colour. Great quantities of it are annually purchaſed by the inhabitants of Majumba, as the chief trade of the natives conſiſts in this article.

A territory called Gobbi, lies between the river Sette, and cape Lopo Gonſalvo: it is full of lakes and rivers, all navigable for canoes. The land of this province is very barren, but the rivers abound with various kinds of fiſh. The chief town in it lies about twenty miles from the coaſt, but it is a ſmall place, and poorly inhabited.

Kilongo, which is ſituated to the ſouth of Majumba, is a large province. It is a level open country, and the ſoil is very fertile, producing great quantities of millet and other grain. Here are two ſmall villages, that appear at ſea like hills, and are the marks by which the ſailors are directed to the port of Loango. This province was formerly an independent kingdom, but being conquered by the king of Loango, it became a part of his dominions. However, the inhabitants ſtill enjoy their antient cuſtoms and privileges, and only make acknowledgement of ſubjection by paying the king an annual tribute.

Cacongo lies to the ſouthward of Loangiri: this kingdom or province is bounded, on the weſt, by the ſea; and, on the north, by the river Loango. Towards the ſouth and ſouth-eaſt, it borders on the kingdom of Angoy; and eaſtward it extends from the coaſt upwards of fifty miles. The town of Cacongo, the capital of the province, is very agreeably ſituated, tolerably large, and well inhabited. The ſoil of the country is in general very fertile, and produces moſt kinds of proviſions with which the natives frequently aſſiſt their diſtreſſed neighbours who live in theſe parts where the ſoil is leſs bountiful.

The river Cacongo runs quite acroſs the kingdom, and, after a courſe of twenty-five or thirty-leagues, falls into the ſea in the fifth degree of ſouth latitude. To the ſouth of this river, about four miles from the coaſt, is a village called Malemba, where the ſea making a gulf, affords a ſafe road for ſhipping. All the reſt of the coaſt, from the river Cacongo to the river Zaire, is very dangerous, being full of rocks and flats.

The principal part of the trade of this province is carried on at Malemba, where the Dutch and Portugueſe ſell ſeveral ſorts of cloth, iron ware, and other commodities, to the natives, who diſpoſe of them farther up the country, and ſell elephants teeth and ſlaves to the Portugueſe in exchange.

The ſmalleſt of all the provinces is Angoy, but the ſoil of it is much better, and would produce great quantities of grain, were it not for the natural indolence of the inhabitants, who ſometimes, from this cauſe only, are obliged to apply for relief to their neighbours. This province is bounded, on the north and eaſt, by Cacongo; on the weſt, by the ſea; and, on the ſouth, by the river Zaire. The capital town is called Bomangoy, and is ſituated on the north ſide of the above river, not far from its mouth. It is tolerably large and populous, but the houſes are very mean buildings, being irregular in their form, and conſtructed only of reeds and mud, covered roughly with branches of trees. The bay is a very commodious place,

and

and here moſt ſhips ſupply themſelves with wood and water. At the point of the bay is the village of Kabenda, which is ſo poor and mean a place, as not to merit any other notice than the bare mention of it. The chief port here is alſo called Kabenda, and is ſituated to the north of the river Zaire.

There are great numbers of wild beaſts, in the more remote parts of the kingdom of Loango, ſuch as elephants, tygers, leopards, civet cats, and various ſorts of monkies. They have only two ſorts of game animals, namely, hogs and goats; but this deficiency is ſupplied by the poultry, which is ſo plentiful, that a good fowl may be purchaſed at the value of an Engliſh farthing. They have alſo a great plenty of wild fowl, and ſeveral uncommon birds peculiar to the country; among the latter, the moſt remarkable is that called the pelican, which being a bird little known to Europeans, we ſhall take this opportunity of deſcribing.

The pelican, from the top of the bill to the end of the tail, is about five feet in length, and weighs in general not leſs than twenty pounds. The bill, which is hooked, is about fourteen inches long, from the tip to the corners of the mouth. The feathers of the body are of a greyiſh colour, and thoſe on the top of the head ſtand erect, and are much longer than the reſt. The tail and covert feathers of the wing are of a duſky aſh colour; but the ends of the quill feathers are black, of which there are twenty-eight in each wing. The upper chap is flat and broad, and the bill near the head is of a lead colour, but yellowiſh towards the end. The lower chap is like two long ribs united at the extremity; and between them there is a thick yellow membrane, or ſkin, which it can draw ſo cloſe up to the bill, as hardly to be perceived; but notwithſtanding this, it may be ſo dilated as to contain a prodigious quantity of water; which is often of infinite uſe to the bird when it travels over ſandy tracts, where that article is not to be obtained for many miles. The legs are bare above the knees, and the feet are webbed, having four toes. But the moſt remarkable circumſtance belonging to this bird is the bones, which appear to be tranſparent, with many fibres and viens running up and down them throughout their whole length. Another ſingularity, which is not to be met with in any other bird whatever, is, that near the middle of the ſtomach the windpipe is divided into two branches.

With reſpect to the inhabitants of Loango, who are called Bramas, they are tall, well-ſhaped, and of a ſhining black colour. They are free and generous to each other, but very eager to attain riches, and greatly addicted to drinking; however they are tolerably civil; and though libidinous themſelves, are exceeding jealous of their wives.

The men wear long garments, that reach from the middle to the ancles, at the bottom of which is a handſome border of fringe. They are faſtened at the waiſt with a ſtring made of the leaves of the matombe tree; beſides which, they have two girdles, each three or four inches broad: one of theſe is made either of red or black cloth ſlightly embroidered, and the other of yarn wrought with flowers, and faſtened before with double ſtrings. Some uſe girdles made of bulruſhes, or palm-leaves, which they weave and plait together: and all of them are obliged to have on the outſide of their garments a piece of the ſkin of a leopard, or ſome other wild beaſt. They wear ſtrings of beads about their necks, and their arms and legs are ornamented with braſs, copper, or iron rings. They have a cap on their heads, which is made to ſit cloſe; and in their hands they always carry either a great knife, a ſword, or a bow and arrows.

The women wear ſhort petticoats reaching only from the waſt to the knee, and over them they wear a piece of European ſtuff or linen. The upper part of the body is quite bare; but their arms, legs, and necks, are adorned with rings, beads, and other trinkets.

Both ſexes anoint themſelves with palm-oil, and ſtain their bodies with a liquid made from a wood called takoel, the colour ariſing from which is a dingy red. Their food conſiſts chiefly of dried fiſh, which they boil with herbs, and then ſeaſon with Braſilian pepper. They make their bread with the flower of millet, and water is their common drink.

Little ceremony is uſed in their marriages, the chief thing being to obtain the conſent of the parents; if that is obtained, they aſſemble together; and the parties agreeing to take each other, an entertainment is provided for the gueſts, and the whole ceremony is ended. The common people have in general only two or three wives; but ſome perſons have ten or twelve.

It is the practice here, as in other parts of Africa, for the women to do all the ſlaviſh work. They are kept under great ſubjection, and not only perform their domeſtic duties, but are obliged to cultivate the land, while their huſbands live in a mere ſtate of indolence. They muſt never ſpeak to their huſbands in any other poſture than on their bended knees: nor ever eat till their huſbands have done, and then chearfully take the leavings.

The colour of infants here, when firſt born, is nearly the ſame as of thoſe in Europe; but in two days it turns to a perfect black. This circumſtance greatly deceived the Portugueſe for ſome time after they ſettled in theſe parts; for, having commerce with the negro women, they took it for granted, that, when a child was born, it muſt be theirs; but when they came to be undeceived, and convinced that it was the offspring of a negro, they loſt that ſatisfaction they had before imbibed: however, when a child is produced between both, that is, a mulatto, they have not only a great reſpect for the infant, but a high veneration for the object that produced it. But it is not a little remarkable, that though both parties are negroes, yet it ſometimes happens that the child is very different in colour from that of its parents. Theſe, at a diſtance, greatly reſemble Europeans: they have grey eyes, and red or yellow hair; but when you are cloſe to them, their colour is like the corpſe of an European, and their eyes appear as it were fixed in their heads. Their ſight is very imperfect in the day; but at night they ſee clear, eſpecially if it be moon-light. Theſe extraordinary births are ſuppoſed to be occaſioned by the effects of imagination in the woman on ſeeing a white man, in the ſame manner as hiſtory informs us, that a white woman brought forth a black child, by viewing the picture of a negro.

The natives call children of this kind dondoes, which are always preſented to the king a few days after they are born. They are brought up in the court, and always attend his perſon; they are held in ſuch high eſteem by the king, that no perſon whatever dare offend them, and if they go to markets, they have free liberty allowed them of taking ſuch articles as they think proper.

On the death of any perſon, the relations immediately publiſh the melancholy tidings by running about the town or village, and ſhrieking in the moſt hideous manner; after which, they bring the corpſe into the ſtreet, and waſh and clean it; they then interrogate it, Why he died? and ſuch like queſtions, which they continue to aſk for ſeveral hours. After this, the grave is dug, when they carry ſeveral of their houſhold goods, and lay by the ſide of the body, as alſo the moſt valuable things uſed by the deceaſed perſon while living. They then haſtily take up the corpſe, and carry it with all expedition to the grave, in which it is immediately depoſited: ſome of the goods are thrown into the grave; and after they have expreſſed their lamentations by howling, and the moſt ſtrange geſticulations, it is filled up with earth. The remaining goods are ſet over the grave on poles, being firſt cut to prevent their being ſtolen. The relations bewail the loſs of the deceaſed by attending the grave for ſix ſucceſſive weeks, morning and evening.

They will not ſuffer any foreigner to be buried in their country; when it happens that an European dies here, his body is carried in a boat two miles from the ſhore, and thrown into the ſea. This cuſtom took its riſe from a Portugueſe gentleman being buried here ſome years ago, ſoon after which the whole country was afflicted with a famine. The prieſts thought proper to attribute the cauſe of the general calamity to the interment of the foreigner, whoſe body, in conſequence of their opinion, was taken up, and thrown into the ſea; and they have never ſince permitted a ſtranger to be interred in their country, merely from this circumſtance.

Theſe people are all idolaters, though an attempt was once made to bring them to a knowledge of Chriſtianity: for in the year 1663, a famous miſſionary, named father Bernardin, an Hungarian, being at Loango, had ſome conferences with the then king, acquainted him with the doctrines of the Chriſtian religion, and baptized him, together with his queen, his children, and ſome perſons of his court. The people, however, would not be perſuaded to follow the king's example, nor could the moſt forcible arguments induce them to relinquiſh the leaſt particle of their ſuperſtitious maxims. They paid no reſpect to the mandates of the king, who in order to eſtabliſh the new religion, commanded them not to work on Sundays, which they abſolutely refuſed to comply with; nor would they pay the leaſt attention to ſuch matters as were derogatory from their idolatrous notions.

This refractorineſs of the people produced a national commotion: one of the king's couſins, a man particularly zealous for idolatry, put himſelf at the head of the people, ſeduced ſome of the new-converted Chriſtians, both by promiſes and preſents, and became at length ſo powerful as to dare to offer battle to his ſovereign. The king who was naturally courageous, went with his army to attack the rebels, and a deſperate engagement enſued; but the rebels, having found means to bring over the principal part of the royal army during the engagement, the king was obliged to retire with the few that had remained faithful to him. The conquerors offered to lay down their arms, and to pay obedience to him as formerly, if he would renounce the new religion he had embraced, and put things again upon their antient footing. The king, who appeared convinced in his mind of the truth of the Chriſtian religion, made anſwer, that he would never renounce the worſhip of the true God, and would ſpill the very laſt drop of his blood in the defence of it.

In conſequence of this reſolution, ſeveral other battles were fought between the king and the rebels, in the laſt of which the king's troops were entirely cut to pieces, and himſelf ſlain. On this the conqueror was acknowledged king, who uſed all his endeavours to extirpate the Chriſtian religion, and re-eſtabliſh paganiſm; but his triumph and reign were of ſhort duration; for one of the late king's children, who had eſcaped from the laſt battle, raiſed a new army, proteſting moſt ſolemnly, that he took up arms with no other view but for the ſake of the Chriſtian religion; and that, after his father's example, he would defend it to his laſt breath. Accordingly he engaged the rebels; and the event of the battle was ſuch that the new tyrant was defeated and killed, with almoſt all his troops; after which, the young conqueror aſcended the throne, and eſtabliſhed the Chriſtian religion for ſome time throughout his dominions. After his death, however, it was finally rooted out by his ſucceſſor, and from that time to the preſent idolatry has prevailed in this country; which we ſhall now proceed to give an account of.

They have ſome notion of a Supreme Being, whom they call Sambian pogo, but their ideas are extremely imperfect; nor have they any belief in the reſurrection of the dead. Their idols, which they call mokiſſoes, are of various forms, ſome of them are made to reſemble the human ſpecies; others conſiſt of a piece of wood about a yard long, with ſmall bits of iron on the top, or elſe the figure of ſome animal carved at the end of it. The heads of their greater idols are ornamented with the feathers of hens or pheaſants, and their bodies are decorated with various kinds of trinkets. All acts of devotion are performed to theſe idols, of which they have great numbers. Each has a peculiar name, according to its office or juriſdiction. To ſome they aſcribe the power over lightning and the wind, and ſuppoſe that by praying to them it will preſerve their corn from vermin and birds of prey. To others they give the command over fiſhes of the ſea and rivers, their cattle, &c. ſome they make protectors of their health and ſafety; others they conſider as being able to ſecure them from evils and misfortunes. Thus every idol has his peculiar province, and his power is limited to a particular place. They have a notion that theſe idols are jealous of one another; for which reaſon they make their addreſſes to them all indifferently, as their protectors and guardians. They generally keep them in a pot of earth, with the figure half in and the other part out; they are made by their prieſts, who obtain conſiderable wealth by the ſale of them, as their value is fixed in proportion to the circumſtances of the perſon who buys them.

Their notions relative to the diſpoſal of the ſoul after death are very extraordinary. Thoſe of the royal family believe, that when any one dies, his ſoul is regenerated in ſome of the family; while others think that the ſoul and body have one determinate end. Some, like the Greeks and Romans, place the ſoul among the heroes, or elſe bring it into the number of their titular houſhold gods; others give them a common place of reſort under the earth; whilſt a fifth ſort make for them little receptacles under the roofs of their houſes: before which places they make ſome offerings for the benefit of the ſoul of their departed friend, when they eat or drink.

Theſe idolaters are led into the practice of the moſt abſurd ceremonies, being prompted thereto by the craftineſs of their prieſts, who work upon their ſuperſtitious notions. When a child is born they call a fetiſher, or prieſt, to enjoin to keep ſome particular thing as a law. The prieſt aſks the parents what was their injunction, and that of their anceſtors? when being anſwered, he tells them, that the oracle, by the mokiſſo, has ordered, that the child ſhall be enjoined not to do ſuch things during the courſe of its life; which the mother takes care to inculcate in the mind of the infant as it grows. Theſe injunctions are of various kinds; as, that they muſt abſtain from ſuch particular fleſh, herbs, or fruit; or that, if they eat ſuch fleſh, they muſt eat it alone, leave none, and bury the bones deep; that they may not be ſcraped up again, and eaten by any beaſt.

Some are forbidden by the prieſts to ſhave either their heads or beards, and others are commanded to abſtain from all kinds of fruits. Some are forbid to go over any water; others to croſs a river in a canoe, though at the ſame time they are permitted to walk, ſwim, or ride through. If an unmarried man has got a fooliſh child, he muſt not eat of the breaſt or udder of a buffalo; but if he gets another more ſenſible, he then becomes freed from that reſtraint.

Theſe, and ſuch like idle maxims, they obſerve with the greateſt exactneſs, firmly believing, that if the command enjoined by the mokiſſo, or the promiſe made to him, are not fully performed, he hath power to kill, or otherwiſe puniſh them; ſince all circumſtances that happen to them, whether good or evil, they ſuppoſe to ariſe from the power of the mokiſſo.

If a man preſerve a good conſtitution, by living in a chaſte and temperate way, he aſcribes his health to the mokiſſo, and not to thoſe virtues themſelves. If a ſick man recovers, they never impute it either to the force of nature, or the application of medicines, but the mokiſſo gets the credit of the cure which they performed; and if the patient happens to die of old age, or by any misfortune, they believe he was killed by ſorcery for having violated the mokiſſo's injunctions.

They have, beſides their private mokiſſoes, many public ones, that are kept in temples or huts, to which they daily repair to pay their devotions. One of theſe is at a village called Thiriko, and in figure reſembles a man. The ganga, or high-prieſt, who is lord of the village, performs the ſervice every morning, in this manner: as ſoon as the people are aſſembled, he ſits down upon a mat, and with a leathern bag ſtrikes his knee ſeveral times, having ſmall iron bells faſtened to his fingers. After this, he ſtrikes the bag ſeveral times on his breaſt, and then uſes many ſtrange motions and poſtures of his body, hands, head and eyes; ſometimes he raiſes his voice, and then depreſſes it, frequently repeating the word mariomena; to which the aſſembly anſwer, ka. When this has continued for ſome time, the ganga appears as if diſtracted, and his rage becomes ſo violent, that he is obliged to be held; but by virtue of a ſour liquor drawn from cane, with which they ſprinkle him, he recovers, and then declares what he has received from the mokiſſo, and what muſt be done in caſe of ſickneſs, and the like. After this he recommends to the mokiſſo the health of the king, the welfare of the country, flouriſhing of the ſeed, ſucceſs to the merchants, and full nets for fiſhermen. The whole company clap their hands, in token of affection, at the mention of the king's name; which concludes the ceremony.

Kikokoo is another remarkable mokiſſo. This is a black image cut in the ſhape of a man ſitting. They believe that this mokiſſo preſerves them from death, and that he keeps them from being hurt by ſorcerers. It is kept in a hut, which is always guarded, on account of its having been once ſtolen by ſome Portugueſe ſailors, who took it out of the houſe, and carried it on board their ſhip; but in the way the head and one of the arms broke off. When the Portugueſe came again to Loango, they were afraid to venture on ſhore without reſtoring kikokoo; ſo nailing on the broken limbs, they conveyed him at night to his old habitation. The next day a report was ſpread among the blacks, that kikokoo had been in Portugal, and that a trading ſhip had carried him away thither. Some time after this, a Portugueſe ſhip happening to ſtrike upon the rocks of Loango, the blacks ſaid that kikokoo had broken the ſhip, becauſe the Portugueſe had driven a nail into his head.

But the mokiſſo, called malemba, is the moſt reverenced by them, and is particularly eſteemed on account of its being viſited by the king. It is a mat about a foot and a half ſquare, on the top of which hang ſeveral ſmall baſkets. with ſcollops, feathers, iron bells, rattles, bones, and other trifles. The ceremonies belonging to this are performed with little drums or tabors, on which boys ſtrike with their

hands. After this, a ſong is chanted by the company, and a perſon appointed for that purpoſe dips a bruſh into ſome water that has been coloured with takoel, which he ſprinkles on the king and the ganga, or high-prieſt. The nobility that attend receive a ſtreak on their bodies out of the ſame pot; after which, they have the honour to carry away malemba, with his pots, bruſhes, &c. which they replace as before.

Another of their mokiſſoes is called kofrie, which conſiſts of a ſack with ſome horns full of whiting. The ſervice to this image is performed with rattles, long ſticks, ſinging ſongs in the night, creeping on their knees, waſhing, ſpitting, ſhouting, tying rings and bands about their bodies, and the like. They ſay this mokiſſo ſecures them againſt the dreadful conſequence of thunder and lightning, and alſo preſerves them from ſickneſs.

Beſides the abovementioned, they have many other images, which have different names, and are ſuppoſed to be ſerviceable to them on various occaſions; but they are all equally ridiculous, with thoſe we have already deſcribed, and only tend farther to evince the folly and ſuperſtition of their deluded votaries, who ſacrifice every particle of reaſon to defend the honour of their contemptible idols.

Before we deſcribe the city of Loango, &c. we ſhall give ſome further particulars relative to the trade, inhabitants, method of travelling, houſes, coin, produce, &c. of the Loangoeſe, as extracted from the account given by Captain Uring, who ſailed to this part of Africa.

"The chief of their trade, according to this writer, is in ſlaves, though they have ſome elephants teeth, and bees-wax, and have very rich copper mines in the country. I have ſeen, ſays he, quantities of copper-drops, which were pieces of about a pound weight, run from the ore, and is for the moſt part bought by the Dutch. I was informed, that the greateſt part of their ſlaves were brought eight or nine hundred miles out of the country, which they call Poamboe; I take this to be Ethiopia. They uſed to make excurſions nearer home, in ſtrong parties, and where they found any people ſettled by themſelves, and not under the protection of any government, they ſeized them, and drove them before them, as other people do cattle, till they brought them to a trading town, where they were ſold for ſlaves; and this is as much a trade among them, as ſelling horſes, cows, and ſheep, or the like, in other countries. Thoſe ſlaves which are brought ſo far out of the country, are generally very ignorant, and dull of apprehenſion; but thoſe taken nearer the ſea coaſt are more quick, eſpecially the people of Loango, who are a crafty cunning people, and tolerably ingenious; they are moſt of them tall, ſtrong, and well limbed: and all of them are great lovers of brandy and tobacco: they do not make ſo good ſlaves as thoſe of the Gold coaſt, or Whidah; the reaſon which is given for it is, that the people on the Gold coaſt fare hard for want of proviſions, and are capable of going through more labour, with leſs victuals, than the natives of other countries, where they have plenty, as they have in the kingdom of Angola, Congo, and thoſe countries from whence theſe ſlaves are brought. It ſeldom happens that any of the town's-people are ſold for ſlaves, except in caſes of adultery, or when their great men ſell ſome of their ſervants for diſobedience.

"The women do all the drudgery; as planting, reaping, dreſſing their proviſions, carrying burdens, combing their huſband's hair, twiſting it into ſeveral forms, and painting their bodies: they alſo make mats. Moſt of the bread eaten amongſt them they call cankey, which is made with Indian corn, beat ſmall, which they mix with ſome roots, and boil in dumplings, and when they take it out of the pot, then they wrap it up in leaves, and it will keep five or ſix days.

"The great men and Europeans travel in the ſame manner as in Congo.

"The houſes of the inhabitants are low, the ſides of them made with cane, wattled together with twigs, and covered with leaves or branches of trees, of which they have many convenient for that purpoſe, and conſiſt moſtly of two or three rooms, the innermoſt of which is particularly for their women. Moſt of them have ſmall yards, incloſed in the ſame manner as the walls of their houſes, where are generally growing plantain, banana, and other trees, the fruits of which ſerve them for food, and the branches are convenient to ſhade them from the ſun, when they have a mind to take the freſh air, which makes the town look very agreeable. Some of their great men, and the chief of their merchants, have cane-walls of about ten or twelve feet high, which form a walk about eight feet wide, reaching near forty yards from the houſes, but with ſo many windings and turnings, that you go five times that diſtance before you come to their habitations; which is all the grandeur I obſerved in their buildings. I have been entertained with palm-wine and fruit at many of their houſes.

"The chief of their common people's food is cankey, potatoes, and other roots; the better ſort eat fowls and ſtewed fiſh. Their fiſh is dreſſed thus; they take five or ſix freſh maſounge, and put them into an earthen pot, with a little water and palm-oil, and a great deal of bird-pepper, and ſome ſalt; over the fiſh they lay three or four pieces of ſmall ſticks acroſs, and then fill the pot with green plantains, and cover it cloſe; the fume of the pot ſtews the plaintains: this is eſteemed an excellent ſavoury diſh. I was prevailed on to taſte it, but it was ſo hot of the pepper, that I could not get the taſte of it out of my mouth for ſeveral hours.

"Their money they call mucates, being certain pieces of cloth made of ſilk-graſs by the women, about the bigneſs of a ſheet of paper, and paſſes as current coin; they ſew ſeveral of them together, which make a fathom, and was what they cloathed themſelves with, before the Europeans traded with them. They value our goods by an imaginary coin, ſomething in the nature of the Portugueſe manner of counting by rees, of whom I ſuppoſe they learned it. A piece of blue baſts is valued at one thouſand, a piece of painted callico at ſix hundred, a piece of neconnes ſix hundred, a Guinea ſtuff three hundred, of paper-braul three hundred, a ſmall keg of powder three hundred, and ſo of the reſt. Annabaſes and braſs pans, pewter-baſons, guns and powder, are much eſteemed with them: they are very fond of ſmall black beads, and coral, to make bracelets: we had alſo knives, tapſeels, and chareolees, with a ſmall quantity of ſcarlet, and blue broad-cloth, which the natives wear in ſmall rings tied round their waiſt for ornament. We bought men-ſlaves from three thouſand ſix hundred to four thouſand, and women, boys, and girls, in proportion. We reckoned a man ſlave at fifty ſhillings prime-coſt of the goods in England. There was in the town a large Portugueſe factory, and in the road a large Dutch ſhip and two Engliſh ſhips beſides ourſelves, or we ſhould have purchaſed ſlaves much cheaper.

They have a market every day, where proviſions and goods are ſold; it begins very early in the morning, and laſts about three hours; they have plenty of Indian corn, kidney-beans, calavances, pindas and guba-gubs; which laſt are in ſhape and taſte like our white peaſe, with this difference, one grain being as big as four or five; they grow upon a vine which runs upon the ground, and every ſingle grain is covered with a diſtinct ſhell. They have great numbers of plantain and banana trees, as they have of palm-trees of ſeveral ſorts, from whence they draw great quantities of palm-wine, and extract a great deal of oil from the fruit, which they both eat and anoint themſelves with, and ſell to the Europeans. They have alſo large cotton trees of a prodigious ſize: pine-apples are ſo plentiful here, that I have bought ten for a knife, which coſt in England about two-pence. They have ſome limes: but I ſaw no lemons, and but very few oranges, and thoſe bitter, ſour, and ill taſted. They have plenty of dunghill-fowls; but I ſaw neither turkey nor duck in the country, no black cattle, nor hogs, (except wild ones) and but one ſheep. The men have their drinking-bouts of palm-wine, which is the only liquor the country affords beſides water: they let it ſtand two days after it is taken from the tree, in which it ferments, and grows ſour, and has ſome ſpirit in it, which exhilirates them, and makes them merry: they ſit at theſe drinking bouts twelve hours together, till they get drunk. I have taſted it, but found it very diſagreeable; but when it is firſt taken from the tree it has a very pleaſant taſte." Thus far this author.

We ſhall now, as we propoſed, give a particular deſcription of the city of Loango, and particularly the king's palace; with an account of the ſtate and dignity of the king, his government, laws, puniſhments, revenues, &c.

Loango, the capital city of the kingdom of the ſame name, ſtands about four miles from the ſea coaſt, and is ſituated in four degrees and a half of ſouth latitude. It is a very large and populous city; the ſtreets are long and ſpacious, and on the ſides of them are planted rows of palmetto and banana-trees. The houſes are built of an oblong form, with two gable ends, and a ſloping roof, which reſts on long thick poſts ſupported by ſtays. They are all built nearly of the ſame ſize, ſtand at equal diſtances, and appear with great uniformity. The inſide contains three

three or four apartments, which are all on the ground floor, and only ſeparated by a ſlight partition made of wicker or reeds. Their houſhold furniture conſiſts chiefly of pots, wooden trays, mats, ſmall and great baſkets for their cloaths, &c.

There is a ſpacious ſquare, ſurrounded with lofty trees, near the center of the city: here, (as is obſerved above) a daily market is held for the ſale of all kinds of proviſions, as meat, poultry, fiſh, wine, corn, and oil; alſo palm cloths of various ſorts, and great quantities of elephants teeth. On the weſt ſide of this ſquare is the royal palace, which conſiſts of a number of detached buildings. The king's apartments are in front, and behind are thoſe belonging to his women. The whole is ſurrounded with lofty palm-trees, and is at leaſt a mile and a half in circumference.

At a ſmall diſtance from the front of the palace is the place where the king holds public audience, and tranſacts all buſineſs relative to the ſtate. Adjoining to the entrance of the palace, on the eaſt ſide, is the banqueting-houſe, where the king every day retires to drink palm-wine. It is a noble building, and the place where all difficult caſes are adjuſted in the preſence of the king. The front of it is open for the benefit of the air, and about twenty feet backwards is a ſcreen or partition quite acroſs, to prevent the palm-wine being ſeen by the people. The room is hung with rich tapeſtry; and in the center of it, juſt without the ſcreen, is the throne, which is ſupported by ſmall pillars made of palmetto-branches curiouſly wrought in imitation of baſket-work. The throne is raiſed from the ground about a foot and a half, and on each ſide of it are two large wicker-baſkets that contain ſeveral weapons kept there by the king for the ſecurity of his perſon. The king's gardens are on the eaſt ſide behind the palace; and thoſe belonging to the queen are on the weſt ſide.

There are two mokiſſoes at a ſmall diſtance from the city, one of which is called mokiſſo a Loango, and is highly eſteemed. It is kept in a ſmall hut, and reſembles a man in a ſitting poſture. The natives perform their ſervices to this idol by dancing round it with rattles in their hands, and throwing themſelves into the moſt ridiculous poſtures and geſticulations.

A place called the Broad-way, is ſituated from the eaſt end of the city, whither ſuch as have been found guilty of any crime by the imbonda drink, are dragged and executed. The ceremony reſpecting the trial of innocence by means of this drink, we ſhall take notice of in treating of their puniſhments.

The monarch of this country hath a great number of wives, all of whom, except the principal one, are obliged to be very obſequious to him. The latter, however, who is diſtinguiſhed by the title of makenda, has not only the ſuperiority over the reſt, but indeed over the king her huſband; for he is obliged to conſult her on all affairs of importance, nor can he act contrary to her will. Such too is her power, that ſhe has the liberty of chuſing any other male companion her inclinations may ſuggeſt; and whatever children ſhe has by ſuch connection are reputed of the royal race. But though the king is thus ſubject to his principl wife, he otherwiſe preſerves a kingly dignity.

This prince is very powerful; and ſo circumſtanced, as to be able to bring into the field a conſiderable army; for all his ſubjects are obliged to equip themſelves with arms, and immediately attend at his command. His dreſs conſiſts of a garment made of cloth or ſtuff, and both he and his nobles wear, on their left arm, the ſkin of a wild cat ſewed together with one end ſtuffed. He makes two meals a day, the firſt of which is about ten o'clock in the morning. His proviſions are brought to his apartment in covered baſkets; and with the people that bring them there is a man with a large bell in his hand, which he rings, to give notice, that the king's diſhes are arrived.

The king on hearing the ſound of the bell, leaves his company; and as ſoon as he enters the apartment, the ſervitors retire and leave him, when he ſhuts the door, and continues by himſelf during the whole time he is at dinner; for (as is the caſe in other parts of Africa) ſhould any perſon happen to ſee him either eat or drink, he would immediately be put to death. And ſo punctually is this law obſerved, that even animals are ſubject to the ſame fate, which happened to a fine dog preſented to the king by the Portugueſe. This creature, not being well fed by thoſe who had the care of him, ſmelling the victuals one day when the king went to dinner, followed the ſcent, and his majeſty not faſtening the door properly, the dog, while he was at dinner, thruſt it open with his feet, and entered the room, when the king immediately quitted the apartment, and ordered the creature to be killed, as a fit puniſhment for his bold intruſion.

After dinner, the king goes every day in ſtate, accompanied by his nobles, and a great croud of people, to the banqueting-houſe, in order to refreſh himſelf, by drinking palm-wine. As ſoon as he arrives there, he ſeats himſelf on the throne, and on each ſide of him is a cup bearer. He on the right-hand reaches him the cup when he is inclined to drink, but at the ſame time turns his head; out of which is given to the company by him on the left, who ſtrikes two iron rods, pointed at the ends, againſt one another. At this ſignal the people turn their backs to the king, and bend their faces to the ground, in which poſture they remain ſo long as the irons continue ringing; after which they riſe, turn their faces to the king, and with him health, by clapping their hands.

His majeſty goes a ſecond time after ſun-ſet, to the apartment adapted for eating, where his proviſions are prepared for him as before, after which, he again viſits the banqueting-houſe, where he remains till nine or ten o'clock, when he returns and retires ſoon after to his chamber.

It is very uncommon for the king to appear abroad, except on the above occaſions; or when an ambaſſador arrives, or ſome extraordinary accident hath happened, ſuch as when a leopard is taken in the country, or elſe lodged about the city ready for the chaſe (for he is very fond of that diverſion); or, laſtly, when his land is to be tilled, and his chief nobility bring him tribute. The place appointed for his appearance on theſe occaſions is a large plain in the center of the city, oppoſite to the palace. The ſtool, or chair, on which he ſits, is raiſed about a foot from the ground, and adorned with black and white wickers, very artificially woven. Behind his back, on a pole, hangs a ſhield, covered with European ſtuffs of various colours. Near him are placed ſix or eight fans fixed at the ends of long ſticks run through the middle of them, which being moved with great force, produce very refreſhing breezes. Before the king, a great cloth is ſpread on the ground, made of leaves very curiouſly woven; and on this no perſon dare tread, except the king and his children. The nobility ſit in ranks, ſome on the bare ground, and others on cloth made of the ſame ſtuff with the king's, each of whom holds a buffalo's tail in his hand, which he keeps continually waving to and fro. All the great officers ſtand behind the king, and the nobles are incloſed by the multitude. As ſoon as the king is ſeated, the muſic immediately plays, and continues during the whole time his majeſty is on the throne.

The muſical inſtruments are of three ſorts, the firſt of which is made of ivory, and is like a hunting horn. The ſecond ſort are drums made of a hollow piece of timber, covered at one end with leather, or the ſkins of wild beaſts; and the laſt ſort ſomewhat reſemble tabors, having little bells faſtened all round. When the muſic has been ſome time playing, the moſt diſtinguiſhed of the nobility riſe from their ſeats, and compliment the king by leaping backwards and forwards before him two or three times; after which they clap their hands together, and then, in token of ſubjection, proſtrate themſelves on the ground, rolling their bodies ſeveral times over.

Three or four criers ſtand on one ſide of the king's ſeat, with iron inſtruments in their hands, upon which they ſtrike with a ſtick, to give notice when the king demands ſilence. Theſe criers are likewiſe officers of the city, and not only proclaim the king's orders, but alſo, like the bellmen in England, go about the ſtreets, ſtriking their iron inſtruments, to give notice to the people when any thing is loſt or found.

The king likewiſe appears in a public manner at the commencement of the ſeed-time, which is always on the firſt of January. He takes his ſeat at three o'clock, when the women who till the ground appear before him with their inſtruments of huſbandry; and the men walk backwards and forwards, armed in their military habits. The king generally ſtays about an hour, when he returns to his palace amidſt the acclamations of the people, who devote themſelves to feſtivity for the remainder of the day.

Hunting the wild beaſts is a favourite diverſion here; therefore when any of the inhabitants have diſcovered a leopard in the woods adjoining to the capital, intimation of it is given to the king, who repairs to his public place of appearance; and a trumpet is ſounded, to give notice to the people to attend his majeſty at the ſport. If the

place where the leopard lies be too far for the king to walk, he is carried on men's ſhoulders on a kind of chair made of wicker, and richly ornamented. As ſoon as they arrive at the ſpot where the leopard is ſecreted, the people ſurround it, armed with bows and arrows, lances and darts, leaving only a ſmall place open, that the king may have a convenient opportunity of ſeeing the ſport. They ſpread nets before this opening, ſo that if the leopard ſhould happen to take his courſe that way, he may be taken alive. When every thing is ready, the beaſt is rouſed by the people making an univerſal ſhouting, together with the blowing of horns, and beating of drums. As ſoon as the creature finds himſelf ſurrounded, he endeavours to make his eſcape, but is prevented by the vollies of darts and arrows that are diſcharged at him by the multitude, who follow him cloſe; and if he happens not to take to the net, overpower and diſpatch him. When the leopard is killed, the king retires to his palace, before which the hunters bring the carcaſe, and triumph over it by dancing, ſinging, and exhibiting various kinds of antic poſtures and diverſions.

The higheſt reſpect is not only ſhewn by the common people of the city of Loango, to the king, but alſo the greateſt ſubmiſſion to the nobility; for when they happen to meet any one of them in the ſtreets, they immediately fall on their knees, and turn their heads the other way, intimating that they are not worthy to look at him; and in this poſture they continue till the nobleman has paſſed.

The laws in this country are not complex, but ſome of the puniſhments are as ſevere as thoſe of the neighbouring kingdoms. Theft is never puniſhed with death, unleſs it be committed on the king: in common caſes, when a thief is detected, either he or his friends muſt reſtore the goods ſtolen, or atone for the want of them by an adequate compenſation; beſides which, the thief is tied to a poſt in the middle of the ſtreet, where he continues an hour as an object of ridicule and contempt to the ſpectators. If he is unable either to reſtore the goods, or pay the value of them, his relations muſt work for the party robbed till he thinks himſelf ſufficiently ſatisfied.

They puniſh adultery only by a fine, which is levied in proportion to the circumſtances of the offender; except it be committed on any of the king's wives, when the man is buried alive, and the woman burnt.

When any perſon is ſuſpected of a crime, and it cannot be clearly proved againſt him, he is ſworn by drinking a certain quantity of a liquor called imbonda. It is made from the root of a ſmall tree or ſhrub ſo called, which is about ſix inches long, and much reſembles a carrot. The root is ſcraped into water, which is boiled in gourds. The liquor is as bitter as gall; and ſo ſtrong, that one root would ſerve to try an hundred people. When the perſon drinks the liquor, if it be too much infuſed, it occaſions a ſuppreſſion of urine, and ſtrikes up into the head, inebriating to ſuch a degree, that he falls down as if dead, in which caſe he is pronounced guilty, and is accordingly dragged to the Broad way and executed; but if he can ſtand upright, and make water, he is deemed innocent. The determination of this matter reſts intirely in the imbonda giver, or perſon appointed to adminiſter the potion, for however innocent he may be that is ſuſpected, yet if the imbonda man has any diſlike to him, or his accuſer is a perſon of importance, he is ſure to give him the liquor ſo ſtrongly infuſed, that its operation proves fatal, though he does it ſo artfully, that it cannot be diſcovered. This ceremony is performed at Loango almoſt every week, ſo that many people are deſtroyed by it in the courſe of a year.

On the death of the king, the ſucceſſion of the crown does not devolve to his children, but to his eldeſt brother; but, for want of ſuch kindred, it falls to his ſiſter's children. Thoſe who have pretenſions to the crown are five in number, and reſide in towns or villages at ſome diſtance from the court; they preſerve their titles agreeable to the names of the reſpective villages in which they live.

The next heir to the crown is called Mani-kay, who reſides at a large town of that name about fifty miles from Loango. The ſecond is called Many-Bokke, and lives at a town called Bokke, ſituated about fourteen miles up the country. The third, called Mani-Salloga, lives at Salloga, a large town ſituated about thirty-five miles north of Loango. Mani-Kat, the fourth, lives at the village of Kat, about fifty miles from Loango. And Many-Inyami, the fifth and laſt, reſides at the hamlet of Inyami, which is ſituated on the borders of the kingdom. When, on the king's death, Mani-Kay ſucceeds, Mani-Bokke removes to the reſidence of Many-Kay, and the reſt all follow, a proper perſon being appointed to ſupply the place of the laſt. And then they ſucceed to each others villages, and afterwards to the crown by a regular rotation.

Mani-Kay, after the deceaſe of the king, immediately enters upon the government; but he does not go to court till the funeral of the late king is over, the ceremonies attending which are theſe: they firſt make two vaults under-ground, adjoining to each other, in one of which they lay the corpſe, richly dreſſed, on a ſtool, and by it all manner of houſhold ſtuff, as pots, kettles, pans, cloths, and garments. They then place round it little images made of wood and red earth, repreſenting the houſhold ſervants of the deceaſed. After this, they leave the royal corpſe, and go to the other vault, where they place the bodies of ſeveral ſlaves, who have been ſacrificed to ſerve the king in the other world, and to make atteſtation in what manner he behaved during his life. The two vaults are then cloſed; and in order to preſerve it from the inclemency of the weather, a covering is erected over each of them.

The revenues of the king of Loango principally ariſe from elephants teeth, copper, and ſlaves. The greateſt part of the copper is brought by ſtealth from an inland country, becauſe the inhabitants of it and the king of Loango are always at variance.

Beſides the branches of trade mentioned above in captain Uring's account, the natives alſo deal in tin, lead, copper, iron, red-wood, and ſeveral ſorts of cloths, the manufacture of the country; in exchange for which, they purchace of the Europeans, ſalt, Sileſia ticking, beads, looking-glaſſes, cutlaſſes, and other commodities.

CHAP. V.

THE NEW HISTORY AND DESCRIPTION OF

CAFFRARIA.

SECT. I.

Containing a General Account of CAFFRARIA, and the Countries thereunto belonging; a Deſcription of the Interior Country of the CAFFRES; that part of CAFFRARIA called the Country of the HOTTENTOTS; and of the Kingdom of MATAMAN or CLIMBEDE.

CAFFRARIA, or Caffreria, is excellently well ſituated for navigation and commerce, both which advantages are almoſt intirely neglected. The country is fertile, but wants the benefit of civilization. The inhabitants are naturally ſagacious, but their faculties are abſorbed in indolence; thus both the lands and minds of the people require improvement; but leſt cultivation in the firſt ſhould introduce luxury, and information in the laſt produce diſobedience, neither of theſe are encouraged by the politic Dutch, who poſſeſs the greateſt part of the coaſt.

This country extends about ſeven hundred and eighty miles from north to ſouth; that is, from cape Negro to

the cape of Good Hope; from the laſt mentioned cape turning north-eaſt, to the mouth of the river Spiritu Santo, it runs about ſix hundred and ſixty miles; and from thence proceeding up the country almoſt to the equinoctial line, it is about one thouſand ſeven hundred and forty miles farther. In ſome places it is nine hundred, and in others not above ſix hundred broad. Cape Negro is in fifteen degrees thirty minutes ſouth latitude, and the river Del Spiritu Santo in twenty-five degrees ſouth latitude. Caffraria is ſo named from the Caffres, its inhabitants; though ſome authors affirm, that this name is merely an opprobrious term given by the Arabs to all who have but confuſed notions of the Deity, and which the Portugueſe have by miſtake applied to theſe people.

Geographers uſually divide this extenſive region into five parts; namely, 1. The kingdom of Mataman, or Climbede; 2. The inland countries between Mataman and Monomotapa; the country of the Hottentots; 4. Terra de Natal; and 5. Terra dos Fumos. But it is neceſſary firſt to take notice of the diſcovery of this country, before we enter upon a local deſcription of it.

The cape of Good Hope, which is the moſt ſouthern part of Africa, till ſo late as the year 1493, when it was firſt diſcovered by Bartholomew Diaz, the admiral of a Portugueſe fleet, who, on account of the boiſterous weather he met with when near it, diſtinguiſhed it by the name of Cabo dos totos Tormentos, or the Cape of all Plagues; ſince which, no place in the univerſe has been more ſpoken of, though little of the country, except the coaſt, has been penetrated or known. The reaſon why it has ſo much attracted the attention of mariners of all nations, is, their being under a neceſſity of frequently calling there for water or other refreſhments, and alſo of doubling it, in their voyages to the Eaſt Indies. But John, king of Portugal, not liking the name which his admiral had beſtowed on this large promontory, changed it to that of the cape of Good Hope, which appellation it hath ever ſince retained.

Neither Diaz, or his ſucceſſor Vaſco de Gama, though they ſaw the cape, thought proper to land at it. But in 1498 the Portugueſe admiral, Rio del Infante, was the firſt who ventured on ſhore; and from his report, Emanuel, king of Portugal, on account of the eligibility of the ſituation, determined to eſtabliſh a colony there: but the Portugueſe, who are naturally puſillanimous, having taken it into their heads that the inhabitants of the cape were cannibals, were too much afraid of being devoured, to obey their ſovereign in making the ſettlement he intended.

Some time after, theſe timid people landed here, under the conduct of a viceroy of Braſil, named Francis d'Almeyda, where the Portugueſe were ſhamefully defeated by the ſcarce armed and unwarlike natives; the viceroy and ſeventy-five of his men being killed in the engagement, and the reſt obliged to retire with precipitation to their ſhips. The Portugueſe were much chagrined at this diſaſter, and greatly abaſhed at the idea of ſuch martial ſuperiority in a people by them deemed at once ſavage and deſpicable. They determined to be revenged; but not having magnanimity enough to ſhew a becoming reſentment, they contrived a moſt inhuman and cowardly expedient.

Touching at the cape about two years after, they landed with all the appearance of amity, and brought on ſhore with them a large cannon loaded with grape ſhot. Knowing the fondneſs of the unſuſpecting natives for braſs, they pretended to make a preſent of this engine of deſtruction, which was of that metal. The poor people, overjoyed by the gift of ſo great a treaſure, began to drag it away by the help of two long ropes which had been previouſly faſtened to the muzzle. Great numbers laid hold of the ropes, and many others went before by way of triumph, when the treacherous Portugueſe firing off the cannon, a prodigious ſlaughter enſued, as moſt of the people ſtood within the range of the ſhot. Many were killed, ſeveral wounded; and the few who eſcaped, abandoned with the moſt precipitate terror the fatal preſent.

The Dutch, about the year 1600, began to touch at the cape, in their way to and from the Eaſt Indies; and becoming annually more ſenſible of the importance of the place, they effected a ſettlement here in 1650, which ſince that time hath riſen to great power and opulence, and been of eſſential ſervice to that nation in general.

With reſpect to the inland parts of the country of the Caffres, the Europeans are but little acquainted with them; however, it is agreed that the country called Mozumbo Acalongo, is bounded on the eaſt, by the empire of Monomotapa; on the weſt, by Mataman, or Climbede; on the north, by the province of Ohila; and, on the ſouth, by the country of the Hottentots.

Ohila and Abutea have been little known, and leſs deſcribed by the European travellers; however, the latter is ſaid to abound in gold mines.

The province of Toraca contains many iron mines, and in the midſt of them is a ſurprizing fabric, being a capacious ſquare caſtle, built of poliſhed free-ſtone; the ſtones are very large, and placed upon each other without any kind of cement. The walls are near nine feet thick, and contain ſeveral inſcriptions, which no perſon has yet been able to explain, or even gueſs to what language the characters belong. As the inhabitants are unacquainted with the founder of this extraordinary pile, they compliment the devil with the honour of being the architect. The neareſt ſtone building to this is a Portugueſe fort, which, however is two hundred leagues from it.

The town of Fatuca, near this place, is rich in gold and precious ſtones.

Boro and Quitici, abound in gold mines; and Chicovee contains many ſilver mines; this laſt place lies more to the north-eaſt.

That part of Caffraria, called the country of the Hottentots extends towards the north, to the tropic of Cancer, and is bounded on all the other parts by the ſouthern ocean. It is divided into twenty parts, or provinces; which, being independent of each other, are termed nations. We ſhall deſcribe theſe Hottentot ſtates in the following order.

The firſt is the country of the Heykams. This territory abounds in cattle, though there is no fodder but flags and reeds, nor any water but what is brackiſh. The few vallies are fertile, but the mountains are many and barren. Game and wild beaſts are numerous, but freſh water is a ſcarce article.

The next is the diſtrict of the Chantours, which contains the fineſt and the moſt lofty trees of any in the Hottentots country: the land in general is flat, the ſoil rich, and the water excellent. Here are abundance of cattle, great quantities of game, a variety of wild beaſts, and plenty of ſea and river fiſh.

The third is the land of the Houteniquas, which contains many fine ſhady woods, and fair, fertile meadows: theſe laſt are beautifully enamelled with a great variety of fragrant flowers; and the former are ſtocked with abundance of medicinal herbs.

The fourth country is that of the Gauriques, or Gauros: it is a ſmall, but plentiful territory; and abounds more in wild beaſts than any other place near the borders of the coaſt.

The fifth is the country of the Damaquas, who inhabit a diſtrict which is flat and fertile. It abounds particularly in cattle, game, hemp, and water-melons. Wood is very ſcarce, and ſalt-pits are at once numerous and uſeleſs, for the Hottentots never eat any ſalt, and the pits are too far from the coaſt to be of any ſervice to the Europeans. Thoſe who travel through this territory are much obſtructed in the way by the ſerpentine river Palamites, which meanders through the whole country: and as the people have not the leaſt idea of building a bridge, they paſs it upon floats, or in canoes.

The land of Dunquas, being the ſixth country, is the leaſt even, and moſt fertile place in this part of Africa. Here is a profuſion of cattle, game, fiſh, herbs, and flowers. It is watered by ſeveral fine ſtreams, which diſembogue themſelves into the river Palamites.

The ſeventh is the country of the Sonquas, who are few in number, and inhabit a very barren rocky country; but their poverty renders them more induſtrious than the reſt of the Hottentots, and their natural wants make them excellent huſbandmen. They are active and intrepid; and when they find it impoſſible to ſubſiſt in their own country, they let themſelves out to hire as ſoldiers, to fight the battles of ſome of their more lazy and leſs warlike neighbours: ſo that they may not improperly be termed the ſwiſs of the cape. Cattle is ſo ſcarce among them, that they never kill any but upon certain ſolemn occaſions: their food being either the game they provide themſelves with in hunting, or ſuch roots, plants, and herbs as their poor country furniſhes. Many employ themſelves in ſearching hollow trees for honey, which they barter with the Dutch for brandy, tobacco, and hardware. Though unimproved by art; they are the philoſophers of nature: deeming this life a ſhadow, they never ſhun any danger, as they imagine it may haſten and facilitate their journey to a ſtate which they ardently expect in a better world.

The eighth is the country of the Heſſaquas, or Gaſſaquas, which is one of the richeſt and moſt poliſhed of all the Hottentot nations; that is, they have the greateſt quan-

tities of cattle, the only criterion of riches, and are the moſt luxurious in their living, the ſole mark of refinement which is obſervable in this country. But their wealth and luxury, on the other hand, are their greateſt misfortunes; for the former by raiſing the envy of their neighbours, encourages them to commit depredations in their territories; and the latter by having enervated, has rendered them incapable of defending themſelves. Hence they are obliged frequently to ſolicit the aſſiſtance of the Dutch, and to pay part of their wealth in ſupport of their effeminacy. Their kraals, or villages, are larger, and better built; their bakkeleys, or oxen for carriage, ſtronger and handſomer, and their country better inhabited than any other about the cape. They have plenty of game, and indeed every thing that is neceſſary for convenience or pleaſure in that tropical ſituation. Some of theſe people article themſelves to the Dutch for a certain number of years, and act with the utmoſt integrity during the ſtipulated ſpace.

The ninth country is inhabited by the Koopmans, who poſſeſs a large and fertile territory, well ſupplied with wood and water, and which contains many European ſettlements.

The tenth is inhabited by the Chainouquas, whoſe territories are ſmall, but fertile: the people conſiſt only of about four hundred perſons: they are hoſpitable to ſtrangers, and very rich in cattle.

The eleventh is the country of the Cabonas, ſituated near the tropic of Capricorn, and are reported to be anthropophagi, or men-eaters. But as theſe people are very little known, it is probable that the ſuppoſition is not founded in truth, and that what is ſaid to their diſadvantage may be owing to the total ignorance of their real characters.

The twelfth country is that of the Hancumquas, which adjoins to the former, lies about the twenty-ſixth degree of ſouth latitude, and is likewiſe very little known: as we mean not, therefore, to adopt any circumſtances but ſuch as are well authenticated, we deem it more eligible to omit any farther particulars of this place, than to inſert them from the mere conjectures of others.

The thirteenth is that of the Henſaquas, who differ from the other Hottentots, in applying themſelves to agriculture, as well as the breeding of cattle. They cultivate a ſingular root called dakka, the juice of which is ſharp and ſpirituous. The ſubſtantial part ſerves them for food: and the fluid is an intoxicating liquor, of which they are very fond. Theſe people catch lions by traps, and have the peculiar art of taming them, ſo as to render them ſociable and domeſtic. Some of the ſtrongeſt and fierceſt they breed for the purpoſes of war, and ſo perfectly well diſcipline them, that they are obedient to command, and attack furiouſly when order'd by their maſters: ſo that the Henſaquas are exceeding formidable to their neighbours by the aſſiſtance of thoſe tremendous light troops.

The fourteenth country is inhabited by the Attaquas, who are poor, having but few cattle, which is owing to the barrenneſs of the country, and the want of water. This poverty of ſoil, is, however, their grand ſecurity againſt invaſion; as few care to riſque their lives with a certain proſpect of being loſers, or to ſteal that which is not worth the having.

The country of the Chirigriquas, being the fifteenth, borders on the bay of St. Helen's; the people are ſtrong, active, and bold. The territory is watered by an excellent ſtream called the Elephants river, on account of the great number of elephants which frequent its banks. This diſtrict abounds with mountains which are flat at the top, and the ſummits of ſome of them have all the verdure of the fineſt meadows. The vallies are admirably enamelled with the moſt beautiful flowers; but it is dangerous to acquire their fragrance, by reaſon of the prodigious number of ſnakes with which they abound: that called ceraſtus is particularly venomous. Theſe people are very numerous, and are celebrated for being the moſt dexterous of any of the Hottentots in throwing the aſſagaye or half-pike, which they do with the moſt critical exactneſs: they always keep the blade of it bright and clean, and, when uſed in war, it is dipt in poiſon. This weapon is made of a taper ſtick, about four feet long, armed at one end with an iron plate, ſharp at the edge, and tapering to a point.

The ſixteenth of theſe countries is inhabited by the Namaquas, who are divided into two nations; the greater Namaquas inhabit the coaſt, and the leſſer Namaquas extend more to the eaſtward. Though the government of theſe two nations differ, the characters of the people are much the ſame; they are more poliſhed, and poſſeſs a greater degree of reputation, than any other of the Hottentots. Their ſtrength, valour, fidelity, and diſcretion, are much admired even by the Europeans. It is computed that the two nations can, together, bring twenty thouſand men into the field. They always deliberate before they ſpeak; uſe very few words, and give a laconic but pertinent anſwer to all queſtions. The women are the fondeſt of finery, and the moſt artful in their behaviour, of any of the natives about the cape. The country through which the Elephants river winds, is mountainous, ſtony, and barren. Wild beaſts are numerous, though there are but few woods. A beautiful deer is found in this part: it is ſmall, exceeding ſwift, and affords delicious veniſon; it is of a handſome make, and the hide is admirably marked with white and yellow ſpots. Theſe animals are never known to go ſingly; but herds of ſeveral hundreds of them are frequently ſeen together.

The ſeventeenth country lies to the north of Saldana bay, and is peopled by the Odiquas. They are continually at war with the Chirigriquas; therefore they are in perpetual alliance with the Saniquas, for their mutual defence againſt the common enemy.

Adjoining to the laſt-mentioned nation is that of the Saſſiquas: the country is mountainous, but at the ſame time covered with verdure, and the vallies are finely enamelled with flowers. It was once a very populous country, but is now thinly inhabited; for the great ſcarcity of water has induced many of the natives to quit it, and others have been driven away by the Dutch freebooters.

The country inhabited by the Cochaquas, which is the nineteenth, is particularly fertile in paſturage, on which account a great extent of it is occupied by the Dutch farmers, who have the care of furniſhing the Dutch Eaſt India ſhips with proviſions, which they are enabled to do, by means of the abundance of cattle, and excellent ſalt-pits found in the territory. A Dutch guard is placed in this country for the ſecurity of the ſalt-pits and cattle, and to ſend notice to Cape Town, when any ſhip comes within view of the coaſt. Theſe people, and indeed moſt of the other Hottentots, move from place to place in their reſpective diſtricts, for the benefit of freſh paſturage. When the graſs in any meadow is rank, they ſet fire to it; and the aſhes meliorate the ſoil, and improve the next crop. Hence the country is frequently ſeen in a blaze for the ſpace of ſeveral miles round; and if the flames, in their progreſs, enter into any other territory, it infallibly occaſions a war between the two nations. The Dutch at the cape burn the graſs for the ſame reaſon, but ſtop the progreſs of the flames with much more diſcretion. In order to impede the fury of the fire, they cut trenches round the place, which limits it to the ſpot deſigned to be manured; but the indolent Hottentots, rather than give themſelves ſo much trouble, would rather cauſe an univerſal conflagration, and alſo kindle the flames of war.

The twentieth and laſt of theſe countries is that of the Gorenghaiconas, or Gunjemans, who dwell promiſcuouſly with the Dutch, as they ſold their country to thoſe people, only reſerving to each family a ſmall portion of land juſt ſufficient for the maintenance of their cattle, and retaining the privilege of hunting in thoſe grounds which the Europeans poſſeſſed.

It is neceſſary to obſerve here, that the Hottentots and Caffres have been often confounded together by writers, but they are a different people, having a conſiderable diſſimilarity even in perſon and features, as the Caffres are totally black, and the Hottentots of a dark olive colour; but we ſhall give a more particular deſcription of them hereafter. And we muſt not omit to mention, that the above names of the ſeveral Hottentot nations were not given to theſe people by the Europeans, but are rendered agreeable to the ſound of thoſe appellations, by which they diſtinguiſh each other: nor is the term Hottentot a word of deriſion, as ſome ſuppoſe, but the name by which theſe people have called themſelves time immemorial.

The kingdom of Mataman, or Climbede, extends from ſixteen degrees thirty minutes ſouth latitude, to the river Bravaghul, in twenty-four degrees ſouth latitude, croſſing the tropic of Capricorn, and being in length four hundred and fifty miles from north to ſouth; and two hundred and ſixty miles broad from eaſt to weſt. The river Bravaghul bounds it on the eaſt and weſt; Benguela, on the north; and the Atlantic ocean, on the ſouth.

The firſt place worthy of obſervation in this kingdom, is cape Negro, or Black cape, which receives its appellation from its ſable appearance to mariners when at a conſiderable diſtance at ſea. At the extremity of the northern angle is a bay about ſix miles broad; and on the ſummit of

of the mountain is a pillar of alabaſter, with the arms of Portugal upon it. Gulfo Frio, and the cape of the ſame name, lie in eighteen degrees thirty-five minutes; and the bay of St. Ambroſe in twenty-one degrees ſouth latitude; and beneath the eighteenth degree of ſouthern latitude, lies cape Ruy-Piz, which extends about ten leagues north-weſt.

The climate is tolerably mild, conſidering the tropical ſituation of the country. The inland parts are fruitful, and there is a great variety of trees towards the north. The coaſt here is very ſandy. The Dutch judge of their approach to this coaſt by the flight of the birds called mews, as they never fly above twenty leagues from land. There is likewiſe another token by which ſailors know when they are near the ſhore, which is, by the floating of the weed called ſargoſſa upon the ſurface of the waters.

Climbede, is very little known; but, according to the few writers who have mentioned it, the government is deſpotic, and the whole country ſubject to one ſovereign, to whom a few petty lords, who ſtile themſelves princes, are ſubordinate, though a ſmall number of towns towards the ſea-coaſt conſtitute the whole of their dominions.

SECT. II.

Treating of the Poſſeſſions belonging to the DUTCH, with their Method of Government, at the Cape of GOOD HOPE.

THE Dutch did not enter into the ſcheme of ſettling a colony at the cape, till the year 1650, when M. Van Ricbeeck, a ſurgeon, in his return from India, obſerved the conveniency of the place for a ſettlement, and, laying before the Dutch Eaſt India company, a plan of its eligibility, the ſcheme was approved, and the propoſer appointed governor. This gentleman, ſailing with four ſhips to the cape, entered into a negotiation with the people, who, in conſideration of fifty thouſand guilders, or four thouſand three hundred and ſeventy-five pounds ſterling, agreed to yield up to the Dutch a conſiderable tract of country about the cape.

Van Ricbeeck, in order to ſecure his new purchaſe, immediately erected a ſtrong ſquare fort; and laid out a large garden, and planted it with a great variety of the productions of Europe, that he might render the place as commodious and agreeable as poſſible.

The Dutch company, having thus ſucceſsfully begun the ſettlement, propoſed, in order the more effectually to eſtabliſh it, that every man, who would ſettle three years at the cape, ſhould have an inheritance of ſixty acres of land, provided that during that ſpace he would ſo improve the eſtate, as to render it ſufficient to maintain himſelf, and contribute ſomething towards the maintenance of the garriſon; and at the expiration of the time, he might either keep poſſeſſion of it, or ſell it, and return home. Induced by theſe propoſals, many went to ſeek their fortunes at the Cape, and were furniſhed on credit with cattle, grain, plants, utenſils, &c. The planters, however, at length grew weary of their habitations, for want of conjugal ſociety; therefore the governors of the company, to prevent their leaving the place, provided them with wives from the orphan-houſes, and other charitable foundations. In proceſs of time they greatly increaſed, and ſpread themſelves farther up the country, and along the coaſt, till they occupied all the lands from Saldanna bay, round the ſouthern point of Africa, to Noſſel bay, on the eaſt; and afterwards purchaſed Terra de Natal, in order to extend their limits ſtill farther.

The Dutch poſſeſſions, then, may be conſidered under four different heads or colonies, viz. 1. Cape; 2. Stellenboſh; 3. Drakenſtein; and, 4. Waveren; and of theſe, after having premiſed a few particulars concerning the Dutch ſettlements at the cape, we ſhall ſeverally treat.

In this celebrated African ſettlement, there are eight eſtabliſhments for the public adminiſtration of affairs; namely, 1. A grand council: 2. A court or college of juſtice for capital matters; 3. An inferior court for the diſcuſſion of petty affairs; 4. A matrimonial court; 5. An orphan court; 6. An eccleſiaſtical council; 7. A common council; and 8. A board of militia.

The great council has the governor for its preſident, who has a double vote, and is aſſiſted by eight of the company's officers who reſide at the cape.

The members of the grand council, in conjunction with the three chief burgomaſters of the cape town, compoſe the ſecond court, or college of juſtice.

The court for the diſcuſſion of petty affairs, or the inferior court, conſiſts of a preſident, who muſt be a member of the great council, of three cape burghers, one of whom acts as vice-preſident; of the company's clerk, and three other of their immediate ſervants and attendants.

Different matters come under the cogniſance of the matrimonial court, which conſiſts of the ſame members as the foregoing.

Seven members compoſe the orphan court, viz. the vice-preſident of the great council, three of the company's ſervants, and three burghers of the cape.

Three paſtors of the three reformed churches here, ſix elders or churchwardens, and twelve overſeers of the poor, conſtitute the eccleſiaſtical council.

In every cape colony a court of common-council is eſtabliſhed; each of theſe is compoſed of burghers choſen out of the liſts prepared by the burgeſſes of each colony.

Here are two boards of militia; namely, the Cape Town board, which conſiſts of a member of the great council, and nine of the principal military officers of the cape colony; and the board for Stellenboſh and Drakenſtein colonies, in which the land-droſt of Stellenboſh colony preſides, and nine military officers of both colonies are appointed to aſſiſt him.

The power of theſe ſeveral courts is as follows: the firſt takes cogniſance of every thing which concerns commerce; inſtitutes and repeals laws; and likewiſe hath authority to declare war or make peace with the nations in the vicinity of the ſettlement. The ſecond tries all capital caſes in civil and criminal cauſes; but an appeal lies from this court to Batavia and Holland. The third is inſtituted for the determination of actions for ſmall debts, and for treſpaſſes; ſo that no action can be entered here which exceeds one hundred crowns. The fourth inſpects the validity of the marriages of the Europeans at the cape, or grants permiſſion for their celebration. The fifth takes care of orphans, and prevents thoſe who have fortunes from marrying before the age of twenty-five. The ſixth diſtributes money to, and takes care of, the poor. The ſeventh collects taxes, and puniſhes criminals, particularly ſlaves, within its own juriſdiction. The eighth cloaths the militia once a year, and ſends out horſemen in purſuit of ſlaves that have run away from their maſters.

The expences of the government are eſtimated at thirty thouſand pounds annually, out of which ſix hundred ſervants, and ſix hundred ſlaves are maintained, and the governor's income is valued at four hundred and fifty pounds a year. A tithe of the produce of all lands is paid towards ſuſtaining the government. The duties on brandy, wine, tobacco, and beer, are farmed at five thouſand two hundred and fifty pounds per annum; and the profits of other merchandizes amount to ſeventy-five per cent.

Great indulgence is ſhewn by the Dutch to thoſe who ſettle here, and the cape Europeans meet with much encouragement upon all occaſions; nor are they leſs ſolicitous to cultivate the friendſhip and conciliate the affections of the different Hottentot nations. They generally live in amity with them: and are ſo much reſpected as to be choſen arbiters in moſt of their quarrels. Deputies from the principal of theſe nations frequently wait on the Dutch governor with preſents of cattle, &c. when they are hoſpitably entertained, and, in return, are ſent back again with what is equally agreeable to themſelves.

It appears, however, that on the firſt ſettlement of the Dutch at the cape, all the Hottentot nations did not acquieſce in the ſale of the country to foreigners; for the Gunyemains diſſented from the agreement of the others, and, in 1659, diſputed the poſſeſſion of the purchaſed territories with the Dutch. They always made their attack in ſtormy and boiſterous weather, as thinking the fire-arms then of leſs uſe and efficacy; and upon theſe occaſions they would murder indiſcriminately all the Europeans they could meet, burn down their houſes, and drive away their cattle.

A Hottentot, named by the Dutch Doman, who had reſided for ſome time at Batavia, and afterwards lived at cape town, at length retired to his countrymen, perſuaded them that it was the intent of the Europeans to enſlave them, and ſtirred them up to this war. They accordingly took up arms, and, being headed by this Doman, and another chief called Garabinga, committed great depredations. But the Hottentots themſelves at length growing tired of the war, one hundred of them, belonging to one nation, came unarmed to the Dutch fort, with a preſent of thirteen head of excellent fine cattle, in order to ſue for peace. This, it may be imagined, was readily granted by the Dutch, who were heartily ſick of a conteſt, in which themſelves were ſuch great loſers, without reaping any advantages from it.

Not

Not long after this, a chief of another nation, with a conſiderable number of attendants, came in a friendly manner to the cape, when, according to the Dutch writers, the governor, for their entertainment, ordered a tub full of brandy, with a wooden diſh in it, to be placed among them: when the men began to be intoxicated, two or three hundred little pieces of tobacco were thrown amongſt them, in ſcrambling for which, they made a horrible noiſe. The noiſe and hurly-burly over, they began to leap and dance with ſeveral ſtrange geſtures; the women in the mean while clapping their hands, and continually ſinging, or rather roaring out, Ho, ho, ho, ho! Having ſlept till they were ſober, they were diſmiſſed with preſents of coral, copper, braſs, tobacco, and other things. But we ſhall now proceed to a more particular deſcription of each of the Dutch poſſeſſions at the cape.

Cape colony extends from the cape itſelf to Falſo Bay, and is ſeparated from Stellenboſh colony by a deſart of conſiderable extent, which reaches from the cape to a plantation called Saxenburgh.

This diſtrict contains in it the hills called the Tyger-hills, Cow-hill, Lion-hill, Table-hill, Wind-hill, Blue-hill, or Blue-mountain, the Norwegen-hills, and Buſh-hill.

The firſt of theſe, namely, the Tyger-hills, receive their name from the ſingular appearance they make, as they ſeem ſpotted and coloured exactly like the ſkin of the animal after whom they are named. Theſe hills are very fertile, are near twenty-five miles in circumference, and the fartheſt is about four miles diſtant from the cape: upon theſe eminences are twenty two eſtates, the poſſeſſions of which are not only a good manſion-houſe to each, but great quantities of cattle; ſome having above one thouſand ſheep, and three or four hundred head of large cattle.

Near twenty miles from the cape ſtands Cow-hill; but it is not ſo well ſettled as the former, the land and water being very indifferent.

The next, denominated Lion-hill, extends northward from Table-Valley to the ocean. Its name is deduced by ſome from the reſemblance it bears to a lion, when viewed from the ſea; but others affirm it was ſo called from having formerly abounded with lions. In a declivity between this and Table-hill are two centinels continually upon duty, a cottage being erected there for their reſidence. Their buſineſs is, daily to aſcend to the ſummit of this hill, which they do alternately, by means of rope ladders. The perſon at the top is able to deſcry a ſail at the diſtance of thirteen or fourteen leagues at ſea. As ſoon as he perceives a ſail, he gives a ſignal to his comrade below, who goes to the fortreſs to give notice to the governor, while the remaining centinel hoiſts the Dutch flag, and diſcharges a two-pounder. At the foot of this hill a little fort mounted with four guns, was erected by the governor, Simon Vander Stel, at the head of a ſmall creek, but ſcarce any remains of it are now to be ſeen.

Table-hill, is the higheſt of any, being near two thouſand feet in height. It is very fertile, being covered with vineyards, plantations, cattle, &c. The governor, among others, has a charming ſeat at this place; and two gardens, the one named Round-buſh-garden, and the other New-land, which are extremely pleaſant. The former receives its name from the fine lofty trees which agreeably ſhade it, and render it a good retreat in the ſummer months. The latter hath its appellation from having been more recently made than the other. The ſcene is romantically charming, from its woody appearance; ſo that a ſtranger might fancy that the genius of the woods had his reſidence here. This hill is finely watered, and is very profitable to the company. In the center there is a prodigious chaſm, where a number of trees grow in a very romantic manner; and the torrents ruſhing down here have a very romantic appearance during the rainy ſeaſon.

We are told by Kolben, that a ſhort time before his arrival at the cape, the people had obſerved, for near a month together, upon this hill, ſomething very ſhining and reſplendent, which they fancied reſembled a ſerpent with a crown like a carbuncle upon his head. It frightened many; and none, it ſeems, had the courage ſufficient to attempt the diſcovery of what it was. But this abſurd whim of imagining that a luminous vapour on the top of a mountain reſembles a ſerpent with a carbuncle on his head, is not peculiar to the conjurors at the cape, for an ingenious writer (Mr. Haynes) informs us of a recent inſtance of ſimilar folly; "On the cape of Samos, he ſays, a very bright light is ſeen, which much reſembles a ſtar. The captain's mate ſaid, he had ſeen this light ſeveral times in his voyages by this iſland, and it was ſaid to be a large ſerpent, with a diamond on his head. Some of the Turkiſh paſſengers ſaid it was univerſally believed to be ſo, and that the Grand Signor had cauſed ſeveral attempts to be made in order to diſcover what it was; but that every one of them proved ineffectual, on account of the ſteepneſs of the cape, till in the year 1763, ſome men contrived ſomething like rope-ladders, fixed iron hooks at the ends, and, by means of very long poles, hung them as high as they deſired, then climbed up them, and diſcovered a monſtrous ſerpent with young ones about it; but did not perceive any diamond on the head of it."

There was ſome years ago a ſilver mine diſcovered upon the top of this hill, between the two groves, known by the reſpective names of Hell and Paradiſe; but as the profit was not found adequate to the expences, the Dutch have left off working it.

Near the Lion-hill ſtands the Wind-hill, or Devil's-hill, as it is termed by the ſailors; it is ſeparated from the former by a chaſm or valley. It receives theſe appellations from the boiſterous winds which break from the white cloud that often hovers over it; for when theſe hurricanes ſweep down its ſides, and iſſue through the cleft or chaſm, they do great miſchief to corn, fruit, houſes, ſhipping, and whatever lies in their way. This extends to the ſea ſide, and, together with Table-hill and Lion-hill, encompaſſes a plain called Table-Valley, which is tolerably fertile, as well as the eminences.

About twenty-five miles from the cape ſtands Blue-hill, which is ſo called from the colour of its ſoil when ſeen at a diſtance. It abounds with wild beaſts, but has only a few plantations about it, not being well ſupplied with water.

Thoſe called the Norwegen-hills are very craggy, and many in number; but as they are at a conſiderable diſtance from the cape, four only are ſettled, and on theſe great quantities of cattle are reared: but the governor Vander Stel built a handſome country-houſe, a fiſh-houſe, a capacious ſtable, &c. on a fertile ſpot here.

The laſt of theſe called Buſh-hill, is ſo named from the trees and ſhrubs with which it abounds, and runs down to a place called Wood's bay, on the coaſt.

The Salt river, is the principal that waters this colony: this is ſo called, becauſe the waters, towards its mouth, at Table-bay, are brackiſh, but at its ſource in Table-hill it is ſweet, ſalubrious, and clear. Simon Vander Stel attempted to cut a canal of communication between this river and Falſo Bay; but on being convinced that it would neither anſwer the deſign, nor reimburſe the expence, he deſiſted.

The river Muſhel or Muſſel, is only a temporary one, which is formed in the rainy-ſeaſon, and falls from the mountains into the Salt river. Another ſtream called Kerſey's river (from a German of that name drowned therein) is always ſtopped up in the dry ſeaſon by the ſand-banks which are raiſed by the violent ſouth-eaſt wind; and this, by throwing the water out of its channel, forms a conſiderable lake till the wet ſeaſon cauſes it to flow again in a regular manner, by demoliſhing its ſand-banks.

Many parts of the country abound with ſmaller ſtreams, ſprings, fountains, caſcades, natural and artificial canals, ponds, and other reſervoirs.

Stellenboſh colony was originally a wild country, overrun with ſhrubs, brambles, and bruſh-wood, and called at firſt, by the Dutch, Wild Foreſt. At length, the governor, Simon Vander Stel, cleared and ſettled it, when it received from him the name of Stel's-buſh colony, which was afterwards corrupted to Stellenboſh. This colony which is ſeparated from Cape colony by a ſandy deſart, is divided into four diſtricts; namely, Stellenboſh, Hottentot Holland, Mottergate, and Bottelary.

The diſtrict of Stellenboſh is ſurrounded by hills, has a wholeſome air, fertile ſoil, and abounds with wood, paſturage, herbs, flowers, &c. The plantations are ſubdivided into vineyards, cornfields, orchards and gardens. The banks of Stellenboſh river, which falls from the mountains, are adorned with many commodious houſes and pleaſant eſtates, the ſtream itſelf yields various kinds of ſmall fiſh; near Table bay into which it diſcharges itſelf, many of a larger ſort are taken. A fine bridge is laid over the river, which was erected by a public ſpirited gentleman at his own expence, in the room of one of a very narrow and inconvenient conſtruction. Adiram Vander Stel erected another bridge over a different part of this river, which has been ſince ſuffered to run to decay, and is now in a ruinous ſtate.

The village of Stellenboſh was accidentally burnt to the

ground in 1710, but has ſince been rebuilt with redoubled luſtre, and is in a flouriſhing ſituation at preſent.

The ſecond of theſe diſtricts, called Hottentot Holland, is the moſt fertile part of Stellenboſh colony, on which account great quantities of cattle are bred here for the company's uſe; there are many houſes, vineyards, and gardens, belonging to the plantations, beſides the paſtures.

Though this country was formerly inhabited by ſcarce any thing but wild beaſts, it is now in general cultivated, and thoſe voracious animals have been either driven to more remote and ſequeſtered places, or totally deſtroyed.

In the hilly part of the country are three rivers, which diſembogue themſelves into Falzo bay, and water the diſtrict; the one, called Lawrence river, frequently overflowed, till a reſervoir was made to receive its rapid waters, by which the miſchief was prevented, and plenty of water retained againſt the dry ſeaſon: a ſtream from this baſon turns a corn mill, and a fort was formerly built upon the banks of the river, but the latter hath been ſuffered to run to decay. The other two rivers are leſs conſiderable; and have not as yet obtained any name; but it is very extraordinary, that though the waters themſelves are ſweet, yet freſh water fiſh will not live in either of the three.

Two roads lead from the cape to Hottentot Holland, the one over the ſandy downs in Tyger valley, and the other over a mountain which has not yet been diſtinguiſhed by any peculiar appellation: the latter is the moſt pleaſant, on account of the fine proſpect it affords, though the former is the moſt commodious.

Several circumjacent mountains, namely, the Hottentot Holland mountains, the Norwegen mountains, the Stone hills, &c. from Falzo bay, which is about thirty miles in circumference, and has in the center a large rock riſing conſiderably above the water, upon which a great number of ſea-birds breed, and have their habitations. The bay abounds with fiſh, and had once an eſtabliſhed fiſhery here, which the company, for cogent reaſons, thought proper afterwards to drop. Stellenboſh and Hottentot Holland rivers empty themſelves into this bay; and the rock which terminates it to the eaſt, from the reſemblance it bears to a lip hanging over a chin, is called Hang-lip rock.

Near the end of the year 1710, a dreadful hurricane, which blew from the ſouth-eaſt, put the waters of this bay into a terrible commotion, and occaſioned a flood which ſpread far into the country, where having done incredible damage, on its return to the bay great numbers of fiſh were left upon the ſhore.

On one ſide of the bay is Sea-cow valley, which received its denomination from the number of ſea-cows that formerly frequented it; ſo many, however, were continually killed here, that the reſt grew ſhy of the place, and have found out much more ſecure retreats. In one part of this valley is a lake of about three miles in circuit, the waters of which, in their natural ſtate, are ſweet; but at certain times the waves of the bay overflow the valley, and, mixing with the waters of the lake, impregnate them with ſalt, beſides leaving a quantity of fiſh behind; theſe, on the return of the ſea, live while the ſaltneſs continues, but as ſoon as the lake water recovers its natural ſweetneſs, they die for want of ſaline nouriſhment. A great number of wild ducks, with various birds, breed among the flags of this lake, which is prodigious reedy.

The diſtrict of Mottergate, lies to the north of Hottentot Holland, and was ſo called on account of the mellowneſs of the ſoil, occaſioned by the frequent floods which intirely overflow it, and render it muddy; for the word "motter" implies muddy. The waters, however, at the ſame time that they make the roads bad, give an uncommon degree of fertility to the ſoil; ſo that this diſtrict is not inferior to any of the others with reſpect to houſes, inhabitants, produce, &c. The advantages of theſe inundations are many; and the few inconveniences might be eaſily remedied, or at leaſt palliated, by the erecting of bridges, and cutting dykes; which improvements we have reaſon to believe will take place, as neceſſity muſt point out their utility, and the inhabitants have both timber and induſtry.

The diſtrict of Bottelary, which is the moſt northern part of the colony, receives its name from the quantity of hay made in it, which exceeds all that is made at the cape beſides. On an elevated ground, called Joſſen-hill, are ſeveral plantations, conſiſting of vineyards, orchards, paſtures, farms, cattle, and nurſeries. Fuel and water are very ſcarce here; of the latter they have little but what the rain affords them, and this the hot weather turns brackiſh in the dykes where it is preſerved. To remedy the inconveniences ariſing from the want of wood, the company have planted ſeveral acres of this diſtrict with trees, and enacted a law, that every perſon ſhall be publicly and ſeverely whipped by the common hangman, who ſhall preſume to cut a ſingle twig.

Drakenſtein colony was ſettled in 1675, principally with French refugees, and under the direction of the governor, Simon Vander Stel, who gave it its preſent name, in compliment to his great friend and patron the baron Van Rheeden, lord of Drakenſtein, in Guelderland, in Holland.

This colony is very large, extending northward to Saldanna bay, ſouthward to the Turnagain mountains, eaſtward to the Drakenſtein mountains, and weſtward to Horſe mountain. The Drakenſtein mountains are high, ſteep, and ragged; hence travelling over them is tedious, fatiguing, and dangerous, on which account they are called the Vexatious mountains by ſome.

The only public buildings in this very extenſive country are a church and a water-mill: there is not a ſingle village, though it contains ſeveral ſcattered farms in the ſeveral ſettlements.

The Mountain river is the principal one: it is ſo named from having its ſource in the mountains. There are many good plantations on both ſides of this river, but it has no bridge over, to facilitate its communication. The waters of it empty themſelves into the bay of St. Helena, after meandering through ſeveral diſtricts.

The air is ſerene, conſidering the ſituation, the water remarkably ſalubrious; and the ſoil, though mountainous, is fertile.

From Turnagain mountain to the church, the road is deep, narrow, and dangerous, being full of precipices, and infeſted by wild beaſts; ſo that many have leaped down the former to avoid the latter, and periſhed by one death in ſhunning another. Near this road a ſilver mine has been diſcovered, but no permiſſion hath been yet given to work it; and a noble manſion, ſuppoſed to be one of the fineſt ſeats in Africa, hath been erected here.

Here is a noble eſtate called Simon's valley, conſiſting of a ſtately dwelling-houſe, commodious wine-houſe, mill, gardens, orchards, vineyards, corn-fields, &c. And near this place is a mountain called, from its height, the Babylonian tower; and there are many good plantations on it.

The church of Drakenſtein is one of the meaneſt buildings imaginable; the walls are exceeding low, and the roof is only made of reeds; nor are the decorations within ſuperior to the appearance without. Near this plain fabric is a market for the ſale of groceries, ſmall wares, &c. In the vicinity is the Pearl mountain, ſo called from the vulgar notion of its ſummit reſembling a pearl; it produces excellent mill-ſtones. The mountain named Riebeeck's-caſtle is high, ſteep, and deficient in water; once barracks were built, and troops poſted here, as an advanced check upon the Hottentots; but recent treaties, and the amicable behaviour of thoſe people, have rendered ſuch precautions unneceſſary, the former have been ſuffered to run to decay, and the latter withdrawn.

A diſtrict called Twenty-four Rivers, is ſituated at about a day's journey north of Riebeeck's-caſtle: it received its name from the variety of ſtreams which water it, and render the paſturage excellent. The land is not entailed, but granted by licence, yet it is well inhabited, fertile, and abounds with cattle; the people here grind their corn in little hand-mills, as they are not accommodated with either wind or water-mills.

The Honey mountains are at the diſtance of a day's journey from Twenty-four Rivers: they derive their name from the great quantities of wax and honey found in the clefts, which the Hottentots obtain with imminent danger of their lives, and ſell to the Europeans. The white people here are greatly infeſted with the Hottentot frailty, idleneſs: they ſeldom cultivate any land, depending chiefly on their cattle; and, what is ſingular, inſtead of eating bread with meat, they eat meat with meat, that is, a piece of dried veniſon with a piece of freſh mutton, or beef. Their drink is water, milk, or honey-beer; which are ſo ſalubrious, that they are ſeldom viſited by diſeaſes. About a day's journey from hence a few cattle feeders inhabit ſome high hills called the Piquet mountains, from the firſt ſettlers having been immoderately given to gaming and, in particular, to playing at piquet. The greateſt harmony ſubſiſts between theſe people and the Hottentots, who intermix with each other.

Waveren colony was ſettled in 1701, by the governor, William Vander Stel: it was named after the illuſtrious Waveren family to which the governor claimed relationſhip: it is the moſt eaſtward colony from the cape. Being the youngeſt ſettlement, the bounds are uncertain: the mountains, which ſurround the greateſt part, are not named; the lands are only licenſed, the habitations are but huts, and the people in general but ſervants, as they have no cattle of their own, but take care of the cattle of perſons belonging to the colonies adjacent.

A high ſteep mountain, called the Red-ſand mountain, is ſituated between this colony and the cape, it was ſo denominated from the colour of the ſoil: there is ſuch difficulty in travelling over it, that the waggons are taken to pieces on one ſide, packed up, and carried on the backs of the teams, and put together on the other ſide: there is a fertile place called Blackland, near this mountain.

The inhabitants of this colony, having neither church or council-houſe, are obliged, for worſhip, to go to Drakenſtein church; for marriages or chriſtenings to the cape; and to Stellenboſh on account of legiſlative concerns.

Here are two hot baths; but it is dangerous to go to either, on account of the wild beaſts which ſwarm in theſe parts. The waters of this colony are in general very good.

Terra de Natal, was likewiſe purchaſed by the Dutch, and is inhabited principally by the Caffres, who are very different in many reſpects from the Hottentots, not greaſing their bodies, or ſtammering in their ſpeech. They, unlike the Hottentots alſo, ſow corn, brew a kind of beer, and build ſquare houſes with a kind of plaiſter. Theſe people trade with the Arabians and rovers of the Red ſea, for ſilk, elephants teeth, coffee, &c. which they barter with the Europeans for cordage, anchors, tar, and other maritime ſtores, and exchange with the former for various articles.

This diſtrict hath been but little penetrated by intelligent travellers; and from the moſt copious and ample deſcription we have been able to obtain concerning it, we learn, that ſuch part of the country as lies towards the ſea is plain, champaign, and woody; but within land it appears more uneven, by reaſon of many hills which riſe in unequal heights above each other: yet it is intermixed with pleaſant vallies and large plains, and is chequered with natural groves and ſavannahs or meadows. There is no want of water; for every hill affords little brooks, that glide down ſeveral ways; ſome of which, after ſeveral turnings and windings, meet by degrees, and make up the river of Natal, which diſcharges itſelf into the eaſtern ocean, in the latitude of about thirty degrees ſouth; then it opens, pretty wide, and is deep enough for ſmall veſſels. But at the mouth of the river is a bar, which has not above ten or eleven feet water on it in a ſpring tide; though within there is water enough. This river is the principal of the diſtrict of Natal, and has been frequented by ſome of our Engliſh ſhips. There are alſo other ſtreams and rivers, which bend their courſes northerly; eſpecially one of a conſiderable bigneſs, which runs due north, about one hundred miles within land.

Several ſorts of trees grow in the woods, many of which afford very good timber fit for any uſe, they being tall and large. The ſavannahs are cloathed with kindly thick graſs. The land animals of this country are lions, tygers, elephants, buffaloes, bullocks, deer, hogs, rabbets, &c. Here are alſo abundance of ſea-horſes; buffaloes and bullocks only are kept tame, but the reſt are all wild. Elephants are ſo numerous here, that they feed together in prodigious herds. Mornings and evenings they are ſeen grazing in the ſavannahs; but in the heat of the day they retire into the woods, and they are very peaceable if not moleſted; deer are alſo very plenty here, they feed quietly in the ſavannahs among the tame cattle; for the natives ſeldom diſturb them.

Fowls of various ſorts are found here in great plenty, ſome ſuch as we have in England, ducks and teal both tame and wild, and plenty of cocks and hens, beſides abundance of wild birds, wholly unknown to us. Here are a ſort of large wild fowl as big as a peacock, with many fine coloured feathers; they are very rare and ſhy. There are others like curlews, but bigger: the fleſh of theſe is ſweet and wholſome, but black.

Though there is plenty of divers ſorts of fiſh in the ſea and rivers; yet the natives do but ſeldom endeavour to take any, except tortoiſes or turtles, and that is chiefly when they come aſhore in the night-time to lay their eggs. But they have another very ſtrange way to catch turtle: they take a living ſucking fiſh, or remora, and faſtening a couple of ſtrings to it (one at the head, and the other at the tail) they let the ſucking-fiſh down into the water, on the turtle-ground, among the half-grown, or young turtles; and when they find that the fiſh has faſtened itſelf to the back of a turtle, as he will ſoon do, they then draw him and the turtle up together. The ſame way of fiſhing is alſo practiſed at Madagaſcar, one of the iſlands in the Indian ocean.

With reſpect to the natives of this country, they are but of a middle ſtature, yet have very good limbs; the colour of their ſkins is black, and the hair criſped; they are oval viſaged, their noſes neither flat nor high, but very well proportioned: their teeth are white, and their aſpect altogether graceful; they are nimble but very lazy, which probably is for want of commerce; their chief employment is huſbandry. They have a great many bulls and cows, which they carefully look after; for every man knows his own, though they all run promiſcuouſly in the ſavannahs; yet they have pens near their own houſes, where they make them gentle, and bring the cows to the pails. They alſo plant corn, and fence in the fields, to keep out all cattle, as well tame as wild. They have Guiney corn, which is their bread; and a ſmall grain, no bigger than muſtard-ſeed, of which they make their drink. No arts or trades are profeſſed among them, but every one makes for himſelf ſuch neceſſaries as need or ornament requires; the men keeping to their employment, and the women to theirs; the men build houſes and huts; plant, and do what is to be done abroad, and the women milk the cows, dreſs the victuals, &c. and manage all domeſtic matters. Their houſes are not large, nor richly furniſhed; but they are made cloſe, and well thatched; ſo that they are well defended from the inclemency of the weather.

Their clothes, of which they wear but few, are extremely mean; the men go in a manner naked; their common garb being only a ſquare piece of cloth made with ſilk-graſs, or moho rind, and wrought in form of a ſhort apron: at the upper corners it has two ſtraps to tie round their waiſts; and the lower end, being finely fringed with the ſame, hangs down to the knees. They have caps made with buff greaſed, of about nine or ten inches high; they are a great while in making theſe caps, for the greaſe muſt be made very pure before it is fit for this uſe; beſides, they lay on but a little at a time, and mix it finely among the hair, and ſo it never afterwards comes off their heads. When they go a hunting, which is but ſeldom, they pare off three or four inches from the top of their caps, ſo that it may fit the ſnugger; but the next day they begin to build it up again, and ſo they do every day till it is of a greater and faſhionable height. It would be a ridiculous thing for a man here to be ſeen without a greaſy cap; but boys are not ſuffered to wear any till they arrive at years of maturity, and then they begin to build up their heads. The women have only ſhort petticoats, which reach from the waiſt to the knee; when it rains, they cover their bodies with a ſimple cow hide, thrown like a blanket over their ſhoulders.

The food of theſe people chiefly conſiſts of Guiney corn, beef, fiſh, milk, ducks, hens eggs, &c. They alſo drink milk often to quench their thirſt, and this ſometimes when it is ſweet, but commonly they let it be four firſt. Beſides milk, which is their common drink, they make a better, but of the ſame grain beforementioned, purpoſely to be merry with; and when they meet on ſuch occaſions, they make themſelves extraordinary fine with feathers ſtuck in their caps very thick: they make uſe of the long feathers of cocks tails, and none elſe. Beſides theſe head ornaments, they wear a piece of cow hide made like a tail, and, like that, it is faſtened behind them, reaching from their waiſt to the ground. This piece of hide is about ſix inches broad, and each ſide of it is adorned with little iron rings of their own making; when they are thus attired, their heads a little intoxicated, and the muſic playing, they all ſkip about merrily, and ſhake their tails briſkly; but in their mirth they are very harmleſs and inoffenſive.

Polygamy being tolerated here, every man may have as many wives as he can maintain; and, without buying, here are none to be had; neither is there any other commodity to be bought or ſold but women. Young virgins are diſpoſed of by their fathers, brothers, or neareſt male relations; the price is according to the beauty of the damſel. They have no money in this country, but give cows in exchange for wives; and therefore he is the richeſt man who has moſt daughters or ſiſters; for then he is ſure to get cattle enough. They make merry all the wedding, but the bride

bride cries all the wedding day, and never joins in the mirth.

These people are very just, and extraordinary civil to strangers. They live together in small villages, and the oldest man governs the rest; for all that live together in one village are a-kin, and therefore willingly submit to his government.

Terra dos Fumos, is but a small trifling country, bounded on the south by the river Dellagoa, which separates it from Terra de Natal; on the north by Zanguana; on the west, by the country of the Naonetas; and by the Eastern ocean on the east. It extends from the mouth of the river Dellagoa, to the mouth of the river De Ladroon, or Teude; the first appellation signifying the river of robbers, which is in twenty-six degrees forty minutes south latitude. The only places worthy of notice here are, cape Pedras, which is about the twenty-ninth degree of south latitude. Potto de Pesqueria, or the Fishing-place, which is a little beyond the former; and the bay of St. Lucia, which is between the latter and the Ladroon river.

The Portuguese, who either named places from the saints days on which they discovered them, or from some trivial circumstance which they observed when they first saw them, gave this country the name of Terra dos Fumos, or the Land of Smoke, from perceiving some smoke on their first approaching the shore.

The Europeans, as yet, have not made any settlement here; and the Caffres, who inhabit the place, live in a simple state of nature, without towns, villages, or settled habitations, and frequently indeed without even moveable huts; so many are the artificial wants of men, and so few their real necessities.

Cape Town, is situated in cape Colony, in thirty-four degrees fifteen minutes south latitude, and sixteen degrees five minutes east longitude. This place is large, commodious, pleasant, and populous; the streets are spacious, and regularly laid out; the houses are built of stone, and tolerably handsome, but they are very low and only thatched; both which circumstances are owing to the stormy weather; for were they built high, they would be blown down, and, if tiles were used instead of thatch, the people would be knocked on the head with them as they passed along the streets. The houses in general have pleasant gardens behind, and neat court yards before them. Building, as well as tillage, is greatly encouraged here, and land given for either purpose to those who chuse to accept of it; but then the government claims an annual tenth of the value of the former, and produce of the latter, and a tithe of all purchase money when estates are sold.

The town extends from the sea shore to the company's garden, spreading along the Table bay. The fort is in a valley at a little distance, its form is pentagonal, it commands the landing place, and is garrisoned by two hundred soldiers; the government storehouses are within it; the governor and other officers have apartments here, as well as six hundred servants; the same number of slaves are lodged in a commodious building in the town, which is divided into two wards, the one for the men, and the other for the women; and there is a house of correction for the reception of dissolute persons of either sex. The hospital for sick seamen is of essential service to the Dutch fleets in going or returning from India.

The church is a large commodious edifice, elegantly plain: but the roof and steeple are thatched, for the reason already mentioned. Thatching indeed, from the nature of the hurricanes, seems absolutely necessary; but from the method in which it was formerly done, it appears that it was frequently attended with danger, as we are informed that there were formerly shelving pent houses erected on both sides the streets, to shelter passengers in rainy weather: but these brought the inhabitants under such dangers and inconveniences, that they were quickly all pulled down by order of the government. Sailors and Hottentots were continually assembling and smoaking their pipes under them, and sometimes through carelessness set them on fire. The government very wisely laid hold of that occasion to rid the streets of those fellows that were continually pestering them, by publishing an order, which is still in force, and from time to time republished, that no Hottentot or common sailor shall smoak in the streets; with a declaration, that the sailor or Hottentot, who should presume so to do, should be tied to the whipping post, and severely lashed. This cleared the streets at length, and keeps them clear to this day of all sailors and Hottentots who have no business there; for it is with great difficulty that either of them can forbear smoaking while they are awake, if they have tobacco, which they are seldom without.

What is most to be admired at the cape is the company's garden, where they have introduced almost all the fruits and flowers that are to be found in Europe, Asia, or America; and most of them are improved. and flourish more than they did in their respective climates and countries from whence they were brought; and the garden is watered with springs that fall down from the Table mountain just above them. The apples and pears of Europe are planted here, with the grapes of Asia, as well as those of Europe; all of a delicious flavour. Here are also excellent lemons, oranges, citrons, figs, Japan apples, and a great variety of other fruits.

SECT. III.

Containing an Account of the Climate, Soil, Produce, Animals, and the People called HOTTENTOTS, at the Cape of GOOD HOPE.

THE weather at the Cape of Good Hope may be divided into two seasons only, viz. winter and summer; or the wet monsoon, and the dry monsoon. The wet monsoon begins in March, and the dry one in September; so that summer commences at the cape about the time that it concludes with us. The inconveniences of the climate are, excessive heat in the dry season, and heavy rains, thick fogs, and unhealthy north-west winds in the wet season. Thunder and lightning are never known here but in March and September. Water seldom freezes, and, when it does, the ice is but thin, and dissolves upon the least appearance of the sun. In the hot weather, the people are happy when the wind blows from the south-east, because it keeps off the seaweeds, which otherwise would float to the shore, and corrupt there, which, by infecting the air, and causing dreadful head-achs, would prove very troublesome.

The appearance of two remarkable clouds, which frequently hang over the summits of the two mountains, of Table-hill and Devil-hill, commonly enable the inhabitants of this country to prognosticate what weather will happen. These clouds are at first but small, but, gradually increasing, they at length unite, and invelop both mountains, when a terrible hurricane soon ensues.

The violence of the wind does great damage to the corn and fruits, and endangers any shipping that happens to be near the coast; but at the same time it purifies and occasions a brisk circulation of the air, which greatly contributes to the health of the inhabitants. A gentleman who resided many years at the cape says, "The skirts of this cloud are white, but seem much compacter than the matter of common clouds. The upper parts are of a lead colour, owing to the refracted rays of light. No rain falls from it, but sometimes it discovers great humidity; at which time it is of a darker colour, and the wind issuing from it is broken, raging by fits of short continuance. In its usual state, the wind keeps up its first fury unabated for one, two, three, or eight days, and sometimes a month together. The cloud seems all the while undiminished, though little fleeces are seen torn from the skirts from time to time, and hurried down the sides of the hills, vanishing when they reach the bottom; so that during the storm the cloud seems supplied with new water. When the cloud begins to brighten up, those supplies fail, and the wind proportionably abates. At length the cloud growing transparent, the wind ceases.

During the continuance of these south-east winds, the Table-valley is torn by furious whirlwinds. If they blow warm, they are generally of short duration, and in this case the cloud soon disappears. This wind rarely blows after sun-set, and never longer than towards midnight, though the cloud remains, but then it is thin and clear. But when the wind blows cold, it is a sure sign it will last for some time, except an hour or two at noon or midnight, when it seems to recover itself, and afterwards renews its boisterous rage."

Near the cape, the water of the ocean is of a green colour, owing principally to the coral shrubs, and the weed called tromba. The first, while in the water, are green and soft; but when exposed to the air, they grow hard and change their colour to white, black, or red. The latter are ten or twelve feet in length, hollow within, and when dry, become firm and strong. They are often framed into trumpets, and the sound they produce is very agreeable to the ear.

The ſource of the rivers in this country are in the mountains: they glide over a gravelly bottom, are clear, pleaſant, and ſalubrious; but moſt other ſtreams are dark, muddy, and unwholſome. Here are a few brackiſh ſprings, whoſe waters, medicinally uſed, greatly purify the blood, and ſeveral warm and hot baths, which are ſingularly efficacious in various diſorders.

In Waveren colony are three hot ſprings, the moſt particular of which is Black-hole bath. The mould of this hole is of the colour of jet, light, greaſy, and ſo ſoft, that the feet of horſes ſink into it. The waters are uſed in ſcorbutic, leprous, and chronic diſorders, being ſtrongly impregnated with ſaline and ſteely particles. Upon the whole, the reputation of the cape waters is ſo great, that every Daniſh ſhip returning from India is obliged to fill a large caſk with the clear ſweet water that abounds here, for the particular uſe of his Daniſh majeſty.

White and red chalks are found in abundance at the cape, which alſo yields excellent clay both for the purpoſes of making brick and earthen-ware: the white chalk is uſed by the Dutch, to whitewaſh their houſes, and the red by the Hottentot women to paint their faces. Various bituminous ſubſtances of ſeveral colours are found in Drakenſtein colony, particularly a kind of oil which trickles from the rocks, and has a very rank ſmell. It is medicinally uſed as a purgative by the Hottentots, who indiſcriminately take it themſelves and give it to their cattle. Many of the hills yield excellent ſtones of a hard nature, and very proper for building. Sand ſtones are found in the running waters; and the country produces many quarries of lime-ſtone, which, however, is but ſeldom uſed, as the mortar in general is made of muſcle-ſhells. Whetſtones, touchſtones, and flints are common; but the moſt valuable ſtone is found in a quarry near the cape. This is of a red colour, veined with white, and ſpotted with blue; it takes an admirable poliſh, and in beauty exceeds the fineſt marble.

With reſpect to minerals, ſilver ore has been found in ſome of the hills; the Namaqua Hottentots bring copper to trade with the Dutch from ſome mountains which are ſituated about three hundred miles from the cape; and there are alſo ſeveral iron mines here. The ſoil in general about the cape conſiſts of a clayey earth; and is ſo fat, that it requires but little manuring. It produces all the neceſſaries and moſt of the luxuries of life.

Moſt of the kinds of grain produced in Europe, except oats, thrive well here; but many of the vegetables in the cultivated parts ſuffer greatly from caterpillars, mildews, and the incurſions of wild beaſts. The elephants in particular do great miſchief among the corn, as they frequently break the incloſures.

When we take occaſion to mention agriculture, it is to be obſerved, that the Europeans of the cape and their lands are implied; for the Hottentots in general deteſt the very idea of cultivation, and would ſooner ſtarve than till the ground, ſo greatly are they addicted to ſloth and indolence.

The working of the plough here is ſo laborious, from the ſtiffneſs of the ſoil, that it frequently requires near twenty oxen to one plough. The ſowing ſeaſon is in July, and the harveſt about Chriſtmas. The corn is not thraſhed with a flail, but trod out by horſes or oxen on an artificial floor made of cow-dung, ſtraw, and water, which when mixed together, cements, and ſoon becomes perfectly hard. It is laid in an oval form; the cattle are confined by halters, which run from one to the other, and the driver ſtands in the middle, where he exerciſes a long ſtick to keep them continually to a quick pace. By this method half a dozen horſes will do more in one day, than a dozen men can in a week. A tythe of the corn belongs to the Dutch company as a matter of right, and the reſt they purchaſe at a price ſtipulated between them and the huſbandmen, according to the nature of the crop and the kindneſs of the ſeaſon.

Many exotics have been tranſplanted from Europe and India, beſides what trees might originally grow here; ſo that the cape now produces oak, fir, camphire, pine, cypreſs, orange, lemon, citron, quince, pomegranate, apricot, apple, pear, peach, fig, plumb, cheſnut, walnut, and almond trees. The cinnamon tree has likewiſe been brought from Ceylon, and ſucceeds tolerably. The vines of Germany and Perſia have been introduced, and thrive exceedingly; ſo that the moſt inconſiderable huſbandman is not without a vineyard. The ſtocks are planted in rows; but that they may not be injured by the ſouth-weſt wind, they are never ſuffered to grow above two feet high, or three at the fartheſt. It is remarkable that they produce more here in the third year, than the European vines do in the fifth. The wine itſelf is ſtrong, mellow, and delicious; the vintage continues from the beginning of February to the latter end of March, and the wine bears a great price all over India.

Aloes are the ſpontaneous product of the place, and afford an agreeable fragrancy. The cripple tree has broad leaves, knotted branches, and bears fruit like a pine apple. The bark is uſed by tanners, and ſometimes medicinally by the cape phyſicians. The amaquas tree grows to the height of about ten feet; it produces white bloſſoms, and a fruit like the pea, only very large, which grows in pods, is of a brown colour, oval form, and aſtringent taſte. When a branch of this tree is lopped, a beautiful gum flows from the aperture, and the wood when dry is exceedingly hard. There is a tree as large as the oak, which is with great propriety denominated the ſtink wood tree, becauſe whenever the carpenters cut it, or attempt to work it with a tool, it yields ſuch an abominable ſtench, that they can ſcarcely endure it; yet it is ſo finely clouded, and takes ſuch a beautiful poliſh, that, the bad ſmell ſubſiding in time, great quantities of furniture are made of it.

A kind of wild hemp, called dakha, is uſed as a ſubſtitute for tobacco, and when mixed with the latter, is called baſpach, and ſmoked in great quantities by the Hottentots; who alſo ſmoke elephants dung, and ſeem to reliſh it highly, when they can neither procure dakha or tobacco. The karma root has many qualities of the Chineſe ginſeng, and produces the ſame effects as opium, on which account the Hottentots hold it in the higheſt eſteem. The ſpiræ or bukhu plant is another favourite vegetable, for the Hottentots pulverize the roots when dry, and with the powder, which is yellow, powder their hair; in ſhort, the native trees, plants, ſhrubs, roots and flowers at the cape, are of various kinds and admirable qualities; and moſt of the exotics thrive ſo greatly, that they exceed thoſe of the ſame ſpecies in the countries from whence they were brought; in particular, the head of a cape cabbage will often weigh forty, and a potatoe ten pounds, though the ſeeds were originally brought hither by the Europeans.

There are great numbers of tame cattle and domeſtic animals in the various colonies and ſettlements at the cape, and the woods and mountains abound with wild beaſts. The oxen are large and fine, and the ſheep numerous, with tails weighing near twenty pounds; the mutton is excellent, and the fat is uſed by the Hottentots in general, and even by ſome Europeans, as a ſubſtitute for butter. Both are ſold exceeding cheap to the Dutch; but the latter make any other Europeans, who touch at the cape, pay dear for them. The horſes, which were brought originally from Perſia, are of a bay cheſnut colour, and rather ſmall: the dogs are of little uſe, and are of a very unpleaſing appearance. With reſpect to wild animals, the elephant claims the firſt place, but differs in nothing from thoſe found in other parts, and which we have already deſcribed.

In treating of the other animals belonging to the cape, we ſhall firſt of all take notice of the rhinoceros, whoſe ſkin is ſo hard, that it is difficult to pierce it with a ſword. This creature is of a dark aſh colour, and has a ſnout like a dog; a horn projects about two feet from the noſe, reſembles a ploughſhare, and is of a dingy grey colour; with this he tears up the ground, rips up the elephant, to whom he is a mortal enemy, pulls up trees by the roots, and throws large ſtones over his head to a great diſtance. Another horn of about ſix inches long, turns up from his forehead. His legs are ſhort, his ears ſmall, and his ſenſe of ſmelling ſurprizingly acute. When he ſcents any thing he purſues in a right line, and tears up every thing in his way; but it is one happineſs that his eyes are exceeding ſmall, and ſo fixed, that he can only ſee ſtrait forward, ſo that it is eaſy to avoid him by ſtepping aſide, as he is a long time in turning himſelf, and longer ſtill in getting ſight again of the object. He will not, however, attack a man unleſs provoked, or unleſs he is dreſſed in ſcarlet. When he has killed any creature, he licks the fleſh from its bones with his rough tongue, which is like a raſp. He feeds principally on herbs, thiſtles, and a plant which reſembles the juniper, and which, from his fondneſs of it, is called rhinoceros-buſh. The blood, ſkin, and horn of this animal are medicinally uſed, and are ſaid to be very efficacious in various diſorders. Wine poured into cups made of the horn, bubbles up in a ſtrange kind of fermentation, and appears as if boiling. If a ſmall portion of poiſon is put into the wine, the cup ſplits; but if poiſon only is poured into the cup, it flies into a thouſand pieces. Hence cups made of the horn of the rhinoceros are deemed excellent

excellent ſafeguards to ſuch as drink out of nothing elſe; and on that account are highly valued, independent of their ſalubrious qualities.

Wolves at the cape are of two kinds: the one reſembles a ſheep-dog, is ſpotted like a tyger, and has a head like a bull-dog, his hair is frizzled, his tail ſhort, and his claws ſharp. The other is like an European wolf: they both prowl about and do great miſchief in the night time, but lie concealed in the day.

Lions, tygers, leopards, &c. alſo abound here, and are ſo troubleſome, that the perſon who kills one of either ſort, is rewarded with twenty-five florins, or fifty ſhillings. The fleſh of the lion is eſteemed equal to veniſon, and the fat is much valued.

Here are much larger buffaloes than in Europe. They are of a brown colour: the horns are ſhort, and curve towards the neck, where they incline to each other. Between them there is a tuft of hair upon the forehead, which adds to the fierceneſs of the look. The ſkin is exceeding hard, and the fleſh rather tough. He is a ſtrong fierce creature; and is enraged at any thing red, like many other animals.

They have very large elks here, being five feet high, with horns a foot long. This is a very handſome creature, having a beautiful head and neck, ſlender legs, and ſoft ſmooth hair, of an aſh colour. Their upper jaw is larger than the other, the tail about a foot long, and the fleſh by the cape epicures is ſaid to exceed the beſt beef. They run ſwift, and climb the rocks with great agility, though they uſually weigh about four hundred pounds each.

The creature called ſtink-breeches, or ſtink-box, is one of the moſt ſingular animals at the cape. This beaſt receives its name from its offenſive ſtench both living and dead. When purſued, it can ſtink away thoſe who follow it; and, if killed, the ſmell is ſo odious, that none can approach the carcaſe. It is about the ſize of a common houſe-dog, and made much like a ferret.

The goats are of various ſpecies, particularly one called the blue goat, which is of a fine azure colour. The ſpotted goat is larger than the other, and beautifully marked with brown, white, and red ſpots. The horns are a foot long, and the fleſh is fine eating. The tame goat is much like the European. The rock-goat is no larger than a kid, but very miſchievous in the plantations. The diving-goat is much like the tame one, and receives its name from its method of ſquatting down in the graſs to hide itſelf. There is another animal called a goat, but without any additional appellation; it is of the ſize of a hart, and extremely beautiful; the hair on the back and ſides is grey, ſtreaked with red, and that on the belly white; a white ſtreak paſſes from his forehead to the ridge of his tail, and three others ſurround his body in circles. The female hath no horns; but thoſe of the male are three feet in length, and the fleſh of both is exceeding delicate. The horns of the hart do not branch like thoſe of Europe; but the roebuck is in every reſpect like ours.

Wild cats are of ſeveral ſorts here: the firſt the Dutch call the civet-cat, not that it is really the animal ſo denominated, but becauſe of the fine ſcent of its ſkin. The next is called the tyger-cat, from its being very large, and ſpotted like a tyger. The third ſort is the mountain cat, which, as well as the tame cat, exactly reſembles thoſe of Europe. The fourth ſpecies is termed the blue cat, from its colour; as it is of a fine blue tinge, with a beautiful red liſt down its back.

There is a ſpecies of mice peculiar to this country, called the rattle-mouſe, which is about the ſize of a ſquirrel, and makes a rattling noiſe with its tail, from which it receives its appellation; it is very nimble, reſides among trees, lives upon nuts and acorns, and purs like a cat. The rats, and their other mice are like ours; and indeed ſome have affirmed, by miſtake, that there was none of this ſort of vermin at the cape till the Europeans carried them thither.

The country abounds with hogs of ſeveral ſorts; namely, the common hog, which is of the breed of thoſe brought from Europe, and reſembles ours. The Java hog, which came originally from Java, but is not unlike the former. The wild hog, or rather wild boar, is very fierce, and harbours in woods; and the earth hog, which is of a red colour, and without teeth; this latter lodges like a badger in holes, and feeds upon ants, which he procures by forcing his long rough pointed tongue into their hills, and drawing it thence with a great number of thoſe animals glued to it.

Many jackalls, and ſome ermines, are found about the cape. Baboons, apes, monkies, &c. are very numerous, and frequently do great miſchief in the gardens, orchards, and vineyards. The porcupine is very common here, and its fleſh eſteemed delicious. Hares, rabbets, and moles, differ in nothing from thoſe generally known.

There are two ſorts of wild aſſes in this country: the firſt reſembles the common aſs of Europe, but the other is a beautiful creature called the zebra, and bears a greater affinity in make and ſhape to the horſe than the aſs. Indeed the ears are ſomething like thoſe of the latter animal, but in all other reſpects it has a much more noble appearance. It is admirably well made, exceeding lively: and ſo extremely ſwift, that it throws almoſt every purſuer at a diſtance. It has fine legs, a twiſted tail, round fleſhy haunches, and a ſmooth ſkin. The females are white and black; and the males white and brown. Theſe colours are placed alternately in the moſt beautiful ſtripes, and are parallel, diſtinct, and narrow. The whole animal is ſtreaked in this admirable manner, ſo as to appear to the diſtant beholder as if curiouſly covered with ribbons. Moſt naturaliſts affirm, that the zebra never can be tamed; that which was preſented to her preſent majeſty queen Charlotte, and kept ſeveral years at the ſtables near Buckingham-gate, continued vicious till its death, which happened ſome years ſince, notwithſtanding it was brought over young, and every poſſible means uſed to render it tractable: it fed upon hay, and the noiſe it made rather reſembled the barking of a maſtiff dog, than the braying of an aſs.

Captain Carteret having, by order of his preſent majeſty, performed a voyage round the world in the Swallow ſloop of war, wrote a letter to the late Dr. Maty, ſecretary to the Royal Society, in which he mentions the camelopardalis, ſaid to have been found in the countries about the cape: "From the ſcarcity of this creature (ſays he) as I believe none have been ſeen in Europe, ſince Julius Cæſar's time, (when, I think, there were two of them at Rome) I imagine a more certain knowledge of its reality will not be diſagreeable to you, as the exiſtence of this fine animal has been doubted by many; if you think it may afford any pleaſure to the curious, you may make what uſe of it you pleaſe. The preſent governor of the cape of Good Hope has ſent out parties of men on inland diſcoveries, ſome of which have been abſent from eighteen months to two years, in which traverſe they have diſcovered many curioſities, which it is hoped they will, in convenient time, communicate to the world. One of theſe parties croſſed many mountains and plains, in one of which they found two of theſe creatures, but they only caught the young one; they endeavoured to bring him alive to the cape town, but unfortunately it died. They took off his ſkin, which they brought as a confirmation of this truth, and it has been ſent to Holland."

The ſkin alluded to in this letter is now depoſited in the cabinet of natural hiſtory at Leyden. Linnæus ranks this animal as one of the deer kind. Its head is like that of a ſtag, the horns are blunt, about ſix inches long, covered with hair, and not branched; the neck reſembles a camel's, but is longer, being near ſeven feet in length: it has a mane like a horſe; feet, ears, and tongue, like a cow; ſlender legs, the fore ones being conſiderably longer than the hinder; the body is but ſmall, covered with white hair, and ſpotted with red; the tail is long, and buſhy at the end; the upper jaw contains no fore-teeth; he moves both the fore feet together when he runs, and not one after the other like other animals; he is eighteen feet in length from the tail to the top of the head, and is ſixteen feet from the ground when he holds up his head.

There is a great variety of birds and fowls found at the cape, moſt of which are ſold cheap, particularly cocks, hens, turkies, capons, and other poultry.

Here are three ſorts of eagles, viz. the bone-breaker, who feeds on tortoiſes; to get at the fleſh of which it uſes this ſingular method: Having carried the tortoiſe aloft in the air, it drops it upon ſome hard rock, by which means the ſhell is broken, and the eagle can eaſily come at its prey. 2. The dung-eagle, which tears out the entrails of animals to ſubſiſt on; and, though no bigger than a common gooſe, is exceeding ſtrong and voracious. And, 3. The duck-eagle, which feeds principally upon ducks.

Wild geeſe are likewiſe of three ſorts, viz. The water-gooſe, which reſembles ours. 2. The mountain gooſe, which is the largeſt of all, and has a green head and green wings. 3. The crop gooſe, ſo named from its remarkable large craw, of which bags, pockets, and tobacco-pouches are made. All theſe kinds of geeſe are ſuch good eating, ſo plentiful, and ſo eaſily taken, that the people at the cape do not think the tame geeſe worth the trouble of breeding.

The bird called the flamingo is one of the moſt ſingular. It has a long neck, and is every way larger than a ſwan: the legs are remarkably long, and of an orange tawnéy, and the feet are like thoſe of a gooſe; the bill contains blue teeth with black points; the head and neck are intirely white; the upper part of the wings are of a bright flame colour, and the lower black. The knor-bird is about the ſize of a common fowl, with a ſhort black bill, and a black tuſt upon the crown; the legs are yellow; the wings of an aſh colour, ſpotted with red and white, but ſo ſmall as greatly to impede its progreſs in flying, and the fleſh is pretty good eating. The ſpoon-bill, or, as ſome call it, the pelican-bird, is rather longer than a gooſe, has a long bill formed like a narrow ſpoon, great eyes, and feathers to its tail of about half a foot in length. It is very uſeful in deſtroying ſerpents, toads, &c. but on that account the cape Europeans abſtain from eating.

Sea-gulls are very numerous here: and do not differ from thoſe in other parts: they furniſh admirable feathers for bedding, as well as a tolerable good diſh for the table. The penguin is about the ſize of the ſea-gull, but cannot fly on account of the ſhortneſs of the wings. The legs are green, the bill black, and the feathers of an aſh colour. It is very fat, builds its neſts in the rocks, and lays eggs that are much valued; but the fleſh, as it taſtes ſtrong and diſagreeable, is ſeldom or never uſed for food. The malagoſis is about the ſize of a gooſe, with black and white feathers prettily ſpotted with grey. The legs are ſhort, and placed ſo far behind, that its walk is whimſically aukward; the bill is ſmall, but contains ſharp teeth.

Peacocks, oſtriches, falcons, pheaſants, ſnipes, and ravens, do not differ from birds of the ſame ſpecies in other places. Owls are only diſſimilar in colour; and the wild ducks have either blue or brown heads; but the tame ones exceed thoſe of Europe in ſize. Here are likewiſe larks, greenfinches, yellow-hammers, water-wagtails, ſparrows, quails, thruſhes, &c. a bird reſembling a cuckow, which inſtead of ſpeaking the word "cuckow," continually cries "edolio," and ſeveral birds of the blackbird kind; ſome like ours, being black, others of a gold colour, and others brown or red. The ſtone-peckers, ſtarlings, ſwallows, hawkfinches, &c. ſeldom differ from thoſe of Europe, and when they do, the difference is in their favour. The canary-birds are only different from the common ones in the tints of their feathers.

The cape-finch and blue-bird are peculiar to this country: this latter is about the ſize of a common ſtarling, covered with blue feathers of different ſhades, and has a reddiſh bill near four inches long; the former are remarkable for changing the colour of their feathers twice annually. In ſummer the head and neck are ſcarlet, but all the reſt black; in winter, they are all over of an aſh colour. The bill is yellow, ſharp, and ſhort, and the reſt divided into two apartments, in which there are ſeparate accommodations for the male and female.

Reptiles are very numerous at the cape, particularly the following ſerpents, or reptiles of the ſerpent kind: 1. The tree ſerpent, which is ſo called, from reſembling the branch of a tree, and from being fond of winding itſelf about trees, ſhrubs, &c. 2. The aſh colour'd aſp, ſpeckled with red and white, which is ſeveral yards long. 3. The ſhoot ſerpent, ſo named from the amazing velocity with which it ſhoots, or darts itſelf at an enemy. Some call it the eye ſerpent, on account of the numerous white ſpots reſembling eyes, with which its ſkin is marked. 4. The blind ſlow worm is a black, ſcaly ſerpent, ſpotted with brown, white, and red. 5. The thirſt ſerpent, or inflamer, is a moſt venomous and dangerous ſerpent, about three quarters of a yard long: has a broad neck, black back, and is very active. The hair ſerpent is about three feet in length, as thick as a man's thumb, and received its name from its yellow hair; its poiſon is ſo malignant, that nothing but the ſerpent ſtone can prevent its proving mortal. The ſtone abovementioned is ſaid to be an artificial compoſition prepared by the Bramins in India, who keep the ſecret to themſelves. It is ſhaped like a bean, in the middle whitiſh, the reſt of a ſky-blue. Whenever this is applied, it ſticks cloſe without bandage or ſupport, and imbibes the poiſon till it can receive no more, and then drops off. Being laid in milk, it purges itſelf of the venom, turning the milk yellow, and ſo is applied again, till by its not ſticking, it proves the poiſon is exhauſted. Some affirm, that horned ſerpents are found at the cape, but the beſt authentics contradict this aſſertion. Houſe ſerpents, however, are very common; but they are intirely inoffenſive, and may perhaps be of the ſame kind as thoſe which the people in Whidah worſhip.

Among the inſects of this country, are the millepes, whoſe bite is mortal: a ſmaller ſpecies of the ſame, called a fugger, which does great miſchief in the vineyards; moths, waſps, a poiſonous black ſpider, butterflies, ſnails, flies, earth flies, bees, ants, &c.

Here are two ſorts of graſshoppers; the ſmaller has a brown back, ſilver belly, green wings, and aſh coloured legs; the larger has a red head, brown wings. aſh coloured back, ſilver belly, and red legs.

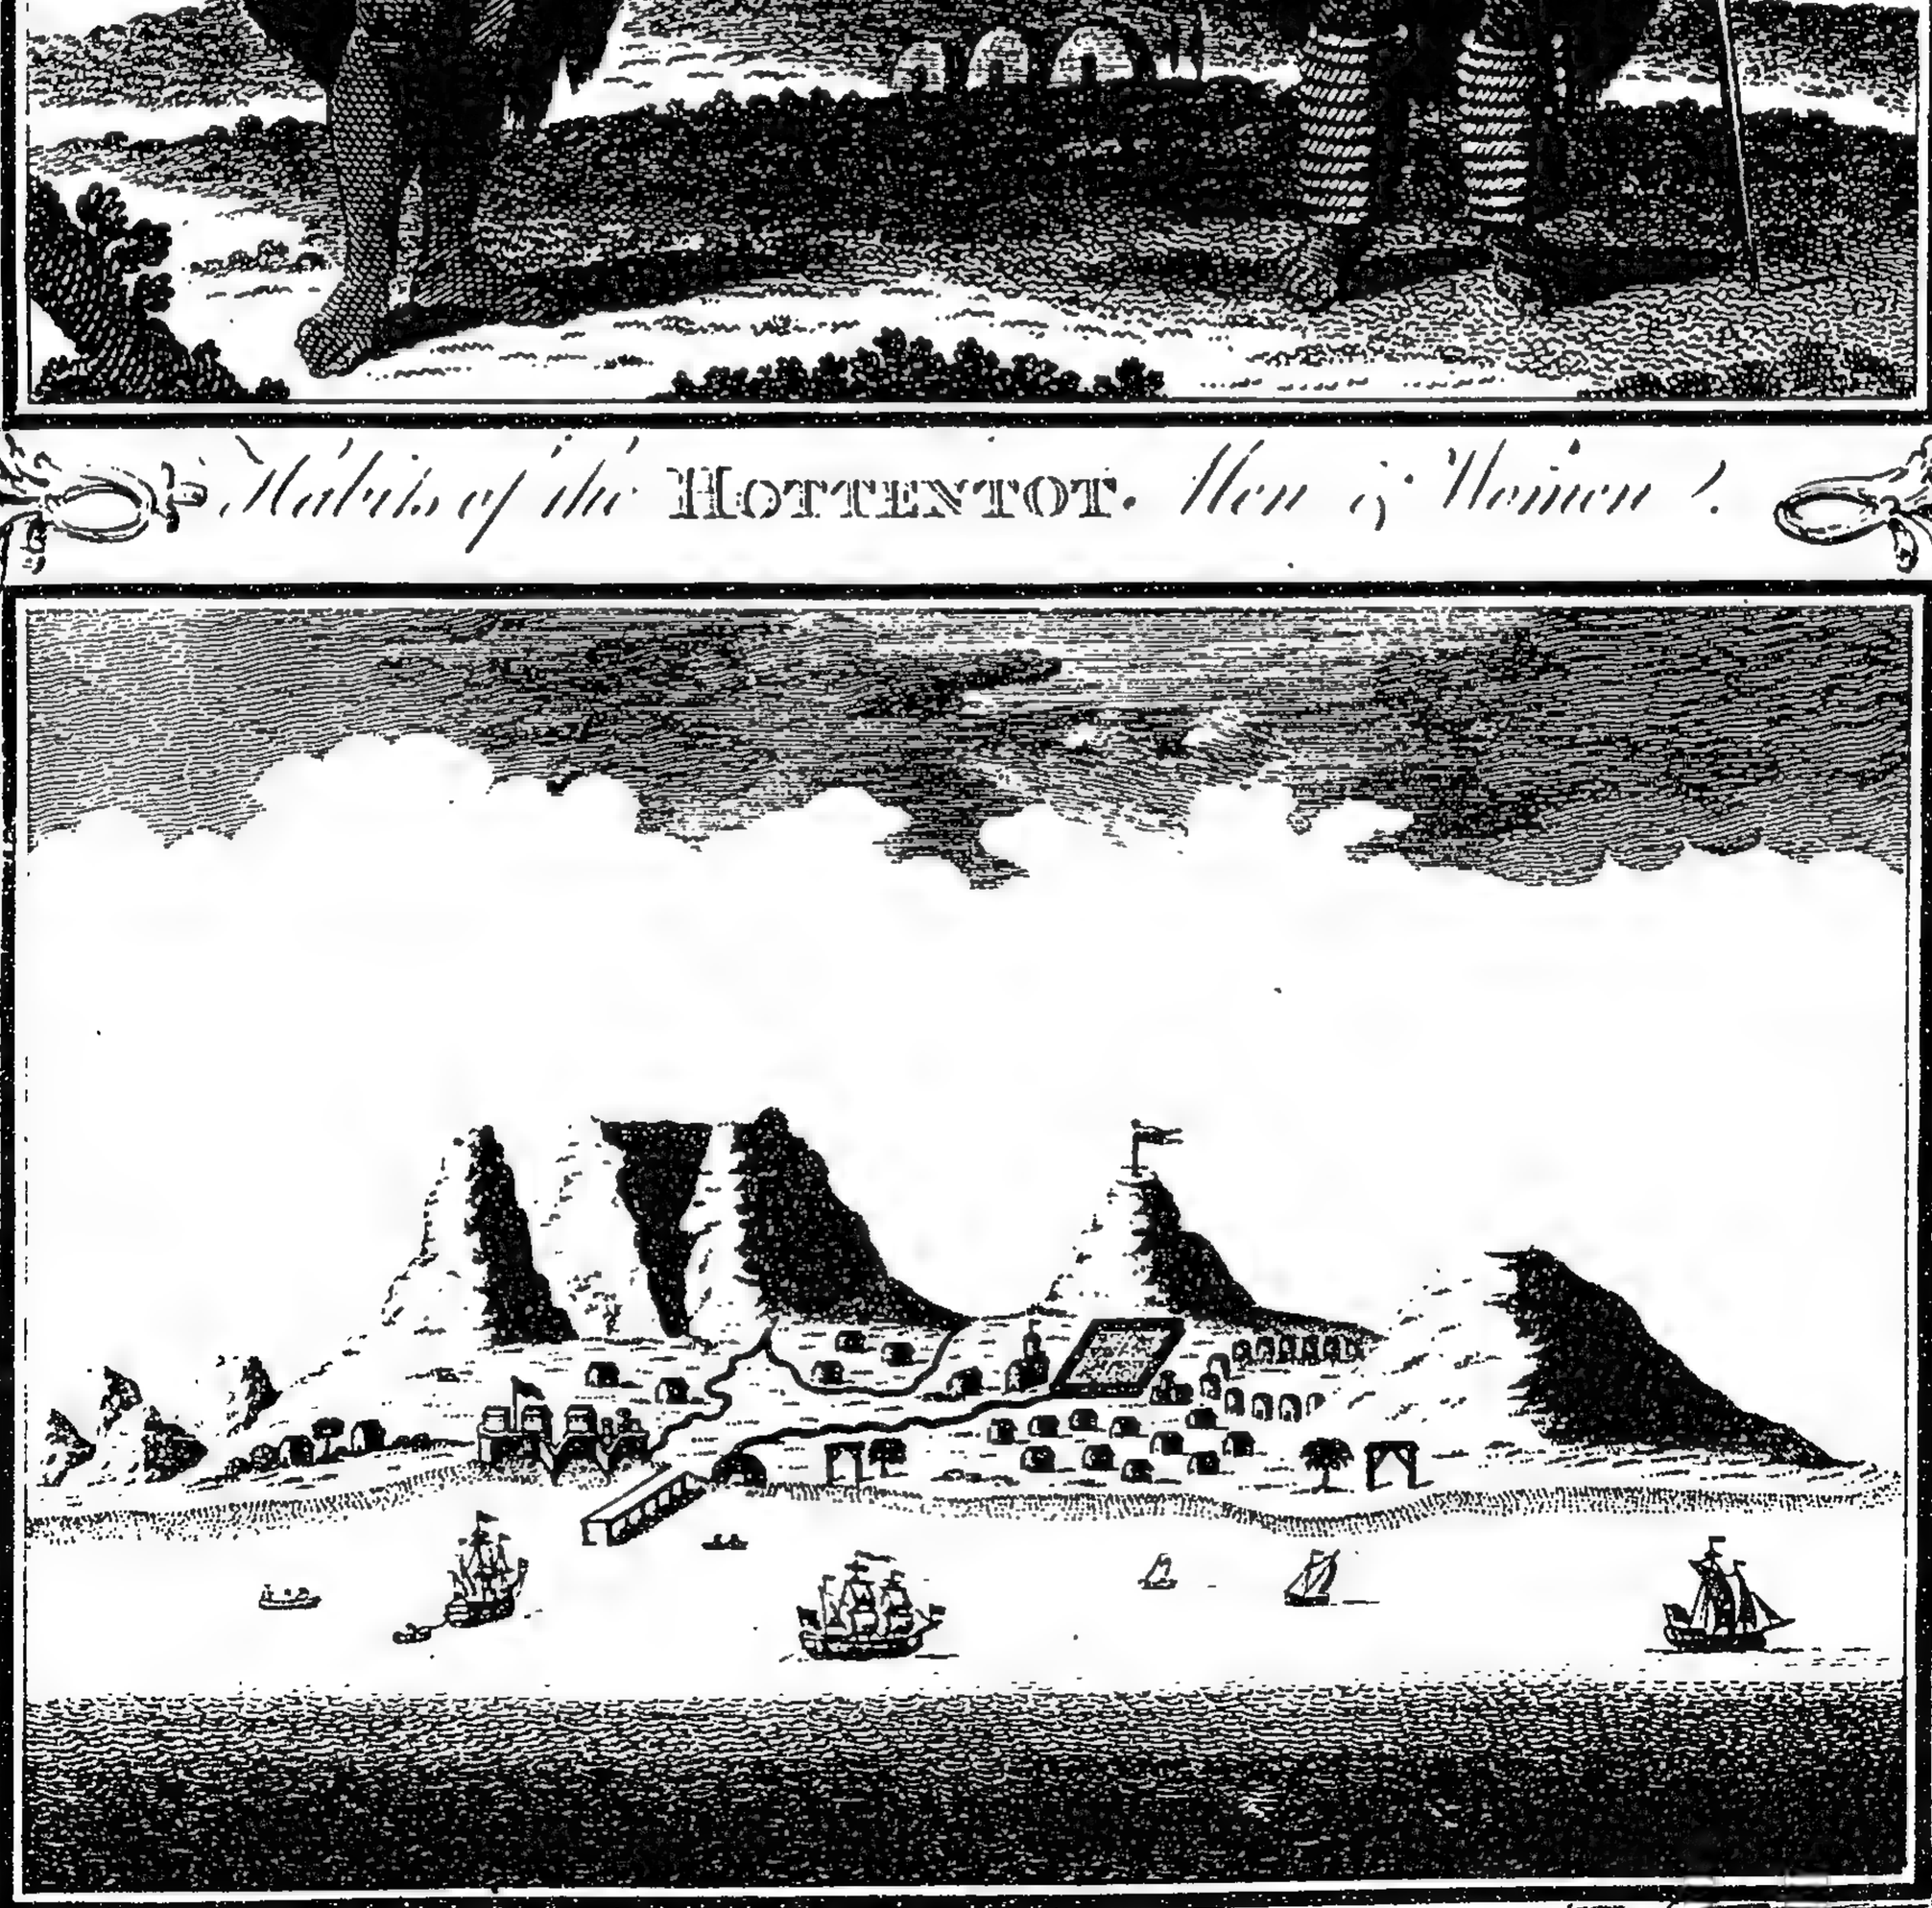
The houſes at the cape are greatly infeſted with bugs; to deſtroy which, the Europeans make uſe of oil colours and mercury, and with theſe they paint their wainſcots and bedſteads. Fleas are very numerous, and troubleſome even to a proverb; as they have a ſaying, which may be thus tranſlated, "Our plagues are theſe; wind, flies, and fleas." The former, however, when it comes, carries away or deſtroys thoſe vermin.

Though the Hottentots ſwarm with lice, none will live on the body of an European at the cape; and even if any of the ſhips crew from Europe are infected with thoſe vermin, they die ſoon after the perſon arrives on ſhore. The beetles are of ſeveral kinds; ſome having green backs and bellies, ſpeckled with white and red, grey legs, and gold wings. Whatever place one of theſe inſects alights on, is deemed ſacred by the Hottentots: the other beetles have no eſſential difference from thoſe of Europe. The ſcorpion, which to appearance reſembles a craw-fiſh in every thing but having a larger and narrower tail, is exceedingly dangerous, and very much dreaded both by Hottentots and Europeans.

The ſea flea and the ſea louſe are the moſt particular inſects about the cape. The former is much like a prawn, ſticks faſt to various fiſhes, and plagues them with its ſting. The latter, which is a ſhell-fiſh, is as troubleſome with its mouth. Sea worms of ſeveral kinds abound. The river inſects are only water ſnakes and leaches. Both toads and frogs are found in the ditches and ſtagnate waters. The Hottentots, however, take them to be the ſame animal, not knowing the difference.

The neighbouring ſea affords a plentiful ſupply of fiſh to the inhabitants of the cape. The meat of the ſea cows is much admired. The flying fiſh, which has wings like a bat, is reckoned a great delicacy, and the herrings are exceeding good. The blower is ſo called, becauſe it can blow itſelf up into the form of a ball: this fiſh is without ſcales, has a yellow back, white belly, and a ſmall mouth, armed with four teeth; but being of a poiſonous nature, is not fit to be eaten. The brown fiſh is as big as an ox, and is deemed good food either freſh or ſalted. The bennet is near three feet long, and weighs about ſeven pounds; the eyes and tail are red, the fins yellow, and the ſcales purple, with gold ſtreaks. The meat is of a crimſon colour, and ſo remains after it is dreſſed; nevertheleſs it is delicious eating. The elft is about two feet long, has yellow ſcales, a black back, white belly, with dark ſtreaks and red ſpots, and is very dry eating. The gold fiſh has a ſtreak from head to tail, and circles round his eyes of a gold colour: it is eighteen inches long, weighs about a pound, and its fleſh of an exquiſite taſte.

Porpoiſes, pikes, pilot fiſhes, ſharks, and dolphins, abound here. The braſſem is only found about the cape. Of this fiſh there are two ſorts: the one has a black back, and purple head; the other is of a dark blue colour, and the former is rounder than the latter. They are both cheap and wholſome food. The ſtone-braſſem is good either freſh or ſalted, reſembles a carp in make, but is more delicious in taſte. One ſpecies of this fiſh is called flat-noſe, from the ſhape of the head, and is much more valued than the other ſort. The red-ſtone fiſh, is exceeding beautiful to the eye, and exquiſite to the taſte: the back is ſcarlet ſpotted with blue, and beſpangled with gold; the eyes are of a bright red, and ſurrounded with a ſilver circle, and the belly is of a pale pink colour, has a ſhining ſilver tail, reſembles a carp both in ſhape and taſte, and weighs about a pound.



Barbels, tortoiſes, tunnies, ſoles, rock-fiſh, eels, lobſters, crabs, oyſters, ſea-ſnails, &c. are innumerable. Of the latter, there is one ſingular ſpecies called klin-kouſen, which has an upper and under-ſhell, thick, rough, twiſted, and incruſted. In vinegar, however, the cruſt drops off, and the ſhell exhibits an admirable pearl colour.

Sea-ſuns and ſea-ſtars are ſmall round ſhell-fiſh; and receive their denominations from the great variety of prickles, which ſhoot from them like rays of light. The fiſh called pagger has a prickly ſhell, and is much dreaded by the people at the cape, as a wound from one of its protube-

rances

Habits of the HOTTENTOT. *Men & Women.*

Perspective View of the Cape of Good Hope.

rances turns to a mortification, unleſs great care is taken to prevent it. The ſea-ſpaut reſembles a piece of moſs ſticking faſt to the rocks: it is of a green colour, emits water, and within is like a tough piece of fleſh. It exhibits no ſigns of animation, except on being touched, when it diſtils clear water from ſeveral ſmall holes.

It has been affirmed by ſome, that ſea lions are found here; and we are told by an accurate author, that a ſea lion was ſhot while baſking on the rocks in Table bay in 1737: it meaſured about ſeventeen feet in length, and as many in circumference; his head nearly reſembled that of a lion in ſhape, but had no hair, nor had he either hair or ſcales on his body. The tongue was all fat in a manner, and weighed above fifty pounds. The colour of his ſkin was yellowiſh. Before, he had two ſhort legs footed like a gooſe: in the place of hind legs, he had two broad fins, each about eighteen inches long: his body tapered to a tail, ending like a half moon. Several barrels of oil were extracted from him.

The torpedo, or cramp-ray, found at the cape, is a very ſingular production of nature. The body is circular, the ſkin ſoft, ſmooth, and yellow, marked with little annular ſpots; the eyes ſmall, and the tail tapering. It is of different ſizes, and weighs from five to fifteen pounds. The narcotic or benumbing quality of this fiſh was known to the antients, and hath furniſhed matter of ſpeculation to the philoſophers of all ages. If a perſon touches it when alive, it inſtantly deprives him of the uſe of his arm, and even has the ſame effect if he touches it with a ſtick. Kempfer, in ſpeaking of this creature, ſays, "The inſtant I touched it with my hand, I felt a terrible numbneſs in my arm, and as far up as my ſhoulder. Even if one treads upon it with a ſhoe on, it effects not only the leg, but the thigh upwards. They who touch it with the feet are ſeized with a ſtronger palpitation than even they who touch it with the hand: this numbneſs bears no reſemblance to that which we feel when a nerve is a long time preſſed, and the foot is ſaid to be aſleep: it rather appears to be like a ſudden vapour, which paſſing through the pores in an inſtant, penetrates to the very ſprings of life, from whence it diffuſes itſelf all over the body, and gives real pain. The nerves are ſo affected, that the perſon ſtruck imagines all the bones of his body, and particularly thoſe of the limb that received the blow, are driven out of joint. All this is accompanied with an univerſal tremor, a ſickneſs of the ſtomach, a general convulſion, and a total ſuſpenſion of the faculties of the mind. In ſhort, ſuch is the pain, that all the force of our promiſes and authority could not prevail upon a ſeaman to undergo the ſhock a ſecond time. A negro indeed, that was ſtanding by, readily undertook to touch the torpedo, and was ſeen to handle it without feeling any of its effects. He informed me, that his whole ſecret conſiſted in keeping his breath: the torpedo was harmleſs; but when we breathed ever ſo little, its power took place. However, experience has ſince proved, that this expedient will not always prevail, as the ſhock hath been ſometimes found very great, even when the breath was held; but climates in this may make a difference.

It has been obſerved, that the powers of this fiſh decline with its ſtrength, and intirely ceaſe when it expires. This benumbing faculty is of double uſe to the torpedo; firſt, it enables it to get its prey with greater facility, by rendering other fiſhes inſenſible with its touch, and conſequently incapable of getting from it; and ſecondly, it is an admirable defence againſt its enemies, as by numbing a fiſh of ſuperior force with its touch, it can eaſily eſcape. The narcotic power of the torpedo is greater in the female than the male. According to Appian, it will benumb the fiſherman through the whole extent of hook, line, and rod. The fleſh of this remarkable fiſh having, however, no pernicious quality, is eaten by the people at the cape, in common with others.

SECT. IV

Treating of the Perſons and Habits of the HOTTENTOTS, their Food, Camps, Government, Forces, method of Fiſhing, Swimming, Marriages, Burials, Religion, &c.

THERE are ſixteen Hottentot nations, which inhabit this ſouthern promontory; at leaſt, there are ſo many that hold a correſpondence with the Dutch, though it is preſumed there are many more to the northward.

The ſtature of the Hottentot men is from five to ſix feet in height. Their bodies are proportionable, and well made: they are ſeldom either too fat or lean, and ſcarce ever any crooked or deformed perſons amongſt them, any farther than they diſfigure their children themſelves, by flatting and breaking the griſtles of their noſes, looking on a flat noſe as a beauty. Their heads as well as their eyes, are rather of the largeſt: their lips are naturally thick; their hair black and ſhort like the negroes, and they have exceeding white teeth: and after they have taken a great deal of pains with greaſe and ſoot to darken their natural tawny complexions, reſemble the negroes pretty much in colour. The women are much leſs than the men; and, what is moſt remarkable in them, is a callous flap or ſkin that falls over the pudenda, and in a manner conceals it. The report of which uſually excites the curioſity of the European ſailors, to viſit the Hottentot villages near the cape, where a great many of thoſe ladies, on ſeeing a ſtranger, will offer to ſatisfy his curioſity, for a halfpenny, before a crowd of people, which perfectly ſpoils the character that Mr. Kolben has given of their modeſty.

The men cover their heads with handfuls of greaſe and ſoot mixed together; and going without any thing elſe on their heads in ſummer-time, the duſt ſticks to it, and makes them a very filthy cap, which they ſay cools them, and preſerves their heads from the ſcorching heat of the ſun; and in the winter, they wear flat caps of cat-ſkin or lamb-ſkin, half dried, which they tie with a thong of the ſame leather under their chins. The men alſo wear a kroſſe or mantle, made of ſheep-ſkins or other ſkins, over their ſhoulders, which reaches to the middle; and, being faſtened with a thong about their neck, is open before. In winter they turn the woolly or hairy ſides next their backs, and in ſummer the other: this ſerves the man for his bed at night; and this is all the winding ſheet or coffin he has when he dies. If he be a captain of a village, or chief of his nation, inſtead of a ſheep-ſkin, his mantle is made of tyger-ſkins, wild-cat-ſkins, or ſome other ſkins they ſet a value upon: but though theſe mantles reach no lower, generally, than their waiſts, yet there are ſome nations who wear them as low as their legs, and others that have them touch the ground.

The man alſo hangs about his neck a greaſy pouch, in which he keeps his knife, his pipe and tobacco, and ſome dahka (which intoxicates like tobacco) and a little piece of wood, burnt at both ends, as a charm againſt witchcraft. He wears alſo three large ivory rings on his left arm, to which he faſtens a bag of proviſions when he travels. He carries in his right hand two ſticks, the firſt called his kirri, which is about three feet long, and an inch thick, but blunt at both ends; the other, called his rackum-ſtick, about a foot long, and of the ſame thickneſs, but has a ſharp point, and is uſed as a dart, to throw at an enemy or wild beaſt; which he ſeldom miſſes, if he be within diſtance. In his left hand he has another ſtick, about a foot long, to which is faſtened a tail of a fox or wild cat; and this ſerves him as a handkerchief to wipe off the ſweat. They wear a kind of ſandals, alſo made of the raw hide of an ox or elephant, when they are obliged to travel through ſtony countries; and ſometimes have buſkins, to preſerve their legs from buſhes and briars: but ordinarily their legs and thighs have no covering.

The women wear caps, the crowns whereof are a little raiſed; and theſe are made of half dried ſkins, and tied under their chins. They ſcarce ever put them off night or day, winter or ſummer. They uſually wear two kroſſes or mantles, one upon another, and, as theſe are only faſtened with a thong about their necks, they appear naked down to the middle: but they have an apron larger than that of the men to cover them before, and another of ſtill larger dimenſions that covers their hind parts. About their legs they wrap thongs of half dried ſkins, to the thickneſs of a jack-boot, which are ſuch a load to them, that they lift up their legs with difficulty, and walk very much like a trooper in jack-boots: this ſerves both for a diſtinction of their ſex, and for ornament. But this is not all their finery: if they are people of any figure, inſtead of a ſheep ſkin, they wear a tyger-ſkin, or a mantle of wild-cat-ſkin. They have alſo a pouch hanging about their necks, in which they alſo carry ſomething to eat, whether they are at home or abroad, with their dahka, tobacco and pipe. But the principal ornaments both of men and women are braſs or glaſs beads, with little thin plates of glittering braſs and mother of pearl, which they wear in their hair, or about their ears. Of theſe glaſs or braſs beads ſtrung, they alſo make necklaces, bracelets for the arms, and girdles, wearing ſeveral ſtrings of them about their necks, waiſt, and arms, chuſing the ſmalleſt beads for their necks: thoſe are fineſt that have moſt ſtrings of them, and their arms

are

are ſometimes covered with bracelets from the wriſt to the elbow. The largeſt beads are on the ſtrings about the middle: in theſe they affect a variety of colours, all of which the Dutch furniſh them with, and take their cattle in return.

There is another kind of ornament peculiar to the men; and that is, the bladder of any wild beaſt they have killed, which is blown up, and faſtened to the hair as a trophy of their valour.

Both men and women powder themſelves with a duſt they call bachu; and the women ſpot their faces with a red earth or ſtone (as ours do with black patches) which is thought to add to their beauty, by the natives; but, in the eyes of Europeans, renders them more frightful and ſhocking than they are naturally.

But, as part of their dreſs, we ought to have mentioned, in the firſt place, the cuſtom of daubing their bodies, and the inſide of their caps and mantles, with greaſe and ſoot. Soon after their children are born, they lay them in the ſun, or by the fire, and rub them over with fat or butter, mixed with ſoot, to render them of a deeper black, it is ſaid; for they are naturally tawny: and this they continue to do almoſt every day of their lives, after they are grown up, not only to increaſe their beauty, but to render their limbs ſupple and pliable. As ſome nations pour oil upon their heads and bodies, ſo theſe people make uſe of melted fat: you cannot make them a more acceptable preſent than the fat or ſcum of the pot that meat is boiled in, to anoint themſelves. Several of theſe Hottentots coming on board our ſhip, ſays the author, as ſoon as we arrived at the cape, addreſſed themſelves in the firſt place to the cook, for ſome of the fat he had ſkimmed off his boiling coppers; which being gratified in, they immediately clapped it on their heads by handfuls; which confirmed us in the opinion of their naſtineſs, of which we had heard ſo much.

Nor are the Hottentots more cleanly in their diet than in their dreſs; for they chooſe the guts and entrails of cattle and of ſome wild beaſts (with very little cleanſing), rather than the reſt of the fleſh, and eat their meat half boiled or broiled; but their principal food conſiſts of roots, herbs, fruits or milk: they ſeldom kill any of their cattle, unleſs at a feſtival; they only feed on ſuch as die of themſelves, either of diſeaſes or old age, or on what they take in hunting; and, when they are hard put to it, they will eat the raw leather that is wound about the womens legs, and even ſoles of ſhoes; and, as their mantles are always well ſtocked with lice of an unuſual ſize, they are not aſhamed to ſit down in the public ſtreets at the cape, pull off the lice, and eat them. And we ought to have remembered, that they boil their meat in the blood of beaſts when they have any of it.

They rather devour their meat than eat it, pulling it to pieces with their teeth and hands, diſcovering a canine appetite and fierceneſs: they abſtain, however, from ſwinesfleſh, and ſome other kinds of meat, and from fiſh that have no ſcales, as religiouſly as ever the Jews did. And here it may not be improper to ſay ſomething of the management of their milk and butter: they never ſtrain their milk, but drink it with all the hairs and naſtineſs with which it is mixed in the milking by the Hottentot women. When they make butter of it, they put it into ſome ſkin made in the form of a ſoldier's knapſack, the hairy ſide inwards; and then two of them taking hold of it, one at each end, they whirl and turn it round till it is converted into butter, which they pot up for anointing themſelves, their caps and mantles with, for they eat no butter; and the reſt they ſell to the Dutch, without clearing it from the hairs and dirt it contracts in the knapſack. The Hollanders, when they have it indeed, endeavour to ſeparate the naſtineſs from it, and ſell it to the ſhipping, that arrives there, frequently for butter of their own making; and ſome they eat themſelves (but ſurely none but a Dutchman could eat Hottentot butter) and the dregs and dirt that is left they give to their ſlaves; which having been found to create diſeaſes, the governor of the cape ſometimes prohibits their giving their ſlaves this ſtuff by public edict; which is not, however, much regarded. The butter-milk, without any manner of cleaning or ſtraining, the Hottentots drink themſelves; giving what they have to ſpare, to their lambs and calves.

The uſual drink of the Hottentots is cow's milk or water, and the women ſometimes drink ewe's milk; but this the men never touch: and it is obſerved, that the women are never ſuffered to eat with the men, or come near them, during the time of their menſes.

Since the arrival of the Dutch among them, it appears that the Hottentots are very fond of wine, brandy, and other ſpirituous liquors: theſe, and the baubles already mentioned, the Hollanders truck for their cattle; and though a Hottentot will turn ſpit for a Dutchman half a day for a draught or two of four wine, yet do they never attempt to plant vineyards (as they ſee the Dutch often do) or think of making wine themſelves.

We ſhall proceed, in the next place, to give an account of their towns and houſes, or rather, their camps and tents.

The Hottentots, like the Tartars and Arabs, remove their dwellings frequently for the conveniency of water and freſh paſture: they encamp in a circle formed by twenty or thirty tents, and ſometimes twice the number, contiguous to each other; within the area whereof they keep their leſſer cattle in the night, and the larger on the outſide of their camp: their tents, or, as ſome call them, houſes, are made with ſlender poles, bent like an arch, and covered with mats or ſkins, and ſometimes both: they are of an oval figure, the middle of the tent being about the height of a man, and decreaſing gradually (the poles being ſhorter) towards each end, the loweſt arch, which is the door or entrance, being about three feet high, as is the oppoſite arch at the other end; the longeſt diameter of the tent being about twelve or fourteen feet, and the ſhorteſt ten; and in the middle of the tent is a ſhallow hole about a yard diameter, in which they make their fire, and round which the whole family, conſiſting of nine or ten people of all ages and ſexes, ſit or lie night and day in ſuch a ſmoak (when it is cold, or they are dreſſing of victuals) that it is impoſſible for an European to bear it, there being uſually no vent for the ſmoak but the door, though ſome have ſeen a hole in the top of ſome of their huts, to let out the ſmoak, and give them light. Such a circle of tents or huts as has been deſcribed, is called by the Hottentots a kraal, and ſometimes by the Europeans a town or village; but ſeems to be more properly a camp: for a town conſiſts of more ſubſtantial buildings, and is ſeldom capable of being removed from one place to another; whereas theſe dwellings conſiſt of nothing more than ſmall tent-poles, covered with ſkins or mats, which are moveable, and carried away upon their baggage oxen whenever they remove with their herds to a diſtant paſture.

As to the furniture of their tents; they conſiſt of little more than their mantles which they lie on, ſome other ſkins of wild beaſts they have killed or purchaſed, an earthen pot they boil their meat in, their arms, and perhaps ſome other trivial utenſils. The only domeſtic animals they keep, are dogs, as ugly in their kind as their maſters, but exceedingly uſeful to them in driving and defending their cattle.

The Hottentots are agreed by all to be the lazieſt generation under the ſun: they will rather ſtarve, or eat dried ſkins, or ſhoe ſoles at home, than hunt for their food; and yet, when they apply themſelves to the chace, or any other exerciſe, no people are more active and dextrous than the Hottentots: and they ſerve the Europeans often with the greateſt fidelity and application, when they contract to ſerve them for wages: they are alſo exceeding generous and hoſpitable; they will ſcarce eat a piece of veniſon, or a diſh of fiſh they have catched, or drink their beloved drams alone, but call in their neighbours to partake with them as far as it will go.

The next thing we ſhall enquire into, is the government of the Hottentots; and we find all people agree, that every nation has its king or chief, called konquer, whoſe authority devolves upon him by hereditary ſucceſſion; and that they do not pretend to elect their reſpective ſovereigns. That this chief has the power of making peace or war, and preſides in all their councils and courts of juſtice: but then his authority is ſaid to be limited; and that he can determine nothing without the conſent of the captains of the ſeveral kraals, who ſeem to be the Hottentot ſenate. The captain of every kraal, whoſe office is hereditary alſo, is their leader in time of war, and chief magiſtrate of his kraal in time of peace; and, with the head of every family, determines all civil and criminal cauſes within the kraal; only ſuch differences as happen between one kraal and another, and matters of ſtate, are determined by the king and ſenate. The Dutch, ſince their arrival at the cape, have preſented the king, or chief of every nation of the Hottentots in alliance with them, with a braſs crown; and the captains of each kraal with a braſs-headed cane, which are now the badges of their reſpective offices, formerly they were diſtinguiſhed only by finer ſkins, and a greater variety of beads and glittering trifles.

In their councils their king ſits on his heels in the center, and the captains of the kraals ſit in like manner round

about him. At his acceſſion, it is ſaid, he promiſes to obſerve their national cuſtoms; and gives them an entertainment, killingan ox, and two or three ſheep, upon the occaſion; on wh ch he feaſts his captains, but their wives are only entertained with the broth: but then the next day, we are told, her Hottentot majeſty treats the ladies, and their huſbands are put off in like manner with the ſoup.

The captain of each kraal alſo, at his acceſſion, engages to obſerve the cuſtoms of his kraal, and makes an entertainment for the men, as his lady does the next day for the women; and, though theſe people ſhew their chiefs great reſpect, they allow neither their king or inferior magiſtreates any revenue; they ſubſiſt, as other families do, upon their ſtock of cattle, and what they take in hunting.

As they have no notion of writing or letters, they can have no written laws; but there are ſome antient cuſtoms, from which they ſcarce ever deviate. Murder, adultery and robbery, they conſtantly puniſh with death; and, if a perſon is ſuſpected of any of theſe crimes, the whole kraal join in ſeizing and ſecuring him: but the guilty perſon ſometimes makes his eſcape to the mountains, where robbers and criminals like himſelf, ſecure themſelves from juſtice, and frequently plunder the neighbouring country; for no other kraal or nation of Hottentots will entertain a ſtranger, unleſs he is known to them, and can give a good reaſon for leaving his own kraal.

If the offender is apprehended, the captain aſſembles the people of his kraal in a day or two; who, making a ring, and ſitting down upon their heels, the criminal is placed in the center of them: the witneſſes on both ſides are heard, and the party ſuffered to make his defence: after which, the caſe being conſidered, the captain collects the ſuffrages of the judges; and, if a majority condemn him, the priſoner is executed on the ſpot. The captain firſt ſtrikes him with a truncheon he carries in his hand, and then the reſt of the judges fall upon him and drub him to death: then wrapping up the corpſe in his kroſſe or mantle, it is carried to ſome place diſtant from the kraal, where they bury it.

In civil caſes alſo, the cauſe is determined by a majority of voices, and ſatisfaction immediately ordered to the injured perſon, out of the goods of the perſon that appears to be in the wrong. There is no appeal to any other court: the king and his council, conſiſting of the captains of the kraals, never interpoſe unleſs in matters that concern the public, or where the kraals are at variance.

It may be proper here to add, that the Hottentot's cattle and perſonal eſtate deſcend to his eldeſt ſon: he cannot diſinherit him, or give his effects to his other children; but as for property in lands, or any certain real eſtate, no man has any; the whole country is but one common, where they feed their cattle promiſcuouſly, moving from place to place, to find water or freſh paſture as neceſſity requires.

Even the ſeveral nations have no ſtated bounds; but uſe ſuch tracts of land as their anceſtors did before them: it is true, their reſpective limits ſometimes create great differences between the ſeveral nations, and occaſion bloody wars; which brings us now to treat of their arms, and the arts and ſtratagems they uſe in war.

The arms of a Hottentot are, 1. His lance, which reſembles a half-pike, ſometimes thrown, and uſed as a miſſive weapon; and at others, ſerves to puſh with in cloſe fight, the head or ſpear whereof is poiſoned. 2. His bow and arrows, the arrows bearded and poiſoned likewiſe, when they engage an enemy, or wild beaſt they do not intend for food. Their bows are made of iron, or olive-wood; the ſtring, of the ſinews or guts of ſome animal: the quiver is a long narrow caſe, made of the ſkin of an elephant, elk, or ox, and ſlung at their backs, as ſoldiers ſling their knapſacks. 3. A dart of a foot long, which they throw exceeding true, ſcarce ever miſſing the mark they aim at, though it is not above the breadth of half a crown; theſe alſo are poiſoned, when they engage an enemy, or a wild beaſt that is not to be eaten: and laſtly, when they have ſpent the reſt of their miſſive weapons, they have recourſe to ſtones, ſeldom making a diſcharge in vain; and, what is moſt remarkable in their ſhooting or throwing arrows, darts, or ſtones, they never ſtand ſtill, but are all the while ſkipping and jumping from one ſide to the other, poſſibly to avoid the ſtones and darts of the enemy.

They are all foot, and never engage on horſeback; but have diſciplined bulls or oxen taught to run upon the enemy, and to toſs and diſorder them; which theſe creatures will do with the utmoſt fury on the word of command, not regarding the weapons that are thrown at them: for though the Hottentots have numbers of large elephants in their country, they have not yet learned the art of taming them, or training them up to war, as the military men in the Eaſt Indies do.

Every able bodied man is a ſoldier, and poſſeſſed of a ſet of ſuch arms as have been deſcribed; and on the ſummons of his prince, appears at the rendezvous with all imaginable alacrity and contempt of danger, and every man maintains himſelf while the expedition laſts. As their officers, civil and military, have no pay; ſo neither do the private men expect any; a ſenſe of honour, and the public good, are the ſole motives for hazarding their lives in their country's ſervice.

In war, the Hottentots have very little conception of diſcipline, nor indeed is it poſſible they ſhould; for the only method of raiſing an army, is, for the kraal captains to order the people to follow them; the only method of maintaining one, is by hunting as they march: and the only way of deciding a diſpute between two nations, is, by fighting one battle; the ſucceſs of which determines the whole affair. In an engagement, they attack with an hideous yell, fight in great confuſion, and put more confidence in their war oxen than their own ſkill: for, as we have hinted before, theſe animals, when trained to the buſineſs, are better diſciplined, and much more formidable, than the Hottentots themſelves.

The principal inducement to their entering into a war at any time, is the preſervation of their territories. As they have no land marks or written treaties to adjuſt the exact bounds of every nation, they frequently diſagree about the limits of their reſpective countries; and, when any neighbouring nation grazes their cattle upon a ſpot of ground another claims, ſatisfaction is immediately demanded; and, if it be not given, they make repriſals, and have recourſe to arms. But this is not the only occaſion of wars amongſt the Hottentots: they are not always that chaſte and virtuous people Mr. Kolben has repreſented them; ſome tempting Helen (for Hottentots poſſibly may appear amiable in one another's eyes, with all the greaſe and carrion they are cloathed with) has ſmitten a neighbouring chief, perhaps, who prevails on his people to aſſiſt him in the rape of the deſired female; and this frequently ſets their tribes together by the ears. The ſtealing each others cattle is another cauſe of deadly ſtrife; for though each kraal puniſhes theft among themſelves with death, yet it is looked upon as an heroic act to rob thoſe of another nation; at leaſt the body of the people are ſo backward in giving up the offender, that they frequently come to blows upon it.

When they march into the field, every man follows his particular captain, the chief of his kraal: they obſerve little order; neither do they take the precaution of throwing up trenches to defend themſelves: and what is ſtill more ſurpriſing, have no ſhields to defend themſelves againſt miſſive weapons, though ſome ſay they will ward off a lance or dart, and even a ſtone, with a little truncheon about a foot long, which they carry in their hand.

The ſeveral companies advance to the charge, at the command of their chief; and, when thoſe in the front have ſhot one flight of arrows, they retreat and make room for thoſe in the rear; and, when they have diſcharged, the former advance again, and thus alternately they continue till they have ſpent all their miſſive weapons, and then they have recourſe to ſtones, unleſs they are firſt broken and diſperſed by a troop of bulls; for the wiſe chiefs and generals of each ſide, according to the European practice, remaining on an eminence in the rear, to obſerve the fortune of the day, when they obſerve their people are hard preſſed, give the word of command to their corpſe de reſerve of bulls, who break into the body of the enemy, and generally bring all into confuſion; and that ſide that preſerves their order beſt, on this furious attack of theſe bulls of Baſan, are ſure to be victorious. The ſkill of the general ſeems to lie chiefly in managing his bulls; who never charge each other, but ſpend their whole rage upon the men, who have, it ſeems, no dogs of Engliſh breed to play againſt them, or this ſtratagem would be of little ſervice: but we ſhould have obſerved, that as the battle always begins with horrid cries and noiſe, which perhaps ſupplies the place of drums and trumpets; ſo the victors inſult with no leſs noiſe over the conquered enemy, killing all that fall into their hands: but they ſeldom fight more than one battle, ſome neighbouring power uſually interpoſing to make up the quarrel; and of late the Dutch perform this good office, between ſuch nations as lie near their ſettlements. From their wars with each other, we naturally proceed to their wars with wild beaſts, with which their country abounds more than any other: theſe people, it

ſeems, eſteem it a much greater honour to have killed one of theſe foes to mankind, than an enemy of their own ſpecies.

There are inſtances, of a Hottentot's engaging ſingly with the fierceſt wild beaſts, and killing them; but uſually the whole kraal or village aſſemble, when a wild beaſt is diſcovered in their neighbourhood, and, dividing themſelves in ſmall parties, endeavour to ſurround him. Having found their enemy, they uſually ſet up a great cry, at which the frighted animal endeavours to break through and eſcape them: if it prove to be a rhinoceros, an elk, or elephant, they throw their lances at him, darts and arrows being too weak to pierce through their thick hides: if the beaſt be not killed at the firſt diſcharge, they repeat the attack, and load him with their ſpears; and, as he runs with all his rage at the perſons who wound him, thoſe in his rear follow him cloſe, and ply him with their ſpears, on whom he turns again, but is overpowered by his enemies, who conſtantly return to the charge, when his back is towards them, and ſcarce ever fail of bringing the creature down, before he has taken his revenge on any of them. How hazardous ſoever ſuch an engagement may appear to an European, theſe people make it their ſport; and have this advantage, that they are exceeding ſwift of foot, and ſcarce ever miſs the mark they aim at with their ſpears: if one of them is hard preſſed by the brute, he is ſure to be relieved by his companions, who never quit the field till the beaſt is killed, or makes his eſcape: though they ſometimes dexteroully avoid the adverſary, they immediately return to the charge, ſubduing the fierceſt either by ſtratagem or force.

In the attacking a lion, a leopard, or a tyger, their darts and arrows are of ſervice to them; and therefore they begin the engagement at a greater diſtance, than when they charge an elephant or rhinoceros; and the creature has a wood of darts and arrows upon his back, before he can approach his enemies, which make him fret and rage and fly at them with the greateſt fury; but thoſe he attacks, nimbly avoid his paws, while others purſue him, and finiſh the conqueſt with their ſpears. Sometimes a lion takes to his heels, with abundance of poiſoned darts and arrows in his fleſh; but, the poiſon beginning to operate, he ſoon falls, and becomes a prey to thoſe he would have preyed upon.

The elephant, the rhinoceros, and the elk, are frequently taken in traps and pitfalls, without any manner of hazard. The elephants are obſerved to go in great companies to water, following in a file one after another, and uſually take the ſame road till they are diſturbed: the Hottentots therefore dig pits in their paths, about eight feet deep, and four and five over; in which they fix ſharp ſtakes pointed with iron, and then cover the pit with ſmall ſticks and turf, ſo as it is not diſcernable: and as theſe animals uſually keep in one track, frequently one or other of them falls in with his fore feet into the pit, and the ſtake pierces his body; the more he ſtruggles, the deeper the weight of his monſtrous body fixes him on the ſtake. When the reſt of the herd obſerve the misfortune of their companion, and find he cannot diſengage himſelf, they immediately abandon him: whereupon the Hottentots, who lie concealed, in expectation of the ſucceſs of their ſtratagem, approach the wounded beaſt, ſtab him with their ſpears, and cut his largeſt veins, ſo that he ſoon expires; whereupon they cut him to pieces, and, carrying the fleſh home, feaſt upon it as long as it laſts. His teeth they make into rings for their arms, and, when they have any ivory to ſpare, diſpoſe of it to the Europeans. The rhinoceros and elk are frequently taken in pitfalls, as the elephants are.

The Hottentot, who kills any of theſe, or a lion, leopard, or tyger, ſingly, has the higheſt honour conferred upon him, and ſeveral privileges, which belong only to ſuch intrepid heroes. At his return from this hazardous and important ſervice, the men of the kraal depute one of the ſeniors to congratulate him on his victory, and deſire that he will honour them with his preſence; whereupon he follows the old deputy to the aſſembly, whom he finds, according to cuſtom, ſitting upon their heels in a circle; and, a mat of diſtinction being laid for him in the center, he ſets himſelf down upon it: after which the old deputy urines plentifully upon him, which the hero rubs in with great eagerneſs, having firſt ſcratched the greaſe off his ſkin with his nails; the deputy all this while pronouncing ſome words unintelligible to any but themſelves. After this, they light a pipe of tobacco, which they ſmoke and hand one to another till there remain nothing but aſhes in the pipe, and theſe the old deputy ſtrews over the gallant man, who rubs them in as they fall upon him, not ſuffering the leaſt duſt to be loſt. After which the neighbours having ſeveral congratulated him on his advancement to the high honour, they diſperſe, and go to their reſpective tents. The conqueror, afterwards, faſtens the bladder of the furious beaſt he has killed to his hair, which he ever after wears as a badge of his knighthood; and is from that time eſteemed by every one a brave man, and a benefactor to his country.

Being retired to his tent, his neighbours ſeem to vie which of them ſhall oblige him moſt, and are, for the next three days, continually ſending him one delicious morſel or other; nor do they call upon him to perform duty during that time, but ſuffer him to indulge his eaſe: but, what is ſtill more unaccountable, his wife, or wives, (for he may have more than one) are not allowed to come near him for three days after this honour is conferred on him; but they are forced to ramble about the fields, and to keep to a ſpare diet, leſt they ſhould, as Mr. Kolben ſurmiſes, tempt the huſbands to their embraces: but on the third day in the evening, we are told the women return to the tent, are received with the utmoſt joy and tenderneſs; mutual congratulations paſs between them; a fat ſheep is killed, and their neighbours invited to the feaſt, where the proweſs of the hero, and the honour he has obtained, are the chief ſubjects of their converſation.

There is ſcarce any wild beaſt, but the fleſh is good eating, if it be not killed with poiſonous weapons: but the tyger is the moſt delicious morſel; and as the whole kraal partake of the feaſt, the perſon who kills him meets with a double ſhare of praiſe, as he both rids the country of an enemy, and pleaſes their palates. Mr. Kolben relates, that he has himſelf eaten of the fleſh of a tyger, and that it exceeds any veal in the world. But to return to the field ſports of the Hottentots: when they hunt a deer, a wild goat, or a hare, they go ſingly, or but two or three in company, armed only with a dart or two, and ſeldom miſs the game they throw at: yet, as has been obſerved already, ſo long as they have any manner of food left, if it be but the raw hides of cattle, or thoe ſoles, they will hardly be perſuaded to ſtir to get more; though it is true, when they apprehend their cattle in danger from wild beaſts, no people are more active, or purſue the chaſe of them with greater alacrity and bravery.

From hunting, we proceed to treat of their fiſhing; at which, according to Kolben, they are very expert; taking fiſh with angles, nets, and ſpears; and they get a certain fiſh, called rock-fiſh, particularly by groping the holes of the rocks near the ſhore, when the tide is out: theſe are mightily admired by the Europeans; but having no ſcales, the Hottentots will not eat them.

When they throw their lines into the ſea, Kolben pretends they allure the fiſh towards the bait, by whiſtling and other noiſes; which we ſhall not encourage our readers to have much faith in, our fiſhermen imagining that a noiſe frights away the fiſh: however, both ſeem to be of opinion, that fiſh can hear in the water; and if this may be depended on, we cannot ſee why fiſh, as well as ſerpents, may not be charmed with muſic, or ſomething like it. Certain it is, the ſnakes in the Eaſt Indies will riſe up and dance to the voice of a girl, and the muſic of a very ill inſtrument. But ſtill, we muſt confeſs, we are in doubt, whether fiſh can hear in the water; and if they can, whether they may be charmed with ſounds of any kind.

But the manner of the Hottentots ſwimming, is as particular as of his fiſhing; for he ſtands upright in the ſea, and rather walks and treads the water, than ſwims upon it, his head, neck, and ſhoulders being quite above the waves, as well as his arms, and yet they move faſter in the water than any European can; even in a ſtorm, when the waves run high, they will venture into the ſea, riſing and falling with the waves like a cork. However, it is obſerved by our author, that before they venture either into the ſea, or a river, they mutter ſomething to themſelves, which he ſuppoſes to be a ſhort prayer; adding, that when they have put up their fiſh in ſkins, they will ſwim, or rather walk with a great load of them upon their heads, through the waves to the ſhore.

The next thing we ſhall conſider is the marriages of the Hottentots: and it ſeems, every young fellow has ſuch regard to the advice of his father, (or rather the laws and cuſtoms of the country require it) that he always conſults the old man before he enters into a treaty with his miſtreſs, and if he approves the match, the father and ſon, in the firſt place, pay a viſit to the father of the damſel, with whom having ſmoaked, and talked of indifferent things for ſome time, the father of the lover opens the matter to the virgin's father, who having conſulted his wife, returns

an anſwer immediately to the propoſal: if it be rejected, the lover and his father retire without more words; but if the offer be approved by the old folks, the damſel is called, and acquainted, that they have provided a huſband for her; and ſhe muſt ſubmit to their determination, unleſs ſhe can hold her lover at arms end, after a night's ſtruggling: for we are told, that when the parents are agreed, the two young people are put together, and if the virgin loſes her maidenhead, ſhe muſt have the young fellow, though ſhe be never ſo averſe to the match: but then ſhe is permitted to pinch and ſcratch, and defend herſelf as well as ſhe can; and if ſhe holds out till morning, the lover returns without his miſtreſs, and makes no further attempts; but if he ſubdues her, ſhe is his wife to all intents and purpoſes, without further ceremony; and the next day the man kills a fat ox, or more, according to his circumſtances, for the wedding dinner, and the entertainment for their friends, who reſort to them upon the occaſion, bringing abundance of good wiſhes for the happineſs of the married couple, as is uſual among politer people. The ox is no ſooner killed, but the company get each ſome of the fat, and greaſe themſelves with it from head to foot, powdering themſelves afterwards with buchu, and the women, to add to their charms, make red ſpots with oker, or red chalk, on their black faces.

The entertainment being ready, the men form a circle in the area of the kraal (for a large company cannot ſit within doors) and the women form another; the bridegroom ſitting in the middle of the men's circle, and the bride in the center of her own ſex. Then the prieſt enters the men's circle, and urines upon the bridegroom, which the young man rubs in very joyfully. He then goes to the ladies circle, where he does the bride the ſame favour. Then the old man goes from the bride to the bridegroom, till he has exhauſted all his ſtore. The prieſt then pronounces his benediction in theſe words: "That they may live long and happily together; that they may have a ſon before the end of the year; and that he may prove a brave man, and an expert huntſman, and the like." After which, the meat is ſerved up in earthen pots glazed with greaſe; and ſome of them having knives ſince the Europeans came amongſt them, they divide their meat pretty decently; but more of them make uſe of their teeth and claws, pulling it to pieces, and eating it as voraciouſly as ſo many dogs, having no other plates or napkins than the ſlinking corners of the napkins they wear; and ſea ſhells without handles uſually ſerve them for ſpoons. When they have dined, a pipe is filled with tobacco, which they ſmoke all round, every one taking two or three whiffs, and then handing it to the next. It is ſingular, that though the Hottentots are immoderately fond of ſpirituous liquors, muſic and dancing, yet they do not drink the firſt, nor practiſe the latter at weddings.

The Hottentots allow of polygamy; but ſeldom have more than three wives at a time; and it ſeems it is death to marry or lie with a firſt or ſecond couſin, or any near relation. A father ſeldom gives his ſon more than two or three cows, and as many ſheep, upon his marriage, and with theſe he muſt make his way in the world; and we do not find they give more with their daughters than a cow, or a couple of ſheep; but the latter are to be returned to the father, if the bride dies without having had any children: on the contrary, if ſhe ever bore any children to her huſband, the portion becomes his; even though the children are defunct.

They do not leave their daughters, or younger ſons, any thing when they die; but all the children depend upon the eldeſt brother, and are his ſervants, or rather ſlaves, when the father is dead, unleſs the elder brother infranchiſe them; nor has the mother any thing to inſiſt on, but what the eldeſt ſon allows her.

As there are no great fortunes among them, they match purely for love; an agreeable companion is all their greateſt men aim at: their chiefs intermarry frequently with the pooreſt man's daughter; and a brave fellow, who has no fortune, does not deſpair of matching with the daughter of a prince. Merit, according to Kolben, is much more regarded there than among politer nations.

A widow, who marries a ſecond time, is obliged to cut off a joint of one of her fingers; and ſo for every huſband ſhe marries after the firſt. Either man or woman may be divorced, on ſhewing ſufficient cauſe before the captain and the reſt of the kraal; the woman, however, muſt not marry again, though the man is allowed to marry, and have as many wives as he pleaſes at the ſame time.

A young Hottentot never is maſter of a hut or tent till he marries, unleſs his father dies and leaves him one: therefore the firſt buſineſs the bride and bridegroom apply themſelves to, after their marriage feaſt, is to erect a tent or hut of all new materials, in which work the woman has as great a ſhare as the man; and this taking them up about a week's time, the new married couple are entertained in the mean time in the tents of ſome of their relations.

When they reſort to their new apartment, and come to keep houſe together, the wife ſeems to have much the greateſt ſhare of the trouble of it: ſhe fodders the cattle, milks them, cuts out the firing, ſearches every morning for roots for their food, brings them home, and boils or broils them, while the drone of a huſband lies indolently at home, and will ſcarce give himſelf the trouble of getting up to eat when the food is provided for him by the drudge his wife. The more wives he has, ſtill the more indolent life he leads, the care of making proviſion for the family being thrown upon them.

He will, it is ſaid, in his turn, attend his cattle in the field; but expects every one of his wives ſhould do, at leaſt, as much towards taking care of them as he does. He will alſo, ſometimes, but very rarely, go a hunting with the men of his kraal, and bring home a piece of veniſon, or a diſh of fiſh: but this is not often; and if he is of any handicraft trade, he may work at it two or three hours in a week, and inſtruct his children in the art. He alſo takes upon him to ſell his cattle, and purchaſe tobacco, and ſtrong liquors of the Dutch, with neceſſary tools, beads and other ornaments, for which the Hottentots barter away their cattle: their wives are not permitted to intermeddle in the buſineſs of buying and ſelling, this being the ſole prerogative of the man.

If a woman brings a living ſon into the world, there is great rejoicing: but the firſt thing they do with the child, is to daub it all over with cow-dung; then they lay it before the fire, or in the ſun, till the dung is dried; after which they rub it off, and waſh the child with the juice of certain herbs, laying it in the ſun, or before the fire again, till the liquor is dried in, after which they anoint the child from head to foot with butter, or ſheeps fat melted, which is dried in as the juice was: and this cuſtom of anointing their bodies with fat, they retain afterwards as long as they live. After the child has been thus ſmeared and greaſed, the mother gives it what name ſhe thinks proper, which is uſually the name of ſome wild beaſt, or domeſtic animal. When the woman is well again, and able to leave her hut, ſhe rubs herſelf all over with cow-dung; and this filthy daubing is by theſe delicate people termed a purification. Being thus delightfully perfumed, and elegantly decorated with ſheep's guts, ſhe is permitted to go abroad, or to ſee company at home.

If the woman has twins, and they are girls, the man propoſes it to the kraal, that he may expoſe one of them, either upon pretence of poverty, or that his wife has not milk for them both; and this they uſually indulge one another in; they do the ſame when they have a boy and girl: but always preſerve the boys, though they happen to have two at a birth. The expoſed child is carried to a diſtance from the kraal: and if they can find a cave or hole in the earth, that ſome wild beaſt has made, they put the child alive into it; and then having ſtopped up the mouth of the den with ſtones or earth, leave it there to ſtarve: if they cannot meet ſuch a cavity, they tie the infant to the lower bough of a tree, or leave it in ſome thicket of buſhes, where it is frequently deſtroyed by wild beaſts. They do not deal thus, however, as has been obſerved, by their male children: on the birth of a boy, they kill a bullock: and if they have twins, two bullocks; and make an entertainment for all the neighbourhood, who congratulate the parents on their good fortune: and, as with us, the greateſt rejoicings are on the birth of the firſt ſon.

At about ten years of age, the males are always deprived of their left teſticle; the operation is performed with a dexterity that would ſurprize an European ſurgeon, and bad conſequences are ſeldom or never known to enſue. A ſheep is killed, and great rejoicings are made upon the occaſion; but it is to be obſerved, that the men devour all the meat, and allow the women nothing but the broth. The reaſon of this abſurd cuſtom of mutilating their male youth is unknown: ſome of the Hottentots ſay, it is to make them run ſwift; but the greateſt part of theſe people give their general reaſon, which they uſe upon all occaſions, when they are unable to account for any of their abſurd practices; namely, That it is the Hottentot cuſtom; and has been practiſed by their anceſtors time immemorial.

At the age of eighteen, the male Hottentots, being deemed

deemed men, are thus admitted into male ſociety: the men of the village (if it may be ſo called) ſquat down, and form a circle, as is uſual upon moſt public occaſions, the youth ſquats down without the circle, at ſome diſtance. The oldeſt man of the kraal then riſes from the circle, and, having obtained the general conſent for the admiſſion of a new member, he goes to the youth, acquaints him with the determination of the men of the kraal, and concludes his harangue with ſome verſes, which admoniſh him to behave like a man for the future. The youth being then daubed with ſoot and fat, and well ſprinkled with urine, is congratulated by the company in general in a kind of chorus, which contains the following wiſhes: that good fortune may attend him, that he may live long, and thrive daily; that he may ſoon have a beard, and many children; till it is univerſally allowed he is a uſeful man to the nation. A feaſt concludes the ceremony; but the youth himſelf is not permitted to participate of any part thereof till all the reſt are ſerved.

Being thus admitted into male ſociety, it is expected that he ſhould behave ill to women in general, and to his mother in particular, in order to evince his contempt of every thing feminine. Indeed it is uſual for a youth as ſoon as admitted, to go to his mother's hut, and cudgel her heartily, for which he is highly applauded by the whole kraal; and even the ſuffering parent herſelf admires him for his ſpirit, and proteſts that the blows do not give her ſo much pain, as the thoughts of having brought ſuch a mettleſome ſon into the world afford her pleaſure. The more ill treatment he gives his mother, the more eſteem he obtains; and every time he ſtrikes her ſhe is in the higheſt raptures, and thanks Providence for having bleſſed her with ſuch a ſpirited child. So egregiouſly will cuſtom counteract the very dictates of nature, and impoſe upon the underſtanding of the ignorant.

A Hottentot never obtains an eſtabliſhment, or, in other words, never is permitted to have a hut or cattle, previous to his marriage, but lives immediately under the direction of his father after eighteen, as he did with his mother before that age. As ſoon as he is married, his wife, as we hinted above, becomes his ſlave, does all the drudgery, and has all the care of domeſtic affairs upon her hands. The huſband ſinks into ſupineneſs, and gives himſelf totally up to idleneſs; if he ever ſtirs, it is now-and-then to go a fiſhing or hunting for a little amuſement, or, if he knows a mechanical buſineſs, he may perhaps teach it to his eldeſt ſon. Upon no other occaſion will he quit his beloved indolence, or ſhew the leaſt alacrity, unleſs indeed he happens to receive an invitation to get drunk. Then joy ſparkles in his eyes and elates his heart, and he thinks he never can make too much haſte to render himſelf a greater brute than he naturally is.

It may now be proper to ſay ſomething of thoſe officers amongſt them, which the Europeans generally denominate their prieſts. Theſe perſons are generally called ſurri or maſter, and are elected by every kraal: they are the men who perform the ceremony of making water at their weddings, and other feſtivals; the ſurri alſo is the perſon who extracts the left teſticle from the young males at eight years of age; for all which he has no ſtated revenue, but a preſent now and then of a calf or a lamb, and makes one at their entertainments.

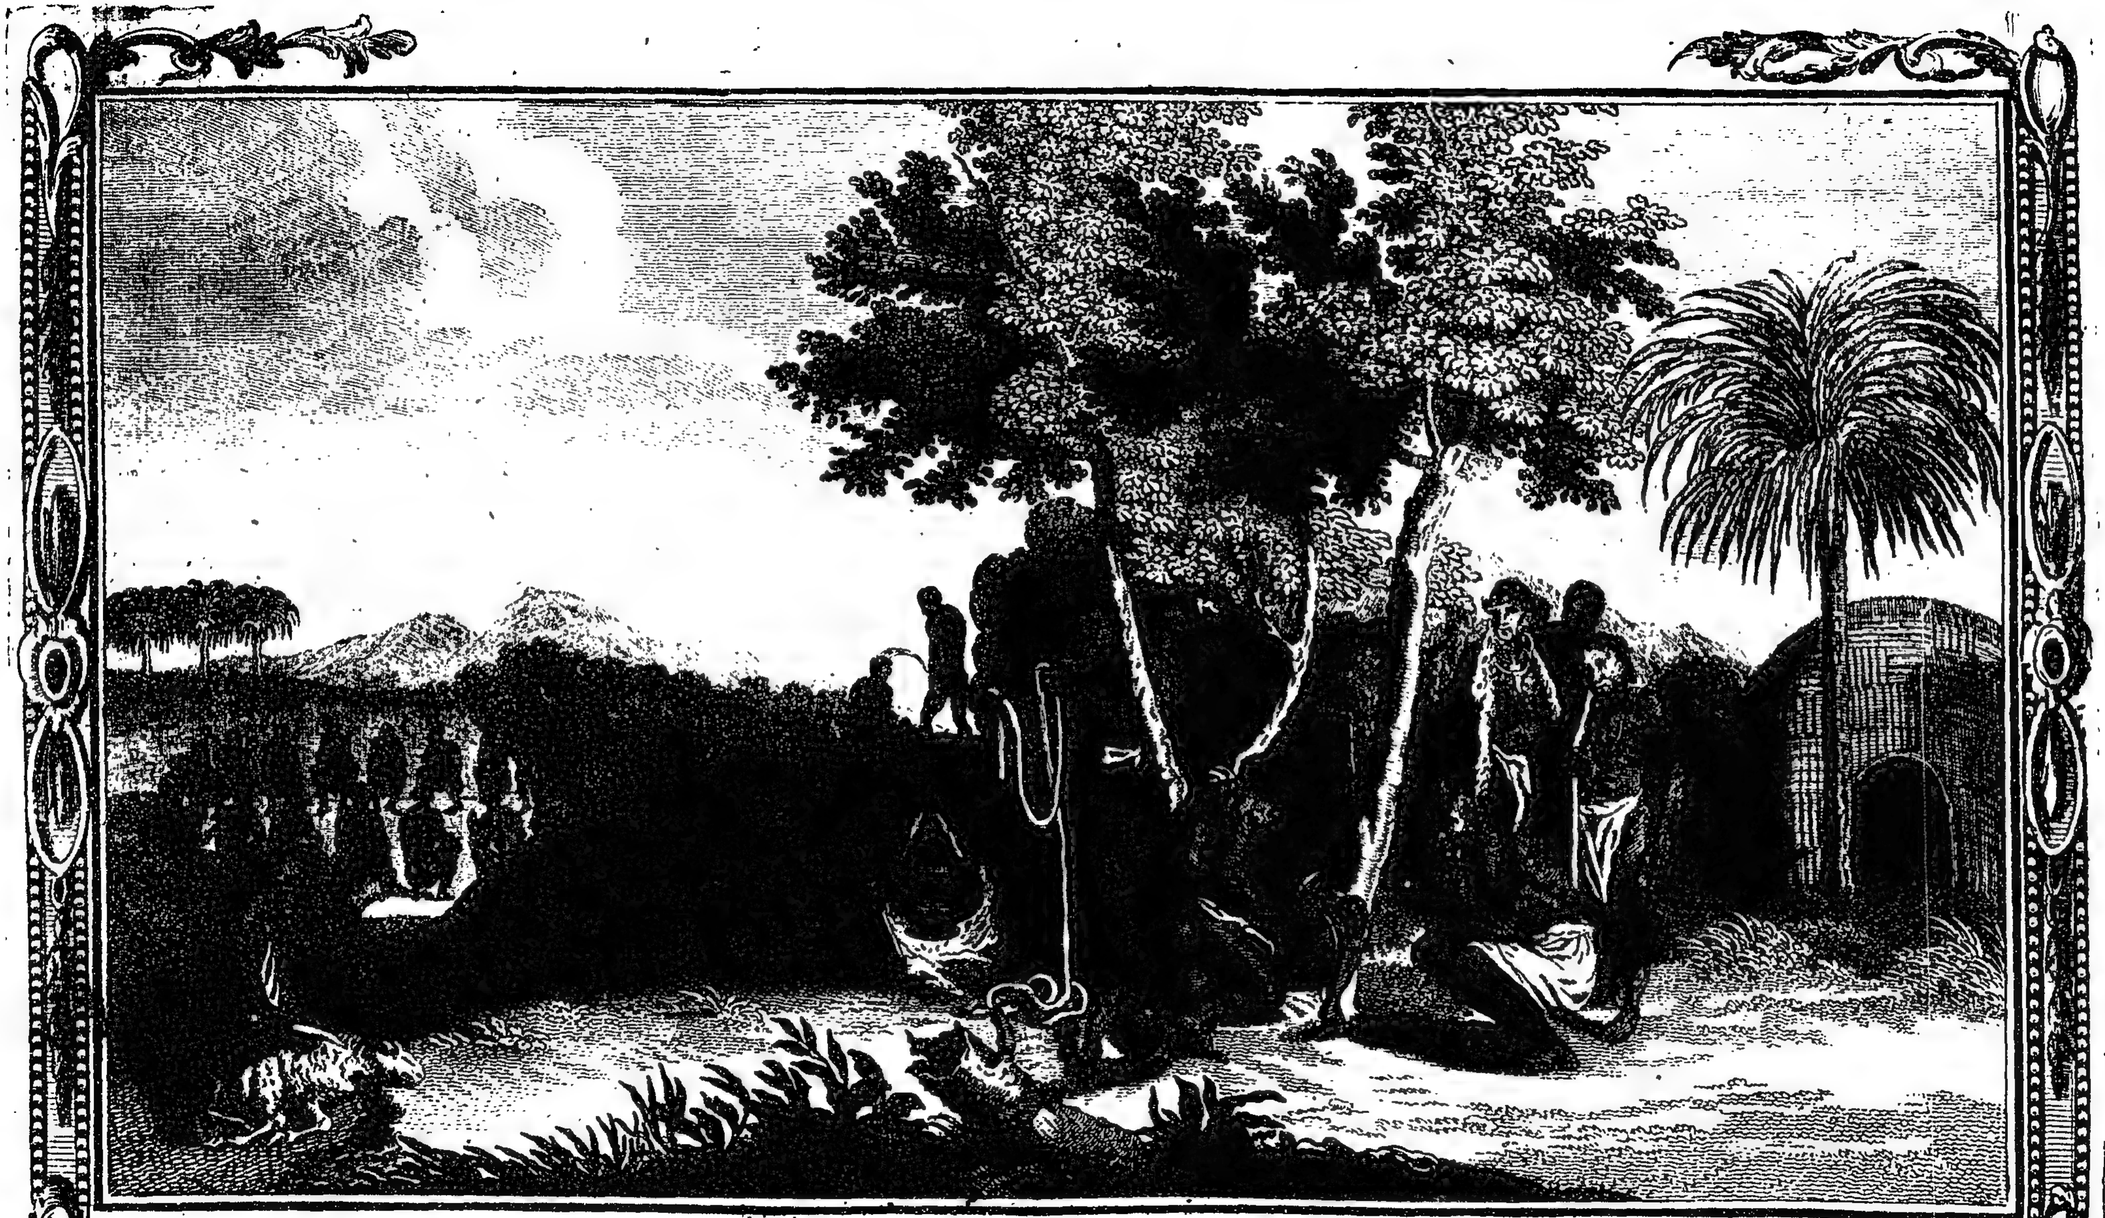
But every kraal alſo has its phyſician, as well as its prieſt, who are perſons that have ſome ſkill in phyſic and ſurgery, and particularly in the virtues of ſalutary herbs: theſe alſo are choſen by a majority of voices, and make it their buſineſs to look after the people's health; but have no other reward for their pains, than voluntary preſents. And ſuch is the opinion of the Hottentots of theſe phyſicians, that, if they cannot effect a cure, they conclude they are certainly bewitched, as the doctor himſelf alſo never fails to give out: whereupon application is made to ſome pretended conjurer for relief; and if the patient happens to recover, it gives the cunning man, as we call him, a mighty reputation.

The Hottentot phyſician and ſurgeon, as has been hinted, is the ſame perſon; and though theſe gentlemen ſcarce ever ſaw a body diſſected, it is ſaid, they have pretty good notions of anatomy: they cup, bleed, make amputations, and reſtore diſlocated limbs, with great dexterity; cholicks and pains in the ſtomach they relieve by cupping. Their cup is an horn of an ox, the edges cut very ſmooth: the doctor, having ſucked the part where the pain lies, claps on the cup; and, after it has remained ſome time, till he thinks the part is inſenſible, he pulls off the horn-cup, and makes two or three inciſions, half an inch in length, with a common knife, having no other inſtrument: after which, he applies the cup again, which falls off when it is full of blood, but the patient it is ſaid, ſuffers great pain in the operation. If the pain removes to another part, they rub it with hot fat; and, if that does not eaſe the pain, they uſe the cup again on the part laſt affected; and, if the ſecond cupping does not relieve the patient, they give him inward medicines, being infuſions or powders of certain dried roots and herbs.

They let blood in plethories and indiſpoſitions of that kind, having no other inſtrument than a common knife; and, if bleeding will not effect the cure, they give the patient phyſic. For head-achs, which they are pretty much ſubject to in calm weather, they ſhave their heads in furrows, as they do when they are in mourning; but a briſk gale of wind uſually carries off the head-ach, without any other application; and this they do not often want at the cape.

They ſeldom make any other amputations, than of the fingers of ſuch women as marry a ſecond time, or oftener; and, in this caſe, they bind the joint below that which is to be cut off very tight, with a dried ſineiw, and then cut off the joint at once with a knife, ſtopping the blood with the juice of myrrh-leaves; after which, they wrap up the finger in ſome healing herbs, and never any part of the finger receives any hurt beyond the amputation.

They have little or no ſkill in ſetting fractured limbs; but are pretty dexterous at reſtoring of diſlocations.



The Hottentot phyſician, in caſe he meets with a foul ſtomach, gives the juice of aloe leaves; and, if one doſe will not do, repeats it two or three days; and, for any inward ail, they give chiefly the powders or infuſions of wild ſage, wild figs and fig leaves, buchu, garlic or fennel: but whatever the diſeaſe be, it ſeems the patient never fails to ſacrifice a bullock, or a ſheep, upon his recovery.

Theſe people are exceedingly ſuperſtitious, and fond of divination. In order to know the fate of a ſick perſon, they flay a ſheep alive; after having its ſkin intirely taken off, if the poor animal is able to get up and run away, it is deemed a propituous omen; but, on the contrary, if the excruciating pain kills it, they imagine that the patient will certainly die, and accordingly give him up intirely to nature, without taking any farther care of him.

Whatever they believe of departed ſouls, they have no notion either of heaven or hell, or of a ſtate of rewards or puniſhments; this is evident from the behaviour of a dying Hottentot, and thoſe about him: neither he nor his friends offer up any prayers to their gods for the ſalvation of his ſoul; or even mention the ſtate of departed ſouls, or their apprehenſions of his being happy or miſerable after death: however, they ſet up ſuch terrible howlings and ſhriekings, when the ſick man is in his laſt agonies, that they may be heard, ſays our author, at a mile's diſtance; and yet theſe very people are frequently guilty of murdering their antient parents, as well as their innocent children.

When the father of a family is become perfectly uſeleſs and ſuperannuated, he is obliged to aſſign over his ſtock of cattle, and every thing elſe he has in the world, to his eldeſt ſon; and in default of ſons, to his next heir male: after which, the heir erects a tent or hut in ſome unfrequented place, a good diſtance from the kraal or camp he belongs to; and, having aſſembled the men of the kraal, acquaints them with the condition of his ſuperannuated relation, and deſires their conſent to expoſe him in the diſtant hut; to which the kraal ſcarce ever refuſe their conſent. Whereupon a day being appointed to carry the old man to the ſolitary tent, the heir kills an ox, and two or three ſheep, and invites the whole village to feaſt and be merry with him; and at the end of the entertainment, all the neighbourhood come and take a formal leave of the old wretch, thus condemned to be ſtarved or devoured by wild beaſts (which ſeems to be the moſt cruel and ill-natured part of the whole tragedy): then the unfortunate creature is laid upon one of their carriage oxen, and carried to his laſt home, attended to the place, where he is to be buried alive, by moſt of his neighbours. The old man being taken down, and ſet in the middle of the hut provided for him, the company return to their kraal, and he never ſees the face of a human creature afterwards: they never ſo much as enquire whether he was ſtarved to death, or devoured by wild beaſts: he is no more thought of, than if he had never been. In the ſame manner they deal with a ſuperannuated mother; only as ſhe has nothing ſhe can call her own, ſhe has not the trouble of aſſigning her effects to her ſon.

When the Hottentots are upbraided with this unparallelled piece of barbarity, they reply, it would be a much greater

Roberts sculp.

CAFERS or HOTTENTOTS *assembled for the admission of their* YOUTH *to the state of* MANHOOD
At the Cape *of* Good Hope.

greater cruelty to ſuffer an old creature to languiſh out a miſerable life, and to be many years a dying, than to make this quick diſpatch with them; and that it is out of their extreme tenderneſs they put an end to the lives of theſe old wretches; all the arguments in the world againſt the inhumanity of the cuſtom, can make no impreſſion on them: and, indeed, as long as the Dutch have reſided at the Cape, they have not been able to break them of one ſingle cuſtom, or prevail with them to alter any part of their conduct, how barbarous or abſurd ſoever: and, it ſeems, the captain of a kraal is not exempted from ſeeing his funeral ſolemnized in this manner, while he is alive, if he happens to become uſeleſs. And this leads me to treat of ſuch funerals as are ſolemnized after the perſon is really dead.

The ſick man, having reſigned his breath, is immediately bundled up, neck and heels together, in his ſheep-ſkin mantle, exceeding cloſe, ſo that no part of the corpſe appears: then the captain of the kraal with ſome of the ſeniors, ſearch the neighbouring country for ſome cavity in a rock, or the den of a wild beaſt, to bury it in, never digging a grave, if they can find one of theſe within a moderate diſtance. After which, the whole kraal, men and women, prepare to attend the corpſe, ſeldom permitting it to remain above ground more than ſix hours. When all things are ready, all the neighbourhood aſſemble before the door of the deceaſed, the men ſitting down on their heels in one circle, and reſting their elbows on their knees (their uſual poſture) as the women do in another: here they clap their hands, and howl, crying, Bo, bo, bo! (i. e. father) lamenting their loſs. The corpſe then being brought out on that ſide the tent, where the perſon died, and not at the door, the bearers carry him in their arms to the grave, the men and women following in different parties, but without any manner of order, crying all the way, Bo, bo, bo! and wringing their hands, and performing a thouſand ridiculous geſtures and grimaces, which is frequently the ſubject of the Dutchmen's mirth; it being impoſſible, it is ſaid, to forbear laughing at the antick tricks they ſhew on ſuch an occaſion.

Having put the corpſe into the cavity prepared for it, they ſtop up the mouth of it with ant-hills, ſtones, and pieces of wood, believing the ants will feed on the corpſe, and ſoon conſume it. The grave being ſtopped up, the men and women rendezvous again before the tent of the deceaſed, where they repeat their howlings, and frequently call upon the name of their departed friend: after which two of the oldeſt men get up; and one of them going into the circle of the men, and the other into the circle of the women, urine upon every one of the company; and, where the kraals are ſo very large, that two cannot find water enough for this ceremony, they double or treble the number. Then the old men go into the tent of the deceaſed; and, having taken up ſome aſhes from the fire-place, they ſprinkle them upon the bodies of the people, bleſſing them as they go: and if the deceaſed was a perſon of diſtinction, this is acted over again ſeveral days. But we ſhould have remembered, that the ceremony always concludes with an entertainment. If the deceaſed had any cattle, a ſheep is killed on the occaſion; and the caul, being powdered with buchu, is tied about the heir's neck, who is forced to wear it till it rots off, which is no great penance, all ſtinks being perfumes to a Hottentot. All the relations alſo wear the cauls of ſheep about their necks; which it ſeems is their mourning, unleſs the children of the deceaſed are ſo poor that they cannot kill a ſheep; and then they ſhave their heads in furrows of about an inch broad, leaving the hair on of the ſame breadth between every furrow.

It is not an eaſy matter to come at a Hottentot's religious notions; he is ſparing of his words, and laconic in his anſwers upon all occaſions; but when religious topics are introduced, he generally conceals his ſentiments in ſilence. Some on this account have doubted whether the Hottentots have any religion at all: but the moſt intelligent among the Dutch at the Cape, poſſitively affirm, that they believe in a Supreme Being, whom they ſtile Gounya Tequoa, or God of gods, and fancy that his reſidence is beyond the moon. They allow that Gounya Taquoa is a humane benevolent being, yet they have no mode of worſhipping him; for which they give this reaſon, "That he curſed their firſt parents for having greatly offended him, on which account their poſterity have never from that time paid him adoration."

They believe that the moon is an inferior viſible god, and the repreſentative of the high and inviſible: that ſhe has the direction of the weather; and therefore they pray to her when it is unſeaſonable. They never fail to aſſemble and worſhip this planet at the new and full moon, let the weather be never ſo bad; and though they diſtort their bodies, grin, and put on very frightful looks, crying and howling in a terrible manner, yet they have ſome expreſſions that ſhew their veneration and dependence on this inferior deity; as, 'Mutſchi Atze, I ſalute you; you are welcome: Cheraqua kaka chori Ounqua, grant us paſture for our cattle and plenty of milk.' Theſe and other prayers to the moon they repeat, frequently dancing and clapping their hands all the while; and at the end of every dance, crying, Ho, ho, ho, ho! raiſing and falling their voices, and uſing abundance of odd geſtures, that appear ridiculous to European ſpectators; and which no doubt made them at firſt, before they knew any thing of their language, conclude, that this could not be the effect of devotion, eſpecially when the people themſelves told them, it was not an act of religion, but only intended for their diverſion. But to return:

They continue thus ſhouting, ſinging, and dancing, with proſtrations on the earth, the whole night, and even part of the next day, with ſome ſhort intervals, never reſting, unleſs they are quite ſpent with the violence of the action; and then they ſquat down upon their heels, holding their heads between their hands, and reſting their elbows on their knees; and, after a little time, they ſtart up again, and fall to ſinging and dancing in a circle as before, with all their might.

The Hottentots alſo adore a fly about the bigneſs of a hornet, called by ſome the gold beetle: whenever they ſee this inſect approach their kraal, they all aſſemble about it, and ſing and dance round it while it remains there, ſtrewing over it the powder of buchu, by botaniſts called ſpiræam; which when it is dried and pulverized, they always powder themſelves with at their feſtivals. They ſtrew the ſame powder alſo over the tops of their tents, and over the whole area of the kraal, as a teſtimony of their veneration for the adored fly. They ſacrifice alſo two ſheep as a thankſgiving for the favour ſhewn their kraal, believing they ſhall certainly proſper after ſuch a viſit: and, if this inſect happens to light upon a tent, they look upon the owner of it for the future as a ſaint, and pay him more than uſual reſpect. The beſt ox of the kraal alſo is immediately ſacrificed, to teſtify their gratitude to the little winged deity, and to honour the ſaint he has been pleaſed thus to diſtinguiſh: to whom the entrails of the beaſt, the choiceſt morſel in their opinion, with the fat and the caul is preſented; and the caul being twiſted like a rope, the ſaint ever after wears it like a collar about his neck day and night, till it putrifies and rots off; and the ſaint only feaſts upon the entrails of the beaſt, while the reſt of the kraal feed upon the joints, that are not in ſo high eſteem among them: with the fat of the ſacrifice alſo the ſaint anoints his body from time to time, till it is all ſpent; and, if the fly lights upon a woman ſhe is no leſs reverenced by the neighbourhood, and entitled to the like privileges.

It is ſcarce poſſible to expreſs the agonies the Hottentots are in, if any European attempts to take or kill one of theſe inſects, as the Dutch will ſometimes ſeem to attempt, to put them in a fright: they will beg and pray, and fall proſtrate on the ground, to procure the liberty of this little creature, if it falls into a Dutchman's hands; they are, on ſuch an occaſion, in no leſs conſternation than the Indians near Fort St. George, when the kite, with a white head, which they worſhip, is in danger. If a ſoldier takes one of theſe alive, and threatens to wring the neck of it off, the Indians will gather in crowds about him, and immediately collect the value of a ſhilling or two, to purchaſe the liberty of the captive bird they adore. But to return to the Hottentots: they imagine if this little deity ſhould be killed, all the cattle would die of diſeaſes, or be deſtroyed by wild beaſts; and they themſelves ſhould be the moſt miſerable of men, and look upon that kraal to be doomed to ſome imminent misfortune, where this animal ſeldom appears.

The Hottentots alſo pay a ſort of religious worſhip to the ſouls of departed ſaints and heroes; they conſecrate fields, mountains, woods, and rivers to their memory; and when, at any time, they happen to paſs by ſuch conſecrated ground, they put a ſhort prayer to the ſubordinate deity of the place, and ſometimes dance round, and clap their hands as they do in their adoration of the moon.

The Hollanders have ſent ſeveral reverend divines to the Cape as miſſionaries, who have ſpared no pains to bring the Hottentots off from their idolatry, and induce them to embrace Chriſtianity; even their covetouſneſs and ambition have been applied to, and temporal rewards offered them, on condition of their being inſtructed in the prin-

ciples of Chriſtianity. But no motives whatever, whether thoſe relating to this or another ſtate, have yet been able to make the leaſt impreſſion on any one of them: they hold faſt and hug their ancient ſuperſtitions, and will hear of no other religion; which, with me, is a great argument that they have a religion or ſuperſtition of their own; for were they governed only by ſecular motives, and had no notion of God or providence, why ſhould they not accept the rewards the Dutch offer, and importune them to accept of, on their embracing Chriſtianity? and I am apt to think, that the reaſon that they neither imitate the Europeans in their building, planting, or cloathing, is becauſe they imagine themſelves to be religiouſly obliged to follow the cuſtoms of their anceſtors; and that, if they ſhould deviate from them in the leaſt of theſe matters, it might make way for a total change of their religion and manners, which they cannot think of without abhorrence.

Kolben relates, that one of the Dutch governors at the Cape bred up an Hottentot from his infancy, obliging him to follow the faſhions and cuſtoms of the Europeans, to be taught ſeveral languages, and to be fully inſtructed in the principles of the Chriſtian religion, cloathing him handſomely, and treating him, in all reſpects, as a perſon for whom he had a high eſteem; and let him know, that he deſigned him for ſome beneficial and honourable employment. The governor afterwards ſent him a voyage to Batavia, where he was employed under the commiſſary, his friend, for ſome time, till that gentleman died; and then he returned to the cape of Good Hope: but, having paid a viſit to the Hottentots of his relations and acquaintance, he threw off all his fine cloaths, bundled them up, and laid them at the governor's feet, and deſired he would give him leave to renounce his Chriſtianity, and live and die in the religion and cuſtoms of his anceſtors: only begging the governor would give him leave to keep the hanger and collar he wore for his ſake; which, while the governor was deliberating with himſelf upon, ſcarce believing the fellow to be in earneſt, the young Hottentot took the opportunity of running away, and never came near the Cape afterwards, thinking himſelf extremely happy that he had exchanged his European cloaths for a ſheep-ſkin, and the reſt of the Hottentots dreſs and ornaments: the Engliſh Eaſt-India company, we are informed, made the like experiment, bringing over two of that nation hither, whom they cloathed decently after the European manner, and uſed them, in all reſpects, with the greateſt goodneſs and gentleneſs, hoping, by that means, to be better informed of the condition of their country, and whether it might be worth the while to make a ſettlement there; but the two Hottentots only learnt Engliſh enough to bewail their misfortune in being brought from their country and their friends; and, after two years trial of them, being ſet on ſhore at the Cape, they immediately ſtripped off their European cloaths, and, having taken up the ſheep-ſkin mantle again, rejoiced beyond meaſure for their happy eſcape from the Engliſh.

SECT. V.

Treating of the Traffic and Commerce, Manufactures, Artificers, Language, &c. of the HOTTENTOTS.

THE poor Hottentots ſometimes employ themſelves in making arms, viz. bows and arrows, lances and darts, bartering them with the rich for cattle, to begin the world with: others get elephants teeth, and what they do not uſe in making rings and ornaments for themſelves, are generally diſpoſed of, it is thought, to the Portugueſe and other Europeans, who touch at Terra de Natal, and other parts of the eaſtern or weſtern coaſt. The Hottentots ſell very few teeth to the Dutch; though it is manifeſt they kill abundance of elephants: they ſupply the Hollanders, however, with cattle, and take wine, brandy, or tobacco, in return; and Kolben relates that an ox may be purchaſed of them for a pound of tobacco, and a large ſheep for half a pound. As to coin, the reader will conclude they have none; nor do they ever ſee any, unleſs ſome ſmall pieces of money the Dutch ſometimes give them for their wages at the Cape: and it muſt not be forgot, that the Hottentots find abundance of oſtrich's eggs in the ſand, which they barter with the ſea-faring men, that touch at the cape, for brandy and tobacco; every ſailor almoſt being proud of bringing home one of theſe egg-ſhells to his friends, after he has fried and eaten the yolk, which makes a large pancake, and is pretty good food, but rather of the ſtrongeſt.

Their butchers are ſaid to be great artiſts in their way, and to handle a knife as dextrouſly as an anatomiſt: having tied the hind and fore legs of a ſheep, they throw the creature on his back, and with cords two of them extend it to its full ſtretch, while a third rips it up; ſo that all the entrails appear: then, with one hand, he tears the guts from the carcaſe, and, with the other, ſtirs the blood, avoiding as much as he can the breaking any of the blood-veſſels about the heart; ſo that the ſheep is a long time a-dying; in the mean time he gives the guts to another, who juſt rids them of the filth, and rinces them in water, and part of them are broiled and eaten amongſt them, before the ſheep is well dead: having ſcooped the blood out of the body of the animal with their hands or ſea-ſhells, they cut the reſt of the guts in ſmall pieces, and ſtew them in the blood, which is the Hottentots favourite diſh. An ox alſo is killed in the ſame barbarous manner; being thrown upon his back, and his legs extended with cords, he is ripped up, and his guts taken out firſt; in which cruel operation the beaſt is half an hour a dying: they ſeparate the parts with great exactneſs, dividing the fleſh, the bones, the membranes, muſcles, veins, and arteries, and laying them in ſeveral parcels, every thing entire. The bones alſo are taken out of the fleſh, and laid together in ſuch order, that they might be eaſily formed into an exact ſkeleton: theſe they boil by themſelves, and get the marrow out of them, with which they anoint their bodies. Of the ſheep ſkin, as has been obſerved already, they make a mantle, if it be large; but, if it is ſmall, they cut it into thongs, to adorn their women's legs; and the hide of an ox ſerves either to cover their tents, or to make girts and ſtraps of, with which they bind their baggage on their carriage-oxen when they decamp; and, if they have no other uſe for their ox-hides, they lay them by, and eat them when they want other food.

They have another artificer, who is both ſelmonger and taylor: that is, he dreſſes ſkins after their way, and then makes them into mantles: he takes a ſheep-ſkin juſt flayed off, and, rubbing it well with fat, the ſkin becomes tough and ſmooth; and, if it be for one of his countrymen, he rubs it over alſo with freſh cow-dung, and lays it in the ſun till it is dry: then he rubs it with fat and cow dung again; which he repeats ſeveral times, till it becomes perfectly black, and ſtinks ſo, that no European can bear it; and then, with a little ſhaping and ſewing, it is a compleat mantle for a Hottentot: but, if it be dreſſed for a Dutchman, he only rubs the ſkin well with fat, which ſecures the wool from coming off. If he be to dreſs an ox's hide, he rubs the hairy ſide with wood aſhes; then ſprinkling it with water, rolls it up, and lays it a day or two in the ſun; which expedients effectually bring off the hair; this ſkin is then well greaſed, ſtretched out, and dried again, when it is deemed good leather.

Their ſmiths do not only faſhion their iron, but melt it from the ore: they find plenty of iron ſtones in ſeveral parts of their country; and having got a heap of theſe, they put them into a hole in the ground, heated and prepared for their purpoſe; then they make a fire over the ſtones, which they ſupply with fuel, and keep up till the iron melts: and then it runs into another hole, which they make for a receiver, a little lower than the firſt: as ſoon as the iron in the receiver is cold they break it to pieces with ſtones; and, heating the pieces again in other fires, beat them with ſtones, till they ſhape them into the heads of lances, darts, arrows, and bows, and ſuch weapons as they uſe; for they ſcarce ever form any other utenſils, but arms of this metal: they get the hardeſt flat ſtone, according to Monſieur Vogel, and, laying the iron upon it, as upon an anvil, beat it with another round ſtone, which ſerves them for a hammer; then they grind it upon the flat ſtone, and poliſh it as nicely as any European artificer could do with all his tools: they have ſome copper ore too, which they melt in like manner; but they make only toys and ornaments for their dreſs of this metal: nor indeed, do they ever work in iron, but when they want weapons. They would never labour, if their neceſſities did not ſometimes compel them to it: but, when they do, no people work harder, or more indefatigably; for they never leave a piece of work, till they have finiſhed it.

The ivory-turner makes the ivory rings that are worn ornamentally about the arms; and conſidering that his only tool is a common claſp knife, which he procures from the Dutch, the workmanſhip has great merit.

The potter or maker of earthen veſſels is another art; but this, it ſeems, they are all dexterous at, every family making the pots and pans they want. For theſe they uſe only the earth of ant-hills, clearing them of all ſand and gravel; after which, they work it together with the bruiſed

ant

ant eggs, that are ſaid to conſtitute an extraordinary cement. When they have moulded theſe materials into a kind of paſte, they take as much of them as will make one of their pots, and faſhion it by hand upon a flat ſtone, making it of the form of a Roman urn; then they ſmooth it within and without very careſully, not leaving the leaſt roughneſs upon the ſurface; and, having dried it in the ſun two or three days, they put the pot into a hole in the ground, and burn it, by making a fire over it; and, when they take it out, it appears perfectly black: every family alſo make their own mats, with which they cover their tents or huts; but this is chiefly the buſineſs of the women: they gather the flags and ruſhes by the river ſide, and weave or plat them into mats ſo cloſely, it is ſaid, that neither the weather or light can penetrate them.

The laſt artificer we ſhall mention is the rope-maker, who has no better materials, than ſuch flags and ruſhes as the mats are made of; and yet they appear almoſt as ſtrong as thoſe made of hemp: the Dutch, at the Cape, buy and uſe them in ploughing, and in draught-carriages.

As to the way of travelling here, the natives all travel on foot, except the aged and infirm: and theſe are carried on their baggage oxen. As there are no inns or places for refreſhment, the travelling Hottentot calls at the kraals in his way, where he meets with a hearty welcome from his countrymen, who endeavour to ſhew their hoſpitality to ſtrangers, whether of their own country or of Europe. Such indeed is the general urbanity of theſe people, and their ſtrict integrity when any confidence is placed in them, that when the Hollanders travel either on foot or horſe-back, if they cannot reach an European ſettlement, they alſo call at the kraals of the Hottentots, where they are complimented with a hut, and ſuch proviſions as they have, or they may lie in the area of the kraal, in the open air, if they pleaſe, and the weather be good; and here they are ſecure, both from robbers and wild beaſts; for the buſhis banditti on the mountains are dangerous, as they give no quarter; but the Hottentot nations in general hold them in abhorrence, and unanimouſly concur in ſeizing and puniſhing them upon all occaſions.

Their language is very inarticulate and defective; one word ſignifies ſeveral things, the definitive meaning being determined by the manner of pronouncing; and the pronunciation is ſo harſh and confuſed, that they ſeem to ſtammer in all they ſpeak. Hence, though they are eaſily taught to underſtand other languages, they can ſeldom be brought to ſpeak them with any degree of intelligibility.

We ſhall here ſubjoin a ſmall Hottentot vocabulary, for the ſatisfaction of the curious; khauna, ſignifies a lamb; kgou, a gooſe; bunqvaa, trees: knomm, to hear; quaqua, a pheaſant; tkaka, a whale; horri, beaſts in general; knabou, a fowling piece; qua-ara-ho, a wild ox; ounequa, the arms; quienkha, to fall; likhanee, a dog; konkequa, a captain; quas, the neck; quan, the heart; kgoyes, a buck or doe; tikquoa, a god; komma, a houſe; khoaa, a cat; kowkuri, iron; konkekerey, a hen; thoukou, a dark night; tkoume, rice; ghoudie, a ſheep; toya, the wind; ttkaa, a valley; tkaonoklau, gunpowder; kamkamma, the earth; quaouw, thunder; duckatere, a duck; kamma, water; quayha, an aſs; naew, the ears; kirri, a ſtick; nombha, the beard; ka-a, to drink; durieſa, an ox; hek-kaa, an ox of burden; ounvie, butter; houteo, a ſea-dog; bikgua, the head; kamma, a ſtag; kouquil, a pigeon; anthuri, to-morrow; kou, a tooth; khamouna, the devil; hakqua, a horſe; koo, a ſon; kammo, a ſtream; tika, graſs; toqua, a wolf; koanqua, the mouth; khou, a peacock; gona, a boy; gois, a girl; khoakamma, a baboon; kerhanehou, a ſtar; mu, an eye; tquaſſouw, a tyger.

The Hottentots have only ten numerical terms, which they repeat twice to expreſs the multiplication of the firſt term, and three times to expreſs the re-multiplication of the latter. Their terms are: q'kui, one; k'kam, two; kouna, three; kakka, four; koo, five; nanni, ſix; hounko, ſeven; khiſſi, eight; khaſſi, nine; ghiſſi, ten.

SECT. V.

Treating of the Empires of MONOMOTAPA and MONOEMUGI: deſcribing their Boundaries and Extent, Provinces, Rivers, the Inhabitants, their Cuſtoms, Dreſs, Laws, Ceremonies, and other Particulars relative to theſe People.

MONOMOTAPA is one of the largeſt empires in all Africa; being bounded on the weſt, by the mountains of Caffraria; on the eaſt, by the kingdom of Sofala; on the north, by the river Cuama, which ſeparates it from Monoemugi; and on the ſouth by the river de Spiritu Sancto. It is ſituated between the fourteenth and twenty-fifth degrees of ſouth latitude, and between the forty-firſt and fifty-ſixth of eaſt longitude, being ſix hundred and fifteen miles in breadth from north to ſouth, and ſix hundred and ſeventy in length from eaſt to weſt.

In this country are ſix provinces, or petty kingdoms, the governors of which are vaſſals to the king or emperor of Monomotapa. The names of theſe provinces are Monomotapa Proper, Quiteve, Manica, Inhambana, Sabia, and Inhamior.

The moſt conſiderable of the whole is Monomotapa Proper, which is particularly diſtinguiſhed for containing the capital city of the empire. It is ſituated in eighteen degrees twenty-ſeven minutes ſouth latitude, and thirty-one degrees ten minutes eaſt longitude from London. It is a large and populous city, and the ſtreets very long and ſpacious. The houſes are built with timber and earth, and are of different ſizes, ſome being much more lofty than others, according to the quality of thoſe that occupy them: the roofs are large, and formed in the ſhape of a bell; and all of them are neatly whitewaſhed both within and without.

The greateſt ornament in the city is the imperial palace, which is a large ſpacious fabric, well flanked with towers, and has four avenues or ſtately gates, conſtantly kept by a numerous guard. The inſide conſiſts of a great variety of ſumptuous apartments, ſpacious and lofty halls, all adorned with a magnificent kind of cotton tapeſtry, the manufacture of the country. The floors, cielings, beams, and rafters, are all either gilt, or plated with gold curiouſly wrought, as are alſo the chair of ſtate, tables, benches, &c. The candleſticks and branches are made of ivory inlaid with gold, and hang from the cieling by chains of the ſame metal, or of ſilver gilt. The plates, diſhes, and bowls, belonging to the emperor's table, are made of a ſort of porcelain, curiouſly wrought on the edges with ſprings of gold reſembling thoſe of coral. In ſhort, ſo rich and magnificent is this palace, that it may be ſaid to vie with that which diſtinguiſhes a monarch of the eaſt.

This province contains ſeveral other towns, all of which are very inconſiderable, except one called Tete, which is remarkable for being the reſidence of the Portugueſe Jeſuits, and is large and populous.

To the ſouth of Monomotapa Proper lies Quiteve, which is bounded on the eaſt by Sabia, on the weſt by Caffraria, and on the ſouth by Manica. The king or governor of the province uſually reſides in this city, which is large, and well inhabited.

Manica is bounded on the eaſt, by Sabia; on the weſt, by Caffraria; on the north, by Quiteve; and, on the ſouth, by the river de Spiritu Sancto. The capital town is called after the name of the province, but it is a ſmall place, and very poorly inhabited. The river de Spiritu Sancto, by ſome called Manica, ſprings from the mountains of Lupata, ſituated in nineteen degrees ſouth latitude, and twenty-ſix degrees eaſt longitude. It runs firſt from north to ſouth, after which it bends its courſe to the ſouth-eaſt, then paſſes along the kingdom of Manica, and empties itſelf into a ſmall gulf, with which the ſea immediately communicates.

The province of Inhambana lies ſouthward from the above province under the tropic of Capricorn, ſo that the air is here exceeding ſultry. The capital town is called Tongue, which, though ſmall, is very populous, owing to the number of Portugueſe that reſide in it.

Sabia, is a very large province, and well watered by ſeveral excellent rivers, one of which is called Sabia, and the other Aroe. The iſland of Bocica, and the capes of St. Sebaſtian and St. Catharine, are on the coaſt of this kingdom.

Inhamior, is a very extenſive province, but it doth not contain any thing that merits particular notice. Its chief town is of the ſame name; and here the king or governor of the province conſtantly reſides.

The climate of Monomotapa is much more wholſome than many other parts of Africa; and the ſoil is ſo fertile, that it produces great plenty of the principal neceſſaries of life. It abounds with paſture grounds, on which are bred prodigious quantities of cattle, eſpecially oxen and cows. The chief grains are rice and millet, and they have plenty of various kinds of tropical fruits. In the woods and foreſts are great numbers of wild beaſts, particularly elephants, the latter of which the natives kill not only for their fleſh, but alſo for their teeth, which they make a conſiderable advantage of by ſelling to the Portugueſe, while the former furniſhes them with food.

There

There are many rivers in this country, and on the banks of moſt of them grow many fine trees and ſugar-canes, without any culture. They abound with a variety of excellent fiſh, and in ſome of them is found gold that is ſwept away from the mines through which they run in the more inland parts.

With reſpect to the natives, they are in general tall, well ſhaped, and healthy; they are quite black, and have woolly hair, which they decorate with a variety of trinkets. They are of a very ſprightly and docile diſpoſition: notwithſtanding which, they are fond of being engaged in war, and prefer that employment to any other. The poorer ſort are brought up to diving; and their chief employment is to get the ſand or mud from the bottom of the rivers, ponds, and lakes, from which they ſeparate the gold that is intermixed with it, and barter it with the Portugueſe for cotton and various other neceſſary articles.

The common people wear a piece of cotton cloth of various colours round the waiſt, from whence it reaches to the knees: but the upper part of the body is entirely naked. The garments of the richer ſort are of the ſame form, but more coſtly and elegant, being made of Italian ſilks, or of cotton embroidered with gold; and they generally wear the ſkin of ſome wild beaſt over them.

The fleſh of oxen and elephants is their common food, with bread made of rice or millet, which is baked into thin cakes; and their drink is either ſour milk or water. The better ſort moſtly eſteem palm-wine, which is reckoned a royal liquor, and greatly uſed at court; though ſome of them uſe ſtrong liquors made from honey, millet, rice, and ſeveral ſorts of fruit.

Here, as in moſt other parts of Africa, polygamy is allowed, every man being permitted to take as many wives as he can maintain; but the firſt wife is the principal; and the father's eſtate devolves to the children borne by her.

Theſe people pay a religious worſhip to the dead, every one preſerving the bones of the moſt diſtinguiſhed of his family. Theſe they hang up in a court, and know whom they belonged to by fixing certain marks on them. Every ſeventh day the relations go and viſit them, being all dreſſed in white, which is the mourning of the country. They ſpread a little table before them with proviſions, then pray to the deceaſed for the king's proſperity, and afterwards ſit down and regale themſelves, which they look upon as the greateſt honour they can confer on their departed relations.

The Portugueſe have converted ſome of the inhabitants here to the Roman catholic religion; but the principal part of them are idolaters, and practiſe the moſt ſuperſtitious maxims. They hold a feaſt on the firſt day of every new moon, as alſo on the anniverſary of the emperor's birth. They ſhew a ſingular veneration for a certain virgin, whom they call Al Firoo, and have temples erected in honour of her: they alſo confine ſome of their daughters in nunneries, of which they have ſeveral, obliging them to obſerve ſtrict celibacy during life.

The emperor or king of Monomotapa, has a prodigious number of wives, the principal of whom are the daughters of ſome of his vaſſal princes: but the firſt only is called empreſs or queen. He always wears the ſame kind of dreſs, which conſiſts of a robe made of a ſilk ſtuff, manufactured in the kingdom: it reaches from the waiſt to the knees, and is faſtened with a girdle richly bedecked with diamonds and other precious ſtones. He has alſo a brocaded mantle over his ſhoulders, and on his legs he wears buſkins, richly wrought and embroidered with gold, pearls, &c. On his head is a turban, the band of which is ornamented with diamonds, rubies, emeralds, and other precious ſtones: and his neck is decorated with a magnificent carkanet, or collar, enriched with the ſame coſtly jewels.

This monarch is exceedingly fond of palm-wine, great quantities of which he always keeps by him, in veſſels made of horn, curiouſly wrought: but he generally mixes with it manna, muſk, or ſome other high ſcented perfumes, of which alſo the courtiers and better ſort of people are great admirers, and uſe them not only in their victuals and drink, but alſo in their apartments and walks, and other places.

The emperor's victuals is always dreſſed by the princeſſes and ladies of the firſt rank, who bring and ſerve it at his table: they diſcharge this buſineſs in their turns, and think it the higheſt honour to be ſo employed. During his meal, he is accompanied by a band of muſicians: but theſe, before they come into his preſence, muſt be hoodwinked, or have a veil before their faces, to prevent their ſeeing him either eat or drink. He is commonly attended by a great number of officers, who keep a moſt profound ſilence, except when he drinks, or happens to ſneeze or cough, at which times one of them cries aloud, "Pray for the health and proſperity of the emperor:" as ſoon as the words are repeated, they all kneel, then riſe, and teſtify their joy by the loudeſt acclamations and tokens of loyalty.

Whenever his majeſty goes abroad, he is generally carried in a ſtately ſedan or chair, over which is a magnificent canopy richly embroidered, and beſpangled with pearls and precious ſtones; and if the weather happens to be cloudy or miſty, four lighted torches are carried before him, to clear and perfume the air. He is always attended by a prodigious retinue, beſides his own guard, and a numerous band of muſicians. On theſe occaſions his ſubjects pay him the moſt profound homage and reſpect, wiſhing him all imaginable ſucceſs and proſperity, and ſhewing their attachment to him by ſacrificing a deer, or ſome other victim, on the road through which he paſſes.

This prince having many powerful vaſſals, far remote from his capital, takes care to bring up their ſucceſſors at his court as hoſtages of their fidelity. They have colleges and academies appropriated for their education at his expence, and he endeavours to win their affections by the greateſt acts of munificence. He alſo takes great pains to preſerve the reſpect of his ſubjects: he exacts no taxes or tribute from them, inſtead of which he is ſatisfied with a trifling preſent, when they apply to him for any particular favour. This is an univerſal cuſtom from an inferior to a ſuperior of every rank and denomination, and is eſteemed the higheſt mark of reſpect that can be ſhewn. His ſubjects always obey his commands with the greateſt cheerfulneſs, inſtead of attending upon him with reluctance; for if at any time he orders them to labour either at the gold mines, or any other ſervice, as is ſeldom the caſe, he always ſends them cows, or other proviſions.

The officers and miniſters of the king of this country, both civil and military, as well as his ſoldiery, who ſubſiſt by his pay, are indeed obliged, inſtead of taxes, to pay him a kind of ſervice of ſeven days in every month, either in cultivating his grounds, or any other work he thinks proper to employ them in; and the lords and nobles are alſo bound to the ſame ſervice when required, unleſs exempted from it by ſome particular privilege granted to their family or office in time paſt.

A numerous army is maintained by the king; for he has no cavalry, there being but few horſes, and thoſe not fit for the purpoſe, throughout his dominions. The weapons uſed by the ſoldiers are bows and arrows, the javelin, ſcymetar, cutlaſs, and dagger, and ſome of them carry a hatchet, all which they handle with great dexterity, being trained up to it from their youth. Wherever the emperor encamps, they always erect a large wooden houſe, in which a fire muſt be kept conſtantly burning during his ſtay. Neither he nor any of his ſoldiers are permitted to waſh their hands or face while the war continues; and when it is over and they have gained a complete victory, the ſpoil is divided, the emperor reſerving one part to himſelf, and diſtributing the reſt in proportionable ſhares to his officers and men. This equitable diſtribution, as it tends to animate the men, and make them fight with diſtinguiſhed intrepidity, has an excellent effect.

There are few laws in this country; and ſo little occaſion is there for the confinement of criminals, that there is not a ſingle priſon throughout the whole empire. Juſtice is adminiſtered in every part of it with the greateſt expedition; the judges hear the reaſons and depoſitions on both ſides, and then pronounce ſentence, which the emperor either confirms or annuls; and every criminal is executed in the open fields immediately after conviction. If the complaint or crime be of ſuch a nature that it cannot be ſo quickly adjudged, and there be any danger of the perſon accuſed making his eſcape, he is ordered to be tied to a tree, and a guard is ſet over him, till he is either acquitted or condemned. In trifling matters they only inflict a corporal puniſhment, which is done by giving the party a certain number of ſtrokes with a knotted cord, according to the nature of the crime; but thoſe found guilty of murder are puniſhed with death.

With reſpect to the gold mines in this empire, from which the Portugueſe have reaped conſiderable advantages, the chief of them are in the province of Manica, near the capital of the ſame name. They extend themſelves through a large, ſpacious, champaign, wild, ſandy, and barren country, about nine miles in circumference, and ſurrounded with high mountains. They are ſituated about one hundred and fifty miles weſt of the market, or place where the commerce for it is carried on. The natives that work at them, find great difficulty in gathering

the metal, which is here in duſt, for want of water to ſeparate it from the earth, ſo that they are obliged to take the whole as they dig it, to other diſtant places, where they keep large ciſterns and reſervoirs for that purpoſe. They have one convenience, however, which is, that they need not dig lower than ſix or ſeven feet, all the reſt being a hard ſolid rock beneath that depth.

There are alſo other mines in different parts of the empire that produce excellent metal, particularly thoſe near Batua, a ſmall place bordering on the province of Manica, and extending itſelf from the mountains of the Moon to the river Magnico, whoſe governor is a vaſſal to the emperor. Theſe mines are reckoned the moſt antient in the whole empire, on account of ſome caſtles in their neighbourhood, which bear the greateſt marks of antiquity, and are ſuppoſed to have been built as a ſafeguard to them. The moſt diſtinguiſhed of theſe buildings is ſituated in the middle of a large ſpacious plain, and ſurrounded by the mines above-mentioned. Its walls are not high, but of the thickneſs of twenty-five feet; the ſtones are laid regularly one upon another, but without any kind of cement to faſten them together. On the front, juſt over the great gate, is a ſtone larger than the reſt, and upon it an inſcription in characters, or rather Hieroglyphics, which are ſo unintelligible, that no perſon hath yet been able to decypher them. And at ſome diſtance from this building are ſeveral others, all ſituated on ſome eminence or riſing ground, and amongſt them is a tower about ſeventy feet high. The natives imagine them to be the works of dæmons, being unable to conceive how ſuch ſtructures could be raiſed.

There are ſeveral conſiderable places between the mines and the ſea coaſt, where fairs and markets are held for the ſale of gold, particularly thoſe towns which lie on the river Zezebe and Cuama, and where the Portugueſe have built fortreſſes to keep the natives in awe, who come to thoſe markets to exchange their gold for European and other commodities. In each of theſe markets they have an officer of their own, who decides all conteſts and differences that ariſe about their traffic; they have likewiſe churches and monaſteries in moſt of theſe towns.

The Portugueſe were firſt permitted by the emperor of Monomotapa to build forts here, in gratitude for the ſervice they had done in contributing to reduce ſome revolted vaſſals to return to their obedience, as well as to enable them, on all ſuch exigencies, to be near at hand to aſſiſt him. This was about the year 1640, ſince which time they have been on ſuch good terms with the ſovereigns of the empire, that they have made themſelves maſters of a tract of land on both ſides the river Cuama for above one hundred and ſixty miles; beſides which, they have engroſſed the whole commerce not only of the coaſt, but alſo the inland parts, and obtained to themſelves ſome of the moſt conſiderable mines in the empire.

The natives, beſides gold, bring great quantities of ivory, furs of ſundry wild and tame beaſts; and other valuable articles, in exchange for cloths of various ſorts, glaſs beads of different ſizes and colours, and other trifling trinkets, which renders it a very advantageous commerce to the Portugueſe.

Monoemugi, is a conſiderable empire; but, being an inland country, is very little frequented by the Europeans. It is bounded on the north, by Abyſſinia; on the eaſt, by part of Zanguebar; on the ſouth, by the empire of Monomotapa; and, on the weſt, by Matamba and Makoko.

We have no particulars relative to this empire, but what are chiefly founded on the authority of the negroes, who carry on a commerce with it, European travellers not daring to venture themſelves in it, not only by reaſon of the unwholeſomeneſs of the climate, but alſo for fear of the inhuman Jaggas, who infeſt the interior parts of it, and maſſacre all that happen to fall in their way, without regard to age or ſex.

It appears from the diſtance of the confines of this empire, that its extent is very great, though it cannot be aſcertained. The emperor is a powerful and rich prince, and hath ſubdued moſt of the petty kingdoms about him to obedience; but ſome of them, eſpecially on the north ſide, revolt, and put themſelves under the protection of the Abyſſinian or Monomotapan emperors. He is ſaid to have many rich gold, ſilver, and copper mines in his dominions, by means of which he carries on a kind of commerce with thoſe two empires, as alſo with ſome of the eaſtern coaſters, with whom he is forced to exchange gold for Indian and European commodities, for want of having ſome port of his own on either the eaſtern or weſtern ſea. This obliged him to preſerve a conſtant friendſhip with the maritime kingdoms of Quiloa, Mombaſo, and Melinda, whoſe merchants furniſh him with a variety of ſilks, cotton cloth, and other ſuch merchandize. He alſo lives in friendſhip with the great makoko, another prince on the north of him, on account of the negro merchants who trade with the Portugueſe, and carry on a conſiderable trade with him and his ſubjects by paſſing through his dominions.

Monoemugi is divided into five kingdoms or provinces, all of which are governed by petty princes, ſubject to the emperor. The names of theſe are as follow; namely, Gingiro, Mujaco, Alaba, Cambate, and Monoemugi Proper.

Gingiro, which is a very large kingdom, lies between Narea, the moſt ſouthern kingdom of Abyſſinia, and Makoko and Cambate. Father Antony Fernandez, who travelled through this kingdom, ſays, the king preſerves an extraordinary dignity, and that he contends with the ſun; for which reaſon he never goes abroad, or gives audience, but before the ſun riſes, alledging that two ſuns cannot appear at once. The ſame perſon tells us, that his palace is no better than a cottage, which, when he dies, is always burnt, and the ſucceſſor has a new one built for him, which is dedicated with the blood of two or three men of a certain family killed at the door, and on that account the ſaid family is free from all other duties, which are ſo heavy, that they render this cruel compoſition acceptable; for when the king buys any thing of foreign merchants, he pays them in ſlaves, and theſe are the ſons and daughters of any family, which he takes at pleaſure.

The province of Mujaco, is bounded on the eaſt, by Abyſſinia; on the weſt, by Congo; on the north, by Nubia; and, on the ſouth, by Makoko. It is a large kingdom, but very poorly inhabited; neither does it contain any thing that merits a particular deſcription.

The province of Alaba, is very large, and ſituated to the eaſt of Cambate: it reaches to the coaſt of Zanguebar, and is inhabited by a cruel people called Gallas. Many of the people are idolaters, and of the worſt ſort, for they offer human ſacrifices.

The province of Cambate joins to that of Gingiro, on the weſt, and is bounded on the eaſt by Alaba, on the north, by Abyſſinia; on the ſouth, by Makoko; and on the weſt, by Gingiro. This country pays a voluntary acknowledgement to the emperor of Abyſſinia. Sangara, which is a poor place, and wretchedly inhabited, is the principal town in the kingdom.

The province of Monoemugi Proper, is bounded on the eaſt by Congo, on the weſt by Tranquebar, on the north by Monomotapa, and on the ſouth by Makoko. This is the largeſt diviſion of the whole empire, and, except for its being the reſidence of the emperor, is no otherwiſe remarkable.

Excluſive of the reſpective mines of gold, ſilver, and copper, the chief productions of this country, are, palm wine and oil, and honey is here ſo plentiful, that the negroes cannot conſume one third of it, ſo that they ſuffer the reſt to be loſt. The great misfortune is, that the air and climate is ſo unwholſome, that no miſſionaries, or other Europeans, dare venture ſo far into the inland parts, principally on account of thoſe degenerate canibals the Jaggas, who infeſt them, as we before obſerved.

In this country the natives dreſs themſelves in ſilks and cottons, which they buy of ſtrangers, and wear collars of tranſparent beads which are brought them from Camboya: theſe beads alſo ſerve inſtead of money; gold and ſilver being conſidered of no value, as it is ſo very common here.

We have not any account of the laws, cuſtoms, ceremonies, and other particulars relating to the people; what we farther know of them is, that they are refractory and cruel in their diſpoſitions, and moſt of them idolaters.

According to the Portugueſe, there is on the eaſt ſide of this empire a great lake full of ſmall iſlands, from whence iſſue ſeveral rivers. They ſay that theſe iſlands abound in all ſorts of fowl and cattle, and are inhabited by negroes.

It has been obſerved, reſpecting the little knowledge attained of this empire, and thoſe parts that border on it to the ſouthward, that "The farther we move ſouthwards towards the cape of Good Hope, the farther we may be ſaid to travel in the dark;" though all our maps unite to embelliſh both the coaſt and inland parts with ſuch proſpects, and pompous names of empires, kingdoms, and countries, crouded ſo cloſe to each other, as might induce an unwary reader to imagine thoſe countries to be as fully

known as Europe itſelf; and were he to compare the vaſt ſhew in thoſe maps with the little he finds in the relations and accounts of the African writers, he might be apt to conclude, from the former, that the far greater and moſt conſiderable part of the latter, like thoſe of the antients, have been unhappily loſt or deſtroyed. And this we think ourſelves bound to appriſe our readers of, leſt they ſhould be induced to aſcribe our leaping over ſuch a vaſt tract of land, overlooking ſo many ſeeming conſiderable kingdoms and ſtates, to our neglect, rather than to what it is really owing, the want of proper intelligence, and to loſe their time in a fruitleſs ſearch after them, amongſt that variety of authors that have written on this part of the world. The truth is, the Arabs, as well as the natives who inhabit this whole eaſtern coaſt, are too jealous of, not to ſay incenſed againſt all Europeans, to give them any intelligence of the inland parts; much leſs to let any of our miſſionaries penetrate into them, as they have more luckily done in the weſtern. So that all the knowledge we have been able to get of them is chiefly founded on the precarious report of thoſe trading coaſters, and extends little farther than the names and ſituations of thoſe kingdoms which make ſo fine an appearance in our maps; and might probably be repreſented by them in ſuch a light, as rather to deter than encourage ſtrangers to attempt making any farther diſcoveries of countries which bear ſo unpromiſing an aſpect.

CHAP. VI.

THE NEW HISTORY AND DESCRIPTION OF

ZANGUEBAR.

SECT. I.

Containing a General Account of ZANGUEBAR; alſo a Deſcription of the Kingdoms of MOSAMBIQUE, MELINDA, and SOFALA, their Towns, Rivers, Soil, Produce, Inhabitants, their Perſons, Dreſs, Manners, Cuſtoms, Laws, Ceremonies, &c.

ZANGUEBAR, by ſome ſtiled Zangibar, is ſo denominated from the word Zangue, which in the Arabic language ſignifies black, all the inhabitants being of that colour. It is bounded on the eaſt, by the Indian ocean; on the weſt, by Monoemugi; on the north, by Anian, or Aian; and on the ſouth, by the river Cuama, which ſeparates it from Monomotapa. It is very diſproportionate in its extent, being not more than three hundred and fifty miles in the broadeſt part, and one thouſand four hundred in length.

This country has a very extenſive coaſt, and there are many rivers and iſlands in it. This part of it is beſt known to the Europeans, owing to the conqueſts made here by the Portugueſe. The inland part conſiſts of a large, barren, and unhealthy track, the lands lying low, and are interſected by rivers, lakes, thick woods, foreſts, and marſhy grounds. Moſt of the inhabitants are Arabs, the deſcendants of thoſe who were baniſhed here from their own country, on account of their adherence to the ſect of Ali, whoſe tenets they profeſs and adhere to with great ſtrictneſs.

Kilmanci, or Quilmanca, is one of the rivers that water this country: the latter name was given it by the Portugueſe, from a fort and town ſo called, built by them at the mouth of it. This river hath its ſource near the mountains of Gravo, in the kingdom of Narea, ſubject to the Abyſſinian empire, and near a village called Bochia, or Boxia; it is one of the moſt conſiderable in all this part of Africa, eſpecially on account of the length and vaſt winding of its courſe, making a kind of circle toward the north and eaſt, as it were to incloſe into a kind of peninſula the kingdom of Gingiro, and divides the ſettlement of the wild Jaggas from Abyſſinia; and thus far it is called by the name of Zebea. After this, it winds its courſe through the country of the Makorites, which it leaves on the eaſt ſide, then croſſes the equinoctial line, continues its courſe along the coaſt of Zanguebar, and diſcharges itſelf into the ocean in the kingdom of Melinda. Ptolemy, in his deſcription of the coaſt of Africa, mentions this river, which is by moſt authors ſuppoſed to be the Rapte. They alſo divide the continental part of Zanguebar into two kingdoms, namely, Moſambique and Melinda: the former of which is divided into ſeveral provinces and lordſhips, and each of them has a peculiar dialect to itſelf.

The climate here is exceeding ſultry and unwholſome, but the ſoil is very fertile, producing plenty of millet, rice, and ſeveral ſorts of pulſe; as alſo abundance of orange and lemon-trees. It abounds likewiſe with wild beaſts, particularly boars and elephants, the latter of which are ſo numerous, that the inhabitants are obliged to kindle fires round the fields, to prevent them from devouring the corn; nor dare they go abroad at night, without carrying lighted torches in their hands to frighten them away. They have likewiſe great plenty of black cattle here, and there are gold and ſilver mines in ſome parts of the country.

The natives of Moſambique are in general of low ſtature, very black, and have ſhort, curled hair; they are naturally cruel, deceitful, and great enemies to ſtrangers; but as they are naturally timorous, the Portugueſe keep them under tolerable ſubjection. The men go quite naked, except only a ſmall piece of cloth faſtened round the waiſt; but the women have a kind of petticoat of coarſe cotton cloth, which reaches from the waiſt to the knees. Their ornaments conſiſt in three or four necklaces of coral beads of ſeveral colours, with braſs rings in their ears, and bracelets of the ſame metal on their arms. They adorn their bodies by inſcribing the figures of birds and animals on different parts of them.

Their common food is the fleſh of elephants, with bread made of millet and rice: from the latter of which they alſo make a kind of beer. Their towns are very ſmall, and their buildings low and deſpicable.

Gold, ebony, ivory, and ſlaves, are the chief wealth of theſe people, who traffic with the Portugueſe only, for they will not ſuffer any other foreigners to enter their country, or trade with them.

Some of theſe people are Chriſtians, and others Mahometans, but the principal part of them are idolaters, and uſe all thoſe ſuperſtitious and ridiculous maxims practiſed in other idolatrous countries in Africa.

There are two ſmall diſtricts, called Mongalo and Angos, adjoining to the kingdom of Moſambique: the former is ſituated near the mouth of the river Cuama and is chiefly inhabited by Arabs; the other is alſo ſituated on a bank of the ſame river, about one hundred and ſixty miles from the former. Both theſe places are fruitful, producing abundance of rice and millet, as alſo great quantities of cattle. The inhabitants are chiefly Mahometans, but intermixed with negroes, who are idolaters, and remarkable for the lowneſs of their ſtature. They have no covering to the upper parts of their bodies, but round their waiſt they wrap pieces of cotton or ſilk; and a turban is worn by ſome of the better ſort.

A commerce is carried on by the people of both theſe places with the inhabitants of Monomotapa, in gold, gum, elephants teeth, and other commodities.

Melinda is ſituated partly under the equinoctial line, and partly on both ſides of it, for its ſouthern boundaries lie under two degrees thirty minutes ſouth latitude, and its northern extremity extends to the river Quilmanci, the

mouth of which lies ſome minutes to the north of the equator. Its extent weſtward is not certainly known, but it is ſuppoſed to be bounded on that ſide by the country of the Moſſegayes, a barbarous nation of the Caffres, and on the eaſt by the weſtern ocean.

The ſoil of this kingdom, which is well watered by rivers, is in general very fertile, and produces great abundance of the principal neceſſaries of life. It abounds alſo with a variety of fruit-trees, particularly orange, palm, and citron trees, the latter of which conſtantly perfume the air with an odoriferous ſcent: they have likewiſe ſeveral ſorts of cattle, with plenty of game and poultry. Some of their ſheep are remarkable for having large tails, which, on an average weigh from twenty to thirty pounds. Inſtead of bread, the poorer ſort uſe potatoes, which are here exceeding large, fine, and in great plenty, they having but little wheat or rice.

The complexions of the inhabitants of this country are very different, ſome of them being quite black, ſome of an olive colour, and others almoſt white, particularly the women.

With reſpect to their dreſs, the ladies of quality always appear in ſilk, and adorn their necks and arms with rings of gold. The common people wear only a looſe piece of cloth about their waiſts; but the better ſort have a garment made of cotton or ſilk, which reaches from the waiſt to the knees, and adorn their necks and arms with ſtrings of gold: the men wear a turban on their heads.

The capital city of this kingdom, called alſo Melinda, is ſituated in a very agreeable plain, and contains a great number of houſes, moſt of which are well built with free-ſtone. It is the reſidence of the king, and in it are a great number of rich merchants who trade with the Indians of Camboya in gold, ivory, copper, quickſilver, and all ſorts of ſtuffs. The Portugueſe are ſo numerous in this city, that they have built no leſs than ſeventeen churches and chapels in it; and they have alſo erected a ſtately croſs of gilt marble before one of the churches. The king's palace is a very ſpacious edifice, built of ſtone, and neatly ornamented; the apartments within are large, and decorated with very rich furniture.

The king is an arbitrary monarch; notwithſtanding which, he is greatly revered by his ſubjects, whoſe affection he obtains, by being always ready to liſten to and redreſs their complaints. Whenever he goes abroad, he is carried in a ſedan, on the ſhoulders of four of the greateſt men in the kingdom, and incenſe and other perfumes are burned before him as he paſſes along the ſtreets. When he goes on any particular expedition, he rides on a horſe richly capariſoned, amidſt the univerſal acclamations of his people. On theſe occaſions the prieſts ſacrifice a hind before him, and, whilſt the king's horſe is paſſing over it, they obſerve very narrowly the motions of the creature's entrails, and, from the obſervations they make upon them, pretend to foretel whether his expedition will be attended with ſucceſs. They alſo offer a ſacrifice of the ſame kind, and with the ſame views, whenever an ambaſſador arrives from a foreign prince, to treat with the king on any important buſineſs. At every town the king enters, he is always met by a number of beautiful women, ſome of whom preſent him with flowers, and others go before him ſcattering various kinds of perfumes; ſome of them make a kind of muſic by beating ſticks upon braſs baſons, while others join the melody of their voices with the ſound of other inſtruments, ſinging the praiſes of the king; in ſhort, they all endeavour to pleaſe and divert him, to the utmoſt of their abilities.

There are but few laws in this country, and thoſe wholly veſted in the power of the king. If any one is found guilty of murder, he is immediately puniſhed with death; but theſts and trifling offences are puniſhed only by fine. If any of the king's grandees are detected in having impoſed falſities upon him, they are ſentenced to pay a fine, or to receive a number of blows from the king's own hand, more or leſs, according to the greatneſs of the offence: in the latter caſe, the method of inflicting the puniſhment is as follows: They ſtrip the criminal naked, and lay him on the ground, in the apartment of the palace aſſigned for that purpoſe; the king then gives him a number of blows on his back and breech with a kind of whip made with two long pieces of leather faſtened to the end of a ſtick: as ſoon as the king thinks he has ſufficiently ſcourged him, he deſiſts, when the criminal riſes, puts on his cloaths, kiſſes the king's feet, and thanks him in the moſt reſpectful and ſubmiſſive manner. After this, the king orders him into his preſence-chamber, when he grants him a pardon in the preſence of his whole council, and forbids every one from reflecting on him for what has paſſed. The criminal is then conducted out of the palace with great pomp, perfumed torches being carried before him by the reſt of the nobles. They who calumniate their neighbours are alſo chaſtiſed in the ſame manner; but the puniſhment is inflicted by the king's officers, when this happens among the lower rank of people.

The people of this kingdom uſe bows and arrows, darts and ſhields for their weapons. They are ſaid to be the beſt ſoldiers on the whole coaſt of Zanguebar; notwithſtanding which, they would certainly have been overpowered by their neighbours, who have made ſeveral attempts on them, had not the Portugueſe conſtantly aſſiſted and protected them.

With reſpect to their religion, ſome of them are Mahometans, but the principal part are idolaters. The Portugueſe have made but few proſelytes in this kingdom, the people being obſtinately tenacious of their own religious principles. The former have uſed many efforts to bring them to a ſenſe of Chriſtianity; but as theſe have proved ineffectual, they have long ſince deliſted from any farther attempts, and now ſatisfy themſelves with the liberty they enjoy of exerciſing their own religion without moleſtation.

Sofala is a very extenſive kingdom, and, like that of Monomotapa, and others above deſcribed, is remarkable for containing many excellent mines of gold. It is bounded on the eaſt, by the Indian ſea; by the province of Manica, on the weſt; by the empire of Monomotapa, on the north; and by the kingdom of Sabia, on the ſouth. It is, properly ſpeaking, a continued coaſt, extending itſelf from the river Cuama, on the north, to that of Magnico, or De Spiritu Sancto, on the ſouth. The inland parts are very trifling in extent, being confined on the weſt by the empire of Monomotapa, notwithſtanding which, the whole kingdom is computed to be two thouſand two hundred and fifty miles in circumference at the leaſt.

Several rivers run through this country, the moſt conſiderable of which are the Cuama and the De Spiritu Sancto, both of which are ſuppoſed to take their riſe from the lake Goyama. The former received its name from the Portugueſe, but it is generally called by the natives Zambere. It receives in its courſe, among others of leſs note, the Mangania, Mazeno, and Suabo; and after being divided into two branches, diſcharges itſelf into the Indian ſea at four channels, from north to ſouth, diſtinguiſhed by the names of Kilimano, Linda, Cuama, and Luava. It is navigable upwards of one hundred and fifty leagues, and hath many large iſlands beſides thoſe formed by its ſeveral channels. This river waſhes down great quantities of gold, which the negroes gather when the waters are low, by diving to the bottom of ſuch parts of it, as from practice they know contain the greateſt abundance. They bring up the mud in buckets, which being properly levigated, the metal is afterwards eaſily diſcovered.

The principal capes on the coaſt, are, Corientes, St. Catharine, and Sebaſtian. The former is ſituated under the twenty-third degree of ſouth latitude: it is noted for the many rocks, ſands, and ſhelves, that lie between it and the iſland of St. Laurence, or Madagaſcar, and which cauſe frequent ſhipwrecks along that channel, to European veſſels.

The ſoil of this country, from the mouth of the river De Spiritu Sancto to Cape Corientes, is very uneven, barren and deſart; but from thence to the mouth of the river Cuama, it is very fertile, and produces great plenty of ſeveral ſorts of grain, particularly rice and millet; in ſome parts of it there is alſo excellent paſturage, and the cattle bred here are alſo larger than in any part of Africa. The inland parts abound with various ſorts of wild beaſts, but particularly elephants, great numbers of which are annually killed by the natives, not only for the ſake of their fleſh, which is the chief part of their food, but alſo for their teeth, which they ſell to great advantage to the Europeans. The number of thoſe animals deſtroyed here by the natives, is ſaid one year with another, to amount at leaſt to four thouſand. But the climate of this kingdom is exceeding unwholſome, occaſioned by the vaſt number of marſhes in it, which, being dried up in ſummer by the ſcorching heat of the ſun, infect the air with peſtilential ſteams.

With reſpect to the inhabitants of this kingdom, they are in general well ſhaped, and have ſhort curled hair: they cover themſelves only from the waiſt to the knees, with a garment made of ſilk or cotton: but they adorn their arms, wriſts, legs, and ancles, with rings of gold, amber,

ber, or coloured beads; the better ſort have ſwords by their ſides, the handles of which are made of ivory curiouſly inlaid with precious ſtones, and they alſo wear a turban on their heads.

The people chiefly ſubſiſt on the fleſh of elephants: large and ſmall cattle, and fiſh, with which the rivers abound; and they uſe rice and millet, inſtead of bread. The better ſort have a kind of beer, made of rice and millet; they have alſo ſome ſtrong liquors made from honey, palm and other fruits; but the drink of the lower claſs is water.

The language of the country is chiefly ſpoken by the common people, but they alſo underſtand the Portugueſe and Arabic. The coaſters in general ſpeak the latter, which is indeed their natural language, for they are not the original natives, but the deſcendants of the natives, who ſettled themſelves more or leſs upon this whole weſtern coaſt, after having been expelled from their native country. The king and his court, with a great number of the principal people, are alſo the deſcendants of the Arabs, and not only ſpeak their language, but alſo ſtrictly profeſs the Mahometan religion; but the original natives are permitted to retain their antient cuſtoms, as alſo their religious maxims, the latter of which nearly reſemble thoſe practiſed by other African idolaters.

The only place of any note in this kingdom, and which is the metropolis of it, is called Sofala: it is pleaſantly ſituated on a ſmall iſland at the mouth of the river Cuama. Before the Portugueſe viſited this part of the coaſt, it was a very inconſiderable town, neither large nor walled, but fenced only with a thorny hedge; ſince their arrival, however, it has been greatly improved, and is now a very large and populous place. The Portugueſe have alſo built a ſtrong fortreſs here, which is of infinite ſervice to them, as it ſecures their ſhips in the harbour when they ſtop here in their paſſage to and from India. Both the fortreſs and iſland are tributary to the king of Portugal. The articles the Portugueſe purchaſe of the natives, are, gold, ambergris, ſlaves and elephants teeth; in exchange for which they ſupply the natives with ſilks, ſtuffs, cotton, glaſs beads, and other ſuch trinkets.

There are two other towns on the coaſt, near the town of Sofala, one of which is called Harlema, and the other Dardema; there are alſo ſeveral villages, but they do not merit particular deſcription, being inconſiderable places.

A great number of ſoldiers is kept by the king; theſe are all paid in gold duſt, each according to his rank. Since the arrival of the Portugueſe, they have been taught the uſe of fire-arms, of which they are very fond, and exerciſe them with great dexterity; but their original weapons were bows and arrows, the ſcymetar, javelin, dagger, and hatchet.

This country is frequently reſorted to by the inhabitants of Quiloa, Mombaza, and Melinda, who come thither in ſmall boats called tambues, with ſtuffs of blue and white cottons, ſilk ſtuffs, yellow and red ambergris, which they exchange with the people here for gold and ivory; and theſe again ſell them to the inhabitants of Monomotapa, who give them gold in return, without weighing it, ſo that the profit of the exchange is very conſiderable. This is the reaſon that when the Monomotapans come to purchaſe theſe articles, as ſoon as the Sofalans perceive their veſſels at ſea, they light fires on the ſhore, to teſtify their joy, and bid them welcome.

The gold mines of this kingdom are ſaid to yield about two millions of metigals per annum, each metigal amounting to fourteen livres; that the ſhips from Zidem and Mecca carry off above two millions a year in time of peace; and that the governor of Moſambique, whoſe office laſts but three years, has above three hundred thouſand crowns revenue, without including the ſoldiers pay, and the tribute annually paid to the king of Portugal. From hence many learned men have conjectured that this is the Ophir, whither Solomon ſent ſhips every three years from Ezion-geber to fetch gold; Ezion-geber being thought to be Suez, a ſea-port on the Red ſea. This conjecture is ſupported by the remains of ſeveral ſtately edifices, which are found in the different parts where the gold mines are ſituated, and, from their appearance, are ſuppoſed to have been originally palaces or caſtles built by that opulent prince the king of Iſrael. It may be alſo confirmed by the authority of the Septuagint, who tranſlate the word Ophir, 1 Kings ix. 28. into Sophira which has ſome reſemblance to its preſent name of Sofala. As a farther confirmation of theſe conjectures, Lopez, in his voyage to India, ſays, the inhabitants of this country, boaſt, that they have books to prove that the Iſraelites ſailed every third year to fetch gold from theſe parts, in the time of Solomon.

SECT. II.

Treating of the Republic of BRAVA; and alſo of the Kingdoms of MAGADOXA, or MAGADOSKA; and the Kingdom of ADEL, or ZEILA, &c. their Situation, Boundaries and Extent, principal Places, Produce, Inhabitants, their Traffic, &c.

THE republic of Brava, is the only one on the whole coaſt of Africa. It is pleaſantly ſituated on the coaſt of the ſame name, being bounded on each ſide by a river, ſuppoſed to be two branches of the great river Quilmancea. Its inland extent is inconſiderable; and the chief thing that renders it remarkable is its capital, which is alſo called Brava, and ſituated in one degree north latitude, between the two rivers or branches abovementioned, where it has a tolerably good harbour. It is a large city, and, with the whole republic, was founded by ſeven Arabian brethren, who fled hither to avoid the impending danger that threatened them from the tyranny of their king, who was one of the petty monarchs of Arabia Felix at that time.

Several ſtrong walls encompaſs this city, which is otherwiſe well fortified. The houſes are very ſpacious, and built after the Moreſco ſtile: they are chiefly inhabited by rich merchants, whoſe principal traffic conſiſts in gold, ſilver, elephants teeth, gums and other drugs, particularly ambergris, with which this coaſt abounds; alſo cotton and other cloths.

This republic is ſubject to an ariſtocratical government, the inhabitants having a right to chooſe twelve chiefs from among the moſt antient families, whom they intruſt with the adminiſtration of juſtice, and the management of all affairs.

The Mahometan is the prevailing religion of the inhabitants, who pay an annual acknowledgment or tribute to the king of Portugal, and the manner by which this republic became tributary to the Portugueſe is thus related:

Triſtran de Cugna, admiral of the Portugueſe fleet, having ſet on ſhore at Melinda three ambaſſadors, ſent by king Emanuel to the emperor of Abyſſinia, and recommended them to the care and protection of the king of it, continued his courſe northward along the coaſt, till he came to the city of Brava, where he caſt anchor, at the port. Here he diſpatched, according to the Portugueſe cuſtom, one of his officers, named Lionel Codingo, to wait on the heads of the republic, and offer them peace, and the friendſhip and alliance of the king his maſter. To this the chiefs anſwered, that they had no objection to enter into ſuch a treaty; but this anſwer proved to be only a piece of diſſimulation, and calculated to detain the fleet to its deſtruction, the ſeaſon being then near at hand, when ſuch boiſterous winds uſually blow in theſe parts as would daſh to pieces in the harbour all their ſhips.

This artifice being diſcovered by Cugna, he reſolved immediately to aſſault the city. Accordingly, before day-break, he drew up his men on the ſhore, and formed them into two lines, the firſt whereof conſiſted of ſix hundred men, the command whereof he gave to Alphonſo Albuquerque, whilſt he reſerved to himſelf the command of the others, which conſiſted of about ſix hundred ſoldiers. Brava was at this time garriſoned by four thouſand men, half of whom immediately ſallied out againſt them. The conflict was ſevere on both ſides: but the Portugueſe charged them with ſuch fury, that they found themſelves obliged to give ground, and made a very regular retreat into the city; after which, to prevent the army from following them, they ſhut all the gates.

Hereupon the place was immediately ſurrounded by the Portugueſe, who examined, with the utmoſt diligence, where they could beſt force an entrance; but were all that time terribly annoyed from within by burning torches, and other miſſile weapons caſt at them by the beſieged.

Albuquerque, having in the mean time diſcovered a weak part in the wall, began his attack there, but was quickly oppoſed by the garriſon, who flocked thither with all ſpeed, and defended it with ſurpriſing intrepidity. The conteſt was maintained with great ſpirit on both ſides, when, luckily for Albuquerque, the admiral came up; at whoſe approach the Moors were ſtruck with ſuch a panic, that they fled with the greateſt precipitation, whilſt the Portugueſe ſoldiers, eager for their prey, would have purſued them into the city, had not their commanders reſtrained them.

Soon after this ſucceſs, the aſſailants entered the city, and plundered it of a very large and valuable booty, which the Portugueſe immediately carried on board their ſhips.

Great numbers of the beſieged were ſlain and wounded, and many of them taken priſoners: but moſt of theſe were ſoon after releaſed. The Portugueſe had about fifty of their men killed, and many dangerouſly wounded, beſides eighteen others who periſhed in the long boat, which, through their inſatiable avarice, they had loaded ſo immoderately, as to occaſion it to overſet. Such too was the inhumanity of the Portugueſe ſailors, and ſuch their thirſt after ſpoil, that they cut off the arms of ſeven women, to come the more readily at their rings and bracelets; but Cugna deterred the reſt from this barbarity, by ſeverely puniſhing the perpetrators of this cruelty.

The victors having plundered the city, Cugna ordered it to be ſet on fire; and it was ſoon reduced to aſhes in ſight of the inhabitants, who ſtood at a ſmall diſtance, beholding the diſmal ſpectacle. From this cataſtrophe, they were forced to become tributary to their conquerors; for the Portugueſe would not permit them to rebuild their city, or enjoy their ancient privileges, on any other condition than that of paying the king of Portugal an annual acknowledgment, which from that time to the preſent has been regularly exacted and paid.

The kingdom of Magadoxa, or Magadoſka, is ſituated on the coaſt of Ajan, and reaches from five degrees forty minutes of north latitude, quite to the equinox, where the river or gulf of Jubo ſeparates the coaſt of Ajan from that of Zanguebar. It is bounded on the eaſt, by the ocean; on the weſt, by the kingdom of Alaba; on the north, by the kingdom of Adel; and on the ſouth, by the territories of Brava. It receives its name from the capital; ſituated at the mouth of a river of the ſame name, and which river, by reaſon of its annually overflowing like that of Egypt, is called by the Arabs the Nile of Magadoxa.

The country is likewiſe well watered by a number of canals that are cut from this river; ſo that the ſoil is exceeding fertile, and produces great quantities of ſeveral kinds of grain, as alſo a variety of excellent fruits; it likewiſe affords good paſturage, for which reaſon the natives breed great quantities of cattle, particularly oxen and ſheep: they have alſo numbers of horſes, and in the inland parts are various kinds of wild animals, particularly monkies, baboons, and apes. The rivers alſo produce ſeveral ſorts of fiſh, which the inhabitants catch without any fear, they not being infeſted with crocodiles, or any other dangerous animals, as in moſt other parts of Africa.

The natives of this country are of different complexions, ſome of them being quite black, others of a tawny colour, and ſome almoſt white. They are very robuſt, and of a courageous and warlike diſpoſition. Their weapons are bows and arrows, the latter of which they infect with poiſon; they uſe alſo darts and lances in war.

With reſpect to the city of Magadoxa, it is tolerably large and well inhabited. Great numbers of merchants reſort to it from the kingdom of Adel, Camboya, and other parts, who bring hither ſtuffs of various ſorts, as alſo drugs and ſpices; in exchange for which they receive gold, ivory, wax, and other commodities, from the inhabitants.

The Mahometan religion is profeſſed by the king and his court, as alſo by the chief inhabitants of the city; but thoſe in the interior parts of the country ſtrictly adhere to their heatheniſh ſuperſtitions and maxims, being all of them idolaters.

As to the hiſtorical part of this country, we have only to obſerve, that an hoſtile attempt was made on its capital by the Portugueſe fleet, under the command of admiral Triſtran de Cugna, who, as we obſerved before, took the city of Brava, and reduced it to aſhes: their atchievments in this place are thus related:

Cugna, after the reduction of the laſt mentioned city, proceeded as far as Magadoxa, which he cauſed to be ſummoned, as uſual; to accept of peace and friendſhip, or, in plainer terms, of ſubjection, and tributaryſhip to Portugal. But here he found the inhabitants ready prepared to give him a ſuitable reception; great numbers of foot were patrolling along the ſhore, the walls were covered with armed men, and a conſiderable body of troops were drawn up before the town, which made Codingo, the officer ſent with the ſummons, afraid of going on ſhore; inſtead of which, he ſent one of the Brava captives to aſſure the Magadoxans, that the Portugueſe came not to denounce war, but to offer peace to them. They, however, knowing what dreadful execution had been made at the city of Brava, fell furiouſly upon the meſſenger, and tore him in pieces; they alſo threatened to ſerve Codingo in the ſame manner, if he offered to land; which obliged him to return to his admiral, and to acquaint him with the inſolent menaces of the enemy, and the ill ſucceſs he had met with.

On receiving this information, Cugna was ſo enraged, that he determined to bombard and ſtorm the place, but was happily diverted from his deſign by the perſuaſion of his officers and pilots.

The former repreſented to him the natural ſtrength of the place, the number of the garriſon, the great plenty of ammunition, and the valour and reſolution of the inhabitants: the latter pointed out the extreme danger that muſt unavoidably ariſe to the ſhips, both from the fire of the town, and the violence of the ſea, eſpecially as winter was then coming on, and the ſeaſon for ſailing nearly expired; ſo that if his troops ſhould miſcarry in their attempt againſt the place, their fleet and army muſt inevitably periſh. Theſe reaſonable obſervations induced Cugna to leave the brave Magadoxans in the peaceable enjoyment of their own poſſeſſions, and to relinquiſh all thoughts of proſecuting the deſign he had ſo precipitately formed; ſo that he gave orders for ſailing to the iſland of Socotora, where he ſoon after arrived with all his ſhips.

The kingdom of Adel, otherwiſe called Zeila, is bounded on the eaſt, by part of the eaſtern ocean; on the weſt, by the kingdoms of Daneali and Balli; on the north, by the ſtraits of Babelmandel; and, on the ſouth, by the kingdom of Magadoxa. Its full extent on either ſide is not certainly known; but along the coaſt, from north to ſouth, it is ſuppoſed to reach about ſeventy-two leagues, and about one hundred and ſixty from eaſt to weſt.

The ſecond name, which is given it, was taken from the capital called Zeila, which is ſituated to the ſouth eaſt of the mouth of the ſtraits of Babelmandel, near a very ſpacious and convenient bay. The city is tolerably large, and the ſtreets are regularly formed: the houſes are built of ſtone and mortar, and are in general very ſpacious, and divided into convenient apartments. The ſoil round the city is very barren, and ſo diſtreſſed are they for water, that they are obliged to go many miles to fetch that uſeful article. At ſome diſtance, however, from the city, the country is very fertile, and produces moſt of the neceſſaries of life, particularly corn and fruit, which are ſo plentiful, that the natives have not only a ſufficiency for their own conſumption, but alſo export great quantities to the neighbouring countries. They have likewiſe abundance of excellent cattle, eſpecially oxen, ſheep, and hogs; and in the woods are plenty of various ſorts of game. Beſides theſe, the country alſo produces gold, ivory, frankincenſe, and pepper, which the natives ſell to the merchants of Arabia and Camboya, who come hither with cloths, amber, necklaces, glaſs beads, dates, raiſins, and other commodities.

The people who inhabit the northern coaſt of this kingdom are of a tawny complexion, but to the ſouth are quite black. Both ſexes are ſtrong and well made, and have naturally good conſtitutions. They go almoſt naked, having only a looſe piece of cloth hanging from the waiſt to the knees; but they are very fond of ornaments, eſpecially the women, who decorate their arms, necks, and ancles with circles made of glaſs and amber beads. The king and nobility are diſtinguiſhed in their dreſs from the commonalty by having a kind of looſe garment, which covers the whole body from the ſhoulders to the ankles, and wearing caps on their heads.

Theſe people are naturally of a warlike diſpoſition, and are frequently at enmity with thoſe who inhabited the remote parts of Abyſſinia, as well out of zeal for religion, as in hopes of plunder: the former being all ſtaunch Mahometans, and the latter a puſillanimous ſort of Chriſtians, no ways equal to them either in valour, diſcipline, or warlike weapons. The arms of theſe people conſiſt chiefly of bows and arrows, lances, and javelins, all wretchedly fabricated; and the ordinary ſort amongſt them have hardly any thing better than long ſtaves, ſharp pointed at one end; whereas the Adelites are furniſhed by the Turks and Arabs, with variety of fire-arms, and other offenſive weapons, in exchange for which, they give them ſlaves, gold duſt, and ſuch other articles as they obtain from their neighbours, by plundering them in their excurſions.

There are in this kingdom ſeveral other large towns beſides Zeila, but the only one that merits any notice is called Barbora, ſituated at the bottom of a convenient bay, on an iſland of the ſame name. It hath been continually a kind of rival in commerce with Zeila, and is no leſs reſorted to by foreign merchants, who carry on the ſame

kind of traffic. It is ſituate oppoſite the city of Aden, and was once more conſiderable than it is at preſent, being plundered and a great part of it deſtroyed by the Portugueſe fleet under Triſtran de Cugna, who expected to have found a conſiderable ſpoil in it, but were greatly diſappointed, the inhabitants having had time enough to carry off their moſt valuable effects, and make their eſcape.

This town is ſituated on an iſland, which is very fertile, and produces abundance of different kinds of grain; as alſo plenty of fruits and cattle, great quantities of which are exported to foreign countries by the merchants.

With reſpect to the interior parts of the kingdom of Adel, they are chiefly flat, and they have ſeldom any rains; but this defect is ſupplied by the number of rivers that water the whole country. Among theſe, the moſt conſiderable is called Hawaſh, which is very broad and deep, and hardly inferior to the Nile, except in the length of its courſe; for it does not extend above ſix miles from its mouth, before it is divided into ſuch a number of canals as to be in ſome meaſure exhauſted before it reaches the ſea. This renders the ſoil ſo exceedingly fertile, that it produces great plenty of wheat, barley, and millet, and alſo feeds prodigious numbers of ſheep, cows, and other cattle.

Gold-duſt, elephants teeth, frankincenſe, and ſlaves, conſtitute the principal traffic of the natives in theſe parts of the kingdom; all which they get chiefly from the inhabitants on the borders of Abyſſinia, with whom they are continually at war, and miſs no opportunities of making inroads into ſome of their provinces, from whence they ſeldom return without great quantities of different kinds of plunder. Theſe they convey to the port of Zeila, where they ſeldom fail of meeting with merchants from Arabia, Camboya, and other ports, who will readily take them off their hands, and furniſh them with cloths of cotton, ſilk, linen, bracelets, amber, cryſtal, fire-arms, and other commodities, in exchange.

The eaſtern part of this coaſt is a mere ſandy and barren tract, producing neither corn, grain, fruit, or any animals except wild ones; for which reaſon it is generally called the Deſert coaſt. The northern part of it however makes amends; the ſoil being very fertile, and producing moſt kinds of proviſions, in which the inhabitants carry on a great commerce. It is particularly remarkable for producing an excellent breed of horſes, which are chiefly purchaſed by foreign merchants, for which the natives take ſilks, cottons, and other commodities, in exchange.

There are great numbers of negroes on the coaſt, who live and intermarry with the Bedouin Arabs (an idolatrous and ſuperſtitious ſect amongſt thoſe people), and like them, are inveterate enemies to the Abyſſinians, on whom they are continually making inroads. They carry on a conſiderable traffic in gold, ſlaves, horſes, ivory, &c. but they are brutiſh and arrant thieves, more particularly thoſe who live near the trading coaſts.

It is neceſſary to obſerve, before we conclude this chapter, that moſt geographers have, by miſtake, included the republic of Brava, with the kingdom of Magadoxa and Adel, under the general name of Ajan, though that is but a term accidentally given by the Portugueſe to the whole tract of coaſt called by that name, which extends itſelf from the ſtraits of Babel-mandel quite to the utmoſt verge of Africa on that ſide, or to the cape called Guardaſui; and on the eaſtern ſide from the ſaid cape, in the twelfth degree of north latitude, which divides it from the coaſt of Zanguebar, already deſcribed.

CHAP. VI.

THE NEW HISTORY AND DESCRIPTION OF

ABYSSINIA OR UPPER ETHIOPIA, ABEX, AND NUBIA.

SECT. I.

Containing a General Account of ABYSSINIA; together with a Deſcription of the different Kingdoms and Provinces that now form that extenſive Empire.

ABYSSINIA, is ſituated under the torrid zone, and lies between the eighth and ſeventeenth degrees of north latitude, and between the thirty-firſt and fortieth of weſt longitude from London. It is bounded on the eaſt, by the Red ſea, and the coaſts of Abex, or Habeſh, which have been diſmembered from it, and now make a province of the Turkiſh empire; on the weſt, by the river Maley, which divides it from Shankala, or the country of the wandering Ethiopians, and falls into the Nile, after it hath run a conſiderable way into the Nubian dominions; on the north, by the kingdom of Nubia; and, on the ſouth, by Alaba. This country is of a thouſand miles extent; and has been known by the different names of Abyſſinia, Abaſſia, and Habeſſinia, the latter of which is obtained from the Arabic word Habeſh, ſignifying a mixture, or confuſion, it being inhabited by people of various nations. The inhabitants, however, reject theſe names, and call themſelves Itiopians, and their country Mangheſta Itiopia, or kingdom of Ethiopia; but the diverſity of names having heretofore made great confuſion, that of Abyſſinia at length prevailed, and by this it hath for ages paſt been univerſally known.

It may however be proper to ſay ſomething concerning the title that hath been abſurdly given to its monarchs, namely, that of Preſtor John, and which ſeems to have thus originated: in the kingdom of Tenduc, in Tartaria Proper, was an antient race of Chriſtian princes, who bore the title of Preſtor, or Preſbyter John, as it was corruptly called by the Europeans, though chiefly owing to an epithet which Ung-Chiang, one of the firſt of thoſe monarchs, either took of Preſtigian, or was complimented with by his ſubjects, that word ſignifying apoſtolical or orthodox, but which had by the Europeans been corrupted into Preſtor John, on ſuppoſition that he was a prieſt as well as king. The fame of this monarch was become ſo great, in the time of John II. king of Portugal, when the diſcovery of India was made, that he ſent Peter Covillan by land to make inquiry after him in India; but as he could hear nothing of ſuch a prince there, he (being informed that there was a potent Chriſtian emperor in Africa) took that country in his way home, and was ſo kindly treated by the reigning monarch, that this was the kingdom ſo much ſought after, though he could find nothing like the title of Preſtor John. This point, however, hath produced much controverſy among the learned world; ſome affirming the empire of Abyſſinia to be the real Preſtor John's country; while others, with much more reaſon, have treated that notion as abſurd and chimerical.

This empire was much more extenſive than at preſent, ſeveral of its kingdoms and provinces having been diſmembered from it by the incurſions of the Gallas, a barbarous people, of whom we ſhall treat hereafter.

The kingdoms and provinces that at preſent belong to it are as follow; namely, 1. Tigra, or Tigre; 2. Bagameder, or Bagamedri; 3. Amara, or Amhara; 4. Oleca and Choa; 5. Damota, or Damut; 6. Goyam, or Gojam; 7. Dambea; 8. Narea, or Enarea. We ſhall deſcribe each of them in the order here ſet down.

The kingdom of Tigra is the moſt conſiderable in the whole empire, and is remarkable for having in it the remains of the city of Axum, which was formerly the reſidence of the emperors; and though now abandoned by thoſe monarchs, and reduced to a mere village, is ſtill the place whither they repair to be crowned. It is bounded on

on the eaſt, by the Red ſea, on the weſt by Dambea, and part of Nubia; on the north, by Barnagaſs; and, on the ſouth, by the kingdoms of Angot and Begameder. Its length, from north to ſouth, is computed to be about three hundred miles, and its breadth about an hundred and ſixty.

The city of Axum, which was formerly very opulent, and the capital city of the kingdom, is the chief place of note in it. When in its proſperity, it was a large and well built city, as appears by its few remains; and ſituated on a ſpacious and delightful plain, watered by ſeveral rivulets, and was adorned with ſtately palaces, churches, obeliſks, arches, &c. There are particularly the ruins of a ſpacious and magnificent ſtructure, ſome of the ſtones of which are of a prodigious length and thickneſs; one of theſe, which is ſtill to be ſeen in the form of a pyramid, is one hundred and four cubits high, on a baſis of ten cubits, and raiſed on a plinth about two feet high. Beſides this, there were many other ſuperb buildings, all of which were reduced to a mere heap of ruins during the wars between the Gallas and the Abyſſinians; after which, the imperial court being removed, it ſtill farther declined, and has now ſcarcely two hundred houſes left, and they make but a mean appearance. The city is ſituated about forty Engliſh miles from the Red ſea; and though the way to it was ſo rocky and mountainous, that it took up ſeven days journey, yet it was well ſupplied from thence with various neceſſary articles. It was antiently the reſidence of queen Candace, and even of the famed queen Sheba, if the Abyſſinian accounts may be credited.

The town of Madgoga, which is ſituated on a hill, ſtands about ten miles ſouth-weſt of Axum: it was ſo called originally from the murmuring noiſe of a neighbouring rivulet; but afterwards received the name of Fremona, from the jeſuit miſſionaries, who had their reſidence in it, on account of one father Frumentius, the firſt of their order that came into theſe parts. This place became more celebrated by the long reſidence and death of father Andrea de Oviedo, ſent thither patriarch of Abyſſinia by the pope; after whoſe death it ſtill continued the reſidence and ſeminary of all the miſſionaries of that order that came into the country (the greateſt part of whom loſt their lives for the cauſe they came to eſtabliſh there, the ſupremacy of the church and pope of Rome) until their final expulſion out of the whole empire. There are ſtill the remains of a large monaſtery, that formerly belonged to the jeſuits in this town.

A town called Ambacanet is about a day's journey from Madgoga; and a little farther to the ſouthern frontiers is another called Manadela; but they are both inſignificant places, and very indifferently inhabited. To the northward of the latter, however, are two of the fineſt monaſteries in the whole empire, both of which were formerly occupied by the jeſuit miſſionaries; the largeſt of them is called Hallelujah, and the other Abugarina.

The town of Barnagaſs is the utmoſt extent of this kingdom, and reaches to the coaſt of the Red ſea, where it had formerly a famous ſea-port called Arquico, which rendered its commerce very conſiderable. This port, however, was ſome years ago ſeized by the Turks, ſince which Barnagaſs has gradually dwindled, and is now become ſo inſignificant as not to merit any farther deſcription.

The kingdom of Angot is ſituated to the north-eaſt of Tigra: it was one of thoſe wreſted from the Abyſſinian empire by the Gallas, who broke into it from the ſouthern parts, where they moſtly ſpread themſelves up to, or even beyond the line, and made themſelves complete maſters of it. It hath ſome few towns in it, viz. Angot, the capital: Doſarzo, ſaid to contain near one thouſand houſes. Abugana, once famed for having in it a handſome church called Imbre Chriſtos, and for being the capital of a conſiderable territory of its name. Beſides theſe, there are many others of leſs note, but they all contain wretched buildings, and no leſs deſpicable inhabitants.

Bagameder, or Bagamedri, lies weſt of Tigra, and extends from it to the Nile. It is about an hundred and eighty miles in length, and ſixty in breadth; but the greateſt part of it is mountainous, rocky, and inhabited by wild nations. It has ſome towns, particularly one of its own name, which is the metropolis, but it is an inconſiderable place, and the others are ſtill more unworthy of notice. This province is however divided into thirteen governments, moſt of which are fertile, and well watered by ſmall rivers.

Amara, or Amhara, lies to the ſouth of the laſt mentioned province, and on the weſt is divided by the Nile, which ſeparates it from the province of Gojam. It is computed to extend about forty leagues from eaſt to weſt, and has thirty-ſix diſtricts. This is conſidered as the moſt noble province in the empire, from its being the uſual reſidence of the Abyſſinian monarchs, and conſequently of the chief nobility. It has a peculiar dialect different from all the reſt, which is become that of the court, and of the polite throughout the empire. Here ſtand the rocks of Ambaguexen, where the princes of the blood were formerly confined and educated; and this province is conſidered as the center of the empire, at this time.

The province of Oleca, lies to the ſouth of Amhara, and is bounded on the eaſt by Angot, and on the weſt by Gojam, from which it is ſeparated by the Nile. It is a very ſmall province, and has nothing remarkable in any of its towns.

To the ſouth of Oleca, is ſituated the province of Choa, called alſo Xoa, and Shewa. It hath part of the country of Marabet on the north, Iſot on the eaſt, and Gojan on the weſt. It is divided into Upper and Lower Choa, and is the laſt province on the ſouth ſide that now acknowledges ſubjection to the emperor of Abyſſinia. The river Sambo, which runs into the Nile, parts it from the north, the Roma on the ſouth-weſt, and the Yema on the ſouth-eaſt; all which rivers ſpring from thoſe mountains that ſtand on the eaſtern borders.

Korkora, the capital, is almoſt the only town worthy of notice: it was once the imperial reſidence, at which time this province flouriſhed ſuperior to any other in the empire. Some remains of the imperial palace are ſtill to be ſeen; as alſo thoſe of a church, and a large monaſtery called Nazareth. Here are alſo ſome other towns that have monaſteries in them, particularly thoſe called Debra Lebanus, or Mount Lebanos; Menghеſtra Samajat, or kingdom of Heaven, and ſome others of leſs note. The general of the monks uſually reſided in the monaſtery at Lebanus.

The kingdom of Damota, or Damut, hath neither cities nor towns, the principal part of it being covered with high mountains; notwithſtanding which, it is ſo well peopled and cultivated, that the inhabitants of it were the firſt that made an inſurrection againſt the emperor, on account of the Portugueſe miſſionaries, which could not be quelled till they were wholly extirpated by the command of that monarch.

In this kingdom, there is, among others, a lofty hill called the Dead mountain: this is the higheſt and coldeſt in all Abyſſinia, and the place to which priſoners of ſtate, and ſuch others as the emperor determines to rid himſelf of, are ſent; for here they are ſoon ſtarved with cold and famine.

The river Maleg hath its ſpring head under one of the mountains in this kingdom, and, in its courſe towards the Nile, runs acroſs it.

There were formerly two places of reſidence for the Jeſuits in Damota, from whence they were driven by the inhabitants, in the inſurrection abovementioned.

On the other ſide of the Nile, and farther to the weſt, is the province of Goyam, or Gojam, which is almoſt encompaſſed on every ſide by that river, except to the north-eaſt, where it is bounded by the Dambean lake. Its length from the north-weſt to the ſouth-eaſt is ſomewhat above an hundred and fifty miles, and its breadth from eaſt to weſt, where it is broadeſt, is about ninety, it contains twenty diſtricts or governments. This country is fertile, but in the middle is high and mountainous; and theſe eminences are partly inhabited by a people ſaid to be deſcended from Hagar, Abraham's Egyptian bond-maid.

The northern parts are altogether mountainous and rocky, and ſaid to be inhabited by Jews; but it is more probable that they are ſome of the ancient Abyſſinians, who have never yet embraced the Chriſtian religion; for though there are great numbers of Jews diſperſed through the whole empire, yet that people are never known to prefer deſart habitations before the inhabited plains and places of commerce: nor is it probable, that they would reſide among the inhoſpitable rocks, unleſs we ſuppoſe ſome rich mines lie hid amongſt them, which keep them more profitably employed.

There is alſo, about the neck or iſthmus made by the Nile, a very ſteep and almoſt inacceſſible mountain, on the top of which is an oval plain two hundred and fifty fathom in length, and one hundred and thirty in breadth; to which there are two paths as aſcents acroſs the rocks, and on one ſide a ſpring of excellent water. Farther towards the Nile is another plain ſeparated from this mountain by a natural trench, where there is a kind of camp, in which the viceroy reſides.

This

This kingdom has but few towns of note. The chief, and only one worth notice, is that called Nebeſſa, in which the empreſs Helena, governeſs to the emperor David, erected a magnificent church, which was afterwards deſtroyed by the Gallas, but rebuilt by the Jeſuits, who reſided in ſeveral parts of the kingdom. Some remains of this church are ſtill to be ſeen, but no idea of its original grandeur can be traced from them.

The kingdom of Dambea, is bounded on the ſouth by Gojam, from whence it is ſeparated by the Nile, and the lake of its own name; on the north, by Nubia; on the eaſt, by Tigra; and, on the weſt, by Changalia. Its length from eaſt to weſt is about ninety miles, and from north to ſouth about thirty-ſix excluſive of the lake, or ſeventy including it. It is one of the flatteſt territories in all Abyſſinia, ſo that it is frequently overflowed, not only by the lake of Dambea, but alſo the rivers that run through it from the higher lands; and on this account it is interſected almoſt every where with deep ditches and canals.

There is, on the eaſtern confines of this kingdom, a remarkable mountain called Dancas, or Dancaton; it is very high; and on the top of it is a ſpacious and fertile plain, where the emperors formerly reſided, with their court and retinue. Here alſo was an elegant building erected after the European manner, for the reſidence of the Portugueſe patriarch Mendez; a monaſtery for the Jeſuits; a church called Gambianet; and about nine hundred ſtone huts, or barracks, covered with ſtraw, for the ſoldiers attending on the emperor. But they have all been totally deſtroyed many years paſt.

Another exceeding high mountain ſtands oppoſite to this, and is ſo ſteep, that the natives uſed to flee hither for ſecurity when attacked by their enemies. On the eaſt ſide of it is the monaſtery of St. Euſtatius, ſo called from its firſt abbot of that name.

There is not a ſingle town in this province; in confirmation of which, Ludolph aſſures us, that the people here not only prefer the living in ſcattered villages and hamlets to towns, where houſes are contiguous, but likewiſe own themſelves at a loſs to conceive how it is poſſible to live in large or walled towns, and be there ſupplied with all the neceſſaries of life; ſuch utter ſtrangers are they to thoſe conveniencies uſed for the carrying on of commerce in other countries. This kingdom is divided into fourteen diſtricts, and governed by a viceroy, who has the title of Dambea Cantiba.

The things moſt worthy of notice here are the following: in the eaſtern part of the kingdom is a famous monaſtery called Ganeta Jeſu, ſituated on a low ground, but very pleaſant, and being well watered, is exceeding fertile. In the church belonging to this monaſtery are the monuments of the Abyſſinian emperors for ages paſt. Father Pais, a Portugueſe jeſuit, was ſo pleaſed with this ſpot, that he built here a church, as alſo a place for the emperor, after the European manner; but they have been both deſtroyed long ago.

There is between Ganeta Jeſu and the frontiers of Bagemeder, a ſmall but pleaſant territory, remarkable for a kind of market or fair kept in it for cattle, to which the inhabitants of moſt parts of the kingdom reſort. This territory was heretofore granted to the patriarch Mendez for his ſubſiſtence, and that of his fraternity. It is about nine miles in length from eaſt to weſt, and about ſix from north to ſouth.

Contiguous to the kingdom of Dambea is a ſmall barren province called Fatigar. It was formerly a part of the Abyſſinian empire, but was diſmembered from it by the Gallas, who ſo ravaged it, that it hath not any thing now worth mentioning, except two high hills, one of which is called the Mountain of the Fever: it is ſituated near a plain, to which the Europeans have given the name of Market, becauſe moſt of the merchants of the neighbouring kingdoms reſort thither. The other is called the Mountain of the Lake, becauſe there is a lake about nine miles in compaſs, with ſeveral monaſteries round it, at the foot of it.

Several other ſmall kingdoms belonging to the Gallas, lie to the weſt of Fatigar; and on the eaſt and north-eaſt are the rivers Haowach and Machi, which join their ſtreams in the kingdom of Fatigar, and thence take their courſe through the kingdom of Adel, and the vaſt territories of the eaſtern Gallas.

Narea, or Enarea, which is the laſt kingdom or province worth notice, extends ſouth as far as the ſixth degree of longitude, and conſequently to the extremity of the empire. It was formerly governed by its own monarchs, who, as well as their ſubjects, were Pagans; but being conquered about a century ago, they embraced Chriſtianity. However, a conſiderable part of the country is ſtill unſubdued, and perhaps unconverted. The whole kingdom is eſteemed rich and fertile, and produces a great number of cattle. The inhabitants carry on a conſiderable trade with the Caffres, who bring them abundance of gold, which they exchange for cloth, ſalt, and other merchandize.

The Nareans are allowed by the Abyſſinians themſelves to be the beſt and handſomeſt people in all Ethiopia. They are tall, ſtrong, and well ſhaped; and in their dealings honeſt, wiſe, faithful, and undiſguiſed. They are alſo brave and warlike, and have always defended their country with great gallantry againſt the incurſions of the wild and barbarous Gallas, who have ſubdued even half of the Abyſſinian empire. The tribute they pay to the emperor of Abyſſinia, appears rather to proceed from their loyalty than any force; for they receive no aſſiſtance from him againſt thoſe common invaders, nor does he maintain any ſtanding forces, garriſons, or fortreſſes, to keep them in awe. This kingdom is ſaid by ſome authors to abound in gold; but that is probably owing to the great quantity of that metal brought into it by the neighbouring Caffres, unleſs it be ſuppoſed that they deſignedly conceal and forbear ſeeking for it, leſt the fame of their wealth ſhould induce the Turks, or the plundering Gallas, to invade them, for the ſake of plunder.

The Gallas having obtained ſo conſiderable a part of the empire, it may not be improper to give ſome account of them. Theſe people, who are alſo called Galli and Balli, are commonly diſtinguiſhed according to their ſituation with reſpect to Abyſſinia, into eaſtern, weſtern, and ſouthern. They are a bold warlike people, who live by the ſword, and conſider that as giving the beſt title to every thing, and as being the ſureſt means of preſerving what they have acquired. They are brought up to arms from their infancy, and are early taught to love glory and conqueſt, and to deſpiſe ſlavery and death. Their youth are not allowed the privilege of cutting their hair, which they eſteem the badge of manhood, till they have killed an enemy or ſome ſavage beaſt. The greater number of brave actions a man has performed, the more he is reſpected; and this gives them the preſidence at councils and at feſtivals, on which account they ſave the heads of thoſe enemies that fall by their hands as the moſt valuable trophies. After an engagement they lay them before the proper officers on the field of battle, where they are regiſtered in favour of the perſons by whom they are brought: after which the owner may carry them to his own tent, together with his ſhare of the plunder, which is adjudged to him according to the ſhare he had in the victory, and the courage he diſplayed.

The bow and arrow, and the dart, when they fight at a diſtance, are their common weapons. Thoſe of high rank cloſe in upon the enemy with their ſwords, and the reſt have a club with one end hardened in the fire. Their ſhields are chiefly made of the hide of a bull or buffalo. They had formerly no cavalry, but have ſince learned to fight on horſeback; and though their horſes are but indifferent, yet they fight ſo cloſe, and in ſuch good order, that the Abyſſinians, though much better mounted, cannot bear the ſhock. It is even a capital crime among them to give way after the onſet is begun: hence they all fight to conquer or die, neither giving nor aſking quarter; ruſhing with ſuch fury on the foe, that it is very difficult to make head againſt them; whence they have gained many ſignal victories over Abyſſinian armies that have been much more numerous, and provided with better horſes and arms. Whenever therefore the Gallas make incurſions into the territory of an enemy, inſtead of truſting to numbers, they commonly chooſe a ſelect body of determined youths, not exceeding eight or ten thouſand at the moſt, who being all ſworn to ſtand by each other to the laſt, fight with ſuch intrepidity as ſeldom fails of putting into diſorder an enemy of twice or three times their number.

Agriculture they conſider as a ſlaviſh employment; and though they admire the bread they take from the Abyſſinians and other neighbours, are generally above ſowing corn; and if they do, leave that work to their ſlaves and women, while they follow what they eſteem the more manly exerciſes of war and hunting. They, however, feed numerous herds of cattle, and live chiefly upon their milk, and ſuch productions of the earth as the country affords, ſhifting from place to place for the ſake of paſture, always taking with them their families and cattle. They give a political reaſon for their indolence, which is, that if their lands produced plenty of corn, the Abyſſinians, and other enemies, might be tempted to invade them, and reap the

fruit

fruit of their labour; and if any neighbouring ſtates make incurſions on their territories, they immediately retire to ſome remote parts, with their wives, children, and cattle, in the latter of which conſiſts their principal wealth; ſo that the enemy, finding the country thus barren, are obliged either to return, or periſh for want of ſubſiſtence.

The Gallas, are ſaid to be divided into above ſixty tribes, each of which has a particular head or prince; and theſe chuſe from among themſelves a luva, or luba, who preſides over all the reſt, but whoſe authority extends only to military affairs, and is confined to eight years. This octennial chief convenes the grand council, in which the affairs of peace and war are determined; and if they agree upon the latter, he heads the army as commander in chief, diſtributing to each of the heads of the tribes his proper province and duty; and when the war or expedition is over, he aſſigns to each man his proper honours and rewards, according to his merit: but if any diſpute or matter of complaint ariſes, it is adjudged by the national council, who alone have a power to confirm, alter, or abrogate the ſentence or decree which the luva has pronounced.

That we may enable the reader to form an idea of the mock dignity preſerved by theſe chiefs, as well as the ſingular method in which they treat thoſe who requeſt audience of them, we ſhall relate the following particulars, as given by father Lobo, who had an opportunity of ſeeing the whole: "Being, ſays he, obliged to pay my reſpects to the luva, or chief, in order to diſcover a new way into Abyſſinia, I found him with all his wives and flocks about him; the place where he received me being a hut thatched with ſtraw, but ſomewhat larger than thoſe of his ſubjects. He appeared with all the ſeeming conſequence of an eaſtern monarch, and his attendants paid him the moſt reverential reſpect. His manner of giving audience to ſtrangers is ſomewhat ſingular: he appears ſeated in the middle of the apartment, with all his courtiers about him, ſitting againſt the wall, each with a goad, or ſtaff, or club in his hand, longer or ſhorter, according to his rank; the longer are the more dignified. As ſoon as the ſtranger enters the place, all theſe courtiers fall foul of him, and baſtinado him till he has regained the door, and got hold of it with his hand; upon which they return to their ſeats, and he is complimented as if nothing of this kind had happened. I myſelf, ſays he, did not fare one jot better, notwithſtanding the peaceable and friendly offices that had paſſed between us; and when I aſked the meaning of ſo ſtrange a ceremony, I was anſwered, that it was to make thoſe that came among them ſenſible of the valour and bravery of their nation above all others, and how reaſonable it is that they ſhould behave ſubmiſſively to ſuch a people."

Notwithſtanding the Gallas are naturally cruel and barbarous, yet they are not without ſome good qualities: they are honeſt and true to their promiſe, and are never known to violate an oath. They conſider this as moſt ſolemn of all engagements; the ceremony of which is thus performed: they bring a ſheep to a proper place appointed, where they anoint it with butter; after which the perſons (or, if it be taken in the name of a tribe or family, the heads of it) lay their hands upon the head of the ſheep, and ſolemnly proteſt, that they will religiouſly obſerve every part of their engagement. The explanation they give of this ceremony is, that the ſheep is, in ſome ſenſe, the mother of all that ſwear, and the butter is an emblem of the mutual love of the mother and her children; and, conſequently, that when a man hath taken an oath upon the head of his mother, he ought never to violate it.

As to their religion, they acknowledge one ſupreme Being, as governor of all ſublunary things, but have not any mode of worſhip, being extremely ignorant of every thing relating to religion. When the Romiſh miſſionaries were here, many of them embraced Chriſtianity, to which for ſome time they ſtrictly adhered; but they have laid their religion aſide, and followed their original maxims, ever ſince the expulſion of the jeſuits.

SECT. II.

Deſcribing the Mountains, Rivers, Soil, Produce, and Animals of ABYSSINIA; containing alſo an Account of the Inhabitants, their Perſons, Dreſs, Manners, and Cuſtoms, together with their Buildings and Furniture: alſo their Marriages and Funeral Rites.

ABYSSINIA, is interſected throughout with a great number of prodigious high mountains, between which are ſuch dreadful precipices as muſt naturally ſtrike terror into the beholder. Some of them have very large plains on the tops covered with trees and other verdure, and afford ſprings of excellent water; and ſome of them are ſo well cultivated as to produce moſt of the principal neceſſaries of life.

Theſe ſtupendous hills, which the natives call Dambas, appear at a diſtance with a delightful variety of ſhapes. Some of them reſemble pyramids, and others look like towers of various ſhapes. Some are of an equal ſquare, others as perfectly round as if they had been turned or wrought with the chiſſel. Some again ſo deceive the eye, that when you arrive at what you ſuppoſe to be the top, you diſcover it only to be the foot of another, no leſs difficult to aſcend, and equally high and craggy.

That our readers may form a proper idea of one of theſe ſtrange natural productions, and the great danger and difficulty there is in aſcending them, we ſhall preſent the reader with an account of that called Guza, ſituated in the kingdom of Tigra, which travellers who come from the Red ſea are obliged to croſs, in going to Dambea: when you have gained the top, it opens to your view a handſome ſpacious plain, in the midſt of which ſtands another mountain of equal height, which you muſt alſo go over, after you have ſufficiently refreſhed yourſelf on the fertile and delightful top of the Guza. The aſcent takes up about half a days journey, and goes winding all the way up; the paths are very narrow, and cut into the ſide of the ſolid rock; and all the way you go preſents you with a moſt deep and dreadful precipice, the bottom of which cannot be reached by the naked eye, but only offers a gulf, which at once makes the head giddy, and fills the heart with a continual dread. Should any of the caravans that keep going up and down theſe ſteep and narrow roads, chance to meet another in its way, they are in the greateſt danger, both man and beaſt, of being thrown down the precipice, and broken into a thouſand pieces before they reach the bottom, unleſs they take the utmoſt care in paſſing by one another. The mules are by far the beſt for thoſe that ride, becauſe they are the ſureſt footed; but they have an ill faculty with them, that they will always go cloſe to the edge of the precipice, and cannot without great riſque be turned to the other ſide of the road, or be kept to it when they are. What adds ſtills more to the horror of the journey, whether it be up or down the ſteep declivity, is, that at the bottom of the valley below there commonly runs a ſwift torrent of water, with a moſt hideous roar, which being echoed by the adjacent rocks, and often heightened by loud winds; as well as by the continual trampling of the men and beaſts upon the rock, increaſes the horrid din to ſuch a degree, that one cannot poſſiby hear one's ſelf, much leſs another ſpeak, though ever ſo loud, or ever ſo near the perſon.

The wiſhed-for ſummit being however once attained (which is reckoned above three hundred fathoms perpendicular above the plain top of Guza, and the moſt difficult part of all the way, being only provided by nature with a ſort of ſteps like winding ſtairs, two or three cubits high, and uncouth, on both ſides of the rock), one is made ample amends by the beautiful proſpect it at once preſents to the view, which is not that of rugged and interſected peaks above, and deep gaping vallies beneath, as might be expected, but of a ſmall, though delightful plain, about two miles in compaſs, and a muſket ſhot in breadth, and terminated at one end by a new, flat, and upright rock, like the back of a chair, of which this little plain is the ſeat, ſo that take the whole mountain together, that of Guza ſeems to be a kind of pedeſtal to this; and the latter, which the natives call Lamalmon, repreſents, in ſome meaſure, a chair without arms, the back of which is the upright rock at the end of the plain, which is as perpendicular as if it had been hewn out with a chiſſel. Along what we may call the ſeat of this wonderful and ſupereminent chair, is pleaſantly ſituated a town of the ſame name, whoſe inhabitants make a decent livelihood by helping the caravans to load and unload the beaſts of burden a good part of the way of the craggy aſcent beforementioned, in order to help them to leap from one ſtep to another; ſo that one would be ſurpriſed to ſee with what facility they make the beaſts climb and keep their feet, while they themſelves convey their burdens from one ſtair to another, through every difficult part of this extenſive aſcent. Thus far the deſcription of this remarkable mountain, as given by the authors of the Univerſal Hiſtory.

In this country, there are other mountains of much the ſame nature as the above, particularly one ſituated between the kingdoms of Amhara and Oleca. But the moſt conſiderable of them all is that called by the natives Thabat Mariam, or more properly Tadbaba Mar-jam, whoſe ſum-

mit greatly exceeds all the reſt, and is at the ſame time very ſpacious. This remarkable mountain, whoſe bottom is watered by two large rivers deſcending from it, hath on its ſummit ſeven handſome churches, one of which dedicated to St. John, is exceeding beautiful, having been formerly the burial place of the Abyſſinian emperors: within ſide are at this time five monuments erected to the memory of thoſe monarchs: the arms of Portugal are repreſented on them, and they are covered with tapeſtry.

In the kingdom of Gojam there is a remarkable hollow and high rock: directly oppoſite to which, at a ſmall diſtance, is another much at the ſame height and bulk, ſo exactly placed by nature, that it echoes back a word barely whiſpered in the former with amazing force; and the joint voices of three or four perſons ſpeaking together, produces a ſound not inferior to that of a numerous army ſhouting.

Here are many excellent rivers in this country: the moſt conſiderable of which, beſides the Nile, which takes its riſe here, are the following: 1. The Tacazee, ſuppoſed to be the Aſtabores of Ptolomy; it riſes in the kingdom of Angot, and, after many conſiderable windings, firſt eaſt, then north, then weſt, and then north again, diſcharges itſelf at length into the Nile: this river, though not ſo large as that it runs into, is in many places very deep, and abounds with crocodiles and ſea-horſes, as alſo that remarkable fiſh called the torpedo, already deſcribed. 2. The Mareb, or Moraba, which comes down from the coaſts of Habeſh, or Abex, and runs moſtly north-weſt through the kingdom of Tigra and other provinces, and at laſt falls into the Tacazee. 3. The Maley, which riſes in Damut, and, after a courſe of ſome ſcore leagues to the weſtward, turns northward toward Narea, waters Biſamo and Faſcala, weſtward of the Nile, and then diſcmbogues itſelf into the White river. 4. The Bahr el Abiad, or White river, which ſprings in Biſamo, receives the Maley, and ſurrounds the kingdom of Changara on the weſt, dividing it from thoſe of Gorham and Gagoa, and falls into the Nile about ſixty leagues below Nubia. 5. The Zebee, which riſes in the kingdom of Narea, and is little inferior to the Nile: it takes its courſe firſt weſtward, then eaſtward, and after that ſouthward; when it ſurrounds in ſome meaſure the kingdom of Gingiro into a peninſula, as the Nile doth that of Gojam; after which, it continues its courſe ſouthward, and at laſt empties itſelf into the Indian ocean. 6. The Howaſh, or Haowache, which runs through the kingdoms of Gan, Fatagar, Bally, &c. and loſes itſelf at laſt in the ſandy deſart in the kingdom of Adel. This river makes ample amends to the inhabitants for the want of rains, which ſeldom fall in this part of the country; and being, like the Nile, drawn into numerous channels, enrich all that tract, by watering their fields, and fertilizing their vallies; ſo that they produce moſt of the articles neceſſary for the preſervation and ſubſiſtence of the inhabitants, particularly plenty of corn and cattle.

In this country, beſides the above, are great numbers of ſmaller rivers, the chief of which fall at length into the Nile, and the reſt into the Indian ſea. The people cut canals from theſe rivers, to water their lands, which in ſome parts are made ſo rich and fertile, that they yield annually two or three crops.

Several large lakes are alſo here, the moſt conſiderable of which is that called by the Europeans Dambea, and by the natives Bahr Tzana, or ſea of Tzana, from the chief iſland in it of that name. This lake is ſituated in the kingdom of Dambea, and is computed to be about thirty leagues in length, twelve in breadth, and one hundred and fifty in compaſs, excluſive of its deep bar, creeks, and other windings. The country round about it is plain, fertile, and pleaſant; and the inſide of the lake abounds with a multitude of iſlands of different ſizes, the largeſt of which are inhabited by Abyſſinian monks. About ſeven or eight of theſe iſlands contain the remains of large monaſteries, which appear to have been formerly ſtately edifices; and among the natural productions of them are ſuch fine citron and orange trees as are not to be equalled in any other part of the empire. One of theſe iſlands, and the moſt barren of them all, is called by the natives Dek, and is the place where ſtate priſoners are uſually confined.

The Abyſſinians ſail on this lake in flat-bottomed boats, which they call tancoas; they are not made of wood, but of a kind of ruſhes that grow on its banks, each of which is about the thickneſs of a man's arm, and about two yards in length. They call theſe ruſhes tambua, the like of which grow alſo on the banks of the Nile, and are uſed for the ſame purpoſes. Theſe laſt are thoſe which the antients call papyrus, and were ſerviceable to them not only in making their boats, ſails, and other tackle, but alſo their paper.

This lake is attended with one great inconvenience, which is, that it breeds great numbers of ſea horſes, which not only endanger the navigation, but deſtroy the fiſh, and ſometimes make conſiderable ravages in the land. However, the people that live on its banks make it their buſineſs to deſtroy theſe animals, not only to ſecure their corn and other grain from being deſtroyed by them, but alſo for the ſake of their fleſh, of which they are very fond; they likewiſe cut their ſkins into long ſtraps, called allongas, which they uſe to ſcourge their horſes with, inſtead of whips.

With reſpect to the climate of this country, we may reaſonably ſuppoſe, from its ſituation, that it is exceeding ſultry; but the extreme heat is only felt in the vallies or low lands, for the hills, or ridges of mountains (moſt of which are of a prodigious height, as we have lately obſerved), enjoy an agreeable coolneſs; inſomuch that there are ſome parts where the ſummers are leſs ſultry than in Portugal; and others, where the inhabitants are more afraid of cold than heat. This difference of climate is, however, frequently productive of violent ſtorms of thunder and lightning, which are ſometimes ſo terrible as to be very deſtructive both to man and beaſt. Theſe ſtorms are alſo generally attended with exceſſive rains, which are frequently ſo violent, that their ſtreams carry away with them trees, houſes, and even hills, whilſt all the rivers overflow, and lay the country under water; and after the water retires, the lands and roads are ſo covered with a thick ſlimy mud, that they become for ſome time intirely impaſſable. But the greateſt inconvenience that attends theſe rains, is, that they infect the air with a dangerous malignancy; for, falling on a ground that hath lain dry and almoſt parched up for a conſiderable time, they naturally raiſe ſuch vaſt quantities of unwholſome vapours, as ſeldom fail to produce ſome violent diſtempers, from which even thoſe are ſeldom excepted, who remain altogether at home.

They have properly ſpeaking, three ſeaſons here; namely, the ſpring, which begins at the latter end of September; the ſummer, which commences on the 25th of December; and the winter, which begins on the 25th of June. They divide the ſummer into two parts, of three months each; the firſt of which they call Tzadai, and is the moſt ſultry and diſagreeable; and the other, which is much more moderate and pleaſant, they call Hagai.

The winds alſo of this country differ, as well as the climates: ſome eſpecially on the high lands and lofty mountains, are very refreſhing and pleaſant; while others on the low lands, where the air is leſs agitated, are hot and very unhealthy. They are ſubject to one in particular, which is rather a hurricane, and is called in their language ſengo, or ſerpent. This is ſometimes ſo violent, that it overturns houſes, tears up trees by the roots, and is frequently very prejudicial to the ſhipping. But notwithſtanding theſe inconveniencies, this wind has ſome good property, as it clears the air of the lower grounds, which would otherwiſe ſtagnate, and prove infectious not only to men, but to other creatures in general.

The lands in Abyſſinia are ſome of them ſo fertile as to yield two or three harveſts of very good millet, barley, and wheat. They have no rye, inſtead of which they make uſe of a ſmall grain called teff, which is of much the ſame taſte and flavour, and yields very good nouriſhment. It is ſmaller than our poppy ſeed, and a little oblong; but at the ſame time the people in general live very poorly, and even naſtily, and their cattle ſeem to fare much better than they do themſelves. As they have no oats, they feed their horſes, camels, dromedaries, and other large beaſts with barley; for though their low lands produce plenty of graſs ſufficient to feed a prodigious number of cattle, yet they never make any hay, which is here the more neceſſary, as it muſt be frequently ſcorched up by the heat of the ſun, and even when it is moſt plentiful, it is liable to be deſtroyed by the vaſt flights of locuſts, with which they are ſometimes infeſted, which cover the ſurface of the earth, and ſoon devour every blade of graſs, beſides other vegetables.

A conſtant verdure is ſaid to crown the trees of this country, and if the inhabitants have a ſcarcity of fruit, it is rather owing to their negligence than to any fault of the ſoil, which is capable of producing as great a plenty and variety of them as any country in Africa. They cultivate the black grape, peaches, ſour pomegranates, ſugar canes, and ſome citrons and oranges: they have alſo ſeveral kinds of figs,

figs, and among others one called enſette, which grows to a prodigious ſize, and which Ludolph has endeavoured to prove to be the dudaim of Moſes, which is rendered mandrakes in our and other tranſlations.

Here are not only the ſame variety of medicinal and odoriferous plants, herbs, and roots that are to be met with in Europe, and which alſo grow without cultivation, but many more unknown to us. The country produces great quantities of ſenna, and there are plains, covered with cardamums, and a kind of ginger that has a moſt agreeable ſcent, and is four times as large as that of India. To theſe we may add the aſſaſo, which has ſuch an effect, that it ſtupifies the ſerpents and venomous reptiles that approach it, and its root is a certain cure for thoſe who are bitten by thoſe creatures. Here are alſo great numbers of the cotton ſhrub which produces cotton in great abundance.

During the greateſt part of the year, the banks of the rivers are adorned with jaſmines, roſes, lillies, jonquils, and a prodigious number of flowers unknown in Europe.

This country produces a great variety of both domeſtic and wild animals: among the former are camels, dromedaries, horſes, aſſes, mules, cows, ſheep with great tails, and goats, which are bred in vaſt numbers, they being the principal wealth of the inhabitants. Their fat oxen are ſaid to be of ſo monſtrous a ſize, that at a diſtance they have been miſtaken for elephants: whence it has been ſaid that horned elephants were common in Abyſſinia, and theſe horns travellers have repreſented as being ſo large, that one of them will contain above ten quarts of liquor, and ſay they are uſed by the people inſtead of pitchers and other veſſels to carry wine, milk, or other liquids. But beſides theſe large oxen, which are fatted for ſlaughter, they have an ordinary ſort deſigned for labour and carriage, whoſe horns are ſaid to be ſo ſoft and flexible, that they hang down like a dead weight from their heads.

Here is a very fine breed of horſes, which, like thoſe of Europe, are of various colours, but the black are the moſt numerous, and in the greateſt eſteem. Theſe are only uſed for war and for travelling. In long journies they make uſe of mules, which are commonly very gentle, ſure footed, and fit for the craggy mountains; they have a quick eaſy pace, and in travelling are commonly preferred by the Abyſſinians to their beſt horſes.

They have here, among the animals of the camel kind, the camelopardus, which is ſaid to be much taller than an elephant, but as ſlenderly made as that is clumſy and unweildy; its fore legs are repreſented as of an amazing length, and though the hinder are ſomewhat ſhorter, its belly is ſo far from the ground, that a tall man may eaſily paſs under it without ſtooping. The neck is of a proportionable length to enable it to reach the ground, and feed upon the graſs, which is the food it chiefly lives on.

Elephants are here extremely numerous, and none were ever known to be brought up tame in this empire. They make dreadful havock among the corn and other grain, much more being deſtroyed by trampling it down, than by what they eat.

The zebra is one of the moſt beautiful animals in this country, it is of the ſhape and ſize of a mule, but more ſleek and ſlender; it is here curiouſly marked with white, black, grey, and yellow ſtreaks acroſs the back from the neck to the tail. This animal is not, however, very common, ſince it is ſo much admired as to be thought a preſent of ſufficient value to be offered to the monarch. We have already deſcribed this creature more at large.

Lyons, tygers, panthers, leopards, wolves, monkies, foxes, wild cats, civet cats, hares, rabbits, ſquirrels, and a varitey of other animals, abound in this country.

Travellers who have viſited Abyſſinia mention a very extraordinary animal, which is probably one of the many ſpecies of monkies. They repreſent it no bigger than a cat; but as having the face of a man, with a mournful voice. It lives upon the trees, where they ſay it is brought forth, and dies: but it is ſo very wild, that there is no poſſibility of taming it; for when any of them have been caught in order to bring them up, all the care that can be taken of them will not prevent their pining themſelves to death.

This place is ſtocked with a great variety of the feathered kind, both wild and tame, many of which are found in Europe; but thoſe here excel ſeveral of ours in beauty and ſize, particularly their partridges, which are ſaid to be as large as our capons; they have ſeveral kinds of them, as alſo of pigeons and turtle-doves. Among the birds which ſeem in a manner peculiar to this country is the maroc, or honey-bird, ſo called from its particular inſtinct in diſcovering the hidden treaſures of the induſtrious bees, which they feed upon.

The largeſt and moſt unwieldy of all the feathered race, namely, the oſtrich, is common, not only here, but in the greateſt part of Africa. In this country are alſo the pipi, ſo named from its conſtantly uttering thoſe two ſyllables, and it is ſaid to direct huntſmen to their game, when it feeds on the blood of the beaſt killed by its direction. The cardinal is ſo called by the Portugueſe from the beautiful redneſs of its feathers, except thoſe on its breaſt, which reſemble the fineſt black velvet; and the white nightingale is a beautiful bird that has a tail two ſpans in length.

A multitude of obnoxious animals infeſt theſe parts, particularly ſerpents and inſects; many of the former are extremely venomous, and their bite attended with almoſt inſtant death, if an effectual remedy be not immediately applied. But none of theſe are capable of doing an hundredth part of the miſchief produced by the locuſts, which ſometimes appear in ſuch thick clouds as to eclipſe the light of the ſun, and to lay whole provinces deſolate by their ravages.

The crocodile and hippopotamus, or river horſe, are the largeſt and moſt deſtructive of their amphibious animals. It is not eaſy to conceive how this animal came to be called a horſe, to which it has ſcarce any reſemblance: Its body is like that of an ox, but is twice as big as that of a bull; its legs are ſhort, and reſemble thoſe of a bear, it having large round feeet, with four claws in each; its tail is like that of an elephant, and it has no more hair on its body than there is upon that animal. In the lower jaw it has four large teeth, two of them crooked like the two tuſks of a wild boar, and the other ſtrait, but ſtanding forwards, and all of them as thick as the horns of an ox. Its eyes and ears are ſmall conſidering its bulk; but it has a wide mouth, great open noſtrils, and an upper lip like a lion's, on which grows a briſtly beard. He ſpends the day commonly in the water, and the night on the land, when he feeds on the graſs, which is his principal food; his teeth, on account of their not being ſubject to turn yellow, are eſteemed more valuable than ivory.

The rivers and lakes abound with a variety of fiſh, among which is the torpedo, whoſe peculiar benumbing quality, on being touched by the finger while alive, we have already given an ample account of.

With reſpect to their perſons, the Abyſſinians are generally tall and well-ſhaped; their complexions may be called black, but ſome of them are inclined to the tawny, and to a reddiſh brown. Among them, the olive is reckoned the fineſt complexion, and next to that the jet black, but the reddiſh, and particularly the yellowiſh brown, is eſteemed the moſt diſagreeable. They have regular and agreeable features, and their eyes are black, briſk, and lively: their noſes are not flat, nor their lips protuberant, as among the natives of Guiney.

Theſe people are ſtout and ſtrong, briſk and healthy; and their labour, together with the temperance they uſe in eating, prolong their lives to a good old age. Moſt of them are ſo nimble and active, as to climb up the talleſt trees, or ſteepeſt rocks, with ſurprizing eaſe and agility. The women greatly exceed thoſe of Europe and Aſia in ſtrength and ſprightlineſs; they breed eaſy, are delivered without help, and can take care both of the child and themſelves, without the aſſiſtance of a nurſe. Indeed, except where they are weakened by a ſedentary life, this ſtrength of conſtitution is common to all the women in theſe hot climates.

The men of quality wear a long veſt, either of fine ſilk or cotton, tied about the middle with a rich ſcarf; that of the citizens is much the ſame, but of cotton only, they not being allowed to wear ſilk, neither is their cotton of the ſame fineneſs. The common people have only a pair of cotton drawers, and a kind of ſcarf, with which they looſely cover the reſt of their bodies; and, till about a century ago, this was the general dreſs of all the people, none but the emperor, the royal family, and ſome diſtinguiſhed favourites, being allowed to wear any other; and this ſcarf, or a piece of cloth, ſerves then to wrap themſelves in at night.

The habit of the women is allowed to be as fine and genteel as their circumſtances will admit; for they are far from being kept in ſo recluſe a manner as thoſe among the more eaſtern nations. Thoſe of high rank uſually dreſs in the richeſt ſilks and brocades, their upper garments are wide and full, not unlike ſurplices: they adorn their heads and hair an hundred different ways, and take care to have the richeſt pendants in their ears; beſides they ſpare no expence in adorning their necks with the

moſt

moſt coſtly ornaments of chains, jewels, and other decorations.

The natives of both ſexes are extremely curious about the management of their hair, on which they laviſh a great deal of butter, to render it ſmooth and ſhining. This vanity is perhaps the more excuſeable, as none but the emperor is allowed to wear either cap or other covering for their head, which, as they have a great deal of idle time upon their hands, is an inducement to them to beſtow ſome part of it in this amuſement. Indeed their hair not being apt to grow thick and long, but moſtly thin and frizly, ſome additional art ſeems neceſſary to keep it in tolerable order, ſo as to diſtinguiſh each ſex; and therefore while the men take much pains in braiding it up in various forms, the women ſtrive to have it hang looſe in a variety of curls and ringlets, except the foretop, which according to their rank, they take ſtill greater pains to adorn with jewels and trinkets.

Their dreſs, upon the whole, is chiefly accommodated to the climate. The heat is ſo exceſſive, that they can hardly ſuffer any cloaths to touch the fleſh; which makes them contrive, during the heat of ſummer, to have them as light, and to hang as looſe as poſſible. Hence the cloth that covers their bodies is thrown looſely over them, their breeches likewiſe, and the women's drawers, are made wide and long; but in the cooler ſeaſons they bring them much cloſer to their bodies, and the rich then appear in handſome veſts, open only to the waiſt, and cloſed with ſmall buttons; theſe have ſmall collars, and very long and ſtrait ſleeves gathered in at the wriſt. Some authors have miſtaken them for ſhirts; though according to the ſeaſon and their circumſtances, they wear another light garment under them, next to the ſkin, made of thin taffety, ſattin, or damaſk.

The Abyſſinians are not ſo temperate in their drinking as in their food, eſpecially at their feaſts, where after a full meal they uſually drink to exceſs: agreeable to one of their proverbs, "Plant firſt, and then water." Their liquors are rendered more tempting than their meat. As they have plenty of honey, their mead is excellent; they have likewiſe ſome other liquors made of various fruits, and a third ſort made of barley without hops. Theſe exceſſes are attended with no ill conſequences, for they live peaceably, and ſeldom quarrel among themſelves; or if they do, their conteſts ſeldom go farther than exchanging a few blows; and in matters of conſequence, they generally decide the controverſy by umpires choſen amongſt themſelves, or lay the affair before the ruler of the place. Here they are allowed to plead their own cauſe without the help of a lawyer: and when judgment is given, whether by the judge or the arbitrator, they without the leaſt grudge, murmur, or appeal, ſubmiſſively acquieſce in it.

The men and women are ſaid in general to be witty and ingenious; but thoſe of the kingdom of Nerea are deemed to exceed the reſt in ſenſe, bravery, generoſity, affability, and other ſocial virtues. They are extremely inquiſitive and fond of learning; yet the people of Tigra, and the neighbouring kingdoms are repreſented as being for the moſt part perfidious, cruel, revengeful, haughty, and inconſtant.

Though there is but little learning found among the Abyſſinians, that defect is rather for want of proper means, than of capacity to attain it, for they are naturally docile and fond of knowledge, which is acknowledged to have been one of the principal motives that induced them to give the jeſuit miſſionaries ſo kind a reception at their firſt coming amongſt them.

An intire negligence appears here reſpecting the ſymmetry and architecture of their buildings; which is owing to their living in huts or camps, after the manner of their monarchs: ſo that except a few old royal palaces, here are neither public ſtructures nor private buildings worthy of notice to be ſeen throughout the whole empire; for thoſe they ſtile houſes would hardly deſerve the name of huts among us, they being built of clay and lathes put together in the meaneſt and moſt ſlovenly manner, ſo as to be eaſily raſed, and as readily abandoned, when they think proper to ſhift their quarters. Theſe buildings belong to the inferior ſort, who follow the royal camp, and being unable to purchaſe tents, erect theſe huts with almoſt as little trouble as a large tent would require in rearing. The very emperors themſelves had neither caſtles nor palaces till the Portugueſe miſſionaries came among them, but lived in their ſtately pavilions, where all their nobles, guards, and other retinue attended them.

At the time abovementioned, theſe people were not only ſuch ſtrangers to all kinds of ſtately edifices, but even to common regular buildings, that when father Pays undertook to build a magnificent edifice for ſultan Segaud, none of that prince's ſubjects knew ſo much as how to dig the ſtones out of the quarries, much leſs how to ſquare or work them fit for uſe. He was therefore obliged to teach them both that, and how to make the proper tools for the maſons, carpenters, joiners, and in ſhort, for every part of the work; and alſo how to join the ſtones, which was performed with a red clay of ſo glutinous a nature, that it makes a good ſtrong cement, without the help of quicklime. The people were filled with amazement, at beholding not only a large ſtupendous ſtructure, erected with much ſtrength and regularity, but even high and ſtately ſtories raiſed one upon another, for which they had not even a proper word, but ſtiled them babeth-laibeth, or houſe upon houſe; ſuch was their ignorance of the nature of buildings in general.

They have chiefly round tables, which among the rich are large enough for twelve or fourteen perſons to ſit round them; but they are very low, as the people, like the inhabitants of moſt of the countries in the eaſt, ſit upon carpets, and the meaner ſort on the ground, or on mats. Their furniture even among thoſe of high rank, is mean: they have no fine paintings, tapeſtry, or other ornaments; and indeed, their way of living is in ſome meaſure incompatible with any ſuch finery. Even their beſt beds are no better than couches, on which they lie upon hides and ſoft furs, wrapped in their upper garments. Indeed, ſome of their princes and perſons of wealth purchaſe Indian quilts, with ſilk borders, which now come to them from the ports on the Red ſea: and theſe they ſpread upon their couches, chiefly in their outward apartments, that they may be ſeen by thoſe who come to viſit them. But the poor moſtly lie on mats, or a hide or two ſpread on the ground, which ſerve them inſtead of a bed.

Here are neither inns, taverns, nor caravanſeras for the entertainment of ſtrangers. Theſe are rendered unneceſſary, by that ſpirit of hoſpitality which prevails amongſt them. If a traveller ſtays longer in a village or camp than three hours, the whole community are ready to lodge and furniſh him with proper neceſſaries for himſelf, his ſervants, and cattle, at the public expence. He need only enter the firſt hut or tent he likes, and reveal his wants to the maſter of it, who immediately goes and informs the chief perſon of the place; upon which an ox is ordered to be killed, and ſo much of it is ſent to him as will be ſufficient for him and his company; together with a proper quantity of bread, liquor, and conveniencies for lodging. They are the more careful to ſupply him with all theſe, being liable to a fine of double the value of what they are bound to furniſh him with, ſhould he prefer a complaint, in caſe of their neglect, to a proper magiſtrate. However, this laudable cuſtom is attended with great inconveniencies, as it gives encouragement to a number of idle vagabonds to abuſe it, and become burdenſome to others.

Manufactures are not numerous among them; and though they are chiefly dreſſed in linen and cotton, and their country is as proper for producing them as any in Africa, they are ſo indolent, that they raiſe no more than will juſt ſerve their preſent wants; and the leſs of either ſerves them, as they make no uſe of any at their tables or for their beds, and a ſmall quantity is ſufficient to ſerve the common people as a covering for their bodies. The Jews are ſaid to be their only weavers, as they are in moſt parts of the empire their only ſmiths, and work in all kinds of metal.

What joiners, carpenters, and maſons are produced in this country may be eaſily gueſſed, from the meanneſs of their buildings and furniture; and the ſame may be ſaid of other trades, as taylors, ſhoemakers, &c. from the plainneſs of their dreſs. Indeed the potters, and makers of horn-trumpets and drinking cups are in the higheſt eſteem. Theſe and other inferior artiſts are incorporated into tribes or companies, and have their ſeveral quarters, neither intermingling nor intermarrying with the reſt, the children commonly following their parents buſineſs.

Gold and ſilver ſmiths, jewellers, and other curious artificers of the like kind, are altogether unknown to them, unleſs by ſome of their works being brought by way of traffic or exchange, and theſe are only to be found among the great and opulent. The ſame may be ſaid of their carpets, tapeſtry, ſilk, brocades, velvets, and other coſtly ſtuffs, which the Turks bring hither, by the way of the Red ſea, and exchange for gold duſt, emeralds, and fine horſes. The Jews, Armenians, and Arabians are the common brokers between them and the Abyſſinians, who ſeldom or ever travel out of their own country, or indeed are ſuffered to do ſo by the Turks, who, being poſſeſſed of

all the ſea ports on the Red ſea, enrich themſelves by this monopoly; and are extremely careful to prevent any trade from being opened into the country by any other nation, or of its being carried on by any other hands but thoſe of their own nation.

The Turks, beſides the above articles, bring them ſeveral kinds of ſpices, in very ſmall quantities, which they keep up at ſo high a price, that none but the richeſt of the Abyſſinians can purchaſe them; in return for theſe, the Abyſſinians bring them ivory, honey, wax, ſkins, furs, and leather in great quantities, for which they are obliged to take what the brokers pleaſe to give.

We muſt not omit, that in Abyſſinia the people have no idea of money; but in purchaſing what they want, exchange one commodity for another. The moſt common article of trade exchanged by them is ſalt, by which they rate the value of every thing elſe; and which in general anſwers the purpoſes of money, by being exchanged for ſuch neceſſaries and conveniencies of life, as they have occaſion for.

Among the Abyſſinians, marriage is little more than a firm bargain, or contract, by which both parties engage to cohabit and join their ſtock as long as they like each other; after which they are at liberty to part. The cuſtom of meeting and bleſſing the married couple at the church door, is doubtleſs derived from the Jews; and it is ſaid that none but prieſts and deacons are married within the body of the church. In this part of the matrimonial ſervice ſeveral ceremonies are performed.

Alvarez, who was preſent when the abuna, or patriarch, officiated at one of theſe marriages, ſays, that the bridegroom and bride were waiting at the church door, where a kind of bed or couch had been prepared for them, and on which the patriarch ordered them to ſit; he then, with a croſs in one hand, and a cenſer in the other, made a kind of proceſſion round them; and then laying his hands on their heads, told them, that as they were become one fleſh, ſo they ought to have but one heart and one will. This was followed by a ſhort exhortation ſuitable to the occaſion; after which he went into the church, and celebrated divine ſervice, at which they both aſſiſted; that being ended, he gave them his bleſſing, which renders the marriage valid, and then diſmiſſed them. The more religious ſort not only attend divine ſervice, but receive the holy communion, either juſt before or after their being joined. What feſtivities and rejoicings attended theſe nuptials, we are not told. The huſband and wife, after conſummation, keep ſeparate tables; or, if they agree to eat together, each bring their own proviſions ready dreſſed, or ſend them in before by their ſlaves or attendants.

Married women are permitted to appear abroad, and to viſit their friends and relations; and the princeſſes of the royal blood have ſtill greater privileges, and are ſaid to think no gallantries, however injurious to their honour, ought to be denied them by their huſbands; in which liberties they are ſo far upheld by their own relations, that all complaints againſt them will not only be in vain, but alſo give offence.

However, this is far from being the caſe of thoſe of inferior rank, who are generally obedient and faithful to their huſbands. Theſe are commonly obliged, eſpecially among the meaner ſort, to perform ſome of the moſt laborious offices of the family, and particularly to grind all the corn uſed in it, which the very ſlaves of the other ſex will refuſe to do: for as they have only hand-mills, they are forced to grind corn either for bread or drink every day, as they want it.

Marriage between perſons in the ſecond, third, and even the fourth degree of conſanguinity, is forbidden, and therefore they eſteem it unlawful to have more than one wife at a time; yet many amongſt them are ſaid to have a plurality of wives; theſe are indeed deprived by the church of the benefit of the holy communion; but they are, notwithſtanding, ſuffered to live with their wives without moleſtation, inaſmuch as polygamy is not deemed by the ſtate detrimental to ſociety.

We have already intimated, that they admit of divorces, not only for breach of conjugal fidelity, but for want of children, by reaſon of diſagreement, bodily infirmities, and the like; in all which caſes, the woman has the ſame privilege of abrogating the marriage contract as the man. In ſuch caſes, the diſſatisfied party applies to the biſhop, and having obtained the deſired divorce, which is ſeldom denied, if the party cannot be prevailed on to withdraw the ſuit, they next petition for a licence to contract a freſh marriage, which they very eaſily obtain.

By theſe indulgences, frequent divorces happen, eſpecially among thoſe of high rank. But with reſpect to the grand motive, the breach of fidelity on either ſide, they frequently compromiſe the affair; for as both the huſband and wife have their ſeparate lands, goods, and chattels, they can make what is eſteemed a ſuitable compenſation for the tranſgreſſion. But where ſuch a compenſation cannot be agreed on between the injurer and the injured, the woman is uſually the moſt ſeverely puniſhed: ſhe is condemned to loſe all her goods, and to leave her huſband's houſe in a mean ragged dreſs, and never to enter it more; carrying with her a ſewing-needle, by which ſhe may earn her livelihood; and ſometimes ſhe is ſentenced to loſe her head of hair, which is her chief ornament, and to be cloſe ſhaved, except a ſingle lock on her fore-top. But the huſband, if he pleaſes, may take her again; or, if he does not, they may both marry. If the huſband be the offender, he is alſo liable to be puniſhed, as well as the partner in his guilt; but a fine is generally laid upon them both, and appropriated to the uſe of the wife. Thus likewiſe the man who has debauched the wife, if convicted, is ſentenced to pay a fine of forty cows, horſes, ſuits of cloaths, &c. and if unable, he becomes the priſoner of the huſband, till the debt be paid. If the injured huſband ſuffers him to go, he obliges him to ſwear, that it is to fetch what will ſatisfy him; upon which the guilty perſon ſends him a piece of beef and ſome liquor, after which they ſometimes eat and drink together; and then, upon his aſking pardon, the huſband firſt remits one part of the fine, and then another, till at length the offender obtains a full acquittal.

They have but few ceremonies in the interment of their dead; as ſoon as the perſon has expired, and the body is waſhed, they perfume it with incenſe, ſprinkle it with holy water, and wrapping it in a ſheet, place it on a bier. The bearers then take it, and hurry it away with ſuch ſwiftneſs, that thoſe who attend can hardly keep pace with them. When they come to the church or church-yard, (for they bury in either), they again incenſe it, and throw plenty of holy water upon it. After the prieſt has read the fourteen firſt verſes of the goſpel of St. John, they ſhoot the corpſe into the ground, inſtead of letting it down gently; the prieſt repeating the ſervice, and the grave is immediately filled up.

The relations bewail their dead many days; their lamentations begin early in the morning, and continue till the evening; the parents, relations, and friends, meet at the grave, together with women mourners, hired to accompany the ſolemnity with their outcries, all clapping their hands, ſmiting their breaſts, and uttering the moſt affecting expreſſions in a doleful tone.

The funerals of the emperors and grandees are performed with great pomp and magnificence, and are accompanied with all the inſignia of their dignity, ſuch as the horſe, ſhield, lance, and other accoutrements of the deceaſed; which are brought to the place; offerings are made to the church and the clergy, and proviſions given liberally to the poor. This ceremony continues, acccording to the quality of the perſon, from three to forty days, and is repeated afreſh on the anniverſary; and, during the mournful ſolemnity, they all pray to God to be merciful to the ſoul of the deceaſed perſon. But they uſe neither torches, nor any other lights, either in the church, or in the proceſſion.

SECT. V.

Treating of the Power, Grandeur, and Titles of the Emperor of ABYSSINIA; his Camp, Marriage, and Revenues, great Officers, Forces, Manner of trying Cauſes, Laws, Puniſhments, &c.

IT is univerſally allowed, that the Abyſſinian government hath, from its firſt foundation, been intirely deſpotic; and according to their annals, there never was a period of time, ſince its firſt origin, wherein the princes of this empire did not claim an abſolute right over the lives, liberty, and fortunes of their ſubjects, as well as an uncontroulable authority in all eccleſiaſtical affairs; and it is not known that there ever were any written laws to reſtrain this exorbitant power of the monarchs, or ſecure the liberty of the ſubject againſt his arbitrary mandates.

The emperors of Abyſſinia boaſt their being deſcended from Menilehech, the ſon of Solomon king of Iſrael, by the queen of Sheba. According to them, this princeſs reigned twenty-five years after her return from Judea, and was ſucceeded by this ſon, from whom deſcended a ſeries of princes in a direct line down to the year 960, when the

crown paſſed into another family, but was afterwards reſtored to it again. Hence the emperor ſtill retains the pompous titles of the Beloved of God, Son of the Pillar of Sion, Kinſman to the race of Judah, Son of David and Solomon, and Emperor of the Great and High Ethiopia, its kingdoms and provinces, &c. They likewiſe bear in their arms the lion of the tribe of Judah, holding a croſs, with this inſcription in Ethiopic, "The lion of the tribe of Judah is conqueror."

This monarch has a degree of reſpect paid to him by his ſubjects which amounts almoſt to adoration: thoſe who are admitted into his preſence fall proſtrate before him, and kiſs the earth as they approach his perſon; and it is ſaid, that even in his abſence they never hear his name mentioned without bowing very low, and touching the ground with their hand. The other marks of grandeur chiefly conſiſt in the retinue with which he is attended; for he is not only attended by his own houſhold and guards, which are very numerous, but by all the grandees and officers of the empire, who ſtrive to outvie each other in the number, richneſs, and ſplendor of their retinue, in the elegance of their dreſs, and the magnificence of their pavilions.

We have already obſerved, that they chiefly live in tents; the emperor's camp always takes up a large ſpace of ground, and makes a very ſplendid appearance, to which the regular diſpoſition of the ſtreets, and great variety of tents, ſtreamers, and other ornaments, and eſpecially the many lights and fires at night, do not a little contribute; ſo that the whole appears like a vaſt open and regular city, in whoſe center, or on ſome eminent part of it, ſtands the imperial pavilion, which eclipſes all the reſt in grandeur, bulk, and height. Near to it are thoſe of the empreſſes, and royal family, and then thoſe of the officers of the court, all appearing with proportionable, though inferior luſtre; to theſe may be added thoſe large and ſtately pavilions which ſerve as churches, upon which they beſtow no ſmall expence, in adorning them both within and without. In ſhort, the imperial camp is of a vaſt extent, and yet good order is commonly obſerved in it. It has markets, courts of juſtice, and places where young perſons of rank perform a variety of exerciſes on horſeback. But all the reſt reſembles only a great number of long extenſive lanes, of mean ordinary taſte, or low miſerable huts of lath and clay, covered with ſtraw, which ſerve the emperor's guards and common ſoldiers, beſides a prodigious number of ſutlers, who ſupply them with all neceſſaries.

If either through the want of wood, or proviſions, in the different wars in which the emperor is engaged, it becomes neceſſary for him to remove his camp, the chief care is to chooſe a convenient and ſpacious ſpot, well furniſhed with water, and eſpecially with wood, of which they make ſuch havock, that vaſt forests are frequently laid bare in a ſhort time, and they are amazed, and think it incredible, that ſuch great cities as are in other parts of the world, ſhould be able, without being in extreme want of wood, to ſubſiſt ſo long a time in one place.

When the emperor is on his march, whether in time of peace or war, he is always attended by his chief miniſters; he appears with a crown on his head made of pure gold, with ſilver lilies, intermixed with pearls, and fixed on a cap of blue velvet, on the top of which is a gold croſs. Some time before he begins his march, officers are ſent to the governors of every province and place through which he is to paſs, with orders to clear and repair the roads, and open the woods through which his way lies, by cutting down branches of trees, the briars, and every thing elſe that may retard the march; and to provide neceſſaries both for him and the whole army, which travels but ſlowly, and by ſhort journies, on account of the multitude of women, children, and cattle, which follow the camp.

At the time appointed, all the governors punctually come in with their quotas of corn, cattle, beer, and other liquors, all which are diſtributed, with the utmoſt exactneſs, among the ſeveral ranks and orders of the army. In theſe marches the titmerari, an officer who commands the van-guard, fixes his pike on the ſpot he chooſes for the imperial pavilion; after which, every one of the reſt knowing his own rank, and the ground he is to take up, eaſily gueſſes by his eye where the tents are to be pitched: ſo that the whole encampment is ſoon completed with ſurpriſing readineſs, and in ſo exact and regular a manner, that notwithſtanding their being ſo frequently removed, every one knows the ways and paths ſo well, that he can go to the tent of any one with the ſame facility as he can to his own, or as we can find a ſtreet, lane, or houſe in any of our cities, and towns.

They always divide the camp into ſeven pariſhes, each of which has its miniſter, deacons, and inferior officers, who aſſiſt in the inſtruction of youth, in performing divine ſervice, and the other functions of the miniſter's office. Whenever an enemy is near, the army is ordered to march cloſe and in the beſt order, the van-guard and rear drawing up cloſe to the main body, the wings ſpread themſelves out, and the emperor keeps in the center with his guards, great officers, and ladies, a ſufficient interval being left for incloſing the baggage. At other times little order is obſerved in their marches, only there is always a number of warlike inſtruments ſounding before, and a particular guard marching round the emperor. He generally mounts and alights in his tent; but if he has occaſion to diſmount by the way, the guards immediately make a ring about his perſon, ſpreading their cloaths to keep him unſeen; and if he diſmounts in order to take reſt, a couch, which is commonly carried for that purpoſe, is brought him, on which he lies on cuſhions covered with the fineſt ſilk carpets.

Though the crown of Abyſſinia is hereditary, and muſt be preſerved in the ſame family; yet the emperor, if he pleaſes, may chooſe any one of his children whom he thinks moſt worthy to ſucceed him. This probably gave birth to the ſevere cuſtom, formerly obſerved in this empire, of confining all the princes of the blood to the fortreſs, or rock, called Ambaguexen, which ſome have deſcribed as a ſevere and diſagreeable place of confinement, on the ſummit of a lofty mountain; while others repreſent it as an earthly paradiſe, in which theſe princes enjoyed every bleſſing except liberty, and were educated in a manner ſuitable to their birth and deſcent.

Theſe young princes were brought out of this abode to aſcend the throne, in the following manner: after due conſultation, and a ſtrict enquiry into the character of the prince, or after the emperor's having declared him his ſucceſſor, which precluded all ſuch conſultations, the viceroy of Tigra went at the head of ſome forces, and encamped at the foot of the mountain, whence, with a proper retinue of grandees and officers, he aſcended it, and entering the cell of the prince elect with great formality, fixed the imperial ear-ring to his ear, as a token of his election: and inſtantly the other young princes were ſent for to pay him homage, and congratulate him on his acceſſion to the throne.

The new emperor was no ſooner come down from the mountain, than the governors and other officers met him at the head of the army, and all alighting together ſaluted him. After which, upon his giving them the ſignal, they mounted again, and taking him into their center, conducted him to the debana, or imperial pavilion, with the ſound of trumpets, kettle-drums, and other muſical inſtruments, intermixed with loud acclamations of joy. Here he alone alighted within, while all the reſt did the ſame without the pavilion. He was ſoon after ſolemnly anointed by a prelate, and the reſt of the clergy accompanied the ceremony with pſalms and hymns ſuitable to the occaſion. Soon after he was inveſted with the imperial robes, and the crown ſet upon his head. The ſword of ſtate was then drawn and put into his hand, and he being ſeated on the throne, an herald proclaimed him emperor, and was ſuddenly anſwered by the loud acclamations of the whole aſſembly and army, who came to pay him their homage.

Upon theſe occaſions a kind of ritual, which perhaps contained the duty of a good ſovereign, was read and explained before him, either by the metropolitan, by whom he was anointed, or by ſome of his ſubſtitutes. From thence the new ſovereign went and aſſiſted at divine ſervice, and received the holy communion; after which he returned, accompanied by his court and army, to the royal tent, through the joyful acclamatio. s of the people, with the ſound of muſical inſtruments; and the ſolemnity was cloſed with feaſting, and other tokens of joy, by all ranks of people.

It is uſual for the Abyſſinian monarchs, like their ancient progenitor Solomon, king of the Jews, to allow themſelves a plurality of wives; and not only imitate him in that, but in taking theſe of different religions, even Mahometans and Gentiles; and ſome have carried this ſo far as to allow their heathen wives to have their own temples and idols; ſo that on one ſide might be ſeen the church of God, and on the other a Pagan temple. Others, however, have had ſo much regard to their religion, as to cauſe thoſe Pagan or Mahometan ladies to be inſtructed and baptized before they married them. The generality of theſe princes, however, chooſe to marry the daughters of noble families among their ſubjects; while others, leſs

attentive

attentive to their noble extraction, pay a greater regard to the natural endowments of the mind, or the beauty of the perſon.

No ſooner has the monarch pitched upon a young lady for his wife, than ſhe is taken from her parents, and lodged with ſome of his relations, in order to obtain a better knowledge of her good qualities. If he is ſatisfied with her, he takes her with him to church, and having both received the holy communion, they are conducted to the imperial pavilion, attended by the whole court in the richeſt attire; and there the abuna, or chief prelate, commonly performs the matrimonial ceremony; which being ended, the emperor, as at other times, dines by himſelf in his own apartment, and ſhe in her's, in company with a number of other ladies. The nobles and clergymen are treated at other tables in ſeparate tents, with a variety of meats and liquors; and the feaſt generally continues among the male gueſts till all the liquor is drank, after which every one retires to reſt.

The Abyſſinian emperors uſed frequently never to appear in public, and they were ſeldom known to trouble themſelves with the affairs of government, the care of which was committed to two miniſters, called babluded, or favourites; but this cuſtom has been long aboliſhed, and they ſhew themſelves to their ſubjects at leaſt three or four times a year, though none is allowed to ſee them eat, except the pages who feed them; (for both they and all the great have their meat cut into bits, and conveyed to their mouths by young pages): and when they give audience to public ambaſſadors, they always ſit behind the curtain, concealed from the public view.

The imperial revenues ſeem to be very inconſiderable, and chiefly ariſe from the four following branches: the firſt is the tribute paid by the governors of ſuch provinces and kingdoms as abound with gold, which amounts to no more than about five or ſix thouſand ounces per annum, one year with another. The next ariſes from the ſale of all the great offices of the empire, and the yearly tribute they pay him. The third branch conſiſts of a tenth of all the cattle in the empire. By this laſt (which it appears was unknown till about the middle of the third century) every man that hath cows, is obliged to pay him one out of ten every third year, and the country breeding vaſt quantities of them, makes it by far the moſt conſiderable branch: this is called the burning or branding tax, becauſe the emperor's officers brand thoſe with a particular mark which they ſet aſide for his uſe. The fourth and laſt branch ariſes from a duty laid on every loom of cotton cloth. If it belongs to a Chriſtian, he pays one piece of cloth; and if to a Mahometan, a piece of eight per annum. By this duty are gathered in the kingdom of Dambea, and parts adjacent, about one thouſand of theſe pieces, and in that of Gojam three thouſand; beſides about two hundred biſſets, which are a thicker and ſtronger cloth, and all ſhagged on one ſide. The like tax is gathered in all the other kingdoms and provinces throughout the empire, and the annual amount of it is very conſiderable.

We ſhall now, as we propoſed, give an account of the great officers and forces of the empire; beginning with the chief officer belonging to the emperor, who is ſtiled raſh, or principal, and is generaliſſimo of all the forces; he has under him two great officers, one of whom is called bellatinoche goyta, that is, lord of the ſervants, and is a kind of high ſteward; his power extends not only over the azagues and umbares, or civil judges of the empire, but over all the viceroys, governors, and generals of the army. The other officer is ſtiled tahah, that is, lord of the leſſer ſervants: he is only a kind of under ſteward to the king's houſhold, which is generally compoſed of perſons of inferior rank. Theſe have in a good meaſure the management of the empire, and the regulation of the army, which is indeed far from being anſwerable to the extent of the country, as they ſeldom exceed forty thouſand men, of whom between four and five thouſand are cavalry, and the reſt foot.

With reſpect to their cavalry, about fifteen hundred of them are well ſized, and properly mounted; but the reſt are indifferently armed and accoutred, having no other arms but ſpears and a buckler. The ſpears are of two ſorts, the one like our half pikes, and the other reſembles a halbert or partizan. The ſtaves of the former are ſlender, and the iron narrow like our pike, but the iron of the other is broad and thin; the firſt is to be darted at the enemy, and the laſt to be uſed in cloſe fight with one hand, while the other holds a buckler made of a buffalo's hide, which is uſually very thick and ſtrong.

The foot ſoldiers have each of them two ſpears; and thoſe of a higher rank have likewiſe ſwords, which they ſeldom uſe in battle, but rather wear them as a mark of diſtinction, and in time of peace commonly hold them in their hands when in converſation; but if they walk, their ſervants carry them under the arm. They have the hilt of gold, or ſilver gilt, and the ſcabbard of velvet or rich damaſk, which is commonly red; theſe weapons are chiefly worn by way of ornament. They likewiſe wear a kind of dagger under their girdle, and ſome alſo carry a club of ſome hard, heavy wood, with a dagger in it. This weapon they commonly uſe by darting at the enemy when they come to a cloſe engagement.

Their ſoldiers are but little acquainted with fire arms, and as poorly furniſhed with powder and ball. The Abyſſinians have not above one thouſand five hundred muſkets, and there are not more than three or four hundred muſketeers in any action, who are generally ſo ill trained to the uſe of arms, that they never fire above once, for want of powder and ball. Theſe they ſeldom have at their exerciſes, except a few of the higher rank, who with their muſquets uſe a reſt.

Their cavalry are all ſaid to be very good horſemen, and are all armed much like the foot: they mount and ſit their horſes extremely well: but in other reſpects, are very ill-diſciplined, like the foot.

The Abyſſinians generally draw up their armies with little regularity, ſo that the firſt ſhock frequently begins and ends the battle, one ſide turning their back, and the other purſuing; for it is ſo common to run from the enemy, that it is not conſidered as any diſgrace; and they never endeavour to rally their troops, or indeed know how to go about it. This behaviour is entirely owing to their want of diſcipline, for they are commonly hardy, and enured to hunger, thirſt, and fatigue, to which they are trained up from their youth; and as they continue in the field the greateſt part of the year, they are equally capable of bearing the moſt exceſſive heat, the ſharpeſt cold, and the moſt violent rains, with very little for their ſuſtenance; and even this they procure by their labour from the lands the emperor allows to thoſe in his ſervice. Another diſadvantage is, their taking their wives and children with them, and theſe are generally ſo numerous, that a camp of thirty thouſand men always conſiſts of above an hundred thouſand perſons, all of whom are obliged to live on the produce of lands aſſigned for their maintenance. They have alſo a vaſt number of prieſts, who not only perform the divine ſervice in pavilions, but eſcort and attend the ſacred utenſils with great pomp and ceremony, and with vocal and inſtrumental muſic. The army is alſo attended by drums and kettle drums, larger and louder than ours; beſides trumpets, hautboys, flutes, and other inſtruments.

The viceroys and governors of provinces, as well as the military commanders and civil magiſtrates, hold their ſeveral courts of judicature, in which all cauſes, whether civil or criminal, are decided; only thoſe of the martial kind have martial officers, who preſide in them, and the others are tried by civil judges, who alone are allowed to ſit, while the plaintiff, defendant, and the reſt of the company ſtand. Theſe, upon proper occaſions, will even ſit upon the ground in the highway or open field, and try a cauſe brought before them, when every one who pleaſes may be preſent. They make uſe of no writing, nor keep any records, nor do they allow of attornies and councils to plead on the merits of the cauſe; but both the plaintiff and defendant plead their own cauſe, the former ſpeaking firſt, and the latter after him: each may anſwer and reply three or four times by turns; after which the judge, commanding ſilence, aſks the opinion of the by-ſtanders, and then pronounces ſentence upon the ſpot.

In criminal caſes, if the accuſed be caſt, he is either kept priſoner by the judge till he has made ſatisfaction to the accuſer, or if the crime be capital, as in the caſe of murder, he is delivered up to the plaintiff, to be puniſhed at his diſcretion, and that of the relations of the deceaſed, who either ſell the murderer, or put him to death in what manner they pleaſe. But when a murder cannot be ſufficiently proved againſt any man, all the inhabitants of the place where it was committed are ſeverely fined, or ſuffer ſome bodily puniſhment for the crime.

They have three kinds of capital puniſhments: the firſt is, burying the criminal quite up to his mouth; then covering his head with thorns and briers, they lay a heavy ſtone upon them. The ſecond is, beating him to death with thick clubs about two feet long; but the moſt uſual method, in caſes of murder, is, running the criminal through with their lances, in which caſe the neareſt relation of the deceaſed makes the firſt thruſt, and the reſt

follow

follow in due order: even thoſe who come after the criminal has expired, generally dip their weapons in his blood, to ſhew that they are alſo concerned to revenge the murder of a relation. But what is ſtill more barbarous, is, the feaſting and loud rejoicing made by thoſe relations, from the time the criminal is delivered into their hands, till his execution, and more particularly on the night preceding it, to all which the priſoner himſelf is a witneſs. This often exaſperates his friends to that degree, that it is not unuſual for the death of ſome of the moſt zealous proſecutors to follow that of the criminal.

Hiſtory informs us, that the Abyſſinians boaſt their having received both their kings and the Jewiſh religion from Solomon. Of this they have an antient record, which gives the following account of this ſingular event: "That a great and potent queen, named Azeb, or Maqueda, reigning in Ethiopia, being informed by a merchant named Tamerin, of the great power and wiſdom of Idoman, travelled to Jeruſalem, attended by a retinue of the greateſt nobles and princes of Ethiopia, and with immenſe treaſure. There Solomon inſtructed her in the knowledge of the true God; and upon her return home, at the end of nine months, ſhe was delivered of a ſon, who was called Menilchech, and alſo David. This ſon afterwards going to Jeruſalem, to ſee his father Solomon, was magnificently entertained by him, and anointed king of Ethiopia, by Zadoc, and Joaſh, the high-prieſt; and when he was thoroughly inſtructed in the law of God, which he was to cauſe to be obſerved in his dominions, Solomon aſſigned ſeveral of the firſt-born of Iſrael to attend and ſerve him in Ethiopia, and furniſhed him with officers and ſervants belonging to the houſe of Judah, with a high-prieſt, levites, and doctors in the law of Moſes, the Jewiſh legiſlator."

Though it muſt be allowed there is nothing in this account very improbable, yet the ſame record adds many circumſtances that are evidently falſe; as, that the firſt-born of Iſrael, at the inſtigation of Azariah, the ſon of Zadoc, went to Jeruſalem, and fetched the ark out of the Temple; and, being aſſiſted by a train of miracles, eſcaped the purſuit of Solomon, and arrived with it in Ethiopia. However, it is not improbable, that the prince of Abyſſinia might cauſe another ark to be made like that formed by Moſes, and that this ſtory might be afterwards invented, in order to procure it a more general veneration from the public.

They keep this ark ſo cloſely concealed, that even their monarchs are not admitted to the ſight of it. Since the Abyſſinian emperors have aſſumed the cuſtom of living in tents, this precious relic is no longer confined to a temple, but always accompanies the royal camp, and is carried about with the greateſt form and ceremony, attended by four prelates in their pontifical habits, and about forty or fifty other prieſts, who chaunt before and after it; while one marching backwards before with a cenſer in his hand, offers incenſe to it all the way, till it be depoſited in the grand pavilion, which is the church where the imperial court aſſemble.

Theſe people maintain, that they were converted to Chriſtianity by the eunuch or prime miniſter of their queen Candace, or, as they call her, Handake, who after his converſion by Philip, they ſay, returned into Ethiopia, and gave his queen a full account of all that had paſſed; upon which that princeſs alſo believed the goſpel. However, in the year 335, Athanaſius, patriarch of Alexandria, ordained Frumentius biſhop of Axuma, and ſent him to preach the goſpel in Ethiopia. This he performed with great ſucceſs; the diſcipline of the church was then ſettled conformably to that of Alexandria; prieſts and deacons were every where ordained; liturgies, articles, and canons were ſettled and confirmed; and the Abyſſinian church was brought to acknowledge herſelf wholly ſubject to, and dependent upon that of Alexandria.

It appears, however, that the Abyſſinians retain many of the Jewiſh ceremonies, beſides that of attending the ark: ſo that their religion may be deemed a mixture of Judaiſm and Chriſtianity. They circumciſe not only the male but the female infants, which laſt is done by cutting off a ſmall piece of ſkin from the clitoris. They abſtain from blood, things ſtrangled, the fleſh of ſwine, and the other animals prohibited by the Moſaic law. They uſe purifications and waſhings after certain defilements. They oblige a man if his brother die without male iſſue, to marry his widow, and raiſe up ſeed to his name; and they keep the ſeventh day ſabbath. On the other hand, they believe the doctrine of the Trinity, and that Chriſt ſhall come again in glory to judge the quick and the dead, when the juſt ſhall inherit the kingdom of heaven, and unrepenting ſinners be ſent into the miſerable regions of darkneſs.

The people never enter their churches without pulling off their ſhoes or ſandals. The divine ſervice conſiſts of a ſet of prayers, pſalms, and hymns ſuitable to the ſeaſons, and for the moſt part performed with great decency and devotion, without any of that pomp and ceremony uſed in the church of Rome. They have no bells, but call the people to the church by the ſound of wooden hammers, which they ſtrike upon a hollow board; at the hearing of which both the clergy and laity repair thither with a decent gravity, ſaying ſome prayers all the way they go; and when there, neither ſtare about, whiſper, nor ſpit. The prieſts and laity are ſeparated from each other; the former are in a kind of choir, with a curtain drawn before them, which hinders the people who are in the body of the church, from ſeeing, though not from hearing the divine ſervice. They have neither pews, benches, nor halſocks, but continue ſtanding all the time. In none of theſe edifices, whether ſumptuous or mean, are any ſtatues or carved images of any kind, except pictures: they will not ſuffer any crucifixes, whether carved or caſt in metal, to be ſeen in them, or to be worn about the necks of the people. The clergy are allowed to marry.

In baptiſm, they uſe a three-fold immerſion, if the infant be capable of bearing it; without danger of its life; if not, the three-fold aſperſion of water is deemed ſufficient. The firſt immerſion is only of one-third of the body, in the name of the Father; the ſecond of two-thirds, or up to the breaſt, in the name of the Son; and the laſt of the whole body, by plunging in the head, in the name of the Holy Ghoſt. They then anoint the whole body, eſpecially the joints, with the holy chriſm, and afterwards adminiſter the holy communion to the child in both kinds, by dipping a bit of the conſecrated bread into what they call the wine, and applying it to the lips of the child.

There is in every church a ſmall room behind the eaſt end, in which are the materials for making the communion bread, which is a leavened cake, that they conſecrate every time they adminiſter the Lord's ſupper, dividing the whole among the communicants, and having it freſh made every time. Inſtead of wine, from which they wholly abſtain, they keep in this little room a ſmall quantity of dried raiſins, which they ſqueeze and macerate in a greater or leſſer quantity of water, according to the number of the communicants; for they adminiſter the cup alſo to the laity, and receive both the elements as ſymbols and channels conveying to them the benefits of Chriſt's death. They do not admit laymen and women to come up to the altar to receive; but adminiſter it to them at the door of the choir; nor do they oblige them to receive it kneeling, but in a ſtanding poſture.

The Abyſſinian clergy are little verſed in the ſacred writings, having neither expoſitors, commentaries, concordances, nor any of thoſe helps which are in uſe amongſt us, except a few homilies upon ſome ſelect parts of the goſpels, or upon a few theological points; but as they never preach or expound them to the laity, it is not ſurpriſing that they are extremely ignorant, and in many particulars groſsly ſuperſtitious. Like the Roman Catholics, they offer up their devotions and prayers to the ſaints, and have proper offices, faſts, and feſtivals to their honour. Though they do not believe a purgatory in the ſame ſenſe as the Greek and Roman churches, nor have any particular office for the dead, yet they make mention of them in their common ſervice, and pray to God to abſolve them from their ſins, and to make them fit for the joys of heaven. They likewiſe keep a kind of anniverſary of their departure, on which they give alms according to their ability, to the prieſts, monks, and poor, to pray for the ſouls of their departed friends.

In this church they receive the ſame canonical books, both of the Old and New Teſtament, that we do; the former are tranſlated into Ethiopic from the Greek verſion, called the Septuagint; and the latter alſo from the Greek text; they have likewiſe the Apoſtolical Conſtitution, which, in many reſpects, differs from the work which paſſes by that name. This they believe to be of divine authority, and to have been written by St. Clement, whoſe name it bears. They have alſo the Nicene, but not that called the Apoſtles Creed.

Like the oriental churches, they obſerve four lents, viz. the great lent, which laſts fifty days; that of St. Peter and St. Paul, which laſts forty days, more or leſs, according to the nearneſs of their Eaſter; that of the Aſſumption of our Lady, which continues fifteen days; and that of Advent, which laſts three weeks. In all theſe lents they abſtain from

from eggs, butter, cheeſe, and neither eat nor drink till after ſun-ſet, which is never later than between ſix and ſeven in the evening: and after that time, they may eat and drink till midnight. Inſtead of butter they uſe oil, which they extract from a ſmall grain, and is far from having an unpleaſant taſte. They faſt with the ſame ſtrictneſs on all the Wedneſdays and Fridays throughout the year, and on thoſe days always go to prayers before they begin their evening meals. The very peaſants leave their work to have time to perform their duty, before they break their faſt. Neither the old nor young, nor even the ſick, are excuſed from faſting, except in ſome very extraordinary caſes.

It may not be improper, before we quit this ſubject, to take ſome notice of the different orders of the Abyſſinian clergy; the moſt dignified of which is the abuna, or patriarch, who is wholly ſubject to that of Alexandria, as all the reſt of the clergy are to him. His office is very lucrative; for having no biſhops under him, nor any other perſon to controul him, he diſpoſes of all benefices, which bring him great emolument. He has likewiſe the ſole privilege of ordaining, which alſo produces a conſiderable income, few being received into holy orders, without a previous offering to obtain them admittance. Beſides theſe advantages, he has alſo certain lands aſſigned him in the kingdoms of Tigra, Gojam and Dambea. The firſt of theſe is computed to bring him in forty or fifty ounces of gold per annum; thoſe of Gojam and Dambea afford him a more than ſufficient quantity of proviſion for his tables, the remainder of which he diſpoſes for his own profit. To theſe may be alſo added, a kind of public gathering of ſalt and cloth, which is annually made for him throughout the empire, and amounts to a conſiderable value, all which put together make a very large income; and the more ſo, as the emperor has exempted the lands from taxes.

The Debararas are the next order of eccleſiaſtics; and theſe are held in great eſteem. They are neither prieſts nor deacons, but a kind of Jewiſh levites, or chanters, who aſſiſt at all public offices of the church, and whoſe head, or ſupreme, called barca guyva, hath the care and direction of the ſacred pavilions in the imperial camp. As theſe boaſt themſelves of Jewiſh extraction, they pretend, by the ſongs, dances, and beating of drums, to imitate the ſervice of the Jewiſh tabernacle, and temple of Jeruſalem, and the dancing of king David before the ark. Theſe debararas always attend on great feſtivals, when they begin their muſic and dancing long before day, and, without appearing to be in the leaſt fatigued, continue it till noon.

The next in order are the komos, and in point of dignity follow the abuna. Every parochial church hath one of theſe, who is a kind of hagumanus, or archipreſbyter, and hath all the inferior prieſts and deacons, as well as the ſecular affairs of the pariſh, under his care and government; and as they have no biſhops over them, they preſide in chief at divine ſervice, diſtribute the ſeveral offices of the inferior clergy, and reconcile their diſputes. The office of the inferior prieſts, is, to ſupply the place of the komos when abſent, and, if preſent, to aſſiſt him in baptizing, marrying, viſiting the ſick, burying the dead, and other parts of divine ſervice.

The laſt order of the prieſthood are the deacons, who likewiſe aſſiſt in performing religious duties, though in a lower ſphere than the prieſts; and both have their proper offices and veſtments when they officiate. This order is conferred by the abuna on the emperor, princes, grandees, and even on their children; not that they may have the privilege of officiating as ſuch, but only to aſſiſt at the divine ſervice, and to receive the communion in the chancel with the clergy, and be ſeparate from the laity, who ſtand in the body of the church by themſelves.

The abovementioned orders are allowed to marry, even after they have been ordained prieſts. Their ſons alſo are permitted to ſucceed them in their eccleſiaſtical benefices. In general, however, they are all, except the abuna, exceeding poor, inſomuch that they are obliged to apply themſelves to labour and induſtry, but chiefly to farming and paſturage; all which renders them leſs reſpected than clergy in other countries, eſpecially as they wear no particular dreſs or other mark of the prieſtly office, except a ſmall croſs, which they carry in their hand, and bleſs the people with, and a ſmall round cap of any colour, which they wear on their heads. Neither have they the privileges enjoyed by prieſts of many other countries; for ſhould they commit any thing derogatory to the laws of their country, they are liable to be puniſhed by the lay magiſtracy, in the ſame manner as ſecular perſons.

The Abyſſinian churches appear for the moſt part to have been formerly large and elegant ſtructures; but they are now ſo decayed, that it is impoſſible to form a proper idea of their original magnificence. The following ones are the moſt diſtinguiſhed, and chiefly claim the attention of all the curious: namely, St. Emanuel, St. Saviour, St. Mary, the Holy Croſs, St. George, Golgotha, Bethlehem, the Martyrs, Marcorcos, and Lalibela. However incredible it may appear, yet certain it is, that theſe ten churches were all cut out of a ſolid rock, by dint of the hammer and chiſſel. The laſt of them bears the name of their founder, who, being deſirous of having them executed, ſent for a number of workmen from Egypt; and ſo expeditiouſly was the undertaking carried on, that it is ſaid the whole was completed in twenty-four years: a ſhort time, conſidering the ſtately manner in which they are conſtituted, being proportionable in all their parts, as gates, windows, pillars, arches, channels, &c. and alſo the number of them.

There are, beſides the above churches, many monaſteries in Abyſſinia, moſt of which contain two chapels, one for the men, and the other for the women; but how they came to be introduced, and of what order the firſt founders of them were, is not known. At preſent there are only two different orders, who are called by the names of their founders, namely thoſe of Taklo Haymanout, and of Alba Euſtatius; the former a native of Ethiopia, and the other of Egypt. All the monks belonging to theſe monaſteries live in a very recluſe and abſtemious manner: their cells are very mean, being built only of clay, and covered with ſtraw, and their furniture within is equally deſpicable: they lie only upon mats on the floor, and follow every thing that is anſwerable to a monaſtic life. To what we have already ſaid concerning their faſts, it may be neceſſary to add, in this place, that in their work of mortification they are peculiar to themſelves, for, inſtead of thoſe practiſed by the monks of other countries (which perhaps rather ſtimulate than damp the fleſhly appetites), they plunge themſelves into the coldeſt rivers, and continue in them, with the water up to their chin, for ſeveral hours together, and this kind of mortification they practiſe even in the coldeſt weather. They have all of them the privilege of carrying a croſs in their hands, and bleſſing the people; thoſe of the abbots or ſuperior orders of convents are diſtinguiſhed from the reſt, by being much larger and better ſhaped: and when they go abroad, are uſually carried before them by ſome inferior monk, as a token of their dignity. Such as prefer a life of celibacy are much more eſteemed than thoſe who marry; and are often, eſpecially their abbots, conſulted in matters relative to the welfare of the ſtate, by the emperor himſelf.

SECT. VI.

Treating of the Hiſtory of ABYSSINIA, and the Succeſſion of their Monarchs, from the Reign of the Queen of Sheba, to the preſent Century, compriſing a Space of upwards of two thouſand ſeven hundred Years.

THE principal materials relating to the Abyſſinian hiſtory have been collected by the jeſuit miſſionaries while in this empire. It is leſs copious and more vague than the hiſtories of moſt other countries; notwithſtanding which, we hope our readers will find ſome ſatisfaction in peruſing the detached fragments they have tranſmitted to us. The antient records, from whence they have obtained theſe accounts, are preſerved in the great church at Axum, and are digeſted in the following order:

The queen of Sheba was the firſt ſovereign of the Abyſſinian empire. She came into Judea in or about the year before Chriſt 992, and of the world 3012. She reigned twenty-five years after her return, and left the crown to

Menilehech, her ſon, who reigned in conjunction with his father twenty-nine years, and eighteen more with his ſon Rehoboam: after which he died, and was ſucceeded by

Sadgur, the ſon of Menilehech, from whom proceeded, in a lineal deſcent, twenty-four princes; but the length of their reigns is not recorded, nor any particulars relative to either of them, except that in the eighth year of the laſt (viz. A. M. 4004.) whom the chronicle calls Phecon, our Saviour was born.

Thirteen emperors reigned from this period to the year 327, whoſe names, and the length of the time each reigned, are omitted; but it was in the above year that St. Athanaſius

nasius sent Frumutius into Ethiopia to convert the Abyssinians to Christianity.

The records, after the above circumstance, furnish us with a remarkable account of three brothers who agreed to reign jointly; their names are, Atzsa, Atzsed, and Amay; and it is said, that in order to prevent discord among them, they projected a very strange expedient, which was, to divide the day into three parts, and to hold the reins alternately, each his third part, or eight hours. This was certainly a most uncommon mode of government, notwithstanding which, if we give credit to the Abyssinian legends, it proved very successful: for if at any time one of the brothers differed or fell out with another, the third was ready to interpose, and act as umpire between the other two.

Several other monarchs succeeded these; but we have not any account of their lives and reigns, only that in the three last of them, whose names were, Arado, Aladoba, and Alamid, great numbers of monks and anchorites came hither from Egypt, with a view of propagating the Christian faith.

Tacena, was succeeded by Alamid, who left the crown to Caleb, in whose time new tribes of monks came from Rum, and settled in the kingdom of Tigra. This was about the year after Christ 521, and the time that Justinian was emperor of Rome. Caleb was sometime at war with the Sabean or Homente kingdom; but at length totally subdued it by defeat and death of the Jewish king Dunavas, whose crown he is said to have sent to Jerusalem, to be there suspended in the great church of St. Sepulchre, in memory of his signal success over that distinguished persecutor of those who professed Christianity at that time.

Gabra Meskel, succeeded Caleb. He was a very peaceable prince, and it is said, formed an alliance with the emperor Justinian. His two next successors were Constantine and Fuzena; and after them fifteen more; all the descendants of Solomon. The last of these was named Del-Noad, who reigned till about the year 960, when the succession passed into the Zegean family; at which time the usurpation, which continued for three hundred and forty years, commenced, by the infamy of a woman named Tredda Gabex, who, for her impiety, cruelty, lewdness, and other enormous vices, was otherwise called Escat, or Firebrand.

This woman formed a plan not only to destroy Del-Noad, the then emperor, but also the whole imperial family; and this she concerted in order to raise a son of hers, whom she had by the governor of Bugna, to the Ethiopian throne. So effectually did she succeed in this diabolical plot, that only one of the whole family escaped, who fled for security into the kingdom of Xava, where his posterity were preserved with the utmost privacy by the viceroys of that kingdom, who, during the whole time of the Zagean usurpation, were strongly attached to the line of Solomon.

While the imperial throne was in the hands of the Zagean family, the following are the only princes of whom any notice is taken; namely, Lalibela, Degna Michael, Newaja Ohristos, and Naacu Luabo. The first of these eternized his name by many glorious actions, and particularly distinguished his piety in causing ten churches to be hewn out of a solid rock, for performing divine service, which we have lately described. The last of the above monarchs, was greatly extolled by his subjects, as a peaceable, magnanimous, and beneficent prince, and likewise of a very pious disposition.

We are not certainly informed who the rest were that filled the throne during the Zagean usurpation, neither are we told by what means the crown was restored to the descendants of Solomon; but only that the Zagean family being driven from the throne about the year 1300, Icon Ambac, whose predecessors had been preserved in the kingdom of Xava during the usurpation, recovered the Abyssinian throne; and that it hath continued in the antient line of Solomon ever since.

The last-mentioned prince held the throne about fifteen years, and is said to have been succeeded by sixteen other princes; but we have no particulars mentioned of either of them till we come to Zaara Jaacob, who was the last. This prince began to reign in 1437, and was greatly esteemed as a man of learning and deep penetration.

After the death of Zaara Jaacob, which happened in 1465, Boeda Mariam assumed the reins, and, after reigning only ten years, died, and was succeeded by Alexander, who reigned fifteen years and six months, that is from 1475 to 1491.

During the reign of Alexander, Peter Covillan arrived in the empire of Abyssinia, and was the first Portuguese that ever penetrated so far into the interior part of the country.

Amda Jeygon was the successor of Alexander: he reigned only six months, and then dying without issue male, was succeeded by

Nahod his uncle, and the son of Boeda Mariam, who was confined, at the time of his accession, on the rocks of Amba-Guexen, where he had been placed by the emperor Alexander. He reigned thirteen years and nine months, dying about 1507, was succeeded by Etana Denghel, or Lebna Denghel, who is better known by the names of Onag-Segued and David; which last he took on his accession to the crown.

This prince reigned very peaceably for some years after his accession, but was at length so harrassed by the cruel depredations made on his dominions by his Mooriish neighbours, that he applied to the Portuguese for assistance; which gave them an opportunity of enlarging the endeavours they had heretofore made of propagating the Romish religion in the Abyssinian empire. Onag-Segued by the great zeal he shewed for the church of Rome, and the Pope's supremacy, had not only occasioned his subjects in general to hate him, but in particular rendered the whole Abyssinian clergy his most inveterate enemies, and at last brought on those complicated troubles which occasioned his death.

Notwithstanding the assistance offered to this prince by the Portuguese, yet so powerful were his enemies, such devastations had they made by their incursions, and so closely did they follow him, that he was reduced to the necessity of seeking refuge among some of the desart mountains, where he remained for some time; but being at length routed, was obliged to retire to the top of the Damo. Having some of his bravest men with him here, he endeavoured to defend himself for some time, having now little more than the name, much less could he support the dignity of a monarch. However, all his troubles had a period in this fortress; for here, in the year 1540, he yielded up his crown and life, in the forty-second year of his age, and the thirty-third of his reign, which he began in 1507: the first twenty years of which had been as happy and prosperous as the last thirteen had proved distracted and unfortunate.

Claudius Segued, or Atgnaf-Segued, son of the former, succeeded to the throne. His reign was but little more tranquil than the latter part of his father's, being harrassed on all sides by the Gallas and Mahometans: and his whole empire must have been totally destroyed, had not the Portuguese interposed to prevent it. However, in the month of March 1559, he lost his life in an engagement with the Gallas, after a tiresome reign of little more than eighteen years. Leaving no male issue, he was succeeded by his brother's son,

Minas, who assumed the name of Adama Segued, at his coronation. This prince reigned only three years, when he was treacherously murdered by his own soldiers, in an engagement against one of the revolted governors of the maritime provinces, in April 1562. He was succeeded by

Melech Segued, a wise and valiant prince, who was blessed with a long, and, for the most part, successful reign, though hardly ever free from war, either against some of his rebellious subjects, or his formidable and inveterate enemies the Gallas and Mahometan Moors. After reigning a little more than thirty-three years he died in 1595; and as he had no sons by his wife, designed a natural one, named Jaacob, for his successor; but having changed his mind a short time before his death, he left the crown to

Zedenghel, his brother's son, who, though in other respects a brave and noble prince, yet, on account of his too great fondness for the Romish church, unhappily proved the fatal cause of a most bloody civil war, as many of the grandees took Jaacob's part against him. Peter, the then abuna, was the principal leader of this rebellion; and, having absolved the Abyssinians from their oath of allegiance, they took up arms against him, whilst he, with the few forces he had left, and a small number of the Portuguese, venturing to give them battle, was defeated and killed, after he had reigned nine years, in October 1604.

Jaacob, on the death of Zedenghel his competitor, obtained the imperial dignity; but had not long enjoyed it, before he found himself strenuously opposed by the great grandson of Etana Danghel, whose name was Susneus, or Socinius, a young prince, no less artful than brave. The contest lasted somewhat longer than two years, when it was decided by an obstinate engagement on the 10th of March

March 1607; in which Jaacob and the abuna Peter loſt their lives on the field of battle.

The crown of Abyſſinia, then devolving to Suſneus, he immediately manifeſted his ſtrong attachment to the Roman catholic religion, notwithſtanding it had been very prejudicial to ſeveral of his predeceſſors. In conſequence of this, he gave ſuch encouragement to the Popiſh miſſionaries, that great numbers flocked thither during his reign, who in all probability would have univerſally eſtabliſhed the pope's authority in this country, had not a ſtop been put to their progreſs by the unexpected death of that monarch, who took leave of the empire and the world in November 1632, and was ſucceeded by his ſon,

Baritides, who aſſumed the name of Adzam Sagued. He had not long aſcended the throne, before he iſſued a decree againſt the Roman catholics; and through the whole of his reign, proved as great an enemy to the miſſionaries, as his father had been a friend and patron to them; inſomuch that before his death, he totally extirpated them from the empire. He died about the year 1664, and was ſucceeded by his ſon John, who, on his aſcenſion, took the name of Aclaf Segued. This prince, after reigning peaceably for ſixteen years, died ſuddenly; and was ſucceeded by his ſon Jawſo, or Adyan Seguel, who aſcended the throne in 1680, and, after reigning upwards of twenty-five years, was dethroned by his ſon Tahlimenoth, who took poſſeſſion of the crown in the year 1706, and enjoyed it but a ſhort time; for the people having conceived a univerſal diſguſt againſt him for his perfidy, cauſed him to be maſſacred about two years after by his own troops.

Teſilis, the brother of Tahlimenoth, then uſurped the throne. His reign, however, was little leſs permanent than that of his predeceſſor: his prime miniſter, named Ouſtas, the ſon of a ſiſter of Jawſo Adyan Segued, having dethroned him in the third year of his reign, and ſeized upon the crown. The Abyſſinians, however, would not ſuffer him to hold the imperial dignity longer than till they could raiſe another prince, named David, to the throne; but this was not effected till great ſlaughter had been made by both parties, as appears from accounts received from Mocha, dated June 1718.

David, having obtained intire poſſeſſion of the throne, enjoyed it without interruption during the remainder of his life; and the revolutions occaſioned by his acceſſion were the laſt of any conſequence that have happened in this empire, his ſucceſſors having from that time to the preſent regularly aſſumed the imperial dignity, and quietly enjoyed the honours annexed to it.

Having now given the moſt intereſting particulars we could meet with, relative to the Abyſſinian hiſtory; we ſhall, before we conclude our account of this country, give a ſuccinct account of the ſtrenuous attempts the Portugueſe have made to eſtabliſh their religion, the deſtruction it hath occaſioned, and their final extirpation by the natives.

The Portugueſe miſſionaries, reſorting to Ethiopia at the latter end of the fifteenth century, when their countrymen found the way round the cape of Good Hope, had almoſt made good catholics of the Ethiopians, and perſuaded their emperor, not only to acknowledge the pope's ſupremacy, but to admit a patriarch amongſt them, ſent thither from Rome. The government alſo conſented to aboliſh their antient rites and ceremonies, and conform entirely to the ritual of the Roman church: but many of the nobility and governors of the provinces, with a majority of the common people, having the greateſt abhorrence of the popiſh religion, roſe in arms againſt their emperor, which occaſioned civil wars in Ethiopia, that laſted upwards of one hundred years, wherein many thouſands were killed; but the court, with the aſſiſtance of the jeſuits, European engineers, and ſome Portugueſe troops, were generally victorious over thoſe of the ancient religion, but could never ſubdue their obſtinate perſeverance in it; and ſeveral provinces revolted entirely from the emperor.

Their emperors, however, continued ſtill to profeſs the popiſh religion, and ſubmit to the dictates of Rome; till at length the jeſuits, under pretence of maintaining the pope's eccleſiaſtical ſupremacy, took upon them to direct almoſt all ſecular affairs, treating the prince rather as viceroy to his holineſs, than ſovereign of the country; and having erected and garriſoned ſeveral fortreſſes, were ſending for European forces to maintain their uſurped power; which gave ſuch an alarm to the emperor, as well as to the nobility, that it was agreed at once to aboliſh popery, and reſtore their ancient religion. The Romiſh prieſts were hereupon generally ſacrificed to the fury of the people, and their patriarch very narrowly eſcaped out of the country, with his life: and when three capuchins afterwards came as far as Squaquena, upon the Red ſea, from whence they ſent letters to the emperor of Ethiopia, to obtain leave to come into his territories again, that prince requeſted the Turkiſh baſſa, who commanded on that coaſt, to ſuffer no franks to come that way into his territories, and to ſend him the heads of thoſe Capuchins: which the baſſa did not only oblige him in, but ſent him their ſkins flayed off, and ſtuffed, that he might know them to be franks by their colour, and prieſts by their ſhaved crowns.

Thus have the jeſuits and fathers of the Romiſh church procured their ſuperſtition to be baniſhed out of almoſt every country where they have planted it; they have indeed, by their ſkill in phyſic and mathematics, and an artful addreſs, inſinuated themſelves into the courts of many great princes; but then their advancing the pope's ſupremacy to ſuch an extravagant height, and pretending to controul the government in civil as well as eccleſiaſtical matters, has ever occaſioned their expulſion. Thus it was in Japan, where that emperor, finding them uſurping upon the civil authority, ordered every Chriſtian in his dominions to be maſſacred; and that no Chriſtian ſhould ever ſet his foot on ſhore there again. This has alſo put a ſtop to their progreſs in China, and occaſioned very ſevere perſecutions of the Chriſtians there; but ſtill they perſiſt in their encroachments on princes where they have an opportunity, and probably will never be ſatisfied, till they have made his holineſs univerſal monarch in temporals as well as ſpirituals; or procured their own extirpation, by the general conſent of Chriſtian princes, as the knights templars did by their inſolence in the fourteenth century.

SECT. VII.

Containing a Deſcription of NUBIA, ABEX, and ANIAN, their Situation, Extent, Climate, Vegetables and Animals; alſo the Perſons, Dreſs, Cuſtoms, and Manners of the Inhabitants; with an Account of the reſpective Cities in theſe Empires, and the Articles of their Commerce, &c.

NUBIA, which is alſo called Sennar, is bounded on the north, by Egypt; on the eaſt, by the Red ſea; on the ſouth, by Abyſſinia; and on the weſt, by the kingdoms of Tagua, Caoga, and the deſart of Gorham. It is ſituated between the thirteenth and twenty-fourth degrees of north latitude, and between the twenty-fifth and thirty-eighth degrees of eaſt longitude, extending in an irregular oblong ſquare. Its principal rivers are the Nile, the Nubia, and the Sira. The Nile overflows here at its uſual ſeaſon, but not ſo conſiderably as in Egypt.

This country, though entirely under the torrid zone, is nevertheleſs in many places very fruitful, eſpecially on the banks of the Nile, where the inhabitants, as in Upper Egypt, raiſe the water up to the high banks by art and labour. Hence it produces ſome very fine fruits, with plenty of ſugar canes; but the natives are unacquainted with the method of making good ſugar. They have alſo a great variety of medicinal plants, roots, and drugs; with others that are extremely obnoxious, particularly a moſt dreadful poiſon, ſo quick and fatal in its operations, that, it is ſaid, a ſingle ſeed taken inwardly gives almoſt inſtant death. Theſe ſeeds grow on the top of a plant that reſembles our nettles, and it is ſaid that conſiderable quantities of it are exported to the neighbouring countries. Nubia alſo affords gold, ivory, ſanders, and other medicinal woods, and drugs.

Here are likewiſe great numbers of dromedaries, camels, horſes, and various kinds of wild beaſts, as lions, tygers, leopards, crocodiles, vipers, and ſeveral kinds of ſerpents, particularly one of a colour which ſo nearly reſembles that of the duſt, or ſand, in which it lurks, that it is not eaſily avoided, and its bite is commonly attended with almoſt immediate death, and that of the moſt painful and dreadful nature.

Moſt of the inhabitants are Mahometans; they are much given to cheating; are a ſtupid debauched people, and are ſaid to have neither modeſty, civility, nor religion. Thoſe that live in villages chiefly apply them to agriculture, except thoſe who inhabit the more deſart parts, who live upon plunder. Mr. Norden, who proceeded up the Nile, a conſiderable way into Nubia, found them baſe, treacherous, mean, and avaricious; eſpecially ſome of the great, who ſcruple neither threats nor entreaties to obtain the treaſures of thoſe whom they dare not plunder by open violence and force.

The natives are ſwarthy, and ſmall of ſtature. Thoſe

of ſuperior rank in the heart of the country wear a veſt without ſleeves; but the common people only wrap a piece of linen cloth about them, and the children go quite naked. However, perſons of quality wear fine looſe long robes of ſilk or cotton, and thoſe of the women reach to the ground; theſe laſt alſo adorn their hair with rings and other trinkets, ſilver, and braſs; yet have nothing on their legs or feet but a kind of ſandal, or leather ſole. As for the women of lower rank, they only wear a ſhort kind of petticoat, from the waiſt to the knees.

They fight to greater advantage on horſeback than on foot, for they are very expert horſemen; but, they poiſon their weapons, and the Turks ſeldom care to attack them; they are however almoſt continually at war with the inhabitants of Gorham, the deſart tracts on the ſouth weſt, or making excurſions as far as to the Red Sea, in the eaſtern parts.

Mr. Poncet, a French phyſician, who paſſed through this country, in his way to Ethiopia, ſays, they are ſubject to a prince, who wears a long robe, embroidered with gold and ſilver, faſtened with a girdle of the fineſt cotton. On his head he has a turban of the ſame, and never appears in public without having his face veiled with a ſilk gauſe of various colours. Strangers, who are permitted to pay their homage to him, are obliged to pull off their ſhoes, and kneeling, to kiſs the ground two or three times; and his ſubjects always appear barefooted before him.

The ſame author obſerves, that the royal palace is a large confuſed pile of buildings, without any regularity, and ſurrounded with a high brick wall; it is, however, furniſhed with every thing eſteemed curious, rich, and coſtly; and the floors, after the manner of the eaſtern nations, are covered with the fineſt ſilk carpets. This prince applies himſelf five days in the week to affairs of ſtate, and the adminiſtration of juſtice, at which time he ſits at the head of his council, and decides cauſes with the utmoſt expedition. When ſentence of death is paſſed on the criminal, it is immediately executed by laying him flat on his back, and beating him on the breaſt with a ſtick till he expires. It is alſo ſaid, that on the death of the king the grand council aſſemble, and have the inhumanity to cauſe all the brothers of their new ſovereign to be put to death. However, the accounts we have both of this country and Abyſſinia are not entirely to be depended upon; though the author laſt mentioned ſeems to have as much veracity as thoſe writers among the Jeſuits, who have deſcribed the country of Abyſſinia, and have endeavoured with the utmoſt malignity, to deſtroy his credit as an hiſtorian.

The king of Nubia is a deſpotic, independent, and powerful prince. Dangala or Dongola, and Sennar, the capital, are the chief cities of Nubia.

Sennar is ſituated in the fourteenth degree, north latitude, and twenty-ninth degree, eaſt longitude. It ſtands on the eaſtern bank of the Nile, and is bounded on the ſouth by Abyſſinia, and on the weſt by Gagoa. It is pleaſantly ſituated on an eminence, between which is a large plain, covered with a great variety of odoriferous fruit trees. It is about five miles in circumference; and ſo populous, that the inhabitants are eſtimated at one hundred thouſand. The houſes in general are low, flat, and ill built; and thoſe in particular without the city are truly wretched, conſiſting only of poor ſmall huts made of wood and mud. Proviſions of all kinds are here very plentiful and cheap; and a market is held every day in the centre of the city for the ſale of them. The inhabitants make fine wheaten bread for ſtrangers, but they chuſe a coarſer ſort for their own eating. The inconveniencies attending this city are chiefly owing to the air being very unwholeſome from the exceſſive heats, which are alſo attended with violent rains, ſo as ſometimes to prove fatal to men and beaſts from the diſorders produced by it.

A conſiderable trade is carried on here, in all parts, between this city and Dangala, as alſo from thence down to Cairo, and other parts of Egypt. The commodities they diſpoſe of are gold, muſk, elephants teeth, in return for which they receive ſpices, cottons, ſilks, and other commodities belonging to India.

Dangala is ſituated in nineteen degrees, ten minutes, north latitude, and twenty ſeven-degrees, ten minutes, eaſt longitude. It ſtands on the eaſtern banks of the Nile, near the confines of Gagoa, and is about two hundred and fifty miles from Sennar. It is extremely populous, and is ſaid to contain at leaſt ten thouſand houſes; but they are all inſignificant buildings, being very low, and made only of mud and wood, and covered with ſtraw. The inhabitants however are moſt of them very rich, and carry on a conſiderable traffic with Cairo, and other parts of Egypt, where they exchange their own commodities, eſpecially ſanders and muſk, for arms, linen cloth, &c.

There are four principal towns in this kingdom, namely, Cuſa, Guola, Jalac, and Sula; but they are all very trifling, neither of them containing any thing worthy of particular deſcription.

Moſt of the villages, of which there are many, are ſituated on the banks of the Nile, and other rivers, for the convenience of watering the grounds. Theſe are tolerably pleaſant; but the reſt, which are in deſart parts, are very thinly inhabited, and make but a mean appearance.

The ſmall kingdom of Gorham lies to the ſouth of Nubia; but we know little of it elſe, than that it is chiefly a deſart country, and that the inhabitants of it are generally at war with the Nubians, and other adjoining kingdoms. The people are very rude and ignorant, go about naked, and live chiefly by plunder. There is not a ſingle village in the whole kingdom, or any thing that looks like one, except a few wretched huts ſituated along the White River, which divides this territory from Abyſſinia, and falls into the Nile ſome leagues below the city of Sennar, otherwiſe called Nubia.

We muſt not omit to mention, that the language of the Nubians is peculiar to themſelves, but bears ſome kind of affinity to the Arabic: it is not however univerſally ſpoken throughout the whole kingdom, for in the deſolate parts, which are inhabited by a different kind of people, they ſpeak a language that does not border either on the one or the other; ſo that theſe and the inhabitants of the more civilized parts of the country, can ſcarcely converſe together at all.

The country of Abex, or Habeſh, is only a narrow ſlip of land which extends along the weſtern or African ſhore of the Red ſea, and was formerly a part of Upper Ethiopia, though it is at preſent ſubject to the Turks, who ſeized on all its bays and ports from Egypt to the Straits of Babelmandel, by which means the natives of Abyſſinia were excluded from all intercourſe with the Red ſea.

The air is not only ſultry, but foggy and unwholeſome, eſpecially after ſun-ſet; and the country is ſandy and ſo parched by the ſun, that it is almoſt barren, and produces few of the neceſſaries of life. It has however ſome deer, and alſo ſheep of a prodigious ſize, with large tails like thoſe we have deſcribed in treating of Syria, p. 281; it is alſo ſaid to abound with a great number of lions, tygers, and other wild animals.

A long chain of inacceſſible mountains ſecure the weſtern part of this track of land, and prevent the paſſage of an army from Abyſſinia into their country, there being only two narrow paſſes, that of Suakin and that of Arkico; and even in theſe paſſes the road is ſo rugged and difficult, that there is no travelling above five or ſix miles a day, and conſequently they may be eaſily defended againſt a numerous army by a handful of troops.

The natives are a mixture of Turks, Egyptians, Ethiopians, Caffres, and Arabs.

Suaquam and Arkico, or Ercoco, are the chief towns; beſides which there is a number of villages of fiſhermen. Suaquam is built on a ſmall iſland of its own name, ſituated in nineteen degrees forty-five minutes north latitude, and in thirty-ſeven degrees thirty minutes eaſt longitude, and is one of the beſt ſea ports in the Red ſea; the entrance into the harbour is by a narrow ſtrait that reaches into a lake, in the midſt of which is the iſland on which the town is built. All the houſes are of ſtone and mortar, and here reſides a Turkiſh governor under the baſha of Cairo. Turks and Arabs are the principal inhabitants of this city.

The town of Arkico, or Ercoco, is ſituated in ſixteen degrees five minutes north latitude, on the coaſt of the Red ſea, and is defended by a caſtle; but is ſmall, and neither rich nor populous.

Several petty kingdoms, ſcarce worthy of notice: one of the principal of theſe is Dancali, or Danraly, which extends beyond the ſtraits of Babelmandel. The ſoil is for the moſt part dry, ſandy, and barren; for the whole country labours under a great ſcarcity of water, and that which they have is very brackiſh. The land produces little beſides ſome hardy vegetables that ſerve to feed the goats, which are in a manner the only quadrupeds in the country. It has ſome ports in the Red ſea, the principal of which is Baliur, and having ſome ſalt mines, the produce of them is ſent into other countries, and in return they receive the neceſſaries of life. Their king, though a Mahometan, is ſaid to be tributary to the Abyſſinian monarch.

Anian

Anian extends along the ſouthern coaſt of the gulf of Babelmandel to cape Guardafuy, and from the twelfth degree of north latitude to the equator; it being bounded on the north by the gulf of Babelmandel, on the eaſt by the Indian ocean, on the ſouth by Zanguebar, and by Abyſſinia and the unknown parts of Africa on the weſt.

The climate being exceeding hot, all the eaſtern coaſt is a mere ſandy barren tract, producing neither corn, fruit, nor any animals, but of the wild kind, on which account it is generally called the Deſart coaſt; but the northern coaſt, which is waſhed by the gulf, is a fertile country that produces plenty of proviſions, in which the natives carry on a conſiderable commerce. They have alſo an excellent breed of horſes, which foreign merchants purchaſe in great numbers, in exchange for ſilks, cottons, and other commodities.

Along the north coaſt the inhabitants are for the moſt part white, with long black hair, and grow more tawny, or even quite black, on proceeding towards the ſouth. Here are likewiſe many negroes, who live and intermarry with the Arabs ſettled in the country, and carry on a great commerce with them in ſlaves, horſes, gold and ivory, which they commonly bring from Abyſſinia; where they are almoſt conſtantly waging war; and, by their frequent inroads into that kingdom, have rendered themſelves a warlike people.

Several kingdoms are included in this tract, the moſt conſiderable of which is that of Adel, ſo called from its metropolis, which authors have not deſcribed; it is alſo named Zeila, from another ſea-port ſituated on the ſouthern coaſt of the Red ſea. This kingdom has the ſtraits of Babelmandel on the north, part of the eaſtern ocean on the eaſt, and the Gallas with the kingdoms of Dancali and unknown countries on the weſtern part.

Zeila is ſeated on a ſpacious bay, to the ſouth-eaſt of the mouth of the ſtraits of Babelmandel, in eleven degrees ten minutes north latitude, and forty-four degrees thirty-five minutes eaſt longitude from London. This city is extremely populous, the ſtreets are regularly laid out, and the houſes built of free-ſtone. Its haven is very commodious, and it carries on a conſiderable commerce, it being the place through which the greateſt part of the merchandize carried into the Abyſſinian empire commonly paſſes, as well as thoſe that are conſumed in the kingdom of Adel.

The ſoil about Zeila is only a dry barren ſand, and the inhabitants are obliged to fetch freſh water at the diſtance of two days journey from the city, where the country abounds with corn and fruit to ſuch a degree, that the inhabitants cannot conſume it all; on which account, the people of the neighbouring places come thither to purchaſe proviſions, and carry goods in return.

Barbora, the next city, is ſituated at the bottom of a bay, on an iſland of its own name. It has been all along a kind of rival in commerce with Zeila, and is no leſs reſorted to by foreign merchants.

The iſland, which is almoſt contiguous to the continent, is very fertile, and produces plenty of corn, fruit, and cattle, great part of which is exported into other countries.

The other parts of the kingdom of Adel being generally flat, and with very few hills, they have ſeldom any rains; but that defect is abundantly ſupplied by the many rivers that run through the country. One of theſe rivers named the Hawaſh, flows down from the Abyſſinian mountains, and receiving ſome other rivers, takes a circuit before it enters the kingdom of Adel. This river is very broad and deep, but it has ſcarce run ſix miles through the country of Adel, before the inhabitants divide it into ſuch a multitude of canals, that it is in ſome meaſure exhauſted before it reaches the ſea. This renders the country ſo rich in grain, fruit, and other proviſions, that part of it is conveyed into the neighbouring kingdoms.

They have plenty of wheat, barley, and millet, and a variety of cows, ſheep and other beaſts; but their principal traffic conſiſts in gold-duſt, elephants teeth, frankincenſe and negro ſlaves, which the inhabitants of Adel carry to the port of Zeila, where they never fail of meeting with merchants from Arabia, Guzarat, and other parts, who give in exchange for them cloths of cotton, ſilk, and linen of various ſorts, collars, bracelets, and other ornaments of amber and cryſtal, with dates, raiſins, and other articles of merchandize.

The natives are brave and warlike, and fight with ſurpriſing intrepidity againſt the Abyſſinians, who are far from being equal to them in valour, diſcipline, and offenſive weapons, the Adelites being furniſhed by the Turks and Arabs with variety of fire arms.

Their dreſs conſiſts of a piece of cotton cloth, which covers them only from the girdle to a little below the knee, the reſt of their body being naked; but the king and nobles of both ſexes wear a kind of looſe garment, which covers their whole body, and a cap on their heads: however, all the women are very fond of adorning their necks, arms, wriſts, and ancles, with bracelets of braſs or amber, and other decorations.

CHAP. VIII.

THE NEW HISTORY AND DESCRIPTION OF

EGYPT.

SECT. I.

Treating of the Name, Situation, and Boundaries, Climate, Diviſions, Deſcription of the River Nile, Produce of the Country, &c.

THE name of Egypt, according to the claſſicks, is derived from (Egyptus,) the brother of Danaus, once ſovereign of this country. It is called Miſraim by the Hebrews and Arabs, which name it is ſuppoſed to have obtained from Miſraim, the ſon of Cham, and grandſon of Noah. It has alſo been known by the name of Coptus, the capital city of Upper Egypt, from whence the natives were called Cophtis, as the Chriſtians of Egypt are at this day; and, notwithſtanding they are the moſt numerous, are looked upon to be the true deſcendants of the antient Egyptians.

The Turks call this country El-kebit, or the overflowed country: and a multitude of other names have been given to it; but by theſe it has been moſt generally known.

Egypt is ſituated on the north-eaſt part of Africa, being bounded by the Mediterranean ſea on the north: by the Red ſea, and the Iſthmus of Suez, which divide it from Aſia, towards the eaſt: by the empire of Abyſſinia and Nubia towards the ſouth; and by the deſart of Barca towards the weſt. It extends from the twenty-firſt degree of northern latitude, to the thirty-firſt and ſome odd minutes beyond; and conſequently muſt be about ſix hundred miles in length from ſouth to north; but the breadth in many places does not ſeem to be near two hundred miles.

The air of this country is not healthful, the ſituation being very low, and the mud which covers the beſt part of it after the overflowing of the Nile, ſending up a noiſome vapour. The ſandy deſarts alſo, which encloſe Egypt on three ſides, render it exceſſive hot. Nor are there more than two ſprings in the whole country to refreſh the parched inhabitants; ſo that they ſeem to be under a neceſſity of building their towns on the banks of the Nile. Accordingly moſt of them ſtand near the river upon riſing ground,

ſo made by art or nature: and when the river overflows, appear like ſo many iſlands, which have a communication with each other only by boats. It ſeldom rains here in the ſummer; but in the winter, modern travellers aſſures us, it rains plentifully ſometimes, eſpecially in Lower Egypt; notwithſtanding it was univerſally believed formerly, that it never rained here at all; which error, we preſume, was occaſioned by the relation of ſome travellers, who had reſided but part of the year in Egypt, and had not informed themſelves of the different ſeaſons.

This country, as has been obſerved already, is uſually divided into lower, middle, and upper Egypt. Lower Egypt is moſt part of it contained in a triangular iſland, made by the Mediterranean ſea, and the two great branches of the Nile, which dividing itſelf five or ſix miles below Old Cairo, flows one part of it towards the north-weſt, and falls into the ſea at Roſſetto, and the other branch towards the north-eaſt; falling into the ſea at Damieta, the antient Peluſium: but there is a great extent of country both to the eaſtward and weſtward of this triangle, which is included under the name of Lower Egypt. But we ſhall ſpeak more particularly of theſe diviſions, when we come to deſcribe the chief towns, and the antiquities contained in them.

Dr. Pococke obſerves, that the ſoil of Egypt being full of nitre, occaſions vapours that render the evening air cold and unhealthful. On the ſmall lakes in the low grounds a cake of ſalt is left on the ſurface after the water has evaporated, which they carry away for domeſtic uſes. This nitre, and the ſediment of the water of the Nile, renders Egypt ſo fruitful, that they ſometimes find it neceſſary to temper it with common ſand. For within a mile of the mountains the country is ſandy, and lies upon an eaſy aſcent, which the Nile never reaches, and on the edge of it are many villages; but where the mountains extend four or five miles from the Nile, there are villages in the midway between them and the river built on eminences raiſed by art; and theſe reſemble ſo many iſlands, from their being ſurrounded with water, during the flood.

The river Nile or Abanchi, which in the Abyſſinian language ſignifies the father of rivers, hath its ſources, as is generally held, in eleven or twelve degrees of northern latitude, in the empire of Abyſſinia: but whether the Portugueſe jeſuits, as is pretended, or any other perſons have diſcovered the very fountains it iſſues from, is very much queſtioned, the country where it riſes, as ſome of the natives relate, being covered with vaſt impenetrable woods. This river runs a courſe of about fifteen hundred miles from ſouth to north for the moſt part, and a little below Cairo dividing itſelf into two branches, one inclining to the eaſt and the other to the weſt, falls into the Mediterranean, the mouths being about an hundred miles aſunder. As for any other branches of this river our modern travellers take no notice of them, and probably thoſe that have been mentioned by antient writers were only canals cut from one of theſe, particularly the canal which was made to convey the water from the river to Alexandria, ſeems in our maps to be laid down for one: however, certain it is, there are no other branches navigable at this day than thoſe of Damieta and Roſetto. While the river is contained within the bounds of the ordinary channel, we do not find it is broader at Old Cairo than the Thames at London, and in the drieſt ſeaſon of the year is fordable in many places. In the upper part of the ſtream there are ſeven cataracts where the water falls in ſheets from a very great height, cauſing a prodigious noiſe; but through Lower Egypt it ſlides along with a very gentle ſtream, and paſſengers are ſeldom ſurprized by tempeſts on it, as has been obſerved. The water is very thick and muddy, eſpecially when it is ſwelled by thoſe heavy rains, which conſtantly fall within the tropicks in the beginning of the ſummer, and theſe are the occaſion of its overflowing the low lands in Egypt annually. The antients, who were unacquainted with thoſe latitudes, were much perplexed to diſcover the true cauſe of deluge; but at this day every traveller obſerves, that this is the caſe of all rivers which have their riſe or courſe within the tropicks; they break their ordinary bounds annually, and overflow the lands for many miles before they reach the ſea, particularly in Tonquin, Siam, Bengal, &c. And theſe alſo leave a prolifick mud which yields a vaſt increaſe, like that which the Nile leaves in Egypt; and though the waters of all theſe rivers be very thick, when they have ſtood ſome time, they are not unwholeſome or unpalatable, and ſome eſteem them preferable to ſpring water, on account of the long courſe they run in latitudes where the ſun has ſo much influence.

There are great rejoicings annually in Egypt, when the river Nile riſes to a certain height, for upon this depends the fruitfulneſs of the country; and at the cutting of the banks to let it into their canals, from whence it is diſtributed into their reſpective fields, is ſolemnized one of their greateſt feſtivals. The river uſually begins to ſwell in the month of May, and on the 28th of June they publiſh in Cairo, and other towns, by a crier, how much the water is increaſed.

One circumſtance, however, belongs to this river, which is of a peculiar nature. Other rivers being ſupplied by rivulets, the ground is loweſt near the banks; but as no water flows into the Nile in its paſſage through Egypt, and as it is neceſſary that this river ſhould overflow the land, the country of Egypt is generally lower at a diſtance from the Nile than it is near it; and the land ſeems, in moſt parts, to have a gradual deſcent from the Nile to the foot of the hills, that may be ſaid to begin at thoſe ſandy parts already mentioned, as being a mile or two from them, which are never overflowed, ſince they riſe towards the mountains in a gradual aſcent.

The cataracts in Upper Egypt, are ſome of the moſt remarkable particulars in relation to the Nile. Several authors have viſited them; one of whom obſerves, that, on approaching them, he never ſaw nature diſcover ſo rough a face as appeared in the country. Nothing is to be ſeen on the eaſt ſide of the river, but rocks; on the weſt, the hills are either of ſand or black rocks: above to the ſouth, there ſeems to be a high rocky iſland; higher up, rocky cliffs appear on each ſide; and below, to the north, are ſo many rocks, that little of the water could be ſeen. The bed of the Nile is croſſed by rocks of granite, which in three places, at ſome diſtance from each other, divide the ſtream, and make three falls at each. The firſt he came to was the leaſt, and appeared not to exceed three feet: the ſecond, which is a little lower down the river, winds round a large rock, or iſland, forming two ſtreams. This iſland is about twelve feet high towards the north, and we are told that at high water the Nile runs over it; but ſuppoſing the river to be then five feet higher below the rock, the fall will not exceed ſeven or eight feet. There are other rocks farther to the weſt; and a third ſtream, which has a greater fall than any of the reſt.

We are not able, however, from this account, to form any idea of theſe cataracts deſcribed by the antients, and even by ſome of the moderns, who inform us, that under the twenty-third degree of latitude, the water of the Nile iſſues from ſeveral large openings of a high rock into its bed below, falling near two hundred feet with ſuch prodigious noiſe as to exceed that of the firing of cannon, or the loudeſt claps of thunder. The water, in its fall, reſembles a large white ſheet about thirty feet in breadth, which in its rapid deſcent forms a kind of arch, under which people may walk without being wet; and this ſeems to have been formerly the amuſement of the neighbouring people, there being ſeveral niches and ſeats in the rock for the convenience of ſitting down. There are alſo, under the arch made by the caſcade, a kind of platform, and ſome ſubterraneous grottos, into which the people uſed to retire, in order to cool themſelves; but theſe are now become inacceſſible by the breaking in of the water from ſome freſh gaps of the rock. It is alſo obſervable, that the water, in its fall below, raiſes a thick miſt, which at a diſtance reſembles a cloud; and yet one who tells us he ſaw this cataract, affirms, that the natives ſhoot it with rafts; which circumſtance we think very improbable, though it is certainly conformable to Lucan's antient deſcription of it. The learned Dr. Shaw's accounts of the cataracts agree with the deſcriptions of the judicious Dr. Pococke and Mr. Norden, and ſeems to diſcredit every thing that is marvellous in the above relation: for he aſſures us, that they are only ordinary falls of water, like thoſe we frequently meet with in great rivers, where the ſtream is a little confined: but (and which ſeems highly probable) may not the cataracts farther up the Nile be much higher, and more agreeable to the deſcriptions of the antients, than thoſe viſited by theſe gentlemen?

Thoſe authors, who have given deſcriptions of Egypt, contented with ſaying that its fertility is ſolely to be aſcribed to the annual inundation of the Nile, have, by their ſilence, given occaſion to think that Egypt is a paradiſe on earth, where the people neither plow nor ſow, but every thing is produced as it were ſpontaneouſly after the draining of the waters: though few lands have more need of cultivation than thoſe of Egypt.

The people have been taught, by neceſſity, to form various methods of raiſing the water, where the land lies higher

higher than the inundation riſes. This is done at Damieta (where the Nile, when at its height, is not much below the ſurface of the earth) by means of a wheel made with boxes round its circumference, which receive the water, and as the wheel turns round, the boxes empty themſelves at the top into a trough made for that purpoſe. Where the water is too deep to be raiſed in this manner, they put a cord round the wheel that reaches down to the water, to the end of which are faſtened earthen jars that fill as it goes round, and empty themſelves at the top in the ſame manner as the other; both being turned by oxen. But where the banks are high, the moſt common way is to make a baſon upon them, and fixing in the ground a pole forked at the top, they place another pole by an axle to the top of it. To one end of this laſt pole they tie a heavy ſtone, and at the other a rope and a leathern bucket. Two men draw down the bucket into the water, and the weight brings it up, the men directing it, and turning the water into the baſon. This baſon is frequently made on the ſide of the bank, and running into another is raiſed up higher with the ſame labour; and in Upper Egypt there are ſometimes ſeen five of them, one higher than the other, the uppermoſt only ſerving to water the fields. However, in Lower and Middle Egypt, where canals have been dug, they have no occaſion for all this labour. The water is conveyed by opening ſluices, or breaking down banks, through canals cut for that purpoſe, into large reſervoirs which are made to ſupply the lower lands as there is occaſion for it.

They ſometimes alſo near Cairo uſe leathern veſſels, and an hydraulic machine, called the Perſian wheel, to pour water into the canals; and very ingenious methods have been invented to retain the water upon the ground till ſufficient humidity is imbibed, and the ſoil thoroughly ſoaked. The grand Signor is not intitled to his tribute till the canal is opened at Grand Cairo; and when the baſſa opens it, the people refuſe to pay tribute, unleſs the waters are ſixteen cubits high.

With reſpect to the natural hiſtory of this country, we muſt firſt obſerve, that Egypt naturally produces few vegetables, moſt of the tender plants being deſtroyed by the heat and inundation; but where the Nile has overflowed, and the land is plowed and ſown, it yields a great increaſe. Egypt, which was anciently the granary of the Roman empire, ſtill produces great quantities of wheat, rice, barley, beans, and other kinds of pulſe, with which the neighbouring countries are ſupplied; beſides ſugar canes, of which ſome ſugar is made; and likewiſe melons, dates, figs, cucumbers, and other vegetables, which the people eat in hot weather as a cooling food.

Upper Egypt ſupplies moſt parts of Europe with ſenna; and coloquintida grows wild in the ſandy grounds: but as Egypt has no common graſs, they ſupply the want of it by ſowing the land with clover, without plowing. The ſpring corn and vegetables are ſown in November and December, as ſoon as the Nile is fallen, and ſooner where that river does not naturally overflow the ground. This corn conſiſts of wheat, lentils, and barley that has ſix rows of grain in one ear; and with this they feed their horſes, for they have no oats. They ſow beans for their camels, and theſe the people alſo eat green both raw and boiled. They have a kind of vetch little inferior to peaſe, with one large grain in each pod; they alſo plant an herb called nill, of which they make a kind of indigo blue, reſembling that uſed in Europe.

Moſt of the trees in Egypt ſeem to have been tranſplanted from other countries: for thoſe in their gardens are doubtleſs exotics, as the cons, or cream-trees, apricots, oranges, lemons, pomegranates, caſſia, cotton-tree, and moſch, a delicious fruit.

The papyrus is a production of Egypt, thought not ſo plentifully as formerly. This reed grew principally on the borders of the Nile, and ſerved the antients for writing-paper.

The moſt common trees in Egypt, are, the ſount, which bears a key or pod uſed inſtead of bark in tanning of leather, the tamariſk, Pharaoh's fig, the ſycamore of the antients, the palm, or date-tree, and is another ſpecies of the palm.

Four-footed beaſts, are not very numerous here: the cows are large and red, with ſhort horns: the natives make uſe of their oxen to turn the wheel with which they raiſe the water, and to plow the land. They have alſo large buffaloes, which are ſo impatient of heat, that they will ſtand in the water with only their noſes out to breathe; and when this convenience is not to be had, they will lie wallowing in mud and water all day like ſwines.

They have a great number of beaſts of burden, particularly camels and dromedaries, and the Turks eat the fleſh of the young ones as a moſt delicate diſh; but will not permit it to be eaten by the Chriſtians, probably that the breed may not be deſtroyed. The horſes, eſpecially thoſe of Upper Egypt, are very fine ones; but their necks are too ſhort. They never trot, but walk well, and gallop with great ſpeed, turn ſhort, ſtop in a moment, and are extremely tractable; but they cannot perform long journies, and are only fit to walk in travelling. During the heat of ſummer, when there is no clover-graſs, they are fed with chopped ſtraw and barley. In Cairo all but the great ride on aſſes, of which they have a fine large breed, and in that city there are ſaid to be no leſs than forty thouſand of them.

Great numbers of antelopes are about Alexandria: they have longer horns, and are more beautiful than thoſe in other countries. The hares and foxes are of a light colour, but the former are not very common. The tyger and the hyena are ſeldom ſeen; however they have alſo ſome of theſe here.

Of the birds in Egypt, the oſtrich deſerves the preference; it is called in Arabic ter-gimel, or the camel-bird, becauſe in its head, neck, and walk, it reſembles the camel. This bird is common in the mountains ſouth-weſt of Alexandria; its fat is ſold by the Arabs, and uſed as an ointment for the rheumatiſm, palſy, and all cold tumours. They have here a kind of large domeſtic hawk, of a brown colour, with a very fine eye. Theſe frequent the tops of houſes, where they may be ſeen with pigeons ſtanding cloſe by them; but though they are not birds of prey, they eat fleſh wherever they find it: the natives never kill them, for they, as well as their anceſtors, ſeem to entertain a veneration both for theſe birds and for cats. The ter-chacus, or meſſenger bird, would be thought very beautiful were it not ſo common; it is almoſt as large as a dove, and is not only finely ſpeckled, but has on the top of its head a tuft of feathers which it ſpreads when it alights on the ground.

They have alſo a beautiful white bird, called by the Europeans the field hen; it reſembles a ſtork, but is not half ſo large, and is ſeen about the fields like a tame fowl. They have likewiſe a large white bird with black wings, ſhaped like a raven; but it is very ugly, and not at all ſhy: theſe laſt are called Pharaoh's hens, and live in the ſame manner as the tame hawk.

Great numbers of the birds called ibis, are found on the iſlands in the Nile: theſe were held in great veneration by the Egyptians, on account of their delivering the country from the multitude of ſerpents that breed in the ground after the retreat of the Nile. They are of a greyiſh colour, with the wings and tail black, and reſemble the crane.

The ſtork is held in the higheſt eſteem and veneration by the Mahometans; it being as ſacred among them as the ibis was among the Egyptians, and no leſs profane would that perſon be accounted, who ſhould attempt to kill, or only hurt or moleſt it. The great regard paid to theſe birds was at firſt, perhaps, leſs occaſioned by the ſervice they are to moiſt fenny countries, in clearing them of a variety of reptiles and inſects, than from the ſolemn geſticulations they are obſerved to make whenever they reſt upon the ground, or return to their neſts: for they firſt throw their heads backwards, as it were, in a poſture of adoration; then ſtrike, as with a pair of caſtanets, their upper and lower bill together, and afterwards proſtrate their necks in a ſuppliant manner quite down to the ground; conſtantly repeating the ſame motions three or four times together.

Here are alſo great flocks of wild geeſe of ſeveral kinds, wild ducks, woodcocks, ſnipes, quails, &c. and eagles and vultures are among their birds of prey.

In this country are ſeveral ſorts of yellow lizards, among which is the worral, which is ſaid to be affected by muſic; Dr. Shaw ſays, he has ſeen ſeveral of them keep exact time and motion with the derviſes in their circulatory dances, turning when they turned, and ſtopping when they ſtopped. This animal, which is of the lizard kind, is four feet long, eight inches broad, and has a forked tongue, which it puts out like a ſerpent, but it has no teeth, and is harmleſs, living on lizards and flies. It frequents the grottos and caverns in the mountains on the weſt of the Nile, and is only found during the hot weather, as it always ſleeps during the winter.

There are two ſpecies of vipers in Egypt, which are much eſteemed in phyſic; they are of a yellowiſh colour like the ſand in which they live, one with a kind of horns, which have ſome reſemblance to thoſe of ſnails, but are of a horny ſubſtance; and the others like thoſe in Europe.

Few

Few of the fish found in any of the rivers of Europe, except eels and mullets, and no kind of shell-fish, are to be met with in the Nile; and the former, with some others, come only at certain seasons from the sea. Of those most esteemed are the ray, which resembles a carp, but is said to be sometimes two hundred pounds weight. The most delicate fish is the hesker, which is only caught in Upper Egypt; it has a long narrow snout, and so small a mouth that one would imagine it could only live by sucking the juice out of the weeds on the ground. Here is a small fish in Upper Egypt called the gurgur, which is about a foot long: its head is armed with a strong bone; the fin on the back, and those on each side under the gills, are also armed with bone. The inhabitants believe that the crocodile is frequently killed by this fish.

Many of the creatures described by the antients are unknown to the modern inhabitants of Egypt, particularly the hippopotamus, or river-horse, which is supposed to be a native of Ethiopia in the upper parts of the Nile; and the crocodile so rarely appears below the first cataracts, that the sight of it is as great an object of curiosity here, as to the Europeans; and though this creature was thought peculiar to Egypt, yet there does not seem to be any material difference between it and the alligators of India and America. They are both in the form of a lizard; are amphibious animals, which grow till they are about twenty feet in length, and have four short legs with large feet armed with claws. They have a flat head; their eyes are indifferently large, and their back is covered with scales, of a square form, which, though extremely hard, are not proof against a musket-ball, as some have asserted.

As many ridiculous and marvellous stories have been told concerning the crocodile, some of which have proceeded from travellers taking the most absurd tales upon trust, and others have been the manufacture of their inventive faculties, in order to impose upon the credulous; we shall therefore present our readers with the following description of one that was dissected some years since by the jesuits: "It was eighteen feet and a half in length, of which the tail was five feet and a half, and the head and neck about two feet and a half; the circumference was four feet nine inches in the thickest part; the fore legs had the same parts and make as the arms of a man both within and without; the fore feet had five fingers, the two last of which had no nails, and were of a conical figure; the hinder legs, including the thigh and paw, were two feet two inches long: the paws, from the joint to the extremity of the longest claws, were about nine inches; they were divided into four toes, of which three were armed with large claws, the longest of which was an inch and a half; these toes were united by a membrane, resembling those of a duck, but thicker. The head was long, with a little rising at the top, but the rest was flat, and especially towards the extremity of the jaws; it was covered by a skin adhering firmly to the scull and to the jaws. The scull was rough, and unequal in several places; and about the middle of the forehead there were two long crests, about four inches high; the scull, between these two crests, was impenetrable by a musket-ball, for it only rendered the part it struck against a little white. The eye, in proportion, was very small, and so placed within its orbit, that the external part, when the lid was closed, was only an inch long, and the line running parallel to the opening of the jaws: it was covered with a double lid, one within and one without; that within was folded in the great corner of the eye, and had a motion towards the tail, but being transparent, it covered the eye without hindering the sight. The iris was very large in proportion to the globe of the eye, and was of a yellowish grey colour. Above the eye the ear was placed, which opened from above downwards, as it were by a kind of spring, by means of a solid, thick and cartilaginous substance. The nose was placed in the middle of the upper jaw, near an inch from its extremity, and was perfectly round and flat, being nearly two inches in diameter, of a black, soft, spongy substance, not unlike the nose of a dog. The jaws appeared to shut within each other; and the opinion commonly received is false, that the animal's under jaw is without motion, for it moves like the lower jaw in all other animals; while the upper jaw is fixed to the scull, and absolutely immoveable. The animal hath twenty-seven cutting teeth in the upper jaw, and fifteen in the lower, with several void spaces between them; they were thick at the bottom and sharp at the point, being all of different sizes, except ten large hooked ones, six of which were in the lower jaw, and four in the upper. The mouth was fifteen inches long, and eight and a half in the broadest part; the distance of the two jaws, when opened as wide as they could be, was fifteen inches and an half. The colour of the body was of a dark brown on the upper part, and of a whitish citron below, with large spots of both colours. From the shoulders to the extremity of the tail, it was covered with large square scales, disposed like parallel girdles, and fifty-two in number; but those near the tail were thinner than the rest. The animal was covered not only with these, but all over with a coat of armour, which, however, as we before observed, might be penetrated by a musket-ball. Those parts of the girdle underneath the belly were of a whitish colour, and were made up of scales of divers shapes, which were not so hard as those on the back. The gullet was large when compared to the mouth; and a ball of wood, as large as a man's hand, readily ran down and was drawn up again. The entrails were but short in proportion, being not so long as the animal's body. The tongue (which some have erroneously, from Pliny, asserted this animal is without) consisted of a thick, spongy, soft flesh, and was strongly connected to the lower jaw. The heart was about the size of a calf's, and of a bright red colour, the blood passing as well from the veins to the aorta as into the lungs: there was no bladder, but the kidnies sent the urine to be discharged by the anus. There were sixty two joints in the back-bone, which though very closely connected, had sufficient play to enable the animal to bend like a bow to the right and the left; so that what we are told of escaping a crocodile, by turning out of the right line, seems to be fabulous; nor is there any foundation for the story that the tears and alluring voice of this creature will draw persons to it, in hopes of devouring them; or that the little bird hochilos lives on the meat it picks from the crocodiles teeth; or that the ichneumon, or rat of Pharaoh, destroys this animal, by jumping into his mouth, and cutting his way out again through his belly, though it must be confessed he is a terrible enemy to this species, and destroys both his eggs and young fry with great avidity.

The crocodiles will leap out of the river on a man or beast that stands near it, and seize him with their fore-paws; but if the distance be too great, they make a spring, and with their tails endeavour to beat down their prey.

We are told, that the most common method of killing crocodiles, is, by shooting them in the belly, where the skin is soft, and not covered with scales like the back. The natives destroy them by making some animals cry at a distance, and when the crocodile comes out, they thrust a spear, to which a rope is tied, into his body; then letting him retire into the water to spend himself, they afterwards draw him out, run a pole into his mouth, and, leaping upon his back tie his jaws together. The people say, they cannot seize a man in the water, and therefore frequently cross the Nile by swimming both by themselves and with their cattle, even above the first cataract, where there are a great number of crocodiles.

They are not fond of salt water, but love to continue in rivers. They lay their eggs in the sand, having previously dug a hole with their fore-paws to deposit them in. Having delivered some of their burden, they cover up the place with great care, and then retire. The next day they return again, uncover the place, lay about the same number of eggs, and then retire till the ensuing day, when they repeat the same for the last time, after which the hole is finally closed. As soon as the eggs are hatched by the warmth of the sun, which happens at the end of thirty days, the young ones begin to break the shell. The mother, by instinct, goes at the same time to assist them by scratching away the sand. The moment they are at liberty, the strongest move towards the water, and the rest mount upon the back of the mother, who carries them safely to it; but the moment they arrive at the water, all natural connection ceases, for when the female has introduced her young to their natural element, she and the males become their most formidable enemies, and devour as many of them as they can; the whole brood scatters into different parts at the bottom, and most of them are destroyed. This animal is not only an enemy to its own species, but is at perpetual war with all other living creatures. Man is its professed foe, and kills it to prevent its depredations, as well as to eat it.

The flesh of the crocodile is but indifferent food, though the eggs are deemed great delicacies, and are sought after very eagerly, not only by man, but by many beasts and birds of prey. The vulture is particularly successful in destroying its eggs, which they effect by the following stratagem: They hide themselves among the bushes and shrubs, about the banks of those waters where the crocodile inhabits, then watching till she hath deposited her eggs,

they go to the place as ſoon as ſhe retires, ſcratch away the ſand, and feaſt upon the ſpoil. At other times, when they have not diſcovered a crocodile's neſt, they are equally deſtructive to the young ones while they are running to the river.

Having mentioned the ichneumon, it may be proper here to give ſome account of that animal, which, with reſpect to ſhape and colour, reſembles a badger; it has a ſnout like a hog, with which it roots up the earth and ſand, the noſe is prominent, and the ears ſhort and round. It is of a yellowiſh colour at all times, when angry: but if provoked it briſtles up its hair like a porcupine, and then appears of two colours, which are white and yellow, that run in diſtinct ſtreaks. The legs are black, the tail long, and the tongue and teeth like thoſe of a cat. It is an amphibious creature, can bear to remain under water much longer than the otter, and is bold, active, and nimble.

Some of the inhabitants, particularly thoſe who are more ſavage than in Lower Egypt, have ſeveral ſtrange methods in croſſing the Nile, which they perform without the leaſt apprehenſion of falling a prey to the crocodiles. Two men, our author obſerves, were ſet on a truſs of ſtraw, while a cow was ſwimming before, one of them held in one hand her tail, and with the other guided the beaſt by a cord faſtened to her horns. The other man, who was behind, ſteered with a little oar, by means of which he kept at the ſame time the balance. The ſame perſon likewiſe ſaw ſome loaded camels croſſing the river. A man ſwimming before held the bridle of the firſt camel in his mouth; the ſecond camel was faſtened to the tail of the firſt, and the third to the tail of the ſecond; while another man brought up the rear, and took care that the ſecond and third camels ſhould follow in a row.

SECT. II.

Containing an Account of the Perſons, Dreſs, Manners, Cuſtoms, Education, Religion, &c. of the EGYPTIANS.

AS this country is inhabited by a variety of people, namely, Arabs, Moors, Copts or Coptis, Turks, Greeks, Jews, Franks, &c. ſo they materially differ in their perſons, manners, habits, and cuſtoms. The Turks are tall, well-made, finely featured, fair, and dreſſed after the Aſiatic faſhion. The Arabs are a ſmall ſwarthy people, and reſide in tents ſcattered about the country in a circular form, which they remove as inclination prompts, or neceſſity requires. The Moors are nearly as ſwarthy as the Arabs, and in every other particular reſemble the Moors of the Bombay ſtates. The Greeks are in every particular like thoſe of the Levant; the Jews in all reſpects reſemble thoſe who reſide in the other parts of Africa; and the Franks may be characterized from the different nations to which they belong.

The real Egyptians, called Copts or Coptis, who are deſcended from the original inhabitants of the country, are a very ill-favoured, bad-ſhaped, effeminate, ſlovenly and dirty people. They are diſagreeable to the beholders in themſelves, and receive no manner of addition from their dreſs; for if the latter be ever ſo good, they put it on ſo aukwardly, as to appear very ridiculous to other people; and indeed the beſt dreſs cannot remain long decent upon them, as they frequently uſe their long ſleeves not only to wipe their hands and mouths after meals, but to blow their noſes on at other times. The Coptic tongue is a corruption of the antient Egyptian, and is now a dead language. Theſe people are ſaid to have been called Coptis, from their retiring to Coptus, and the adjacent places, during the firſt perſecutions.

The people of this country are naturally inclined to indolence, and take great delight in ſitting ſtill, and hearing tales, and indeed appear to be always more fit for a quiet than an active life. This probably may be owing to their being enervated by the heat of the country. They are alſo envious and miſchievous; which prevents their uniting and ſetting up for themſelves. The Mahometan inhabitants are either original natives, who live in the villages, or of the Arab race. The latter are divided into thoſe who are alſo ſettled in the villages, and are for the moſt part an honeſt, harmleſs people; who live in tents, and chiefly ſubſiſt on their cattle, which are principally camels and goats, that feed on ſmall ſhrubs. The Turks, who are thus named to diſtinguiſh them from the Arabs and the original natives of the country, are thoſe ſent by the grand ſignior, and the ſlaves. Theſe are the governing party, and are remarkable for being moſt avaricious, and very fond of power: the Turkiſh dreſs diſtinguiſhes them from the others.

In the country, moſt of the children go naked in ſummer, and many of them do ſo all the year round. The moſt ſimple dreſs of the natives reſembles that worn by the antient Egyptians, who were cloathed in linen, and over it had a woollen garment: this, it is not improbable, may be ſomewhat like the primitive manner of cloathing. They wear a long ſhirt with wide ſleeves, commonly tied about the middle. The common people have over it a brown woollen ſhirt; thoſe of ſuperior rank a long cloth coat, and over that a long blue ſhirt; but in the dreſs of ceremony, they wear a white ſhirt inſtead of a blue one, which, in Upper Egypt, they appear in on feſtival days, and when they viſit their ſuperiors. In the lower parts of the country they uſe a garment of the ſame form made of black woollen, which is ſometimes left open before, and the people of rank have them of cloth adorned with furs. The Coptis and Arabs always wear large ſleeves; but the Turks only wear them upon public occaſions; at other times their ſleeves are ſmall and cloſe. The people in general wear drawers, but the men do not tuck the ſhirt or under garment into them, though the women do. Some of the Turks, over their linen drawers, wear another pair made of red cloth, but the latter reaches to the ancles, and beneath them yellow ſocks are worn.

We have the following account of the true Mamaluck dreſs; which is the ſhut garment above-mentioned, put into their great red trowſers, which are tied round the leg at each ancle, the foot being left bare; and they wear the ſort of ſhoes uſed by the Arabs when they ride. In other reſpects they dreſs like the Turks; and this is the dreſs of the ſlaves, as alſo of the great men, except on extraordinary occaſions.

Among the deſcendants of the Arabs, and the native Mahometans, it is almoſt a general cuſtom to wear in winter a white or brown blanket, and in ſummer a blue and white cotton ſheet. This the Chriſtians in the country alſo conſtantly uſe, wrapping it round their bodies over the left ſhoulder, and under their right arm, which is left free; and in ſome parts of the country no other cloathing is worn by young people and the poorer ſort.

The Janiſſaries, Arabs, Egyptians, and Chriſtians here, wear ſlippers of red leather, while thoſe of the Jews are blue. Within doors, the Turks and Chriſtians out of frugality, wear a kind of wooden clogs, ſome of which are made very fine. People, in ſhort, are diſtinguiſhed by the dreſs of their head and feet; and are fined if they do not follow the cuſtom: hence none but foreign Chriſtians are permitted to wear yellow ſlippers. The dreſs for the head, is either the turban, or red woollen cap that fits cloſe to the head, which is worn among the Coptis and the Arabs by the lower claſs of people.

The drawers, worn by the women, and moſt of their other garments, are of ſilk; all but their outward dreſs are ſhorter than the mens, and their ſleeves hang down very low. They wear on their heads a white woollen ſkull-cap, and over it an embroidered handkerchief, round which their hair is plaited. Over all they have a large black veil. As it is eſteemed indecent to ſhew too much of the face, they generally cover the mouth and one eye, if not the whole face. Women of ordinary rank have a large garment like a ſurplice, of blue linen or cotton, and before their faces hang a kind of bib joined to the head-dreſs by a tape over the noſe: thus hiding all the lower parts of the face, and leaving the eyes uncovered, which gives them a very odd appearance.

The women, among the vulgar, eſpecially the blacks, wear rings in their noſes adorned with glaſs beads, and have ear-rings three inches in diameter, that come round their ears, and are adorned with ſtones; they likewiſe wear ſtone rings on their fingers, which among the ordinary people are of lead, while thoſe in better circumſtances have them of gold. The bracelets are generally of wire, but ſome are of plain iron or braſs, but others have them of gold finely jointed. The women, among the vulgar, paint their lips, and the tip of their chin, with blue, and thoſe of ſuperior rank paint their eye-lids black, and their nails and feet yellow; but both, in order to render themſelves attractive, take great pains to make their appearance frightfully hideous to ſtrangers.

In Egypt, education chiefly conſiſts in learning to read and write, which the Coptis generally obtain, together with book-keeping; but few of the Arabs and native Mahometans can read, except thoſe bred to the law, or educated for ſome poſt. The beſt education is given to the ſlaves, who often underſtand Arabic and Turkiſh, and

frequently write both. They are alſo well ſkilled in riding, ſhooting, and throwing the dart; which are eſteemed great accompliſhments.

It may not be improper, before we deſcribe the preſent ſtate of religion in Egypt, to give ſome account of that uſed by the antient Egyptians, who were groſs idolaters, and worſhipped the moſt fabulous deities, ſurpaſſing all other people in ſuperſtition. They had a great number of gods of different orders and degrees, which we ſhall omit, as belonging more to fable than hiſtory. Among the reſt, two were univerſally adored in that country, and thoſe were Oſiris and Iris, which are thought to be the ſun and moon; and indeed the worſhip of thoſe luminaries have given riſe to idolatry.

Beſides theſe gods, the Egyptians worſhipped a great number of beaſts; as the ox, the dog, the wolf, the hawk, the crocodile, the ibis, the cat, &c. Many of theſe beaſts were the objects only of the ſuperſtition of ſome particular cities; and whilſt a people worſhipped one ſpecies of animals as gods, their neighbours had the ſame animal gods in abomination. This was the ſource of the continual wars which were carried on between one city and another; and this was owing to the falſe policy of one of their kings, who, to deprive them of the opportunity and means of conſpiring againſt the ſtate, endeavoured to amuſe them, by engaging them in religious conteſts.

Every nation had a great zeal for their gods. "Among us, ſays Cicero, it is very common to ſee temples robbed and ſtatues carried off; but it was never known, that any perſon in Egypt, ever abuſed a crocodile, an ibis, or a cat; for its inhabitants would have ſuffered the moſt extreme torments, rather than be guilty of ſuch ſacrilege."

It was death for any perſon to kill one of theſe animals voluntarily; and even a puniſhment was decreed againſt him, who ſhould have killed an ibis, or a cat, without deſign. Diodorus relates an incident, to which himſelf was an eye-witneſs, during his ſtay in Egypt. A Roman had inadvertently, and without deſign, killed a cat; the exaſperated populace ran to his houſe: and neither the authority of the king, who immediately detached a body of his guards, nor the terror of the Roman name, could reſcue the unfortunate criminal. And ſuch was the reverence which the Egyptians had for theſe animals, that in an extreme famine, they choſe to eat one another, rather than feed upon theſe imagined deities.

Of all theſe animals, the bull Apis, called Epaphus by the Greeks, was the moſt famous. Magnificent temples were erected to him; extraordinary honours were paid him while he lived, and ſtill greater after his death. Egypt went then into a general mourning. His obſequies were ſolemnized with ſuch pomp as is hardly credible. In the reign of Ptolemy Lagus, the bull apis dying of old age, the funeral pomp, beſides the ordinary expences, amounted to upwards of fifty thouſand French crowns. After the laſt honours had been paid to the deceaſed god, the next care was to provide him a ſucceſſor, and all Egypt was ſought through for that purpoſe. He was known by certain ſigns, which diſtinguiſhed him from all other animals of that ſpecies; upon his forehead was to be a white ſpot in form of a creſcent; on his back, the figure of an eagle; upon his tongue, that of a beetle. As ſoon as he was found, mourning gave place to joy; and nothing was heard, in all parts of Egypt, but feſtivals and rejoicings. The new god was brought to Memphis, to take poſſeſſion of his dignity, and there inſtalled with a great number of ceremonies. Cambyſes, at his return from his unfortunate expedition againſt Ethiopia, finding all the Egyptians in tranſports of joy for their new god apis, and imagining that this was intended as an inſult upon his misfortunes, killed, in the firſt ſtart of his fury, the young bull, who, by that means, had but a ſhort enjoyment of his divinity. It is plain, that the golden calf ſet up near mount Sinai by the Iſraelites, was owing to their abode in Egypt, and an imitation of the god apis; as well as thoſe which were afterwards ſet up by Jeroboam, (who had reſided a conſiderable time in Egypt) in the two extremities of the kingdom of Iſrael.

The Egyptians, not contented with offering incenſe to animals, carried their folly to ſuch an exceſs, as to aſcribe a divinity to the pulſe and roots of their gardens: for this, they are ingeniouſly reproached by the ſatyriſt:

Who has not heard, where Egypt's realms are nam'd,
What monſter gods her frantic ſons have fram'd;
Here Ibis gorg'd with well grown ſerpents, there
The crocodile commands religious fear:
Where Memnon's ſtatue magick ſtrings inſpire
With vocal ſounds that emulate the lyre;
And Thebes, ſuch fate, are thy diſaſtrous turns!
Now proſtrate o'er her pompous ruin mourns;
A monkey-god, prodigious to be told!
Strikes the beholder's eye with burniſh'd gold;
To godſhip here, blue Triton's ſcaly herd,
The river progeny is there preferr'd:
Thro' towns, Diana's power neglected lies:
Where to her dogs aſpiring temples riſe:
And ſhould you leeks or onions eat, no time
Would expiate the ſacrilegious crime:
Religious nation ſure, and bleſt abodes,
Where ev'ry orchard is o'er-run with gods.

Several reaſons are given of the worſhip paid to animals by the Egyptians.

The firſt is drawn from fabulous hiſtory. It is pretended, that the gods, in a rebellion made againſt them by men, fled into Egypt, and there concealed themſelves under the forms of different animals; and that this gave birth to the worſhip which was afterwards paid to theſe animals.

The ſecond is taken from the benefit which theſe ſeveral animals procure to mankind; oxen by their labour; ſheep by their wool and milk; dogs by their ſervice in hunting and guarding houſes; whence the god anubis was repreſented with a dog's head. The ibis, a bird very much reſembling a ſtork, was worſhipped becauſe he put to flight the winged ſerpents, with which Egypt would otherwiſe have been grievouſly infeſted; the crocodile, an amphibious creature, that is, living alike upon land and water, of a ſurprizing ſtrength and ſize, was worſhipped, becauſe he defended Egypt from the incurſions of the wild Arabs; the ichneumon, a kind of rat, was adored, becauſe he prevented the too great increaſe of crocodiles, which might have proved deſtructive to Egypt.

After having thus given an account of the religious worſhip of the antient Egyptians, we ſhall proceed to take notice of that practiſed by the modern ones; and muſt firſt premiſe, that the preſent eſtabliſhed religion in Egypt is that of the Mahometans, which is here exerciſed in all reſpects the ſame as in Turkey, except that they are not quite ſo ſtrict in obſerving it in the former, as they are in the latter.

It appears by the moſt antient and authentic records, that Chriſtianity was firſt planted in Egypt by St. Mark, who was the firſt biſhop of Alexandria, then the metropolis of the kingdom. The juriſdiction of theſe prelates was ſettled by the council of Nice over all the churches of the dioceſe of Egypt, which included Libya, Pentapolis, and Egypt properly ſo called; and afterwards the Ethiopian or Abyſſinian churches, became ſubject to this patriarch.

In the time of Severus, a perſecution againſt the Chriſtians went through all the Roman provinces, but it was more violent at Alexandria than any where elſe; and many Chriſtians of the firſt rank in Egypt ſuffered martyrdom; particularly the two female confeſſors, St. Felicia and St. Perpetua. Churches were eſtabliſhed in Egypt in the third century.

The religion which is profeſſed here by the Coptis, is that of the native Chriſtians. The Greeks alſo are very numerous at Cairo and in Dalmatia; but there are not many of them in the other parts of the country, except a few merchants in the principal towns. The Chriſtian religion would ſtill be at a lower ebb, did not the people find it convenient to have Coptis ſtewards, who are well acquainted with buſineſs, and very expert at keeping accounts, which they do in a ſort of Coptic characters that none but themſelves underſtand. They are the protectors of the Chriſtians in every village and town.

The Coptis, in general, are very irreverent and careleſs in their devotions; yet they ſpend the night before Sundays and feſtivals in their churches, which they no ſooner enter, then they pull off their ſlippers and kiſs the pavement. They paſs their holidays in ſauntering about, ſitting under ſhady trees in ſummer, and under their walls in winter. They ſeem to imagine that religion conſiſts in repeating their long ſervices, and in the ſtrict obſervance of their numerous faſts. They uſe the liturgies of St. Baſil, St. Gregory, and St. Cyril; but the firſt, being ſhorteſt, is oftenеſt read. However, both the prieſts and people are extremely ignorant with reſpect to the doctrines of their religion; the former perform the ſervice in the Coptic language, which they generally underſtand very imperfectly, but they have books of their liturgy with an Arabic interpretation annexed to them.

Theſe people are ſaid to faſt ſeven months in the year.

The

The children are eſpouſed at ſeven or eight years of age, and conſummate at eleven or twelve; and a little before that time they are circumciſed. They eaſily procure divorces on account of adultery, long ſickneſs, or diſagreement; and, at their deſire, the patriarch, or biſhop, gives them leave to marry again: but, if this be refuſed, they go to the cady, who will do it readily, and this is practiſed all over Turkey by the Chriſtians.

The child at baptiſm, is plunged three times into the water, and then the prieſt dips the end of his finger into the conſecrated wine, and puts it into the child's mouth; but if the child happens to be ſick, inſtead of being immerſed in water, it is laid on a cloth near the font, and the prieſt, dipping his hands in water, rubs it all over him; but if the infant be too ill to be brought to church, they then only anoint him, which they ſay is baptiſm ſufficient under that circumſtance.

The ſacrament is adminiſtered by them in both kinds on Sundays, Wedneſdays, and Fridays, on all their numerous holidays, and every day in lent; and when the prieſt, in reading the ſervice, mentions Peter's cutting off the ear of the high prieſt's ſervant, the people cry out, Well done Peter. They abſtain from ſwines' fleſh, from blood, and things ſtrangled; pray for the dead, and proſtrate themſelves before pictures; but have no images, except a crucifix. They alſo adminiſter extreme unction, and at the ſame time give abſolution, anointing all the people preſent in order to repel the evil ſpirit.

Notwithſtanding the religion of the Coptis in many reſpects reſembles that of the Greeks, yet they bear an implacable hatred to them; and have generally as little regard for the Europeans; which proceeds in a great meaſure from the endeavours of thoſe of the Romiſh church to make converts of them; for they ſeldom diſtinguiſh between thoſe of different religions, but include all under the name of Franks, the name they give to Chriſtians in general.

Jews are very numerous in Egypt, and, as in times of paganiſm, they were afraid of drinking wine offered to idols; they ſtill have here all they drink made by their own people, ſealed up and ſent to them. This cuſtom they obſerve throughout all the eaſt. There is a particular ſect among them who live by themſelves, and have a ſeparate ſynagogue: theſe are the ancient eſſens, who are now called charaims. They are diſtinguiſhed by their regard to the five books of Moſes, which they ſtrictly obſerve according to the letter, without receiving any written traditions whatever.

In Egypt, the Turks are deeply tinctured with the doctrine of predeſtination, which not only inſpires them with courage, but makes them diſcover great magnanimity, when thrown from the height of power into a ſtate of poverty and diſtreſs, ſaying, It is the will of God. They indeed behave better in adverſity than in proſperity: for though perſons in high rank aſſume a becoming gravity, and confer favours in a very graceful manner, they are greedy of money; for nothing is to be done with them without a bribe; and they are apt to fancy that the greateſt villainies are expiated as ſoon as they have waſhed their hands and feet, which is their preparation for prayer. Religion is faſhionable among them; they pray in the moſt public places, and when on a viſit will call for water to waſh, and then perform their devotions; and yet their words generally paſs for nothing, either in their promiſes or profeſſions of friendſhip.

Opium is leſs uſed by them than formerly. The Arabs ſeldom drink wine or ſtrong liquors, and the common people pound leaves of green hemp, make them up into a pill, and ſwallow it, in order to render them chearful.

The pooreſt Mahometan thinks himſelf ſuperior to the richeſt Chriſtian; but the Arabs and people of the country behave with great civility; and, ſitting about the ſtranger, grow troubleſome, by being too curious and inquiſitive. The Turks indeed behave with great civility, either to obtain preſents, or to diſcover your deſigns, in which they are very artful. They treat their ſuperiors with the utmoſt decorum and reſpect, and one of great dignity readily holds the ſtirrup to another who is ſtill greater than himſelf.

Their ſalutation, as they paſs, is, by ſtretching out the right hand, bringing it to the breaſt, and a little inclining of the head. The extraordinary ſalute is kiſſing the hand, putting it to the head. When they viſit a ſuperior, they kiſs his hand; but if he be greatly their ſuperior, they kiſs the hem of his garment. When they take any thing from a ſuperior, or that is ſent by a ſuperior, they kiſs it, and put it to their foreheads; and they put their hand to their turban, when they promiſe to ſerve or protect you. The word made uſe of in theſe ſalutations is peace; but this ſimple word a Mahometan cannot be prevailed on to make uſe of to a Chriſtian. Joining the hands, and bowing the head ſeveral times to him ſaluted, is the Arab ſalutation.

The Egyptians are very frugal in their proviſions, as they do not often eat; and the tables of the great are of little expence, conſidering the number of their attendants, in which they are very extravagant; for they ſometimes have fifty or ſixty ſlaves, and many other ſervants.

The Turks, at their meals, make uſe of a low circular, or octangular ſtool, inſtead of a table, under it a coloured cloth is placed on the ground, and over it a kind of table cloth is ſpread, large enough to come into the lap of the gueſts. They give to people of condition a napkin before they eat, and another after they have done, previous to their waſhing. A copper diſh, tinned both within ſide and without, is put on the ſtool, and bread, pickles, ſallads, &c. are placed round it. Two or three diſhes are then ſerved up, to which the company either kneel, or ſit croſs-legged. They uſe no knives or forks; they employ their right hand only at meals, and tear the meat with it in a beaſtly manner, and the maſter of the houſe ſometimes throws large pieces to ſuch of the gueſts as he would pay an extraordinary compliment to. The entertainment conſiſts of two or three courſes, and coffee immediately ſucceeds. The ſecond conſiſts of pilu, ſoups, ſweet ragouts, ſtewed diſhes, pieces of meat cut ſmall and roaſted; and dulma, which is any kind of vegetable ſtuffed with forced meat. The inferior kind of ſervants, who are not ſlaves, eat what is left; but the ſlaves have a meal of the coarſeſt kind of food provided on purpoſe for them. The Arabs, for their own family uſe only a ſkin by way of table cloth, which they ſpread upon the ground; but when they have company, a coarſe woollen cloth is ſubſtituted; when whole ſheep and lambs, boiled or roaſted, are ſerved up; and as ſoon as one company has done, another falls to, till all is conſumed by the gueſts.

An Arab prince, it ſeems, will often dine in the ſtreet, before his door, and call to all that paſs, even beggars, and permit them to ſit down to the repaſt, for the Arabs, being great levellers, put all perſons on a footing with themſelves; and, by ſuch hoſpitable and generous behaviour, maintain their intereſt with the people; but the middle claſs among them, and the Coptis, live poorly.

At a Turkiſh viſit, a pipe is immediately brought, and coffee; if it is a viſit of ceremony, ſweetmeats with the coffee; afterwards a ſherbet; and then according to the quality of the perſon, incenſe and roſe-water, to perfume. Some of them have muſic at certain hours of the day, and in others a man tells ſome hiſtory, or an Arabian tale. Tradeſmen have often their proviſions brought to the coffee houſes, and they having little or nothing to do, ſpend whole days in them. If any one goes to the houſe or tent of an Arab, bread is immediately made, and they ſerve up ſour milk, fried eggs, and oil to dip the bread in, a ſalt cheeſe like curds, and other things of a like nature.

The women in Grand Cairo are obliged to ride on aſſes becauſe the men are weak enough to put confidence in an old prediction, which declares, that a woman on horſeback ſhall ſometime or other take that city. They are likewiſe obliged to have ſhort ſtirrups, which would be diſgraceful for a man riding on an aſs to make uſe of. Friday is the day appointed for women to go abroad, when they repair to the ſepulchres of their relations, to adorn them with boughs and flowers, to hang a lamp over them, and pour water upon their graves. Ladies of diſtinction are attended by many female ſlaves, who follow them all mounted upon aſſes. The women, in riding, wear yellow boots without ſoles.

Here are public bagnios for men and women: the women more particularly meet in theirs, where they freely chat of the current news, and converſe together without the leaſt reſerve.

The ſantos, or ſantonis, a kind of enthuſiaſts, are very much admired in Egypt. They are very numerous; ſome of them go intirely naked; others have a rag or ſkin of a beaſt round about their loins, for the ſake of decency. Some lead a ſolitary life in holes or caverns, others run begging about the city: theſe laſt are very troubleſome to every decent perſon who paſſes the ſtreets, particularly the Franks, who generally ride when they have occaſion to go to any diſtant part of the city: for theſe ſantos will take hold of the aſs's neck, and keep with you until you give them ſomething. One of theſe, who begs between Cairo and Boulack, with a brick or ſtone in his hand, will accept of nothing unleſs the donor puts it thereon: one of theſe fellows has been ſeen to run his head ſeveral times againſt a ſtone wall, for the ſake of two or three paras. Thoſe

ſantos who go intirely naked are eſteemed by the people, who ſay they are undoubtedly in a ſtate of innocence, otherwiſe they would know they were naked, and would aſk for clothes. The ſantos who beg on the banks of the Nile, between Roſetta and Cairo, wear their own hair. Moſt of them have got ſome favourite paſſage of the alcoran by heart, which they repeat in the ſtreets. Many of the tombs are covered with a building in form of a cupola. Theſe mauſoleums are erected at the expence of thoſe who moſt admired the ſanto in his life-time. When the followers of a ſanto cannot afford to build him a magnificent ſepulchre, they will, when carrying him to the grave, ſuddenly ſtop, then run backward, as though impelled by ſome external force; and as ſoon as they have (or rather pretend to have) recovered themſelves, they will feign to try again to get the corpſe to the grave, and ſuddenly run backward as before. After ſeveral pranks, they declare the holy man will not be buried in the common ground, but muſt have a mauſoleum erected over him. The populace believe this, and a collection is immediately made to defray the expence of building one.

The people in general are great believers in magic, divination, and fortune-telling; are fond of taliſmans, philtres, and charms; and firmly believe that the eyes of ſome particular perſons, commonly called evil eyes, have the power of doing great miſchief, by faſcination. This brings us to inquire into the firſt riſe of that raſcally people called gypſies, thoſe pretended fortune-tellers that infeſt moſt countries in Europe and Aſia, and who are generally held to be of Egyptian extraction, at leaſt the firſt of them were ſuch. They are called in Turkey Zinganees from their captain Zinganeus, who when Sultan Selimus made a conqueſt of Egypt about the year 1517, with ſeveral other Mamalukes, and as many native Egyptians as refuſed to ſubmit to the Turkiſh yoke, retired into the deſarts, where they lived by rapine and plunder, and frequently came down into the plains of Egypt, committing great outrages in the towns upon the Nile under the dominion of the Turks; and idle people frequently reſorting to them in hopes of participating in their plunder, they encreaſed at length to ſo formidable a body, that the Turks were glad to come to a treaty with them, wherein it was agreed they ſhould lay down their arms and be permitted to exerciſe any other callings with the ſame privileges other ſubjects enjoyed.

The Zinganees, however, having been long uſed to a vagabond rapacious way of living, and compoſed of a mixture of nations, who, during their depredations upon all mankind in the deſarts, had loſt all ſenſe of religion, and became averſe to the following any art or ſcience, began to have recourſe to their former ways of rapine and robbery; and though they were often forgiven by the Turks for fear of another inſurrection, yet it being found at length that they were not to be reclaimed, the government were compelled to baniſh the Zinganees their country, and a power was given to any man to kill a Zinganee, or make him his ſlave, if he was found in Egypt after a limited time; and this edict was ſo well executed, that a Zinganee was not to be ſeen in Egypt for ſeveral years after; at leaſt, any that dare profeſs themſelves ſuch, for it ſeems they agreed to diſperſe themſelves in ſmall parties into every country in the known world; and as they were natives of Egypt, a country where the occult ſciences, or the black art, as it was called, was ſuppoſed to have arrived to great perfection; and which in that credulous age was in great vogue with people of all religions and perſuations: they thought that they could not pitch upon a more effectual way to gain a ſubſiſtence, and yet indulge that lazy wandering life they had been uſed to, than by ſetting up for a more than ordinary ſkill in foretelling future events; and as they had by a profligate life quite eradicated all principles of honour and conſcience, no doubt they had a view of ſupplying their neceſſities by other means when fortune-telling ſhould fail them.

The reaſon theſe people are ſtill tolerated in Turkey, may be, that they do there, at leaſt of late years, apply themſelves to ſome handicraft buſineſs, particularly the making of edge tools, which they are very excellent at; carrying their tents and utenſils upon aſſes, and uſually pitch their black camp near ſome great town, where by working, thieving or fortune-telling, they make a pretty good proviſion for their bellies, but do not much trouble themſelves about clothing or furniture: and when the people begin to grow weary of their pilfering tricks, they move off to ſome other part of the country. They have a prophecy, it ſeems, amongſt them, that they ſhall recover the dominion of Egypt again, and the Turkiſh empire after a certain period ſhall be deſtroyed, which Mr. Hill has given us in Engliſh verſe as follows:

Years over years ſhall roll,
Ages o'er ages ſlide,
Before the world's controul,
Shall check the creſcent's pride.

Baniſh'd from place to place,
Wide as the ocean's roar,
The mighty gypſy race
Shall viſit every ſhore.

But when the hundredth year
Shall three times doubled be,
Then ſhall an end appear
To all their ſlavery.

Then ſhall the warlike pow'rs
From diſtant climes return;
Egypt again be ours,
And Turkiſh turrets burn.

There is alſo in Egypt a very particular ſort of people called derviſes, who may be diſtinguiſhed into two or three claſſes. Thoſe that are in convents are a kind of religious order, and live retired; though ſome of thoſe travel with credit, and return to their convents. Some who aſſume this character live with their families, and follow their trades: theſe alſo appear to be a good kind of people. But there is a third ſort that travel about the country and beg, or rather oblige every body to give. They all wear an octagonal badge of white alabaſter, with a greeniſh caſt, on their girdles, and they have a high ſtiff cap without any ornament; the tarcomen wear the ſame, but with a white ſaſh about it, and a little more pointed. Except thoſe who live in convents, and others at a ſmall diſtance from Cairo, there are not many of theſe people in Egypt.

Before we quit this ſection, it will be proper to mention, that among the inhabitants of Egypt, above deſcribed, there are two ſorts of a peculiar kind, the firſt of whom are called the eſtabliſhed Bedouins or Bedwins, and the latter the Wandering Bedouins. The former live in villages, and are to be conſidered as peaſants of the country. The Wandering Bedouins lead the ſame life as the antient patriarchs, living under tents, upon the milk of their cattle, and ſhift their habitations for the convenience of paſture; they always encamp in places where they can conveniently come at water: ſome take up their reſidence near the mountains, and others retire to places before uninhabited. With reſpect to theſe people, it is ſaid, the golden age is ſtill in being: their cattle not only furniſh them with the moſt delicious repaſts, but alſo ſupply their other occaſions. The wool of their ſheep ſuffices to cloath them, as they make a ſtuff with it which defends them from the injuries of the weather. A celebrated French writer obſerves concerning them, that "they have no difference about religion, no wrangling doctors or divines; ſince they paſs their lives undiſturbed by the rage of oppoſite parties, who are always ready to murder one another. Theſe happy people have no tent encompaſſed with ditches, guarded by ſoldiers, and ſet apart for the confinement of priſoners of ſtate; nor do they make it criminal for their brother to think differently from themſelves reſpecting religious matters, every one having the liberty of addreſſing the deity in whatever language he pleaſes. A ſuit of law between two perſons never laſts above twenty-four hours, for the oldeſt man in the tribe gives his deciſion of the matter in queſtion on the ſpot. Theſe people are ignorant of edicts and new regulations concerning property; for never does a Bedouin go to bed with an hundred thouſand crowns in his pocket, and riſe not worth a penny. The moſt he loſes is a ſheep, which a wolf may run away with in the night. He pays no tax at coming into the world, nor any at going out." But notwithſtanding the panegyric of this writer, it is affirmed by others, (moſt probably the wandering tribes) that they frequently rob caravans, when they happen to be the ſtronger party. The principal men among them are called emirs and ſheiks.

SECT. III.

Giving a Deſcription of the Cities of ALEXANDRIA, ROSETTO, GRAND CAIRO, DAMIETA, and other remarkable Places in EGYPT.

THE city of Alexandria was ſo called from Alexander the Great, who, after his return from conſulting the oracle of Jupiter Ammon, built a city in the place where

Racotis ſtood, three hundred years before the birth of Chriſt. This city is called by the Turks Scanderia or Scanderoon, as among them Alexander is called Scander. It was once an opulent and elegant city, ſeated near the moſt weſterly branch of the Nile, where the ſea forms a moſt ſpacious haven reſembling a creſcent, in thirty-three degrees eleven minutes north latitude, and in thirty degrees thirty-nine minutes eaſt longitude.

Travellers inform us, that the port of Alexandria was formed by the iſle of Pharos which extended acroſs the mouth of the bay, and towards the weſt end was joined to the continent by a cauſeway and two bridges, ninety paces in length. On a rock encompaſſed by the ſea at the eaſt end of the iſland was the ancient Pharos, or light houſe, ſo famous in antiquity, that it was eſteemed one of the ſeven wonders of the world; and on the place where it ſtood is a caſtle called Pharillon. Nothing can be more beautiful, than to view from hence the mixture of antique and modern monuments in this city.

On paſſing the ſmalleſt caſtle, called the Little Pharillon, you ſee a row of great towers, joined together by the ruins of a thick wall. A ſingle obeliſk is of a ſufficient height to make itſelf remarked where the wall has fallen down. On turning a little farther you perceive the towers appear again, but only in a diſtant view. New Alexandria afterwards makes a figure with its minorets, and at a diſtance riſes Pompey's column, a moſt majeſtic monument: and the view is terminated by hills, towers, and a large ſquare building, in which a magazine of powder is depoſited.

The walls round the outſide of the old city are beautifully built of hewn ſtone, ſtrengthened by ſemi-circular towers twenty feet in diameter, and about one hundred and thirty feet diſtant from each other. At each of them are ſteps to aſcend up to the battlements, there being on the top of the walls a walk built on arches. The inner walls which appear to be built in the middle ages, are much ſtronger and higher than the others and are defended by large towers, which are alſo very high.

A fourth part of the city was taken up by the palace, with the buildings belonging to it, and within it was the muſeum, or academy, and a burial place of the kings, where the body of Alexander was depoſited in a gold coffin: but that being taken away it was put into one of glaſs, and was probably in that condition when Auguſtus taking a view of the corpſe, adorned it with a golden crown, and ſcattered flowers over it.

With reſpect to the ſtreet, which extended the whole length of the city, it is ſaid to have been a hundred feet wide, and had certainly many magnificent buildings, as appears from the granite columns ſtill remaining in ſeveral places. Among theſe was the Gymnaſium, or public ſchools, to which were porticos that extended above half a quarter of a mile. Theſe may have been where there are great ruins to the weſt of that ſtreet, and ſome large columns of red granite ſtill ſtanding. In this magnificent ſtreet was alſo probably the forum, or court of juſtice, which was perhaps erected where ſome pillars remain nearer the ſea, and are now to be ſeen.

But the moſt extraordinary remains of the ancient city are the ciſterns built under the houſes for receiving the water of the Nile, as they do at preſent. The canal of Canopus comes to the walls near Pompey's pillar, and has a paſſage under him. But the water is not only conveyed to the ciſterns from the canal on its entering the city, but from ſeveral diſtant parts of the canal, by paſſages under ground, to the higher parts of Alexandria. The materials of the old city have been carried away to build the new, ſo that there are only a few houſes, ſome moſques, and three convents within the old walls.

Among the moſques, is one called the moſque of a thouſand and one pillars. Dr. Pococke obſerved that it has four rows of pillars to the ſouth and weſt, and one row on the other ſides. This, it is ſaid, was a church dedicated to St. Mark, at which the patriarch reſided, it being near the gate, without which the Evangeliſt is ſaid to have ſuffered martyrdom. There is another great moſque, named St. Athanaſius, which was alſo doubtleſs a Chriſtian church. The Greeks, Latins, and Coptis have each a monaſtery in the old city; but ſome poor Arabs being always encamped within the walls, it is dangerous being abroad after ſun ſet.

All over the city are fragments of columns of beautiful marble, the remains of its ancient grandeur and magnificence. Among the reſt an obeliſk, formed of one ſingle piece of granite, riſes ſixty-three feet high; but two of its four faces are ſo diſfigured by time, that the hieroglyphics with which they were anciently covered can ſcarcely be ſeen. This is ſtill called the obeliſk of Cleopatra. Another lies near it broken. About a quarter of a mile to the ſouth of the walls ſtands Pompey's pillar on a ſmall eminence. As this is not mentioned by Strabo, it was probably erected after his time, and perhaps in honour of Titus or Adrian.

Near the pillar abovementioned are ſome fragments of granite columns four feet in diameter; and it appears that ſome magnificent building was erected there, and that this noble pillar was placed in the area before it. Indeed ſome Arabian hiſtorians ſay, that here was the palace of Julius Cæſar. This pillar is of granite, and, beſides the foundation, conſiſts of only three ſtones: the capital is ſuppoſed to be eight or nine feet deep, and is of the Corinthian order, the leaf appearing to be the plain-laurel or bay leaf, and a hole being on the top, it has been thought that a ſtatue was erected upon it: the ſhaft, including the upper torus of the baſe, is of one piece of granite marble, eighty-eight feet nine inches high, and nine feet in diameter: the pedeſtal, with part of the baſe, which are of a greyiſh ſtone reſembling flint, are twelve feet and a half high, and the foundation, which conſiſts of two tier of ſtones, is four feet nine inches; ſo that this pillar is an hundred and fourteen feet in height.

Three leagues from Alexandria are the ruins of an ancient temple in the water, with broken ſtatues of ſphynxes; and pieces of columns of yellow marble; and near it are the remains of other buildings, part of which appear to have been a grand portico, from there being many pieces of columns of grey and red granite; and from the order in which they lie, they ſeem to have belonged to a round temple. Moſt of them are three feet three inches in diameter, and fluted.

Theſe ruins are ſituated in a wide bay, in which is a little iſland joined to the continent by a chain of rocks; and on the ſhore of this bay are cavities in the rocks, uſed as agreeable retreats, where people may enjoy the cool air, and without being ſeen, ſee every thing that paſſes in the port. The natural grottos in theſe rocks gave the ancients the opportunity of forming them, by the aſſiſtance of the chiſſel, into places of pleaſure. Entire apartments are thus formed, and benches are cut for ſeats, where you may be ſecured from the wet, or bathe in a part of the grottos, into which the ſea riſes; and little harbours, ſheltered from all the winds, were formed on the outſide. There is a cavern generally called a temple, oppoſite the point of the peninſula that forms the port. The only entrance is a little opening, through which you paſs, lighted by flambeaux, and ſtooping for twenty paces, when you enter a pretty large ſquare hall. The cieling is ſmooth, but the bottom and ſides are covered with ſand, and with the excrements of bats and other animals that harbour there. A paſſage leads from hence into a round cavern, the top of which is cut in the form of an arch. Here four gates are oppoſite to each other, each adorned with an architrave, a cornice, and a pediment, with a creſcent on the top. One of theſe gates ſerves for an entrance, the others form each a niche, that may contain a kind of cheſt, ſaved out of the rock in hollowing it, and large enough to contain a dead body. We may hence perceive, that what in that country is eſteemed a temple, was probably the tomb of ſome great man, or perhaps of a ſovereign prince. It is reaſonable to ſuppoſe, that farther on there are other ſtructures of the ſame kind, as there is the appearance of a gallery, which continues beyond this ſuppoſed temple.

A celebrated writer, in ſpeaking of New Alexandria, obſerves, that it may be juſtly denominated a poor orphan, who poſſeſſed no other inheritance but his father's venerable name. The prodigious extent of the antient city is contracted, in the new, to a ſmall neck of land, which ſeparates the two harbours. The moſt ſuperb temples are converted into plain moſques; magnificent palaces into ill-conſtructed houſes; an opulent and numerous people are ſucceeded by a few foreign traders, and a multitude of wretches who are the ſlaves of thoſe from whom they obtain a ſubſiſtence. This place, once celebrated for its commerce, is no longer any thing more than a place where people embark, and is ſo far from being a phœnix ſprung from its own aſhes, that it may with great propriety be deemed a reptile ſprung from the duſt and corruption with which the koran hath infeſted the whole country; but notwithſtanding the meanneſs of the buildings in general, they have placed a great variety of columns, in ſeveral houſes built round the courts on porticos: theſe columns were moſtly of granite, with which they adorned the antient city.

The decay of this city is principally owing to the diſcovery of the new way to the Eaſt Indies, by doubling the cape of Good Hope; for till then it was one of the chief marts to which the ſpices and valuable commodities of the Eaſt were brought, and diſperſed into all the countries of Europe from thence.

The greateſt part of the inhabitants are Jews, Turks, Coptis, Greeks, and Armenian Chriſtians, beſides a few European merchants, moſt of which are the French and Engliſh; the former, it ſeems, flatter themſelves with being treated with more reſpect, but the latter appear to have a better trade. The French maintain a conſul dependent on the conſul of Grand Cairo, and enjoy a flouriſhing trade. The Engliſh have alſo a conſul, and ſend every year a great number of Engliſh veſſels to Alexandria; but they are not always laden on the account of this nation.

With reſpect to the environs of Alexandria, they are very low; the only marks, by which the ſailors can know the coaſt, are, the tower of the Arabians, which lies thirty-ſix miles to the weſtward of the town, and the column of Pompey. This circumſtance often occaſions ſhips bound to Alexandria to go to Cyprus, or to Syria, when the weather is foggy. There are neither woods nor paſtures for a conſiderable diſtance round the town. The land is covered with ſand, and ſome few date-trees grow on it, but the fruit is very indifferent. An ingenious writer obſerves, "that it is really a matter of ſurpriſe that this ſpot ſhould be choſen for ſo great a capital to be built upon, where it is ſo difficult of acceſs for ſhips, and ſo deſtitute of wood, water, and all other neceſſaries of life. But it is much more to be wondered at, that the Ptolomies ſpent ſuch immenſe ſums to people this place, and to collect together in it all things that could be had in the world, in the greateſt abundance."

The late Marcotis lies to the ſouth of Alexandria: it is thirty miles long from eaſt to weſt, and twelve broad. It is dry about four or five months in the year, and receives its waters out of the Nile at the time of its overflowing. The town of the Arabs, called by the natives the caſtle Abuzir, is at the weſt end of this lake. It is, indeed, a ſquare earth, eighty feet high, and its fronts are each two hundred and fifty feet broad. It is built of fine free ſtone, and the walls are fourteen feet thick. About three quarters of a mile from this caſtle, is another tower, which is ſquare at top, and round below, and ſix miles from thence there is another to the weſtward, on the walls of which are the remains of an inſcription in Arabic: but all theſe buildings are in a very ruinous ſtate at preſent.

The city of Roſetta, is eſteemed one of the moſt pleaſant places in Egypt, and, being refreſhed by the winds which blow from the ſea, is extremely healthy. It is called by the Egyptians Raſchid, is ſituated twenty-five miles to the north-weſt of Alexandria, in thirty-one degrees five minutes north latitude, and in thirty-one degrees ten minutes eaſt longitude from London: it ſtands on the weſt ſide of the branch of the Nile, anciently called Bolbetinum, or the Bolbutic branch, about four miles from its mouth. It is nearly two miles in length, but only conſiſts of two or three long ſtreets: but the buildings are ſtately, and the houſes commodious. It is defended by two caſtles, one on each ſide of the branch of the Nile, by which merchandize is brought hither from Cairo. The fine country of Dolta on the other ſide of the Nile, and two beautiful iſlands a little below the town, afford a delightful proſpect; and to the north the country is agreeably improved by pleaſant gardens of citrons, oranges, lemons, and almoſt all kinds of fruits, and is variegated by groves of palm-trees, ſmall lakes, and fields of rice, which latter, when ripe, make a very beautiful appearance.

Here is a caſtle, about two miles north of the town, on the weſt ſide of the river. It is a ſquare building, with round towers at the four corners, having port-holes at the bottom of it, and ſome pieces of braſs cannon. It is built of brick caſed with ſtone, and is ſaid to have been erected about four hundred years. A little lower down, on the oppoſite ſide of the river, is a platform of guns; to the eaſt of which are ſalt lakes, where great quantities of ſalt are collected. A little nearer to the ſea, from the above caſtle, is another, whoſe walls, ordinance, and garriſon, are in a poor condition.

Somewhat below this ſecond caſtle, the Nile ſplits into two branches, one turning eaſt, and the other weſt, and forming what is called a bogaz or bar in their mouth, which is known by the name of Canopic. This bar is very dangerous to paſs over, eſpecially when the ſea is agitated by a northerly wind.

The water at Roſetta, though ſituated near the ſea, is in general very good, unleſs when the north wind blows ſtrong, or the Nile is at the loweſt, at which time it is brackiſh. The river here does not riſe above three or four feet; becauſe the banks are low, and the water riſing above them, ſpreads itſelf all over the adjacent country. The arm of the Nile, at Roſetta, is nearly of the ſame width as the Thames at Graveſend; but it leſſens by degrees, till it becomes ſo ſhallow in many places as to be very dangerous, owing to the difficulty of avoiding the flats.

An iſland of a triangular form, is near this part of the Nile; it is called by the Greeks Latimia, on account of the diviſion of the water here, by which two entrances are made at the mouth of the rivers. It is about a mile in circumference, and there are ſandy hillocks from eaſt to weſt along the middle of it. The iſland is a kind of moraſs towards the ſouth, but to the north it is ſandy.

A conſiderable manufactory of ſtriped and coarſe linen is carried on by the inhabitants of Roſetta; but the principal buſineſs of the place is the carriage of goods between this town and Cairo; for all European merchandize is brought hither by ſea from Alexandria, and ſent from thence in other boats to Cairo; and alſo that brought down the Nile from Cairo is here put into large boats, to be ſent to Alexandria. On this account the Europeans have their vice-conſuls and factors here to tranſact their buſineſs, and letters are regularly brought from Alexandria to be ſent by the boats from Cairo; but thoſe of great conſequence, which require diſpatch, are ſent by foot meſſengers acroſs the deſart which lies between Alexandria and Roſetta.

Grand Cairo, the capital of Egypt, at preſent conſiſts of Old and New Cairo, which are a mile diſtant from each other. It is ſituated about a mile from the eaſtern bank of the river Nile, and extends eaſtward near two miles to the neighbouring mountain. This city ſtands in middle Egypt, in thirty degrees fifteen minutes north latitude, and in thirty-two degrees twelve minutes eaſt longitude from London. It is about ſeven miles in circumference, and was much larger before the diſcovery of the Eaſt Indies by the way of the cape of Good Hope, it being then the center of trade, all ſpices of the Eaſt being brought to this city, and from thence to Europe.

The city of Grand Cairo may be ſaid to conſiſt of three towns or cities, namely, Old Cairo, which adjoins to it; Cairo, properly ſo called, and the port of Bulac. Old Cairo is at preſent reduced to a very ſmall compaſs, not being above two miles round; but it is the port for the boats that come from Upper Egypt, and ſome of the beys and European merchants have houſes here, to which they retire at the riſing of the Nile.

The Jews have a ſynagogue here, which nearly reſembles our churches, and is ſaid to have been built in its preſent form one thouſand ſix hundred years ago. They pretend that Jeremiah the prophet was on the very ſpot where they uſually read the law, and that they have a manuſcript of the bible written by Ezra; it is kept in a niche in the wall about ten feet high, before which a curtain is drawn, and lamps kept continually burning: this writing is eſteemed ſo ſacred, that none are permitted to touch it.

The ſtreets in Cairo, like thoſe in moſt of the Turkiſh cities are very narrow; and the wideſt extends the whole length of the place, but in Europe it would only be conſidered as a lane; and the others are ſo narrow, that the people frequently ſpread a light ſtuff acroſs the houſes, from one ſide of the ſtreet to the other, to defend them from the ſun. Moſt of the ſtreets, or at leaſt each end of every ward, is ſhut up with gates as ſoon as it grows dark; and guards of janiſſaries are placed at ſome of the principal ones, ſo that no idle people can lurk about them without being diſcovered. Several ſtreets conſiſt only of ſhops, without any houſes, which are alſo locked up at night, when the tradeſmen return home; and the ſhops of the ſame trade are commonly together, as well in the bereſtans, or exchange, as in the ſtreets. Perſons are appointed to ſweep and ſprinkle the ſtreets every day with water, eſpecially before the houſes of the better ſort; for being without any pavement, they are generally full of duſt.

The outſides of their houſes, like thoſe in Turkey, are without any kind of ornament: the lower part is built of ſtone, and above is a ſort of cage-work, ſometimes filled up with unburnt brick; and the windows which look into the ſtreets are ſecured with iron rails and curtains, in order to prevent the women from being ſeen. The inſides are equally plain, having no other embelliſhments than the neceſſary furniture for domeſtic uſes, except their ſaloons where they receive their friends and acquaintance. A perſon

ſon who viſited the houſe of a bey, gives the following deſcription of the fine ſaloon into which he was introduced. "It had, ſays he, a lobby before it. The grand room is an oblong ſquare, with an octagon marble pillar in the middle, inlaid on two ſides about eight feet high, with pannels of grey marble, each bordered with Moſaic work. The floor is covered with fine carpets; and the ſopha extends all round the room, having rich velvet cuſhions belonging to it."

A canal, which comes out of the Nile cloſe to Old Cairo, runs through the centre of the city. It has water during three months only, after which it is a mere dirty ditch. In the watery ſeaſon it forms ſeven or eight ſmall ponds in the city and its environs, waters the adjacent fields, and about nine miles from Cairo communicates with the Lake of Pilgrims.

After forming an idea of ſeveral ſquares or places about the city from a quarter to three quarters of a mile in compaſs, contrived ſo as to receive and retain the water of the Nile conveyed to them by the canal, as the river riſes, we ſhall have a pretty juſt notion of the ſeveral lakes that are about the city during great part of the year, when nothing can be imagined more beautiful; for they are ſurrounded by the beſt houſes in the city; and in the ſummer, when the Nile is high, are covered with fine boats and barges belonging to perſons of diſtinction, who ſpend the evenings with their ladies on the water, where concerts of muſic are never wanting, and ſometimes fireworks are added. All the houſes round are in a manner illuminated, and the windows filled with ſpectators. This pleaſing ſcene however, intirely vaniſhes when the waters are gone off, and nothing but mud appears. Yet even this is ſoon ſucceeded by the agreeable view of green corn, and afterwards of harveſt in the midſt of a great city, and in the very places where but a few months before the boats were ſailing.

Here are twelve churches and a convent belonging to the Coptis, who pretend that the holy family were in a cave in the church dedicated to St. Sergius. Their churches are commonly adorned with columns in the front; they have two ailes with galleries over them ſupported by pillars, and the ſpace for the altar is ſeparated by a partition, that in ſome of them is finely ornamented with carving and inlaid work of tortoiſeſhell and ivory. The Romans have an hoſpital belonging to the fathers of the Holy Land. Here are alſo about half a dozen moſques, among which one named Amarah is ſaid to have been a church, and is remarkable for having near four hundred columns, which, with their capitals, ſeem to have been collected from ſeveral buildings of great antiquity.

Though the city of Grand Cairo is very populous, yet the inhabitants of it are a mixture of various nations; ſuch as original Egyptians, or the Coptis Chriſtians; Arabs; people of Barbary and other weſtern parts of Africa; and ſome from Nubia; but the principal parts of the inhabitants are deſcended from the Mamalukes. Here are alſo a great number of Jews, a few Armenians, and ſome Greeks.

There are ſeveral very handſome and convenient bagnios in this city, which are reſorted to by great numbers of people: ſome viſit them on a religious account, to purify themſelves; while others go to them for refreſhment and diverſion; the latter are chiefly women, who, once or twice in a week, ſpend moſt of the day in them, and are glad of ſuch a pretence to be releaſed from their confinement. People of the firſt rank, to avoid intermixing with thoſe of inferior character, have bagnios in their own houſes.

Here are likewiſe many kanns, which they call okalas. Theſe are indifferent buildings round a court, and are commonly appropriated to the uſe of merchants of particular countries for the ſale of their reſpective commodities. There is one for thoſe of Nubia, and the black ſlaves they bring with them; and another for white ſlaves from Georgia. They have likewiſe ſeveral kanns at Boulac; in which all ſtrangers are at a very eaſy rate accommodated with a room.

There are, in Old Cairo, ſeveral ſquare courts encompaſſed with walls about fifteen feet high, built chiefly with brick; and ſtrengthened by ſemi-circular buttreſſes; theſe places are uſually called Joſeph's granaries. The houſes are filled with corn, and room only left to enter at the door. The grain is covered with mats, and the door faſtened only with wooden locks; but the inſpectors of the granaries, by putting a handful of clay on the locks, fix their ſeal thereto. The corn brought from Upper Egypt, and paid as a tax to the Grand Signor, is depoſited here, and diſtributed among the ſoldiers as a part of their pay. This granary, however, is not very antient, for it ſeems to have been built in the time of the Saracens.

At the north end of the city is a plain building for raiſing the water of the Nile to an aqueduct. The ſtructure is an hexagon, each ſide of which is near ninety feet in length, and about as many in height. The water flows into a reſervoir below, and is drawn up by five oxen, which turn ſo many Perſian wheels, that empty the water into the aqueduct. Theſe wheels are turned at the top of the building, to which is an aſcent on the outſide for the oxen to go up. Both this edifice and the aqueduct are built with free ſtone, in order to convey water to the caſtle. The aqueduct is ſupported by about two hundred and eighty-nine arches and piers of different dimenſions, the former being only from ten to fifteen feet wide. Theſe arches are low towards the caſtle-hill, where the water runs into a reſervoir, whence by means of ſeveral wheels placed over each other, it is raiſed up to the caſtle.

A pleaſant iſland named Roida, is oppoſite to Old Cairo; it is ſituated in the midſt of the Nile, and extends near a mile in length. Towards the north end is a village of the ſame name, and at the ſouth end is the Mikias, or houſe in which is the famous pillar for meaſuring the riſe of the Nile. This is fixed in a deep baſon, the bottom of which is on a level with the bed of the river, and the water paſſes through it. The pillar, which is placed under a dome ſupported by Corinthian columns, is divided into meaſures for obſerving the riſe of the waters, and is crowned with a Corinthian capital, and form the court that leads to the houſe is a deſcent to the Nile by ſteps, on which the common people believe that Moſes, after being expoſed on the banks of the river, was found by Pharaoh's daughter.

The ceremonies practiſed at opening the canal, are ſome of the moſt remarkable cuſtoms obſerved at Cairo. When the Nile begins to riſe, they caſt up a bank of earth acroſs the end of the canal near the river, and about the middle of Auguſt, when the water is riſen to a proper height, it is broke down with great rejoicings. Mr. Thevenot, who gives the moſt particular account of theſe ceremonies, went to Boulac, the port of all the boats that come up the river, and which ſome reckon a part of Grand Cairo, to ſee the preparations, when he obſerved ſeveral gallies lying in the river, in the ſterns of which were noble rooms, ſome of which were twelve or fourteen paces ſquare, and ſurrounded with rails and balluſters gilt and painted, and the floors covered with rich carpets and cuſhions.

About ſeven in the morning the baſha arrived in great ſtate; as he paſſed, a ſheep was killed in ſeveral places, and three or four more on the bank of the river. All the beys and great men of Cairo accompanied the baſha in his galley, and having ſailed as high as Old Cairo, he was ſaluted by the guns of the other veſſels which followed in order. The ſailors of the baſha's galley were of ſeveral colours, and worked with large red roſes, and the flags and ſtreamers in this and the other gallies made a very pretty appearance on the water: the trumpets and other muſic played as they paſſed, while the guns fired, and the people ſhouted, to expreſs their great joy. In this manner they moved gently along, till they came to the place where the bank was to be opened to let the water into the canal. Here the mob were waiting in crowds, and there being two paſteboard towers filled with fireworks, theſe were let off as the baſha paſſed; in the mean time the people broke down the bank to give the water a paſſage into the canal, and boat loads of ſweetmeats were thrown into the river, for which they jumped in and ſcrambled. The viceroy moved forward to his palace in the iſland of Roida, oppoſite to Cairo; and bonfires, illuminations, and fireworks were continued for three nights ſucceſſively. There were particularly two vaſt machines repreſenting a man and woman of gigantic ſtature placed on the river before the baſha's palace, which took up no leſs than two thouſand lamps to illuminate them; beſides all the gallies, barges, and other veſſels were hung full of lamps, and in them the muſic played, and fireworks with great and ſmall guns were continually let off. But the ceremonies are more uſually performed by land, when the baſha, attended by his guards, proceeds on horſeback along the canal, and coming to the end of it, diſmounts, ſtrikes the bank, takes horſe, and riding back, leaves ſeveral perſons to break it down, while great crowds follow him, ſinging and ſtriking each other with cudgels. The water at length flows in accompanied by a number of men and boys ſwimming. Fiteworks are played off, and all the while the canal is filling, it is covered with boats filled with young men, ſinging and playing on muſical inſtruments, to expreſs their joy for the fertility produced by this river to the country.

In

In this part of Egypt, is an ancient palace built by the ſeventh king, who was of the race of the Mamalukes, and lived about the year 1279. The entrance to the grand apartment is by a fine door ſomewhat in the Gothic taſte. In this room is a noble ſaloon in the form of a Greek croſs, with a cupola in the middle, and it is wainſcotted, or rather inlaid, ten feet high, in a very expenſive manner. Round the top, about two feet deep, are Arabic inſcriptions; then with two feet more it is covered with mother of pearl, and different kinds of fine marble, in the form of ſmall arches. Below this the wall is covered with pannels, ſome of the moſt beautiful marble, and others of mother of pearl; while all the pannels are ſurrounded with a border of Moſaic work, in azure and mother of pearl.

There are ſeveral magnificent moſques in New Cairo, particularly one on the north-eaſt of the town called Kubbeel-Azab, which is about ſixty feet ſquare, and has a very beautiful dome raiſed on a baſe of ſixteen ſides, in each of which is a window. It is caſed round with all the moſt beautiful kinds of marble, among which are ſeveral fine ſlabs of red and green porphyry. Theſe are all placed in pannels finely carved and gilt, and above is a ſort of frize covered with ſentences cut in large gilt characters, called the Comphe, in which they here antiently wrote the Arabic tongue. The walls above have Arabic inſcriptions in letters of gold. All over the moſque are hung a great number of glaſs lamps and oſtriches eggs: adjoining to this edifice are ſeveral apartments built for the prieſts; and alſo ſome very elegant ones for perſons of rank, who ſometimes come and reſide there. This great building is ſaid to have been erected by Jaafar, who conquered Egypt for Moezz, the califf. The window lattices both to their moſques and houſes are very elegant, being curiouſly manufactured either of iron, braſs, or wood. They are made of round bars let into each other, and forming ſmall ſquares, which are decorated with a variety of ornaments.

At the foot of the caſtle-hill there is a moſque which exceeds all the reſt, as well in the ſolidity of the building, as in its grandeur and magnificence, ſo as to ſtrike the beholder with admiration. It is very lofty, and erected in the form of an oblong ſquare, crowned with a cornice all round that projects a great way, and is adorned, after the Turkiſh manner, with a kind of groteſque carving. The entrance is inlaid with ſeveral kinds of marble, carved at the top.

The aſcent to it was by ſeveral ſteps; but theſe have been broken down, and the door cloſed up, becauſe, when public inſurrections have happened, the rebels have often taken ſhelter there.

Eaſtward of the town of Tailoun ſtands the caſtle of Cairo, ſaid to have been built by Saladin. It is ſeated on a rocky hill, and is walled round; but though it is very difficult of acceſs, it is ſo commanded by the hill Tabel Mochattham to the eaſt, as to be incapable of withſtanding an attack ſince the invention of cannon. The eaſtern entrance is called the Gate of the Janiſſaries, and the weſtern one the gate of the Arabs. The caſtle is about a mile in circumference; but yet it is an irregular building, and the principal part of it is in a very ruinous condition. At the weſt end are the remains of very noble apartments, ſome of which are covered with domes, and adorned with pictures in Moſaic work; but theſe apartments are now only uſed for weaving, embroidering, and preparing hangings and coverings, great quantities of which are annually ſent to Mecca by the caravan.

The eaſtern part of this caſtle ſtands on much higher ground than the reſt, and near a grand ſaloon called Joſeph's hall, from whence there is a delightful proſpect of Cairo, the pyramids, and all the neighbouring country. This, it is probable, was a terrace to the ſaloon, which is open on every ſide, except to the ſouth, and is adorned with large and beautiful columns of red granite, ſome of which have capitals of the Corinthian order; ſome are only marked out in lines like leaves, and many are only plain ſtones that do not much reſemble capitals. In the weſt part of the caſtle is the goal, which the common people think to be the priſon in which Joſeph was confined at the inſtigation of an adulterous woman.

A ſmall garriſon is kept here; and the men are lodged in large towers, which form an incloſure or court, on the ſouth ſide of which are the baſha's apartments; ſo that whenever he receives an order from the Porte to quit his government, a battery of four or five cannon is raiſed againſt them; which would ſoon demoliſh them, ſhould he offer any reſiſtance. Near the baſha's apartments are alſo thoſe of the great divan, where the beys aſſemble three times a week under the kaia, or prime miniſter of the baſha; and the latter ſometimes ſits in a room behind, that has a communication with ſome lattice-windows. A ſtranger may enter with the conſul's interpreter; and, being afterwards conducted to the baſha's coffee room, will be entertained by his ſervants with ſweetmeats and coffee. Here are to be ſeen ſeveral leathern ſhields, each almoſt an inch thick, with a javelin ſticking in them, wherewith it is ſaid they were pierced by one of the ſultans, and are kept as monuments of his ſtrength. The officers under the baſha have alſo noble apartments here.

Near the abovementioned apartments is the mint, where they coin their gold, and ſmall pieces of iron waſhed over with ſilver; which laſt are of the value of three farthings, and are called medines.

In this caſtle there is a well, which is much admired on account of its great depth, which is two hundred and forty-four feet; but it has two ſhafts that are not perpendicular, above one another, the firſt is one hundred and forty-eight feet long, and the other one hundred and ſixteen feet. It is generally called Joſeph's Well, not from the patriarch of that name, but from a grand viſir, who about ſeven hundred years ago had the care of the work under Sultan Mahomet; but the Arabians call it the Snail Well, becauſe it deſcends in a ſpiral line. The water of it can only be drank at the time of the inundation; after which it is brackiſh, like all other wells in the town. They draw the water up by means of a double wheel, and a double range of earthen jars. The oxen employed to turn the wheel go up the firſt ſhaft by a path which is cut in the rock quite round the well from top to bottom.

There are grottos, in many ſtories, all up the ſide of the rock upon which this caſtle is built; but ſeveral of them are now inacceſſible, though there is a way to others by a narrow terrace. Theſe are generally narrow rooms, eight or ten feet ſquare. Towards the brow of the hill, on the top, are two rooms, with holes on the top to admit the light; over which is an eminence, to which the great people often go to enjoy one of the fineſt proſpects in Egypt, ſince it commands a view of Cairo and all the country as far as the eye can reach. Over the ſouth cliff is a moſque, the inſide of which is painted all over with flowers on a red ground: here was interred the Sheik Duiſe, whoſe name is given both to the hill and the moſque: ſeveral of the ſheiks children and ſome of the ſons of baſhas are buried near it.

There is a kind of ancient ſuburb called Caraffa, to the ſouth of the caſtle: at the entrance are ſeveral magnificent tombs covered with domes, and ſaid to be the magnificent tombs of ſome Egyptian kings. The people in general ſuppoſe that they are the monuments of the califs, the relations of Mahomet, who conquered this country; and ſuch is the veneration for them, that they oblige Chriſtians and Jews to alight from their aſſes and camels to pay them reſpect, when they paſs this way. On an eminence, adjoining to Caraffa, is the great moſque of El Iman Shafee, antiently one of the four doctors of the law, who is held in great veneration among them, and whoſe ſepulchre is there. It is called Le Salchiah, from a title they gave Saladin who built it, together with a college and hoſpital.

There ſtill remains a matter of a very ſingular nature, to be related of this part of the country, which every traveller who paſſes through it takes notice of; as firſt, their way of hatching chickens in ovens. They put their eggs in ovens, ſays Thevenot, which are heated with ſo temperate a warmth, and imitates ſo well the natural heat, that chickens are formed and hatched in them: theſe ovens are under ground, and the hearth of them covered with cotton or flax to lay the eggs upon. There are twelve of theſe ovens together, ſix on a ſide, two ſtories on each ſide the paſſage, that is three ovens above and three below on each hand: they begin to heat the ovens about the middle of February, and continue to heat them about four months: they heat their ovens only with the hot aſhes of oxen, or camel's dung, which affords a ſmothering heat without any viſible fire; this they lay at the mouth and the farther end of the oven, changing it and putting in freſh dung every day: this they continue to do for ten days, and then lay in the eggs, ſometimes eight thouſand in an oven; after eight or ten days they pick out the good from the bad, which are diſcovered by holding them to a lamp, then they put out the fire, and having laid one half of the eggs in the upper ovens, they ſhut up all cloſe and let them lie about ten days longer, when the chickens are hatched; at which time it is very entertaining to ſee ſome of the chickens juſt putting forth their heads, others half out of the ſhell, and others quite free. Thunder occaſions abund-

ance of eggs to miſcarry; and at beſt, it is obſerved that there are few of them which have not ſome defect, and nice people think they can diſtinguiſh one of theſe pullets from another by their palates. It has been diſputed, it ſeems, whether this can be effected in any other country beſides Egypt, where the natural heat of the climate is thought to contribute much towards theſe productions; but M. Thevenot tells us, that the duke of Florence ſent for ſome of the Coptis (who only follow this buſineſs) and hatched chickens in Italy in the ſame manner, and ſince that time, the late learned and ingenious M. Reaumur, after many experiments, found it practicable in France: and in a work on that ſubject, which has been tranſlated into Engliſh, has ſhown the manner of doing it.

Before we leave Grand Cairo, it may not be improper to give an account of the grand pilgrimage made annually from that city to Mecca, at which time the grand Signor ſends thither a very coſtly preſent, ſaid to amount to one-third of the value of the revenues of his kingdom.

At the time appointed for the caravan to prepare for Mecca, the preſents are brought with great ſolemnity from the caſtle, through the city to the palace of the emir hadge, who is captain of the caravan of pilgrims, which our author had the opportunity of ſeeing performed. In the beginning of the proceſſion came the ſervants of the beys and lords of Cairo, followed by the chiaux, azapes, and janiſſaries; and after them the beys in perſon, of whom the emir hadge, and ſeveral other officers had rich coftans or coats on, preſented them by the baſha on this occaſion: then came the janiſſaries of the divan followed by men carrying four very long pieces of crimſon velvet, embroidered with Arabic letters of gold as large as one's finger, and others carried a large door-piece of velvet embroidered in the ſame manner: after theſe came a camel well harneſſed, carrying a great pavillion or tent of crimſon ſattin embroidered with gold, and ſhaped like a bell, with a great gilt ball on the top of it; then a little ſquare pavillion, carried by a man, and ſome other utenſils, which were all to be employed in hanging and adorning the caaba, or little temple of Mecca: after theſe great numbers of banners and colours were carried in proceſſion, all the ſantos with drums and muſic attending them; the people in the mean time preſſing and crowding to touch the ſacred utenſils, and thoſe that could not get near enough threw a piece of linen to touch them, holding one end in their hands that they might draw it back again; and it is not to be conceived with what devotion they would kiſs the thing that had touched but a rope employed in the ſacred preſent, which was to adorn the place they eſteem moſt holy.

Theſe ornaments being lodged at the palace of the emir hadge, two days after he went out of the town encamping near the city. The cavalcade on this occaſion was not very different from the former, only there were ſix field pieces, which the emir always carries with him on theſe expeditions: there were alſo a great many little children mounted on camels and horſes, who were the ſons of the emir's officers, and ſeveral camels loaden with proviſions for the journey. A multitude of ſantos in ſtrange antic habits, alſo followed dancing and ſcrewing themſelves into a thouſand ridiculous ſhapes and poſtures, like maſquers at a carnival, as our author expreſſes himſelf. At length came the bleſſed camel which carried the pavilion abovementioned, richly dreſſed out, with another to relieve him when he was weary.

It is wonderful, our author obſerves, to ſee the multitudes which come from all places to perform this pilgrimage, there being no leſs than five caravans of them, viz. That of Cairo, which conſiſts of Egyptians, and of all thoſe that come from Conſtantinople and the neighbourhood of it. That of Damaſcus, in which are all the pilgrims of Syria. That of the Magrebins, or thoſe who come from the weſtward, conſiſting of the natives of Barbary, Fez, and Morocco, who meet at Cairo, and thoſe of Perſia and India. Thoſe who come from Fez and Morocco undergo the greateſt fatigue, travelling by land over large deſarts, in which they employ a whole year, and one half of them uſually die in the journey. The caravan of Cairo, our author ſays, was very numerous when he was there: there being in it four beys or princes, and ſeveral other great lords, beſides an hundred thouſand other pilgrims, as was given out; but he underſtood afterwards they did not amount to a fifth part of that number. The emir hadge, or captain of the caravan, has uſually fifteen hundred camels to carry his baggage, and ſell to thoſe who loſe their own, for many of them die by the way; and he has five hundred camels alſo to carry water only.

The emir hadge having encamped ſome time cloſe to the city, removed twelve miles farther to the birque, being a great baſon or reſervatory of water, about twelve miles to the eaſtward of Cairo, and is the rendezvous of all the caravans. The emir hadge decamped from thence on the eighth of Auguſt, it being the cuſtom for the caravan of Cairo to ſet out ſeven and fifty days after the beginning of the ramadan, that they may be at Mecca at the time preſcribed: the next day, being the ninth of Auguſt, the caravan of Magrebins, who come from the weſtern part of Africa, ſet forward; theſe do not depend on the emir hadge of Cairo, but have a chief of their own. They travel chiefly in the night to avoid the heat, which is inſupportable, and when there is no moon they have men who carry torches, and either in their camps, or on the march, that infinite number of lights which are ſpread over the deſarts make a noble illumination, which is ſeen at a very great diſtance.

There are other reaſons for going this pilgrimage to Mecca beſides pure devotion: many go upon the account of trade, merchandize being brought thither from almoſt every part of the known world; and ſome go, it is ſaid, to eſcape the puniſhment of their crimes: for let a man have been guilty of the moſt notorious acts, he is never called in queſtion if he makes this journey afterwards; but obtains a general indemnity, and the character of a ſaint, on account of the fatigue and hazard he has undergone to ſee the holy place. But whatever may be the true inducement to the undertaking this journey, all perform it with abundance of ſeeming devotion, repeating or ſinging ſome verſes of the alcoran all the way they go; and beſtowing their charity according to their reſpective circumſtances: as to their behaviour when they arrive at the holy place, we have given an account of it already, in treating of the Perſian pilgrims.

About ſix weeks after the ſetting out of the caravan from Cairo, it being computed that they are ready to return, an aga marches from Cairo to guard the freſh proviſions which people ſend to their relations in the caravan; all which are ſealed up to be delivered to thoſe to whom they are directed. The aga has a great number of camels aſſigned him for this ſervice: and uſually meets the pilgrims half way, being very well paid for his trouble. The year our author was in Egypt, the caravan returned and encamped at the birque twelve miles from the city on the thirteenth of November, and the caravan of Magrebins arrived there the day before; ſeveral people came from Cairo to the birque to meet their friends and welcome them home; and upon theſe occaſions they ſalute and kiſs all they know five or ſix times; and indeed, there is nothing to be ſeen in the city but kiſſing and congratulations for five or ſix days ſucceſſively, or elſe people lamenting the death of their relations who died in the journey.

The pilgrims are forty-five days in their journey from Cairo to Mecca, and as many in returning, beſides the time they ſpend there; but they make very eaſy journeys, often ſtopping to unload and load their camels, of which many die as well as of the people. They find but little water in the way, and that exceeding bad, and freſh proviſions they meet with none but what they carry with them. What incommodes them moſt are the hot winds, which frequently ſuffocate or otherwiſe deſtroy them: in one day, it ſeems, there died ſeveral hundred of pilgrims by the hot winds in this journey; and not leſs then ſix thouſand belonging to the caravan of Cairo died by one misfortune or other. It is no uncommon thing, as our author relates, to hear a man ſinging ſome verſes of the alcoran, and in a moment ſee him drop down dead from his camel: and thoſe who return alive are ſo altered and emaciated that they can hardly be known by their friends: notwithſtanding which there is not a year but many women and children perform this pilgrimage.

Thoſe who have made this journey are called adgi or pilgrims, and are in great eſteem in the countries where they live ever after. The emir hadge amaſſes vaſt ſums in this command; for beſides his other profits he is entitled to the effects of all that die in the journey, of which perquiſite alone he made three hundred thouſand piaſtres in one year, there were ſo many of the pilgrims that died; he is alſo ſupreme judge of all the people under his charge during the expedition. The number of thoſe which compoſe the caravan ſeldom amounts to leſs than forty thouſand; but in times of peace and plenty it is often much greater. Every muſſulman is obliged to make at leaſt once in his life this grand pilgrimage to Mecca, the center of the Mahometan faith.

The city of Damieta, which is nearly oppoſite Roſetta, ſtands on the eaſtern branch of the Nile, between four and five miles from the mouth of the river. It is a very large place, but the houſes in general are indifferently built, and its principal inhabitants are fiſhermen and janiſſaries. It is encompaſſed by walls, except that part which fronts the river, and, at the north end of it is a fine large round tower built of hewn ſtone. It is reckoned to be moſt advantageouſly ſituated for trade, on account of its commodious harbour on the Mediterranean.

This city is ſuppoſed to contain about twenty-five thouſand inhabitants, without including its ſuburb on the other ſide of the Nile. Here are about four hundred Greek families, who are the principal merchants and traders in the city. They have a church, a biſhop, and the free liberty of exerciſing their religion except the article of ringing the bell. Beſides the Greeks, here, are many other ſtrangers of various nations and religions; but they are greatly reſtrained in the enjoyment of their national privileges, and are afraid of going into the ſtreets, eſpecially after dark, on account of the inſults they are liable to meet with from the Turkiſh ſoldiery, who have a natural antipathy to all ſtrangers: but they have a particular averſion to Europeans, which ſeems to be handed down to them by their forefathers, and to be occaſioned by the holy war, as this city was the principal ſcene of action, and where Lewis IX. was made priſoner. As a Chriſtian is known by his mien, ſtrangers dare not go out of the ſtreets they are accuſtomed to frequent; nor muſt any perſon appear in an European dreſs.

With reſpect to the trade of this place, that chiefly carried on here is the export of rice and coffee to all parts of Turky; and of the former, a contraband trade to Europe, which has been productive of tumults againſt the Chriſtians. They have alſo an import of tobacco and ſoap; the latter from the coaſt of Syria, and the former from Latichea.

At a ſmall diſtance from Damieta, and the ſouth-weſt of the lake called Marcotis, is the caſtle of the labyrinth, ſo called from a famous ancient labyrinth, of which we may take ſome notice when we come to treat of the ancient ſtate of Egypt. This antique edifice is about one hundred and ſixty-five feet long, and eighty broad. The portico is a very ruſtic work, and the principal part of it deſtroyed, being no where above ſix feet high; but the front is in a more ruinous condition than any other part of it. The upper ſtory, in the middle, is fallen down, and is almoſt intirely gone all the way from the breaking off. In its preſent ſtate, there are forty-four tiers of ſtone, each nine inches deep, and conſequently the whole is thirty-three feet high. This edifice, viewed all together, has the appearance of ſome antient palace, or other public ſtructure; but its remains are incapable of conveying an adequate idea of its original magnificence and grandeur.

Many ſtones are ſcattered about the plain near this building, eſpecially ſeveral round ones with holes in the middle; which ſeem to have compoſed the pillars that might have been about this edifice, and, by means of theſe holes, were probably faſtened to each other.

The town of Suez is the next principal place that attracts our attention; it is ſituated at the north end of the Red ſea, and is thought to be built on the ſpot where formerly ſtood the antient city of Arſinoe. It is a conſiderable ſea-port on the iſthmus, of its name, which joins Aſia and Africa, and is advantageouſly ſeated on a ſmall peninſula that juts into the utmoſt verge of the Red ſea, about ſixty-three miles ſouth-weſt of Cairo. The trade between the laſt mentioned place and this town is effected by ſhips belonging to private perſons at Cairo.

Southward of this town there is a large ſandy bank about two miles long, to the eaſt of which is a road to go out to the ſhipping; and when there is no wind, they draw the boats along by this bank. About a mile ſouth-weſt of it are the ſhips, three miles from the town, the deep water being on the weſt, where the ſhore is incloſed by high hills; but there are conſiderable ſhoals where the land is low, on the eaſt ſide.

Suez, is a ſmall town; but the houſes, moſques, quay, magazines, and other public edifices, are made of a moſt curious ſort of ſtone, conſiſting of a vaſt number of ſhells, ſo cloſely united by nature as to be inſeparable. Here are four moſques, all of which are very handſome buildings; and here is alſo a Greek church. Moſt of the inhabitants are Mahometans, there being only about ſixty Greek families, and a few Coptis. They fetch all the neceſſaries of life, and even pot herbs, from Cairo; for the country, near ſixty miles round, does not produce any thing. Water is likewiſe very ſcarce, inſomuch that they are obliged to get it from a place nine miles off, and pay two-pence per pail for it, though it is of a brackiſh quality.

This town is governed by a captain, whoſe buſineſs chiefly depends on the ſhips, and he has under him a caimacam (the ordinary governor of towns), who both together, or ſeparately, govern the affairs of the place. The caimacam generally reſides here, and the captain when the ſhips are in the port. They have a garriſon of about three hundred men, one half janiſſaries, and the reſt Arabs; and theſe laſt are commanded either by a civil officer of their own, ſtiled ſader, or by a ſheik. The harbour lies north and ſouth, is not large, and has very little water: when the tide has ebbed out, it is not above five feet deep.

As this harbour is only fit for ſmall ſhips, the larger ones, which are employed in bringing goods to Jedda and other parts, anchor in another harbour, about four miles and an half from the town. Many of their veſſels will carry from one hundred and eighty to two hundred and fifty tons. Some of them are pierced for thirty guns, but never mount more than two, and theſe are the beſt armed; for moſt of them have only two pedereros. They direct the ſhip by means of a pole ſtrongly faſtened to the rudder on the outſide, and placed in an inclined ſituation, not quite horizontally: a rope is faſtened at the end, which paſſes on both ſides through blocks faſtened to two thick tranſverſe pieces of wood, which are nailed to the two ends of a long and thick beam, placed abaft. The rope, being put through the blocks, is hung or faſtened on a peg which ſtands on that part of the ſtem where the helm is. On each ſide three men are placed, who muſt not leave this rope while the veſſel is under ſail; and muſt alter the direction of the helm, when required, by drawing at the rope. Theſe veſſels are but ill provided with ſailing tackle and trimmings; nor indeed do they require them ſo compleſe as in moſt other voyages, for they never ſail without a fair wind, and always keep along the ſhore. The harbour in which theſe veſſels lie at anchor is from five to eight fathom deep; they are ſheltered there by the mountains of Etaga from the eaſt wind; and when they are forced away by another wind, they run aſhore, without any damage, on the neighbouring ſandy beach.

The fortifications belonging to the town are very indifferent, ſince it has no other defence than twenty-two cannons and three culverins, all of which are in ſo wretched a condition, that they appear as if entirely uſeleſs.

The ruins of an old caſtle, ſuppoſed to have been formerly built by the French, are to be ſeen on an eminence at a ſmall diſtance from the town.

The Roman emperors and kings of Egypt made many attempts to cut a channel through the iſthmus of Suez, and join the two ſeas together; but all their efforts proved ineffectual. About three miles from the town, there is ſtill to be ſeen a deep ditch, which runs from north to ſouth, and is ſuppoſed to be a relic of that vain and impracticable undertaking.

We ſhall now proceed to give a deſcription of the principal towns and villages ſituated up the Nile; and the firſt we meet with is called Gize, ſuppoſed to ſtand on a part of the ground where the ancient city of Memphis once ſtood. The town itſelf is tolerably large, but the houſes are very low, mean buildings; and its only ornaments conſiſt of four or five minarets or moſques, and ſome palm-trees. The inhabitants are chiefly employed in making earthen pots and tiles; but they are ſo indifferently executed, as to produce but an inconſiderable advantage.

The village of Deiir-Etiin, is ſituated about a mile and a half to the ſouth of Old Cairo; here is a moſque and a Coptis convent. The houſes here are almoſt all built of clay, and covered with reeds. The greateſt ornament of this village, as well as moſt of the others, are the palm-trees, which are cultivated in great abundance. One end of this village is cloſe to the Nile, and the other extends towards the mountains.

The village of Dagjour, is a little diſtance from the above: it is remarkable for containing, in its neighbourhood many ſpacious moſques and ſeveral handſome pyramids.

Beneſoef, the next village we come to, is ſituated on the weſtern ſhore of the Nile: it is a kind of capital, about one hundred miles diſtant from Cairo, and the place of reſidence of a bey, who is the governor of it. There are in it ſeveral very large and elegant moſques.

Mount Kobzim, is ſituated to the north-eaſt of the laſt mentioned village, at the foot of which ſtands the convent of

of St. Antony; and at ſome diſtance are the mountains of Aſkar, where are ſeen the ruins of three monaſteries, namely, Deir-Berdet, Deir Bahſta, and Deir Anna.

The convent of St. Paul is not far diſtant from that of St. Antony. The Coptis call this the Tyger convent, from a ſuppoſition that thoſe animals made the tomb of that ſaint. The principal building is a quadrangle, but much leſs than that of St. Antony. The church is thirty-two feet long and fourteen broad, and is very light. The walls are ornamented with paintings, and on that part where the altar is fixed are the remains of a Greek inſcription, but the characters are illegible. The garden is planted with many fruit-trees, particularly vines; and the friars plant as many kitchen herbs here, as thoſe do who belong to the garden of St. Antony. Here are fourteen monks in this convent, five of whom are prieſts; two wear the angelic dreſs, and the reſt are lay-brothers. About forty yards from the monaſtery is a rock which ſupplies it with a large fountain of water.

Monſalut, is another village, on the ſame ſide the Nile with that of Beneſoef. It is a ſort of capital, whoſe moſques give it a beautiful appearance; and it is the ſee of a Coptis biſhop. The adjacent country abounds with a variety of fruit trees, and is in general very fertile.

Sionth, another village, contains ſeveral handſome moſques, and is the rendezvous of thoſe who go with the caravan that ſets out from hence to Nubia. This village is ſituated about two miles from the river, in a very pleaſant part of the country; and a large lake is by the ſide of it, which is filled from the Nile by a canal, over which there is a bridge of three high Gothic arches. The church is three miles from the village, among a number of hills, in which ſeveral grottos are cut. A caſhif, who is governor of the province, reſides here; and there is a biſhop, with about five hundred Chriſtians.

The large village of Aboutiteſhe, is ſituated on the ſame ſide of the Nile with Sionth. It is ſuppoſed to be the Hypſele of the antients; it is at preſent a biſhop's ſee, and has ſome moſques in it.

On the eaſt ſide, farther up the Nile, is the village of Akmin; which is very large, and adorned with ſeveral moſques. Here are the remains of two temples, conſiſting of ſtones twenty feet long and ten broad; all of which are painted, and full of hieroglyphical figures. Here is a Greek inſcription of four lines on one of the ſtones; but the firſt and laſt lines are almoſt totally, and the others partly defaced. Here is an hoſpital belonging to the Congregatio de propaganda Fide; and the Coptis have a convent here.

To the eaſtward of this village, at the foot of a mountain, is the monaſtery of St. Senodius. It is built of free ſtone, and of an oblong quadrangle; it is one hundred and thirty feet long, twenty feet broad, and fifty feet high, and a cornice goes quite round it. Its greateſt ſides have two rows of twenty-one windows each, all cloſed up; there are only nine windows in each row, on the other ſides; five doors were formerly on the weſt ſide, but they are now all cloſed up, and the entrance to the monaſtery is by a little double door on the ſouth ſide, the leaves of which are covered with iron plates. The church is in a very decayed ſtate; but there are ſtill fourteen pillars in it, ſome of ſtone, and the reſt of bricks, covered with gypſum, and which ſupport the cieling. The choir, which is preſerved, contains three altars, but hath not any thing remarkable in it. This convent is inhabited only by three monks, who have very wretched habitations. There is likewiſe a deep and wide well in it, whoſe water riſes and falls like the Nile, though the convent is above three miles from the river. However, this riſing and falling of the water (which the monks and Coptis conſider as a miracle wrought by Dioſcorus whilſt he ſtaid in this monaſtery) is occaſioned by a communication with a canal, whoſe water is ſupplied from the Nile, and ſo provides this well with it.

We come next to the town of Girge, or Tſihirſche, which is the capital of Upper Egypt, and the reſidence of the bey. It is about a quarter of a mile from the river, and tolerably large, being at leaſt two miles in circumference: the houſes are chiefly built of hard brick, and are pretty ſpacious; and here are ſeveral handſome Turkiſh moſques. It is alſo the ſee of a Coptis biſhop; and the fathers de propaganda Fide have an hoſpital here, where they maintain themſelves by their practice of phyſic, that renders them uſeful to the Turks. When the bey of Girge has any thing to communicate to the chief of the Arabs from the Divan at Cairo, he ſends them word that they are to come to him. They immediately ſend one of their number with two thouſand horſemen to a certain place deſtined for thoſe interviews: theſe troops form a ring round the bey, who is attended by a ſuite of twelve perſons only: and each returns to his own home after the interview is over.

On the eaſtern ſide of the Nile is the village of Gau, which was once very large, but a conſiderable part of it has been waſhed away by the overflowings of that river. Here are fourteen columns, full of hieroglyphics, preſerved ſtanding. At ſome diſtance from the village are many ſcattered coffins cut in ſtone, which the travellers make uſe of as troughs or ciſterns to water their horſes at. At the foot of the mountain are many quarries, the ſtones of which are white, and have a fine poliſh. There is alſo a coloſſal ſtatue of rock ſtone, but it is greatly diſfigured.

The village of Eridy is ſituated on the ſame ſide of the Nile, and about ſeven miles from Gau: it is the reſidence of a ſheik of the ſame name. This village is famous throughout Egypt on account of a ſnake, of which the people relate many ſtrange and miraculous ſtories; and ſome of them believe it to be the devil, baniſhed into the mountains of Upper Egypt by the angel Raphael. This ſerpent is kept by a ſheik, and has been in the poſſeſſion of his predeceſſors for a long time. Among other ſtrange ſtories concerning it, they tell us, that the ſheik would cut it in pieces at night, and be ſure to find it whole and ſound the next morning. But notwithſtanding the abſurd notions the people here entertain of this ſerpent, it is remarkable that they can handle theſe reptiles without receiving the leaſt injury, as we are aſſured by a celebrated writer, who, from the hiſtory of his travels while in Egypt, gives us the following account.

"I am now going, ſays he, to inform you of ſomething which I look upon as very curious; but I aſſure you the thing is ſo amazing, that had I not had ocular demonſtration of the fact, I would not preſume to relate it. One morning, as I was looking for ſomething in our warehouſes, I obſerved in ſeveral parts of them, the traces of ſerpents, which gave me ſome uneaſineſs, leſt at any time I ſhould be hurt by them. I conſulted our druggerman about it, who told me to make myſelf entirely eaſy, for he knew an Egyptian who could catch them by a charm. I communicated this to Mr. F. H. who, like me, wanted faith to believe that any mortal had this power. The druggerman ſent for the man; and as I ſuſpected he might bring tame ſerpents with him, and privately let them looſe, and then catch them again in our preſence; I propoſed that the charmer, before he began, ſhould be ſtript to his ſkin; which was agreed to be done. We led him into the court yard where the warehouſes ſtood; but before he went into either of them, he fixed his eyes towards the ſky, and muttered ſomething unintelligible to us; this done, he went into one of the warehouſes, and with a ſhort and ſlender ſtick of a date-tree, he had in his hand, he pointed to the roof, and uttered ſomething with a loud voice, at the ſame time ſtamping hard on the ground: as ſoon as he had done this, he told us, there had been ſerpents there, but they were gone. He then went into another warehouſe, and, after doing the ſame as he had done in the firſt, he ſaid, there was a ſerpent ſomewhere in the walls; which were of looſe ſtones, very thick, and much decayed. Here he repeated his charm; and preſently a very large ſerpent came out of the wall, and ſtopped; but the charmer, who ſtood in the middle of the warehouſe, uttered ſome more jargon with very great vehemence, and the ſerpent came to his feet; he took it up in his hand as unconcerned as though it had been only an eel. In the ſame manner he caught another among ſome ruins in the yard. We examined the ſerpents, and found they had their teeth; for I aſſure you, Sir, we were ſo much amazed, that we could hardly believe our eyes. We gave him thirty paras for his trouble, and he went away quite ſatisfied." The above relation is corroborated by the teſtimony of the learned Dr. Haſſelquiſt, who alſo travelled into Egypt, and tells us, that they take up the moſt poiſonous vipers with their bare hands, play with them, put them in their boſoms, and uſe a great many more tricks with them; and that he had frequently ſeen them handle vipers that were three or four feet long, and of the moſt horrid ſort. He adds hereto, "I inquired and examined whether they had cut out the vipers poiſonous teeth; but I have with my own eyes ſeen they do not: we may therefore conclude that there are to this day pſilli (that is, perſons who are capable of faſcinating or taming ſerpents) in Egypt; but what art they uſed, is not eaſily known.

known. Some people are very ſuperſtitious, and the generality believe this to be done by ſome ſupernatural power, which they obtain from inviſible beings. I do not know whether their power is to be aſcribed to good or evil; but I am perſuaded that they who underſtand it uſe many ſuperſtitions." The doctor then gives an inſtance of a woman who handled theſe noxious creatures with the greateſt familiarity, and without the leaſt harm happening to her, to the great conſternation of himſelf and his friends. But we ſhall have occaſion hereafter to ſpeak more particularly of this miraculous ſerpent, and detect the fraud practiſed with it, when we deſcribe the tomb of the pretended Turkiſh ſaint.

Near the village of Eridy, in the mountains, are ten or twelve ſepulchral caverns. There are alſo many heaps of ruins, which are the remains of the antient town of Irgy, according to the report of the Coptis.

Here is a ſmall village called Dandera, which is very pleaſantly ſituated, it being encompaſſed by continued rows of trees, which produce all the various fruits to be met with in Egypt. Nagadi is a large town, and, among other edifices, contains ſeveral ſpacious moſques; and a Coptis biſhop conſtantly reſides here. Camac, is a name given to a vaſt extenſive country to the eaſt of the Nile, where ſome conſiderable ruins of buildings, that were once ſpacious and magnificent, are ſeen in various places. Elnay is higher up the river, and is a large place, adorned with a very handſome moſque. It is the reſidence of an Arab ſheik, and is ſituated where the antient Lycopolis ſtood, ſome remains of which are ſtill to be ſeen. Edfa or Edfou, is the antient Apollinopolis, and is ſituated on the weſtern ſide of the Nile. Here is a fine monument of antiquity, which has been long converted by the Turks into a citadel.

The town of Eſſouan is likewiſe ſituated on the weſtern ſide of the Nile, and is the antient Seyne, which was under the tropic of Cancer. It is a poor and ſmall place, with a ſort of fortreſs or rather barrack for janiſſaries, under their governor, who has the command of the country. In this town, as alſo in an iſland adjoining, are quarries of granite, and the remains of ſome antient buildings. The firſt cataract of the Nile begins here, above which is the iſland of Gieſiret Ell Heiff, the Philæ of the antients, which is a deſart, and quite covered with rocks of granite. The borders of this iſland are cut in the form of a walk on the rock; and there are abundance of colonades, buildings, and other magnificent and venerable antiquities within it.

The ruins of ſeveral grand edifices are to be ſeen at Debondi, as alſo at Hindau, Sahdaob, and Taffa, where Nubia begins, and Egypt ends. From thence up to Derri are many ſmall villages, in ſome of which ſeveral ruins of antiquity are to be ſeen.

The town of Derri is ſituated on the eaſtern ſhore of the Nile, near the place where the river begins to direct its courſe towards the weſt. It is inhabited by a race of people called Barbarins, who are a poor and miſerable tribe, and live chiefly by plunder. The ſlope of the ſhore of the Nile here is in many places covered with lupines and radiſhes, the ſeed of which they make oil from. The people of Derri frequently croſs the Nile, in order to go to Eſſouan; but as they have no canoes, they ſupply the want of them in the manner deſcribed in a former ſection; beſides which they have the following: they put themſelves a ſtraddle upon a great piece of wood, after having placed their cloaths upon their heads in form of a turban. They alſo faſten to it their aſſagaye or dart; they afterwards make uſe of their arms as oars. By theſe methods they croſs the river without any danger from the crocodiles, or much difficulty or hazard to themſelves.

SECT. IV.

Treating of the Language, Arts, Trade and Commerce, Manufactures, Weights, Coins, Diſeaſes, &c. of the EGYPTIANS.

THE moſt antient language ſpoken in Egypt, that we have any account of, was the Coptic, which was generally uſed till Alexander the Great conquered this country, when he introduced the Greek, which for above nine hundred years afterwards, was the language moſt in uſe, and which prevailed till the Greeks were expelled by the Arabs; ſince which, the moſt univerſal has been the vulgar Arabic, or Arbeſk language. It is true, the Turkiſh, Coptic, and modern Greek, are ſtill ſpoken, but not ſo univerſally as the Arabic language.

The liberal or ingenious arts are principally in the hands of the Franks or Chriſtians, the genius of the Turks tending more to traffic. The Chriſtians only are ſilverſmiths and jewellers; and theſe have a pretty briſk trade, on account of the great demand for trinkets and trappings to adorn women and horſes; for the Mahometans are not allowed to keep plate in their houſes, nor are the men permitted to wear rings, unleſs they give a tenth part of what they are worth to the poor; and few of them are ſo fond of ornament as to purchaſe the privilege of appearing fine at ſo great an expence. The Turks of Conſtantinople far ſurpaſs thoſe who reſide here in every branch of work they attempt to execute.

The inhabitants in many of the villages on the banks of the Nile, are chiefly employed in making ſal ammoniac. This ſalt, it ſeems, is procured from the ſoot which ariſes from the burnt dung of animals that feed only on vegetables; but the dung of theſe animals is only fit to be burnt for that purpoſe during the firſt four months of the year, when they feed on freſh ſpring graſs, which in Egypt is a kind of trefoil or clover; for when they feed only on dry meat, it will be ineffectual. The dung of oxen, buffaloes, ſheep, goats, horſes, and aſſes, at the proper time, is as fit for this purpoſe as camels dung. The ſoot ariſing from the dung is put into glaſs veſſels, and theſe veſſels into an oven or kiln, which is heated by degrees, and at laſt with a very ſtrong fire for three ſucceſſive nights and days; after which, the ſmoke firſt ſhews itſelf, and in a ſhort time the ſalt appears, adhering to the glaſſes, and covers the whole opening by degrees. They break the glaſſes, and take out the ſalt in the ſame form and ſtate in which we receive it.

Their domeſtic trade chiefly conſiſts in ſupplying the lower parts of Egypt, from the Upper, with corn, pulſe of all ſorts, dates, &c. and ſupplying the upper parts from Delta with rice, ſalt, &c. Cairo is the general mart for all things imported into Egypt; but Indian linens, muſlins, callicoes, china-ware, &c. being brought the principal part of the way by land, bear a greater price here than in England.

The Turks prohibit the exportation of coffee and rice from Egypt, to any parts not under their government; however, great quantities of both are ſmuggled to many places. Flax is ſent to all parts of Turkey and Leghorn, and cotton is tranſported in great quantities to Marſeilles. Senna, caſſia, coloquintida, and a red dye called ſaffranoun, are exported from hence to ſeveral European countries.

The Egyptians import Engliſh, French, and Venetian cloths, ſilk from Leghorn and Venice, likewiſe drugs and dyes which Egypt does not produce: alſo coral and amber from various parts, raw ſilk from Syria, wool from Barbary, carpets from Aſia Minor, iron from Salonica, furs and copper utenſils from Conſtantinople, ſmall wares from France and Venice, lead and marble blocks from Italy, and tin from England. Beſides the above, they import and export to and from different places the following articles; namely: their imports are, Braſil wood, cochineal, cinnabar, vermillion, vitriol, quickſilver, antimony, orpiment, arſnic, and agaric; and their exports are, ſal ammoniac, ſaffron, tamarinds, cinnamon, ſugar, indigo, opium, &c.

Linens are the principal manufactures of Egypt, which are not conſumed at home, great quantities of theſe being ſent to Turkey, France, Algiers, Italy, and other parts. Linen, woollen, and ſilk, are the three chief manufactures here. The ſilk is worked into large pieces for womens veils, and of ſome are made rich handkerchiefs worked with gold: many ſatinets and taffeties are made in Cairo, but both are inferior to thoſe of India; the wool is manufactured into carpets of different colours and ſizes, and various kinds of garments. The linen is made from flax which principally grows in the Delta: the threads are drawn from the diſtaff by letting the ſpindle hang down without being ſpun. The linen, however, when made, is not very fine, which ſeems to be principally owing to there not being a great demand for it in Egypt, as people of diſtinction wear a kind of fine light muſlin, which ſeems better adapted to ſo hot a climate. The chief place for making the linen is at Roſetta, which is in general cheap and white.

At Cairo, red leather is made, and a better ſort is prepared at Alexandria; yet the latter is far inferior to that which is made in Morocco. Pebbles are here finely poliſhed for ſnuff boxes, handles for knives, &c. They are done by a wheel, like jewellery-work, and are not to be rivalled any where.

A gentleman who reſided many years at Grand Cairo, and belonging to the factory there, has favoured us with the

the following account of the trade carried on by the Engliſh at this place:

"The goods we have to ſell here, ſays he, are conſigned to us by ſome eminent Turkey merchants in London. The principal articles are, woollens, lead, lead ore, tin, fire-arms, cutlery, hard-ware, optics, bob and chime clocks, alſo watches, made in a particular manner for the Turkey trade. We ſell our goods to ſome for ready money, and we barter with others for ſome of the following articles, viz. cocculus indicus, aſſafœtida, ſal ammoniac, aloes, myrrh, frankincenſe, ſagapenum, gum tragacanth, gum arabic, gum elemy, ſaſſafras, coffee, and other commodities.

"On our firſt ſettling here, and ſelling goods to the Mahometans, they would ſometimes bring them back, after having kept them a week, complain of defects when there were none, and inſiſt on having the money returned; but we were ſoon after inſtructed in what manner to deal with them. When we ſell any thing now to a Mahometan, as ſoon as the price is agreed on, which we will ſuppoſe is two hundred zermahoop chequins, we call in two Mahometans as witneſſes, and then take a handful of dirt, and put it upon the goods, ſaying at the ſame time, "We ſell you this dirt for two hundred zermahoop chequins:" if he replies, "I buy this dirt for two hundred zermahoop chequins," the bargain will then be like the laws of the Medes and Perſians, which alter not. Perhaps cuſtom only has eſtabliſhed this method; but be that as it may, the goods are never afterwards returned on our hands. When we have gum arabic, frankincenſe, myrrh, or cocculus indicus, to ſend to Chriſtendom, we always take care to have it garbelled firſt; but we, and all other Franks here, are obliged to employ a ſet of men called Garbellers, and no other, as this privilege is yearly purchaſed of the baſha for a certain ſum.

"Thoſe merchants who conſign goods to Cairo, ſhould be very careful to ſee them well and ſecurely packed or embaled. We had thirty barrels of tin in rods conſigned to us by a merchant in London; it came very ſafe to Alexandria, and was there unſhipped and put on board ſome veſſels for this place. In their paſſage up the Nile, the exceſſive heat of the ſun had ſuch an effect on the barrels, as to cauſe ſome of them to fall intirely to pieces, others loſt their hoops, and ſome their heads; which gave the poor pilfering ſailors, who work theſe veſſels, a fine opportunity of making a penny; which when the goods arrived at Boulac, we find they had not neglected; for out of every barrel damaged, they had taken ſome pounds weight of tin, and ſold it at different villages on the banks of the Nile. I would adviſe merchants who ſend goods to Cairo, not to have it put up in barrels, but in ſtrong caſes made of elm or oak, to the length of the rods, and have them well nailed up; were this done, there would ſcarce be a probability of an ounce being loſt; for I never heard of Nile ſailors forcing any packages open. Woollens ſhould be embaled as tight as poſſible, with a tarpaulin under the outſide canvas; for at the mouth of the Nile is a boughas, or mud-bank, on which ſometimes the germs run foul; but cloth packed up in the manner I deſcribe, may, in caſe of this accident, be got without damage into another germ.

It is uſual to pack up gold and ſilver ſtuffs in ſtout waxed cloth, and then put them in a ſtrong caſe. In and near Cairo, they make oil of the ſeeds of ſafflowers and ſell the greaves at twenty-ſix paras the quintal of five hundred rotolos; theſe greaves are uſed by the poor people for food. In Upper Egypt there are many plantations of ſugar-canes; the ſugar and molaſſes made there are ſent to a kan near Boulac, for ſale; the molaſſes are put into the ſkins of oxen, heifers, calves, and other animals, which appear like ſo many dead beaſts, when quite full.

Brokers, who are moſt of them Jews, conduct the chief part of the buſineſs: theſe will buy or ſell for their employers, no matter how, ſo that they get the brokerage. A native of Aleppo, who kept a ſhop in this city, ſold many pikes of woollen cloth, to a great Turk, for the cloathing of his ſervants, and to be given to the poor; and a few days after being deſired by the Turk to bring in his bill, replied, that, through the hurry of buſineſs, he had forgot to enter that tranſaction in his book; that, he perfectly remembered the rate per pike agreed on, but as to the number of pikes, he was totally at a loſs. The Turk deſired him to gueſs as near as he could; and the ſhop-keeper, ſuddenly recollecting himſelf, aſked the Turk if he had the liſting of the cloth by him; and was anſwered in the affirmative; then ſaid he, we can ſoon ſettle the matter by meaſuring that, which muſt be the ſame as the length of the cloth. The liſting was meaſured, and the ſhopkeeper was paid for as many pikes of cloth; but he groſsly impoſed on the Turk; for it was evident he made him pay twice as much as he ought, as all woollen cloth has two liſtings. The baſeneſs of this tranſaction was a few days after explained to the Turk; but the Aleppo knave had a friend who warned him of his danger, and adviſed him to decamp, which he immediately did.

We pack the drugs, &c. for Chriſtendom in large ſquare baſkets made of date-tree wood, which are called coffaſſes; we line them with coarſe blue linen, and cover them with ſkins of beaſts. During the Turkiſh lent, month, or moon Ramazan, we ſell more woollens than at any other time; for then the Turks, againſt the feaſt of Bairam, purchaſe great quantities for the new cloathing of themſelves and ſervants.

They make uſe of the following weights in Egypt; viz. A grain is the firſt and leaſt, four of which is a killat. Sixteen killats is a dram, of which all the Egyptian weights are compounded. One dram and a half is a mettigal, by which gold and ſilver lace is weighed. One hundred and forty-four drams is a rotolo, and is equal to one pound, four ounces, one dram, and eight-elevenths. Four hundred drams is an oke, by which weight ſhopkeepers ſell pepper, ſugar and other goods.

The quintals in Egypt are, one of thirty-ſix okes, others of one hundred and ten, one hundred and thirty three, one hundred and fifty, and one hundred and fifty-five rotolos. One pound avoirdupois is equal to one hundred and forty-two drams, twelve-fourteenths. One hundred weight to forty okes. One oke to two pounds, twelve ounces, four fifths. One hundred okes to two hundred and eighty pounds.

The coins current in Egypt are, burbers, medines, and ſequins. The burber is a copper piece of money about as big as a ſix-pence, twelve of which make a medine, which is a piece of iron ſilvered over, and about the ſize of a ſilver three-pence. The ſequin is of two ſorts; the one, called a funduclee, is of the value of one hundred and forty-ſix medines; the other, called a zermahoop, is worth one hundred and ten medines. Aſpers, though not coined in Egypt, are taken here, three going to a medine. Barbary ſequins and Spaniſh pieces likewiſe go here. In ſpeaking of great ſums, the inhabitants of Egypt always reckon by purſes, a purſe being twenty-five thouſand medines, or one hundred and twenty pounds ſterling.

The Turks begin their month which is lunar, at the time the moon firſt appears. The coptis month is thirty days: and every year they have five intercalary days, and every fourth year ſix. Their æra begins three hundred and two years after Chriſt, from the martyrdom of the ſaints in Egypt, in the reign of the emperor Diocleſian.

Caravans come from Tunis and Algiers to Cairo; beſides, there is one of the Barberines, from Sennar, who bring the goods of Ethiopia, and of ſeveral parts of Africa, as black ſlaves, gold duſt, elephants teeth, gums, oſtrich-feathers, muſk, ambergris, and ebony. One great caravan that arrives at Cairo, conſiſts of thoſe blacks who come from the country near the Iſle of Pheaſants, and paſs through Fez. Morocco, and Tripoli, being about eight months on their journey, and chiefly bring gold-duſt.

The principal inconveniencies and diſtempers people are ſubject to in this country, are, firſt, exceſſive heat, ſo intolerable, that a man knows not how to ſet about any buſineſs; and in the ſummer nights there is no ſleeping quietly for muſketoes, or gnats; there are always ſwarms of them buzzing about; the beſt remedy againſt them is to have a fine cloth tacked cloſe round the bed, but ſome of them will get in and torment a perſon notwithſtanding. Another inconvenience is the ſand, which inſinuates itſelf every where, inſomuch that you will find the bed-clothes full of it, and as hot as if they had been warmed with a pan of coals.

A pain in the ſtomach foreigners eſpecially are very ſubject to, which proceeds from their going open breaſted, which chills their bowels, and cauſes dangerous fevers and fluxes, eſpecially in autumn, when the river overflows the country.

Another diſtemper which reigns here is the ſwelling of the ſcrotum; and ſore eyes are almoſt univerſal in ſummer time, occaſioned by the ſcorching heat reflected from the ſand, and the duſt itſelf, which is very ſubtile and ſalt, and pernicious to the ſight. Our author relates, that a French merchant of his acquaintance loſt his ſight by it, as many of the country people do; and others were ſo afflicted with it, that they were in the extremeſt torture, crying out night and day, for a fortnight or three weeks together, and could

get no ſleep. You will hardly ſee any body abroad, in ſummer time, that is perfectly free from this diſtemper, and moſt of them with little ſlips of blue ſtuff hanging over their eyes. M. Thevenot ſays, he eſcaped ſore eyes himſelf, which he imputes to his waſhing them frequently with cold water.

The ſwelling of the legs, attended with ſharp pains, is another inconvenience many people ſuffer at Cairo, and when the water of the Nile begins to riſe, there are few people but are troubled with an inflammation, which runs over the whole body, and when they drink they feel ſharp pricking pains all over them, as if a hundred needles were run into them at once.

The plague generally viſits them once in ſeven years, during which time it is obſerved to take a tour round the Ottoman empire, but is ſometimes at Cairo two years together. All diſeaſes are more fatal in Egypt during the Hamchin, or hot winds, than at any other time, and they generally begin about the ſeventh of April, and laſt fifty days. They bring abundance of ſand into the town, which gets into the chambers, trunks, and boxes, let them be never ſo cloſe; and many of the people, who travel with the caravans at this time of the year, periſh by theſe winds. As ſoon as the hot winds ceaſe, and the dews begin to fall, by ſome, or, as others ſay, when the Nile begins to riſe, all diſtempers, even the plague itſelf, ceaſes to be mortal; ſo that this noble river conſtantly brings health and plenty with it, when it overflows the country, and may well be the cauſe of that annual joy they expreſs on its riſing to a certain height.

As for phyſicians or remedies, the Mahometans in Egypt ſcarce uſe any, adhering immoveably to their doctrine of fate; and, therefore, when the plague is in a family, they viſit their neighbours as at other times, and do not ſcruple to wear the clothes of a man that died of it.

SECT. V.

Containing a Deſcription of the EGYPTIAN Pyramids, Catacombs, and Mummies, &c.

NEAR Cairo we meet with thoſe extraordinary monuments, the pyramids, which were formerly ranked among the ſeven wonders of the world, and cannot now be viewed without admiration. Theſe are ſituated upon the ſolid rock, at the foot of the high mountains that accompany the Nile in its courſe, and ſeparate Egypt from Libya. Their architecture, both on the inſide and without, is extremely different with reſpect to diſtribution, materials, and grandeur. Some of theſe are open, others are ruined, and moſt of them are incloſed; but all have been injured by time. The immenſe quantity of materials uſed in conſtructing them renders it impoſſible for them all to have been built at the ſame time, and thoſe that were laſt erected greatly exceed the firſt in magnificence.

Theſe pyramids are the works of the remoteſt antiquity, and even more early than the times of the moſt antient hiſtorians whoſe writings have been tranſmitted to us, the very epocha of their beginning being loſt at the time when the firſt Greek philoſophers travelled into Egypt. It is not improbable that the invention of pyramids was owing to the ignorance of the people in having no other method of covering a great circumference, before the art of arching and employing columns to ſupport a roof were invented. It is indeed a mortifying conſideration, that the moſt durable works in architecture have been owing to ignorance. Thus the famous aqueducts of the antients, the remains of which are the wonder and admiration of the preſent times, were owing to their not knowing that water would riſe up nearly to the ſame height as its ſource.

It is the opinion of the common people, that the pyramids, the vaſt palaces, and the temples, whoſe remains fill the ſpectators with amazement, were built by giants; and, indeed, it has been ſuppoſed, that men ſome thouſand years ago were much larger than at preſent; but theſe opinions are fully confuted by the height of the entrances of the caves from whence they have taken ſtones for theſe purpoſes, by the narrowneſs of the paſſages of the pyramids, and by the height of the doors of the moſt antient ſtructures.

As the principal pyramids, being ſituated three or four leagues to the weſt of Cairo, near the place where the city of Memphis is ſuppoſed to have ſtood, they are commonly called, The pyramids of Memphis. They ſtand on a rocky plain, eighty feet perpendicular above the level of the ground overflowed by the Nile; and it appears that this rock, not being every-where level, has been ſmoothed by the chiſſel. It is remarkable, that this rock is almoſt covered by the flying ſand brought by the wind from the adjacent mountains; and that in this ſand are a great number of ſhells, and thoſe of oyſters petrified, which is the more ſurpriſing, as this plain of ſolid rock is never overflowed by the Nile, which, beſides, has no ſhell-fiſh throughout its whole courſe. Here are alſo found the beautiful flint-ſtones which, on account of the ſingularity of their colours, are thought much more valuable than agate, and of which the people of Cairo make handles for knives, and ſnuff-boxes.

Four of the pyramids more particularly deſerve the attention of the curious; beſides theſe, there are ſeven or eight others, but theſe laſt are not to be compared with the former, eſpecially as they are in a very ruinous condition. The four principal are nearly upon the ſame diagonal line, at about four hundred paces diſtant from each other; and their faces exactly correſpond to the four cardinal points.

The two moſt northerly are the largeſt; and Mr. Greaves, who meaſured the bottom of the firſt, found that it was exactly ſix hundred and ninety-three Engliſh feet ſquare, and that its perpendicular height is five hundred feet; but if it be taken as the pyramid aſcends inclining, then the height is equal to the breadth of the baſe.

It may be proper here to obſerve, that the ſquare of Lincoln's-inn-fields is ſaid to have been formed by Inigo Jones of the ſize of this pyramid, which if placed in that ſquare, would on all ſides reach to the houſes. This pyramid is aſcended on the outſide by ſteps, which run round the pyramid; the number of them has, however, been very differently related; but they are between two hundred and ſeven and two hundred and twelve in number, and from two feet and a half to four feet high, and are broad in proportion to their height.

The external part of the pyramid is chiefly built of great ſquare ſtones, cut from the rock which extends along the Nile, where to this day may be ſeen the caves from whence they were taken. The ſize of the ſtones is unequal; but they have all the figure of a priſm, that they may lie perfectly cloſe. The architect has only obſerved the pyramidical figure, without troubling himſelf about the regularity of the ſteps; and it appears that the inequality of the ſtones, which differ four, five, and even ten inches, is the reaſon why ſo many travellers who have counted them, always differ with reſpect to number. Theſe kinds of ſteps were not deſigned for aſcending and deſcending, and therefore regularity was no farther ſought than was neceſſary for the general ſhape of the pyramid and the facility of the work. It appears that the external lays are ſolely compacted by the weight of the ſtones, without mortar, lead, or cramps of any metal; but in the body of the pyramid they have uſed a mortar compoſed of lime, earth, and clay At its four corners it is eaſily perceived that the lower ſtones are placed on the rock, without any other foundation; but beyond them, quite to the middle of each face, the wind has formed a ſlope of ſand, which on the north ſide riſes ſo high as to afford a commodious aſcent to the entrance of the pyramid, which is about forty-eight feet in height.

When you aſcend to the entrance, you diſcharge a piſtol to frighten away the bats, and then two Arabs, whom you are obliged to have for your attendants, enter and remove the ſand, which almoſt ſtops up the paſſage. You then ſtrip yourſelf to your ſhirt, on account of the exceſſive heat conſtantly felt in the pyramid, and in this condition enter the paſſage, each of the company having a wax candle in his hand; for the torches are not lighted till you are in the chambers, for fear of cauſing too much ſmoke. This paſſage runs downwards ninety-two feet and a half, and is very ſteep; but at the farther end of it is an opening ſo ſmall, that it is barely a foot and a half high, and two feet in breadth; yet through this hole you are obliged to paſs; but the traveller, inſtead of creeping, commonly lays himſelf down, and each of the two Arabs that went before take one of his legs, and thus drag him over the ſand and duſt through the paſſage.

After having paſſed this ſtrait, which is luckily no more than two ells long, you enter a pretty large place, where travellers commonly take ſome refreſhment to give them courage to proceed farther.

All theſe paſſages, except the fourth, are three feet and a half ſquare, and lined on the four ſides by great blocks of white marble, ſo poliſhed, that this, with the acclivity

of

of the way, would render them impaſſable, were it not for little holes cut for reſting the feet in. It coſts great trouble to advance forward, and if you make a falſe ſtep, you will ſlide backwards to the place from whence you ſet out; but by obſerving theſe holes you proceed commodiouſly enough, though you muſt ſtoop till you come to the end of the ſecond paſſage, which is a hundred and ten feet in length: you then come to a reſting-place, on the right hand of which is an opening into a kind of well, in which nothing is to be found but bats that are upwards of a foot long.

The third paſſage, begins at this reſting place: it is a hundred and twenty-four feet in length, and runs horizontally in a ſtraight line to the inferior chamber. The height of this gallery is twenty-ſix feet, and the breadth ſix, with benches on each ſide of poliſhed ſtone. Before the chamber are ſome ſtones with which the way is embarraſſed; but having ſurmounted this difficulty, you enter a chamber which is alſo covered with ſtones. This chamber is lined with granite, finely poliſhed; but at preſent extremely black with the ſmoke of the torches uſed in examining its various parts.

After viſiting the lower chamber, you return to the reſting-place, and aſcend upwards by faſtening your feet as before, till coming to the end of the fourth gallery you meet with a little platform. You muſt then begin to climb again, but ſoon finding a new opening, where you may ſtand upright, you contemplate a little room, which is at firſt no more than a palm's breadth larger than the galleries, but afterwards enlarges itſelf on both ſides; and at length, ſtooping for the laſt time, you paſs the remainder of the fifth gallery, that leads in a horizontal line to the upper chamber. This is a very noble room in the center of the pyramid, at an equal diſtance from all the ſides, and almoſt exactly between the baſis and the top. The floor, ſides, and roof, are all formed of vaſt blocks of granite marble. There are but ſix ranges of ſtone from the bottom to the top; and thoſe which cover it are of a ſtupendous height, like ſo many huge beams lying flat, and traverſing the room, nine of them forming the cieling. This hall is ſomething more than thirty-four feet in length; it is ſeventeen feet broad, and nineteen feet and a half in height.

On the left ſide is what is generally ſuppoſed to be a coffin, formed of one entire piece of granite marble, and uncovered at the top; and on being ſtruck with a key, ſounds like a bell. This is ſaid to be the tomb of Cheops, king of Egypt, whom Diodorus calls Chemnis. Its form is like that of an altar, hollowed within, and the ſtone is ſmooth and plain without any relief. The exterior ſurface contains ſeven feet three inches and an half in length, three feet, three inches, and three quarters in depth, and as much in breadth. The hollow part within is little more than ſix feet long, and two feet broad. It is common for people to diſcharge a piſtol in this room, which makes a noiſe reſembling thunder. Perſons go out by the ſame way they entered; and the traveller has no ſooner quitted the pyramid, than he wraps himſelf up warm, and drinks a glaſs of ſome ſpirituous liquor, to preſerve himſelf from a pleuriſy, occaſioned by the ſudden tranſition from an extremely hot to a temperate air.

When the perſon has regained his natural heat, he aſcends the pyramid, in order to enjoy a delightful proſpect of the ſurrounding country. The way to aſcend it is by the north-eaſt corner; and when the ſteps are high, or are broken, the perſon muſt ſearch for a convenient place where the ſteps are entire, or a high ſtep is mouldered, ſo as to facilitate the aſcent. The top does not end in a point, but in a little flat or ſquare, conſiſting of nine ſtones, beſides two at the angles that are wanting. Abundance of people, who have viſited the pyramid at different times, and were willing to tranſmit to poſterity the memorial of their being here, have inſcribed their names on the top, in the entrance, and in the chambers of it.

It has been affirmed by ſeveral travellers, that a man who ſtands on the top of this pyramid, could not ſhoot an arrow farther than the bottom, but it muſt neceſſarily fall upon the ſteps; however, it is very certain, that a good bow and a ſtrong arm will ſend an arrow beyond them. There is as little juſtice in the remark, that theſe pyramids caſt no ſhadows. In ſummer-time, it is true, and for near three quarters of a year, the pyramids caſt no ſhadows at noon; but every morning and evening in the year, and at noon in winter, they certainly caſt a ſhadow proportionable to their bulk; and Thales, the Miletian, according to Pliny and Laertius, took the height of theſe pillars by their ſhadows about two thouſand years ago.

The ſecond pyramid appears on approaching it, even higher than the firſt, which is owing to its being placed in a more elevated ſituation, for they are in other reſpects both of the ſame ſize, only the ſecond is ſo well cloſed, that there is not the leaſt ſign of its ever having been opened; and it is coated on the four ſides with granite, ſo well joined and poliſhed, that the aſcending it would ſcarcely be attempted by the boldeſt man living. On the north and weſt ſides are two very ſtately and celebrated pieces of architecture, about thirty feet deep, and one thouſand four hundred feet long, cut out of the rock in a perpendicular, and ſquared with the chiſſel; which, it is ſuppoſed, were deſigned as lodgings for the Egyptian prieſts.

The ruins of a temple are to be ſeen on the eaſtern ſide of this pyramid, the ſtones of which are ſix feet broad, and as many deep, moſt of them ſixteen or ſeventeen, and ſome twenty-two feet in length. The whole building was an hundred and ſixty feet in depth, and an hundred and eighty in front.

At a ſmall diſtance from theſe pyramids, and about a quarter of a mile from the river, is a monſtrous figure, called a ſphinx, the face of which repreſents that of a beautiful woman, and the body that of a lion. This extraordinary figure is ſaid to have been the ſepulchre of king Amaſis. It is of one entire ſtone, ſmooth and poliſhed, and was cut out of the ſolid rock; and Dr. Pococke obſerves, that what ſome have thought joinings of the ſtones, are only veins of the rock. The lower part of the neck, or beginning of the breaſt, is thirty-three feet wide, and twenty thick to the back; and thence to a large hole in the back ſeventy-three feet, and from thence to the tail thirty feet. Beſides the above mentioned hole in the back, there is another on the top of the head, by which it is conjectured the prieſts entered to deliver their oracles. The ſand is raiſed about it to ſuch a height, that the top of the back can only be ſeen. Some people have taken great pains to break off part of the noſe of this figure, and thereby very much diſfigured this celebrated monument of antiquity.

The third pyramid is ſituated on a riſing ground, about two hundred yards from the ſecond, and is ſaid to have been built by Mycherinus, the ſon of Cheops, and ſucceſſor of Cephrenes. It is cloſed like the ſecond, and is without any coating. It meaſures about three hundred feet on every ſide, and, though leſs than the other two, is ſaid greatly to excel them in the beauty of its workmanſhip. On the outſide of this pyramid was likewiſe a temple, which was alſo compoſed of ſtones of a prodigious ſize, and is more diſtinguiſhable in its ruins than the other.

The next pyramid to be mentioned, which is the fourth, is an hundred feet leſs than the third, and alſo without coating; it is cloſed, and reſembles the others, but had no temple: it has however, one ſingularity, which is, its ſummit being terminated by a ſingle ſtone that is very large, and ſeems to have ſerved as a pedeſtal. It is ſituated a little more to the weſt, and out of the line of the others. Theſe four great pyramids are ſurrounded by others that are ſmaller, which are in a very ruinous condition, and have been for the moſt part opened.

The pyramids of Soccotra, ſo called from a mean village of that name, are at near ten miles diſtance from thoſe laſt mentioned. Theſe extend from north to ſouth, and are ſituated at the foot of the mountains, in a plain that ſeems formed by nature, for the uſe to which it is applied, it not being of great extent, but ſo high that it is never overflowed by the Nile; and there is great reaſon to believe that the celebrated city of Memphis extended almoſt to this ſpot.

The pyramid, among theſe, which riſes above the reſt, is called the great pyramid to the north. On meaſuring this ſtructure, it was found that the eaſt ſide extended ſix hundred and ninety feet, and the north ſide ſeven hundred and ten. The perpendicular height is three hundred and forty-five feet. It has one hundred and fifty-ſix ſteps from two to three feet in height, and is built of the ſame kind of free-ſtone as the others, but was caſed with a fine hard-ſtone, which is ſtill remaining in ſeveral parts of the ſtructure, though a great deal has fallen down. About one-third of the way up is an entrance three feet five inches wide, and four feet two inches deep. The ſtones within are of the height and breadth of the entrance, and about five feet in length. Mr. Norden and his companions entered this paſſage, which is ſteep, and has alſo holes cut as reſts for the feet. Having paſſed through it, they entered a room twenty-two feet and a half long, and eleven feet ten inches wide. At the height of ten feet ſix inches a range of ſtones project five inches inwards on each ſide,

and in the ſame manner twelve tires project one farther than the other till they meet at the top. To the weſt of this room is another that reſembles it: theſe rooms are formed of ſmooth white ſtones, ſo large, that there are only three or four of them in breadth, and ſeven of them in length.

There is another, at the diſtance of a mile to the ſouth-eaſt, called the great pyramid to the ſouth, which at the bottom is about ſix hundred feet ſquare. It is built within of good hewn ſtone, and ſeems to have been caſed all the way up.

About two miles to the eaſt of the laſt great pyramid, and on a lower ground, is one built of unburnt brick, which ſeems to have been made of the mud of the Nile, it being a ſandy black clay, with ſome pebbles and ſhells in it, and mixed up with chopped ſtraw, in order to bind the clay together, as unburnt bricks are at preſent uſually made in Egypt and other parts of the eaſt. Some of theſe bricks are thirteen inches and a half long, ſix inches and a half broad, and four inches thick; but others were fifteen inches long, ſeven broad, and four inches three quarters in thickneſs, but were not laid ſo as to bind each other. This pyramid extends two hundred and ten feet on the weſt ſide, and is one hundred and fifty feet high; and at the top is forty-three feet by thirty-five. It ſeems to have been built with five degrees, each being ten feet broad, and thirty deep, yet the aſcent is eaſy on account of the bricks having crumbled away through length of time.

Theſe pyramids are ſuppoſed by many, to have been built by the Iſraelites, which is confirmed by Joſephus, who ſays, that when time had extinguiſhed the memory of the benefits of Joſeph, and the kingdom was transferred to another family, they uſed the Iſraelites with great rigour, waſting them by ſeveral labours. They were ordered to cut canals for the river Nile, to raiſe walls and caſt up banks to hinder the inundation of that river, and that they oppreſſed them alſo with erecting thoſe fabricks of the pyramids, and compelling them to learn many mechanical arts. But Mr. Greaves thinks it a ſufficient confutation of this account, that the pyramids are built of ſtone, and not of brick, in making whereof the Iſraelites were employed. But though the Iſraelites might, a little before their departure from Egypt, be employed in making bricks, methinks it does by no means follow, that they were not empolyed in any other works. And when is it more likely that the Egyptian kings ſhould undertake theſe vaſt ſtructures, than when they had ſo many hundred thouſand ſlaves in their dominions, whom they ſeemed under a neceſſity of employing conſtantly in ſuch works as theſe to prevent an inſurrection? beſides, it has ſome weight with me, that this was the general opinion, ſo long ſince as Joſephus wrote, for had it been much later, the time of their being erected would not, in that age, have been ſo difficult to diſcover.

The time when theſe pyramids were built is not leſs uncertain than the founders names; for nothing can be more precarious than the Egyptian chronology, where we find a ſucceſſion of kings for fifty thouſand years; and they pretend to enumerate no leſs than three hundred and thirty kings, who reigned before king Mœris. Mr. Greaves has taken an infinite deal of pains to aſcertain the time of their erection, and concludes at length, that they were built between the time of the Iſraelites going out of Egypt, and the building of Solomon's temple, being a ſpace of four hundred and eighty years. But we cannot help inclining ſtill to believe that they were built by the Iſraelites, whom the kings of Egypt employed in theſe ſtupendous works, on a politic account, rather than for any oſtentation of their power and grandeur, as ſome writers imagine: not but that there might be ſome other inducements to the erecting them, beſides the keeping a mutinous people in action, who, upon the leaſt reſpite from their labours ſeemed ready to break out into rebellion. That they were actually employed in laborious works, we have the beſt authority we can have, both from ſacred and profane writers. And as there were no leſs than ſix hundred thouſand of theſe labourers, beſides women and children, as it appears there were at their leaving Egypt, when can we aſſign a properer time for erecting theſe vaſt ſtructures, than when they dwelt in this kingdom? their being employed in general in preparing materials for building, by the kings of Egypt, of which we have ſuch undoubted teſtimonies, carries a much ſtronger preſumption that they were employed in the erecting theſe fabrics, than the account of their making bricks does, that they were never concerned in any other work, but brick-making. Beſides a leſs body of men than the Iſraelites were, would have made but a ſlow progreſs in ſuch mighty buildings: and the reaſon the dimenſions of the Egyptian pyramids exceed any other ſtructures that ever were in the world is, becauſe never any other prince employed ſo prodigious a number of labourers, or had equal reaſon for doing it. Another reaſon why we are inclined to believe they are as antient as the time of the Iſraelites being in Egypt is, that no profane author is able to aſſign the time of their erection; but we leave every man to his own conjectures.

Many perſons have thought that the pyramids were erected as ſepulchres for the kings of Egypt; but if this was the caſe, they would ſurely have provided a better entrance, and not made it neceſſary to drag the corpſe through long, narrow, and intricate paſſages before it could be placed in its tomb: and it ſeems improbable that in the firſt pyramid eleven acres of ground ſhould be covered with blocks of ſolid ſtone for ſo great a height, merely for the ſake of a room or two of no extraordinary ſize, in which a coffin was to ſtand. Dr. Shaw is of the ſame opinion, that the great cheſt of granite marble found in the upper chamber of the pyramid, was probably intended for ſome religious uſe, it being of a different form from the ſtone coffins found in Egypt, which are conſtantly adorned with ſacred characters, and made with a kind of pedeſtal at the feet; for the mummies always ſtand upright, where time or accident have not diſturbed them; but this cheſt lies flat upon the floor, and conſequently wants that dignity of poſture, which, ſays Dr. Shaw, we may ſuppoſe this wiſe nation knew to be peculiar, and therefore would be very ſcrupulous of denying, to the human body. Upon the whole, then, in ſo ſymbolical a religion as that of the antient Egyptians, it is not improbable that the pyramidical form might convey ſome ſacred meaning; and perhaps the pyramids themſelves might be objects repreſenting the deity, and to which they offered their adorations; juſt as the Paphian Venus was, according to Tacitus, not of a human, but of a pyramidical form; as is alſo the black ſtone worſhipped by the Gentoos of India, under the name of Jaggernaut.

We ſhall now proceed to give an account of the catacombs, or mummy-pits, and Egyptian mummies, which are to be ſeen in the ſame plain in which theſe laſt pyramids are placed, the entrance into which is by a kind of wells, about four feet ſquare, and twenty feet deep, cut through a ſlaty rock, covered with ſand, which being moved by the wind, ſometimes fills up theſe entrances. However, ſome of them are caſed as far as the depth of the ſand with large unburnt bricks. People are uſually let down with ropes, when being got to the bottom, they find a paſſage five feet wide, and about fifty feet in length, filled up very high with ſand, and having got to the end of it turn down another paſſage to the left hand about ſix feet high, on one ſide of which are little rooms, with benches about two feet above the floor, and on the other ſide are narrow cells juſt big enough to receive a large coffin. At the end of this alley is another, which is narrower, and on each ſide are niches that ſeem deſigned for coffins placed upright. This paſſage leads to rooms in the form of an oblong ſquare, filled with the remains of mummies. Our author obſerves, that here the inferior perſons of a family were probably depoſited, while the heads of the families were placed in the niches. Each family had originally, perhaps, its burial-place; and as the family increaſed, they branched out theſe ſepulchral grottos, that every deſcendant might have a ſeparate place for their remains.

There are found in theſe catacombs the reliques of embalmed bodies, ſwathes ſcattered up and down, and ſometimes coffins ſtanding upright and entire, made of ſycamore or Pharaoh's fig-tree, that have continued in theſe ſubterraneous apartments above three thouſand years, though the wood is to appearance ſpongy and porous. The upper part of the coffin is commonly ſhaped like a head, with a face painted upon it; the reſt is a continued trunk, and the end for the feet is made broad and flat for it to ſtand upright in the repoſitory. Other coffins are made of ſtone, and they are generally adorned with carved work repreſenting hieroglyphical figures of various animals.

On opening the coffins the bodies appear wrapped up in a linen ſhroud, upon which are faſtened ſeveral linen ſcrolls painted with hieroglyphic characters. Theſe ſcrolls commonly run down the belly and ſides, or are fixed on the knees and legs. On a kind of linen headpiece, which covers the face, the countenance of the perſon is repreſented in gold, or painted: but theſe paintings are very much decayed by time. The whole body is ſwathed by fillets or narrow bandages of linen wrapped round in ſo curious

curious a manner, with ſo many windings and ſo often upon each other, that it is ſuppoſed a corpſe has ſeldom leſs than a thouſand ells of filletting. Thoſe eſpecially about the head and face are laid on with ſuch ſurpriſing neatneſs, that there may be plainly perceived ſomething of the ſhape of the eyes and mouth.

The learned and ingenious Dr. Pococke brought a mummy to England, which was in a coffin made of wood, the ſeams of which were filled up with linen and fine plaſter. Four folds of cloth were over the head, and the upper one painted blue. Beneath theſe was a compoſition about half an inch thick of gum and cloth burnt by the heat of the things applied to it, and over the ſkin was a coat of gum, or bitumen, of the thickneſs of a wafer. The back part of the head was filled with bitumen, which had been poured in at the noſe, and had penetrated even into the bone of the ſkull. The body was bound round with a bandage of linen tape about three quarters of an inch broad, under which were four folds of cloth, then a ſwathe two inches broad, and under that eight different bandages of the ſame breadth laid acroſs from the ſhoulders to the hips on the other ſide: under this was a cruſt of linen about an inch thick, burnt almoſt to aſhes, but ſticking together by means of the gums with which it had been ſmeared. The arms were laid acroſs the breaſt, the right hand over the left, and both lying towards the face. From the hips to the feet, were eight bandages twelve inches broad, and under theſe were bandages an inch thick conſumed by time, and the heat of the drugs; but the outer bandages did not appear to have been ſmeared with gums. The coffin in which the body was put was formed of two pieces of wood hollowed ſo as to receive it, and being put together were faſtened with broad pegs in the top fixed in holes in the lower part. This coffin was in the ſhape of an human body, as bound up after its being embalmed; and both the coffin and body wrapped up in linen, were painted and covered with a thin plaſter.

One of the catacombs is appropriated for the birds and other animals worſhipped by the antient Egyptians; for when they happened to find them dead they embalmed them, and wrapped them up with the ſame care as the human bodies. The catacomb is about thirty feet deep, and has the ſame kind of entrance, only the paſſage from it is about eight feet wide, and almoſt filled with ſand. It is alſo much more magnificent than the others. The birds are depoſited in earthen vaſes, covered over and ſtopped cloſe with mortar. In one of the irregular apartments are large jars that might be for bigger animals. In ſhort, the birds were embalmed by dipping them in gums and aromatic drugs, and bound up, like the human bodies, with many folds of linen.

We ſhall conclude this ſection with a deſcription of that famous building called the Labyrinth, at a place called the town of Caroon, near the city of Memphis, which is ſaid to have been much more ſurpriſing than the pyramids. It was built, according to Herodotus, by the twelve kings of Egypt, when the government was divided into twelve parts, as ſo many places for them to meet in, and tranſact the affairs of ſtate and religion. This was ſo extraordinary a building, that Dœdalus the famous Athenian artificer, came to Egypt on purpoſe to ſee it, and formed the labyrinth in Crete for king Minos on the model of this. The ſame hiſtorian thus deſcribes it: "This labyrinth has twelve ſaloons or covered courts, with gates oppoſite to each other, ſix towards the ſouth, and ſix towards the north in continued lines. They are ſurrounded by the ſame outward wall. The apartments are on two floors, the one under ground, and the other over them, and are three thouſand in all, each floor conſiſting of one thouſand five hundred. Thoſe above ground I myſelf have ſeen and gone through, ſo that I ſpeak from my own knowledge; but thoſe beneath the ſepulchres of the kings, and of the ſacred crocodiles, the rulers of the Egyptians were by no means willing to exhibit. The upper apartments are greater than any other human works; for the outlets at the top, and the various windings through the ſaloons, gave me infinite ſurprize, as I paſſed from a ſaloon into apartments, and from apartments into bed-chambers, and into other rooms out of the bed-chambers, and from apartments into ſaloons. The roof of the whole is ſtone as well as the walls. The latter are adorned with ſculpture: each ſaloon has a periſtyle of white ſtones admirably joined together. Quite cloſe to the line where the labyrinth terminates, is a pyramid of two hundred and forty feet, on which large animals are engraven, and the entrance into it is under-ground." Little, however, is now to be ſeen of theſe boaſted pieces of art, but heaps of ruins, broken columns, ſhattered walls, and entablatures. Among the reſt, is the foundation of an oblong ſquare building formed of a reddiſh ſtone or marble. Some ſemicircular pilaſters are placed upon it, and the remains of the edifice above are of brick plaſtered over.

It is the opinion of Diodorus Siculus, and ſeveral other antient hiſtorians, that this ſtructure was abſolutely a ſepulchre in which many of the Egyptian kings, particularly thoſe who are ſuppoſed to have founded it, were interred; and this opinion appears the more probable, as thoſe monarchs prided themſelves in being depoſited in pyramids and other magnificent ſtructures, after their deaths.

Hiſtorians mention, that among the bodies of deceaſed men, which had been preſerved through many ages, and were actually entire in the time of Auguſtus, was that of Alexander the Great. They farther tell us, that Auguſtus, when in Egypt, had the curioſity to viſit the tomb of that mighty conqueror, and ſaw therein the body in a ſhrine of glaſs ſubſtituted in the room of one of gold, which had been taken away by Seleucus.

SECT. VI.

Treating of the Ruins ſtill to be ſeen of ſeveral cities of EGYPT, famous in antient Times; particularly BUSIRIS, HELIOPOLIS, ANTINOPOLIS; ſeveral remarkable Antiquities; a more particular Account of the miraculous Serpent Heredy; alſo a Deſcription of the Ruins of TENTYRA, THEBES, &c. with other Cities and Places of UPPER and LOWER EGYPT.

SOME of the ruins of the cities and temples of Egypt, like thoſe of Palmyra and Balbec, raiſe our ideas of their antient magnificence and grandeur; while others only ſhew the places where the moſt ſplendid cities, &c. once ſtood; the vaſt length of time ſince they were built having levelled them with the duſt, and only left a few ſcattered monuments of the moſt ſuperb ſtructures as teſtimonials of the truth of hiſtory, and as ſpecimens of the architecture of the early ages before it was improved, and carried to perfection by the Greeks. Thoſe of the laſt kind, and which are moſt imperfect, ſhall take the firſt place here.

The village of Baalbait, a little to the northward of Cairo, is ſituated on one of thoſe artificial eminences on which probably ſtood Buſiris, a city celebrated for its temple dedicated to Iſis: here are the remains of a temple, whoſe materials are the moſt coſtly of any in Egypt. The temple appears, from theſe ruins, to have been about two hundred feet long and one hundred broad, and, at about one hundred feet diſtance, it is encompaſſed by a mound raiſed to keep out the Nile. The outſide of this ſtructure was of grey granite, and the inſides and columns of red, the capitals being the head of Iſis: there ſeem to have been four rows of twelve columns each in the temple. But what moſt commands the attention and admiration of the curious is, the exquiſite beauty of the ſculpture; for though the figures are only about four feet high, there is ſomething ſo fine, and ſo divine in the mien of the deities and prieſts, that exceeds imagination. But the columns are frequently cut into mill-ſtones by the natives, who are conſtantly employed in deſtroying theſe fragments of antiquity.

To the north eaſt of Cairo are the ſmall remains of Heliopolis, or the City of the Sun, ſituated on the borders of the Delta, which is the Or of the Scriptures, and is now called Matarſa. It was a city of great antiquity, and famous for the worſhip of the ſun. They alſo worſhipped a bull, which was kept here under the name of Mnevis. A large mound encompaſſes the whole, the antient ſcite being about a mile long, and half a mile broad. Here are the remains of a temple, ſeveral ſphynxes, and an obeliſk near ſeventy feet high. The prieſts of Heliopolis were the moſt famous of all Egypt for the ſtudy of philoſophy and aſtronomy; and were the firſt that computed time by years, of three hundred and ſixty-five days. They had here a ſort of college conſiſting of a great number of rooms. Herodotus came to this place to be inſtructed in the Egyptian learning; and Strabo, when here, was ſhewn the apartments of Plato and Eudoxus. Near this city was a famous obſervatory, which received its name from Eudoxus, who was a great aſtronomer, and ſtudied that ſcience here for many years. There is great reaſon to think that the territory about Heliopolis is the land of Goſhen, called alſo Rameſes in Scripture; eſpecially as the children of Iſrael went by Rameſes the firſt ſtation, on their departure from Egypt; the country being near Memphis, where it is probable Pharaoh reſided at that time.

We read in hiſtory, that Seſoſtris erected, in Heliopolis, two obeliſks of extreme hard ſtone, brought from the quarries of Syene, at the extremity of Egypt, which were each one hundred and eighty feet high, and of one piece of granite. They were cut with a deſign to acquaint poſterity with the extent of his power, and the number of nations he had conquered. Auguſtus cauſed one of theſe obeliſks to be tranſported to Rome, and placed in the Campus Martius. He durſt not venture upon a ſecond, which was near the palace of Heliopolis, and of a prodigious ſize, made in the reign of king Rameſes, who it is ſaid employed twenty thouſand men in cutting it. This obeliſk muſt be conſidered as one of the moſt valuable monuments which now remain of Egyptian antiquity. It was reſpected even by Cambyſes, at the time when that furious prince put all to fire and ſword in Egypt, and who neither ſpared temples, nor thoſe ſuperb monuments, whoſe ruins are ſtill the admiration of travellers. This prince, after having made himſelf maſter of Heliopolis, gave up the whole town to the flames; but when he ſaw the fire approaching to this obeliſk, he ordered it immediately to be extinguiſhed. It was afterwards brought to Rome by Conſtans, the ſon of Conſtantine, and placed in the Circus, with immenſe labour and expence. It was afterwards thrown down, but re-eſtabliſhed by the care of pope Sixtus V.

The village of Matare is ſituated at a ſmall diſtance to the ſouth of the above city. It is ſaid the holy family lay for ſome time concealed here when they came into Egypt; and they add, that being in danger from ſome bad people, a tree opened, and became hollow to receive and ſhelter them.

More to the eaſt are the remains of an oblong ſquare edifice of white hewn ſtone plaſtered over, with a kind of baſe and plainth ranging round. Near it is a kind of ruſtic building that ſeems to have been a gate. At length appear the remains of the grand ſtructure itſelf, which is now called the caſtle of Caroon. It had a portico of ruſtic work, which is now no where above ſix feet high, and the front is more ruinous than any other part. On the other ſides are forty tiers of ſtone, each nine inches deep, and conſequently it is there thirty-three feet high; it has ſigns of a cornice ranging round with ornaments of ſculpture. There are four rooms in the length of this building, with the doors crowned with double cornices, and over each a kind of falſe door ornamented in the ſame manner; on the ſides of the walls are ſeveral niches, and many ſtones are ſcattered about the plain, of ſome of which the ſhafts of the columns appear to have been compoſed.

The ruins of the city of Antinopolis lie a little farther to the ſouth, where antiently was a town called Baſa; Antinous, who accompanied Hadrian into Egypt, being drowned there, that emperor built this city, and named it Antinopolis, in alluſion to his favourite, to whom he inſtituted games and divine honours. It was about four miles in circumference, and on the part where it ſtood is now a town called Enſineh. Some remains of this antient city are ſtill to be ſeen, particularly a beautiful gate, of which the front is almoſt entire; and behind it are four pillars, together with as many columns and their capitals, the fronts being fluted. Beyond this gate is an avenue with one hundred and thirty pilaſters on each ſide, but they are all in a very bad condition. At the end of this avenue ſtands the column of Alexander Severus, the Roman emperor; the fuſts, which is built of five pieces of ſtone, is thirty-two feet long, and has a proportionable diameter. The firſt piece and the capital is ornamented with foliage; the pedeſtal is ſquare, twelve feet high, and five broad. On one ſide of it is a Greek inſcription, but the greateſt part of it is ſo defaced as to be entirely unintelligible. Near this pedeſtal is another, on which alſo are the remains of a Greek inſcription. About one hundred yards from this laſt is a triumphal arch almoſt entire. The fronts are forty-eight feet wide, and the ſides twenty-four in length. It has three gates, the two outermoſt of which are ſeven feet wide, and twenty high; and the centre one, which is the largeſt, is ſixteen feet wide, and thirty feet high. Oppoſite each of the four ſides of this triumphal arch was a colonade, or range of pillars of red granite, of which nothing remain but ſome broken pillars.

In this part of Egypt alſo ſtood Cynopolis, or, The City of Dogs, in which Anubis was worſhipped; and dogs were held in great eſteem, a certain food being allotted to them. It is ſaid the riſe of this was owing to Anubis, a companion of Oſiris, who wore the dog's-ſkin for armour, as an emblem of his courage; as Macedon, his other companion, wore the ſkin of a wolf, on which account it is conjectured theſe animals came to be worſhipped.

Several other cities alſo ornamented this part of the Egyptian country, called, Heptanomis, or Middle Egypt; namely, 1. Acanthus, where was a temple of Oſiris, and a wood of Thebaic Acantha, that produced gums, from which, it is probable, the city might have received its name. 2. Heracleopolis, or the city of Hercules, in an iſland made by a canal running from the Nile. 3. Nicopolis, which ſtood in the lower part of this iſland, to the north. 4. Ariſinoe, on a branch of the Nile, which ran into the lake Mœris, about fifty miles ſouth-weſt of Memphis, and twelve miles and a half from the lake. It was firſt called the city of Crocodiles, becauſe the inhabitants worſhipped that animal. It is conjectured that this city was about four miles in circumference, and had a canal on every ſide. Some of its ruins are ſtill to be ſeen near the province now called Fayoum. 5. Oxyrynchus, ſo called from a fiſh of that name worſhipped all over Egypt, but principally in this place, where a temple was erected to that deity. 6. Hermopolis, or the temple of Mercury, now the village of Archo-Mountain. This city was ſituated about two miles from the river, and was irregular in its form, being about a mile long, and half a mile broad. Here is ſtill to be ſeen the grand portico of an antient temple, conſiſting of twelve pillars, ſix in a row, and nine feet in diameter. About three miles ſouth-weſt of theſe ruins was the antient caſtle of Hermopolis, where they took cuſtom for all commodities brought from the city of Thebes. 7. On the eaſt ſide of the river ſtood Anucropolis, or the city of Anchors; ſo called from a neighbouring quarry, out of which were cut ſtone anchors. 8. Aphroditopolis, or the city of Venus, the inhabitants of which paid particular adoration to a white cow. 9. Coreeſura, ſituated on the weſtern ſide of the Nile. 10. New Babylon, ſuppoſed to have ſtood on Mount Jehuſi, at the ſouth end of Old Cairo, where many ruins are ſtill to be ſeen.

To the ſouth of Hermopolis is a mountain called Shebat el Koſſeri, in the ſide of which are ſome remarkable antiquities. After aſcending the mountain for about two hours, you arrive at a gate which leads into a great ſaloon, ſupported by hexagonal pillars cut out of the ſolid rock. The walls are adorned with paintings, which are ſtill plainly to be diſtinguiſhed, and the gold that was employed glitters on all ſides. There are openings leading to other apartments; but thoſe are filled up with rubbiſh. There is another apartment above, to which you may arrive, though with great difficulty, by climbing up on the outſide. It is ſmaller than the firſt, and has no pillars, but is painted like the other. On each ſide of the ſecond grotto is a tomb of the ſame ſtone with the mountain, with which they both form a continued body. One is open, and the other cloſed, but almoſt buried in the ſand. This upper cavern had alſo a communication with other apartments; but thoſe are alſo cloſed up, like ſome of the others.

Gawa Kiebra is a little farther to the ſouth: here ſtill remains a beautiful portico of a temple, containing eighteen pillars in three rows: theſe have a ſingular kind of capital, and their ſhafts are enriched with hieroglyphics, executed in a maſterly manner. This temple appears to have been extremely magnificent, not only from the grandeur of the portico, but from the vaſt ſtones which formed the walls, one of which was found to be twenty-one feet long, eight broad, and four deep; and another thirty feet long, and five broad. At ſome diſtance behind the portico is a ſtone ſhaped like the top of an obeliſk, which is adorned with hieroglyphics, and has on one ſide of it a niche as if for a ſtatue.

There is at ſome diſtance to the ſouth the grotto of the famous ſerpent called Heredy, where is the tomb of a pretended Turkiſh ſaint, adorned with a cupola raiſed above the mountain. The Arabs affirm, that this ſaint, who was named Heredy, dying in this place, was buried here; and that, by a particular favour of the Almighty, he was transformed into a ſerpent that never dies, but heals diſeaſes, and beſtows favours on all who implore his aid. Of this ſerpent both Dr. Pococke and Mr. Norden have given a very particular account, and perfectly agree in the particulars they relate of it; and therefore we ſhall give an account of it here, as this can hardly fail of being acceptable to the curious reader, who will doubtleſs be inclined to entertain a very mean opinion of the people who could be deceived by this pious fraud; but abſurd as it is, it is not more ſo than the vulgar belief among the ancient Romans, atteſted by very creditable authors, of Æſculapius entering into a ſerpent, and under that form being brought to Rome and curing a peſtilence in that city.

It ſeems this miraculous ſerpent pays great reſpect to particular

particular perſons, and is more propitious to the great lords than to the poor: for if a governor be attacked by any diſorder, the ſerpent has the complaiſance to ſuffer himſelf to be carried to his houſe; but a perſon of the common rank muſt not only make a vow to recompenſe him for his trouble, but ſend a ſpotleſs virgin on the important embaſſy: for the fair alone can have any influence on him; and if her virtue ſhould be the leaſt ſullied, he would be inexorable. On her entering into his preſence, ſhe makes him a compliment, and, with the moſt humble ſubmiſſion intreats him to ſuffer himſelf to be carried to the perſon who wants his aſſiſtance.

The ſerpent, who can refuſe nothing to female virtue, begins at firſt with moving its tail; the virgin redoubles her intreaties, and at length the reptile ſprings up to her neck, places itſelf in her boſom, and there remains quiet, while it is carried in ſtate in the midſt of loud acclamations, to the houſe of the perſon who diſpatched the ambaſſadreſs. No ſooner is it brought into the room, than the patient begins to find himſelf relieved. Yet this miraculous phyſician does not withdraw; for he is very willing to remain ſome hours with the patient, if during the whole time they take care to regale his prieſts, who never leave him.

All this is performed to admiration, provided no Chriſtian or other unbeliever comes in, whoſe preſence, it is pretended, would intirely mar the plot; for this ſagacious ſerpent, on perceiving him, would immediately diſappear. The prieſts would ſearch for him in vain, and it would be impoſſible to find him: for were he carried to the other ſide of the Nile, he would return inviſibly to his dwelling in the tomb. The Arabs even boldly aſſert, that were he cut in pieces, the parts would inſtantly join again; and that nothing can put a period to his life, being deſtined to be immortal.

The Chriſtians, who ought to claim a degree of wiſdom ſuperior to the Arabs, have even the folly to believe that this pretended ſaint is the devil himſelf, whom God has permitted to miſlead theſe blind and ignorant people; and in this belief they are confirmed by a tradition, that to this place the angel Raphael baniſhed the devil Aſmodi, whom in Tobit viii. 3. he is ſaid to ſend into Egypt. On which an author of credit makes the following reflection:

"I am perſuaded," ſays he, "that both the Arabs and theſe Chriſtians offend againſt the rules of reaſon. Before we conſider a thing as miraculous or ſuperſtitious, it is neceſſary to examine whether the fact itſelf be true; whether the circumſtances are ſuch as are pretended, and whether no fraud is uſed. I agree that the ſerpent is there, but it cannot be immortal; he undoubtedly dies like other ſerpents, and the prieſts who draw a profit from him ſubſtitute another of the ſame kind in his room. Were they indeed to cut the ſerpent in pieces, and were the parts ſeen to join again, it might be eſteemed a proof of its immortality; but they can never be brought to this: and when the emir of Akmim ordered them to make this trial in his preſence, the prieſts excuſed themſelves from the experiment.

"Is there any thing eaſier than to make a tame ſerpent obey certain ſigns? The virginity of the ambaſſadreſs is ſecured by her being ſo young as to be free from ſuſpicion; and ſerpents are known to be attracted by certain odours and herbs, with which the girl may be rubbed; at leaſt ſhe is adorned with chaplets and garlands of flowers, in which they take care not to forget ſuch as are agreeable to the ſerpent. In ſhort, if it be aſked how it is poſſible that it ſhould diſappear from the ſight of ſo many people, I anſwer, that it is ſufficient to conceive that theſe prieſts are excellent jugglers, and there will be no difficulty in imagining them capable of conveying away the ſerpent in the preſence of a great number of ſpectators, without the moſt attentive and quick-ſighted being able to perceive it: whoever has ſeen the tricks daily played by the mountebanks in the great ſquare before the caſtle of Cairo, muſt have been ſtruck with feats much more remarkable than this." If to all this be added the account travellers give us of the dancing-ſerpents, and other particulars relating to thoſe reptiles, in Indoſtan, every thing myſterious in the affair will vaniſh, and the whole muſt appear to be an arrant impoſture.

We ſhall now proceed to give a deſcription of the antient ſtate of Upper Egypt, or Thebais, and alſo an account of the ruins and remaining antiquities in that part of the country.

The city of Tentyra was ſituated ſtill farther up the Nile, the inhabitants of which paid extraordinary adorations to Venus and Iſis, to each of whom they built a temple. From the many heaps of ruins ſeen here, the city appears to have been of great extent, and to have been much frequented ſince it was in its ancient ſplendor. People ſeem to have lived even in the temples, and ſeveral houſes have been built of unburnt brick on the top of the great temple, which is two hundred feet long, and forty-five broad. The principal remains of the ancient buildings are near each other; theſe are two gates and four temples.

The grand temple already mentioned appears to be that of Iſis, and ſeems entire, only the apartments which appear to have been built at the top are deſtroyed, and ſix or ſeven of the rooms which have been formed below are filled up. There is an aſcent to the top by ten flights of ſteps. The pillars are adorned with large capitals of the head of Iſis, each capital having four faces, one on each ſide, and over them are compartments in baſſo relievo, finely executed, and in a noble taſte. At the end of the grand room are four ſtories of hieroglyphics in ſeven compartments, each of which has two or three human figures, but ſome of them are defaced. There are likewiſe four ſtories of hieroglyphics on the outſide, and it is not improbable that before the ground was raiſed there were five both within and without. On the outſide of the ſouth end are five coloſſal figures, and two more beautiful than the reſt ſtand at each corner. Round the top of the edifice are ſeveral ſpouts, with an ornament over them repreſenting the head and ſhoulders of the ſphynx before-mentioned.

The ruins of the ancient city of Thebes, being the moſt conſiderable in Egypt, and generally known by the name of The antiquities of Carnack and Luxerien, two villages ſituated among thoſe ruins of antiquity, we ſhall now give our readers a particular deſcription of them.

The city of Thebes extended on both ſides the river, and according to ſome authors, was built by Oſiris, and according to others by Buſiris II. who appointed its circuit, adorned it with magnificent buildings, and rendered it the moſt opulent city upon earth. It was originally called Dioſpolis, or the city of Jupiter, and afterwards obtained the name of Thebes. Diodorus Siculus obſerves, "that not only this king, but many of his ſucceſſors, improved the city with preſents of gold and ſilver, with ivory, and a multitude of coloſſal ſtatues; and that no city under the ſun was ſo adorned with obeliſks of one entire ſtone. The buildings erected here by the antients have remained to modern times; but the gold and ſilver, the ivory, and precious ſtones, were carried away by the Perſians when Cambyſes ſet fire to the temples of Egypt. It is ſaid that the Perſians having transferred this opulence to Aſia, and having carried artiſts with them from Egypt, built the magnificent palaces of Perſepolis, Suſa, and others in Media. It is added, that the riches of Egypt were at that time ſo great, that after the plundering and burning, there were taken above three hundred talents of gold, and two thouſand three hundred talents of ſilver, from among the ruins."

There were four temples admirable in beauty and greatneſs, the moſt antient of which, according to Diodorus Siculus, was in circuit thirteen ſtadia, and forty-five cubits in height, with a wall of twenty-four feet broad. The ornaments and offerings within were agreeable to this magnificence, both in value and workmanſhip. The ruins of the above temple are ſtill to be ſeen, and it is computed to have been about half a mile in circumference. It has eight grand entrances, to three of which were avenues of a great length between ſphynxes, two of them having ſixty of theſe ſtatues on each ſide. Having paſſed between theſe at one of the entrances, you come to four grand gates at a conſiderable diſtance behind each other in a direct line to the temple. They are about thirty-five feet deep, one hundred and fifty in length, and, before the ground was raiſed, muſt have been from ſixty to ſixty-five feet high. Theſe ſtructures leſſen every way like a pyramid, from the bottom to the top: the firſt is of red granite finely poliſhed, and beautifully adorned on the outſide with hieroglyphics, in four ſeries from the top downwards, and three on the inſide, in each of which are the figures of two men finely executed, and bigger than the life. Farther on each ſide are coloſſal figures, about fifteen feet high, with hieroglyphics under them; and in this laſt manner the gates are adorned, but without the compartments.

Dr. Pococke, who viewed theſe venerable ruins, obſerves, that on each of theſe gates there ſeem to have been coloſſal ſtatues. On the outſide of the firſt, on one ſide, is a ſtatue of red granite, and on the other a ſtatue of a kind of granite that ſeems compoſed of ſmall pebbles. On meaſuring the head of one of them, it was found to be five feet ſix inches in length. The next gate is much ruined, and has

has only two ſtories of coloſſal figures to the ſouth, and one to the north. The third gate is covered all round with hieroglyphics and coloſſal figures of men; and here are the remains of a ſtatue of white marble, the head of which has a ſerpent on its caſque. This head is four feet and a half from the top to the lower part of the neck. The fourth gate is a heap of ruins; and before the main building is a large pond, that was probably a reſervoir of the water of the Nile for the uſe of the temple. From thoſe gates walls had been built, that extended to the other gates, as well to encloſe particular courts between the gates and the temple, as to form the entire incloſure of the building.

There is another ſuperb entrance about one hundred and fifty paces to the weſt, with the ſame kind of avenue of ſphynxes; and all the reſt have the appearance of extraordinary magnificence. The grand entrance to the weſt is forty feet broad, the bottom part being a ſolid wall of the ſame thickneſs. Within this is a large open court, having on each ſide, at the firſt entrance, a terrace of eighty feet broad. In the front of the entrance are two ſmall windows; but the upper ſtory is in many parts ſo ruined, that at a diſtance it has the appearance of battlements. The walk between the two terraces leads to the inner part of the temple, and is adorned on each ſide with a grand colonade of pillars above forty feet high, and eight feet diameter, with large capital vaſes, like a baſe, only worked with ſome figures in lines. At the farther end of theſe pillars are two coloſſal ſtatues of red granite on pedeſtals four feet wide, and ſix long, but the heads are broken off, and the ſtatues much disfigured and mutilated.

Our author ſays, that notwithſtanding the wall of the inner temple is greatly ruined, it has in its preſent ſtate more grandeur and magnificence than in any other building he ever ſaw. The door is very high, and yet in a juſt proportion; and the walls on each ſide are beautifully adorned with hieroglyphics and the figures of men, in ſix compartments, above nine feet high, and twelve wide, every compartment having the figure of three men in it.

There appear, on entering the inner temple, ſixteen rows of pillars one way, and eighteen another; thoſe in the two middle rows are eleven feet in diameter, and the others eight, with capitals of ſquare ſtone. The temple was higher above the middle rows than in the other parts, and had a kind of windows over the ſpace between every two pillars, with twelve lattices of ſtone in each. Both within and without the temple are hieroglyphics, and other repreſentations. Carved repreſentations of battles and chariots, one of which is drawn by ſtags, are ſtill to be ſeen on the outſide to the north, which was beautified in a very grand manner.

There is on each ſide of the grand entrance into the eaſt end of the temple, an obeliſk upwards of ſixty-five feet high and ſix ſquare, having only one column of hieroglyphics. Farther to the eaſt are two obeliſks, ſeven feet ſix inches ſquare, and ſeventy-three feet high; but one of them is fallen down: they are all of red granite, and theſe two laſt have three columns of hieroglyphics all the way down. At a little diſtance from theſe obeliſks are two walls, ſeparated by an entrance in the middle, and on the weſt ſide of them are coloſſal buſts.

Continuing along the middle to the eaſt, you come to a ſmall room of red granite; and on each ſide of the temple are ſeveral apartments, ſome of which might probably have been appropriated to the uſe of the prieſts, and others adapted for the beaſts they kept for ſacrifice. About one hundred and ſixty feet to the eaſt, is a large building which conſiſts of ſeveral ſmall apartments on each ſide of a ſpacious colonade, and ſeems as if adapted for the uſe of the officers of the temple. To the north of this are ruins of buildings, with a grand gate before them, which ſeems originally to have led to the temple. Among the reſt, are the remains of a temple, which appear to have been one hundred and ſeventy-five feet in diameter, and to have been of a round form.

The following are the principal hieroglyphics now to be ſeen on the gates of the abovementioned temple: on one, a man offers the deity, in each hand, a vaſe like a chocolate diſh, having on each arm ſomething reſembling a folded napkin. In another, one ſeems to offer himſelf to two deities, which might probably be the ſun and moon. A man likewiſe offers ſomething like apples to one on a throne, four deities being on thrones above, as on another floor. A bird like a hawk on a pillar ſomewhat reſembling the Corinthian order. A peacock on another. A man ſtanding before four monkies, which are on two floors; and three trees on a pedeſtal. Theſe figures are all entire, for they could not eaſily be disfigured, being cut in granite.

Here are alſo the remains of ſeveral other temples, whoſe ruins are ſcattered ſeveral miles round; among theſe, one of them, from the ſituation of its fragments, appears to have been round, and in diameter near one hundred and ſeventy-five feet.

A very elegant temple once ſtood about four miles eaſt of Carnack; but the whole of it is totally deſtroyed, except the grand gate, which is entire, and near it is a ſphynx about four feet long. And about a mile to the north of Carnack is a kind of ſtreet, on each ſide of which is a rocky ground about ten feet high; in theſe rocks are cut many rooms, and ſupported with pillars. Being contrived as excellent ſecurities againſt the inclemency of the weather, they are therefore ſuppoſed to have ſerved inſtead of houſes in the very earlieſt times.

After paſſing through ſeveral vallies, where the mountains riſe to a great height, the traveller comes to a round opening like an amphitheatre, and, aſcending it by a narrow ſteep paſſage, arrives at a mountainous place called Bribah-el-Maluke, the ſepulchres of the kings of Thebes, which are formed in the rocks. The vales, in which are theſe grottos, are covered with rough ſtones, that have probably rotted from above. It is about one hundred feet wide, between high precipices, in which grottos are cut in a moſt beautiful manner. Long galleries, or paſſages are formed under the mountains, out of a cloſe white free-ſtone that cuts like chalk, and is as ſmooth as the fineſt ſtucco work. There are generally four or five of theſe galleries one within another, from thirty to fifty feet long, and from ten to fifteen feet high, leading to a ſpacious room, in which is the king's tomb, or coffin, with his figure cut in relief on the lid: in one of the galleries the picture of the king is painted at full length. Both the cieling and ſides of the rooms are cut with hieroglyphics of birds and beaſts, ſome of them painted, being as freſh as if they were but juſt finiſhed, though they muſt be above two thouſand years old. One of theſe ſepulchres is moſt beautifully adorned with hieroglyphics cut in the ſtone, and painted.

The entrance into this, which has a deſcent, is cut through the rock, and for thirteen feet is open at the top: then for eight more the cieling inclines, anſwering to the deſcent under it. The galleries have hieroglyphics carved on each ſide, firſt on a kind of compartments next to the cieling, in the manner of a frize. Below them are carved figures repreſenting mummies, and under there are hieroglyphics all down the ſides, divided by lines into different columns. In the middle of the cieling are the figures of men with ſtars on each ſide. The king's tomb is of one ſtone of red granite, ſeven feet nine inches high, eleven feet eight inches long, and above ſix feet broad, the cover being made to ſhut into it; and on it is cut the figure of the king in mezzo relievo, with an hieroglyphical inſcription, which may be ſome account of the monarch. This room is adorned with hieroglyphics in different columns, with figures of men, hawks, and bulls. In the great room is the ſtatue of a man holding a ſceptre in his hand, and on the cieling is painted a large figure of a man holding a particular kind of ſceptre, with wings hanging lower than his feet, and covering his whole body. On each ſide of the entrance are four men cut in the ſtone above the natural ſize, with the heads of hawks and other animals, of different ſpecies.

To the ſouthward of theſe mountains are two very extenſive apartments: to one of them is a deſcent of ten ſteps to a ſpacious area cut in the rock, which leads to a room ſupported by ſquare pillars, alſo cut out of the ſolid rock; and beyond it is a long room ſupported by pillars on each ſide. All the apartments are adorned with hieroglyphics; but they are in ſome places black and ſcaled, as if damaged by fire. Beyond theſe rooms are apartments, to which there is a deſcent of ſeveral ſteps to the right; and one part leads to a gallery cut round the rock, which has apartments on one ſide, and in them are holes cut perpendicularly down to other apartments below, where there are doors and openings, and probably as many rooms as above. One would imagine, ſays Dr. Pococke, that theſe were the habitations of the living, and that they were cut under thoſe of the kings of Thebes, if they were not themſelves palaces, to which thoſe princes retired to avoid the heat, when it was moſt intenſe.

Other apartments are cut in a ſmall hill near the appearance of a grand entrance under the mountains: the way to which is through a valley, that ſeems to have been divided by walls or mounds into four parts; one of them is dug much deeper than the reſt, and was probably a reſervoir of the water of the Nile, and the others extend towards ſome remains of old buildings.

To

To the weſt is a room that has a well-turned arch, and appears to have been uſed as a Chriſtian church; for the hieroglyphics, which are in ſmall columns, and extremely well cut, have been covered with plaſter, on which is painted Chriſt encompaſſed with a glory.

To the ſouth-eaſt are the ruins of a large temple, and at a diſtance from it the ruins of a pyramidal gate, and of a very large coloſſal ſtatue, broke off about the middle of the trunk. It is twenty-one feet broad at the ſhoulders; from the top of the head to the bottom of the neck is eleven feet; and the ear is three feet long.

Two rows of ſquare pillars are in the firſt court of the temple; on each ſide of which is a ſtatue, but their heads are broke off. Each of theſe ſtatues has the lituus in one hand, and the flagellum or whip in the other, as is commonly ſeen in the ſtatues of Oſiris. In the ſecond court are the remains of two coloſſal ſtatues ſitting; they are of black granite, and the head of one of them, which lies on the ground, is three feet five inches in length.

Many pillars belonging to the temple are ſtill ſtanding, and many others are deſtroyed. Two ſorts of pillars are obſerved in this edifice, one more beautiful than the other. Their thickneſs and ſolidity give them at a diſtance a noble appearance, and on approaching them the eye is entertained with the hieroglyphics; and when you are near them their colours have a fine effect. This ſort of painting has neither ſhade nor degradation. The figures are encruſted with it like painting in enamel; and it is ſaid to ſurpaſs in ſtrength every thing ſeen of the kind, it being ſuperior in beauty to the al-freſco and Moſaic work, with the advantage of being more durable. It is ſurpriſing to ſee, how the gold, ultra marine, and other colours have preſerved their luſtre to the preſent time.

Beſides the antiquities already mentioned, at a conſiderable diſtance from the temple, are what are called the coloſſal ſtatues of Memnon, which front the Nile. The firſt appears to repreſent a man ſitting, and the other a woman in the ſame poſture; and they are both fifty feet high from the baſes of the pedeſtals to the top of their heads. They are ſeated upon ſtones fifteen feet in height, and as many in breadth; but the back part of each ſtone is higher than the fore part by a foot and a half, and they are placed on plain pedeſtals five feet high. The ſtatue to the north has been broken off at the middle, and has been built up with five tier of ſtones; but the other is of one ſingle ſtone: the feet have the toes broken off, and the features are mouldered away by time. The ſides of their ſeats are covered with hieroglyphics; on the pedeſtal of the ſtatue, which has been broken, is a Greek epigram; and on their inſteps and legs are ſeveral Greek and Latin inſcriptions, ſome of them epigrams in honour of Memnon; but moſt of them are teſtimonies of thoſe who have heard his ſound; for one of them has been thought the famous ſtatue of Memnon, which at the firſt and ſecond hour, it is pretended, uttered a ſound, occaſioned by the rays of the ſun ſtriking upon it, like the breaking of the ſtring of a harp, when it was wound up.

Not far from theſe ſtatues are the ruins of ſeveral others, particularly one of yellow granite almoſt entire, and from the top of the head to the thigh, was twelve feet in length.

Near two miles from Carnack is a ſmall village called Luxurien, built on a part of the antient Thebes. On the eaſt end of the river, adjoining to this village, are the remains of a large and magnificent temple, which was alſo a part of the ancient Thebes, and is called by Diodorus the ſepulchre of Oſymandus: it is ſituated on the eaſt ſide of the river, to the ſouth of the antiquities juſt deſcribed. On approaching it you come to two obeliſks, which are probably the fineſt in the world; they are at preſent ſixty feet high, and might be ſeventy or eighty, according as the ground has riſen, which is certainly a great deal: they are ſeven feet and a half ſquare, and at bottom might be eight feet. The hieroglyphics extend in three columns down each ſide, and are cut with a flat bottom an inch and a half deep, and the granite has perfectly retained its poliſh, which is as fine as can be imagined. On the top of each ſide a perſon ſits on a throne, and another offers him ſomething on his knees. Theſe figures are likewiſe below. Lower down are three hawks, then three bulls, and at the diſtance of about every foot is an owl. There are alſo monkies, heads of camels, hares, dogs, ſerpents, birds, inſects, and other creatures.

There is at a ſmall diſtance from the above, a pyramidal gate, two hundred feet long, and at preſent fifty-four above the ground. On each ſide of the entrance is a coloſſal ſtatue, which riſes thirteen feet and a half above the ſurface of the earth, though the ſhoulders are only three feet and a half above the ground. In the front of the pyramidal gate are windows and ſculpture, particularly a perſon ſeated on a throne, holding out one hand, in which he has a ſcepter or a ſtaff, and is ſurrounded by others in poſtures of adoration. On the other ſide a man is repreſented in a car, galloping and ſhooting with a bow, and followed by many chariots. This may have a relation to the wars of this king againſt the Bactrians. Within this gate is a court almoſt filled with cottages, with ſome pillars that once formed part of a colonade, beyond which was another gate now in ruins, and beyond that another court, which had a large and beautiful altar in the middle, and the hiſtory of the king was cut all round on the walls. The pillars in this court are forty feet high; but the work in the capitals, inſtead of being in relief, is only cut out in lines. The walls of the rooms are adorned with ſculpture, among which a deity is repreſented carried by eighteen men in a kind of boat preceded and followed by a perſon holding a particular enſign. Here are alſo a perſon ſitting, and another kneeling to him, with inſtruments of muſic, a man leading four bulls with a ſtring, and men kneeling who have in their hands the heads of hawks.

Beſides thoſe abovementioned, the following cities, ſituated on this ſide of the Nile, were contained in this part of Egypt; namely, 1. Lycopolis, or The City of Wolves, ſo called from the inhabitants of it paying an extraordinary reſpect to that animal. 2. Hypſele, about a mile to the weſt of the Nile. 3. Ptolemais, ſaid by Ptolemy to be the largeſt of them all. It had a government eſtabliſhed after the Greek manner, ſo that it was probably rebuilt under the Ptolemies, and had its name from them. 4. Abydus, originally famous for having in it the magnificent palace of Memnon. In Strabo's time it was a very ſmall place, and is now a village called El Berbi, or the Temple. 5. Little Dioſpolis, or the City of Jupiter. 6. Hermonthis, a city in which Apollo and Jupiter were worſhipped, and the capital of a province of that name. It was between three and four miles round, and ſituated in the midſt of a long plain. The ruins of the temple of Apollo are ſtill to be ſeen; but ſo imperfect as not to convey any idea of the form or magnificence of that ſtructure. Here are two walls of free-ſtone, which are nine feet aſunder; the height of theſe walls is fifteen feet, and the length thirty-ſix. On the top of one of them are the remains of a cornice, below which there is a globe, ſupported by two fiſh-like lampreys. 7. Aphroditopolis, that is, The City of Venus. 8. Latopolis, in which was the temple of Pallas, where both that deity and the fiſh latus were worſhipped. The principal part of the temple is ſtill ſtanding, and is thus deſcribed by Dr. Pococke; "The capitals of the pillars are ſomewhat like the Corinthian; within the temple are three ſtories of hieroglyphics of men about three feet high, and at one end the loweſt figures are as big as life, one of which has the head of an ibis." 9. Crocoditopolis, or the City of Crocodiles, ſo called, according to Strabo, from that animal being the particular object worſhipped by the inhabitants. 10. Apollinopolis, where was antiently a magnificent temple, ſome remains of which are ſtill extant; but the interior parts cannot be entered, they being quite filled up with earth and rubbiſh. Its front, in breadth, was one hundred and eighteen feet: the ſides one hundred and ſixty-nine feet long, and its height ſeventy feet. There is now a ſmall village called Utfu on the ruins of the city. 11. The city of Elephantine ſtood on an iſland of the ſame name. The iſland is about a mile long, and a quarter of a mile broad to the ſouth, ending in a point at the north. There was a temple at Cnuphis on this iſland, and a nilometer to meaſure the riſe of the Nile. Here are ſtill the remains of a temple, before which is a ſtatue, ſitting with the hands acroſs on the breaſt, and a lituus in each hand: the ſtatue is about eight feet high.

12. The city of Philæ ſtood about twelve miles from Elephantine, in an iſland of the ſame name, not above half a mile long, and a quarter broad. The iſland was deemed ſacred, from an opinion that Oſiris was buried there; and the ruins of a magnificent temple are ſtill to be ſeen. It was called a Temple of the Hawk, from the inhabitants worſhipping that bird, the figure of which is cut among the hieroglyphics in ſeveral parts. It was built with free-ſtone, and ſituated on the weſt ſide of the iſland. The outer court of the temple was of conſiderable length, and on each ſide of it are ſtill remaining a row of pillars, ornamented with a variety of capitals. On the outſide of the inner court are large coloſſal figures, and within are ſeveral beautiful pillars, ornamented with capitals wrought in baſſo relievo. The ſouth part of the entrance is ter-

minated by a wall, at which are two obeliſks raiſed on very handſome pedeſtals; and on each ſide of the entrance to the eaſt is an obeliſk of red granite.

The appearance of the country about this iſland is very romantic; the eaſt ſide of it is all rocks; and on the weſt the hills are either ſandy, or of black rocks. The rocks of granite croſs the Nile; and in three different places, at ſome diſtance from one another, divide the ſtream into three parts, making three falls at each of them. Here are ſeveral large cataracts, the moſt conſiderable of which appears to be that deſcribed by Strabo, who ſays, "It is a rocky height in the middle of the river; the upper part of it is ſmooth, ſo as the water can run on it, but ends in a precipice down which the water falls."

Going down from the iſland of Philæ, and on the eaſt ſide of the Nile, ſtands Syene, built on very high rocks, oppoſite the ſouth end of Elephantine. Its ruins are ſtill to be ſeen on the height over Aſwanan, exactly under the tropic of Cancer. Pliny mentions this place, and particularly the antient forts here, as being ſituated in a peninſula; and it is conjectured by modern travellers, that the granite pillars in that neighbourhood are the remains of ſome antient temple. Strabo tells us, that here was a garriſon of three Roman cohorts. The ſame hiſtorian alſo deſcribes an obſervatory here, built over a famous well, for making aſtonominical obſervations.

The granite quarries are to the ſouth-eaſt of the ruins of Seyne; all the country, the iſlands, and ſome parts of the bed of the Nile, being red granite, which is the ſtone mentioned by Herodotus. The quarries are not worked in deep, but the ſtone is hewn out of the ſides of the low hills. Dr. Pococke ſays, "they ſeem to have worked in round the ſtone with a narrow tool, and when the ſtones were almoſt ſeparated, there is reaſon to think they forced them out of their beds with large wedges, of which there are evident ſigns in all parts of the quarries."

The city of Ombos ſtood farther to the ſouth of Seyne; it is now a village, called Com-Ombo, where a great heap of ruins are ſtill to be ſeen of an old temple. On ſome of the pillars, which are a few feet above the ground, are many beautiful hieroglyphics; but the chief parts of the building are ſo buried in the earth, that no judgment can be formed either of the ſhape or magnificence of the building in its original ſtate.

Not the leaſt remains are at this time to be ſeen of the city of Elethya, or Lucina, famous for a temple ſacred to that goddeſs.

The laſt city we have to mention in this diviſion of the country, is Cnuphis, ſo called, according to Strabo, from a god of that name which the inhabitants worſhipped.

Lower Egypt forms a kind of iſland, and in ſhape reſembles a triangle, or Δ, from whence it received the name of Delta, the fourth letter in the Greek alphabet. It extended from Heptanouris to the Mediterranean ſea, and contained not only that part which is encompaſſed by the arms of the Nile, but alſo Marcotis and Alexandria, with its dependencies to the weſt; and to the eaſt, Caſiotis and Auguſtamnica, with ſome other territories towards Arabia.

This diviſion begins where the Nile is ſeparated into two large canals, through which it empties itſelf into the Mediterranean. The eaſtern mouth is called the Peluſian, and the weſtern the Canopic, from two cities in their neighbourhood, formerly Peluſium and Canopus, called now Damieta and Roſetta; but there are five ſmaller branches between theſe two large ones.

Several conſiderable places were formerly near the lake Maxcotis, but there are no veſtiges of them now to be ſeen.

The famous city of Alexandria (which we have already deſcribed) ſtood between the lake and the Canopic branch of the Nile: the Ptolemies made it the place of their reſidence, and the capital of all Egypt, after the death of Alexander its founder.

Several other cities were at a ſmall diſtance from Alexandria, particularly Nicopolis, Eleuſis, and Canopus. The latter of theſe was ſituated near the ſea-ſide, about thirteen miles from Alexandria. It is ſaid to have been built by the Spartans on their return from the Trojan war, and to have taken its name from Canopus, the pilot of Menelaus, who was buried there. In the centre of this city ſtood the temple of Serapis, beſides which ſeveral obeliſks were in different parts of it, but not the leaſt part of them is now remaining.

Several other cities antiently ſtood between the ſea and the canal that runs from Alexandria to Canopus, as alſo to the ſouth and weſt of the laſt mentioned place. The cities of Mitelis, Naucratis, and Sais, were likewiſe between the Peluſian and Canopic branches; the latter of theſe was once the metropolis of Lower Egypt, and ſuppoſed by ſome to be the Sin of the Scriptures. Here was a famous temple dedicated to Minerva, and near it was the aſylum of Oſiris, where he was ſuppoſed to have been buried; for, according to the Egyptian mythology, Iſis depoſited ſeveral coffins in different places, that his body might not be diſcovered by Typhon.

The cities of Cabaſa and Brutus ſtood to the north of Sais, the latter of which was famous for having in it the temples of Diana, Apollo, and Latona.

There are many other cities, beſides the above mentioned, in this part of Delta; but we know nothing more than their names, which have been handed down to us by the antients, there not being the leaſt trace of any of them now remaining.

The following remarkable cities once ſtood on the eaſt-ſide of the Delta, where Egypt was bounded by Arabia Petræa and Paleſtine; namely, 1. Barbartus, on the moſt eaſtern part of the Nile, where was a magnificent temple dedicated to Diana, whom the Egyptians called Bubaſtus. 2. Onias, ſituated higher on the river, and which had its name from a Hebrew prieſt, who had obtained it of a king of Egypt, and built a temple there in oppoſition to that of Jeruſalem. According to Joſephus, Onias was influenced to build this temple, by a great faith he had conſtantly placed in a propheey of Eſaias, who, ſix hundred years before, had foretold that a temple ſhould be built in Egypt by a Jew, to the honour of the moſt high God.

Mount Caſius ſtood at a ſmall diſtance from theſe cities; and here, according to Ptolemy, was a town of the ſame name. Strabo ſays, it has a magnificent temple dedicated to Jupiter Caſius; but what rendered it moſt remarkable, was, that it contained the ſepulchre of Pompey, who was buried in this ſandy hill, which runs into the ſea, and ſeems to be the place now called by mariners Tenere. Near this place Pompey was treacherouſly murdered by the command of Ptolemy. He was buried by Cordus, a Roman ſoldier; and a ſuperb monument was afterwards erected to his memory, which was repaired and beautified by the emperor Adrian.

The lake Sirbonis, which ſeparates Egypt from Syria, is a little to the eaſt of Mount Caſius. The antient Egyptians called it the place of Typhon's exit; and the poets feign, that Typhon lay under it: for in thoſe times it was ſuppoſed to be a place of great ſecurity. It was then twenty-five miles long, but narrow, and incloſed by hills of ſand on each ſide.

Several other cities formerly ſtood near the lake Sirbonis and the Red ſea, but there are not any remains of them now to be ſeen. We ſhall therefore conclude this account of the antient ſtate and antiquities of Egypt, by obſerving, from Diodorus Siculus, it originally contained eighteen thouſand cities, the chief of which was Thebes: Memphis ſucceeded to Thebes, and at laſt Alexandria to Memphis; as Cairo has ſince done to Alexandria; in which city there were four thouſand palaces, as many baths, four hundred ſquares, and forty thouſand Jews that paid tribute when it was taken by the Saracens.

SECT. VII.

Of the Ancient Hiſtory of EGYPT, including alſo its Government, Laws, Soldiery, Artificers, Arts and Sciences, Huſbandry, &c.

IT will not be expected that we ſhould dwell long upon the antient hiſtory of this country, our buſineſs being chiefly with the modern; we ſhall, however, give a ſhort view of it, which we preſume may be acceptable to moſt of our readers.

The Egyptians are certainly a very antient nation, though far from being ſo antient as they would repreſent themſelves, when they give us a catalogue of their princes, ſome of whom, according to their fabulous account, muſt have lived ſeveral thouſand years before the creation. But if, as it is obſerved by ſome writers, the Egyptians, by years, did not mean the periodical revolution of the ſun, but only of the moon, their chronology, in that caſe, might be conſiſtent with reaſon and truth; but otherwiſe, as hath been long ſince remarked of the Chineſe and other people, who run up their original ſo very high, it confutes itſelf, as no tolerable account or hiſtory is given us of theſe pretended times, but on the contrary, the invention of all arts and ſciences, even agriculture, were introduced among them about the time mentioned in our hiſtories;

hiſtories; which could not poſſibly have been the caſe, had the world been as old as they ſuggeſt; for it cannot be conceived how men could live any time in a regular ſociety without theſe arts.

That this country was early planted is very evident; but the hiſtory of its antient ſtate is ſo inveloped in obſcurity, or diſguiſed by fables, that it cannot in the leaſt be depended on. We cannot with certainty affirm, as ſome have ventured to do, that Menes, or Miſraim, the ſon of Ham, and grandſon of Noah, who reigned in the year of the world 1816, and 2188 years before Chriſt, was the founder of the Egyptian monarchy, becauſe it is very difficult to ſhew who were the firſt planters of almoſt any nation in the univerſe: it is ſufficient that it appears, that this and ſeveral of the neighbouring nations were planted ſoon after the diſperſion of the people at the building of the tower of Babel. But it is obſervable, that all writers, antient and modern, republican, as well as the advocates for monarchy, agree, that the firſt plantations or ſettlements were made and conducted by ſome great captain or ſovereign who had the ſupreme command of his followers by virtue of his birthright, and that a republican form of government was not known in the firſt ages of the world. But to return from this digreſſion. Cham, the ſon of Noah, is generally held to be the ſame with Jupiter Ammon; and Miſraim, his grandſon, the ſame with Oſiris, the great deity of the Egyptians; and from him, it is ſaid, deſcended that race of monarchs, who had the general denomination of Pharaohs; but from whom or how the word Pharaoh came to be the ſtyle of their kings, I find no ſatisfactory reaſon given.

There are reckoned about ſixty princes of the line of theſe Pharaohs, and they reigned, as it is ſaid, in an uninterrupted ſucceſſion to the year of the world 3435, when Pharaoh Pſamnitichus, the ſecond monarch of that name, was conquered by Cambyſes II. king of Perſia, who united Egypt to that empire, under which it remained till the reign of Darius, being upwards of one hundred years, when it revolted from that crown, and became an independent kingdom again, A. M. 3600, (Amyrteus being their firſt king after that revolt), in which ſtate it continued about fifty years, when Ochus, king of Perſia, recovered the dominion of it again; and it remained ſubject to the Perſian monarchs till Alexander the Great defeated Darius, when it fell under the power of that prince, with the reſt of the provinces of the Perſian empire.

After the death of Alexander, A. M. 3641, Ptolemy, the ſon of Lagus, or, as others inſinuate, the ſon of Philip of Macedon, and conſequently half brother of Alexander, found means to ſeat himſelf in the throne of Egypt, and render it an independent kingdom once again, whoſe ſucceſſors, the kings of Egypt, ever after retained the name of Ptolemies; in which line it continued between two and three hundred years, the laſt ſovereign being the famous Cleopatra, wife and ſiſter to Ptolemy Dionyſius, the laſt king, and miſtreſs to Julius Cæſar and Mark Antony ſucceſſively. This was about the year of the world 3925.

Ptolemy Philadelphus, ſon of the firſt Ptolemy, collected the Alexandrian library, ſaid to conſiſt of ſeven hundred thouſand volumes; and the ſame prince cauſed the Scriptures to be tranſlated into Greek, but whether by ſeventy-two interpreters, and in the manner as is commonly related, is juſtly queſtioned. The Ptolemies ſometimes extended their dominion over a great part of Syria, and were frequently at war with the kings of Syria, in which they met with various ſucceſs.

After the death of Cleopatra, this kingdom fell under the power of the Romans, and was uſually governed by a gentleman of Rome, it being thought too hazardous to truſt ſo conſiderable a command with a ſenator. When it was made a province of the empire, it was looked upon as the emperor's peculiar, and afterwards made an entire dioceſe of itſelf, ſubordinate to the Præfectus Prætorio Orientis; and while it was under the dominion of the Romans, the nation in general embraced Chriſtianity.

Egypt remained a Roman province till the reign of Heraclius, the emperor of Conſtantinople, when the people, being diſguſted with their governors, called in Omar the third caliph of the Saracens, and ſubmitted themſelves to the Mahometan power, being about the year of our Lord 640. But ſurely the adminiſtration of the Greek emperors muſt be very grievous, which could induce a Chriſtian nation to make choice of a Saracen for their ſovereign.

The caliphs of Babylon were ſovereigns here till about the year 870, when the Egyptians ſet up a caliph of their own, called the caliph of Cairo, to whom the Saracens of Africa and Spain were ſubject; but the governors of the provinces, or ſultans under the caliphs of Babylon and Cairo, ſoon wreſted the civil power out of the hands of their caliphs, or high-prieſts, leaving them only a ſhadow of ſovereignty.

About the year 1160, Aſſareddin, or Saracon, general of Norraddin, the Saracen ſultan of Damaſcus, ſubdued the kingdom of Egypt, and uſurped the dominion of it, being ſucceeded in this kingdom by his ſon Saladin, who reduced alſo the kingdom of Damaſcus, Meſopotamia and Paleſtine under his power, and about the year 1190, took Jeruſalem from the Chriſtians. It was this prince who eſtabliſhed a body of troops in Egypt like the preſent janiſſaries, compoſed of the ſons of Chriſtians taken in war, or purchaſed of the Tartars, to whom they gave the name of Mamalukes, which, it is ſaid, ſignifies no more than ſlaves, which, among the forces of the Mahometan princes, is looked upon as a title of great honour, as it expreſſes their being devoted in a peculiar manner to the ſervice of their ſovereign, and conſequently they are entitled to greater privileges than other ſubjects. The poſterity of Aſſareddin enjoyed the crown till the year 1242, when the Mamalukes depoſed Elmutan, as they had done his father Melech Aſſalach ſome years before, and ſet one of their own officers upon the throne. The firſt king of the race of the Mamalukes being Turquemenius, theſe Mamaluke ſultans were engaged in continual wars with the Chriſtians in Syria and Paleſtine, till Araphus the ſixth ſultan entirely diſpoſſeſſed the Chriſtians of the Holy Land; the ninth ſultan Melechnaſſor ſubdued the iſland of Cyprus and made it tributary to Egypt.

About the year 1501, Campſon Gaurus the fifteenth ſultan of the Mamalukes, entering into an alliance with Iſmael the ſophi of Perſia, againſt Selimus the third emperor, and tenth king of the Ottoman family, the confederates received ſeveral memorable defeats: and Tonombeius II. who ſucceeded Campſon Gaurus, was depoſed and murdered by Selimus, and according to ſome accounts, hanged up at the gates of Grand Cairo. Gazelle, one of the grandees of the Mamalukes maintained a war for ſome time againſt Selimus, but was at length defeated, and Egypt made a province of the Ottoman empire.

The Mamaluke ſultans were always choſen by a majority of Mamalukes out of their own body, who were ſo jealous of the kingdom's being made hereditary, that they ſcarce ever elected the ſon of the preceding ſultan; and if the choice ever happened to fall upon ſuch a one, they were ſo apprehenſive of its being made an ill precedent, that they never reſted till they depoſed him.

Since the Ottoman emperors have had the dominion of this kingdom, they have always governed it by a viceroy, ſtyled the baſha of Grand Cairo: but as Egypt is ſubdivided into ſeveral inferior governments, theſe governors we perceive are not ſent from Conſtantinople, or appointed by the viceroy, but are natives of Egypt, and ſeem to be veſted with ſovereign power in their reſpective diſtricts, and to have the command of the militia of the ſeveral provinces; and are many of them of the race of the Mamalukes. It is true, the viceroy has a conſiderable body of ſpahis and janiſſaries about Cairo to keep them in awe; and every one of theſe petty princes, it is ſaid, is obliged to mount the viceroy's guard in his turn, with a body of the national troops.

There is a perpetual jealouſy between the Turkiſh baſha and theſe Egyptian royalets; ſometimes the baſha will take upon him to depoſe one of them, and perhaps take his head; and there are inſtances on the other hand, where they have depoſed the baſha, and compelled the Porte to ſend them another more acceptable to them: and the Grand Signor has thought fit to humour them in it, rather than hazard the revolt of ſo rich a province, which is now eſteemed the granary of Conſtantinople, as it was antiently of Rome; for this is a ſoil ſo fertilized by the Nile, that it is not in the power of the Turks, it ſeems, to render it barren. But one great reaſon of its continuing to be manured is, that they are yet governed by their own princes, and have an inheritance in their lands, which are privileges very few of the ſubjects of Turkey enjoy beſides: neither dare the Turkiſh government overload this people with taxes, for fear of a general revolt: inſomuch that except what the viceroy and his creatures illegally extort from them, the whole revenue raiſed by the government, does not amount to a million of our money, of which two thirds are ſpent within the kingdom, and not more than one third comes into the Grand Signor's treaſury. But we ſhall treat more particularly on this ſubject when we come to give an account of the government of Egypt, at the

the close of this section; and as we have given above a sketch of the antient history of the Egyptians, till they became subject to the Turks, it may be necessary here to subjoin the most remarkable particulars we have been able to collect, relative to their antient government and laws.

The Egyptians were the first people who rightly understood the rules of government. A nation so grave and serious, immediately perceived, that the true end of politics is to make life easy, and a people happy.

The kingdom was hereditary; but according to Diodorus, the Egyptian princes conducted themselves in a different manner from what is usually seen in other monarchies, where the prince acknowledges no other rule of his actions, but his arbitrary will and pleasures. But here kings were under greater restraints from the laws, than their subjects. They had some particular ones digested by a former monarch that composed part of those books, which the Egyptians call sacred. Thus every thing being settled by antient custom, they never sought to live in a different way from their ancestors.

No slave, or foreigner, was admitted into the immediate service of the prince; such a post was too important to be intrusted to any persons, except those who were the most distinguished by their birth, and had received the most excellent education; to the end, that as they had the liberty of approaching the king's person, day and night, he might, from men so qualified, hear nothing which was unbecoming the royal majesty, or have any sentiments instilled into him, but such as were of a noble and generous kind. For, adds Diodorus, it is very rarely seen, that kings fly out into any vicious excess, unless those who approach them approve their irregularities, or serve as instruments to their passions.

The kings of Egypt freely permitted, not only the quality and proportion of their eatables and liquids to be prescribed them (a thing customary in Egypt, the inhabitants of which were all sober, and whose air inspired frugality) but even that all their hours, and almost every action should be under the regulation of the laws.

In the morning at day-break, when the head is clearest, and the thoughts least perplexed, they read the several letters they received, to form a more just and distinct idea of the affairs which were to come under their consideration that day.

As soon as they were dressed, they went to the daily sacrifice performed in the temple, where, surrounded with their whole court, and the victims placed before the altar, they assisted at the prayer pronounced aloud by the high-priest, in which he asked of the gods, health and all other blessings for the king, because he governed his people with clemency and justice, and made the laws of his kingdom the rule and standard of his actions. The high-priest entered into a long detail of his virtues; observing that he was religious to the gods, affable to men, moderate, just, magnanimous, sincere, an enemy to falshood; liberal, master of his passions; punishing crimes with the utmost lenity, but boundless in rewarding merit. He next spoke of the faults which kings might be guilty of; but supposed at the same time, that they never committed any, except by surprize or ignorance: and loaded with imprecations such of their ministers as gave them ill council, and suppressed or disguised the truth. Such were their methods of conveying instruction to their kings. It was thought that reproaches would only sour their tempers, and that the most effectual method to inspire them with virtue, would be to point out to them their duty in praises conformable to the sense of the laws, and pronounced in a solemn manner before the gods. After the prayers and sacrifices were ended, the councils and actions of great men were read to the king out of the sacred books, in order that he might govern his dominions according to their maxims, and maintain the laws which had made his predecessors and their subjects so happy.

We have already observed, that the quantity, as well as quality, of both eatables and liquids, were prescribed by the laws, to the king; his table was covered with nothing but the most common meats; because eating, in Egypt, was designed not to tickle the palate, but to satisfy the cravings of nature. One would have concluded (observes the historian) that these rules had been laid down by some able physician, who was attentive only to the health of the prince, rather than the legislature. The same simplicity prevailed in all other things; and we read in Plutarch, of a temple in Thebes, which had one of its pillars inscribed with imprecations against that king who first introduced profusion and luxury into Egypt.

The principal duty of kings, and their most essential function, is the administering justice to their subjects. Accordingly the kings of Egypt cultivated more immediately this duty, convinced that thereupon depended not only the ease and comfort of the several individuals, but the happiness of the state, which would be an herd of robbers, rather than a kingdom, should the weak be unprotected, and the powerful enabled, by their riches and influence, to commit crimes with impunity. Thirty judges were selected out of the principal cities, to form a body, or assembly for judging the whole kingdom. The prince, in filling these vacancies, chose such as were most renowned for their honesty: and put at their head him who was most distinguished for his knowledge and love of the laws, and was held in the most universal esteem. By his bounty they had revenues assigned to them, to the end that, being freed from domestic cares, they might devote their whole time to the execution of the laws. Thus honourably subsisting by the generosity of the prince, they administered justice gratuitously to the people, who have a natural right to it; among whom it ought to have a free circulation, and, in some sense, among the poor more than the rich, because the latter find a support within themselves; whereas the very condition of the former exposes them to more injuries, and therefore calls louder for the protection of the laws.

To guard against surprize, affairs were transacted by writing in the assemblies of these judges. That species of eloquence (a false kind) was dreaded, which dazzles the mind, and moves the passions. Truth could not be expressed with too much plainness, as it was to have the only sway in judgments, because in that alone the rich and poor, the powerful and weak, the learned and the ignorant, were to find relief and security. The president of this senate wore a collar of gold, set with precious stones, at which hung a figure represented blind, this being called the emblem of truth. When the president put the collar on, it was understood as a signal to enter upon business. He touched the party with it who was to gain his cause; and this was the form of passing sentence.

With respect to the laws of the Egyptians, the most excellent circumstance in them was, that every individual, from his infancy, was nurtured in the strict observance of them. A new custom in Egypt was a kind of miracle. All things there ran in the old channel; and the exactness with which little matters were adhered to, preserved those of more importance; and indeed, no nation ever preserved their laws and customs longer than the Egyptians.

Wilful murder was punished with death, whatever might be the condition of the murdered person; whether he was free-born or otherwise. Herein the humanity and equity of the Egyptians, was superior to that of the Romans, who gave the master an absolute power, as to life and death, over his slave. The emperor Adrian, indeed, abolished this law, from an opinion that an abuse of this nature ought to be reformed, let its antiquity or authority be ever so great.

Perjury was also punished with death, because that crime attacks both the gods, whose majesty is trampled upon, by invoking their name to a false oath, and men in breaking the strongest tie of human society, viz. sincerity and honesty.

The false accuser was sentenced to undergo the punishment which the person accused was to have suffered, had the accusation been proved.

He who neglected, or refused to save a man's life, when attacked, if it was in his power to assist him, was punished as rigorously as the assassin. But if the unfortunate person could not be succoured, the offender was at least to be impeached, and penalties were decreed for any neglect of this kind. Thus the subjects were a guard and protection to one another, and the whole body of the community united against the designs of the bad.

No man was allowed to be useless to the state; but every man was obliged to enter his name and place of abode in a public register, that remained in the hands of a magistrate, and to annex his profession, and in what manner he lived. If such a one gave a false account of himself, he was immediately put to death. The wisest and best regulated states, as Athens and Rome, ever found insuperable difficulties in contriving a just medium to restrain on one hand, the cruelty of the creditor in the exaction of his loan; and on the other, the knavery of the debtor, who refused or neglected to pay his debts. Now Egypt took a wise course on this occasion; and without doing any injury to the personal liberty of its inhabitants, or ruining their families, pursued the debtor with incessant fears of infamy from his dishonesty. No man was permitted to borrow money without pawning to the creditor the body of

his father, which every Egyptian embalmed with great care, and kept reverentially in his houſe, and therefore might be eaſily moved from one place to another. But it was equally impious and infamous not to redeem ſoon ſo precious a pledge; and he who died without having diſcharged his duty, was deprived of the cuſtomary honours paid to the dead.

Polygamy was allowed in Egypt, except to prieſts, who could marry but one woman. Whatever was the condition of the woman, whether ſhe was free or a ſlave, her children were deemed free and legitimate.

One cuſtom that was practiſed in Egypt, ſhewed the profound darkneſs into which ſuch nations, as were moſt celebrated for their wiſdom, have been plunged; and this was the marriage of brothers with ſiſters, which was not only authorized by the laws, but even, in ſome meaſure, was a part of their religion, from the example and practice of ſuch of their gods as had been the moſt antiently and univerſally adored in Egypt; that is, Oſiris and Iſis.

A very great reſpect was there paid to old age. The young were obliged to riſe up for the old, and on every occaſion to reſign to them the moſt honourable ſeat. The Spartans borrowed this law from the Egyptians.

The virtue in the higheſt eſteem among the Egyptians was gratitude. The glory which has been given them of being the moſt grateful of all men, ſhews that they were the beſt formed of any nation for ſocial life. Benefits are the bands of concord, both public and private. He who acknowledges favours loves to do good to others; and in banithing ingratitude, the pleaſure of doing good remains ſo pure and engaging, that it is impoſſible for a man to be inſenſible of it. But no kind of gratitude gave the Egyptians a more pleaſing ſatisfaction, than that which was paid to their kings. Princes, whilſt living, were by them honoured as ſo many viſible repreſentations of the Deity; and after their death were mourned as the fathers of their country. Theſe ſentiments of reſpect and tenderneſs proceeded from a ſtrong perſuaſion, that the Divinity itſelf had placed them upon the throne, as he diſtinguiſhed them ſo greatly from all other mortals; and that kings bore the moſt noble characteriſtics of the Supreme Being, as the power and will of doing good to others were united in their perſons.

We have already obſerved, in our account of the Egyptian mummies, that it was cuſtomary, particularly with the more opulent, to preſerve the bodies of their deceaſed relations, or ſuch perſons for whom they had a peculiar regard and veneration; the method of doing which, is thus deſcribed by a late author. "In the preparing of them, ſo as to keep them from putrefaction, they drew out the brains at the noſtrils, and ſupplied their place with preſervative ſpices; then cutting up the belly with an Ethiopian ſtone, and extracting the bowels, they cleanſed the inſide with wine; and ſtuffing the ſame with a compoſition of caſſia, myrrh, and other odours, they cloſed it again. The poorer ſort of people effected the like with bitumen, and the juice of cedars, which, by the extreme bitterneſs and ſiccative faculty, not only immediately ſubdued the cauſe of interior corruptions, but have preſerved them from putrefaction above three thouſand years." The ſeeing the bodies of their anceſtors they had preſerved, recalled to mind thoſe virtues for which the public had honoured them; and they were excited to love thoſe laws which ſuch excellent perſons had left for their ſecurity. We find, that part of theſe ceremonies were performed in the funeral honours done to Joſeph in Egypt.

Among the heathens, it was a conſolation to a dying man, to leave a good name behind him; and they imagined that this is the only human bleſſing of which death cannot deprive us. But the antient Egyptians would not ſuffer praiſes to be indiſcriminately beſtowed on all deceaſed perſons. This honour was to be obtained only from the public voice. The aſſembly of the judges met on the other ſide of the lake, which they croſſed in a boat. He who ſat at the helm was called Charon in the Egyptian language; and this firſt gave the hint to Orpheus, who had been in Egypt; and, after him, to the other Greeks, to invent the fiction of Charon's boat.

As ſoon as a man was dead, he was brought to his trial. The public accuſer was heard. If he proved the deceaſed had led a bad life, his memory was condemned, and he was deprived of burial. The people were affected with laws, which extended even beyond the grave; and every one, ſtruck with the diſgrace that was inflicted on the dead perſon, was afraid to reflect diſhonour on his own memory, and that of his family. But if the deceaſed perſon was convicted of any crime, he was interred in a diſhonourable manner.

There was a ſtill more aſtoniſhing circumſtance in this public inqueſt on the dead; namely, that the throne itſelf was no protection from it. Kings were ſpared during their lives, becauſe the public peace was concerned in this forbearance; but their quality did not exempt them from the judgment paſſed upon the dead; and even ſome of them were deprived of ſepulture. This cuſtom was imitated by the Iſraelities. We ſee in Scripture, that bad kings were not interred in the monuments of their more worthy anceſtors. This practice ſuggeſted to princes, that if their dignity placed them out of the reach of man's judgment, while they were alive, they would at laſt be liable to it, when death ſhould reduce them to a level with their ſubjects.

When a favourable judgment was pronounced on a deceaſed perſon, the next thing was to proceed to the ceremonies of interment. In this panegyric, no mention was made of his birth, becauſe every Egyptian was deemed noble. No praiſes were conſidered as juſt or true, but ſuch as related to the perſonal merit of the deceaſed. He was applauded for having received an excellent education in his younger years; and, in his more advanced age, for having cultivated piety towards the gods, juſtice towards men, gentleneſs, modeſty, moderation, and all other virtues which conſtitute the good man. Then all the people ſhouted, and beſtowed the higheſt eulogiums on the deceaſed, as one who would be received for ever into the ſociety of the virtuous in the kingdom of Pluto.

We ſhall now proceed to give ſome account of the military men, artificers, arts and ſciences, huſbandmen, &c. of the antient Egyptians.

Among the antient inhabitants of Egypt, the profeſſion of arms was in great repute. After the ſacerdotal families, the moſt illuſtrious, as with us, were thoſe devoted to a military life. They were not only diſtinguiſhed by honours, but by ample liberalities. Every ſoldier was allowed an aroura, that is, a piece of arable land, very nearly anſwering to half a French acre, exempt from all tax or tribute. Beſides this privilege, each ſoldier received a daily allowance of five pounds of bread, two of fleſh, and a pint of wine. This allowance was ſufficient to ſupport part of their family. Such an indulgence made them more affectionate to the perſon of their prince, and the intereſts of their country, and more reſolute in the defence of both; and, as Diodorus obſerves, it was thought inconſiſtent with good policy, and even common ſenſe, to commit the defence of a country to men who had no intereſt in its preſervation.

Four hundred thouſand ſoldiers were kept in continual pay (all natives of Egypt) and trained up in the exacteſt diſcipline. They were inured to the fatigues of war, by a ſevere and rigorous education. There is an art of forming the body as well as the mind. This art, loſt by our ſloth, was well known to the antients, and eſpecially the Egyptians.

Foot, horſe, and chariot races, were performed in Egypt with wonderful agility, and the world could not ſhew better horſemen than the Egyptians. The Scripture, in ſeveral places, ſpeaks advantageouſly of their cavalry.

Military laws were eaſily preſerved in Egypt, becauſe ſons received them from their fathers; the profeſſion of war, as all others, being tranſmitted from father to ſon. Thoſe who fled in battle, or diſcovered any ſigns of cowardice, were only diſtinguiſhed by ſome particular mark of ignominy, it being thought more adviſeable to reſtrain them by motives of honour, than by the terrors of puniſhment.

But notwithſtanding this, we will not pretend to ſay that the Egyptians were a warlike people. It is of little advantage to have regular and well paid troops; to have armies exerciſed in peace, and employed only in mock fights; it is war alone, and real combats, which form the ſoldier. Egypt loved peace, becauſe it loved juſtice, and maintained ſoldiers only for its ſecurity. Its inhabitants, content with a country which abounded in all things, had no ambitious dreams of conqueſt. The Egyptians extended their reputation in a very different manner, by ſending colonies into all parts of the world, and with them laws and politeneſs. They triumphed by the wiſdom of their counſels, and the ſuperiority of their knowledge; and this empire of the mind appeared more noble and glorious to them, than that which is atchieved by arms and conqueſt.

The Egyptians had an inventive genius, and turned it

to profitable ſpeculations. Their Mercuries filled Egypt with wonderful inventions, and left it almoſt ignorant of nothing which could accompliſh the mind, or procure eaſe and happineſs. The diſcoverers of any uſeful invention received both living and dead, rewards equal to their profitable labours. It is this that conſecrated the books of their two Mercuries, and ſtamped them with a divine authority. The firſt libraries were in Egypt; and the titles they bore, inſpired the reader with an eager deſire to enter them, and dive into the ſecrets they contained. They are called the Office for the Diſeaſes of the Soul; and that very juſtly, becauſe the ſoul was there cured of ignorance, the moſt dangerous, and the parent of all other maladies.

As their country was level, and the air of it always ſerene, and unclouded, they were ſome of the firſt who obſerved the courſes of the planets. Theſe obſervations led them to regulate the year from the courſe of the ſun; for, as Diodorus obſerves, their year, from the moſt remote antiquity, was compoſed of 365 days, and ſix hours. To adjuſt the property of their lands, which were every year covered by the overflowing of the Nile, they were obliged to have recourſe to ſurveys; and this firſt taught them geometry. They were great obſervers of nature, which in a climate ſo ſerene, and under ſo intenſe a ſun, was vigorous and fruitful.

By this ſtudy and application, they invented, or improved, the ſcience of phyſick. The ſick were not abandoned to the arbitrary will and caprice of the phyſician: he was obliged to follow fixed rules, which were the obſervations of old and experienced practitioners, and written in the ſacred books. While theſe rules were obſerved, the phyſician was not anſwerable for the ſucceſs; otherwiſe a miſcarriage coſt him his life. This law checked indeed the temerity of empirics; but then it might prevent new diſcoveries, and keep the art from attaining to its juſt perfection. Every phyſician, if Herodotus may be credited, confined his practice to the cure of one diſeaſe only; one was for the eyes, another for the teeth, and ſo on.

What we have ſaid of the pyramids, the labyrinth, and that infinite number of obeliſks, temples, and palaces, whoſe precious remains ſtill ſtrike with admiration, and in which were diſplayed the magnificence of the princes who raiſed them, the ſkill of the workmen, the riches of the ornaments diffuſed over every part of them, and the juſt proportion and beautiful ſymmetry of the parts in which their greateſt beauty conſiſted; works in many of which the livelineſs of the colours remain to this day, in ſpite of the rude hand of time, which commonly deadens or deſtroys them: all this, we ſay, ſhews the perfection to which architecture, painting, ſculpture, and all other arts had arrived in Egypt.

The Egyptians entertained but a mean opinion of that ſort of exerciſe, which did not contribute to invigorate the body, or improve health; nor of muſic, which they conſidered as a uſeleſs and dangerous diverſion, and only fit to enervate the mind.

Huſbandmen, ſhepherds and artificers, formed the three claſſes of lower life in Egypt, but were nevertheleſs had in very great eſteem, particularly huſbandmen and ſhepherds. The body politic requires a ſuperiority and ſubordination of its ſeveral members; for as in the natural body, the eye may be ſaid to hold the firſt rank; yet its luſtre does not dart contempt upon the feet, the hands, or even on thoſe parts which are leſs honourable. In like manner, among the Egyptians, the prieſts, ſoldiers, and ſcholars were diſtinguiſhed by particular honours; but all profeſſions to the meaneſt, had their ſhare in public eſteem, becauſe the deſpiſing any man, whoſe labours, however mean, were uſeful to the ſtate, was thought a crime.

A better reaſon than the foregoing might have inſpired them at firſt, with theſe ſentiments of equity and moderation, which they ſo long preſerved. As they all deſcended from Cham, their common father, the memory of their origin occurring freſh to the minds of all in thoſe firſt ages, eſtabliſhed among them a kind of equality, and ſtamped, in their opinion, a nobility on every perſon derived from the common ſtock. Indeed, the difference of conditions, and the contempt with which perſons of the loweſt rank are treated, are owing merely to the diſtance from the common root; which makes us forget, that the meaneſt plebeian, when his deſcent is traced back to the ſource, is equally noble with thoſe of the moſt elevated rank and titles.

Be that as it will, no profeſſion in Egypt was conſidered as groveling and ſordid. By this means, arts were raiſed to the higheſt perfection. The honour which cheriſhed them, mixed with every thought and care for their improvement. Every man had his way of life aſſigned him by the laws, and it was perpetuated from father to ſon. Two profeſſions at one time, or a change of that which a man was born to, were never allowed. By this means, men became more able and expert in employments, which they had always exerciſed from their infancy; and every man adding his own experience to that of his anceſtors, was more capable of attaining perfection in his particular art. Beſides, this wholeſome inſtitution, which had been eſtabliſhed antiently throughout Egypt, extinguiſhed all irregular ambition; and taught every man to ſit down contented with his condition, without aſpiring to one more elevated, from intereſt, vain glory, or levity.

From this ſource flowed numberleſs inventions for the improvement of all the arts, and for rendering life more commodious, and trade more eaſy. We could ſcarcely believe that Diodorus was in earneſt in what he relates concerning the Egyptian induſtry; namely, that theſe people had found out a way, by an artificial fecundity, to hatch eggs, without the ſitting of the hen; but all modern travellers have put this beyond a doubt; and we have already given an account of the methods made uſe of for this purpoſe.

With reſpect to their ſoil and produce, we ſhall treat only of ſome plants peculiar to Egypt, and of the abundance of corn which it produced.

The papyrus is a plant, from the root of which ſhoot out a great many triangular ſtalks, to the height of ſix or ſeven cubits. The antients wrote at firſt upon palm-leaves; next on the inſide of the bark of trees, from whence the word liber, or book, is derived: after that, upon tables covered over with wax, on which the characters were impreſſed with an inſtrument called Stylus, ſharp-pointed at one end to write with, and flat at the other to efface what had been written; which gave occaſion to the following expreſſion of Horace: "Oft turn your ſtile, if you deſire to write things that will bear a ſecond reading;" which intimates that a good performance is not to be expected without many corrections.

At laſt the uſe of paper was introduced; and this was made of the bark of papyrus, divided into thin flakes, or leaves, which were very proper for writing; and this papyrus was likewiſe called biblus. Pliny calls it a wonderful invention; ſo uſeful to life, that it preſerves the memory of great actions, and immortalizes thoſe who atchieved them. Varro aſcribes this invention to Alexander the Great, when he built Alexandria; but he had only the merit of making paper more common; for the invention was of much greater antiquity. The ſame Pliny adds, that Eumenco, king of Pergamus, ſubſtituted parchment inſtead of paper, in emulation of Ptolemy king of Egypt, whoſe library he was ambitious to excel by his invention, which carried the advantage over paper. It was called pergamenum from Pergamus, whoſe kings had the honour of the invention. All the antient manuſcripts are either upon parchment or vellum, and a great deal finer than the common parchment. The plant papyrus was likewiſe uſed for ſails, tackling, cloaths, coverlets, &c.

Linum, flax, is a plant whoſe bark, full of fibres and ſtrings, is uſeful in making fine linen. The method of making this linen in Egypt was wonderful, and carried to ſuch perfection, that the threads which were drawn out of them were allowed to be too ſmall for the obſervation of the ſharpeſt eye. Prieſts were always habited in linen, and never in woollen, and not only the prieſts, but all perſons of diſtinction, wore linen cloaths. This flax formed a conſiderable branch of the Egyptian trade, and great quantities of it were exported into foreign countries: a great number of hands, eſpecially women, were employed in the making of it.

Another kind of flax was called Byſſus: this was exceeding fine and ſmall, and often received a purple dye. It was very dear, and none but rich and wealthy perſons could afford to wear it. Pliny, who gives the firſt place to the aſbeſton or aſbeſtinum (the combuſtible flax), places the byſſus in the next rank, and ſays, that it ſerved as an ornament to the ladies. It appears from the Holy Scriptures, that cloth of this fine flax was brought from Egypt.

Another plant in great requeſt with the Egyptians was the Lotus, or Lote-tree, whoſe berries ſerved them in former times for bread. There was another Lotus in Africa, which gave its name to the Lotophagi, or Lote-eaters, becauſe they lived upon the fruit of this tree, which had ſo delicious a taſte, if Homer may be credited, that it made the eaters of it forget all the ſweets of their native country, as Ulyſſes found to his coſt, in his return from Troy.

It

It may be ſaid, that the Egyptian pulſe and fruits were excellent; and might, as Pliny obſerves, have ſufficed ſingly for the nouriſhment of the inhabitants; ſuch was their excellent quality, and ſo great their plenty. And, indeed, working men lived then almoſt upon nothing elſe, as appears from thoſe who were employed in building the pyramids.

Beſides theſe rural riches, the Nile, from its fiſh, and the fatneſs it gave to the ſoil for the feeding of cattle, furniſhed the tables of the Egyptians with the moſt exquiſite fiſh of every kind, and the moſt ſucculent fleſh. This it was which made the Iſraelites ſo deeply regret the loſs of Egypt, when they found themſelves in the dreary deſart. "Who," ſay they, in a plaintive, and at the ſame time, ſeditious tone, "ſhall give us fleſh to eat? we remember the fiſh, which we did eat in Egypt freely; the cucumbers and melons, and the leeks, and the onions, and the garlick: we ſat by the fleſh-pots, and we did eat bread to the full."

But the great and matchleſs wealth of Egypt aroſe from its corn, which, even in an almoſt univerſal famine, enabled it to ſupport all the neighbouring nations, as it particularly did under Joſeph's adminiſtration. In later ages, it was the reſource and certain granary of Rome and Conſtantinople.

SECT. VIII.

Of the preſent Political, Military, and Civil Government of EGYPT.

THIS is the moſt conſiderable government belonging to the Grand Signor. It is veſted in a baſha, twenty-four beys, and ſeven corps of different troops, without the conſent of whom the baſha cannot act. He begins his viceroyſhip with the month of September, which is the firſt in the Coptic calendar; and the Grand Signor ſends his order every year towards that time, by virtue of which he is either confirmed in his poſt, or diſmiſſed from it. His reſidence is in the caſtle of Cairo; and he holds a divan, or privy council, three times a week, viz. Sundays, Tueſdays, and Thurſdays; at which the beys and ajas, or heads of the abovementioned troops, always aſſiſt and give their attendance.

The number of beys, though fixed at twenty-four, is never complete: the baſha, who has a right to appoint them, turns the ſalary of thoſe who are wanting, to his own account. This ſalary is five hundred aſpers, or about fifteen ſhillings per day; and in caſe they have ſome campaigns for the good of the country, it is double that ſum. The dignity of bey is purchaſed, and thirty purſes is generally the price paid for it.

The caſe is nearly the ſame with the militia, or land-forces, who are ſeldom found to exceed half their proper number; only with this difference, that the officers appropriate to their own uſe the pay of thoſe that are wanting, though not without making ſome ſuitable acknowledgment to the baſha for conniving at the deficiency of the troops ordered to be provided.

The janiſſaries and Arabs are the two only corps of troops which ſerve on foot; the reſt being horſemen, and are called jumalis, tufckgis, ſherekfas, mettefaracas, and ſhaous. The janiſſaries are ſuppoſed to form a body of twelve thouſand, the Arabs one of eight thouſand, and the horſe twenty thouſand; ſo that the whole number ſhould be forty thouſand; but they ſeldom amount to above half the number for the reaſon before aſſigned. The foot ſoldiers form the garriſon in the caſtle and city of Cairo, the mettefaracas hold the other caſtles, ſuch as Alexandria, Roſetta, &c. The jumelis, tufckgis, and ſherekfas, are diſtributed all over the kingdom, to ſerve the beys and governors of provinces; and the ſhaous are appointed to keep a watchful eye over the Grand Signor's chargeable revenues.

This country is divided into a number of provinces, called caſheflis. The governors of them are called caſhefs; and thoſe who poſſeſs villages, meltezens. Theſe are obliged to obey the commands of the divan and baſha at Cairo. Each meltezen, or owner of a village, muſt either have ſold or given his right to another forty days before his death. In default of this the whole becomes the property of the Grand Signor, in conſequence of his right to confiſcate all the poſſeſſions of his ſubjects, who are in his ſervice at the time of their deceaſe.

The troops, as well as the power, are veſted in the beys, and there is always one amongſt them who takes ſome degree of authority above the others, and raiſes their jealouſy by that means; but he only retains this ſituation till his enemies have found a ſtronger party than his own. The government of thoſe who thus elevate themſelves above the reſt is ſhort, and their end often proves tragical; we are told by Dr. Pococke, that neither the baſha, nor any of the beys, ſcruple taking off their enemies by poiſon or the dagger, particularly by the former; of which he gives the following inſtance: "A baſha knowing that the bey whom he would willingly diſpatch was jealous of his deſigns, ordered his ſervant, when he came to viſit him, to pour his own coffee, and that of the bey's, out of the ſame pot. The bey, ſeeing this, concluded that it could not be poiſoned, and drank it off; but the ſlave, on his giving the coffee to the baſha, made a falſe ſtep, as he was ordered, and ſpilt it on the floor; upon which the bey perceived the baſha's treachery when it was too late to prevent the miſchievous effects of it."

The baſha generally grows rich when any inteſtine wars ariſe, partly becauſe the diſunion among the troops throws ſome of the power back into his own hands, and partly becauſe a conſiderable ſhare of the eſtates of thoſe who are killed in battle, or are afterwards proclaimed enemies of the ſtate, becomes his property. But the moſt conſiderable branch of his revenue ariſes from the peſtilence that ſo frequently rages in Egypt; inſomuch that during the three or four months it commonly laſts, it produces ſo great an income, that a ſingle day may bring in two or three hundred thouſand crowns, by the deaths of thoſe who are poſſeſſed of large villages. By the laws of the Ottoman empire, thoſe lands never revert to the Grand Signor, but a conſiderable part of them fall to the ſhare of the baſha, to which he is entitled by virtue of his commiſſion; and theſe frequently amount to immenſe ſums, eſpecially as, by the rapid deaths, with which the purchaſers are often ſnatched away one after another, he is enabled to ſell the ſame eſtate to three or four different perſons in one week; ſince the death of the purchaſer extinguiſhes the property in every land purchaſe.

In treating of the political conſtitution of Egypt, a celebrated writer remarks, that "notwithſtanding Egypt is ſubject to the Grand Signor, yet we may ſay it properly belongs to the Mamalukes, or ſlaves, moſt of whom are Georgians or Circaſſians. The Turks who carry on the trade with thoſe ſlaves, force them to abjure their religion before they bring them into Egypt. All the beys, and eſpecially all the officers of the troops, are renegadoes: and it is reckoned extraordinary to ſee a Turk raiſed to any great military poſt. They go into the ſervice of the renegadoes, who partly to get rid of the expence of feeding them, obtain from them the pay of a janiſſary or a horſeman; in a word, all the ſeven corps of troops conſiſt merely of the life-guards of theſe renegadoes. There are thayas of the janiſſaries, who have a guard of four hundred men about them, beſides thoſe whom they keep in their villages. The renegadoes inherit equal ſhares of their maſters eſtates with the children; and it has been obſerved, that the latter being brought up to a voluptuous life, ſoon ſpend their inheritance, and are reduced to ſuch wretched circumſtances, as to have recourſe to their own ſlaves, and beg of them for ſubſiſtence, or even permiſſion to ſerve them. It may be juſtly ſaid, that in no country whatever ſuch vaſt changes happen in families as in Egypt."

The Grand Signor's revenues in Egypt conſiſt of three branches, which ariſe from the lands, the cuſtoms, and the poll-tax on Chriſtians and Jews. All the villages in Egypt pay a certain yearly rent to the Grand Signor; and this is the haſna, or treaſure, that is ſent every year to Conſtantinople. How eaſy the levy is, may be concluded from the ſum which is raiſed, amounting only to ſix thouſand purſes, each of twenty-five thouſand medines, or about one hundred and twenty pounds ſterling; out of this, corn, flour, oil, and the like, are ſent yearly to Mecca, and twelve thouſand ſoldiers are paid, which reduces the treaſure to one thouſand two hundred purſes. After other deductions, for the conveyance of the water of the Nile to their lands, preſerving the public canals, repairing the caſtles, ſupplying the ſeraglio, and ſtoring the arſenal, the whole of this treaſure carried to Conſtantinople does not commonly amount to more than two hundred purſes in ſpecie, or about twenty-four thouſand pounds ſterling. The cuſtoms are farmed; and the perſons that pay this poll-tax (which is called the harach, and levied only on Chriſtians and Jews) are only men after they arrive at the age of ſixteen.

Not only the political, but civil government of this kingdom is firſt veſted in the baſha, whoſe prime miniſter is called caia, and generally holds the divan. The baſha

preſerve

preſerves a dignity not inferior to that of the Grand Signor. He always ſits behind a lattice at the end of the divan, and ſeldom aſſiſts in perſon, except on very particular occaſions, ſuch as reading ſome order from the Porte, or the like. When he goes abroad, he is always attended by one of the great officers, called a druggerman aga, who is not only an interpreter, but more eſpecially acts as maſter of the ceremonies; and he is always eſcorted by a body of the guards, like the Grand Signor.

The divan is held at the baſſa's palace at Cairo, three times a week; viz. on Sunday, Tueſday, and Thurſday. This grand council aſſemble in a ſpacious and magnificent halt, which hath a noble ſquare, or court before it, where the members of it parade with all their retinue, and make ſuch a ſplendid appearance with their ſervants and horſes, richly dreſſed and capariſoned, and glittering with gold, ſilver, and precious ſtones, that it is ſaid to exceed even the pomp of the Grand Signor at Conſtantinople. According to ancient records, we are informed that Sultan Selim, having told his divan at Cairo, and in the ſtately hall of the royal palace of the Egyptian monarchs, forbad the then baſha, and all his ſucceſſors, to meet any more in that magnificent apartment, leſt the ſight of ſo much grandeur and opulence, joined to the noble appearance of the divan, ſhould inſpire them with a deſire of ſhaking off their allegiance to the Porte, and of making themſelves abſolute maſters of Egypt: ſo that this hall, where the divan now meets, is quite different from that of the antient Egyptian kings; nor is there any thing in it worthy of obſervation, except ſeven deal planks, each about half an inch thick, and cloſely faſtened together with an arrow, which, it is ſaid, that ſultan ſhot through them. Theſe are kept ſuſpended over the place where the caſſa ſits, as a monument of the above-mentioned monarch's extraordinary ſtrength.

Egypt is ſubdivided into ſeveral provinces, ſome of which are under the direction of governors, called ſangiacs; other diviſions of it are governed by Arab ſheiks, or chiefs, all of whom are annually choſen by the divan, on the 29th of Auguſt, which is the firſt day of the coptic year. The buſineſs of theſe officers is to collect the revenue belonging to the Grand Signor, and keep the people under the reſpective juriſdictions in proper order.

Grand Cairo, and the country north of it, are under the protection of the janiſſaries; and the Arabs guard the country round the city. An officer called the walla, conſtantly patroles about the city, eſpecially at night; his office anſwers to that of the Turkiſh ſoubaſha. He takes into cuſtody all diſorderly perſons, or ſuch as cannot give a ſatisfactory account of themſelves; and, if they are not protected by the janiſaries, frequently puniſhes them as he pleaſes. The meteſſib is another diſtinguiſhed officer belonging to the city, whoſe buſineſs it is to inſpect all weights and meaſures, and ſee that their ſtandard is juſt and legal.

Another great officer is the teſterdar, who is lord high treaſurer of the tribute paid out of the lands to the Grand Signor. He is choſen annually by the Porte; but uſually retains his office during life, except in caſe of miſbehaviour, or breach of truſt.

The officer called the emir hadge, or prince of the pilgrims that go to Mecca, is alſo choſen annually; but in order to make amends for the great expence he muſt neceſſarily be at the firſt year for his equipage, he is generally continued two years in his office. If he be a perſon of abilities, and has great intereſt at the Porte, he then continues much longer, though rarely more than ſix years, for if they conduct the caravan ſeven years, the Grand Signor preſents them with a collar of gold. Their perſons are eſteemed ſacred; and ſhould they in any reſpect deviate from the conduct they ought to preſerve, they are not ſubject to any other puniſhment than degradation from their office. He has the command over the eſtates that belong to Mecca. If he behaves well during his adminiſtration, it procures him the general eſteem and affection of the whole country. The perquiſites of his office, excluſive of what he is allowed by the Porte, conſiſt in being intitled to one tenth of the effects of pilgrims who die on their journey.

The adminiſtration of juſtice here, nearly reſembles that in moſt other parts of the Grand Signor's dominions. A cadiliſkier (whoſe office is much like that of lord high chancellor) is ſent annually to Grand Cairo from Conſtantinople: appeals are made to him from the cadis; and, at his arrival, many cauſes of importance are brought before him. His houſe is in the place of juſtice; and he has his deputy who is called nakib. There are eight cadis in different parts of Cairo, and an officer in every ward, called kabandi, who is ſomething like a notary-public; for all obligations that are deemed valid, muſt be drawn by him. The cadiliſkier ſends the cadis from Cairo to moſt other towns, and one of the officers is ſent annually from Conſtantinople to Gize, Damietta, Roſetta, and Alexandria.

The people here apply themſelves greatly to the ſtudy of the law, which is written in the pureſt language, ſuch as is ſpoken at Damaſcus. They have a ſaying, that "the law cuts the ſword, but the ſword cannot cut the law;" for, however atrocious the offence may be, the Grand Signor himſelf cannot inflict any puniſhment on a perſon of that profeſſion.

One thing much to be admired in the adminiſtration of juſtice here, is, that all cauſes are immediately decided, as ſoon as the parties make application to thoſe in whoſe power it is to determine them. Many cauſes here, are brought before leading men, who finally decide the matter, without having any reference to a magiſtrate.

With reſpect to the puniſhments inflicted on offenders in Egypt, they are proportioned to the offences committed. Thoſe guilty of murder are puniſhed with death; but in trifling matters, they either give them the baſtinado, or elſe ſeverely whip them. They are particularly ſevere in the puniſhment of bakers for making their bread deficient; as alſo to butchers, for ſelling their meat either ſhort of weight, or ſo ſtale as not to be wholeſome. We have a particular account of theſe latter puniſhments, given by a perſon who lately travelled through moſt parts of this kingdom, which we ſhall preſent our readers in his own words:

"The puniſhment inflicted on bakers in this country, for making their bread deficient in weight, is, I think, ſevere and cruel; for though I cannot excuſe ſo barbarous an impoſition on the labouring part of the community, yet I would by all means limit the puniſhment within the bounds of humanity. When found guilty of the firſt offence, the overſeer of the bakers, (who is the examiner, and only perſon who tries them) immediately orders the delinquent to be ſeverely baſtinadoed; which is, beating them on the ſoles of their feet with a large ſtick; for the ſecond, they are more ſeverely puniſhed in the ſame manner; and, for the third, without any other proceſs than the above officer's order, they are ſometimes put in their own oven, when hot, where they are ſuffered to periſh, being burnt to death; which puniſhment I ſaw executed."

"The puniſhment of the butchers in this country (the ſame writer informs us) who are detected in ſelling meat either ſtale or deficient in weight, is no leſs extraordinary than that of the bakers, though not ſo cruel or ſevere; and as I mean rather to acquaint you more particularly with facts I have had ocular demonſtration of, than relations culled from other travellers, ſuch as dancing camels, &c. vouched by many, and which, after the moſt ſtrict enquiry among the natives, I could never learn the leaſt intimation of, from the oldeſt inhabitants of Cairo; ſo you may be aſſured the following is a fact, of which alſo I was an eye-witneſs. A butcher in the neighbourhood where I reſided, was detected, by the examining officer, of being guilty of this crime, and without any other form of trial than the order of the officer, was immediately nailed by one of his ears to the poſt of his own door; his noſe pierced, and one end of a wire, about ſix inches long, faſtened to it; at the other end of which, a piece of his ſtinking meat was fixed. In this ſituation he was obliged to continue four hours."

It is a privilege belonging to the relations or deſcendants of Mahomet (called in Arabia, ſheriff or noble, and by the Turks, emir or prince) to be exempt from appearing before any judge but their own chief, who is himſelf a relation of Mahomet, and is called neckilelſheriff. They are ſo much eſteemed, that though any one of the military bodies will puniſh them if guilty of any miſdemeanor, yet they firſt take off their green turban, out of reſpect to their character, and then ſubject them to equal puniſhments with others; and when they are puniſhed by their own magiſtrates, the like ceremonies are alſo uſed.

Notwithſtanding the baſha, his beys, and the military officers, adminiſter juſtice in ſome caſes, yet they themſelves pay little regard to the laws of equity. The military officers in particular, enrich themſelves by various oppreſſions of the people, eſpecially of the richer ſort, whom they either artfully enliſt, or pretend to have enliſted, under ſome of their bodies; by which they fleece them while alive, and ſeize on the beſt part of their effects after they are dead. The baſha connives at all theſe abuſes, either as being

being a ſharer of the ſpoils, or out of fear of diſobliging ſuch a powerful body, by diſcountenancing or ſuppreſſing them.

Proceedings of this arbitrary nature are exerciſed by the military more or leſs over the kingdom, eſpecially among the Arabian ſheiks, from whom they extort the moſt exorbitant contributions, under the ſpecious name of tribute for protecting them. The janiſſaries are ſo bent upon this point, that they keep an exact regiſter of all the various eſtates, trades, and occupations in the kingdom; of all the rich and poor; of the different ways by which they have extorted any ſums from them; and are ever concerting new methods whereby to renew their oppreſſions on the people.

Theſe cruel extortions extend in like manner to the Europeans, and other trading nations: as the janiſſaries are never at a loſs to quarrel with them, ſometimes about their dreſs, at others about their behaviour, as not paying them a proper reſpect, or for admitting ſome of their Mahometan women into their quarters by night. Thus they extort money under ſuch pretences, whether real or falſe; for there is no method of avoiding their reſentment, but by quick ſubmiſſion, and ſome anſwerable atonement, as ſpeedy as valuable, according to one of their favourite adages, that "the egg of to-day is preferable to the chicken of to-morrow." But, of all nations, that of the Jews is moſt hated, deſpiſed, and oppreſſed by this tyrannical government, under which they are dwindled to a very inconſiderable number, except at Cairo, and reduced to the loweſt poverty; though they were once intruſted with ſome of the moſt important poſts of the ſtate, and were at the ſame time very numerous and rich.

The people who inhabit the upper part of the kingdom are ſtill more wretched, as they are not only equally oppreſſed by their rapacious governors, but frequently expoſed to the inroads and dreadful ravages of the Arabian theiks, who take all opportunities of plundering the poor villagers, by way of repriſal, for the hardſhips they ſuffer from their petty tyrants and oppreſſors.

Upon the whole, the government of Egypt, from the tyranny thus exerciſed by one degree of people over another, may be ſaid to be at leaſt equally oppreſſive with that under the power of the moſt deſpotic prince. The rich plunder the poor, who, in defence of themſelves make repriſals wherever they are to be met with. Thus inſurrections frequently happen, the conſequences of which are not only the loſs of property, but of lives; for the poorer ſort, when urged by neceſſity, become deſperate, and wreak their revenge on thoſe that have oppreſſed them; for, when plundered of their wealth, they are ſeldom at a loſs for means to expreſs their reſentment of the injuries they ſuſtain.

SECT. IX.

Containing a Deſcription of the Deſart, chiefly diſtinguiſhed by the Provinces, or Kingdoms of ZAARA or ZAHARA, BILEDULGERID, and TOMBUTO; with an Account of its Situation, Extent, Diviſions and Provinces, Towns, Villages, Inhabitants, their Cuſtoms, Dreſs, Manners, Diet, Marriages, Funerals, &c.

THE deſart of Zaara is a vaſt inhoſpitable tract of land, which ſtretches itſelf from the Atlantic ocean on the weſt, to the kingdom and deſarts of Barca and Nubia on the eaſt, and from the river Senegal on the ſouth, to Biledulgerid on the north; that is, from the eighth degree weſt, to the twenty-ſixth of eaſt longitude, and from the fifteenth degree of eaſt latitude to the tropic of Cancer, comprehending from eaſt to weſt, a ſpace of at leaſt fifteen hundred miles in length; and in breadth, from north to ſouth about five hundred.

The Arabs divide this immenſe tract of land into three general diſtricts. Cahel, Zahara, and Aſgar, that is, the ſandy, ſtony, and marſhy deſarts, according to the nature of the ſoil; but later geographers divide this country into ſeven provinces, which are Zanaga, Zuenziga, Targa or Havr, Lempta or Iguidi, Bardoa, Bornou, and Gaoga.

As this country is covered with burning ſands, the ſoil cannot be ſuppoſed to be fertile, though that ſituated on the northern banks of the Senegal being watered, peopled, and cultivated, produces corn, rice, millet, and a variety of fruits, but little more perhaps is reaped than is ſufficient for the uſe of the inhabitants, except dates.

Camels and other cattle are common here, but this country is moſt remarkable for a ſpecies of domeſtic animal called adimnaim, of which there is great plenty. This is a kind of ſheep, about the ſize of an aſs, with long hanging ears: the females have horns, but not the males, and the wool is ſhort, but ſoft and fine. This animal is ſo ſtrong that it can eaſily carry a man for ſeveral miles, and ſo gentle that it never refuſes a burthen. The miſeries to which the inhabitants of this parched, ſandy, and barren deſart are expoſed, are increaſed by incredible multitudes of lions, tygers, wolves, and other ſavage animals, with which it is infeſted.

That the reader may have as diſtinct an account of this great tract of country as poſſible, we ſhall deſcribe the different provinces and deſarts into which it is divided. Beginning at the ſouth, the province of Zanaga extends from the Senegal on the ſouth, to the province of Suz on the north; it is bounded by the Atlantic ocean on the weſt, and by the territories of Seram, Sunda, and Zuenziga on the eaſt. It contains the two deſarts Azvo and Tugguzza or Taggoſt. The laſt of theſe produces a prodigious quantity of rock ſalt, which is conveyed hence into all the adjacent countries, and is uſed in the deſart chiefly to moiſten the mouth parched with the ſultry heat, and to preſerve the gums againſt a ſcorbutic diſorder to which the natives are very liable.

If the ſummer proves dry, travelling is here extremely fatiguing and dangerous; ſcarce a drop of water being to be ſeen for thirty leagues together; and when any is found it is ſo brackiſh, as to be equally unwholeſome and unpalatable. Nor do the cattle fare better, the barren earth not yielding ſo much as a blade of graſs, or any thing for their ſuſtenance, which obliges the paſſengers to carry not only proviſions for themſelves, but for their beaſts of burthen. Beſides the country being flat and ſandy, without mountains, woods, rivers, lakes, or any object to direct their courſe, it would be impoſſible to avoid loſing their way, were it not for the flight of certain birds, who are obſerved to go and return at certain ſtated periods. They are alſo guided by the courſe of the ſun by day, and by the ſtars by night; which laſt is probably the uſual time of travelling here, as well as in the deſarts of Arabia. Yet it is certain, that every part of theſe deſarts is not equally inhoſpitable, as they are allowed to be inhabited by ſeveral different nations, particularly by the Berviches, Ludayers, Duleyns, and Zenequi, ſome of which are ſo numerous as to raiſe fifteen or twenty thouſand men; there are alſo a variety of Arab tribes no leſs numerous, potent, and warlike, and conſequently they find lands capable of providing them and their cattle with ſubſiſtence.

Zuenziga is, if poſſible, a more dry and barren province than Zanaga; and we are told, that of large caravans that paſs through this country, ſeldom half the number, either of men or beaſts, ever return; moſt of them dying of thirſt, hunger, fatigue, or under the whirlwinds of ſand with which they are overwhelmed: but this we cannot give entire credit to.

Many beautiful horſes are bred in this diſtrict; and the inhabitants are ſuch expert horſemen and warriors, that they are become formidable to the princes of Barbary, who ſtudy to keep on good terms with them; nor are they leſs dreaded by the negroes, whom they ſeize on all occaſions, and ſell to the people of Fez and Morocco; and when the negroes get any of them in their power, they cut them in pieces by way of retaliation.

Targa is ſaid to be leſs barren, dry, and ſultry than either of the former provinces, it having a variety of good wells of freſh water dug deep in the ground, and the ſand produces graſs and ſeveral vegetables fit for food: the climate is healthful, and great quantities of manna are gathered here, which they ſell to their neighbours.

The province of Lempta, which lies to the eaſt of Targa, travellers find no leſs dangerous than any of the former, on account of the exceſſive heat of the ſun reflecting from the ſand, the ſcarcity of water, the whirlwinds of ſand, and the barbarity of the people, who endeavour to rob and plunder all that come in their way. Through this inhoſpitable region caravans paſs from Conſtantia, and other towns of Algiers and Tunis, to Nigritia, though equally in danger of periſhing by thirſt, hunger, and the ſword; but their attachment to commerce, and the advantages they reap from it, make them encounter theſe hazards with the utmoſt fortitude.

The province of Bardoa ſtretches from the ſixteenth to the twenty-ſecond degree of eaſt longitude. The inhabitants, who are named Bardoaits, have no towns but live in tents on the plunder of merchants and paſſengers. Near the mountains, which form the northern barriers between this province and Tripoli, ſtands the town of Kala, where are kept ſome fairs, to which the merchants reſort from

every part of Zahara, and the nations bordering upon the Mediterranean ſea, with the wealth of their ſeveral countries. The ſoil is in general dry, barren, and produces no commodities that merit particular notice.

The kingdom or province of Bornou extends from the twelfth to the twenty-ſecond degree of eaſt longitude, and from the ſeventeenth to the twenty-firſt degree of north latitude. The northern part reſembles in barrenneſs the other provinces of Zahara; but all the reſt, which is the greater part, is well watered by ſprings and rivers, that fall with a dreadful noiſe from the mountains, and render the country fertile in corn, graſs, and fruits. Both the eaſtern and weſtern frontiers are inhabited by a people of a roving diſpoſition, who live in tents, and are ſaid to enjoy every thing in common, no ſuch thing as property being known among them. Theſe frontiers are divided into mountains and vallies, covered with flocks of cattle, and fields of rice and millet; timber, fruit-trees, and cotton, alſo grow on many of the mountains.

The people of this province, as we before obſerved, live in tents or cabins, which are placed together in the form of a circle, and in the centre is a ſpacious area, in which they keep their cattle. As they frequently remove from one place to another, they are conſequently under diſagreeable apprehenſions from robbers and wild beaſts; and, in order to guard againſt any ſurprize from either, they always keep centinels without the tents, who, if any danger appears, give an immediate alarm, which is circulated throughout the encampment, and every perſon able to bear arms, defends his own habitation.

The poorer part of the natives, who are chiefly ſhepherds and huſbandmen, go almoſt naked in hot weather, wearing only a ſhort apron before, which reaches to their knees; but the better ſort wear a large ſhirt made of black linen, and faſtened round the middle by a ſaſh. Their heads are covered with a red bonnet or cap edged with white cotton; and they wear ſandals of Morocco leather, which riſe to the calf of the leg. Both ſexes wear ear-rings and pendants, as alſo rings on their fingers, and bracelets on their arms. The men let their hair hang low, but the women tie it up in a knot, and ornament in in proportion to their ſtation and quality. During the winter they are warmly cloathed with the ſofteſt ſheep ſkins, of which they alſo form their bed cloaths.

Cakes made of millet are their chief food, and their uſual drink is milk or whey. They have wheat and barley, but they are ſo averſe from ſtaying long in a place, that it is ſeldom reaped by the hands that ſow it. They ſit croſs-legged at their meals, on a mat made of Morocco leather or palm-leaves, and the diſhes that contain their food are made of copper or ivory. They waſh after their meals, and then regale themſelves by drinking coffee, and ſmoaking tobacco. They eat but two meals a day, one a little after ſun riſe, and the other a little before ſun ſet; and the women are not permitted to eat with the men.

Their male children are circumciſed at the age of fourteen: after which they may marry as ſoon as they can purchaſe a wife. They who have many daughters conſider them as a capital eſtate, for when any ſuitor offers himſelf, he muſt make conſiderable preſents to the parents, as his ſucceſs principally depends on that. They form a judgment of the ſuitor's affections by his liberality; and however well the parties may like each other, the parents of the girl will not deliver her up, till they are ſatisfied with the preſent made by the intended huſband. If he does not approve of his wife after ſhe is delivered to him by her parents, he may return her back to them; but he is obliged, in that caſe, to forfeit the preſents made previous to their marriage.

On the death of a perſon, the neareſt relation alarms the whole camp, who immediately aſſemble round the tent of the deceaſed, and teſtify their ſorrow indiſcriminately by the moſt lamentable ſhrieks. This continues for ſome time, when the body of the deceaſed is waſhed, and placed on a ſtool, to be publickly viewed till the grave is made, when he is carried to it, attended by his relations, and the principal people of the camp. After the ceremony, an entertainment is provided by the relations of the deceaſed for the attendants.

In the ſouthern parts of this province are ſeveral good towns, inhabited by people particularly diſtinguiſhed for their politeneſs and hoſpitality; and among them are many artificers and merchants of various nations, and of all complexions. It is ſaid that the government is in general monarchical, and that the king reſides at Bornou, the capital of the province, but his palace is a very mean building: and only remarkable for its furniture, the principal part of which is of ſolid gold, as are likewiſe his ſtirrups and ſpurs, with the bit and ornaments of his bridles: whence it may be conjectured, that a great trade is carried on here in that article with foreign countries, or that gold is produced either in this, or ſome of the neighbouring kingdoms.

Beſides Bornou, the capital of this province, there are ſaid to be the towns of Amozen, Sagra, and Samegonda, all of them to the northward of the metropolis, and, to the eaſtward, thoſe of Sama and Nabrina, but as the very exiſtence of theſe towns is queſtioned by theſe writers, therefore no account can be given of them.

The laſt and moſt eaſtern provinces of the deſart of Zahara is called by the natives Gaoga, and is reckoned to be upwards of five hundred miles in length from north to ſouth, and three hundred in breadth from eaſt to weſt, extending itſelf from the nineteenth to the twenty-eighth degree of eaſt longitude, and from the twelfth to the twenty-ſecond degree of north latitude. It is bounded on the eaſt, by Nubia; on the weſt, by Bornou; on the north, by part of the ſame province; and, on the ſouth, by the kingdom of Gorham, from which the river Senegal ſeparates it.

This is for the moſt part an exceeding mountainous country, and the inhabitants are little better than ſavages. They go almoſt naked, and their chief ſubſiſtence ariſes from their cattle: but they ſometimes obtain a conſiderable booty by plundering travellers. They live in ſmall wretched huts, made of ſo light a conſtruction, that they frequently take fire, and the whole village formed of them is totally conſumed.

Gaoga, is the chief and only city in this province: it is ſituated on the north ſide of the lake of the ſame name, in fifteen degrees forty minutes north latitude, and twenty-five degrees thirty minutes eaſt longitude, but it is ſo wretched a place, and the inhabitants are ſo rude and illiterate, that travellers have not thought it worthy of a particular deſcription.

We ſhall now take notice of the learning, poetry, and muſic, of the natives of the deſart of Zaara; their method of making war, ſkill in horſemanſhip, and their riding upon the back of an oſtrich, &c.

The learning of the Moors and Arabs of the deſarts, is ſo extremely limited, that few of them are able to read Arabic or any other language; yet ſome of them have a tolerable notion of aſtronomy, and talk with the preciſion of an European ſcholar upon the ſtars, their number, ſituation, and diviſion into conſtellations. The clear and ſerene ſky in which they live has greatly aſſiſted their obſervations, an advantage they have improved by a warm imagination and a happy memory: their ſyſtem of aſtronomy is, however, ſo replete with fable and abſurdity, that it is in general difficult to comprehend their meaning: yet, with all their ignorance, they ſeem formed by nature for liberal ſentiments, and with a taſte for the polite arts, as their eſſays in poetry and muſic, which are far from being contemptible, ſeem to indicate. Thoſe who are acquainted with the genius of the oriental tongues, from which theirs is derived, have been highly delighted with their ſongs, ſung in recitative, accompanied by a kind of guittar, which they are extremely fond of.

It might be imagined, from the ſoftneſs and effeminacy of their muſic, that theſe people cannot be very warlike; but if we may judge from ſome of their maxims, they are far from being puſillanimous. "Can any thing, ſay they, be more daſtardly, than to kill a man before you approach him near enough to be diſtinguiſhed." Hence they never attack an enemy till they come within the length of their lances, and then retiring to a proper diſtance, throw them, or ſhoot their arrows, with ſurpriſing dexterity. They fight chiefly on horſeback with ſhort ſtirrups, and by raiſing themſelves high in the ſaddle, ſtrike with greater force. They never draw up their cavalry in long lines and extended wings, but in ſmall detached ſquadrons, by which means they are leſs liable to be broke or thrown into confuſion; and when ſuch an accident happens, are more eaſily rallied. The agility of their horſes, and their own ſkill in riding, give them great advantages by attacking in all quarters, wheeling off, and returning to the charge with amazing dexterity and quickneſs.

We are told, that they ſometimes mount the oſtrich. Mr. Adamſon ſays, that ſome of thoſe he had ſeen among the burning ſands on the north ſide of the Senegal, are incredibly large, ſwift, and ſtrong. Two boys were mounted upon the back of one of theſe gigantic fowls not full grown, with which weight it ran ſeveral miles with a velocity exceeding belief, and the ſwiftneſs of the fleeteſt courſer. To try the ſtrength of an exceeding large oſtrich.

oſtrich, the gentlemen abovementioned had two ſtout men mounted upon his back, when their weight appeared by no means diſproportioned to his ability, as it was far from retarding its progreſs. At firſt the bird went a pretty high trot; but when he was heated he extended his wings, as it were to catch the wind, to which his ſwiftneſs ſeemed indeed equal. "Every body, ſays he, muſt have ſeen a partridge run, and conſequently muſt know there is no man whatever able to keep pace with it; and it is eaſy to imagine, that if its ſteps were longer, its ſpeed would be greatly augmented. The oſtrich moves like the partridge, but with the advantage of a long ſtep, and great aſſiſtance from its wings; and I am ſatisfied, thoſe I am ſpeaking of would have diſtanced the fleeteſt race horſes in England." Whence, we may remark, that if they could be tamed and broke in the ſame manner as a horſe, we might eaſily judge of their utility.

The natives of this country are in general fond of long journies and excurſions into remote parts on affairs of trade and commerce, in which reſpect they are ſo indefatigable, that no hazard is too great, where profit is the motive. Theſe expeditions being undertaken in large caravans, in which their goods and neceſſaries are carried on camels, they are able to make head againſt any oppoſition they may meet with on the road, and ſeldom return without rich ladings of gold, ivory, gum, oſtrich feathers, camel's hair, ſlaves, and other commodities, which they ſell to the Europeans, or to the merchants of Fez or Morocco. As no road or path can be preſerved in theſe ſandy deſarts, they are directed in their courſe by the flight of certain birds. The zealous and devout Mahometans conſider theſe as guides ſent by their prophet to direct them in their way; and it is ſaid, they never preſume to undertake a journey of any conſiderable length without their direction.

The kingdom of Tombuto, which borders on the province of Zuenziga, is ſituated to the ſouth-eaſt on both ſides the Niger; and, though little known, is ſaid to be of great extent. It took its name from Tombuto its capital, which ſtands in the latitude of fourteen degrees thirty-two minutes, and in the longitude of two degrees twenty-five minutes eaſt from London.

The houſes in the town, as well as thoſe in the circumjacent country, are built of a bell form, and only compoſed of hurdles plaiſtered over with loam; but here is a handſome moſque built with ſtone and lime. The royal palace is likewiſe built with the ſame durable materials, after a deſign drawn and executed by an excellent artiſt of Granada, who was driven hither when the Moors were expelled from Spain. There are ſome other tolerable ſtructures, beſides thoſe abovementioned.

Many weavers of cotton reſide in the city of Tombuto, and mechanics are more encouraged there than in any part of Africa. European cloths are brought hither from Barbary and the coaſt of Guiney. Markets and public fairs are held for the ſale of them, to which the women reſort with their faces vailed. Some of the native inhabitants and ſtrangers who reſide in the city are ſo rich, that the king thinks it not beneath the dignity of his rank to enter into an alliance with them.

This country is very fertile, being well watered by the river Senegal, which runs through it; and when that river overflows, the water is conveyed by ſluices to Tombuto. Beſides this, there are many ſprings, the water of which is exceeding good. Here are all kinds of grain, graſs, cattle, milk, butter, and all the neceſſaries of life, except ſalt, which they procure by land carriage from Tagara, which is about five hundred miles diſtant, and is ſo highly valued, that eighty ducats are given for a camel load of it.

The monarch of this country, when he goes abroad, rides upon a camel richly capariſoned, all the furniture ſhining with burniſhed gold, and his horſe is led after him by one of his principal officers. He likwiſe rides upon a camel in war; but all his ſoldiers are mounted on horſes. His attendants conſiſt of three thouſand horſemen, and a prodigious number of foot, who, beſides other arms, have poiſoned arrows. They have frequent ſkirmiſhes with thoſe who refuſe to pay tribute, and when a conqueſt is obtained, the captives are ſold to the merchants of Tombuto. Their horſes are chiefly brought from Barbary, for thoſe bred in the country are ſo few, and at the ſame time ſo ſmall, that they are only uſed on very trifling occaſions. The king, however, is always well provided with theſe beaſts; for when a merchant comes there with horſes, he orders the beſt of them to be picked out for him, and never ſcruples to pay whatever price the merchant demands. He has in his poſſeſſion a prodigious quantity of gold plate, and the whole court is ſaid to eat out of gold veſſels; ſilver, or any other metal being ſeldom uſed.

The king has the moſt profound homage and reſpect paid him by all his ſubjects; and when any ſtranger, or ambaſſador from other princes obtains an audience of him, he muſt fall proſtrate before him, and ſhew his ſubmiſſion, by taking up the duſt with his hands, and ſprinkling it over his head and ſhoulders. This ceremony is particularly obſerved by all who never had the honour before.

This prince has ſuch a natural antipathy to the Jews, that he has ſtrictly prohibited their being admitted into the city; and if a merchant is known to traffic with them, he is ſubjected to a heavy penalty. The king's taſte for literature is ſaid to appear from the great number of doctors, judges, and prieſts, whom he maintains at a great expence in the capital, furniſhing them with great convenience for ſtudy.

Manuſcripts from Barbary are brought hither, and ſold as the moſt valuable merchandize; and ſome traders are affirmed to have amaſſed immenſe wealth by confining themſelves to this literary traffic, which the monarch encourages with a princely ſpirit, taſte, and generoſity. Notwithſtanding all which, learning has made but little progreſs, except about the court, it having produced no viſible alteration in the manners of the people.

The inhabitants are in general mild and gentle in their diſpoſition, frugal in their œconomy, induſtrious in the diſcharge of their ſeveral employments, and chearful in the hours of relaxation, which they devote to ſinging, dancing, and merriment of various kinds.

Great quantities of European cloth are brought hither by the Barbary and Tripoli merchants; beſides which, the latter alſo bring glaſs beads, coral, paper, copper baſons, and other like wares. The articles exported from hence are gold, ſlaves, oſtrich feathers, ſena, and dates.

Inſtead of coin, they uſe bits of gold, ſix of which weigh an ounce: they have alſo ſhells brought from Perſia, four hundred of which are eſtimated at the value of a ducat: theſe latter they uſe in purchaſing articles of ſmall price.

There are neither gardens nor orchards without the ſuburbs of Tombuto. The gentry here place the higheſt mark of ſtate and dignity in keeping a great number of ſlaves; but their careleſſneſs frequently produces the moſt dreadful calamities: ſince by their means the whole town is often in flames; for the houſes, being built of combuſtible materials, catch fire upon the moſt trivial accident.

There is a large town to the ſouth of Tombuto, called Cobra, which is pleaſantly ſituated on the banks of the river Senegal. There is a judge appointed by the king to decide all controverſies; but the people have the liberty of appealing from his deciſion to the ſovereign. The buildings are much the ſame as thoſe of the capital, and the inhabitants are no leſs mild and ſociable, though not quite ſo temperate in their living: they are ſubject to many diſeaſes, that carry off numbers, which is ſuppoſed to be owing to the heterogeneous qualities of their food, which is uſually compoſed of fleſh, fiſh, milk, butter, oil, and wine; beſides which, they addict themſelves to ſpirituous liquors, and ſometimes drink them to great exceſs.

The province of Biledulgerid received its name from the Arabic Biled-el-gerid, ſignifying the land of dates, on account of the great quantity of that fruit which is peculiar to this country, and ſo plentiful as to ſupply the neighbouring kingdoms. Some geographers affirm, that this province was antiently known to the Greeks and Romans by the name of Numidia, and that it was then divided into two large provinces, whoſe inhabitants were diſtinguiſhed by the names of Maſcelyans and Maſſylians, the latter of which were ſituated eaſtward of the former. It is almoſt of a ſquare form, and extends above eighty leagues every way, or from twenty-eight degrees thirty minutes to thirty-two degrees fifty-minutes north latitude, and from five degrees thirty minutes to eleven degrees fifty minutes eaſt longitude; and is bounded on the eaſt by a ridge of lofty mountains which divide it from the kingdom of Tripoli and part of Gudamis, on the weſt by the countries of Zeb and Mezeb, and on the ſouth by the province of Verghela: this is all that can with propriety be comprehended within the juſt limits of Biledulgerid, though it is uſual to include all the countries here mentioned as its frontiers, under that name.

Biledulgerid is mountainous, ſandy, and barren, throughout, producing little beſides dates, which grow here in ſuch plenty, that the face of half the country is covered with trees bearing that fruit. The climate is hot and unhealthy, the people lean, ſwarthy, with ſhrivelled complexions, and their eyes inflamed, owing to the reflexion of the ſun-

beams

beams from the white hard ſoil; and the ſhowers of duſt and ſand driven by the high winds that blow here at certain ſeaſons with ſuch violence, as ſometimes to bury under it both men and cattle.

Eating dates is ſaid to occaſion an inveterate ſcurvy in the gums of the inhabitants, which frequently makes all their teeth drop out, and ſometimes ſpreads over their whole bodies, by which means they are rendered unhappy and extremely loathſome. In other reſpects the natives are ſound, vigorous, and healthy; and many of them live without ſickneſs to a good old age, though they diſcover a furrowed countenance, ſhrivelled ſkin, and hoary locks very early in life, and before infirmity, decrepitude, or any decay of their faculties begin to appear.

The plague, which makes ſuch havock in Barbary, is in a manner unknown at Biledulgerid; though the countries are contiguous, and there is a conſtant intercourſe between the inhabitants at all ſeaſons. This is alſo the caſe with the ſmall pox, which in other hot counties is no leſs contagious and fatal than the plague.

The people of this country are repreſented as ſavage, treacherous, and thieviſh, conſiſting of a mixture of old Africans and Arabs. The former live with great regularity in villages, compoſed of a number of ſmall huts, and the latter in tents, ranging from place to place in queſt of food and plunder. There is not a town in the whole country beſides Touſera and Tonſera worthy of notice; nor is it leſs deſtitute of rivers, there being in all this large territory ſcarce a ſingle ſtream worth mentioning, or that is not dried up for ſeveral months together.

In Biledulgerid, the Arabs, who value themſelves on their being ſuperior in birth and talents to the primitive inhabitants, are perfectly free and independent, and frequently enter into the ſervice of the neighbouring princes who are at war. They are fond of hunting, particularly the oſtrich, of which they make great advantage, for they eat the fleſh, exchange their feathers for corn, pulſe, and other things they want, uſe the talons as pendants for their ears and other ornaments; their fat is eſteemed a medicine of ſingular virtue, and they convert their ſkins into pouches and knapſacks; ſo that no part of the animal is left unemployed in ſome uſeful purpoſe. The Arabs likewiſe live upon the fleſh of camels and goats, and drink either the broth in which it is boiled or camels milk, for they ſeldom taſte water, that which is good being generally more ſcarce than milk itſelf. They have ſome horſes which they uſe in the chace, where people of rank are attended by negro ſlaves; and thoſe of inferior fortune by their women, who are no leſs obſequious than the ſlaves themſelves, looking after the horſes, and performing the moſt ſervile and laborious buſineſs.

Learning is here at a very low ebb; they have nevertheleſs ſchools to which all the boys of diſtinction are ſent in order to be inſtructed in that kind of knowledge which is moſt in repute, and are raiſed from thence to the dignity of judges or prieſts, in proportion to their genius and the proficiency they have made in their ſtudies. Some addict themſelves to poetry, for which many of the natives of this country ſhew a very early genius; and it is not uncommon to ſee a perſon merit the higheſt diſtinctions by means of this talent, which, conſidering the rude ignorance of the people in general, they ſometimes carry to an amazing pitch of ſweetneſs and ſublimity. Their invention is ſurpriſingly fertile, and they particularly excel in fables and parables. A few of them purſue the mechanic arts: but the people in general deſpiſe them as mean and ſervile: and where any of them engage in the employments of huſbandry, their wives and ſlaves commonly do all the labour.

Touſera, which De Liſle has placed within the limits of Biledulgerid, ſtands on the confines of Tunis, in thirty-two degrees twenty-eight minutes north latitude, and in ten degrees twenty-ſix minutes eaſt longitude from London. Of this city Marmol has given us the following account: that it was built by the Romans, and fortified with high walls, the ruins of which are ſtill to be ſeen. The Mahometans, on their entering this country, plundered and deſtroyed the city on account of the reſiſtance made by the inhabitants, and thus all its noble ſtructures were demoliſhed, the preſent buildings conſiſting only of low and mean huts. Here they have fairs at certain ſeaſons, to which the merchants of the ſurrounding countries reſort. Through the center of the town runs a river, by which the Arabs and Africans are ſeparated, each poſſeſſing a certain quarter, the one to the ſouth, and the other to the north, enjoying different privileges, though all are equally the inhabitants of the ſame city. They are even continually at war with each other, and make incurſions acroſs the river with all the rancour and animoſity of declared enemies; but when endeavours are made to bring them under a foreign government, they will then frequently unite againſt the common foe.

About ninety miles north-weſt of Tonſera, in thirty-three degrees fifteen minutes north latitude, and nine degrees three minutes eaſt longitude, was ſituated the city of Capſa, which was almoſt a Roman city, and was formerly ſurrounded with high walls, towers, &c. but they were almoſt totally demoliſhed by the Arabs; but the walls of the citadel are ſtill ſtanding, which are built of large ſquare ſtones, and are thirty feet thick, and one hundred and fifty in height. It was once a very populous city, and contained many ſtately moſques, and other magnificent ſtructures; but it is now very poorly inhabited, and the people are greatly oppreſſed under the Tuniſian government. In the center of the city is an incloſed fountain, the water of which is hot, and ſerves not only to bathe in, but, when cool, to drink. The adjacent country is fertile, and abounds with palm, citron, olive, and other fruit trees; but the climate is very unwholſome, and the inconvenience the inhabitants labour under on that account makes them naturally of a peeviſh and churliſh temper. Both ſexes go well cloathed, except about their feet, on which they wear large coarſe ſhoes made of the ſkins of wild beaſts, but ſo much out of form, that they not only diſfigure them, but are alſo exceedingly inconvenient; ſo that they are obliged to lay them aſide, and travel barefooted, when they are on a journey that requires expedition.

We cannot, with propriety, take leave of the continent of Africa, without, in the firſt place, giving the opinions of the learned concerning the reaſon of the dark complexion of the negroes, who chiefly inhabit this quarter of the globe. And, ſecondly, introducing ſome obſervations, together with objections and anſwers, relative to the ſlave trade, in order to prove that it is abſolutely inconſiſtent with, and even contrary to ſound policy, as well as abhorrent to humanity, reaſon, and juſtice: with ſome hints to thoſe who are not to be moved by ſuch arguments; for the better treatment of ſlaves during their paſſage from Africa to America, and on the plantations of the latter, for the benefit of both.

A learned author, in treating of the deep-black which tinges the complexions of the negroes, ſays, "The cauſe of this ſingularity has been the ſubject of much inquiry, which has given riſe to a variety of ſyſtems. Some have abſurdly ſuppoſed that the negroes, being the deſcendants from Cain, have had this mark of infamy ſtamped upon them, as a puniſhment for the fratricide of their anceſtor. If it were ſo, it muſt be allowed that his poſterity has made a ſevere atonement for his crime, and that the blood of the pacific Abel has been thoroughly avenged by his poſterity."

It was long the opinion of the Chriſtians in general, (ſays Mr. Salmon) and perhaps of the Jews before them, that all men were white till after the flood; but that Ham, the ſecond ſon of Noah, was converted from a white man, to a black man by his father's curſing him; and that Africa, falling to the lot of this ſon, all his poſterity who poſſeſſed this part of the world, have remained black ever ſince.

But that this curſe of Noah's was not the occaſion of ſuch a change of complexion is pretty evident; for firſt, the poſterity of Cham, or Ham, if they poſſeſſed Africa, are not all black. The entire northern coaſt, from Egypt to the empire of Fez incluſive, and for ſeveral hundred miles to the ſouthward, even as far as the tropic of Cancer, if not further, are not black, any more than thoſe who inhabit to the ſouthward of the tropic of Capricorn.

2. The people, in ſome parts of Aſia, particularly in the peninſula of India, on this ſide the river Ganges, and who are ſuppoſed to be the poſterity of Seth, the favourite ſon, are full as black within the tropic of Cancer, as any of the negroes in Africa: nor is there, in the inland country of India, at a diſtance from the coaſt, a ſingle perſon to be found that is not black; at leaſt I never met with one, though I travelled ſome hundred miles in that country, and reſided ſome time in it. It has been reported, indeed, that there are no blacks out of Africa; but probably thoſe writers who aſſert this, had their information from ſuch merchants or ſeamen, as had viſited only the coaſt of India; where, 'tis true, there is a tawny mingled breed; but even there the greateſt numbers of the natives are black, who lie within the tropic of Cancer. Indeed the Indian blacks have not the flat noſes, and thick lips, or the ſhort frizzled hair of the negroes. But theſe, I think, have never been reckoned part of Noah's curſe.

Another

Another reaſon aſſigned for the blackneſs of the negroes, is the heat of the climate, their country being ſituated within the torrid zone. But neither can this be admitted as the ſole reaſon of it, for great part of the continent of America alſo lies within the torrid zone; and yet there never was a black man there, till the Europeans tranſported them thither from Africa.

Others have ſuggeſted, that the people of Africa, being of a tawny complexion, between black and white originally, and not able to make themſelves as white as their northern neighbours, took great pains to make themſelves black, as a more deſirable colour than the olive: that they accordingly rubbed over their bodies with oil or greaſe, mixed with ſoot, or ſome other black ingredients; and thereby contributed to render their complexions darker than they were originally; and that the women afterwards, ſeeing nothing elſe but black men, brought black children into the world; and theſe ſtrengthen their opinions by ſome very notable facts. It is obſerved by all travellers, that the negroes greaſe or anoint themſelves and their children, continually from the hour they are born; and many of them mix black ingredients with the ointment; that the Caffres and Hottentots, beyond the tropic of Cancer, who are not naturally of ſo dark a complexion as the negroes nearer the line, do actually darken their ſkins pretty much, by rubbing them with fat and ſoot.

Others obſerve, that not only the complexions, but the very features, hair, make and ſtature of people differ, as the country and climate differs, wherein they were ſeverally born; and as to the negroes in particular, their hair, their lips and noſes, are not at all like thoſe of Aſia or Europe, or even thoſe who live in the north of Africa. The Scythians, of old, and the Tartars and Laplanders, at preſent, are of a very different make from the people of the ſouthern parts of Europe or Aſia: the Tartars are remarkable for their olive complexion, ſquat make, flat faces, and little eyes ſet deep in their heads. In ſome countries the people are tall, in others ſhort; and not only the perſons, but the very genius and temper of men differ, as the ſoil and climate differ where they were born. The Spaniards are grave and ſedate, mighty ſlow and circumſpect in their actions; while the French are gay and airy, perpetually dancing and ſinging: and this difference, no doubt, proceeds from the ſoil and ſituation of the reſpective countries; for, tranſplant any people from one country to another, they will alter or degenerate into the ſame kind of men, in a few generations, as the former inhabitants were. If the Spaniards and French were to change countries, they would, in a few generations, alter their perſons and humours; the French would be Spaniards, and the Spaniards French.

Did not every body ſee a remarkable difference between the French and the Engliſh, when the French firſt came over hither? and yet, in two or three generations, it was impoſſible to diſtinguiſh the one from the other. And ſo I take it to be in complexions, as well as in features and humours: blacks, in a few generations, would become white, if brought over hither; and poſſibly white men might become black, or very near it, if they were planted a few generations in the heart of Africa, eſpecially if pains were taken to make them ſo, by rubbing their children with greaſe and ſoot from the time they were born, as the Africans do.

To ſum up all: the ſun, no doubt, goes a great way towards the darkening the complexion of the people that inhabit the torrid zone; but then the ſoil they live upon, the pains they take to make their children ſtill blacker, and their women converſing altogether, or chiefly with black men, every one of theſe may contribute ſomething towards making them ſo exceeding black; for the ſun alone, it is certain, will not do it; or the people, who live within the torrid zone in America, would be equally black. And, as to Noah's curſing his ſon Ham, it is evident, this can be of no weight; for, as I have obſerved already, great part of the people of Africa (the country his poſterity are ſuppoſed to inherit) are not black: and the people of the Eaſt-Indies, who are ſuppoſed to be the deſcendants of Seth, the favourite ſon, are as black as any of the negroes of Africa; though, it is true, their hair is long, and their features much more engaging than thoſe of the African negroes.

If it be ſtill doubted, whether the alteration of climate or ſoil will have any effect upon the features as well as complexion, we may remember, that the Turks, Perſians, Indians, and Chineſe, all came originally from Tartary (at leaſt the ſovereigns and governing parts of thoſe empires); and yet they do not at all reſemble the Tartars from whence they deſcended, at this day, but the people of thoſe countries they reſpectively poſſeſſed to the ſouthward

of them, which, I believe, will be admitted to amount to a demonſtration of what has been advanced on this head."

To this may be added, that whatever may be the original and radical cauſe of that variety of complexion in the human ſpecies, it is agreed, that this complexion is owing to a gelatinous ſubſtance that is lodged between the cuticle and the ſkin. This ſubſtance is blackiſh in negroes, brown in olive-coloured or ſwarthy people, white in Europeans, and diverſified with reddiſh ſpots in thoſe who have extremely light or red hair. Anatomy hath diſcovered, that, in negroes, the ſubſtance of the brain is blackiſh, that the pineal gland is intirely black, and their blood is of a much deeper red than that of white people. Their ſkin is always hotter, and their pulſe quicker. The reaſon of their hair being curled, is becauſe, having to penetrate through a net work of a more denſe and tenacious ſubſtance, it becomes twiſted, and cannot be lengthened out. The ſweat of the negro diffuſes a ſtrong and diſagreeable odour, becauſe it is impregnated with that thick, rancid fluid which hath been long lodged, and ſlowly oozes out between the cuticle and the ſkin. This ſubſtance is ſo palpable, that one may diſtinguiſh in it, with a microſcope, a ſediment, formed in little blackiſh globules. Hence it happens that the linen cloth which wipes off the perſpiration of a negro, when copious, is tinged with it.

We ſhall now offer ſome remarks and obſervations relative to the African ſlaves, of which it has been publicly aſſerted, that they are equally incapable of reaſon and virtue. We hope, that what we are going to advance on this ſubject will ſet the matter right, and convince every diſcerning perſon, that ſuch an opinion is altogether erroneous and unjuſt.

In the year 1752, an Engliſh ſhip that traded to Guiney was obliged to leave the ſurgeon behind, whoſe bad ſtate of health did not permit him to continue at ſea. Murray (for that was his name) was there endeavouring to recover his health, when a Dutch ſhip drew near the coaſt, put in irons the blacks whom curioſity had brought to the ſhore, and immediately ſet ſail.

After this tranſaction, thoſe who took the part of theſe unhappy people, incenſed at ſo baſe a treachery, inſtantly ran to Cudjoe (a black at whoſe houſe Murray lodged) who ſtopped them at his door, and aſked them what they were in ſearch of? "the white man who is with you," replied they, "who ſhould be put to death, becauſe his brethren have carried off ours." The generous hoſt anſwered, "The Europeans who have carried off our countrymen, are barbarians; kill them whenever you can find them. But he who lodges with me is a good man; my houſe is his fortreſs; I am his ſoldier, and I will defend him. Before you can get at him, you ſhall paſs over my body. O my friends, what juſt man would ever enter my doors, if I had ſuffered my habitation to be ſtained with the blood of an innocent man?" This diſcourſe appeaſed the rage of the blacks; they retired, aſhamed of the deſign that had brought them thither; and ſome days after acknowledged to Murray himſelf, how happy they were that they had not committed a crime which would have ſtung them with remorſe as long as they lived.

From the above circumſtance it is very reaſonable to conclude, that the firſt impreſſions which the Africans receive in the new world, determines them either to good or bad actions. Repeated experience confirms the truth of this obſervation; for thoſe who fall to the ſhare of a humane maſter, willingly eſpouſe his intereſts. They inſenſibly adopt the ſpirit and manners of the place where they are fixed. This attachment is ſometimes exalted into heroiſm. We ſhall here give a remarkable inſtance of this.

A Portugueſe ſlave, who had fled into the woods, having learnt that his old maſter had been taken up for an aſſaſſination, came into the court of juſtice, and acknowledged himſelf guilty of the fact: ſuffered himſelf to be put in priſon inſtead of his maſter; brought falſe though judicial proofs of his pretended crime, and ſuffered death inſtead of the guilty perſon. Actions of a leſs heroical nature, though not uncommon, have touched the hearts of ſome coloniſts. Several would readily ſay as Sir William Gooch, governor of Virginia, did, when he was blamed for returning the ſalutation of a black; "I ſhould be very ſorry that a ſlave ſhould ſurpaſs me in politeneſs."

It is a melancholy conſideration, that many writers have proſtituted their abilities to juſtify policy which morality condemns. Be that as it may, it would be unpardonable in us, at a period when ſo many errors are boldly inculcated, to conceal any truth that is intereſting to humanity. If whatever we have hitherto advanced hath ſeemingly tended only to alleviate the burden of ſlavery, the reaſon

recover their independence, would live in quiet, upon the ſame manual labours, that would be then free and advantageous to them. The vaſſals of Denmark, and others in the dominions of the empreſs of Ruſſia, who have lately been made free, have not abandoned their ploughs, or relaxed in their labour, ſince they have obtained that indulgence.

Notwithſtanding the ſeveral nations concerned in the African trade are equally intereſted in preſerving the ſlaves in their paſſage, yet they do not all attend to it with the ſame care. They all feed them with beans, mixed with the ſame quantity of rice, but they differ in their manner of treating them in other reſpects. The Engliſh, Dutch, and Danes, keep the men conſtantly in irons, and frequently hand-cuff the women. The ſmall number of hands they have on board their ſhips, obliges them to this ſeverity. The French, who have great numbers, allow them more liberty. Three or four days after their departure, they take off all their fetters. All theſe nations, eſpecially the Engliſh, are too negligent with regard to the intercourſe between the ſailors and the women ſlaves. This irregularity occaſions the death of three-fourths of thoſe whom the Guinea voyage deſtroys every year. None but the Portugueſe, during their paſſage, are ſecured againſt revolts, and other calamities. This advantage is a conſequence of the care they take to man their veſſels only with the negroes, to whom they have given their freedom. The ſlaves, encouraged by the converſation and condition of their countrymen, form a tolerably favourable idea of the deſtiny that awaits them. The quietneſs of their behaviour induces the Portugueſe to grant the two ſexes the happineſs of living together; which indulgence would be productive of the greateſt inconveniences if allowed in other veſſels.

The Guiney negroes in general, and thoſe born in the iſlands, as well male as female, have the yaws once in their lives; it is a diſeaſe they muſt neceſſarily paſs through; but there is no inſtance of any of them being attacked with it a ſecond time, after having been radically cured. The Europeans ſeldom or ever catch this diſorder, notwithſtanding the frequent and daily connection they have with the negroe women. Theſe women ſuckle the children of the white people, but do not give them the diſorder. How is it poſſible to reconcile theſe facts (which are inconteſtable) with the ſentiments which phyſicians have adopted with regard to the nature of the yaws? May it not be allowed that the ſemen, the blood and ſkin of the negroes, are ſuſceptible of a virus peculiar to their ſpecies? Perhaps, the cauſe of this diſorder is owing to that which occaſions their colour; one difference is frequently productive of another; and there is no being or quality in nature, that exiſts abſolutely detached from others.

Be the cauſe or nature of this diſorder what it may, it is however evident, from the moſt accurate and undeniable calculations, that one-ſeventh part of the blacks that are imported into America from Guiney, die there every year. Fourteen hundred thouſand unhappy beings, who are now in the European colonies in the new world, are the unfortunate remains of nine millions of ſlaves that have been conveyed thither. This dreadful deſtruction cannot be the effect of the climate, which is nearly the ſame as that of Africa, much leſs of the diſorders, to which, in the opinion of all obſervers, but few fall a ſacrifice.

It may naturally be ſuppoſed that this great mortality muſt originate from the manner in which theſe ſlaves are governed; and might not an error of this nature be corrected? The firſt ſtep neceſſary in this reformation would be to attend minutely to the natural and moral ſtate of man. Thoſe who go to purchaſe blacks on the coaſts of ſavage nations: thoſe who convey them to America, and eſpecially thoſe who direct their labours, often think themſelves obliged, from their ſituation, and frequently too for the ſake of their own ſafety, to oppreſs thoſe wretched men. The ſoul of theſe managers of ſlaves, loſt to all ſenſe of compaſſion, is ignorant of every motive to enſure obedience but thoſe of fear or ſeverity, and theſe they exerciſe with all the harſhneſs of a temporary authority. If the proprietors of plantations would ceaſe to regard the care of their ſlaves as an occupation below them, and conſider it as an office to which it is their duty to attend, they would ſoon diſcard theſe errors that ariſe from a ſpirit of cruelty. The hiſtory of all mankind will ſhew them, that in order to render ſlavery uſeful, it is at leaſt neceſſary to make it eaſy; that force does not prevent the rebellion of the mind; that it is the maſter's intereſt that the ſlaves ſhould be attached to life; and that from the moment he no longer fears to die, nothing is to be expected from him.

"Many abuſes would be reformed, if the principle of enlightened reaſon, derived from the ſentiments of humanity, had its proper influence. Men would acknowledge the neceſſity of lodging, cloathing, and giving proper food to beings condemned to the moſt painful bondage that ever has exiſted, ſince the infamous origin of ſlavery. They would be ſenſible that it is naturally impoſſible that thoſe who reap no advantage from their own labours, can have the ſame underſtanding, the ſame œconomy, the ſame activity, and the ſame ſtrength, as the man who enjoys the produce of his own induſtry. That political moderation would gradually take place, which conſiſts in leſſening of labour, alleviating puniſhment, and rendering to man part of his rights, in order to reap with greater certainty the benefit of thoſe duties that are impoſed upon him. The preſervation of a great number of ſlaves, whom diſorders, occaſioned by vexation or regret, deprive the colonies of, would naturally flow from ſo wiſe a regulation. Far from aggravating the yoke that oppreſſes them, every kind of attention ſhould be given to make it eaſy, and, by favouring a natural taſte that ſeems peculiar to the negroes, to diſſipate even the idea of their preſent ſituation.

"It may be obſerved, that the organs of the negroes are extremely ſenſible of the powers of muſic. Their ear is ſo true, that, in their dances, the tune of a ſong makes them ſpring up an hundred at once, ſtriking the earth at the ſame inſtant. Enchanted, as it were, with the voice of a ſinger, or the tone of a ſtringed inſtrument, a vibration of the air is the ſpirit that actuates all the bodies of theſe men; a ſound agitates, tranſports, and throws them into extaſies. In their common labours, the motion of their arms, or of their feet, is always in cadence. At all their employments they ſing, and ſeem always as if they were dancing. Muſic animates their courage, and rouſes them from their indolence. The marks of this extreme ſenſibility to harmony, are viſible in all the muſcles of their bodies, which are always naked. Being poets and muſicians by nature, they make the words ſubſervient to the muſic, by a licence they arbitrarily aſſume, by lengthening or ſhortening them, in order to accommodate them to an air that pleaſes them.

"Whenever any object or incident ſtrikes a negro, he inſtantly makes it the ſubject of a ſong. In all ages, this has been the origin of poetry. Three or four words, which are alternately repeated by the ſinger, and the general chorus, ſometimes conſtitute the whole poem. Five or ſix bars of muſic compoſe the whole length of the ſong. What appears to be a ſingular circumſtance, is, that the ſame air, though merely a continual repetition of the ſame tones, takes intire poſſeſſion of them, and makes them work or dance for ſeveral hours; neither they, nor even the white men, are diſguſted with that tedious uniformity which theſe repetitions might naturally occaſion. This particular attachment is owing to the warmth and expreſſion which they introduce into their ſongs.

"Their airs are generally double time. None of them tend to inſpire them with pride. Thoſe intended to excite tenderneſs, promote rather a kind of languor. Even thoſe which are moſt lively, carry in them a certain expreſſion of melancholy. This is the higheſt entertainment to minds of great ſenſibility. So ſtrong an inclination for muſic might become a powerful motive to action under the direction of ſkilful hands. Feſtivals, games, and rewards might on this account be eſtabliſhed among them. Theſe amuſements, conducted with judgment, would prevent that ſtupidity ſo common among ſlaves, eaſe their labours, and preſerve them from that conſtant melancholy which conſumes them, and ſhortens their days.

"After having provided for the preſervation of the blacks exported from Africa, the welfare of thoſe who are born in the places whither they are conveyed would then be conſidered. The negroes are not averſe to the propagation of their ſpecies, even in the chains of ſlavery. But the cruelty of their maſters effectually prevents them from complying with this great end of nature. Such hard labour is required from negroe women, both before and after their pregnancy, that their children are either abortive, or live but a ſhort time after delivery. Mothers, rendered deſperate by the puniſhments which the weakneſs of their condition expoſes them to, ſometimes ſnatch their children from the cradle, in order to ſtrangle them in their arms, and ſacrifice them with a fury mingled with a ſpirit of revenge and compaſſion, that they may not become the property of their cruel maſters. This barbarity, the horror of which muſt be wholly imputed to the Europeans, will perhaps convince them of their error; ſo that their ſenſibility may be rouſed, and engage them to pay a greater

attention

attention to their true intereſts, as well as the dictates of humanity. They will find, that by committing ſuch outrages on the common rights of mankind, they injure themſelves; and they will at leaſt ceaſe to be the executioners, if they will not become the benefactors of their ſlaves.

"Thus the Europeans, urged by theſe cogent motives, will perhaps reſolve to liberate thoſe mothers who ſhall have brought up a conſiderable number of children to the age of ſix years. The allurements of liberty are the moſt powerful that can influence the human heart. The negro women, animated by the hope of ſo great a bleſſing, to which all would aſpire, and few would be able to obtain, would make neglect and infamy be ſucceeded by a virtuous ambition to bring up children, eſpecially when freedom and tranquillity would be ſecured to them by the number and preſervation of their offspring."

CHAP. IX.

THE NEW HISTORY AND DESCRIPTION OF THE

AFRICAN ISLANDS;

OF WHICH

ZOCATRA, BABELMANDEL, MADAGASCAR, THE COMORA ISLES, BOURBON, AND MAURITIUS, ARE IN THE INDIAN OCEAN, AND THE REST IN THE ATLANTIC.

SECT. I.

Treating of the ISLAND of MAURITIUS, or the ISLE of FRANCE, its Boundaries and Extent, Rivers, Harbours, Product, Animals, Inhabitants, &c.

THIS iſland lies in the Indian ocean, between the nineteenth and twentieth degrees of ſouth latitude, and in ſifty-eight degrees thirty minutes eaſt longitude from London, about one hundred leagues to the eaſt of Madagaſcar. It was early diſcovered by the Portugueſe; after them, the Dutch took poſſeſſion of it in 1598, and ſettled on the ſouth ſhore, but abandoned it after they became poſſeſſed of the Cape of Good Hope: they gave it the name of Mauritius in honour of prince Maurice their ſtadtholder. It remained uninhabited after the Dutch quitted it, till the French in 1720 landed on it.

Mauritius is reckoned to be about forty-five leagues in circumference. The form is oval; and from the many high mountains torrents of freſh water ruſh down with great impetuoſity, and form various rapid rivers and rivulets, which are foul near where they fall, particularly in the rainy ſeaſon, but grow clearer as they run farther from the mountains, and are tranſparent as cryſtal before they diſembogue themſelves into the ſea. A French officer, who made the circuit of the iſland in 1770, during the dry ſeaſon, croſſed twenty-four rivers flowing with freſh water, but none of them are navigable for ſloops above a muſquet ſhot from their mouth. One of theſe rivers, which is named Anguilles, flows from ſprings of a ferruginous quality, which covers the water with an oil.

According to the meaſurement of the Abbe de Caille, the iſle of France is, in its greateſt diameter, thirty-one thouſand eight hundred and ninety fathoms from north to ſouth, and twenty-two thouſand one hundred and twenty-four from eaſt to weſt: its ſuperficial content is four hundred and thirty-two thouſand ſix hundred and eighty acres, of one hundred perches the acre, and twenty feet the perch. The country is hilly, and in ſome parts mountainous, covered with thick woods. The iſland is almoſt entirely encircled, at ſome diſtance from the ſhore, by a belt of rocks; and in the parts where this defence fails, the coaſt is formed of rocks high and inacceſſible.

The wind generally blows from the ſouth-eaſt; but when the ſun is in the northern hemiſphere, particularly in the months of May and June, it commonly blows from the north-weſt. The hotteſt months are thoſe of November and December, but the air is then tempered with plentiful rains, yet dreadful hurricanes viſit the iſland at that ſeaſon. On account of the continued ſtorms, all navigation is at a ſtand from December till April. While a hurricane laſts, it is uſual for the wind to go quite the circle of the horizon, after which a perfect calm ſucceeds. A very fatal hurricane happened in 1760. Theſe tempeſts deſtroy a great number of rats, graſhoppers, and ants, with which this iſland is infeſted.

This iſland contains two ports, the principal of which is to the ſouth-eaſt, where the Dutch ſettlement formerly was, the remains of the building belonging to which are ſtill to be ſeen. This port may be entered before the wind; but it is very difficult to get out of it, as the gales generally blow to the ſouth-eaſt. The other port, named port Louis, is ſituated to the north-weſt, and is ſmaller than the former; a ſhip may go in or out of it large before the wind, which induced the French to fix their principal ſettlement here, although ſituated in the moſt diſagreeable part of the iſland.

The town, called alſo the camp, and which has ſcarcely the appearance of a market town, is built with tolerable regularity at the bottom of the port, and at the opening of a valley which is about three quarters of a league long, and eight hundred or one thouſand yards wide. It conſiſts of wooden houſes of one ſtory high, and is defended towards the ſea by a fort, called fort Blanco, and a battery. This harbour is greatly obſtructed by hulks of ſhips, which having been long ſince ſunk there, form each an iſland, which is every day increaſed by the madrepores growing round them.

There are only three churches in the iſland, one at port Louis, the ſecond at the ſouth-eaſt part, and the third and handſomeſt at a ſettlement called Pamplemouſſe. The two firſt are ſmaller than the churches of a country village. Indeed, another church was built at port Louis upon a very commodious and elegant plan, but the roof being too much raiſed, the walls were inſufficient to bear its weight, and reſiſt the force of the hurricanes; what remains of it is now uſed as a ſtorehouſe, of which there are but few in the iſland, and the greater part of them are built of wood, a material by no means proper for public buildings here, where the ſtrongeſt beams will only laſt forty years, if the worms do not deſtroy them ſooner.

It has been remarked by a late writer, that every thing in this iſland differs from what is ſeen in Europe, even the herbage of the country. The ſoil is almoſt every where of a reddiſh colour, and mixed with veins of iron, which are frequently found near the ſurface, in the form of grain, the ſize of a pea. In the drier parts, eſpecially near the town, the ground is very hard. It reſembles pipe clay; and, to make trenches, they ſometimes cut it with axes, as they do lead. As ſoon as it rains, it becomes ſoft and ſticky,

ſticky, notwithſtanding which, they have not yet been able to make it into bricks. There is no real ſand in the ſoil, but the ground is every where rocky, except where artificial means have been uſed to make it otherwiſe. The rocky ſubſtances in general are of an iron grey colour, contain a great deal of iron ore, and vitrify in the fire. The whole iſland is ſurrounded with mad repares, a kind of vegetation of ſtone, formed like a plant or ſhrub: theſe are ſo numerous, that the rocks ſeem formed of them only.

With reſpect to the natural productions of this iſland, the firſt we ſhall mention is a turf, which grows in beds near the ſea-ſhore: it is very thick and elaſtic; its leaf is very ſmall, and ſo ſharp-pointed as to prick people's cloaths. The cattle will not touch this herb, but love to browſe upon a kind of dogs graſs, which grows in many parts, and puts out little hard branches from the joints. The beſt herb, however, is one that grows on the windward ſide of the iſland: it has pretty large blades, or rather leaves, and is green and tender all the year. Here is likewiſe a ſhrub that yields a kind of fruit whoſe huſk might be turned to ſingular advantage. A prickly aſparagus; a mallow with ſmall leaves; a thiſtle with yellow flowers, which yield ſeeds that are poiſonous; a bad ſcented gilliflower; ſweet baſil, which is of a healing quality; and a kind of ſweet-ſcented lilly.

The vel antier is a plant whoſe odour is quite agreeable at a diſtance; leſs ſo, as you approach it, and perfectly nauſeous when you come near it; and here is a kind of bramble that bears a nut, the kernel of which is bitter, but efficacious in many diſorders. The plants called raquettes, which bear yellow flowers, are uſed in making hedges, on account of their ſharp prickles.

Here is a very pretty ſhrub called bois de demoiſelle, or lady-wood; others that reſemble the box-tree, and that bear a great affinity to the cork-tree. Balm ſhrubs and a baſtard kind of potatoe are common; as is panier graſs, which ſerves for phyſic and cloathing, for it is uſed medicinally, and likewiſe to make thread. Here are likewiſe many other ſhrubs, which have not as yet particular names aſſigned them, but go under the general denomination of liaimes or rattans; theſe twine round the trees in a ſurprizing manner, and ſecure them from the violence of the hurricanes; of the bark of theſe they make ſtrong cords, which are tougher and more ſerviceable than thoſe made of bark.

The mapou-tree, is as penetrable to a knife as a turnip, but it is of a poiſonous nature. The baſtard cinnamon-tree is large; its timber reſembles that of the walnut-tree, and its wood is much valued by cabinet makers. The iron wood and ſtinking wood trees are common, as are likewiſe the ſandal wood tree, the vacoaer ſmall palm, the latanier, the mangrove, which is a very large kind of fern, and grows in the ſand of the ſea.

The real or black ebony tree, grows very high and thick, has a bark of a dark colour; and the leaves which reſemble thoſe of myrtle, are of a deep green. The ebony trees, after being cut down, are buried under the ground for ſome time, which it is ſaid improves the jetty black. The wood, being very fine and beautiful, is uſed in various Moſaic inlaid works, and toys; the qualities are, being hard, heavy, of an admirable black, and bearing a high poliſh. The ebony of this iſland is reckoned the fineſt in the world: but ſince the Europeans have diſcovered ſo many methods of giving other hard woods a beautiful black colour, and an elegant poliſh, this wood is on that account not quite ſo much in requeſt as formerly.

Many vegetable productions, which have been brought into this iſland by order of government, tranſplanted by private perſons, or imported by the deſire of ſome of the ſettled inhabitants, have greatly increaſed. Theſe are diſtinguiſhed under four claſſes; namely, 1. The plants, which, being once ſown afterwards grow ſpontaneouſly by reſowing themſelves, and thus become naturalized. 2. Articles of cultivation. 3. The produce of the kitchen garden. 4. The produce of the flower garden.

Thoſe of the firſt claſs, conſiſt of a kind of indigo, purſlain, water-creſſes, dandelion, wormwood, mullen; the bulruſh, which is green for about five months in the year; white graſs, which was introduced firſt of all for forage, but none of the cattle will eat it, and its increaſe is now ſo great, that it may juſtly be deemed one of the plagues of huſbandry; the brette, a ſpecies of the morell, with a prickly leaf, but pleaſant of taſte, and of a purgative nature; there are two ſpecies of the brette, one of which is ſerved up at table in the manner of ſpinach, and the other is uſed as a medicine.

The caſſau root is one of the plants which are the objects of cultivation. It was tranſplanted hither from America, and grows in great plenty; it is of great ſervice in ſubſiſting the negroes, who are allowed three pounds of it daily. Maiz or Turkiſh, and mamoe, are common; as are wheat, rice, millet, fatague, a fine kind of graſs brought from Madagaſcar, and tobacco; but the latter is very indifferent. Vegetables, it has been obſerved, in general degenerate here; and that they who wiſh to have them tolerable good, are obliged to be ſupplied with freſh ſeed from the cape of Good Hope, or Europe, and experiments have been made, but without ſucceſs, to propagate ſainfoin, trefoil, hemp, flax, and hops.

The vegetables of the third claſs which are propagated and grow here, are, leeks and onions, celery, lettuce, endive, fennel, parſley, cauliflowers, cabbage, burnet, garden purſlain, ſage, aſparagus, carrots, parſneps, turneps, ſaſſafras, radiſhes, beet-roots, European potatoes very ſmall, Indian potatoes very large, ſaffron, ginger, piſtachio-nuts, chives; alſo cherville, ſorrel, garden creſſes, ſpinach, ſtrawberries, pomegranates, pine-apples, pepper, gourds, cucumbers, water melons, melons, pumpkins, artichoaks, French beans, and peas.

With reſpect to the flower gardens, attempts have been made to cultivate a variety of flowers here, but they have never ſucceeded; the only productions from Europe being the tuberoſe, lark's foot, large daiſy of China, and a ſmall ſpecies of pinks. The African exotics are the flowering ſhrub, called belle immortelle, or immortal beauty of the cape; a reed which bears a group of leaves, white in the inſide, and violet coloured without; a kind of tulip, bearing but two leaves, which always adhere to the ground. Theſe flowers are all without ſmell; and even thoſe tranſplanted from Europe, when cultivated here, loſe their agreeable fragrancy. And it has been remarked in general, that no plants bear flowers here of a pleaſant ſmell.

Among thoſe which flouriſh here, are, aloes, roſe-trees, jaſſmines, myrtles, a flower called the ſhoe-maker flower; the poincillade, a kind of bramble; jalop flowers, the vine of Madagaſcar, which is only a rattan, with which cradles are made, but it bears a yellow flower. The franchipanier, an inferior kind of jaſſmine, the Indian ilac, and the mongris, which has ſome reſemblance both to the jaſſmine and the orange tree.

Here are found ſome oak, pine, fir, cherry, apricot, medlar, apple, pear, olive, fig, and mulberry-trees; but they are in general much degenerated with reſpect to ſize, many of the fruit trees only bloſſom, and ſcarce bear any fruit, unleſs we except the peach tree, which produces ſome fruit, and the vines tranſplanted hither bear grapes, but a kind of white louſe is very deſtructive to both. The cotton tree, ſugar-cane, and coffee-tree, ſucceed tolerably well. The polehe is a tree that affords a pleaſant ſhade; and the bambou is uſeful in various domeſtic matters. The banana is very common, and the blacks are exceedingly fond of its fruit. They are treated with it in great plenty every new-year's day; and they uſually count their years of ſorrow and ſervitude by the number of banana feaſts they have regaled at. The badamier yields a kind of almond; the avacat ſerves as a ſweetmeat; the jaca tree furniſhes a large fruit, which is rather agreeable to the taſte. The gonyavo tree is a kind of medlar; and the jamroe tree reſembles a roſe tree, but bears a ſmall fruit of a ſweetiſh, but inſipid taſte.

Orange and citron trees abound here, though the fruits of each are but indifferently taſted. The cocoa-trees, however, produce nuts which are very delicious. Date, palm, ſago, &c. are found here, but in no great perfection. The tamarind tree has a beautiful head; its leaves are ſpread during the day, but cloſed at night, like moſt other leguminous plants: its pod contains a mucilage, which makes excellent lemonade. It may be remarked upon the whole, that the exotics of Africa, are beſt calculated for tranſplanting hither, as the climate of this iſland is rather too cold for Aſiatic vegetables, and too hot for thoſe of Europe.

As to the animals of the iſland of Mauritius, the only quadrupedes natural to it are monkies and rats. The monkies are of a middling ſize, of a reddiſh grey caſt, with long tails. They frequently go in droves, and pillage the houſes. When they are on the ſcout, they depute one of their number to aſcend the higheſt tree, or the point of a rock; and if any danger is apprehended, he cries out to alarm the reſt, when they all immediately decamp: this watchman has ſometimes been unfortunate enough to be ſhot by the ſailors.

This iſland has always been peſtered with great numbers of rats, inſomuch that the Dutch are ſaid to have abandoned it on that account. They are much the ſame as thoſe of Europe, from whence it is ſuppoſed they were originally brought. The havock theſe animals make here

is almoſt incredible, particularly to the corn and fruits; and we are told, that a whole field of maize has been known to be deſtroyed by them in a ſingle night.

The feathered race are not very numerous, or in great variety in this iſland. But among them is one called corbigeaux, which is reckoned the beſt game they have; but they are very difficult to catch. Parrots are tolerably plentiful, but none very handſome. There is alſo a ſpecies of the paroquets; they are about the ſize of ſparrows, and have green bodies, with grey heads. Another of their birds is called by the natives pailleneus, and by the Engliſh the tropic bird. Of theſe there are two ſorts, one of which is all white, and the other variegated, having the body white, the beak black, and the tail and claws red. They build their neſts in the woods, but are generally found near the ſea, and are ſo familiar, that they are eaſily caught. The woods abound with blackbirds, which are a kind of game greatly admired by the natives. There are alſo two kinds of pigeons, one of which, though pleaſant to the taſte, is of ſo bad a quality, that they who eat of them are thrown into ſtrong convulſions.

Great numbers of toalouroux are found near the ſea-ſide; theſe are a kind of amphibious crab that make burrows under ground, like moles; they run very faſt; and will ſnap their claws by way of defence, when attacked.

The moſt extraordinary creature here is that called bernard l'hermite; it is a kind of lobſter, whoſe hinder part is not provided with a ſhell; but it inſtinctively lodges itſelf in empty ſhells which it finds on the ſhore. They run together in great numbers, each with its houſe after it, which, as it advances in growth, it abandons for a larger one.

Inſects are extremely numerous in this iſland, the moſt deſtructive among which are the graſshoppers, which ſometimes light upon a field like a a fall of ſnow, when they eat up the verdure in the courſe of a night. Ants are equally miſchievous in houſes, where they prey upon every kind of proviſion, which it is difficult to ſecure from them. Here are likewiſe waſps, ſpiders, various kinds of flies, centipedes, and lizards. Moths, or ſmall butterflies, ſo infeſt the houſes after dark, that they are obliged to put their candles into glaſs cylinders. Theſe flies draw into the houſes a very beautiful lizard: it is about five inches long, and has bright and ſparkling eyes; it climbs along the walls, and lives upon flies and other inſects: they are not in the leaſt miſchievous; but, on the contrary, ſo tame, that if ſugar is thrown on the ground, they will immediately come and take it. But the greateſt enemy to theſe inſects is the ſpider, ſome of which have bodies as big as a nut, with large paws covered with hair. Their webs are ſo ſtrong that even ſmall birds are ſometimes caught in them. They are particularly ſerviceable in deſtroying the centipedes and waſps.

An inſect called formicaleo, proves very deſtructive to the ants here; and another, named canerelas, is equally ſo, of which there are three ſorts: the moſt common are about the ſize of a cockchafer, of a reddiſh brown: another of them is flat, and of a grey colour. They are very deſtructive to furniture and books; and the houſes are greatly annoyed with them in wet weather.

It is obſerved by a late celebrated writer, that the temperature of this climate is ſo favourable to the propagation of inſects, that in a ſhort time the fruits would be eaten up by them, and the iſland itſelf become uninhabited, were it not that moſt of the fruits of theſe meridional countries are cloathed with a thick rind, and afterwards with a ſkin, a very hard ſhell, and an aromatic bark, like the orange or citron; inſomuch that the flies can introduce their eggs into very few of them. Many of theſe noxious animals are at perpetual war with each other. The formicaleos lay ſnares for the ants; the green fly pierces the canerelas; the lizard hunts the butterfly; the ſpiders ſpread nets for every inſect that flies; and the hurricane, which rages once a year, annihilates not only a great part of the prey, but of the devourers alſo.

The animals of the quadruped kind, brought into this iſland from other countries, and which may be called domeſtic, are horſes, oxen, ſheep, and hogs. The horſes are very ſmall, and ſo dear, that a common one cannot be purchaſed for leſs than a hundred piſtoles. Here is one ſort of oxen, of the Madagaſcar breed; but they are not ſo good as thoſe from Europe, nor will the cows of that breed give half the quantity of milk. The pork is at leaſt equal in quality to that of Europe; but it will not receive the ſalt, on account of the peculiar acidity of that article. The ſheep are large and fat, but they are apt to loſe their wool.

Great numbers of wild goats, hogs, hares, and ſtags are in theſe woods. The latter are particularly numerous; and as their fleſh is exceeding good from the beginning of April to the end of Auguſt, they therefore afford a very ample ſupply of food for the natives.

Their poultry conſiſts of various kinds; but the moſt common are ducks and fowls, the former of which were brought from Manila, and the latter from Europe. They have alſo a ſmall ſpecies of fowl from China, whoſe fleſh is exceeding delicate. The wild fowl are pintatoes, Chineſe pheaſants, pigeons, and three ſorts of partridges: theſe birds, the better to ſecure themſelves from being deſtroyed by the rats, always rooſt on the tops of trees.

They have a very beautiful ſmall bird, called the titmouſe, which has a number of white ſpots on the wings. There is alſo another from Bengal, called the cardinal, ſome of the plumage is of a party coloured grey; but the head, neck, and belly, at a certain time of the year, is of a lively red.

The martin is the moſt propagating bird in this iſland, and in ſize, colour, and aptitude to talk, greatly reſembles the Engliſh ſtarling. It will perch upon, and peck at beaſts without fear; but its chief prey is the graſshopper, which it purſues with an unwearied perſeverance. They always fly in pairs, and conſtantly aſſemble at ſun ſet in very conſiderable flocks. The ſhooting of them is prohibited, though their fleſh is very indifferent eating.

In this iſland are two ſorts of birds brought from the cape, one of which is called the gardeners friend. It is of a brown colour, about the ſize of a large ſparrow, and lives upon worms, ſnails, and ſmall ſerpents, which it not only eats when preſſed by hunger, but collects an ample ſtore of, by ſticking them on the prickles of the hedges. The other cape-bird is much like the Engliſh ſky-lark, and is the only feathered inhabitant of this iſland that is heard to ſing. They were firſt brought here as curioſities; but ſome of them eſcaped to the woods; where they bred ſo faſt, that there are now great numbers of them.

Here are two ſorts of foreign fiſh; one of which is the Chineſe gold fiſh; theſe thrive equally well as in their own climate; but as they increaſe in bulk, they loſe their beauty. The other is called Gourami, and was imported from Batavia. It is a freſh water fiſh, about the ſize of a ſalmon; but the taſte of it is far ſuperior; and in India it is preferred to any other kind of fiſh.

It has been ſeveral times attempted to introduce frogs into this country, that they might eat the eggs which the muſquetoes lay on the ſtanding water; but every attempt has proved unſucceſsful, either from the difference of climate, or ſome other unknown cauſe.

Mr. Buffon takes notice of an animal of a very ſingular nature, which he calls the great Madagaſcar bat; but as it is common not only to that iſland, but to the iſlands of Bourbon and Mauritius, and there are great numbers of them in the latter, we ſhall here deſcribe it; previous to which, we obſerve, that the bats ſeen in Great Britain are inoffenſive, and, from their ſize, incapable of injuring mankind: being alſo not ſufficiently numerous to incommode them; but the race of bats here are truly formidable: a ſingle one is a dangerous enemy; but when they unite in flocks, they become really dreadful. Deſmarchais ſays, that if the inhabitants of the African coaſt were to eat animals of the bat kind, as they do in the Eaſt Indies, they would never want a ſupply of proviſions. Here are ſuch numbers of them, that when they fly they obſcure the ſetting ſun: early in the morning they are ſeen ſticking upon the tops of trees, and clinging together in great heaps. The Europeans often amuſe themſelves in ſhooting them; and the negroes are expert in killing them; but they would not eat them if they were ready to periſh with hunger, as they always regard the bat with horror.

It is about a foot long from the tip of the noſe to the inſertion of the tail; and its extent, from the tip of one wing to that of the other, is about four feet. It has large canine teeth: that is to ſay, four cutting teeth above, and four below. The noſe is black and ſharp, the ears large and naked, and the talons crooked, ſtrong, and compreſſed ſideways; but it is without a tail. Theſe animals differ in colour, ſome being of a bright red, others brown, and a third ſort of a dark, duſky colour. It reſembles the common bat in its internal formation, the ſhape of its wings, and manner of its flying. When theſe creatures repoſe, they ſtick themſelves on the tops of the talleſt trees, and hang with their heads downward; but at other times they frequently ſettle upon animals, and even upon man himſelf. They devour indiſcriminately fruits, fleſh, and inſects; and are, in particular, ſo extremely fond of the juice of the palm tree, that they will ſometimes intoxicate themſelves with it, till they drop to the ground. At night they may be heard in the foreſts, at the diſtance of more than

than two miles, with a moſt horrible din; but they uſually retire at the approach of day. Nothing is ſafe from the depredations of theſe noxious creatures: they deſtroy fowls and domeſtic animals, if they are not properly ſecured, and frequently faſten upon the inhabitants themſelves, attacking them in the face, and inflicting very terrible wounds.

The firſt mentioned author obſerves, that it is probable the antients took their idea of harpies from thoſe fierce and voracious creatures, as they both ſeem to concur in many parts of the deſcription, being equally cruel, deformed, uncleanly, and greedy. That notwithſtanding their diſagreeable nature, the Indians eat theſe animals, and ſay the fleſh is very good, eſpecially at particular times of the year, when they have more fat than uſual; and even ſome of the French here, and in the iſle of Bourbon, have brought themſelves to uſe them, in order to give a reliſh to their bouillons; but negroes, as we obſerved before, hold them in the utmoſt abhorrence, and will not touch them upon any account. Perſons have been attacked by theſe creatures, and have ſometimes paſſed from a ſound ſleep into eternity; for the bat is ſo dextrous a bleeder, as to inſinuate its ſharp pointed tongue into a vein unperceived, and to ſuck the blood till it is ſatiated, at the ſame time fanning with its wings, and agitating the air, which, in hot regions, lulls the perſon attacked by them into a ſtill ſounder ſleep. It is therefore dangerous to be in any reſpect expoſed to the incurſions of theſe noxious animals, and eſpecially to repoſe in the open air.

About the month of September, whales are often ſeen to the windward of this iſland; but they are ſmaller than in the northern ſeas; the negroes have a method of harpooning them. The vicille is a blackiſh fiſh, and their fleſh in ſome meaſure reſembles the cod fiſh, in taſte and make. Sea cows are ſometimes caught, and their fleſh taſtes much like that of beef. The fiſh caught on the windward ſide of the iſland is unwholſome.

The moſt eſteemed fiſh for eating here is a kind of turbot called the water pullet, the fat of which is green, and exceeding delicious. The hog fiſh has a head like a pike, and upon its back are ſeven points, as large as its body, the pricks of which are very venomous; a membrane, ſtreaked with brown ſtripes, and reſembling the wing of a bat, unites them. Many of the fiſh near this iſland are of a poiſonous quality, particularly the white ones, with a large belly and great head, ſuch as the captain and caranguee; and it may be obſerved reſpecting the reſt, that the ſmaller the fiſh, the greater the danger.

There is alſo a fiſh called the paroquet, from its near reſemblance to the bird of that name; they alſo, like them, go together in numbers. It is green, hath a yellow head, and a kind of white crooked beak. Their eels are of the conger kind, furniſh but bad food, and are very dangerous to thoſe who attempt to bathe in the creeks where they are found, being capable of killing any perſon they attack. They are in general eight feet in length, to the full as thick as a man's leg, and exceedingly voracious.

Lobſters, cray-fiſh, and crabs, are found in great plenty here; the two former are of a fine blue colour, marbled with black; and the latter is principally grey. One ſpecies hath the eyes in two long tubes, like teleſcopes, which, when not in uſe, are depoſited in groves along the ſide of the ſhell. Among the ſhell-fiſh, here is one of a very ſingular nature, for the uſual order ſeems to be reverſed; the animal is on the outſide of the ſhell, and the whole appearing as a ſhapeleſs maſs, ſoft and membranous; in the middle of which is a ſingle bone, or ſhell, ſmooth and arched. The tulier, an enormous fiſh of the oyſter kind, is common here; the ſhell of which is ſuppoſed to be the largeſt of any to be met with in the ocean.

Having thus given an account of the vegetables and animals, both natural and imported, and likewiſe the marine productions of this iſland, we ſhall next give a deſcription of the different inhabitants, their cuſtoms, manners, treatment of their ſlaves, &c.

The iſland of Mauritius, when firſt diſcovered, was uninhabited. The firſt French people who eſtabliſhed themſelves here, were a few huſbandmen from the iſle of Bourbon. Theſe people were ſimple in their manners, induſtrious in their callings, and hoſpitable in their behaviour. When the importance of this iſland was known, from its ſituation in the courſe from Europe to the Eaſt Indies, many perſons came to ſettle here, particularly ſeveral who were ſent by the French Eaſt India Company. Theſe, by their tyrannical and avaricious behaviour, ſoon became exceeding offenſive to the people in general; commerce employed their thoughts, but they had not the leaſt idea of humanity; they ſuppoſed they came ſo far to get money, not to do good; and, inſtead of clearing the lands for the purpoſes of agriculture, they cleared them to erect dwelling houſes and warehouſes, which they might ſell at an exorbitant price to new ſettlers. Complaints were indeed made of their arbitrary proceedings, but the complaints were too inconſiderable to obtain redreſs, and the aggreſſors too great to be puniſhed.

After this, many ſea-faring people ſettled here, who hoped to gain great advantages from the commerce carrying on between Europe and India; but neither the manners or morals were in the leaſt mended by theſe newcomers.

The French Eaſt India Company ſoon afterwards ſent a military force hither, commanded by officers whoſe families were very good, while their pockets were but low. Theſe, having more pride than money, did not chuſe to keep company with the merchants or clerks, becauſe they were ſordid; with the planters, becauſe they were mean; nor with the ſailors, becauſe they were brutiſh; ſo they aſſociated with each other; and hence remained as poor in this iſland, as they had been in Old France, from whence they ſet out.

Some time afterwards, ſome of the king's troops touched here, and ſeveral of them became ſettlers; but theſe entertained a ſovereign contempt for the troops of the company, and the reſt of the inhabitants; and this diſlike was retained and augmented, by the diſdain the other parties expreſſed towards them.

Some miſſionaries of the order of St. Lazarus, were the next ſettlers; when all the endeavours of theſe were to reign as uncontrouled over the minds, as the company's principal ſervants did over the lives and properties of the inhabitants.

Then followed a ſucceſſion of ſcheming merchants, who introduced monopolies, and all the chicanery of trade; and at length, to complete this heterogeneous mixture, the late war (which commenced in 1756) occaſioned the ſcum of Europe and Aſia to emigrate to the iſle of France; bankrupts, ruined libertines, thieves, proſtitutes, and wretches of every caſt, driven by their crimes from the former, or by the bad ſucceſs of the French arms from the latter, ſought refuge here. On the arrival of this ſet of men, the complaints, both general and particular, of the inhabitants, were increaſed; every character was traduced with an Aſiatic ingenuity, hitherto unknown to the calumniators of Europe. No woman was now looked upon as chaſte, nor any man as honeſt; all confidence and eſteem were at an end. Thus they thought to reduce all mankind to their own level, by vilifying all without diſtinction.

At length, in 1765, the French Eaſt India company yielded up to the king this iſland, but little benefit ſeems to have been derived from this change; the inhabitants appear to be neither wealthy nor happy. An ingenious French officer, who reſided there upwards of a twelvemonth, gives no favourable idea of the ſtate of ſociety in this ſecluded ſpot. "Diſcord, (ſays he) reigns all over the iſland, and has entirely extirpated that love of ſociety, which might be expected to prevail among Frenchmen baniſhed to a deſart, ſurrounded by the ſeas, and at the end of the world. Each man is diſcontented; each man wants to get a fortune, and to leave the place. To hear them talk, one would think the iſland would be once more uninhabited, every man declaring he will go away next year; and ſome of them have held this intention for thirty years paſt, yet remain to make the ſame declaration the year enſuing." European goods are dearer at the iſle of France than in India, and Indian goods dearer than in Europe.

There are but few married people in the town, but thoſe men who live upon their plantations marry: the women ſeldom go to town but to a ball, or to confeſs at Eaſter. They are moſt paſſionately fond of dancing. The women are rather pale, but well made, and in general handſome. They have naturally a good flow of wit and ſpirits, and if better educated, would be moſt agreeable companions; but many are ſo ignorant as to be unable to read. At their meetings they are reſerved and ſilent. Each woman brings with her ſome ſecret pretenſions, either from the fortune, the employ, or the birth of the huſband; others reckon upon their youth or their beauty. An European looks with diſdain upon a Creole, who as often looks upon the European as an adventurer. The women here are not celebrated for their chaſtity; but, ſays our author, they are, in my opinion, far more deſerving than the men, by whom they are neglected for the black ſlaves. Such of the women

women as are really virtuous, are highly to be commended, as it is by no means owing to their education that they are ſo. They have at once to combat with the heat of the climate, the indifference of their huſbands, and the prodigality and ardour of young officers, ſkilled in ſeduction, and regardleſs of repulſe. In other reſpects they have very many good qualities: they are domeſtic, ſober, very rarely drinking any thing but water, and neat in their apparel to an extreme. The dreſs moſt common here, is of muſlin, trimmed with roſe-coloured taffety.

They are extravagantly fond of their children, who run about the houſe naked ſoon after they are born; are never put in ſwaddling cloaths, but are frequently bathed, eat fruit as they think proper, live without care and without ſtudy, and ſoon grow ſtrong and robuſt. The puberty of both ſexes makes a very early appearance. Girls marry at eleven years of age. The children are ſuffered to exerciſe their caprices upon the poor ſlaves to a degree of tyranny beyond all bounds. So that their depravity is only equalled by their ignorance. Indeed, the principal people ſend their children very young to France for education, from whence they return with vices, perhaps more amiable, but ſtill more dangerous, than they before poſſeſſed.

On this iſland are ſcarcely four hundred planters. There are about an hundred women of condition, ten only of whom live in the town. The evening is their time of viſiting, and for want of converſation they game, or ſoon grow tired of each other. At eight o'clock the evening gun fires, and every body goes home on hearing that ſignal.

Indians, or negroes, are the black inhabitants of this iſland. The Indians are Malabars, or Malayans, who come from Pondicherry in the Eaſt Indies, in order to article themſelves as ſervants, for a certain term of years. They are almoſt all of handicraft trades; are ſober and thriſty, but laſcivious, and live in a ſuburb called the Camp of the Blacks. They are clad in long muſlin gowns, wear a turban on their heads, have gold rings in their ears, and ſilver bracelets on their wriſts. Some few, who are not fond of farming work, engage themſelves as running footmen to the principal and richeſt people. Theſe being equipped with a handſome cane, and a poniard at the girdle, affect great ſtate, and deliver the moſt trivial meſſages with ſuch air of profound reſpect, as to make a truly farcical appearance.

The negroes are brought from Madagaſcar, where a ſlave may be bought for a barrel of powder, for a few muſkets, linen, or eſpecially piaſtres. The greateſt price paid is 50 crowns (7l. 10s.) or rarely ſo much. Theſe are neither ſo black, nor ſo badly featured, as the natives of Guinea; but reſemble the Europeans in their features, and in their complexion incline to a copper colour. They are in general active, ingenious, grateful for favours, and faithful when well uſed; and have a quicker ſenſe of an injury done to any one they love, than of any perſonal inſult to themſelves. After having been purchaſed at Madagaſcar, they are landed, with only a rag about their loins, at the Iſle of France, where, being ſold, it frequently happens that huſbands, wives, brothers, ſiſters, friends, lovers, &c. are cruelly torn aſunder, and, bidding each other a long farewell, are driven in the greateſt anguiſh to the reſpective plantations for which they are bought. Some, upon theſe occaſions, have been known to become frantic and deſperate, and afterwards hang or poiſon themſelves, which is to be imputed to the terrors they conceive from the apprehenſions of the dreadful fate to which they imagine they are doomed; for it is a prevailing notion with ſome tribes of the Madagaſcar negroes, that the white people intend eating their fleſh, making red urine of their blood, and gunpowder of their bones; nor are theſe ſtrange ideas to be wondered at, when we conſider the innumerable barbarities of the whites, which have given occaſion to ſuggeſt them. They frequently ſecrete themſelves in the woods, where they are hunted by parties of ſoldiers, and by other negroes, with dogs. Some of the inhabitants form parties of pleaſure for this purpoſe, and put up a negro as they would a wild beaſt; and if they cannot hunt him down, will ſhoot him, like any wild animal; then his head is cut off, and brought in triumph to town upon a ſtick, the unexampled trophy of the moſt atrocious cruelty.

Theſe deſerters are called Maron-negroes, who, being ſheltered by immenſe foreſts, ſometimes collect into a troop of two or three hundred. When a woman in any of theſe parties, is delivered of a child, it is immediately killed, leſt their retreat ſhould be diſcovered by its cries. And when any of theſe negroes are taken without being hunted, his ſentence for the firſt offence is to be ſeverely flogged, and to loſe an ear; for the ſecond, to be ſtill more ſeverely whipped, and ham-ſtrung; but the third offence is puniſhed with death, which is executed by hanging or breaking on the wheel.

Some of theſe ſlaves have been baptized, but that hath given no encouragement to others to become Chriſtians; for thoſe who are baptized are no better uſed than thoſe who are not; as the religious ſentiments of the negroes are not ſo much attended to, as the intereſt of the planter to whom they belong.

As to the commerce of this iſland, the inhabitants of it receive moſt of their utenſils from China, their apparel from India, their ſlaves from Madagaſcar, moſt of the articles of provender which they conſume from the Cape of Good Hope, their money from Spain; their laws and governments from France; their follies from various nations both white and black; and their vices, at the head of which ſtand inhumanity and avarice, from the devil, the arch enemy of mankind.

Trade here is greatly clogged by their paper currency, which is payable in France, at ſix months after ſight, but at the beſt rate of exchange it bears thirty-three per cent. diſcount, frequently fifty per cent. Ready money in this iſland is reckoned to produce thirty-three per cent. in eighteen months.

A learned writer has obſerved concerning this iſland, that notwithſtanding the depravity of its inhabitants and the inconvenience of the climate, it is of the utmoſt political conſequence, and is at preſent one of the fineſt, as it always was one of the moſt important and improveable ſpots upon the globe. Admiral Boſcawen in 1748, with ſix line of battle ſhips, made an hoſtile viſit to it; but found it to be ſo well defended both by nature and art, that he did not venture to attack it; and no attempt has been ſince made to wreſt from the French this valuable ſettlement, which renders the Britiſh poſſeſſions in Aſia inſecure.

SECT. II.

Containing a Deſcription of the Iſle of BOURBON and the COMORA Iſlands.

THE iſland of Bourbon, which lies in twenty-one degrees ſouth latitude, and fifty-four degrees eaſt longitude, was firſt diſcovered in 1545, by a Portugueſe, named Maſcarenhas, who called it by his own name; however, he made no ſettlement. It ſoon after became a place of refuge for pirates, who cohabited with negro women from Madagaſcar. They fixed here about the year 1657. The French India company had a factory and a governor. The pirates gradually decreaſed in number whilſt the French were augmented by the frequent arrival of their countrymen from Madagaſcar. The laſt of theſe pirates, whoſe name was Adam, died at the age of an hundred and four years.

At a diſtance the iſland appears like a part of a ſphere, with very high mountains, the land of which is cultivated to the height of eight hundred toiſes. Here are three inacceſſible pikes, which are reckoned one thouſand ſix hundred perpendicular toiſes to the ſummit. The whole iſland is ſixty miles in length, and forty-five in breadth. It is only forty leagues to the leeward of the iſle of France, and a veſſel can go from thence to Bourbon in a day, but a month is frequently ſpent in returning. In this iſland is a volcano.

The principal place in Bourbon, is St. Dennis, the reſidence of the governor and council. As the ſhore here is very ſteep, and the ſea rolls with a great ſurf, ſo that no veſſel can come to the land, a draw-bridge has been contrived for unloading of ſhips, which projects more than fourſcore feet over the ſea, and is ſuſtained by iron chains. At the end of this bridge is fixed a rope ladder, which thoſe who would land muſt climb. This is the only place in the whole iſland where any one can land without firſt jumping into the ſea.

St. Paul, another town on the iſland, is ſituated on the ſide of a great lake of freſh water, of which a port probably might be made. When the wind blows into the bay of St. Paul, there is no getting out of it; and if a veſſel ſhould run aſhore, ſhe muſt infallibly be loſt, the ſea breaking upon a very high ſand. The want of a harbour is an inconvenience which admits of no remedy, and greatly leſſens the value and importance of this fruitful and healthy ſpot.

Sixty thouſand blacks are reckoned to live in Bourbon, and five thouſand white inhabitants. It is thrice as populous as the iſland of France, on which it depends for its export traffic. It is alſo much better cultivated, having produced twenty thouſand quintals of corn, and as much coffee, beſides rice and other proviſions for home conſumption. Herds of oxen are not ſcarce here. The French king pays fifteen livres per cent. for corn (thirteen ſhillings ſterling) and the inhabitants ſell a quintal of coffee for forty-five livres (one pound nineteen ſhillings ſterling) in piaſtres, and ſeventy livres in paper.

This iſland abounds in all kinds of refreſhments, and the air is particularly excellent. The French Eaſt India ſhips touch here to take in water and proviſions; for the roads are good for ſhipping, but there is no harbour in the whole iſland. Here is plenty of good wood and water, and the face of the country is beautifully diverſified with hills and dales, paſtures and woods, and watered by excellent ſprings and rivulets. In one of the mountains there is a ſmall volcano, which diſcharges fire, and fills the neighbourhood with a bituminous matter; and the flames are perceivable, in the night time, at twenty-five leagues diſtance.

The ſoil of Bourbon is more ſandy than that of the Mauritius; and is mixed, at ſome diſtance from land, with the ſame kind of ſmall pebbles with which the ſea is covered; from which it appears, that either the iſland has riſen out of the ocean, or the ſea has withdrawn itſelf. Some of the trees here are fit for building veſſels. The ſhrub that bears coffee, the tamariſk, the cocoa tree, the tree from whence benzoin diſtils, the cotton, aloe, and ebony tree are produced here. The black ebony is leſs eſteemed than the yellow; and the wild coffee which is very plentiful, is exceeding good. Many of the trees and plants produce odoriferous gums; and here are plenty of oranges, lemons, tobacco, palms, white pepper, &c. This iſland likewiſe abounds with black cattle, hogs, goats and boars, the fleſh of which is admirable, on account of their feeding on tortoiſes; many kinds of fowls, pigeons, turtle-doves, parrots, &c. The ſurrounding ſeas and interſecting rivers, rivulets, &c. ſupply the inhabitants with abundance of fiſh; and on the ſhore are found great quantities of ambergris, corals, and beautiful ſhells. Here are no crocodiles, ſnakes, muſketoes, or any of thoſe vermin, or other venomous creatures, which in moſt other parts of the torrid zone are ſo exceedingly troubleſome.

The beſt animal found here, whether for taſte or wholſomeneſs, is the land tortoiſe; and the moſt agreeable fruit is the anana. The tortoiſe is of the ſame figure with thoſe of Europe, but of a very different ſize. They ſay it lives a prodigious number of years, that ſeveral ages are required to bring it to its full growth, and that it can live ſeveral months without food. They have kept ſome young ones in the iſland, which have increaſed only a few inches in bulk at the end of twenty years.

The anana is a fruit of an oblong form, and of the bigneſs of a melon; it is covered with ſhort leaves, diſpoſed very much in the ſame manner as the diviſions of a pine apple, and it is crowned with a tuft of leaves ſomething longer; it grows on a plant reſembling an artichoak, and has the taſte of ſeveral fruits, but that of a quince more than any other.

There is in this iſland a very ſingular kind of bat, which one might call the flying fox, ſince it very much reſembles this animal in ſize, hair, head, ears, and even teeth. The female hath two teats, and, under each wing, a bag to carry her young in. The length of the wings is about four feet from one extremity to the other. The fleſh of them is ſo delicious to the taſte, that the people go a hunting for them with the ſame eagerneſs as we ſhoot for partridges in Europe.

Of late years, vines have been ſucceſsfully planted here, and now conſiderable quantities of different wines are annually produced; but the greateſt inconveniences here ariſe from the terrible hurricanes and ſtorms, which are not only exceeding violent, but very frequent; hence ſhipwrecks are common, and the moſt horrid devaſtations become familiar to the eye.

A French writer obſerves, that though this iſland is in many reſpects agreeable, it does not come near to the beauty of the coaſts of Java and Sumatra; plains, which are covered with orange, cocoa, and other fruit trees, with a number of rivulets that water them, hills adorned with delightful groves, foreſts for evergreen, and the moſt charming and ſplendid towns and villages.

With reſpect to the original inhabitants of this iſland, we are told by a French officer, who viſited both this and the iſle of France, that the manners of the firſt inhabitants of the iſle of Bourbon were very ſimple; the greater number of the houſes were not made to ſhut; a lock, was a curioſity. Some people even put their money in a tortoiſe ſhell over their door. They dreſſed in blue cloth, went barefooted, and lived upon rice and coffee; they imported but little from Europe: content to live without luxury, they conſequently lived without want. They joined to this moderation the virtues that ever attend it; good faith in commerce, and generoſity in their proceedings. As ſoon as a ſtranger appeared, the inhabitants came to him, invited him to their houſes, and entertained him with the moſt generous hoſpitality. The ſame writer obſerves, that the laſt war in the Indies made an alteration in their manners. In this war the volunteers of Bourbon diſtinguiſhed themſelves by their bravery; but the ſtuffs of Aſia, and the military diſtinctions of France, thereby got footing in the iſland. The children, richer than their parents, required to be treated with greater reſpect. The attention of the fathers being chiefly fixed upon their ſons, they ſend them to France, from whence they ſeldom return: hence it is that in this iſland there are more than five hundred marriageable girls, who are likely to die without huſbands. They have now no enjoyment of an unnoticed good fortune, but ſeek in Europe pleaſures and honours, in exchange for domeſtic happineſs, and the quiet and ſimplicity of a country life.

The Comora iſlands are five in number, the largeſt of which gives name to the whole; the other four are diſtinguiſhed by the names of Mayotta, Mohilla, Angazeja, and Johanna. Theſe iſlands lie oppoſite the ſhore of Zanguebar, and north of the great iſland of Madagaſcar, and in twelve degrees fifteen minutes ſouth latitude.

Comora is the moſt northerly of theſe iſlands; and though the moſt conſiderable in point of ſize, is in all other reſpects the moſt inſignificant, for it has no ſafe harbour for ſhips; and the natives are ſo untractable and uncivilized, that no Europeans have ventured to ſtop here for a conſiderable time. For this perhaps they have a ſufficient reaſon, as it was too common for the Portugueſe, eſpecially at their firſt landing here, to take advantage of the ſimplicity of the inhabitants unacquainted with arms, and incapable of defence, for they not only robbed them of their property, and committed the moſt dreadful outrages, but alſo made them captives, and frequently diveſted them of every earthly enjoyment, by forcing them on board their ſhips, and then ſelling them for ſlaves. This may have given them a traditional averſion to ſtrangers in general, and particularly to Europeans; and it is not improbable, that the revenge they might take on the next who viſited them, without diſtinguiſhing the innocent from the guilty, may have gained them the inhoſpitable character which they ſtill retain, and have occaſioned them to look with abhorrence on thoſe who had proved themſelves ſtrangers to the common dictates of humanity.

Mayotta, is ſaid to be rather low, but to abound with proviſions and fruit. The French commodore Beaulieu, in the narrative of his expedition to the Eaſt Indies, informs us, that it is cool, moiſt, covered with verdure, and inhabited all along the ſea ſhore. "The tide (ſays he) carried us weſtward all along the coaſt, to a point where we came in ſight of a ſhip; upon which I ſent out our long-boat with ten muſqueteers, who brought me word, that it was a veſſel of forty tons bound for Mecca, and that the captain taking us for Dutch ſhips, had run all the goods on ſhore. The captain of this veſſel ſhewed me two letters, one from an Engliſh commander called Martin, and another from captain Banner, to inform their countrymen, that they had taken in refreſhments at that place; eſpecially fruit; that they had found no water; and that linen cloth and paper were proper commodities for that place; adding that care ought to be taken, not to diſoblige the inhabitants, who, though they appeared friendly, were able to do them a great deal of miſchief.

"The road being ſurrounded with rocks, the Arabian maſter adviſed me not to attempt landing without fetching a pilot from the ſhore, and accordingly I ſent my boat along with him, and in the afternoon he returned with two of the inhabitants, who, before ſun-ſet brought our ſhip ſafe to an anchor. I then ſent the Arabian maſter back to his own ſhip, with full aſſurances of the innocence of our deſigns, and the friendly diſpoſition of the French, together with a letter to the ſame purpoſe, to the king of the iſland, addreſſed in Spaniſh.

"The king afterwards ſent ſome of his chief favourites to aſſure us of his friendſhip, and readineſs to ſupply with whatever the country afforded. Upon this, I ſent him

him a preſent of a ſilver hilted hanger, a couple of very handſome knives, a ream of paper, and a looking-glaſs, which he received with pleaſure; and, in return, ſent me a young kid and ſome fruit. I at the ſame time deſired the Arabian captain, who was then on ſhore, to buy me ſome proviſions, promiſing to ſend ſuch commodities as were proper to be given in exchange. Upon this, the captain ſent me word, that the inhabitants of the iſland were of ſuch a particular humour, that they would not conclude a bargain of the value of half a rial in a day's time; and would not buy a yard of cloth, without calling together all their neighbours and relations to fix the price they ſhould give for it. I was alſo informed, that the inhabitants were ſo overſtocked with rials, that they ſet no value on them, having obtained a great quantity from a Portugueſe carrack which had been caſt away upon that iſland about three years before.

"Having, on the next day, obſerved two ſhips belonging to that country, I had the captains brought on board, when they informed me, that they came from the iſland of Mayotta, that they were laden with rice and dried fiſh, and were bound for Monbaze. The next day they ſupplied me with as much rice, peaſe, and hung-beef, as would ſerve us for ſome months; of which I was very glad, as I could buy nothing of the inhabitants without infinite loſs of time. Beſides, I began to ſuſpect their honeſty; for the day before, when we were ſounding, in order to come to an anchor, ſome of them made a ſignal for us to come over a place where we obſerved a long ridge of rocks; whence I preſumed, the advantage they had made by the ſhipwreck of the Portugueſe carrack, had tempted them to wiſh us the ſame fate; and as I alſo found the water brackiſh, we left the place, and purſued our voyage."

Angazeja is inhabited by Moors, who trade with different parts of the continent, and moſt of the iſlands to the eaſtward, in cattle, fruits, and the other commodities of the iſland, exchanging them for callicoes and other cotton cloths. The bread uſed in this iſland is of the kernel of the cocoa-nut, boiled or broiled, and ſpread over with honey: their drink is palm wine, a juice extracted from the ſugar cane, and ſuffered to ferment, or the milk of the cocoa-nut.

They never let their women be ſeen by ſtrangers, without permiſſion from one of the chiefs, or an order to ſee them, which the ſtranger brings with him. Many of them write and read Arabic with great facility; and ſome of them underſtand the Portugueſe, which they learn from their intercourſe with Mozambique, whither they trade in veſſels of forty tons burden. The houſes are built of ſtone, and lime made of calcined oyſter ſhells, with which the walls and roofs are plaſtered in a very elegant manner, and the roofs and windows are covered with palm leaves, which ſerve as a defence againſt rain, and the ſcorching heat of the ſun. The conſtitution of this iſland is purely ariſtocratical, being under the government of the lords.

Mohilla, is an iſland very ſeldom viſited, not only from the diſlike the inhabitants have to ſtrangers, but alſo from there not being any convenient place for the reception of ſhips. It is under the direction of a ſultan, whoſe children, whether male or female, ſhare in his authority, and govern in quality of viceroys in different parts of the iſland. All, however, bear the title of ſultans, though they are, in ſome reſpects, ſubordinate to the authority of the father: each has his guards, his crown, ſceptre, and all the enſigns and pageantry of majeſty, together with a brilliant court and numerous houſhold. The ſultan never goes abroad without being attended by twenty of the principal perſons in the iſland; upon which occaſion, his dreſs is a long robe of ſtriped callico, hanging from his ſhoulders to his heels, with a turban on his head. The people in general wear looſe callico gowns, and are continually chewing areka, or betel, in the manner of the Eaſt-Indians, to whom they have a near affinity in their cuſtoms.

Johanna, as we hinted above, is the moſt frequented, and beſt known to Europeans, of all the Comora iſlands, on account of the ſafety of its road, and the civil diſpoſition of its inhabitants; which, together with the fineneſs of the country, have induced the ſhips from Europe to touch here for refreſhments in their paſſage to Bombay and the Malabar coaſts of India. This iſland lies in twelve degrees twenty minutes ſouth latitude, is thirty miles long, fifteen broad, and about ninety in circumference. Though ſome parts of it are exceeding mountainous, yet it is in general a very beautiful and fertile ſpot. The ſoil is naturally very good; and, from its being well watered by rivers, produces abundance of the chief neceſſaries of life.

When ſhips approach this iſland, they anchor in the road on the weſt ſide of it, where the hills, covered with evergreens, ending in a delightful valley, form the moſt pleaſing landſcape that the imagination can paint. The ſailors uſually pitch a tent on ſhore for the reception of the ſick, when, ſuch is the excellence of the climate, that thoſe ever ſo much diſabled with that dreadful diſorder the ſcurvy, generally recover their health with ſurpriſing ſpeed; which is probably as much owing to the ſalubrious influence of the earth, as to the variety of excellent refreſhments with which the country abounds. Nevertheleſs the common ſailors, who arrive hither in health, are ſometimes in danger by their intemperance in eating the delicious fruits the iſland affords, of laying the foundation of diſtempers which break out when they go again to ſea. It has alſo been ſaid, that lying aſhore is prejudicial to them, on account of the moiſt vapours diffuſed from the neighbouring hills; but it is probable that their not being ſufficiently ſcreened from the keenneſs of the night air, and the damps which ariſe from the earth, expoſe them to the greateſt danger.

The ingenious Mr. Groſe, and another Engliſh gentleman, by their account of a walk taken by them on this iſland the day after their arrival, have given us an opportunity of conveying to our readers a deſcription of its beauties and natural productions; which we ſhall ſet down in their own words: "As we ſet out pretty early in the morning, ſays the writer, we made ſhift to penetrate about five miles into the country before the ſun began to be any ways troubleſome; and this was no ſmall ſtretch, conſidering the mountainous way we had to go. We had fowling pieces with us, and the view of excellent ſport in ſhooting, could we have reached the place where we perceived the game to lay; but we could not conquer the aſcent of the hills, though we endeavoured to ſcamble up them on our hands and knees: we were obliged, therefore, to reſt ſatisfied with what ſmall birds preſented themſelves in the vallies and hills that were paſſable. We made our breakfaſt on pine-apples, and the milk of cocoa-nuts, which ſerved to quench our thirſt. About noon, coming to a beautiful piece of water, we ſeated ourſelves in the ſhade by the banks of it, to make a ſecond meal, as well as to enjoy the tinkling of ſeveral little ſprings and natural caſcades that fell from the rocks, and, according to their diſtance, ſeemed to ſound a gradation of notes, ſo as to form a kind of agreeable water muſic.

"The orange and lime-trees, which ſtood in great number about that ſpot of ground, bending under the weight of their fruit, diffuſed a moſt fragrant odour. There were alſo pine-apples which grew wild, of eleven and thirteen inches in circumference, of a much richer flavour than thoſe I afterwards met with in India. Our guides too made us diſtinguiſh a number of goyava, and eſpecially plumb-trees, the ſize of whoſe fruit is about that of a damaſcene, and leaves a pleaſant reliſh on the palate for ſome minutes after it is eaten. All theſe growing promiſcuouſly, and without the leaſt arrangement or order, combined with the falls of water, and the ſtupendous height of the ſurrounding hills, covered with trees and verdure, and in their various breaks and projections exhibiting the boldeſt ſtrokes of nature, altogether compoſed what might without exaggeration, be called a terreſtrial paradiſe, compared to which the fineſt gardens in Europe, with their ſtatues, artificial caſcades, compartments, and all the refinements of human invention would appear poor indeed! here it was impoſſible for art to add any thing, but what would rather ſpoil than adorn the ſcenery.

"It was not then without regret that we quitted ſo charming a ſpot, after having feaſted our eyes with the beauties of it; to which it may be mentioned, as no inconſiderable addition, that there was no fear of wild beaſts or venomous creatures mixed with our pleaſure, the iſland being ſo happy as to produce none. We returned then to our tent, well paid for the ſlight fatigue we had undergone in this little excurſion."

They have, beſides the fruit already mentioned, and many others common in the Indies, particularly a remarkable ſort of ſweet oranges of a ſmall ſize, not exceeding that of a common apricot, but filled with a juice that has a much more delicious flavour than the larger ſort generally imported here from Portugal, under the name of China oranges; and their being gathered ripe and freſh from the tree, renders their taſte more agreeable.

A great number of monkeys of different kinds and ſizes are in the woods; and alſo a beaſt about the bigneſs of a common monkey, with a head nearly reſembling that of a fox; it has a lively piercing eye, its coat is woolly, and generally of a mouſe colour; and its tail, which is about

three feet long, is variegated with circles of black, within an inch of each other, quite to the end; the natives call it a mocawk, and when taken young it ſoon grows exceeding tame: the country alſo abounds with ſquirrels, which are generally large and ſhy; but neither of an agreeable colour or well ſhaped.

The principal cattle in this iſland are oxen, which are very numerous, and of a middling ſize; like thoſe in the Eaſt Indies, they are remarkable for differing from ours in having a large fleſhy excreſcence between their neck and back, which, when kept in pickle for ſome time, is generally preferred either to tongue or udder, it taſting like firm marrow; and their fleſh is extremely ſweet.

Fowls are here extremely good and fat; but our author obſerves, that he had no opportunity of taſting their game, of which they are ſaid to have great variety; for as the natives are very indifferent ſportſmen, either with net or gun, very few of them are caught.

The ſea abounds with fiſh of different ſorts, which they are very expert at catching. Among the reſt, they have a particular ſpecies called the parrot-fiſh, which is beautified with the livelieſt colours that can be imagined; it is about three feet and a half in length, and thick in proportion; it takes its name from the form of its mouth, which is hooked like the bill of a parrot; the fins are blue, as are alſo the eyes, which are very ſprightly, and have a yellow iris; the ſcales are very large, and there are two rows of ſtrong teeth in the mouth, with which it breakes open muſcles and oyſters. The fleſh of this fiſh is very firm, and is eſteemed delicious eating. They have likewiſe ſome flat fiſh that nearly reſemble the turbot; and alſo thornbacks, mullets, and ſeveral other ſorts.

The inhabitants of this iſland are in general tall of ſtature, ſtrong, and well proportioned; they have piercing eyes, long black hair, lips ſomewhat thick, and their complexions in general are of a colour between olive and black; but their women are rather more clumſily made than the other ſex.

The dreſs of the common people is only a ſkull-cap of any ſort of ſtuff, and a coarſe wrapper round their loins; but thoſe of ſuperior rank have a kind of wide-ſleeved ſhirt hanging over a pair of long drawers, and a waiſtcoat, which is either thick or thin, according to the ſeaſon; few wear turbans, except thoſe of high rank: theſe are alſo uſually diſtinguiſhed by the nails of their fingers and toes, which they ſuffer to grow to an immoderate length, and tinge them with alihenna, a yellowiſh red, furniſhed by a ſhrub that grows in the marſhy places of the iſland. They uſually carry large knives, or poniards, which are ſtuck in a ſaſh they wear round their waiſts, ſome of them have ſilver or agate handles, but they have commonly carved wooden ones.

The women wear a ſhort jacket and petticoat, with a ſort of looſe gown, and a vail to cover their faces. They uſually adorn their arms and wriſts with a number of bracelets made of ſilver, pewter, copper, iron, and glaſs, according to their rank and circumſtances. Their fingers and toes, and the ſmall of their legs, are likewiſe decked with chains and rings. Their ears are ſtuck ſo full of mock jewels, and ornaments of metal, that the lobes are in particular greatly dilated and weighed down, which, from their infancy, they are taught to conſider as a ſingular embelliſhment.

Children of both ſexes are ſuffered to go ſtark naked from the time of their birth till they are ſeven or eight years old; which proceeds leſs from any conſideration of the heat of the climate, than from phyſical reaſons; for they imagine that infants are more apt to be hurt by heat than by cold, and that the free acceſs of the air to every part of the body is nutritious and more favourable to their growth, than their being heated by ſwathing and cloaths, which deprive them of a hardineſs conducive to health; and in caſe of any diſpoſition to deformity, obſtruct the free courſe of nature which ſtrives to free itſelf from any imperfections. By this means they are alſo preſerved from the galling and chafing of cloaths, which frequently occaſion ſuch crying and ſtrainings as terminate in ruptures, if not carefully attended to.

The ſoil of this iſland is ſo naturally fertile, as to produce every thing they covet for food; ſo their conſtitutional indolence keeps them ſatisfied, without any attempts to improve it by tillage or cultivation. They chiefly ſubſiſt on milk and vegetables, both which they poſſeſs in great plenty and perfection. Inſtead of oil and vinegar to their ſallads, which are of the lettuce kind, they uſe a liquid which has ſome reſemblance to our treacle, and is a preparation of the juice yielded from the cocoa-nut tree, by inciſion.

Theſe people ſpeak a corrupt Arabic, mixed with the Zanguebar tongue of the oppoſite part of the continent, from whence the Comora iſlands were probably firſt peopled: but thoſe of the faireſt complexion, who are generally of the beſt rank, or at leaſt the moſt eſteemed amongſt them, derive their colour partly from the Arab mixture, and partly from their communication with Europeans, which was formerly much more common than it has been of late years.

In their manners, they ſtill retain much of the ſimplicity of uncultivated nature. The mildneſs of the climate renders them indolent, and prone to venery. They frequently make uſe of the liberty granted them by their religion, which is that of Mahometaniſm, of divorcing their wives upon ſlight pretences, for the ſake of novelty; they have uſually two or three of them, and may have as many concubines as they can maintain. Though they are forward to beg whatever they like, they are far from being thieviſh. They treat the Engliſh in a very friendly manner, not merely from a principle of intereſt and convenience, though this has doubtleſs ſome influence, but alſo from a ſenſe of gratitude, for the effectual aſſiſtance they formerly received from them in their wars with the Mohillans, and from their being aſſured, by frequent intercourſe with them, that they have no intention to invade their country or liberty, of which they retain a ſtrong jealouſy againſt the Portugueſe and other European nations; but chiefly place their ſafety in the inacceſſibility of their mountains, which nature has formed as an impenetrable barrier and defence of the inland country againſt invaders.

The lower ſort of people have huts, ſomewhat reſembling our barns, the ſides being formed of reeds tied together, and plaſtered over with a mixture of clay and cow-dung; and the roofs are thatched with cocoa-leaves. That man who has a houſe erected with ſtone and mud, is accounted very great.

With reſpect to the town, or more properly the village of Johanna, it is compoſed of about two hundred houſes and huts together. Thoſe houſes, which are of ſtone, belong to the chief, who is honoured with the title of king of Johanna, and to the principal men of the country. Their hut buildings are very low, and only of one ſtory high. The houſe in which the king reſides, is built, like the reſt, of ſtone and mud, and does not appear much better than a common alms-houſe, it being wretchedly furniſhed, and aukwardly hung with pieces of coarſe chintz, with here and there a ſmall looking-glaſs. The people here ſuffer ſtrangers to come familiarly into their firſt apartment, but ſet apart all the others for the uſe of their families.

Notwithſtanding the above-mentioned inferiority in point of ſtate and grandeur, in compariſon of what is ſeen in more extenſive and civilized kingdoms, yet the title of king is juſtly given to the chief of this iſland, he having all the eſſentials of royalty, and unlimited power over his ſubjects, both in temporals and ſpirituals, together with ſeventy-three villages, and near 30,000 inhabitants under his dominion. He reſides, for the moſt part, about nine miles up in the country, ſeldom coming down to what they call the lower Town, by the ſea-ſide, except when the European ſhips are lying there, at which times a very numerous retinue accompanies him.

The king generally goes on board the veſſels which arrive on the coaſt, when he expreſſes a great deſire of learning the name of every thing that is new to him; and as he has obtained a tolerable ſmattering of the Engliſh tongue, he is very inquiſitive in relation to our wars in Europe, and is particularly pleaſed with the civility of the Engliſh captains, who regale him in the beſt manner they can, after the European faſhion, and ſalute him, both on his arrival and departure, with a diſcharge of five guns. This is a ceremony he is exceedingly fond of, as it is a mark of reſpect that gives him an air of importance, and tends to increaſe, or at leaſt preſerve the eſteem of his ſubjects. His attendants, however, are far from ſtanding ſo much upon ceremony as their ſovereign, and have a forward way of begging any thing they fancy, and if they are refuſed, ſeem greatly diſſatisfied.

On the arrival of any ſhip, the captain is obliged to obtain a licenſe from the prince, for dealing with the natives, eſpecially for the more conſiderable articles of refreſhment, ſuch as oxen and goats; and alſo for wooding, watering, and landing the men. But this permiſſion is purchaſed

purchaſed at a reaſonable expence, conſiſting of a few preſents, as a little gun-powder, a few muſkets, ſome yards of ſcarlet cloth, or other trifling articles of the manufacture of Europe.

When a ſhip caſts anchor in the road, it is preſently ſurrounded by a number of canoes, the people hurrying aboard with refreſhments of the produce of the iſlands; and it is diverting enough to obſerve the confuſion and ſtrife among the rowers, all of whom exert their utmoſt endeavour to get firſt to their market the ſhip. When the ſea runs high, they are ſometimes overſet, but this is attended with no danger, on account of their being excellent ſwimmers, and therefore they only loſe their little cargoes of greens and fruit.

Moſt of their canoes are balanced on each ſide without leaguers, formed of two poles each, with one acroſs to prevent their overſetting, which has ſome reſemblance to the flying proas we have before deſcribed, and which are uſed in the Eaſt Indies. They uſe paddles inſtead of oars; and both ends of theſe veſſels are formed for cutting the water, without any diſtinction of head and ſtern, and conſequently they can ſail backwards and forwards without tacking about. Their large boats, called panguays, are raiſed ſome feet above the ſides with reeds, and branches of trees, well bound together with ſmall cord, and afterwards made water-proof with a kind of bitumen or reſinous ſubſtance. The maſt (for few of them have more than one) carries a ſail or two, made either of the leaves of a cocoa-tree, or of ſheer-graſs matted together; and in theſe boats they will venture out at ſea for the ſpace of three or four weeks, and ſometimes a longer time.

It was common for the natives, ſome years ago, when they came off to the ſhips with cocoa-nuts, plantains, fowls, &c. to deal entirely by way of barter, for handkerchiefs, rags, glaſs bottles, bits of iron, and almoſt every article, without regard to money; but they now begin to know its value, and will part with only the moſt inconſiderable articles in the former manner; for if we want to purchaſe cattle, fowls, or cowries, they deſire to be paid either in ſpecie, fire-arms, or gun-powder. They have likewiſe fallen upon a method of ſoliciting thoſe who come thither, particularly all paſſengers, to contribute a dollar or two towards improving their navigation, which they carry on with the African continent; and, by way of perſuaſive examples, produce ſeveral liſts of perſons who have ſubſcribed for that purpoſe; ſo that they ſometimes collect thirty or forty dollars a ſhip from thoſe who touch here; and they generally make it a point for the captains to ſign, and leave with them, a certificate of good uſage, when they quit the place.

Before we conclude this ſection, we ſhall, for the entertainment of our readers, give an account of the manner in which the iſland of Johanna became ſubject to the preſent race of kings, which we have been favoured with by Mr. Groſe, who was a conſiderable time in this iſland, and to whom we are indebted for many curious particulars relating to it.

"The grandfather of the preſent king, ſays our author, was an Arab, or Mooriſh trader to Moſambique, where, in a quarrel with a Portugueſe, with whom he was dealing for ſlaves, he killed him, and being obliged inſtantly to fly, put to ſea in the firſt boat he could ſeize on the ſhore, when the firſt land he made was Johanna, where, meeting with an hoſpitable reception, he remained ſome years in obſcurity, till an Arabian veſſel being driven in there by ſtreſs of weather, he made himſelf known to his countrymen, and procured them all the relief the place afforded. In the mean while he had perfectly learned the language, was become acquainted with the manners of the inhabitants, and was ſo pleaſed with the fertility and pleaſantneſs of the country, that he not only laid aſide all thoughts of leaving it, but formed a ſcheme to raiſe himſelf to the ſovereignty of it, in which he was greatly countenanced and aſſiſted by the Arabs, his countrymen, who, from the advantages they hoped to derive from the event, came readily into his views.

"In the proſecution of his plan, he did not proceed to any violent methods, but made himſelf neceſſary to the natives by inſtructing them in the uſe of arms, before unknown to them, particularly the lance, which thoſe of any diſtinction amongſt them now handle with great dexterity. This, with his teaching them other methods of war, which theſe ſimple ſavages were before ignorant of, proved of ſingular advantage to them, by enabling them to repulſe the inhabitants of the neighbouring iſlands, eſpecially thoſe of Mohilla, with whom they were conſtantly at variance, ſometimes invading, and at others being invaded by them. This acquired him ſuch reſpect and authority, that, ſoon availing himſelf of it, he cauſed himſelf to be elected their chief, or king, and to be inveſted with deſpotic power. In obtaining this point, he proceeded by degrees, and made uſe of all his art; but he had no ſooner gained the ſummit of his ambition, than he gave them reaſon to repent of their credulity and confidence; for having not only ſtrengthened himſelf by calling in ſome of his countrymen, with their families, but chuſing for his guards the moſt bold and enterpriſing of the natives, he was ſoon in a condition to eſtabliſh an arbitary government. Such as endeavoured to oppoſe him in his pretenſions and innovations, he forced from their families, and ſold for ſlaves to the Arabs; who, on this alteration, reſorted more than ever to the iſland, for the ſake of trade, which they ſtill continue. In ſhort, he ſucceeded ſo entirely, as to ſurmount all oppoſition, and to bequeath the peaceable ſovereignty to his ſon, who was about forty-three years of age at the death of his father, when he obtained the peaceable poſſeſſion of the kingdom, which he alſo enjoyed during his life, and leaving two ſons at his death, the eldeſt of whom was king of the iſland in the year 1756."

SECT. III.

Of the Iſland of MADAGASCAR, its Name, Situation, and Extent; the Face of the Country; alſo its Provinces, principal Rivers, and the Natural Hiſtory of the Iſland; together with a Deſcription of the Perſons, Manners, Cuſtoms, Dreſs, Marriages, Funerals, &c. of the Inhabitants.

THIS iſland, which is the moſt extenſive of any in Africa, and one of the largeſt in the univerſe, is called by the natives Madacaſc: but the Portugueſe, who firſt diſcovered it, gave it the name of St. Laurence; the French call it l'Iſle Dauphin, or the Dauphin's iſland; and the Nubian geographers, Perſians, and Arabs, call it Serandib. It is ſituated between the twelfth and twenty-ſixth degrees of ſouth latitude, and between the forty-fourth and fifty-firſt degrees of eaſt longitude from London, about forty leagues to the eaſt of the continent of Africa, it being about a thouſand miles in length from north to ſouth, and generally between two and three hundred miles broad. Its ſouthernmoſt end, which leans towards the Cape of Good Hope, is the broadeſt; for towards the north it grows much narrower, and terminates in a point.

At a diſtance from the ſea are many high and ſteep mountains, yet it abounds in ſpacious plains that have excellent paſture, and has ſeveral large foreſts always green, in which lemons, pomegranates, and a variety of other fruits grow wild.

Madagaſcar is interſected and its coaſts divided by rivers which have their ſource in the inland parts, and diſcharge themſelves into the ſea. The bays and gulphs are innumerable, and in general abound with good roads and harbours, ſo that the iſland might be rendered extremely beneficial. The French always claim the honour of having firſt diſcovered the maritime countries between the bay of Antongil and the bay of St. Auguſtine, although the Portugueſe, in all their voyages to the Eaſt-Indies, have conſtantly, ſince the year 1506, anchored in this iſland, and improved their diſcoveries; and the Dutch have followed the example of the Portugueze; and it muſt be allowed, that the French have penetrated farther into the country than either of the two former.

Modern geographers divide this iſland into twenty-eight provinces, or countries, which form ſo many diſtinct people and governments; namely, 1. Anoſſi, or Carcauſſi. 2. Manatengha, or Manampam. 3. The valley of Amboule. 4. Vohitſbang. 5. Itomampo. 6. Icondre. 7. Vatemanahon. 8. Anachimouſſi. 9. Eringdrane. 10. Vohits-Anghombe. 11. Manacarongha. 12. Matatan. 13. Antavaree. 14. Ghallemboulow. 15. Tanletari. 16. Sahaveh. 17. Voulovilou. 18. Andovouche. 19. Manghabei. 20. Adeimou. 21. Mandrerei. 22. Ampatre. 23. Caramboule. 24. Mahaſalle. 25. Houlouve. 26. Sivah. 27. Ivorodhcoe. 28. Machicore.

There are a great number of rivers in this iſland, the principal of which are, Franchere, Aconere, Imanhal, Manambatou, Manhaſio, Harangazavac, Fantac, Samau, in the province of Anoſſi.

Manampani, in the province of Manatengha.

Manatengha, Aviboul, Andraghinta, Sandravivangna, Manambondreu, Maſſianac, Mananghare, in the province of Vohitſbang.

Itomampo, Iongainon, Maropie, Mangharae: theſe run through

through the provinces of Itomampo, Icondre, Vatemanaon, Caramboule, and Anachimouſſi.

Mananghare, waters the provinces of Manacarongha and Matatan.

Avibabe and Sacavil, water the provinces of Antavaree and Anachimouſſi.

Mananghorou, Mananſatra, Morimbo, Sumiame, Mananghare, run along the coaſt from Tametavi to the bay of Antogil.

Mandrerei, waters the provinces of Ampatre, Manghabei, and Caramboule.

Ionghelahe, waters the provinces of Mahafalle, Houlouve, Sivah, and Ivorongheoc.

Onghalahe, Ranoumene, Ranoumaninthi, Sahaurrnha, Soumaudo, Manatangh, and Manſiatre, run through and water the province of Machicore.

Anoſſi, or Carcauſſi; or, as ſome writers have called it, Androbeizahæ, extends from the province of Manatangha to the river Mandrerei. Crocodiles ſwarm in all parts of this province, and indeed they are to be found in all the rivers of the iſland. A lake is found at the head of the principal river, called Franchere. The name of this lake is Ambone; it is half a league over, and has ſufficient depth for any ſhip, if the mouth was conſtantly open, which might very eaſily be effected. The cape which runs out from the river Franchere is by the French called cape St. Romain, but by the natives Ranevate. When the cape is paſſed, the coaſt forms a fine bay in the ſhape of a croſs, as the land projects into the middle of it, and forms a peninſula called Tholangare. Fort Dauphin lies to the north of this peninſula, and port Dauphin over againſt it; and hence the French call this Dauphin's bay. The entrance is rocky and dangerous; but within it there is a ſecure harbour for either ſhipping or boats. A ſmall iſland, called by the French St. Clare, lies near, and forms another convenient harbour. This province includes ſeveral other leſs conſiderable peninſulas and ſmaller iſlands on the coaſt. The country, upon the whole, is beautiful, abounds in fruit-trees, is fertile in paſtures for cattle, and, with proper culture, might be made to produce not only the neceſſaries, but even the luxuries of life. It is ſurrounded by mountains, finely diverſified with hillocks and plains.

Beſides villages and hamlets, this province contains eight towns, namely, Franchere, Imanhal, Cocombes, Andravaule, Ambonetana, Moromamou, Imours, Marofontonts, and Fananghæ.

At ſome leagues diſtance from fort Dauphin the Portugueſe had formerly a fort, on the ſummit of a high rock, and ſeveral incloſures that furniſhed them with all ſorts of proviſions; but the neighbouring natives at length maſſacred them all.

The mountains in this province are covered with trees and ſhrubs, and the French have often dug here in expectation of finding gold, but have always been diſappointed. They have indeed ſometimes found ſtones in the rivers, and alſo yellow clay, intermixed with black and white ſpangles, the latter ſhining like ſilver; theſe they carefully pounded and waſhed, but the ſeparated matter proved much too light. Some writers, nevertheleſs, affirm, that the Portugueſe, by digging here, formerly found gold, and that the places where they dug had been filled up by the natives, after they had expelled thoſe invaders.

Here are two ſorts of inhabitants in this province, namely, whites and negroes. The whites are deſcended from ſome Arabs, who ſettled here upwards of 200 years ago; and the negroes are the original inhabitants of the country.

The whites are divided into three claſſes or degrees, viz. Rohandrians, Anaçandrians, and Andtzatſi.

The negroes are divided into four claſſes or degrees, viz. Voadziri, Lohavohits, Antſoa, and Andeves.

The chiefs and kings are choſen from among the Rohandrian whites, who are the nobles. The Anaçandrians are of the blood of the Rohandrians, but it is by a degenerate mode, or, in other words, they are the illegitimate offspring, or the deſcendants of the illegitimate offspring of the kings, princes, and nobles of the Rohandrian race. Both theſe claſſes enjoy the privilege of killing cattle, which in Madagaſcar is conſidered as a very great honour.

The loweſt claſs of the whites are the Andzatſi, who are the illegitimate deſcendants of the Anacandrians. The people of this claſs are in general fiſhermen, and are not permitted to kill any living creature except chickens, and the fiſh they catch.

The people above-mentioned are rather of a copper colour, their hair hanging down in ringlets, but they are generally diſtinguiſhed by the name of whites.

The negroes of the firſt or Voadziri claſs are the moſt powerful and rich, being maſters of ſeveral villages: they deſcended from the original lords of the country, though they are at preſent, and have been for a conſiderable time, ſubordinate to the whites. They are permitted to kill cattle, if no white happens to be in the village; but they muſt not aſpire to that honour, if a white is near at hand.

The ſecond claſs, called Lohavohits, are chiefs, but are notwithſtanding inferior to the Voadziri; as theſe latter are lords of diſtricts, and Lohavohits only of ſingle villages. Theſe are likewiſe, when abſent from the whites, permitted to kill beaſts for their own uſe.

The third claſs of people, called the Antſoa, are the legitimate offspring of the Lohavohits.

The Andeves, or people of the fourth claſs, are conſidered in a deſpicable or mean light, the term itſelf, by which they are denominated, implying "loſt men," and as ſuch they may be conſidered, ſince they are either ſlaves made by the fortune of war, or the children of ſlaves. In times of famine, or ſcarcity, if the maſters of the Andeves cannot or will not ſupport them, the latter have the privilege of changing maſters, and giving themſelves to be the ſlaves of others; but freedom is a thing they never can obtain, till death releaſes them from their tyrants. Others may vary their circumſtances by induſtry, and gain an acceſſion of wealth by fortunate contingencies, but the unhappy Andeves have no alternative, nor any hope beyond the idea of ſlavery.

Manatengha is well watered by rivers, but nothing particularly remarkable is mentioned concerning this province.

Amboule is a valley, in which there is a variety of ſprings, which it receives from the mountains of Encælidæ, Hiela, and Manghaze. In the midſt of this pleaſant valley ſtands the large town of Amboule, which is populous in itſelf, and the circumjacent territories abound in cattle, plants and fruits, particularly white yams, and the herb ſeſame, whoſe ſeed, when compreſſed, produces the oil menachil, and the cattle are here remarkably fat and fine.

This province produces iron; and near the town of Amboule is a hot ſpring of mineral water which is deemed exceedingly efficacious in the gout. The people of this diſtrict are principally employed in manufacturing weapons and domeſtic utenſils with iron and ſteel. They are licentious and diſhoneſt in their diſpoſitions; ſo that this diſtrict is deemed the retreat of the roguiſh and lazy, who eſcape from other provinces, and run hither in order to herd with ſuch whoſe characters reſemble their own. This province contains only about eight hundred perſons, the men of which are deemed the beſt ſoldiers in the iſland. It is ſubject to a rabertau, or great lord, who is very rich, particularly in cattle, and governs in a very arbitrary manner. Subordinate to this rabertau is another, who rules over a little diſtrict called Izame.

Vohitſbang extends from the river Manatengha to the river Mananghare, and ſtretches up the country to the river Itomampo. The ſea coaſt of this province is mountainous, and covered with thickets, and the plain parts are fertile, and abound in honey, ſugar-canes, yams, rice, and other ſorts of grain: iron mines are alſo found here.

With reſpect to the inhabitants of this part, they are black, with long thick curled hair, extremely quarrelſome, vindictive, cruel and treacherous: they are alſo great thieves, and pay ſo little regard to humanity in their robberies, that they frequently ſteal the wives, children, and ſervants of their neareſt relations, and ſell them for ſlaves. They have conceived an implacable hatred to the white natives, as they are poſſeſſed with a notion, that the latter have the power to bewitch them, and what belongs to them, and to ſend diſeaſes and death among them and their cattle. Their garments are made of the bark of a tree called frautraſtanou, and thoſe brought from Matatan are made of another bark called avo. Their arms are a heavy dart, and a wooden ſhield covered with an ox's hide: theſe people ſometimes travel into the provinces of Anoſſi and Ampatre.

Itomampo is only about three leagues in length, and narrow in proportion: it is ſituated in a valley ſurrounded by high mountains; and the beſt ſteel in the iſland is prepared in this province.

Icondre is alſo a very ſmall and mountainons province. Its boundaries on the north-eaſt are high hills, which di-

vide it from Itomampo. On the south are the counties of Vatemanahon and Machicore; and the hills and woods adjoining to various provinces are the other boundaries.

Vatemanahon adjoins to Icondre; but the whole race of the inhabitants of this province having been extirpated and destroyed by the wars, it is at present uninhabited.

Anachimoussi is said to be four days journey in extent, and is principally bounded by mountains or rivers. This province is extremely populous, finely watered, and exceedingly fertile in cattle, yams, rice, and every other necessary of life. The people of this province formerly became very rich and powerful by the assistance of the French, in the wars carried on by them against the neighbouring provinces. The title of its prince is decan or dian panohahe.

Eringdrane is a fine flat country, of great extent, and divided into two districts, namely, greater and lesser, which separation the river Mangharae occasions.

Vohits Anghombe is divided from that of Eringdrane by the river Mananfatra, which river has its source in the last mentioned province.

These two provinces, we are told, are uncommonly fertile, and so exceedingly populous, that Eringdrane can send into the field thirty thousand, and Vohits Anghombe one hundred thousand fighting men. In both these provinces, the towns and houses surpass in beauty those of any other. Iron, steel, and all the necessaries of life abound here. Cloaths are made of the rind of banana-trees, and these garments are almost as fine as silk, and are preferred to it by the natives, though they can likewise make silk. The people of these fertile provinces, however, are at perpetual variance with one another.

Manacarongha is situated on the sea-coast, the inland parts being bounded either by rivers or mountains. The river Mananghare, which waters this province, is formed by the conflux of these rivers, viz. the Itomampo, Iongainon, and Mangharae, besides many small rivulets that run down from the mountains, and which all uniting, lose their respective names, and take that of Mananghare. This river afterwards separates, and disembogues itself into the sea, by seven mouths, none of which are navigable, nor is the river itself, though a very wide one, on account of the rocks in them.

Matatan is situated near a river that bears the same name, which hath its source in the adjacent mountains, and discharges itself into the sea by two mouths, seven leagues distant from each other, and by which a large and delightful island is formed.

Sugar canes, honey, yams, and cattle, abound in this province, which is watered by many rivers, in which are great quantities of fish. Sugar-canes grow in such plenty, that many ships might be loaded yearly, could the natives be brought to make sugar, and were they furnished with proper implements.

Polygamy is allowed to the chiefs of this country, and their wives, which are generally about twenty in number, live in separate apartments in an inclosed place, surrounded by palisadoes, like a large town; and the punishment of death is inflicted on any person who presumes to enter it.

Antavaree is watered by many streams, some of which have their source in the Red mountains, which are the north-western boundary of the province.

Ghallemboulou surrounds a bay of the same name, which is very extensive, with a good road for boats behind the rocks, but extremely dangerous. The village of Ratsmalone, called St. Matthew by the Europeans, lies upon the coast of this province.

Tometavi, situated on a bay or gulph of the same name, is tolerably fertile, and well watered.

Saheveh is also situated upon a gulph of the same name: this gulph is of a great depth, the bottom is sandy and good, but the excessive high winds render the bay unsafe.

Voulovilou is near cape Long-Point, and, being well watered, is exceeding fertile. In this province are some rocks which project a considerable way into the sea, between which there is a fine harbour.

Andovouche is a maritime province, containing many gulphs, bays, harbours, &c. particularly the bay of Antonghil, formerly called Manyhabee by the inhabitants of the country. It is situated lengthways to the north, and is about eighteen miles wide. At the end of the bay stands an island extremely high above water; it is about six miles in circuit, covered with the most delightful verdure, and abounding in all kinds of grain, plants, fruits, bananas, honey, fowls, &c. Besides this island, there are some rocks, and three or four other small islands, in the middle of the bay from the entrance to the north-east side; some of these are covered with wood, and others sown with rice.

The province of Manghabei, which contains many populous villages, borders on the before-mentioned bay. On the north side of the river stands a large town called by the Portuguese St. Angelo. Advancing deep in the bay, on the left hand, stands another, called Spakenburg, built by the Dutch, in 1595, in their first voyage to the East-Indies, containing, in the inclosure, about two hundred houses. The coast here is covered with forests of high trees, for several miles in length, and the interior part of the country is full of bamboos, or a kind of thick cane called bambuvocilau. The soil itself is good and fat, and properly mellowed by the frequent showers of rain. The meadows are rich in pasture, though the inhabitants are never rich in cattle, the greatest stock of the most wealthy not amounting to above twenty head.

The mountains are peculiarly fruitful, and the towns, in this part, are erected with great regularity and solidity, and even exhibit some signs of taste in the choice of situation, as they are either built on pleasant eminences, or by the sides of rivers. They are strongly palisadoed round, and have only two gates or entries, one for the usual goings in and out, and the other towards the woods, to facilitate their retreat to those places of refuge and safety, when surprized by their enemies, or when too weak to resist them.

The people in this province are in general fairer than the whites of Matatan; their hair is long, and hanging down; they are free, liberal, and hospitable to strangers, and are not addicted to murder and theft. They are fond of singing and dancing; their dances have rather an immodest tendency, and love is the only subject of their songs.

Adcimou is so small and inconsiderable a province, as to be scarce worth mentioning by geographers or travellers.

Mandrerei is partly watered by the river of the same name, and partly by other streams. This river, which, near its source, divides the provinces of Anossi and Ampatre, runs like a torrent, with great rapidity; it rises in the same mountain with that of Itomampo, and runs a great way to the south-west, receiving several other rivers and streams in its course, till at length it empties itself into the South-sea.

Ampatre lies along the sea-coast, is sixty miles in length and between thirty and forty in breadth, from the sea to Machicore. As there is no river in this province, water is very scarce, and can only be had from a few marshes here and there. It is supposed that Mr. Drury, when upon the following occasion he mentions the great scarcity of water, alludes to this country, which he calls Anterndroe, the name given it by the natives. "This employment, says he, of attending the cattle, was agreeable to me, except in excessive hot weather, when it was a great fatigue to drive them several miles to water, at least every other day; but, in the colder season we had no occasion to observe that practice, for the dew falls so plentifully in the night, that we find it sufficient to drive them into the grass about break of day; and even the inhabitants of this part of the country of Anterndroe, who have no water near them, go into the fields in a morning, with two wooden platters and a tub, and in less than an hour will collect about eight or ten gallons of dew water, which is very good while fresh, but will turn sour, and disagreeable to the taste, in a day or two."

Caramboule is but a small province, being not above twenty miles in length, and ten in breadth. The sea bounds it to the south, and towards the west there is a gulph, which is denominated the bay of Caramboule; and this bay or gulf runs greatly from the west towards the east, and thereby divides this province from that of Ampatre. The country of Caramboule is in general dry and barren, notwithstanding which there are some good pastures, and many herds both of tame and wild cattle. They have cotton and some silk, which the inhabitants make into apparel.

Mahefalle is situated more to the north-west, on the sea side, and extends as far as the salt river, called by the Portuguese Sacalite. This river flows from the country of Houlouve, and turns into a gulf, an accustomed anchoring-place of the Portuguese, but the French never frequent it.

Houlouve extends about two days journey up the country. This province begins at the mouth of the salt river above-mentioned.

Sivah extends about twelve miles along the coast of the island.

Ivoronheoc,

Ivoronheoc, or the country of the bay of St. Auguſtine, is ſituated near the river Ionghelahe, which receives the waters of three ſmall rivers, namely, Orandumainthi, Onghelamaſſey, and Sacamare, beſides many rivulets.

Machicore is of great extent, and of equal length with the river Ionghelahe. It is upwards of two hundred miles from eaſt-north-eaſt to weſt-ſouth-weſt, the ſame from eaſt to weſt, and about one hundred and fifty from north to ſouth, that is, from the river Ionghelahe to the provinces of Mahefalle and Ampatre.

Some years ago this country was laid waſte, and ruined by war, the inhabitants living concealed in woods, for fear of their enemies, and ſubſiſting upon roots only, or the fleſh of wild cattle. Previous to that time, ſeveral of the before-mentioned provinces were under the ſovereignty of one lord, called Decan or Dian Baluralen, or lord of an hundred thouſand parks; in the life-time of this prince, theſe countries enjoyed a profound peace, and flouriſhed in exceſs of riches and pleaſure, but, upon his death, a war broke out between his ſons, which was carried on with ſo much fury and animoſity, that it ended in the ruin of themſelves and the country.

In the gulfs belonging to, or near the coaſts of Madagaſcar, are ſeveral iſlands. The firſt we ſhall take notice of is the iſland of St. Mary; or, as the natives and Madagaſcrians call it, Noſſi Ibrahim, or the iſle of Abraham, which lies in ſeventeen degrees ſouth latitude, about two leagues from the ſhore of Madagaſcar, and oppoſite the mouth of the river Mananghare. It is about fifty miles in length, from north to ſouth, and almoſt ten from eaſt to weſt. It is ſurrounded by rocks, over which canoes may paſs when the ſea is high; but at low tide they are ſcarcely covered with a foot of water, which renders the coaſt in general dangerous, and only acceſſible for ſhipping at particular places. Various beautiful ſhells, and great quantities of white coral, abound about this iſland. The whole is interſected and watered by many rivers, rivulets, and running ſprings, which give fertility to the ſoil, and beauty to the ſcene; enriched on every ſide by plantations of rice, yams, millet, fruit, vegetables, &c. The air is extremely moiſt: for there is hardly a day in the year but it rains ſome time within the twenty-four hours, and it often rains a week together, without intermiſſion. The cattle are fat and good: ambergris is found about the eaſtern ſhore; and the iſland abounds with various gums, particularly that excellent one called tacamahaca.

Since the French were ſettled on the iſland of St. Mary, it became much more populous than before: nor dare the neighbouring Madagaſcrians now ſet a foot on the iſland, though they formerly uſed to carry fire and ſword amongſt the poor natives, and were a great ſcourge to them. At preſent there are ten or twelve villages, and near a thouſand inhabitants, who employ themſelves chiefly in cultivating rice, yams, peas, beans, &c. They are likewiſe very fond of a fiſh called hourils, which they catch either by nets or hooks, and eat or ſell them, as their neceſſities require. Their religion is paganiſm, intermixed with ſome particles of judaiſm; and though none of them have been known to become proſelytes, yet they keep on good terms with Chriſtians.

Southward of the iſland of St. Mary is a ſmall iſland, ſeparated by a narrow channel, not above three fathoms over, ſo rich, fertile and abundant, that the inhabitants of St. Mary ſend their cattle hither to fatten, and lay out large plantations of rice, corn, roots and fruits, notwithſtanding which they have not thought proper to plant any colony in it. This is probably the ſame iſland which Flacourt places in the bottom of the bay of Antogil, which he highly praiſes for its beauty and fertility, as well as for the ſafety of its harbour, which, during the early voyages of the Dutch to the Eaſt Indies, was much frequented by them.

In nineteen degrees fifteen minutes ſouth latitude, and about twenty-two leagues to the eaſtward of Madagaſcar, is ſituated the uninhabited iſland of Diego Rodriguer.

The iſlands called by the Portugueſe Illas Primieras; and four other iſlands called Angoras, are ſituated in the ſixteenth degree ſouth latitude, but theſe iſlands contain nothing in them deſerving a particular deſcription.

Several ſmall iſlands, called Utiques, are placed by Le Croix oppoſite to cape St. Sebaſtian, on the coaſt of Safola, and under the latitude of twenty-four degrees nine minutes from the continent; yet theſe we have reaſon to believe to be the little cluſter of iſlands which ſtand off St. Sebaſtian, on the north-weſt end of Madagaſcar, eaſt of the Comora iſlands; they produce rice, millet, and great abundance of cattle; there is alſo ambergris found on the ſea-coaſt, which the people collect and export to different parts of the continent; but the moſt valuable commodity of thoſe iſlands is a pearl fiſhery, which might turn to good account, if the natives underſtood their virtue, and did not ſpoil their colour and tranſparency, by boiling the oyſters in which they find the pearls.

This iſland is inhabited by negroes, who reſemble thoſe of Madagaſcar both in perſon and dreſs, if the bit of rag or lamber tied round their middle, merits that denomination. Their religion is paganiſm, with ſome faint gleams of judaiſm; and they are exceedingly ſuperſtitious, being extremely fond of attending to predictions, though their lives are uſually rendered unhappy thereby, as, indeed, how can it be otherwiſe, anxiouſly agitated as they are between the hope of poſſeſſing ſome certain good, or on the contrary, that ſome dreadful evil will aſſuredly befal them?

There are a number of ſmall iſlands on the coaſt of Madagaſcar, from the fifth to the fortieth degree of latitude; but a deſcription of them cannot be expected, as they are all uninhabited.

Under the latitude of eight, and ninety degrees eaſt longitude, lies the iſland of Diego Garcia. Near two degrees ſouth of this ſtand three ſmall iſlands, called Bromdens; and directly ſouth of them, about three degrees, ſtands the iſland of Rodrique, or Roderigo, between the continent and Madagaſcar, not very far diſtant from the Comora iſlands.

Under the twenty-ninth degree of ſouth latitude, ſtands the iſland of Ramareires, about three degrees eaſt ſouth-eaſt of Mauritius; a little beyond which is the iſland of John of Liſbon, in twenty-ſix degrees ſouth latitude, and in the ſame longitude with the iſle of Bourbon.

There lies an iſland, in latitude thirty-two, and longitude ſeventy-ſix, which was diſcovered by the Dutch, who never gave any name to it. To the ſouth of this, between latitude thirty-ſeven and thirty-eight, are two other iſlands, one of which is called Amſterdam, and the other St. Paul, but neither of them contain any thing that merits particular attention.

To the north of the cape of Good Hope, are three ſmall iſlands, called by the Dutch, Roben Eiland, Daſſen Eiland, and Frans Eiland. The firſt of theſe is alſo called Rabbet iſland, from the prodigious numbers of thoſe animals that burrow on the ſhore: it is very ſmall, being not more than two leagues in circuit. The ſecond is called Deer iſland, by its being inhabited by great numbers of deer. It is imagined that theſe creatures were brought hither by Spitſbergen, in the year 1601. The Engliſh and Dutch afterwards brought hither ſome ſheep, which have alſo greatly increaſed, though not in proportion to the deer, which are ſo numerous as to cover the principal part of the iſland. The ſheep here grow to an amazing ſize, and their tails are from thirty to forty pounds weight. It is ſurpriſing how theſe animals procure a ſubſiſtence, or what could induce the people to bring them here, as the iſland, which is ſandy, produces nothing but a few flowers and briars; it muſt, therefore, have had a very unpromiſing appearance for the breeding or fattening of cattle, though the event, by the peculiar care of Providence, has anſwered the expectations of thoſe who were induced to try the experiment. What ſtill increaſes our aſtoniſhment is, that it wants freſh water; which circumſtance alone, it might have been imagined, would have ruined the whole project. But to proceed to the natural hiſtory of this iſland.

Gold, ſilver, copper, tin, and iron, are found in Madagaſcar, of which the natives make razors, lances, hatchets, and other inſtruments. Here are alſo ſeveral ſorts of precious ſtones, as topazes, amethyſts, agates, and ſeveral ſorts of jaſpers; frankincenſe and benzoin are found in abundance; and ambergris is gathered on the ſea coaſt.

Beſides the lemon and pomegranate trees already mentioned, they have, among the fruit, palmettos, plantains, bananas, tamarinds, a currant which grows on a tree and not on a buſh as in Europe, and is very pleaſant to the taſte. Here are alſo ſugar canes, vats, barley, and rice. They have a large tree which bears a kind of a plumb, which, when ripe, is black, and of the ſize of a cherry, and on the inſide are little ſtones like thoſe of grapes; this tree has thorns two inches long. They have alſo a very tall tree, the leaf of which reſembles that of the pear-tree; it has a fruit ſpeckled like the ſparrow's egg, and of the ſame ſize; it is full of ſeeds, and of a ſweet juice, eſteemed a certain cure for fluxes. They have a kind of nut which ſmells of all ſorts of ſpices; it is as large as a nutmeg, but browner,

browner, and more round. Pepper grows here in ſmall quantities, no care being taken to cultivate it; this pepper grows in cluſters upon ſhrubs that trail upon the ground.

In this iſland is a tree, whoſe leaves and tender ſprigs ſting like nettles, but the root is of great uſe where there is a ſcarcity of water, which is the caſe in many parts of the country; for it retains a great deal of juice, which is extracted by beating the root in a wooden mortar, and preſſing out the liquor; and of the bark of this tree they make ropes. Here is likewiſe wood proper for building, as alſo cedar and ebony, but none fit for maſts.

Several ſorts of graſs of different colours grow in the plains, to a much greater height than any in England: the natives never cut any for hay; for before the old is withered, new graſs ſprings up under it; but they commonly burn the old graſs.

Tobacco grows there, which is ſmoaked in reeds or ſhells. The natives are alſo fond of ſmoaking a plant, to which they give the name of jermanghler; this plant grows about five feet high, bearing a long and ſlender leaf, and a pod which contains about a dozen ſeeds like hemp-ſeed. The natives mix the leaves and ſeeds together, and lay them three or four days in the ſun, till they are very dry and fit to be ſmoaked; but it ſtrongly intoxicates the people; their eyes, after ſmoaking it, look red and fiery, their aſpect fierce and wild; and they are even more active, bold, and vigorous, while the effect continues; but thoſe who uſe it much, are weak and diſpirited whenever they are not intoxicated.

The ſoil is indeed ſo fertile, that it produces two crops in a year of every thing, except ſugar-canes, which muſt be left two years ſtanding, that they may grow to a proper ſize and maturity.

Their oxen are prodigiouſly large, and yet ſo nimble and unruly, that they will leap very high fences: they are beautifully coloured, ſome of them being ſtreaked like a tyger; others are black, with white ſpots, and ſome are white with black ſpots. They have a protuberance between their ſhoulders, which has ſome reſemblance to that of a camel, and conſiſts of fat and fleſh; ſome of theſe excreſcences are ſaid to weigh between three and fourſcore pounds. The cows do not give ſo much milk as ours in England, nor will they ever ſuffer themſelves to be milked till the calf has firſt ſucked; ſo that they keep a calf for every cow till ſhe is again with calf, for they ſeldom miſs a ſeaſon.

Here are ſome ſheep with heavy tails, and alſo goats; but they keep no tame hogs, theſe being ſufficiently numerous in the country, and ſo very miſchievous to the plantations of potatoes, and other roots, that they are forced to ſet traps to catch them. They have alſo wild dogs, and foxes, which are very fierce, and ſometimes will attack a man; but there are no lions, tygers, or any other ferocious animals in the iſland, except wild boars, which have two horns near the noſe, like prickles, and their ſkin is almoſt impenetrable.

Here are excellent fowls, with plenty of turtle-doves, partridges, pigeons, ducks, teal and other wild fowl in the woods.

In Madagaſcar, bees are very numerous, and great quantities of honey are found in the woods. The natives alſo keep bee-hives; for they not only eat the honey, but make a palatable liquor of it, called toack, which has a conſiderable ſpirit, and of which they frequently drink till they are intoxicated. This is the common liquor drank at entertainments.

In this iſland are two or three kinds of ſilk, which are found in plenty in almoſt every part of it, ſome of a browniſh colour, and one ſort white, the outſide of which is full of ſmall pointed prickles. The cone is about three inches long, ſhaped like a ninepin, and at the top is found a ſmall hole, out of which a blackiſh worm is ſometimes ſeen to creep; but we have no account of its changing its form in the manner of the common ſilk-worms, though it probably becomes a flying inſect. There are, however, no mulberry trees in the iſland, and theſe worms and ſilk are found on three or four different ſorts of trees, adhering to the thick branches or trunk. The people pull out the cone on their knees, tearing it to pieces with their hands, and then ſpin it with a ſpindle made of bone, and a rock-ſtaff; after which they weave it, and wear it round their waiſt, as a garment.

There is a tree called roſeer in ſome parts of the country, which is of great uſe to the lower, or middling ſort of people, from its furniſhing materials for a cloth to wear round their waiſt. The leaf reſembles that of a cocoa-tree, but is longer by two feet, and bears a plumb almoſt like a damaſcene. They take away the outer bark, and peel entirely off the inner, which is white, and beat it with a ſtick which is ſoft and pliable. It then reſembles a long, white, thin ſhaving. After this they ſoak it in water, then ſplit it into threads, which they tie together, and weave it into cloth.

In this iſland are ſeveral kinds of river and other birds, known in the language of the country by the general name of Vourou; but they are much leſs than thoſe of Europe; the eggs of the hens not being larger than thoſe of pigeons. Here are many pheaſants, which are of the ſame kind as thoſe in England; but there is a particular ſort, that have violet feathers, and a red beak. Here are likewiſe ſmall paroquets, and ſome of a dark red; but theſe laſt are very ſcarce. Small green finches, that whiſtle and imitate the ſongs of other birds; wild turkies; black, white, and grey eagles, with fine plumage; wild ſtorks, with creſts on their heads; common teal, and a particular ſort, with red legs and claws, called halives; pelicans; black and white herons; water wag-tails, &c. Samba is a bird whoſe feathers are as red as fire. Vourouchontſi are white birds, that follow the cattle, and feed upon the flies and beetles found on them; they are generally very lean, and ill-taſted. Voula is a river bird, with a long and white beak; it is about the ſize of a pelican, and its fleſh is tolerably good eating. Taliva is alſo a river bird, about the ſize of a hen, with violet plumage, with red and black feet. Heretac is a bird with a red creſt on his head, and has black feathers, and feet like a teal. Takia is a bird, whoſe wings, feet, and beak, are black; it is about the ſize of a blackbird, and has but one ſimple note, from which it receives its name; for it is continually calling takia; as our cuckow in England, from its note being expreſſive of that ſound, is ſo called.

They catch great numbers of lobſters and craw-fiſh, excellent turtles, eels, the ſword-fiſh, the ſea hedge-hog, and many kinds of fiſh common to other countries in the ſame climate. There are many aligators in the river.

In this iſland are a great variety of inſects and reptiles. The famocantraton, or breaſt-leaper, is an extraordinary but dangerous inſect. It is about the ſize of a ſmall lizard, and fixes itſelf, as if clued, to the barks of trees, with its mouth always open, ready to catch ſpiders, flies, and other inſects. They are called breaſt-leapers, from their leaping on the breaſts of thoſe who approach the tree where they are; and they ſtick ſo faſt, that it is impoſſible to get them off, without cutting away that part of the fleſh on which they are fixed. Mardent is a kind of ſerpent that feeds on bats and ſmall birds; it is about the length and thickneſs of a man's arm, and not venomous, though deemed ſo by moſt of the natives. Among other ſerpents, here are alſo the menore, ſave, mare, triondibale, renutric, and ahacondef. This laſt is very dangerous, though in ſubſtance not thicker than a quill. It ſlips into the body at particular times, gnaws the inteſtines, and occaſions the moſt excruciating pain: it infalliibly produces death, if not extracted in a ſhort time, which is ſeldom the caſe.

The water-ſcorpion, called tringalaka huravou, reſides conſtantly in marſhes and ſtill waters, deſtroys cattle, attacks dogs, and ſucks their blood, after it has killed them.

The ſcorpion ſpider, or vancoho, has a large, round, and black belly, and is extremely dangerous. Its bite occaſions an inſtantaneous ſwooning, which ſometimes laſts two days, attended with a remarkable coldneſs and ſhivering. The method of cure is, by placing the perſon near the fire, and adminiſtering ſuch things as poiſon is uſually expelled with.

Here is a creeping animal, called anocalife, that breeds between the barks of rotten and worm-eaten trees. It is about ſix inches long, of a flat form, and has many legs like a caterpillar, with a hard ſkin. Its bite is exceeding venomous, and cauſes the like diſorder as that produced from the vanocho; and the conſequence will be the loſs of life, if the ſame remedies are not applied.

Moth-worms, ear-wigs, bugs, and other troubleſome inſects, are very numerous here. The acolalan is a ſmall inſect, like a bug, but not ſo offenſive in ſmell; when full grown, it is about the ſize of a man's little finger, at which time it becomes winged, and flies away. The young ones remain in the houſes, and are very deſtructive to the furniture, as alſo to moſt kinds of apparel, and to cloth. The vofnbau is a butterfly variegated with different colours, among which are thoſe of gold and ſilver. Others are known by the name of ſacondre: theſe proceed from beetles, and keep to the bark of a particular ſhrub, on which

which they depoſit honey, equal to that the bees produce.

Many ſorts of ſnails are here, ſome of which have their particular appellations, but they are in general called catacora. Caterpillars alſo abound here in great variety, but the whole of them are diſtinguiſhed by the name of fingoulon voulon. Herechereche is a beetle that ſhines in the woods and houſes with a ſurpriſing luſtre in the night.

In this iſland are worms of various kinds; but the moſt diſtinguiſhed are the ſilk worms, which are four-footed. Some of them, called landove, produce one prickly cod; others, called landeſeraha, make ſmall cods incloſed in a large one, frequently containing five hundred young. The third kind, called landeanacau, ſpin their ſilk on the tree anacau that grows by the ſea ſide, the cods hang in ſtrings, ſeparated from each other, and the ſilk is the fineſt, ſtrongeſt, and beſt of all. The fourth ſort, called landevontaguea, make their ſilk on the tree vontonfir, which is not ſo ſubſtantial as the former, but very fine.

Two ſorts of land-tortoiſes are to be found here; one of which is called hilinſtoca, and the other fanou. Ants are very numerous, and exceedingly harmleſs, except one ſort called ſicouroucourous, which are particularly deſtructive to the rice, of which they devour great quantities.

In this iſland are mines of iron and ſteel, which the natives have the art of purifying and forging with much leſs difficulty and labour than the Europeans. In the inland mountainous parts, ſilver is found; and a white metal, which much reſembles tin. The gold here is of two ſorts, namely, a pale ſoft ſort, which is of little value; and a finer ſort, which is tolerably good.

In the valley of Amboula, is a fountain of hot water, eſteemed a ſovereign remedy againſt all diſorders proceeding from cold in the nervous parts; and the ſame water, taken inwardly, removes obſtructions in the loins, cures aſthmas, and all diſorders of the lungs.

We ſhall now treat of the perſons, manners, cuſtoms, dreſs, &c. of the inhabitants of Madagaſcar; previous to which, it may be proper to obſerve, that this iſland, though reckoned to be eight hundred leagues in compaſs from north to ſouth, is not populous in proportion to its extent, for it is ſuppoſed not to contain above one million ſix hundred thouſand ſouls.

All the inhabitants are black, except thoſe of a little province beyond the Maratanes; and moſt of the great men, who are deſcended from the Arabs, and ſtill preſerve ſomething of their complexion, though they become black inſenſibly, by their intermarriages with the original inhabitants. The Arabs, who ſeized upon this iſland, in the beginning of the fifteenth century, eſtabliſhed commanders in all the provinces, and fixed the chief ſeat of their government beyond the Maratanes, which is the reaſon why their deſcendants, who are ſtiled lavaleſſes, are ſtill fair, or at leaſt called ſo, for they are for the moſt part of a tawny complexion.

The natives are in general tall, well made, nimble, and have a proud gait. Their hair is not woolly, like that of the Guiney negroes, but it is always black, and for the moſt part curls naturally; their lips are not thick, neither are their noſes flat, though they are ſmall. They ſometimes affect a ſmiling countenance; and they know how to conceal a grand deſign, or the ſtrongeſt paſſion, with as much artifice as the moſt crafty knave among the nations that are moſt famous for their political diſſimulation.

Wild people are found in ſome parts of this iſland, who let their hair and beards grow, go almoſt naked, inhabit thick and unfrequented woods, live upon wild cattle, fruits, roots, honey, locuſts, &c. and do not aſſociate with their fellow natives.

Though, according to the accounts given by the French of the inhabitants, ſome of the people are ſaid to be very deceitful, flattering, and falſe; yet this muſt be underſtood chiefly of thoſe of the coaſt of Manghabei, to the end of the iſland, ſouthward. But the people in general are allowed to be of a humane and friendly diſpoſition; ſhare with their neighbours what they take in hunting; and the great even take a pride in relieving the diſtreſſed, though they were before at enmity. In ſhort, they have many virtues; but, as in other countries, there are conſiderable numbers, who violate the laws of juſtice and humanity, in order to gratify their paſſions. They are, however, not deficient in point of underſtanding, but are capable of reaſoning upon any ſubject where they have not been blinded by ſuperſtition; and many of them are endued with admirable good ſenſe. The women are remarkable for their obedience to their huſbands, their good temper, and agreeable converſation.

With reſpect to the dreſs of the Madagaſcrians, the men wear only a piece of cotton cloth or ſilk round their waiſt, called a lamber; ſome of theſe they make themſelves; but thoſe who are rich buy the ſilks and callicoes at ſea port towns, giving a great price for them, as a cow and a calf for no more than will make one lamber. The men and women of diſtinction alſo adorn themſelves with rings on their wriſts; ſome are of gold, ſome of ſilver, but moſt of them of copper. They curl their hair, and make it lie cloſe and ſmooth; and thoſe of ſuperior rank adorn their hair with rings and other decorations.

The habit of the women conſiſts of a lamber, which reaches to their feet, and above it a garment like a ſtraight ſhift, which covers all the body, and has ſhort ſleeves. This is commonly made of cotton, and dyed of a dark colour. Thoſe of a higher rank, adorn it with beads, eſpecially in the back, where they are ranged in rows, and croſs each other; theſe being of different colours, form a large double croſs very much reſembling the union flag. Some of the women uſe ſaravohits, or drawers, with an aezan, or long robe without ſleeves, and a piece of linen before, ſewed at both ends like an apron.

Their ornaments, called firauach, are different kinds of chains worn round the necks, arms, and legs; ear-rings, bracelets, rings, and other toys, with necklaces of different names, ſuch as ſalantes, ſaraves, and endachs, conſiſting of three or four, and even twelve rows of pearls, corals, beads of gold, glaſs of all colours, rock cryſtal, agates, cornelian, and ſardonian ſtones. Theſe ornaments of gold are only worn by the Zaferamini, who are the chiefs of the iſland; and among the negroes, by the Voadziri and Lahavohits.

The common diet of theſe iſlanders is cows milk, rice, and roots. They roaſt ſometimes large pieces of beef with the hide on. They drink water and honey-wine; but they have neither bread nor grape-wine. The honey-wine is a compoſition of three parts of water to one of honey, which they boil together, and ſkim, after it is reduced to three-fourths. They afterwards ſet it to work in large pots of black earth, made in this iſland. This wine has a very pleaſant tartiſh taſte, but is too luſcious. They have a ſort of wine, ſtill more unwholſome, which is made of ſugar canes.

Licking the feet of a ſuperior, is deemed the moſt reſpectful ſalutation. This kind of abject ſubmiſſion is practiſed by all inferior perſons when they addreſs their prince, and by the women when they come to welcome their huſbands on their return from the wars; thoſe of ſuperior rank lick only the knees of their ſovereign; but ſlaves pay to their maſters the above prepoſterous mark of reſpect.

Here is no other marriage ceremony among the negroes, than agreeing to cohabit together; but the whites have a peculiar ceremony in being joined, or married to the head wife; their other wives are taken with as little form as thoſe of the negroes are.

They practiſe polygamy throughout the iſland; and the people in general are exceeding incontinent, which may be aſcribed to the extremes which actuate both ſexes; the men having too much freedom, and the women being under too much reſtraint; yet theſe oppoſite cauſes produce ſimilar effects; for here ſince the men take all the licentious liberties which ſuch an unbounded licence permits; ſo the women, being impatient of reſtraint, allow themſelves ſuch freedom in private, in order to compenſate for what they ſuffer by the ſeverity of the public laws and tyranny of their huſbands, that the ineſtimable jewel chaſtity is rarely to be met with among them.

Their funerals are conducted in the following manner: the relations waſh and cleanſe the body of the deceaſed, and then deck it with the moſt coſtly ornaments which the perſon wore when living. It is then wrapped up in a mat, in order to be carried in that manner to the grave. The head of a woman's corpſe is generally embelliſhed with a kind of cap: but the heads and beards of men of rank, after their deceaſe, are clean ſhaved. Previous to the time of burial, the corpſe lies in ſtate for ſome days, during which ſpace a light is continually burnt at its feet; and all the relations, friends, and ſlaves, frequently ſurround the corpſe, and utter the moſt diſmal lamentations. Having tired themſelves with bewailing, the women fall a dancing, and the men have recourſe to warlike exerciſes. At length they all ſurround the body again, call the dead by his name, very gravely expoſtulate with him for dying, and pathetically demand whether he had not every thing that could ſatisfy him in this life, ſuch as beautiful and faithful wives, dutiful children, loving friends, induſtri-

ous ſlaves, a ſufficiency of gold, ſilver, iron, cattle, &c. We are ſorry there is reaſon to remark, that this burleſque method of howling over and interrogating the dead is not peculiar to this idolatrous people, as not only many other nations in Africa have the ſame cuſtom; but that even in Europe ſome perſons, who pretend to be more enlightened, ſtill retain theſe abſurd ceremonies.

When the day of interment is come, the corpſe is carried to the burying-place, which is named Amounouque, in a coffin made of hollow trunks of trees, which are curiouſly cloſed together; and there it is depoſited ſix feet deep, under a ſtrong hut, in which are left plates, diſhes, apparel, rice, tobacco, &c. that the dead may want no neceſſary accommodation. The deceaſed being thus properly provided for; the hut is intirely cloſed up, by placing a large ſtone before the only entrance. Then, on the outſide, beaſts are ſacrificed; and the company having regaled themſelves, ſome fragments of meat are left, which they ſuppoſe will be equally diſtributed between the departed perſon and the dæmons.

Fifteen days after, imagining the proviſions are exhauſted, the relations and friends ſend more, leſt the dead body, or the dæmons who guard it, ſhould be famiſhed; and theſe preſents are always accompanied with the kindeſt meſſages and moſt reſpectful compliments to the deceaſed. The heads of all the beaſts which are ſacrificed, are fixed upon long poles, and placed round the ſepulchral hut in the manner of trophies. Sacrifices of beaſts are likewiſe made by, or in favour of the children deſcended from the deceaſed, or thoſe nearly related to him, when the juvenile band, in a kind of hymn, invoke the ſpirit of the departed perſon to be propitious to them.

When a perſon of rank dies at a diſtance from home, his body is burned upon the ſpot; but his head having been previouſly cut off, is carried home and interred in a proper ſepulchre, with the uſual funeral rights. But perſons ſlain in war, who have been haſtily buried in or near the field of battle, are, in times of peace, again dug up, and reburied in the uſual form, provided the body be not nearly in a ſtate of putrefaction, from the long ſpace ſince its interment.

Theſe people hold the memory of their anceſtors in the utmoſt eſteem and veneration; their greateſt and moſt ſolemn oath being, to ſwear by the ſouls of their predeceſſors, or the virtues of their parents or neareſt relations.

In conſequence of the execrable ſuperſtitions of theſe people, they have a moſt barbarous cuſtom of expoſing their children to a certain and cruel, though indeterminate kind of death, by ſtrangling them in the birth, or ſacrificing them to dæmons, which horrid and atrocious practice may in all probability be the true political reaſon why this large iſland is ſo thin of inhabitants, in proportion to its great extent and amazing fertility. Theſe ſhocking cruelties are owing to the ombiaſſes, who exerciſe a moſt uncontrouled power over the minds of the people; the latter being under an obligation of expoſing their new born children in deſart places to famiſh, or be devoured by wild beaſts; to ſtrangle them in their birth, or to ſacrifice them to their dæmons, according to the prediction or the command of the ombiaſſes, who pretending to contemplate the aſpect of the planets at the time of their birth, pronounce arbitrarily whether they are fortunate or inauſpicious, and decree the child to life or death accordingly. Theſe deteſtable murders are the more frequent, inaſmuch as, beſides the ombiaſſes having the fate of new born infants at their diſpoſal at all times, thoſe who are born on what the people deem unlucky days, are ſure to be put to death, and, unhappily, above half the days in the year are accounted ſo.

The inauſpicious or unfortunate portions of the year are; the entire months of April or Safard, March or Ramahara; the laſt week of every month in the year; every eighth day, whether it falls in auſpicious months or weeks, or otherwiſe, every eighth day being called Aſſarontor, and every laſt week in each month Alacoſſi. Every Wedneſday and Friday throughout the year are deemed unlucky; and even particular hours are ſuppoſed to be influenced by the vitangs, or unlucky planets, However, the force of nature ſometimes overcomes the prevalence of ſuperſtition; and the prejudice of cuſtom yields to the dictates of parental affection; to which we may add, that the ombiaſſes are not inſenſible to the power of bribery; and what will not a parent, who has tender feelings, give to ſave his inoffenſive offſpring from immediate deſtruction? Thus wealth, the grand fountain of vice, and ſtimulator of crimes, may, properly applied, be rendered the means of benevolence, and friend of humanity.

Throughout the iſland of Madagaſcar, the ſame language is ſpoken, but differently pronounced in different provinces. It bears a great affinity to the Arabic, is extremely copious, and, in the manner of ſpeaking, and in the order and conjunction of the nouns and verbs, is agreeable to the Greek. The characters in uſe among the ombiaſſes are the Arabic, twenty-four in number, written from the right to the left, though the pronunciation of ſome differs from the Arabic. Theſe characters were introduced about three centuries ago by the Arabs ſent by the calif of Mecca, who landed at Matatan, intermarried with the women of the country, and taught the Arabic language, with the koran, to thoſe who embraced Mahometaniſm, which ſome of them ſtill adhere to.

In order to give the reader ſome idea of the ſoft and liquid tones, with which the Madagaſcar language abounds, we have here ſelected a few of their common words, with their tranſlation in Engliſh; viz. valu, alive; melanjore; to agree; maliſke, anger; leſhulu, any-body; mononego, aſcend; bettu, brains; haner, beef; omebayvovva, cow; tanna, the earth; omebay, cattle; morte, dead; varlarvo, a mouſe; oroong, the noſe; overnarmo, potatoes; plato, a piſtol; hulu, people; colo:, years. Teenongher, eaſt; andreffer, weſt; avarruchs, north; ateemo, ſouth. Their numbers are, eſer, one; roaa, two; talu, three; effutchs, four; deene, five; eamming, ſix; feeto, ſeven; varlo, eight; ſever, nine; folo, ten. The days of the week are, Alhaida, Sunday; Alletenme, Monday; Talorter, Tueſday; Allerrerbeer, Wedneſday; Commeſhee, Thurſday; Immor, Friday; Sarbueche, Saturday.

They reckon from one to ten, like the Arabians and Europeans, and, after ten, add the number one, as far as twenty. All the people of Madagaſcar, except the negroes of Machicore, and the inhabitants of the mountains, are tolerably expert at caſting up ſmall ſums.

They uſe no weights or meaſures higher than a drachm, for as they weigh no articles whatever, gold and ſilver excepted, drachm weights are deemed ſufficient; all other commodities being ſold by way of barter or exchange.

The names of their ſmall weights are, nanqui, half a grain; ſacare, a grain; nangue, ſix grains; vari, half a drachm; ſompi, a drachm.

The meaſures are, 1. The voule, which contains half a pound of rice, &c. 2. The monca, containing ſix pounds; and, 3. The zatou, containing one hundred voulus, or fifty pounds of rice, &c. Theſe are meaſures of capacity.

The meaſure of length is only a reſe, or a meaſure of about two yards in length, which is uſed in meaſuring cordage, ſtuffs, &c. the land not being eſtimated by admeaſurement, but by the quantity of grain with which it may be ſown.

They make paper, in this iſland, with fewer inſtruments and engines than they uſe in Europe. The bark of the tree avo is boiled two days in good lye, made of the aſhes of the ſame tree, till it becomes ſoft, and ſupple; when it is waſhed in clear water, beat to a proper conſiſtency, and poured afterwards on mats of exquiſite fine reeds, twiſted and regularly joined together, in order to be drained and become paper. After this, it is placed on a loaf of baliſior, oiled with menachil, to dry in the ſun; each dried leaf is afterwards dipped in a decoction of rice, to prevent it from remaining ſpongy: then being dried once more, it becomes ſmooth, even, and fit for uſe.

Their ink is extracted, by way of decoction, from the wood called arandranto, which is likewiſe made uſe of by the principal people for building. The extract, being mixed with verdigris, becomes exceeding black. Their pens are made of bamboo, and are cut to the ſame ſize, faſhioned after a ſimilar manner, and rendered almoſt as tranſparent as the quills uſed in Europe.

SECT. IV.

Of the Trade carried on in MADAGASCAR; Method of going to War between the different Provinces, &c. and the political and civil Government of the Iſland.

THE natives of Madagaſcar have very confined ideas and imperfect notions of foreign traffic; ſo that the trade of this iſland is chiefly of a domeſtic nature. There being no currency eſtabliſhed among them, they deal together by way of barter, and if they obtain any gold or ſilver coins from the Europeans, who ſometimes touch here, they immediately melt them down, and convert them into ear-rings, bracelets, &c.

The

The domeſtic trade is of this nature: the people of the cotton provinces take care to cultivate that article, and then carry it to the provinces which abound in cattle, rice, &c. Having trucked or bartered commodities, the wants of each are ſupplied; for they who have plenty of proviſions, are by theſe means ſupplied with cloathing; and they who can eaſily procure apparel in their own country are furniſhed with proviſions, in which their own provinces might be deficient. Thus the interchange of the produce of the different provinces becomes of reciprocal benefit to the whole.

The foreign traffic which ſome of the Madagaſcrians carry on with the European ſhips, conſiſts in exchanging freſh proviſions for yellow wires; ſapphires for hard and ſmall wares of all ſorts; rubies for looking glaſſes; emeralds for beads; cornelians, and other precious ſtones found in the country, &c. for fire-arms, and coral of any ſize or colour, pierced through for ſtringing, &c. Thus the riches of theſe people conſiſt in the wares and commodities which they procure; in the bills, hatchets, knives, lances, iron and ſteel ſpades, lambers, &c. which they make, in the ſlaves they take in war, or ſteal in times of peace, in the cattle they breed, and in the lands which they cultivate. The French, who trade with theſe people from the iſle of Bourbon for ſlaves and cattle, complain that of late years piaſtres are demanded for thoſe and other articles.

The celebrated French governor Hacourt eſteemed this iſland of great importance for advancing and eſtabliſhing commerce towards Ethiopia, the Red ſea, gulf of Arabia, and other Indian countries; and that great advantage might be made from the conveniency of wood for building ſhips, for carrying on the trade, and from the exchange of commodities.

The ſovereigns or princes of the different territories in this iſland are moſt of them related to each other, as are likewiſe their great lords and inferior ſubjects, by continual intermarriages; nevertheleſs they are perpetually quarrelling with and waging war againſt each other; private family diſputes often occaſion open ruptures, and the reſentment of an individual will induce ſome thouſands to commit hoſtilities on the offending party. Theſe domeſtic wars are purſued with more rancour and hatred than a war with a foreign enemy would be; for when relations and friends differ, it is obſervable, they entertain a greater implacability againſt each other, than ſtrangers when they happen to be at enmity.

Their engagements in the field are ſeldom regular; they chiefly depend on ſurpriſe and ambuſcade, and ſacrifice courage to ſtratagem. When the proſpect of advantage offers, they uſually aſſemble privately, act with the utmoſt caution and ſecrecy, gain the enemies frontiers by forced marches in the night, and attack them ſuddenly and unexpectedly: if ſucceſs attends their arms, they commit the moſt cruel ravages: if they meet with an unlooked for repulſe, they retire with the utmoſt precipitation. But good or bad ſucceſs are alike fatal to the country; if they are fortunate, they deſtroy all before them as they advance; if unfortunate, they lay waſte the country in their retreat. Thus, by means of inteſtine broils, famine frequently reigns in a country calculated by nature to afford the utmoſt plenty.

The prince of a territory ſometimes gives notice to the lords, who are his ſubjects, to aſſemble their forces ſeparately, and to march by different routs to the place of rendezvous, in order to come ſuddenly upon and attack the towns of their enemies, which they ſurround, and advance with the moſt dreadful ſhouts; and, if ſucceſsful, they maſſacre all they meet with in them, ſparing neither age nor ſex. After this ſanguinary heat is over, if they meet with any other of the adverſe party, or overtake any fugitives, they make ſlaves of them; but uſually put to death thoſe who are allied to the chief, fearing they might at ſome future time become formidable, ſhould they be ſuffered to ſurvive.

With reſpect to their political management of the war, they depute ſpies to obſerve the condition, number, and ſituation of the enemy, if on a march, or encamped; or to reconnoitre their towns, and take notice of the importance of their fortifications, if they ſhould mean to maintain them, and ſtand a ſiege. If threatened to be attacked by others, they ſhift their place of reſidence, drive their women and cattle into the moſt private receſſes, or places difficult of acceſs, and conſequently may be eaſily defended. Sometimes parties of only forty or fifty are ſent to plunder and deſtroy the leſſer villages and hamlets; and theſe light detachments are called ſamvouve. If opportunity ſerves, the towns are reduced to aſhes; but if they are under any apprehenſion that the flames will exaſperate the neighbouring inhabitants, who might immediately purſue them, or cut off their retreat, they ſatisfy themſelves with only plundering the towns without burning them.

Theſe kind of expeditions are named tafichamanthi, or ſecret war; and the marauders, who engage in them, are always provided with what they deem charms, which are ſmall billets written in Arabic characters; theſe they imagine will procure them ſucceſs, and bring the greateſt misfortunes on their enemies, by taking away their ſtrength, and depriving them of their courage to defend themſelves; they likewiſe imagine that they afflict their foes with innumerable diſorders, and occaſion the moſt fatal diſtempers to attack them.

Their warlike weapons vary according to the different parts of the iſland they live in. Some make uſe of a dart, which is named renelefs, with an iron point long and thick, and carry beſides fifteen leſſer darts, that are named fitoraches. Others uſe an ample ſhield, and a large dart called caubahi, but the generality uſe lances as well as darts, and the great men carry fire-arms; for to carry a lance, denotes a perſon to be of common or vulgar rank; but to bear a gun upon the ſhoulder betokens gentility, and ſhews that the bearer ranks as a nobleman, or perſon of ſuperior degree.

The iſlanders have little notion of diſcipline in their wars; they generally charge in ſeparate bodies of one hundred each; their charges are irregularly made, as each individual tries to do his beſt, but at the ſame time keeps continually ſhouting, capering, and jumping about, in order at once to intimidate the enemy, and prevent any aim being taken at himſelf; ſo that an attack thus made, appears to be rather the aſſault of a promiſcuous mob, than the well conducted onſet of diſciplined troops. When an enemy falls, he is immediately pierced through with darts by as many as can come near him, and his throat is afterwards cut from ear to ear. And we are told, that during the time of war, the women keep up continual dancing (alternately) by day and night, never eat or ſleep in their own houſes, and, however addicted to incontinency, never ſuffer the company of another man, whilſt their huſbands are expoſed to danger, perſuaded that the men would be killed or wounded by infidelity in their abſence, and believe them to be animated by their continual dancing, and their ſtrength and courage increaſed; wherefore in compliance with the moſt ſuperſtitious cuſtoms and ceremonies, they keep up their dancing during the war.

If it happens that one of the princes finds himſelf too weak to oppoſe the other by force of arms, he has recourſe to negociation, and ſends ambaſſadors, laden with preſents, to ſue for peace, appoint a time and place for conference, and ſettle all the preliminaries for an accommodation. If the preſents are received, and the propoſals approved, other preſents are ſent in return, and every thing is ſettled for the intended meeting, the place appointed being always on the banks of a river. When the day arrives both princes or chiefs repair to the river at the head of their reſpective armies. Each then kills a bull in the ſight of the armies, and then they preſent to each other a piece of the liver on the end of a ſpear, which both are obliged to eat a piece of; and after this they mutually wiſh, with the moſt ſolemn aſſeveration, "That the liver may burſt them; that God may withdraw his hand from amongſt them; that they may be deſtroyed by their enemies; and that their race may end in themſelves; if they any longer think of carrying on the war; if they have any deſign of ſending witchcrafts or poiſons into the enemies country; if they carry off the cattle, or deſtroy the ſubjects of each other," &c.

Theſe people have ſome notion of aſtronomy, and divide the year like us, into twelve months: the firſt day of their year begins with the new moon in March. They have no certain and regular account of time and ſeaſons, but compute the years by the days of the weeks, beginning the year of circumciſion on Friday. They have likewiſe obſerved the motions of the heavens, the revolutions of the planets, and the ſigns of the zodiac, which, in the manner of the Europeans, they likewiſe divide into twelve ſigns; namely, in the ſpring, Alimazi, Alicarobo, Alacoſſi, Libra, Scorpio, Sagittarius: in ſummer, Alizadi, Adalou, Alohotſi, Capricorn, Aquarius, Piſces: in autumn, Alahemali, Azorou, Alizozo, Aries, Taurus, Gemini: in winter, Aſarata, Alaaſade, Aſamboulo, Cancer, Leo, Virgo. Thus are they correct by caſual obſervations only; and accurate, without the knowledge or uſe of inſtruments; which evince, that the heavens are an univerſal

verſal book that is open to all nations, may be read in every climate, and be ſerviceable even to the moſt ſavage and ignorant.

It is the general opinion, that the perpetual enmity, in which the Madagaſcrians ſeem to live with each other, ariſes either from jealouſy or theft; but while the former occaſions many private animoſities, the latter uſually terminates in war. Princes and nobles themſelves make no manner of conſcience of ſtealing their neighbours cattle privately; and their neighbours retaliate upon them in the ſame manner whenever an opportunity preſents. In this manner it ſometimes only prompts the party to return the ſame treatment; but, at other times it occaſions a war to break out between them.

While Mr. Drury was in captivity in the iſland of Madagaſcar, he was a ſlave to a chief of great conſequence, who was nevertheleſs very fond of ſtealing his neighbour's cattle privately. He thus deſcribes the diſtreſs which affected his mind, when he firſt went with his maſter on one of theſe expeditions: "My maſter, ſays he, attended by ſeveral of his ſlaves, took me alſo with him one evening, into the woods. I obſerved great preparations made for killing and dreſſing a bullock, or ſome ſuch thing; but there being none to kill, and it being then dark, I perceived that they walked with great circumſpection, talked ſoftly, and teſtified all the ſymptoms of ſome ſecret deſign; upon this, the tears ſtood in my eyes, imagining that they intended to cut me up, and make a meal of me; but my fright was ſoon over, when I ſaw two ſlaves hauling along a bullock by a rope faſtened to his horns, and my maſter ſtriking his lance into his throat, in order to diſpach him. They immediately cut up the carcaſe, and dreſſed his entrails after their own manner. The booty was equally divided, and I obſerved that each man took care to hide his portion in ſome private place, from whence he might convey it away by night. As ſoon as our buſineſs was over, we parted, ſome one way, and ſome another, for fear of being taken notice of. I now plainly perceived, that we were all this time plundering our neighbours of their property." Though, as we obſerved before, the wives and ſlaves of the chiefs come creeping to lick their feet when they return from war, or from a grand hunting match of wild cattle; yet when they return from their thieving matches, no ſuch homage or ſubmiſſion is paid to them.

The above gentleman has alſo given us a curious account of their manner of hunting wild cattle, which is one of the principal diverſions of theſe people, and is as follows: "It was now night, ſays he, and they were going a beef hunting: for when they go out on purpoſe to kill the beſt beaſts, they always make choice of the darkeſt nights. They permitted me, on my requeſt, to accompany them, but firſt ordered me to waſh myſelf, as they themſelves did, that we might not ſmell either of ſmoke or ſweat. I would have taken two lances according to cuſtom, but they obliged me to leave one behind, leſt two together might rattle in my hand.

"Theſe cattle feed only in the night; and if all theſe precautions were not taken, they could never be ſurprized, for they are always on their guard, ſnorting with their noſes, and liſtening after their purſuers. We can hear them roar and bellow a great way off, by which we know where they are, and we are forced always to go round, till they are directly to the windward of us, for otherwiſe they would ſoon ſcent us. As ſoon as we had got the wind and cattle right a head, and were within hearing, we walked with all the circumſpection imaginable, cropping the top of the graſs with our hands, as cloſe as poſſible, to mimick as well as we could the noiſe a cow makes when ſhe bites it. The moment they heard us, they were all huſh, not one of them bellowed or grazed, but ſeemed to liſten with the utmoſt attention; which when we perceived, we all ſtood ſtill likewiſe without a whiſper, whilſt three or four, who beſt underſtood the nature of it, continued cropping the graſs. When the cattle had liſtened till, as we imagined, they took us for ſome of their own ſpecies, they returned to their grazing, and we walked with caution nearer, ſtill mimicking them as we moved ſoftly along. Decan Murnanzac (one of the chiefs) ordered me to keep behind, leſt they ſhould diſcern my white ſkin, and be ſtartled; he alſo gave me his lamber to cover myſelf with, which was a large piece of black ſilk; ſo that, as the graſs was above knee deep, if I had been near them, they could have ſeen nothing but my face.

"We got at length among them, ſo that one of our men, with ſome graſs in his hand, and under the cover of a buſh, took hold of the dug of a cow, and finding that ſhe gave no milk, he concluded that ſhe was not lean: for which reaſon he ſtruck his lance inſtantly into her belly, and drew it out again, making no other motion. The cow, when wounded, will give a ſpring perhaps, and make a noiſe as if another had run her horns againſt her; but this is ſo common among them, that the herd is not any ways diſturbed by it; ſo that our people ſtuck three or four after this manner, and left them with an intention to come the next morning and trace them by their blood, for it is very dangerous to keep too near them in the night. As ſoon as they find themſelves ſorely wounded, they run from their companions, and will attack the firſt man they ſee. They are generally found actually dead, or fallen down in ſome wood or ſhelter of buſhes, as if they induſtriouſly endeavoured to conceal themſelves at theſe times.

"Soon after this beef-hunting, we had an accidental diverſion of another kind; our dogs had got the ſcent of ſome wild hogs that were got into a thicket, and were very buſy in running round it, but could find no entrance for a conſiderable time; at length, however, they found the path which the ſwine had made, and attempted to enter the wood by it: the paſſage was defended by a large boar who fought the dogs with great fury, and wounded one of them in a deſperate manner. Now what with the dogs on one hand, and the ſwine on the other, there was ſuch a yelping, grunting, and howling, that the woods rang with their noiſe; and one would have imagined all the hogs in the iſland had met there by conſent, in order to revenge their quarrel upon us. We laid down our burdens, and ſome of us went up to them armed with guns and lances; Decan Murnanzach ſhot the boar that wounded his dog; whereupon another, in an inſtant, defended the entrance, and fought ſo reſolutely, that neither the dogs, nor we ourſelves, could come near the cattle that were within, till we had made a paſſage behind them with our hatchets and lances; and then fired upon ſome of the moſt reſolute who turned upon us: the reſt, perceiving themſelves attacked behind, fought their way through the dogs, and ran away, with the dogs after them; when words cannot deſcribe the noiſe there was, eſpecially after a number of them were wounded by our men with their fire."

With reſpect to the political ſtate and government of this iſland, the accounts tranſmitted to us differ very much from each other, which cannot be imputed to any want of authenticity in the ſeveral authors, but to the revolutions which have ſo frequently happened; ſo that different writers, in treating of the political ſtate of Madagaſcar, at various periods, muſt of courſe vary from each other exceedingly. Hence Vincentius Albus and Gaſpar de San Bernardino have informed us, that this iſland was divided into ſix diſtinct kingdoms, whoſe ſovereigns were at continual variance with each other; and Marcus Paulus, the Venetian, tells us, that in his time it was governed by only four ſovereigns. By later accounts, however, it is certain, that every province hath its particular ſovereign, or lord, who is called deean, or dian; and this ſovereign lord appoints a tiloubei, or governor, over every village in his territories.

We have the following deſcription of one of theſe ſovereigns, given us by Mr. Drury, who was preſented to him. His hair was twiſted in knots, beginning at the crown of the head, where they formed a ſmall circle: below them was another ring of knots, and thus they were continued in ſeveral circles, each longer than that above it. On ſome of theſe knots hung fine beads; he had alſo a forehead-piece of beads, that hung ſo low as to reach his noſe. About his neck he had a fine necklace, formed of two ſtrings of beads, ſeveral of which were of gold; this necklace hung down before in the manner of an alderman's chain, and on each wriſt he had five or ſix ſilver bracelets, and four rings of gold upon his fingers. On each ancle were near twenty ſtrings of beads ſtrung very cloſe, and exactly fitted to his legs. He had a ſilk mantle over his ſhoulders, and another piece of ſilk, as uſual, about his waiſt. But theſe princes differ as much in the diſpoſition of their ornaments, as in their paſſions.

The ſovereigns of this iſland, though they have an abſolute power over the lives of their ſubjects, and ſometimes kill with their own hand thoſe who exaſperate them, will nevertheleſs talk familiarly with every body, and ſtill preſerve a decent ſtate. They uſually give audience to their ſubjects ſitting croſs-legged on a mat. Theſe princes have no regular bodies of troops trained to war, but make uſe of their vaſſals, who endeavour to imitate their bravery; but generally fly when they ſet them the example, or when they are killed. Their arms are lances, hatchets made in the country, and guns purchaſed of the Europeans, who frequent the different parts of the iſland.

In this iſland, the civil government is not dependent on edicts or public inſtruments; nor is there a written law in the whole country. The firſt guide of theſe people is a kind of natural law, ariſing from the common occurrences of life, founded on the feelings of human nature, reſulting from reaſon, and handed down by tradition from father to ſon.

Here are three kinds of theſe traditional or oral laws; viz. 1. Maſſindili, or the law of the prince; 2. Maſſimpoh, or the law of individuals; and, 3. Maſſintanc, or the general law or cuſtom of the iſland; all of which appear to be founded, for the moſt part, on good ſenſe, and natural juſtice.

The law of the prince reſpects his peculiar prerogatives, and ſhews how far his will ſhould be limited, and how far his power extended. The ſecond, or the law of individuals, is of a domeſtic nature, and reſpects each individual, his manner of living, his deportment according to his circumſtances, his behaviour to perſons of his own family, or to his immediate neighbours. The third kind, is the univerſal law of the country, or what may be called the common law. It regards all occurrences, offences, and complaints which are of a public and material nature, or which in any meaſure affect the welfare of the public in general.

By the law of the prince, or the prerogative law, (which is of the firſt kind) it is made death to lie with one of the ſovereign's wives.

According to the laws of the ſecond kind, if a man is detected in robbing his neighbour of an ox or a cow, he is obliged to reſtore it ten fold. Alſo, if a man borrows an ox or a cow of his neighbour, and does not return it in a year's time, ſix calves are looked upon as an equivalent for the ox; and if he neglects payment at that time, thoſe calves are ſuppoſed to be three ſteers, and three heifers; and their increaſe, which, by a fair computation, ariſes by their growth and production, is the man's right of whom the beaſt was borrowed. And if it go on for ten years, or any longer time, it is computed what three bulls and three cows might produce in that time, all which becomes the creditor's property.

The laws of the third kind, or thoſe of a general nature, are; if a man has a criminal converſation with the wife of another man who is his ſuperior, he forfeits thirty head of cattle, beſides beads and ſhovels in abundance; but if the men are of equal degree, then the fine is only twenty head of cattle. If any one maliciouſly aſſaults another, and breaks a leg or an arm, he is fined fifteen head of cattle, as a forfeit to the party injured. If any one breaks the head of another, and the aggrieved party has not returned the blow, he receives three beeves by way of damage. If any one ſteals another's hive of honey, and is caught in the fact, the fine is three iron ſhovels; for it is to be obſerved (as trade is by way of barter), that iron ſhovels, hoes, &c. are a kind of ſmall money among theſe people. If one man's cattle breaks into another's plantation, the owner, for every beaſt found there, muſt give an iron ſhovel. If two men quarrel, and one happens to curſe the other's father or mother, whether they be living or dead, and his antagoniſt has ſo much command of himſelf as to refrain from curſing the other's father or mother, he recovers two beeves as a compenſation. If any one is found guilty of ſtealing Guiney corn, caravances, potatoes, or the like, out of any of the plantations, he forfeits a cow and a calf to the owner; but if the damage done is ſuppoſed to require a greater forfeit, more is then to be given.

Before we conclude this ſection, it will be proper to take notice, that to the ſouth-weſt of Madagaſcar, are a people who ſeem almoſt of a different ſpecies from the other inhabitants of the iſland. Theſe are called Virzimbers. Their heads are of a very ſingular ſhape, the hinder part being as flat as a trencher, and the forehead nearly ſo, which, it is obſerved, was probably occaſioned by their preſſing the child's head from its birth. Their hair is not long, like that of the other natives, nor is it quite ſo woolly as the hair of the inhabitants of Guiney.

Theſe people have a language peculiar to themſelves, though they ſpeak that of the iſland. Their religion is likewiſe different from that of the other natives, they having no owley (a kind of portable images) in their houſes; but pay an extraordinary attention to the new moon, and to ſeveral animals, as a cock, a lizard, and ſome others. When they ſit down to their meals, they take a bit of meat, and throwing it over their head, ſay, "There is a bit for the ſpirit." Then cutting four more little bits, they throw them to the lords of the four quarters of the earth. This is the general practice of thoſe who have a regard for religion, though there are many who neglect it; juſt as, in Europe, many neglect ſaying grace at their meals. But theſe people, like thoſe in the other parts of the iſland, have neither prieſts nor temples; nor is difference of religion conſidered as any crime by them.

The Virzimbers make very good earthen ware, as pots, diſhes, and jugs, glazing them both within and without; and in many other reſpects they are very ingenious artificers.

Several Engliſhmen, we are told, have at various times been driven by diſtreſs on the ſouthern coaſt of Madagaſcar, and there detained many years, among theſe were Robert Drury, a youth (to whoſe minutes we are indebted for ſeveral remarkable particulars relating to this iſland) and Mr. John Benbow, ſon of the famous admiral of that name. Drury, after having been fifteen years a ſlave, was redeemed by captain William Mackett, and brought to England in 1716. He reſided in London many years, and there publiſhed an account of his adventures. Benbow alſo lived many years after his return to England, and wrote a deſcription of the ſouthern part of the iſland, which was handed about in manuſcript among his acquaintance, and by that means was loſt; this curious performance having been in vain attempted to be recovered by the family.

SECT. V.

Containing an Account of the Religious Ceremonies and Superſtitious Rites of the Inhabitants of MADAGASCAR; their Form of Circumciſion; ſome Particulars relative to their Funerals; and of the Ombiaſſes, or pretended Magicians.

THE inhabitants of Madagaſcar have no particular places of religious worſhip; nor do they offer up prayers, unleſs their occaſional incantations may be ſo called, notwithſtanding they adore and acknowledge one Supreme God, whom they call Deaan Unghorras, which ſignifies the Lord above; who created the heavens and the earth, all animated beings, and an innumerable hoſt of angels, in ſeven days. Yet after having this juſt idea of the deity, they have not any notion that it is neceſſary to worſhip him, or pay him divine honours. They likewiſe ſay, there are four other lords, each of whom has his reſpective quarter of the world, as the northern, the eaſtern, the ſouthern, and the weſtern lords. The eaſtern lord they ſay is the diſpenſer of plagues and miſeries to mankind, by the permiſſion or command of the Supreme God; and though the others alſo fulfil his commands, they are chiefly the diſpenſers of benefits. They conſider their lords as mediators between men and the great God, on which account they have an high veneration for them, and recommend themſelves to them in their prayers and offerings.

Almoſt every perſon is ſuppoſed to have a diſtinct and ſeparate ſpirit who preſides over his actions, and preſents his prayers to the Lord above; and the people expect, that after a ſacrifice, theſe ſpirits will tell them in dreams what they are to do, and warn them of the dangers that will await them. This naturally renders them ſuperſtitious with reſpect to dreams, and their moſt common concerns.

They perform the rite of circumciſion, but with very different ceremonies from thoſe practiſed by the Jews and Mahometans, from whom they are ſaid to have received the cuſtom, by means of Arabs, who came to ſettle there. This ceremony is performed every third year; at which time they build a hall raiſed upon wooden pillars, and encompaſſed with a palliſado of ſtakes. The great lord of the province kills a bull, and having ſpilt the blood of it, mixed with honey-wine, round the building, he opens the palliſado and plants at that opening a banana-tree, with leaves and fruit, on which hangs a girdle tinged with the blood of the bull: after which that place is looked upon as ſacred; no perſon approaches it but with the utmoſt reſpect, and none enter into it.

The fathers of the children who are to be circumciſed faſt during the eight days of the moon of March, and the laſt day they walk abroad two and two, carrying the children on their ſhoulders, wrapped up in paans. The young men who are not married follow them, and holding their ſabres in their hands, they make threatening motions with them, as though they were going to attack an enemy. After they have walked three times round the donac (the

lord's houſe), they ſtop before the door, and, dividing themſelves into troops, they exerciſe themſelves a long while in feigned attacks, till being tired at laſt, they are obliged to ſit down on mats prepared for them.

The next day a prieſt or marabout runs like a madman into all the cottages, in order to drive away the evil ſpirit out of the bodies of theſe children; he threatens him, and at length makes the people believe that he has forced him to come into the body of a chicken, which is tied up in a baſket, and, cruſhing it to death, he tells them the children are delivered from that evil ſpirit. The fathers and mothers preſent themſelves afterwards before the great lord, with as many oxen and as many black chickens as there are children to be circumciſed, and the lord appoints the day on which the ceremony is to be performed.

That day being come, the lord, ſitting at the entry of the hall, receives, on a table covered with paans or carpets, the offerings of the mothers; then he enters into the hall, and ſits down in the middle of it, and the fathers holding their children on a very ſmooth ſtone, the lord cuts off the prepuce; which done, the father immediately cuts the throat of the chicken, makes the blood of it drop on the ground, and gives the child back to the mother; who, dipping cotton into the blood of the ox that has been killed, and into that of the chicken alſo, ties it about the wound of the child.

The following account of their method of thankſgiving after a ſucceſsful war, is extracted from Drury. "The inhabitants (ſays he) have in all their houſes, a ſmall portable utenſil, which is devoted to religious uſes, and is a kind of houſhold altar, which they call the owley. It is made of a peculiar wood, in ſmall pieces neatly joined, and making almoſt the form of a half-moon, with the horns downwards, between which are placed two alligators teeth. This is adorned with various kinds of beads, and ſuch a ſaſh faſtened to it behind as a man ties about his waiſt when he goes to war. However, I obſerved that they brought two forks from the woods, and fixed them in the ground, on which was laid a beam, ſlender at each end, and about ſix feet long, with two or three pegs in it, and upon this they hung the owley. Behind it was a long pole, to which a bullock was faſtened with a cord. They had a pan full of live coals, upon which they threw an aromatic gum, and planted it under the owley. Then they took a ſmall quantity of hair from the tail, chin, and eye-brows of the ox, and put them on the owley. Then my maſter uſed ſome particular geſtures with a large knife in his hand, and made a formal incantation, in which the people joined. In the next place, they threw the ox on the ground, with his legs tied faſt together, and my maſter cut his throat." Thus this ceremony ended; and this is deemed an oblation for having obtained a victory over an enemy.

Theſe people have a great veneration for their forefathers, and have an aſſurance of their ſpirits always exiſting, which appears in almoſt every circumſtance of the few religious acts which they perform. The burial of the dead is very ſingular and ſolemn. As they treat each other in all calamities and misfortunes with great humanity, ſo they frequently viſit the ſick, and contribute all in their power to aſſiſt the afflicted family, and to reſtore thoſe to health who are ill. When a perſon dies, all the relations and neighbours come to the houſe, the women lament, and the men aſſiſt in preparing for the funeral, the manner of which we have already deſcribed.

Each family has a peculiar burying-place, which none dare to break into; it is encloſed with a kind of palliſadoes. No perſon is permitted to enter theſe burying-grounds but ſome of the neareſt relations. They commonly go once a year to theſe burying-places to clear them of weeds, but never enter them till they have burnt a bullock or a cow before the ſepulchre.

Their method of mourning doth not conſiſt in the colour or form of the garment, but in ſhaving their heads; and every man under the juriſdiction of a king, or lord, who does not do this at the death of his prince, is eſteemed diſaffected to the royal family.

Theſe people are extremely ſuperſtitious in their implicit obedience to all the directions of their ombiaſſes, or magicians, who pretend to know the ſecret powers of nature, and how to engage the aſſiſtance of the guardian ſpirits on all occaſions. Nothing of importance can be undertaken without conſulting them; and it appears that ſome of the lords, who are men of ſenſe, keep one of theſe conjurors out of policy, only to amuſe their people, who, they think, ought to be humoured in their bigotry, and captivated by the artifices of theſe impoſtures, in order to render them more tractable and obedient. Theſe ombiaſſes, however, never interfere in the acts of their religion, except in fixing the proper minute of performing them: nor in religious matters is any one offended becauſe his neighbour has ſome ceremonies of his own, and deviates from the forms generally practiſed.

The firſt order of ombiaſſes is uſually compoſed of white Madagaſcrians, who practiſe phyſic, teach the Arabic language, compoſe the ziridzi, or Arabic words, written on ſmall billets, which are uſed as charms; act as ſchoolmaſters, conjurors, wizards, &c. The ſecond order are black ombiaſſes; and theſe, by pretending to geomancy, or the art of divination, upon all occaſions, live with great reputation among the people, and accumulate conſiderable profits to themſelves. There is alſo a claſs of inferior ombiaſſes, which are placed upon the footing of quacks, as not being deemed ſo regular in their profeſſion as the two former orders. Theſe, however, viſit the ſick, not to adminiſter medicines, but to predict the event of the diſorder; their predictions uſually being favourable or unfavourable according to the amount of the fee.

Moſt of their traditions and religious principles have been introduced by the Mahometan Arabs, who were the progenitors of thoſe people called the Madagaſcrian whites; it is therefore no wonder that they ſhould have made ſuch a ſelection of Chriſtian, Jewiſh and Mahometan tenets, and have interlarded them with abſurdities of their own; nor can we be ſurpriſed that they ſhould have attempted to make the Mahometan the prevailing and primitive religion, ſince, where chronology is unknown, any error which dates alone can rectify may be imbibed. However, they are in a great meaſure right in their notions reſpecting Chriſt, as they allow that he was ſent by God; that he was not begotten of man, that he was born of a virgin; that he was God and man; that he was a great prophet, and that he was crucified by the Jews; but then they add, that God, not thinking proper that he ſhould die, ſubſtituted a malefactor in his place, who died inſtead of him. The latter circumſtance might originate from the ſcriptural account of the malefactor who was crucified at the ſame time with Chriſt; but muſt have been adopted from their total ignorance of the end for which the Redeemer of mankind came into the world.

SECT. V.

Of the Hiſtory and Revolutions in the Iſland of MADAGASCAR.

AS the people of this iſland are without public records, or the chronological knowledge of events, conſequently the antient hiſtory of the country cannot be given by us. All that is known is from oral tradition; but the tranſactions thus handed down are too futile and vague, and too much interwoven with fiction, to merit notice. We are indeed told, that the province of Anoſſi, which has been better known to the Europeans than any other part of the iſland, was previous to the arrival of the French, governed by a ſovereign, who was not only honoured as a king, but almoſt revered as a god. His name was Andian Ramach, and on his demiſe devolved to Andian Maroarive, who was a Chriſtian, having been educated at Goa, and baptized by the jeſuits. He however, ſoon turned to paganiſm, and was afterwards, on the attack of the town of Franchere by the French, killed by a muſket-ball.

In the year 1642, captain Rivault, a Frenchman, obtained permiſſion from cardinal Richlieu, for nine years, to ſend ſhips and forces to Madagaſcar, and the neighbouring iſlands, in order to eſtabliſh a colony and plantation, and eſtabliſh an excluſive commerce there. For the ſaid purpoſe, this gentleman erected a ſociety, under the name of a French Eaſt India company, and the grant was drawn out, with the addition of ten years more privilege: ſo that it extended to the year 1661. In the mean time, that is, immediately ſubſequent to the making out of the grant, A. D. 1642, the firſt ſhip was ſent under the command of captain Coquet, who was going to load ebony at Madagaſcar, on the account of himſelf and ſome private merchants; but had orders to take with him two governors, whoſe names were Pronis and Fauquenbourg, and twelve other Frenchmen, theſe being commanded to land and remain there, till the arrival of a ſhip from France, which was in November following.

In September captain Coquet arrived at Madagaſcar, having in his way anchored at the iſland of Bourbon, which

which he took poſſeſſion of in the name of the king of France; touching afterwards at the iſle of St. Mary, he did the ſame; and, ſailing to the bay of Antongil in Madagaſcar, he acted in a ſimilar manner. Pronis and Fauquenbourg were at length landed in the port of St. Lucia, in the province of Manghabei, which is one of the principal places in the iſland.

On the firſt of April in the enſuing year, the expected ſhip from France arrived. It was named the St. Lawrence, and was under the command of captain Giles Reſimont. This officer brought ſeventy men with him, to reinforce Pronis. The inhabitants, jealous that the French would obtain too firm a footing in their country, meditated an oppoſition; but their intentions were prevented, or at leaſt delayed, by the prudent conduct and timely preſents of Pronis. Upon this ſucceſs, Pronis ſent twelve men to penetrate into the province of Matatan, ſix of whom were cut off by the natives, and the reſt compelled to retreat; and ſoon after captain Reſimont's ſon and ſix ſailors were murdered in the province of Vohitſbang. This oppoſition was owing to the ſecret intrigues of the leading men in Anoſſi, who, from their maritime ſituation, did not dare to offend the French themſelves; but upon all occaſions, ſtirred up the people of other provinces to oppoſe and murder them.

Captain Pronis, in 1644, thought proper to remove from St. Lucia to the bay of Tholongare, where he began to fortify himſelf; and having reduced almoſt the whole province of Anoſſi by force of arms, he built fort Dauphin, the ſituation of which was excellent, the harbour commodious and finely ſheltered, and the entrance very convenient for ſhipping of any burden. Behind the fort, he erected ſeveral other buildings, with large incloſures, which produced various ſorts of vegetables and fruits. However, in 1650, the fort, by ſome unforeſeen accident, took fire, and was totally deſtroyed; but was ſoon afterwards rebuilt, and ſtrongly garriſoned; the French being always at variance with the natives, and frequently at war with them.

The celebrated French governor, Flacourt, in the year 1651, at the head of eighty Frenchmen, and a great number of armed negroes, ravaged the country to a conſiderable diſtance from the fort, carrying off great quantities of cattle, and deſtroying all the houſes and huts in his way. This occaſioned the natives to conceive an extraordinary averſion to the French; and what added to their diſlike was, that whenever any priſoners fell into the hands of the French, they looked upon them all in an equal light, and ſold them indiſcriminately to the then Dutch governor of the iſland of Mauritius, not making any diſtinction between deeans or lords, freemen or ſlaves; or ſhewing any greater reſpect to their ladies, when captives, than to women of a lower rank. After theſe tranſactions, the French, finding that the idea of conquering Madagaſcar was chimerical; and the danger and expences of maintaining a colony, and keeping up a fortreſs there, were not recompenced by the profits accruing from the ſettlement, thought proper to abandon the iſland, and all projects relative to the reduction of it.

Mr. Drury, during his captivity in this iſland, has collected ſeveral traditional accounts given by the natives, of the attempts made by the French to ſettle on and ſubdue Madagaſcar, which being extremely curious, we ſhall here preſent to our readers for their entertainment. "This part of the country (ſays he) to which the French have given the name of port Dauphin, is called Antenoſa, in the Madagaſcar language. There came hither, upwards of a century ago, two French ſhips, on what account I cannot learn; however, they came to an anchor cloſe under land, in a very good harbour. The captains, obſerving that there was plenty of cattle, all kinds of proviſions, and a very good ſoil, determined that one of them ſhould ſtay here, and eſtabliſh a ſettlement. Hereupon they caſt lots who ſhould continue on the iſland, and the perſon on whom the lot fell was captain Meſmerrico, who landed with two hundred white men, well armed, and provided with ſtore of ammunition, and other neceſſaries for the building of a fort, which they immediately began.

No ſooner had the natives obſerved their intention, but they uſed their utmoſt art and induſtry to prevent them: this created a war, in which the French were the victors, who took at ſeveral times a great number of priſoners. In this war, the king Antenoſa and his brother were killed; and, amongſt many other children that were made captives, the king's ſon was one. When the French had ſuppreſſed the natives, and completed their fort, the ſhips ſet ſail for France, and carried with them this young prince, and ſeveral other perſons of diſtinction.

The natives, about a year after this expedition, began to be better reconciled to the French, notwithſtanding they were ſecretly diſguſted at the indignity offered to their young prince, and could by no means reliſh the government and direction of foreigners: however, the French, by their artful and cunning deportment and inſinuations, gained ſo much friendſhip among them, that they married, and lived up and down in ſeveral towns, at ſome diſtance from each other; and not above five or ſix in a place. They occaſionally aſſiſted the natives in their wars againſt a king that reſides to the northward, whom they defeated, took a great number of ſlaves, and many cattle. In this manner they lived for ſome years with great tranquillity, neglecting their fort, and extending themſelves all over the whole country of Antenoſa: but at laſt, as their families grew numerous, the natives grew jealous; and recollecting how inhumanly they had treated their prince, and perceiving them thus ſcattered and diſperſed, they thought this a favourable opportunity to free themſelves from a foreign yoke. Hereupon they formed a conſpiracy to cut off all the white men in one day, and the Wedneſday following it was put in execution, not leaving a white man alive in the place.

A French ſhip ſoon after came thither as uſual; when the maurominders, or ſlaves, who retained a reſpect for the French, got a canoe, and went off to them, and informed them that their countrymen were all maſſacred. The captain was ſtartled, and deeply concerned at this melancholy news, but could not revenge their cauſe, being glad to ſteer another courſe, without making the leaſt attempt to go on ſhore; ſo that the natives, having now nobody to interrupt them, put their government into its original form, and made choice of one for their king who was the neareſt related to the former; there being no other ſon but him whom the French took captive.

They lived peaceably under this new king's direction for ſeveral years, no French ſhip ever preſuming to come near them; but now and then an Engliſh ſhip paid them a viſit; and they traded in a fair and honeſt manner with the officers on board. But ſome years after this, a French ſhip, homeward bound from India, happened to be in great diſtreſs for want of water and proviſions, and could not compaſs the cape. Though port Dauphin lay very commodious for the captain, yet he knew that the natives were their implacable enemies, neither was he ignorant of the real occaſion; and therefore reſolved to make uſe of the following ſtratagem. Under pretence of being ſent ambaſſador from the French king, he went on ſhore in great pomp, and with proper attendants. The ſhip lay at anchor as near the ſhore as poſſible, in order to be within reach of their guns, in caſe any acts of hoſtility ſhould be ſhewn them. The natives, who came down to them, aſked if they were Engliſh or French? They replied, the latter; but they were ſent by expreſs orders from the French king, with ſome valuable preſents, and were inclined to make a treaty of peace. The king they had laſt choſen, whom we have mentioned before, died about a month before their arrival, and no new one was then elected in his ſtead; but the old queen (mother of the young prince, whom they had ſo clandeſtinely conveyed away ſome years before) being then alive, gave directions that the ambaſſadors ſhould be conducted to her houſe. His men carried a number of things of no great value with them; but ſuch, however, as they knew would be highly agreeable in this country. Theſe were formally preſented in the name of the French king; and the queen teſtified her ſatisfaction in the reception of them, by entertaining the captain in the moſt elegant manner ſhe could deviſe. This day paſſed in compliments, mutual preſents, and ſuch other ceremonies as were conſiſtent with their ideas of public grandeur.

The next day the queen ſent for the captain, and informed him, that ſhe expected his men, as well as himſelf, ſhould take the oaths, according to the cuſtom of her country. The captain having readily agreed to her propoſition, the ceremony was performed after the following manner: The holy owley (of which we have already given ſome account) was brought out, and hung upon a piece of wood laid croſs-wiſe on two forks, all which were cut down on this ſolemn occaſion; as was alſo a long pole, to which a bullock was faſtened: this was provided by the queen, and when killed, they took part of the tail, and ſome of the hair of the noſe and eyebrows, and put them on ſome live coals under the owley: they then took ſome of the blood, which they ſprinkled upon

upon it, and upon the beam whereon it hung; the liver alſo was roaſted, and a piece placed on it; two other pieces were put on two lances, which were ſtuck in the ground betwixt the queen and the ambaſſador: after which the queen ſwore firſt to this or the like effect; "I ſwear by the great God above, by the four gods of the four quarters of the world, by the ſpirits of my forefathers, and before this holy owley; that neither I, nor any of my offſpring, nor any of my people, who aſſiſt at this ſolemnity, or their iſſue, ſhall or will wittingly or willingly kill any Frenchman, unleſs he firſt proves the aggreſſor: and if we or any of us, mean any other than the plain and honeſt truth by this proteſtation, may this liver, which I now eat, be converted into poiſon, and deſtroy me immediately." Having repeated this form of words, ſhe took the piece of liver off the lance, and eat it; which when ſhe had done, the ſham ambaſſador followed her example.

"After this ſolemn contract was concluded, the captain, or quondam ambaſſador, ſtayed on ſhore about two or three days, and ſent on board what proviſions his people wanted. A firm friendſhip being now eſtabliſhed between them, they ſtrove who ſhould outvie the other in the arts of courteſy and complaiſance. The captain invited the queen to go on board his veſſel, and ſhe very readily went with ſeveral of the chief of her people, who were treated by the captain with great magnificence, and to her intire ſatisfaction.

"When the queen returned on ſhore in the ſhip's boat, ſhe ſtood looking about her for ſome time after ſhe was landed. The Frenchmen, not regarding the preſence of the black queen, ſtripped, and ſwam about to waſh and cool themſelves; her majeſty, obſerving the whiteneſs of their ſkins, indulged her curioſity in looking on them: at laſt, perceiving one man, whoſe ſkin was much darker than the reſt of his companions, as he came towards the ſhore, and was going to put on his cloaths, ſhe eſpied a particular mole under his left breaſt; ſhe went to him immediately, and, looking more wiſhfully on it, would not permit him to put on his ſhirt; but claimed him as her ſon, who had been carried away when a child many years before; and had not patience to reſtrain herſelf, but ran to him, (crying with joy, that ſhe had found her ſon) threw her arms about his neck, and almoſt ſtifled him with kiſſes. This ſurpriſed all the people, as well blacks as whites; till having recovered herſelf a little, ſhe turned to them and told them this was her ſon; and ſhewed them the private mark. They who had known the young prince, drew near, viewed the mole, and acquieſced with her, that it muſt be he, and no other.

"The Frenchmen could not tell what to make of this odd diſcovery, nor what fatal conſequences might poſſibly attend it. The captain, therefore, taking the man aſide, adviſed him to give as artful anſwers as he could to what queſtions they ſhould aſk him, for their ſafety's ſake. Now there were ſeveral blacks who ſpoke French, and by their means the Frenchman as ſoon underſtood the queen as they did. She deſired they would aſk him, If he knew the country he was born in? He anſwered, he could remember nothing of it, for he was carried from his native place when a child. She aſked him, If he knew her? He ſaid, he could not pretend to ſay abſolutely that he did: but he thought ſhe bore a great reſemblance to ſomebody he was much uſed to when young. This confirmed them more and more in their opinion: as to his being white ſkinned, they thought that might eaſily be from his wearing cloaths, during the time he was abſent from home: and his hair was as black as theirs; ſo that it was concluded it muſt be their prince.

"The old queen was tranſported with joy at finding her ſon, and the natives were for chuſing him their king directly, he being the next heir. They aſked what was his name? He told them, he never remembered that he was called by any other name than that of Samuel; but they gave him what they thought was his original name, compounded with Tuley, which denoted his return, or arrival, ſo they called him Deean Tuley-Noro; and he was alſo further ſaluted immediately with the title of panaſker, that is, king of Antenoſia.

"The French captain and his men were ſurpriſed to find the man act his part ſo dexterouſly, not perceiving at firſt that he was in earneſt, and was as fond of being their king, as they were of electing him; though it was ſo heatheniſh a place. He had here twelve thouſand fighting men immediately under his command; and a fine ſpacious and plentiful country. The ſhip's crew ſailed away, and left him behind them; but as often as the French had occaſion for what this iſland afforded, they made it a conſtant practice to put into port Dauphin, and traffic with them.

"About three years before we were caſt away, continue Drury, a French ſhip happening to be there, ſome of th men got drunk; and in a quarrel with ſome of the natives told them, that king Samuel was not their lawful prince but that he was ſtill reſident in France. This might have proved of very fatal conſequence to him, but he took ſuch care to prevent it as no one could juſtly blame him for: he ſent for the man who made this public declaration, and ordered him to be ſhot to death; he commanded likewiſe his companions to depart forthwith, and aſſured them, that if ever they, or any of their countrymen, preſumed to come within his territories again, they ſhould be ſeverely puniſhed.

"It was once expected, ſays Mr. Salmon, that the pirates would have made a ſettlement in this iſland, and uſurped the dominion of it, having ſix or ſeven ſail of ſhips, with which they uſed to infeſt the Indian ſeas, and carry their prizes into a place of ſecurity, on the north-eaſt part of Madagaſcar, where they poſſeſſed themſelves of a harbour of difficult acceſs, and defended from ſtorms by the little iſland of St. Mary's, which lies before it in ſeventeen degrees ſouth latitude.

"The court of England, about the year 1700, ſent a ſquadron of four men of war, commanded by commodore Warren, to drive the pirates from thence; but he, finding it impoſſible to come at them, publiſhed a proclamation, in purſuance of his inſtructions, offering a pardon to all that would come in, except Avery their leader; but not a man came over to him. The commodore afterwards proceeded to fort St. George in the Eaſt Indies, where the writer of theſe papers ſaw him. This gentleman uſed his utmoſt diligence to meet with the pirates in the ſeas of India, but to no purpoſe; and having left one or two of his ſhips on the ſhoals near Malacca, returned with the reſt to England: however, his expedition had this good effect, that the pirates durſt not ſtir out from Madagaſcar; and, finding they were ſo narrowly watched, they agreed to divide what they had got, and diſperſe themſelves. Two of them were afterwards taken by the Dutch at Malacca; and, being ſent to fort St. George, were brought over to England in the Howland, being the ſame ſhip in which the author came home in the year 1701.

We find, however, from more recent accounts, that Avery diſſipated his immenſe wealth, returned to England incognito, lived many years privately and poorly, and at length died in great indigence and miſery at Biddeford in Devonſhire, thus concluding a life of wickedneſs in a death of anguiſh and unavailing remorſe.

Another Engliſh pirate, named Plaintain, ſettled here about the year 1740, and attempted to profit by the diviſions among the petty princes of the iſland, ſometimes taking the part of one, and ſometimes of another, by which conduct he made himſelf reſpectable among the natives, till each individual of his crew affecting the ſtate of nobility, and growing too proud to be commanded, the captain found himſelf intirely deſerted, when, venturing to ſea in an open boat, with only one aſſociate, he landed on the coaſt of Malabar in India, and entered into the ſervice of the celebrated piratical prince Angria, whoſe fleet were deſtroyed in the year 1755 by admiral Watſon, ſix of his forts were levelled with the ground, and his principal fort was afterwards taken by general Clive and the Engliſh fleet in 1756, together with his treaſure; and his family were at the ſame time made priſoners by admiral Watſon, who behaved towards them with the greateſt generoſity and humanity.

We ſhall conclude this ſection with an account of the places where the Europeans have attempted to make ſettlements on the iſland of Madagaſcar; the moſt remarkable of which are the bay of Antongil, the iſland of St. Mary, fort Dauphin, and the bay of St. Auguſtine.

1. The bay of St. Antongil is ſituated on the eaſtern coaſt, in the ſixteenth degree of ſouth latitude; it extends about fourteen leagues due north, and is nine leagues broad at its entrance. In the bottom of the bay is a ſmall iſland, which affords plenty of proviſions, good water, and a ſafe harbour for ſhipping. This bay was once frequented by the Dutch, who had a kind of factory there; conſiſting of fourteen men, for buying of ſlaves and rice; but ſome of them died with ſickneſs, and others were murdered by the inhabitants, whom they treated with inſolence.

2. The iſland of St. Mary, alſo called Noſſi Ibrahim, or the iſle of Abraham, is ſituated to the ſouthward of the bay of Antongil, in the ſeventeenth degree of ſouth latitude, and is four miles long from north to ſouth, but

but its greateſt breadth from eaſt to weſt does not exceed nine miles; the neareſt part is about two leagues diſtant from the coaſt.

This iſland is entirely ſurrounded with rocks, over which canoes may paſs at high water; but at ebb there is not above half a foot depth, and on theſe rocks may be ſeen the fineſt white coral in the world. Ambergris is often found on the eaſtern coaſt of the iſland, and the iſland itſelf affords many ſorts of gums. But we ſhall give a fuller deſcription of this iſland hereafter.

3. Fort Dauphin, which was erected by the French, is ſituated near the ſouth-eaſt point of Madagaſcar, in twenty-four degrees twenty-five minutes ſouth latitude, near the mouth of the river Franchere; but the French finding that the trade there did not anſwer the expence of keeping the colony, quitted it long ſince.

4. St. Auguſtine's Bay is on the weſtern coaſt of Madagaſcar, in twenty-three degrees thirty minutes ſouth latitude, that is, juſt under the tropic of Capricorn. It is formed by the mouth of the river Yong Lahe. The Engliſh formerly traded at this bay, and at other places on the weſtern ſide of the iſland, for ſlaves.

The Europeans who frequented the iſland of Madagaſcar, purchaſed ſcarce any thing there but ſlaves and cattle, which the natives exchanged for guns, gun-powder, beads, cloathing, and hardware; and here the ſhips bound to and from India ſometimes ſtop, in order to furniſh themſelves with water, freſh proviſions, and fruits, for which they give pieces of ſilk, calicoe, and ſome of the above articles, by way of barter.

It is thought the French will again attempt to eſtabliſh themſelves in this iſland, if not prevented by the other maritime powers.

SECT. VII.

Deſcribing the Iſland and Streight of BABELMANDEL, near the Red Sea; alſo the Iſlands of MASUA, MARATA, SWAKEN, and BARBORA.

THE ſtreights of Babelmandel join the Indian ocean to the Red ſea. The name given to them is a corruption of the words babal mandul, which latter ſignifies "the gate of weeping," an epithet given by the Arabs to theſe ſtreights, on account of the danger that attended the navigation of them, which was conceived to be ſo great that when any of their relations paſſed them, they put on mourning, as for perſons whom they had given over for loſt. Nevertheleſs, many, allured by the hope of gain engaged in theſe voyages, notwithſtanding the dangers they were expoſed to.

The Arabian gulf, or Red ſea, which includes the ſtreights of Babelmandel, begins on that part of the ocean, bounded, on the ſide of Africa, by cape Guardafuy, of Old Aromata; and, on the ſide of Aſia, by cape Tartak. The ſhores run weſtward from theſe capes as far as Aden and Zeyla; and proceed from thence, narrowing with deſart coaſts, and with little windings, till they meet with two promontories in the mouth of the Arabic gulf.

The part of the promontory on the Arabian ſide, was antiently called Poſſodium, but the name of that on the European ſide is loſt. The Arabians and Indians called the intermediate ſtreight Albano, which ſignifies the gates or mouths, as it is not above ſix leagues wide, and ſo interſperſed with little iſlands, as ſcarce to admit of ſhipping to paſs through its narrow channels. Theſe ſmall iſlands are full of bays, ports, nooks, creeks, &c. the ebbing and flowing of the waters into and from which greatly impede the navigation here.

The cape on the ſide of Arabia, appears to thoſe at ſea, to be an iſland at a conſiderable diſtance from the main land. The iſland of Robon, or Roboan (ſignifying, in Arabic, a pilot) is not far from the cape. This appellation was given to the iſland, becauſe ſeveral pilots, who underſtood the navigation of theſe ſtreights, reſided here.

The iſland of Robon is very flat, and not two miles in compaſs. The water from here to the promontory is ſo ſhallow, that, when the tide is low, it may eaſily be forded.

Here is another iſland about a league farther: it is ſomething bigger than Robon's iſland; but, though it has a very good haven, is unfrequented.

It muſt naturally be ſuppoſed, that, by means of ſo many iſlands, ſeveral channels are made; yet as there is eleven fathom depth quite through, and neither flat ſhoals, nor any other obſtruction, the principal of them may be paſſed in the midſt, ſteering north-weſt by weſt, or ſouth-eaſt by eaſt.

Though the other channels are not quite ſo wide as the above, they may be as eaſily navigated; and as the Arabians do not appear at preſent to be afraid of ſailing on theſe ſtreights, we may ſuppoſe they are either more ſkilful in maritime affairs, or leſs fearful than they formerly were, when they named them.

The iſland of Bab or Babelmandel, is ſituated towards the entrance into the Red ſea, and forms one ſide of the ſtreights of Babelmandel, lying in twelve degrees fifty minutes north latitude, and is about five miles in circumference. It was formerly called the iſland of Diodorus, but now the Port of Afflictions. This iſland ſtands in the very middle of the ſtreights, about four miles from the Arabian, and the ſame diſtance from the Abyſſinian coaſt, directly oppoſite to cape Zeila. Hence it forms two fine channels, one on each ſide of it, and from its ſituation might, if properly fortified, command both. Antient hiſtorians affirm, that the kings of Egypt fortified theſe channels, by laying booms or chains acroſs both, from the iſland to the continent on each ſide. This iſland is important on no other account than its admirable ſituation, as neither grain, roots, herbage, or fruits, are produced in it. However the Arabs of the kingdom of Adel and the Abyſſinians formerly contended with great fury for the poſſeſſion of it, and became maſters of it alternately, till the Portugueſe took it, and demoliſhed the fortifications. Since the Turks have poſſeſſed themſelves of both ſhores, the iſland is in a manner deſerted, being a ſandy, barren ſoil, with a few poor inhabitants, and affording ſcarce any ſuſtenance for man or beaſt.

The famous Don Juan de Caſtro, one of the commanders in the fleet of the Portugueſe, (and not Don Stefano de Gama) has given us the beſt account extant of the other iſlands in the ſtreights of Babelmandel, the navigation of theſe ſtreights, and of the Red ſea, with the entrance into the latter, which we ſhall here, for the entertainment of our readers, extract from the journals of his voyage from Goa to Suez.

De Caſtro, in paſſing the ſtreights, made an obſervation at noon, and found the mouth of them to be in twelve degrees fifteen minutes north latitude, and two hours after midnight the Portugueſe ſet ſail for the mouth of the ſtreights. In the morning they ſaw both coaſts, being nearer the Abeſhim, between which and the firſt iſland they ſailed north-weſt by weſt, the wind blowing hard at eaſt till noon. This coaſt was quite new to the Portugueſe; their diſtance from land was about four leagues. An hour after ſun riſe they ſaw a range of iſlands, moſt of them very low, which extended north-weſt and ſouth-eaſt; as the coaſt did along which they lay, for about ſixty leagues. They ſailed with a fair wind in this channel of Abeſhim, having iſlands on both ſides all the way.

Ships cannot ſail here by night, or without the wind in the poop; for if it happens to change it is impoſſible to tack about or come to an anchor, till the ſhip arrives at the firſt iſlands, which are nine little ones. After having paſſed theſe, the ſea becomes more open and free, but, towards the ſhore, there are ſeveral iſlands and rocks, which render the navigation dangerous if a veſſel keeps too near the coaſt; and De Caſtro thinks that none ſhould attempt the navigation of the ſtreights of Babelmandel, or the Red ſea, without a pilot belonging to the country. A little farther are ſeven ſmall iſlands, called the Seven Siſters, between which and the ſhore are ſome very dangerous rocks. After having paſſed theſe, they arrrived at the iſland of Sorbo, and anchored in nine fathom and a half water in a harbour of the ſame name.

The iſland of Sorbo, according to this journaliſt, is in fifteen degrees ſeven minutes north latitude. It is near twenty miles in circumference, and belongs to a great archipelago of iſlands, about four leagues from the Abyſſinian coaſt, and twenty-four ſhort of Maſua. The Portugueſe roved about this iſland, and perceived it was low and full of trees, but the trees were all ſhort, or of the ſhrub kind; the plains were verdant, and they diſcovered the tracks of men and beaſts in ſeveral places, though they did not happen to meet with either, a camel excepted, on which account they called it Camel iſland. After all their reſearches, they did not find any water, except in one well digged in a ſtone, and made principally for the reception of rain, as they conjectured.

After leaving Sorbo, they ſailed among many iſlands, moſt of which were very low, and almoſt even with the ſea. In their paſſage, they kept about a league to the right of them; and in the evening ſaw alſo to the right, about

four leagues diſtant, a very long range of iſlands, extending near five leagues in length, north-weſt and ſouth-eaſt, as near as could be judged. The depth of water was continually twenty-five fathom, in an oozy bottom; and the coaſts here ſtretched north-weſt by weſt, and ſouth-eaſt by eaſt.

After this, they entered the channel between the point of Dahlak and Shamoa; the iſland of Shamoa being the firſt they made of five very flat iſlands, which are ſituated between the ſaid point and the main land. It is two leagues in compaſs, and contains a few ſprings and wells. There are ſeveral other ſmall iſlands near this latter, the names of which are unknown, and the places where they are ſituated are too inconſiderable to deſerve particular attention.

The iſland of Dahlak is ſituated near the coaſt of Habaſh or Abex, being about twenty leagues eaſtward from the continent, and about the ſame diſtance ſouth of Maſua. This iſland is near ninety miles in circumference, and is the largeſt and moſt conſiderable on the coaſt. The air is temperate and ſalubrious; the land well-watered and verdant, and the people numerous and robuſt. Great numbers of camels, oxen, goats, &c. feed in the paſtures; the ſea and rivers yield plenty of fiſh, and the inhabitants are profuſely ſupplied with honey, corn, &c. from the continent.

The pearl fiſhery here, at which many of the natives are very dextrous, conſtitutes the chief wealth of the place; and the pearls found here are ſome of the fineſt in the univerſe. Beſides pearls, this iſland produces many emeralds. We ſhall here, for the information of thoſe not verſed in natural hiſtory, give a deſcription of both theſe.

The pearl is by ſome ranked a gem, yet is not properly ſo, being a hard white and beautiful ſubſtance, having uſually a ſhining roundiſh body, found in a ſhell fiſh reſembling an oyſter. They have been highly valued in all ages, nevertheleſs proceed only from a diſtemper in the creature that produces them, being analogous to the bezoars, and other ſtony concretions in ſeveral kinds of animals. And what the antients imagined to be a drop of dew concreted into a pearl in the body of the pearl fiſh (which they ſuppoſed roſe from the bottom to the ſurface of the water to receive it) is nothing more than the matter deſtined to form and enlarge the ſhell, burſting from the veſſels deſigned to carry it to the parts of the ſhell it ſhould have formed, by which means theſe little concretions are produced.

The emerald, is the moſt beautiful of all the claſſes of coloured gems, when perfect. It is ſometimes found in the roundiſh or pebble form; ſometimes in the columnar or cryſtalline form: but the pebble emeralds are moſt valued. Theſe are found looſe in the earth of mountains, and in the beds of rivers they are, in their natural ſtate, bright and tranſparent, though leſs gloſſy than the columnar ones. Emeralds have the green colour in all its different ſhades, from very dark to extremely pale, and are ſometimes intirely colourleſs; when it is called white ſapphire by the Engliſh jewellers.

Such of the inhabitants of Dahlak, as do not employ their time in fiſhing, are, in general, notorious pirates, and plunder all the ſhips that come in their way. They behave with aſperity to all, but particularly to the Turks, when any of them are ſo unfortunate as to fall into their hands; and when they get home, they take a peculiar pleaſure in boaſting of their piratical exploits to their wives, children, and relations.

This iſland, with many others contiguous to it, are under the dominion of the king of Dahlak; and his ſubjects conſiſt chiefly of Abyſſinian Chriſtians, or Chriſtians of the Abyſſinian church. Indeed ſome few Mahometans, of the ſect of Hali, reſide in his dominions; but theſe are very much oppreſſed by the king, and cordially hated by their Chriſtian fellow ſubjects. The people of Dahlak, who appear to be of the Ethiopic race, are black and ill-favoured; but ſtrong, robuſt, bold, daring, and loyal to their ſovereign. They are extremely ſagacious and crafty, fond of repeating and hearing entertaining tales, are very pleaſant companions, and admirably ſkilled in ſtory-telling.

The dreſs of theſe iſlanders is a large piece of ſilk or cotton (according to the reſpective ranks of the wearers) tied round the middle, and hanging down to the feet; but from the middle upwards, both ſexes go naked. Their deportment is extremely courteous to each other, but they are very uncivil and cruel to ſtrangers. They ſpeak the Arabic language, intermixed with ſome Ethiopic words.

They manufacture the goat's hair, which is here very fine and long, into tolerable camblets. The ſoil in general of this iſland is red; and though it does not produce much timber, yet it yields abundance of herbs. Here is a ſmall inſect reſembling a bee, which feeds on a kind of gum, that diſtils from a tree which hath ſome ſimilitude to a cherry-tree; and from this inſect, it is ſaid, they extract that gum-lac, uſed in varniſhing, making ſealing-wax, &c.

The iſland of Maſua is only half a mile in length, and ſomewhat leſs in breadth. It is very flat, and lies very near the main land; that is, on the north-weſt ſide. It has a good harbour, ſecure in all weathers, the depth of the water being about eight or nine fathom, and the ground oozy. The entrance of this port is on the north-eaſt ſide, towards the middle of the channel; for from the north-eaſt point of the iſland there runs a ſhoal towards another point, ſo that ſhips muſt take care to keep the middle of the channel, which runs north-eaſt and ſouth-weſt, is very ſtrait, and conſequently dangerous.

With reſpect to the people here, they reſemble thoſe of Dahlak in cuſtoms, manners, vices, &c. and have likewiſe ſimilar virtues. The men are alſo of two claſſes, thoſe who follow traffic, or the pearl fiſhery, and thoſe who live by piracy; yet both claſſes are looked upon in a light equally favourable, as piracy is not deemed criminal, or even diſhonourable here. Whatever profits accrue from either trading are, by the men in general, applied to the purpoſes of gallantry, and the facilitating their amours; for the people here are very great votaries of Venus, and Cupid ſeems to reign with unbounded power; the men being as expert in intriguing, and the women as faithful in the arts of coquetry, as if they had been educated in much politer nations. As the people of Maſua are extremely warm in their paſſions, both from their manner of living, and the natural heat of the climate; ſo their ſanguine conſtitutions, and the heat of their imaginations, often occaſion them to commit very raſh actions, and their amours are frequently attended with a fatal cataſtrophe.

This iſland, with all the oppoſite coaſt, was formerly ſubject to the emperor of Abyſſinia; but within the laſt century it was ſeized by the king of Dahlak, who reſides chiefly here, for the conveniency of carrying on a trade with the continent; from whence great quantities of gold and ivory are brought to him.

During the months of May and June, the air is exceedingly unhealthy, for want of wind; ſo that the king and principal inhabitants, during theſe months, retire to Dahlak.

Two other iſlands lie very near this, to the ſouth and ſouth-weſt: the largeſt is next the land; the other, lying towards the ſouth-weſt, is very round. There are many ſhoals between this iſland and Maſua; but gallies and row-veſſels may paſs at full ſea in a channel that runs through the midſt of them.

Theſe people value themſelves upon a tradition which they have among them, that the queen of Sheba croſſed from the continent hither, and took ſhipping in their port, in order to viſit king Solomon, to whom ſhe carried immenſe riches.

There are ſome cluſters of ſmall inconſiderable iſlands between this and Marate, whoſe names are not known, and whoſe importance is ſo trifling, that geographers and navigators have not deemed them worth deſcribing.

The iſland of Marate is low and barren, of a roundiſh ſhape, about three leagues from the continent, and ſixty-ſix from Maſua; but it does not exceed five miles in circuit.

Here is a very good haven on the ſouth-weſt ſide facing the coaſt, ſecure from all winds, eſpecially the eaſtern, made by two very long points which extend north by weſt, and ſouth by eaſt, incloſing a ſpacious harbour. narrow at the mouth, where there lies a long, very flat iſland, with ſome ſand-banks and ſhoals; ſo that no ſea can get in. This port hath two entrances, both very near the points. The channel on the eaſt ſide lies north by weſt. The depth is three fathoms in the ſhalloweſt place, and increaſes advancing in the port; it is four or five fathoms near the ſhore, and is rather muddy at the bottom.

With reſpect to cuſtoms, manners, dreſs, &c. the people who inhabit this iſland differ in nothing from thoſe who reſide in Maſua, Dahlak, &c.

The iſland of Swaken is ſituated nineteen degrees forty-five minutes north latitude, and thirty-ſeven degrees thirty minutes eaſt longitude, and the port is deemed one of the beſt in the Red Sea. The entrance is by a narrow ſtreight, which leads to a lake; in the midſt of which is an iſland, and a town

town that covers every part of the iſland. De Caſtro, in his account of De Gama's voyage, informs us, that this town was once very important, and extremely opulent. At the time he was there, which was about the year 1540, he thus writes concerning it: "Swaken is at preſent one of the richeſt cities in the eaſt, ſtanding near the coaſt of Abyſſinia. It equals, if not exceeds, the moſt eminent places in the goodneſs and ſecurity of its harbour, facility in lading and unlading of ſhips, traffic with remote countries, ſtrength and advantageous ſituation of the town, &c. The harbour is ſheltered by nature from all winds; and the waters are ſo ſmooth and ſtill, that the tides are ſcarce perceptible. It is capable of containing two hundred large ſhips, beſides a prodigious number of gallies. The road is from five to twelve fathoms water in depth, and hath a mud bottom, which is ſeen in all places not exceeding ſeven fathoms water. The ſhips come up cloſe to the ſhore, quite round the city; and may be laden by laying a plank from them to the warehouſes of the merchants."

The ſame writer ſays, that, with reſpect to commerce, he knew no city, except Liſbon, which could compare to it, for at that time it traded to both the peninſulas of India, the Arabian and Perſian gulphs, Grand Cairo, Conſtantinople, Alexandria, Ethiopia, and other countries. For ſtrength, the city ſeemed naturally well ſecured by the many ſhoals, iſlands, rocks, ſand-banks, and intricate channels that lie from ſixteen leagues about it, which renders the approach by ſea very dangerous, and even terrible to navigators; yet the inhabitants had not taken the leſs care to defend it by art. "This city, he adds, thus ſituated, in the midſt of a circular rock, ſtands in a flat iſland almoſt perfectly round, and level with the water, about a mile in compaſs. In this ſpace there is not a foot of ground but what is taken up with houſes; ſo that all the iſland is a city, and all the city an iſland." Such was the importance and opulence of Swaken between two and three centuries ago, at which period it was under the dominion of a Caffrian prince.

After the time above-mentioned, this place has fallen into the hands of the Turks, and like moſt other places which theſe haughty, tyrannical, and indolent people have become poſſeſſed of, hath ever ſince dwindled away to little or nothing, loſt its commerce and conſequence, grown poor and thin of inhabitants, ſo that at preſent it makes but a very mean appearance, Such are the fatal effects of idleneſs, an arbitrary government, joined with ſuperſtition and ignorance!

Three other iſlands lie on the north-weſt ſide of Swaken, two of which are very ſmall, but the third, next the channel, is about as large as the city.

Between this iſland, and the coaſt on the north ſide, runs a great and long channel, where a numerous fleet may ride in ſeven fathoms water with ſafety.

The decayed city of Swaken is now the ſeat of a Turkiſh governor, who acts ſubordinate to the baſha of Grand Caira; and the modern inhabitants are principally Turks or Arabs. The houſes now remaining here, and in the other little iſlands, are all erected with ſtone and mortar, and built in the European manner. The beſt buildings in Swaken are the baths; and the moſt pleaſing amuſement which both the Turks and Arabs take, is that of bathing. Indeed the ſultry weather here ſeems to require frequent ablutions, both for health and pleaſure; and Mahomet appears to have entertained the ſame opinion of the Turkiſh dominions in general, by his having made purifications, by frequent waſhings and bathings, a duty daily incumbent on every one of his followers, and a fundamental point of the Mahometan religion.

It may not be improper to give a particular account of theſe baths, and the manner in which the perſons are treated by the attendants appointed to wait upon the perſons who frequent them: we muſt firſt of all remark, that the men never bathe with the women; and indeed there is ſo much modeſty obſerved, that any one would be reproved who ſhould happen to ſee them through inadvertency, and, if he did it by deſign, would be baſtinadoed. Some baths are for the uſe of the men in the morning, and for the women in the afternoon; others are frequented one day in the week by one ſex, and the next by the other. People are very well attended in theſe baths for three or four aſpers.

The firſt entrance is into a fine hall, in the middle of which the principal fountain appears. All round the hall is a ſmall bench, about three feet high, covered with a mat. The men ſit upon it to ſmoak, and pull off their cloaths, which are folded up in a towel. The air in this firſt hall is ſo hot, that nothing can be born upon the body, but an apron about the waiſt, to cover before and behind. In this condition a man paſſes into a ſmall hall which is ſtill warmer, and from thence into a larger, where the heat is more ſenſible. All theſe halls are generally cloſed above with ſmall domes, which let in light at the top through a round glaſs, like thoſe our gardeners put over their melons. In the laſt hall there are marble baſons with two cocks, one of hot water, and the other of cold, which every one mixes according to his own fancy, and pours upon his body with little buckets of braſs belonging to the place. The pavement of this chamber is heated by furnaces beneath, and every one walks there as long as he thinks proper.

When a man deſires to be ſcoured, a ſervant of the bath cauſes him at once to lie along upon his back, and, ſetting his knees upon his belly, preſſes and ſqueezes him violently, making every bone crack. They handle after the ſame manner the joints of the back and the ſhoulder-blades. If he would be ſhaved, the ſervant ſhaves him, or gives him a razor to ſhave himſelf. When the perſon enters the great hall, another ſervant preſſes his fleſh all over with his hands ſo dexterouſly, that having, as it were kneaded him, without doing him any harm, he forces out a ſurpriſing quantity of ſweat. The little camblet bags they make uſe of here, are inſtead of the ſtrigles of the antients, and are much more convenient. To clean the ſkin the better, they pour a great deal of hot water upon the body, and alſo uſe perfumed ſoap. They wipe the ſkin with linen very clean, dry, and warm; and the ceremony concludes with the feet, which the ſame man waſhes very carefully when the perſon returns to the hall, in which they ſmoak, drink coffee, and have collations; for after this exerciſe a man finds himſelf very hungry.

By cleanſing the glands, the bath certainly facilitates perſpiration, and conſequently the circulation of the juices, which ſupply the blood. A man perceives himſelf very light when he has been well purified; but he muſt be accuſtomed to the bath from his youth, for otherwiſe the breaſt is very much affected by theſe warm rooms.

The women are very happy when they are permitted to go to the public baths; but moſt of them (eſpecially ſuch whoſe huſbands are rich enough to build them baths at home) have not this liberty. In the public baths they entertain one another without any reſtraint, and paſs their time more agreeably than in their own apartments. The men who have any complaiſance for their wives do not refuſe them theſe innocent diverſions; for they would ſometimes ſeek reaſons for a divorce, were they under too much conſtraint.

The iſland of Barbora lies in ten degrees forty-five minutes north latitude, and forty-ſeven degrees two minutes eaſt longitude; it derives its appellation from a town of the ſame name adjacent to it.

The natives of this iſland are negroes; and the common people wear cotton garments, which go round their waiſts, and hang down to their feet, the reſt of the body being bare; but thoſe of a ſuperior quality have the addition of a long cotton gown, which covers them all over, except their faces.

The ſoil of the iſland affording excellent paſture, the people great feeders of cattle; they are alſo very induſtrious traders, and carry on a conſiderable traffic, by exchanging cattle, gold, frankincenſe, ivory, pepper, &c. for clothes, amber, necklaces, glaſs beads, raiſins, dates, and other articles.

The inhabitants of Barbora exchange away either the produce of their own iſland, or what they procure from the neighbouring continent; for their labour is looking after cattle, as many of them officiate in the capacity of ſhepherds and graziers to the people of the kingdom of Adel, on the oppoſite continent.

Thoſe who here tend the herds and flocks, are ſome of the happieſt and moſt inoffenſive people in the univerſe: indeed their felicity hath been ſo much the admiration and envy of others, that many capital men from Adel, and the adjacent kingdoms, and ſeveral rich Arabian merchants, have thought proper to retire hither from the adulation of courts, the dangers of war, the hazards of commercial voyages, and the painful buſtle of trade, in order to taſte in rural retirement, thoſe delicious pleaſures which honours and riches could not procure them.

The Turkiſh, Mooriſh, Arabian, Egyptian, &c. merchants, bring their commodities hither. Their traffic, however, is much decayed ſince the Europeans have formed ſuch powerful connections in the Eaſt Indies, as the merchants above alluded to naturally repair to the beſt mart,

mart, and ſeek the moſt profitable mode of vending their commodities, or traffcking with the natives.

Theſe people are admired by all who have traded in thoſe ſeas, for their univerſal philanthropy; and are peculiar for their ſingular benevolence to each other, and their very humane treatment to domeſtic and other animals. Happy would it be for mankind in general, if ſuch virtues were more general; and that they who eſteem themſelves politer people, and boaſt of a more refined education, would copy the ſhining parts of all characters, how different ſoever from them in political or religious ſentiments, or remote with reſpect to the locality of ſituation.

SECT. VIII.

Of the Iſland of ZOCATRA, ZOCOTORA, or SOCOTORA, its Situation, Boundaries, Climate, Productions; alſo an Account of the Inhabitants, their Diſpoſition, Dreſs, Cuſtoms, Laws, Puniſhments, &c.

THIS iſland was firſt diſcovered about the year 1560, by one Ferdinand Pereira, a Portugueſe. It is ſituated about ſeventy-five miles to the north-eaſt of cape Gaurdufuy, in twelve degrees ten minutes north latitude. It is bounded on the ſouth, by the continent of Arabia, from whence it is diſtant about fifty miles; and, on the north-eaſt, by the kingdom of Melinda. It is of very conſiderable extent, being not leſs than eighty miles in length, ſixty in breadth, and one hundred and fifty in circumference. There are ſeveral good harbours on the ſhore; beſides which, there are two excellent bays, where the ſhipping ride with the greateſt ſafety. The ground in the bays is ſand, and in ſome places ſtony; but not ſo as to injure the cables.

The tides here are contrary to thoſe of India: for when the moon appeareth on the horizon, it is high-tide, which thence begins to ebb; and by the time it cometh to the meridian, it begins to flow again in the ſame order as it ſets at Goa; and it is full ſea when ſet.

The weather here is exceeding ſultry, owing to the ſhort continuance of rains, which ſeldom laſt more than two or three weeks in the ſeaſon. This defect in the climate is, however, happily remedied by heavy dews, occaſioned by the lofty mountains, whoſe tops are generally covered with ſnow, ſo high as to condenſe the clouds, and afterwards diſſolve them in a kind of thick miſt or fog.

In ſome parts of the iſland are rivers, which riſe from ſprings, and are never affected even by the drieſt ſeaſons; but other parts of it, except in the rainy ſeaſon, are totally deſtitute of water.

The inhabitants of this iſland, which is exceeding populous, are under the government of a prince or ſultan, who was once ſubject to the ſhariffs of Arabia; but is now tributary to the Turks.

This country abounds in cattle and fruit, with which, and ſome other commodities, the natives trade to Goa, where they are better received than the Arabs, who are not permitted to enter that town without paſſports. The other productions of the iſland are, aloes, frankincenſe, dragon's blood, rice, dates, ambergris, and coral. We ſhall take an opportunity of deſcribing the two laſt articles, as they have not been hitherto particularly noticed.

The former of theſe, namely ambergris, is generally of an aſh-colour, or grey, and is a fat, ſolid ſubſtance, like ſuet, but light. It is variegated like marble, and is ſometimes ſpeckled with white; it ſprings from the bowels of the earth, is condenſed in the ſea, and is found floating on the water, though ſometimes it is met with on the ſea-ſhore, where it has been thrown by the waves. It is ſometimes black as well as grey; but the grey is accounted the beſt.

There is little room to doubt that this is a ſort of bitumen, which proceeds from the earth near the bottom of the ſea; for it ſometimes contains ſtones, ſhells, the bones of animals, and the bills and claws of birds, as well as honey-combs, from which the honey has not been all loſt. Hence it appears, that this bitumen muſt have been firſt in a liquid ſtate; lumps of 200lb. weight have ſometimes been found.

When put into the fire, ambergris will melt into a ſort of gold-coloured reſin, which will kindle and burn when held to a candle. It will not diſſolve entirely in ſpirits of wine, but leaves a black, pitchy matter behind it. The ſolution, after ſome time, will leave a white cloudy ſediment, which will coagulate by little and little, and grow thick, eſpecially by the incorporation of the finer parts of the ſpirits of wine. When this is dry, it becomes a ſhining ſort of earth, not much unlike ſpermaceti. It conſiſts of oily greyiſh particles, which are very fine and volatile, with others that are thicker, ſaline, and bituminous.

Ambergris is of great uſe among perfumers; and is recommended by phyſicians for raiſing languiſhing ſpirits, and increaſing their motion; whence it is given for diſorders of the brain and heart, as well as in fainting fits. The doſe is from one grain to eight in wine or a poached egg, and, in ſubſtance, a pill of the ſize of a ſmall pea.

Coral conſiſts of various kinds; ſome of which reſemble ſmall trees without leaves; others are in the form of a net, ſometimes with large meſhes, and ſometimes with ſmall. The inſide of the branches ſeems to be of the nature of horn, for it has the ſame ſmell when put into the fire; but the bark is of a ſtony nature, and contains a great deal of ſalt.

Coral, properly ſo called, is of a ſtony nature, and is placed in the animal kingdom, becauſe it produces ſea-inſects. Some of theſe are red, and others white, and others of various colours; however, the red, of the colour of vermillion, is beſt, and is by ſome ſaid to be of the male kind, and that which is paliſh of the female. The white coral is the next in value; and next to that, the black; but ſome will not allow thoſe of the other colours to be corals, though they are found in the ſame places. It is always covered with bark, and is ſtony, ſolid, and very hard, even in the water; though the branches are a little flexible, but ſoon grow hard in the air. The bark of coral is a mixture of tartar and a fluid of a glutinous nature; and though it is a little rough, it takes a very fine poliſh.

Some perſons take the black coral to be a ſea-plant of a different nature. Red coral is not ſo much eſteemed in Europe as it is in Aſia, and particularly in Arabia. It is uſed for making ſeveral ſorts of toys, ſuch as ſpoons, heads of canes, knife-handles, ſword-hilts, and beads; and, when tipped with ſilver, it ſerves as a plaything for children, and is deſigned to rub the gums therewith, to facilitate the cutting their teeth.

There are found on the young branches of coral, ſevery ſmall eminences, in the form of ſtars, and full of a milky fluid when they are juſt taken out of the water. Many learned men have thought ſea-plants to be nothing but petrifactions, conſiſting of plates of ſalt and layers of tartar, placed one upon another; and as coral always grows with its head downwards, in caverns of rocks in the ſea, the ſituation has cauſed them to ſuſpect that they were nothing elſe but petrifactions, likethoſe found in the roofs of certain caves in the rocks. But ſince the diſcovery of the flowers of coral, and ſome other marine productions, it is not at all doubted but they have a regular organization; and if their ſeeds have not been perceived, it is becauſe their ſmallneſs renders them indiſcernible to the eye.

The generation of theſe plants have been thought by ſome to be not owing to theſe ſeeds; becauſe as they always hang with their heads downwards, they would fall off to the bottom of the caverns, and not place themſelves on the top; but this difficulty may be removed, by ſuppoſing they are lighter than the ſea-water, and that the milk which ſurrounds them is of ſo thick a nature, that it may help to aſſiſt them in ſwimming. Hence indeed it may happen that many of theſe may riſe to the top of the water, and there periſh; but then likewiſe others may aſcend to the top of the caverns, and there fix themſelves, and then they will grow like coral, from which they proceed. Hence we may conclude, from the regularity of theſe productions, the organization of their parts, the great number of ſmall pores in their bark to receive their bitumen, and other ſea-juices, the eminences regularly hollowed in the form of ſtars, which ſerves for the rows of flowers in the ſame ſhape, the veſſels full of a milky fluid which is found between the bark and the body of the plant, to make it grow thicker by little and little, and the perpetual uniformity of the ſame circumſtances; from all theſe particulars we have reaſon to believe, that the bottom of the ſea is covered with plants that have characteriſtics different from theſe we are acquainted with.

The faculty make choice of the red coral only for medicinal uſes; and many authors have aſcribed great virtues thereto, which are in a great meaſure imaginary; however, it cannot be denied that it is a good abſorbent, and is therefore proper to reſtrain the organiſm of the blood,

and to blunt the acrimony of the bile and other humours in various ſorts of fluxes, as well as for pains in the bowels of children. From a ſcruple to a drachm is the doſe, according to the nature of the caſe.

Theſe articles are purchaſed by the inhabitants of Goa, who export them from thence to many parts of the Indies, and to moſt of the kingdoms of Europe: whence ariſe great profits to the traders, and advantage to the inhabitants, who are luxuriouſly ſupplied with all the neceſſaries of life, in exchange for their commodities. Formerly they had a more immediate intercourſe with Europe, by means of the Eaſt India ſhips; which frequently ſtopped here, when diſappointed of their paſſage, either by being too early or too late for the monſoons; but this port has been almoſt entirely neglected ſince the ſtated periods of thoſe winds are ſo well aſcertained.

In this iſland are great numbers of Arabs, beſides the natives: the former of whom call the latter by the name of Bedouins, or ſtupid brutes. Theſe laſt are divided into two ſorts, namely, the natives of the coaſt, who intermarry with the Arabs, and are called half Bedouins, and thoſe of the interior parts, who rigorouſly adhere to their own cuſtoms, and reckon it a heinous crime to mingle blood with foreigners. The laſt are the true Bedouins, or original inhabitants of the country. They are much fairer than the Indians, and are in general tall and very proportionably made; but in their diſpoſitions they are deceitful, indolent, and great cowards, ſuffering themſelves to be enſlaved in a manner by a handful of Arabs, and attending to nothing beſides huſbandry and paſture, both which are chiefly carried on by the women. Their food conſiſts of milk, butter, rice, dates, and the fleſh of their cattle; water is their common drink.

With reſpect to the other inhabitants of the iſland, though they ſeem to make uſe of all the benefits of their ſituation, yet they want at the ſame time the perſonal advantages of the Bedouins; for they are of a low ſtature, diſagreeable complexion, lean habit, and have hideous features; but they are very hardy, and are prodigious ſtrong and active. They feed on fiſh, fleſh, milk, butter, and vegetables: their uſual diſh, is a compoſition of all theſe boiled together; and they generally eat bread, dates, or rice with it.

There are different kinds of dreſs worn in this iſland, according to the ſeveral parts of it. The native Bedouins go almoſt naked, having nothing more than a ſmall piece of cloth faſtened round the waiſt, and a cap made of goats ſkin. The women go bare-headed, and have a ſhort gown, or cloak, with a ſhift made of goats hair. But the moſt general dreſs of theſe iſlanders conſiſts of a long cloak, which reaches from the waiſt to the ancles; it hangs down in a train behind, and is not unbecoming, though extremely incommodious, on account of the heat of the climate: they gather it up, and faſten it round the waiſt with a girdle, when they are at work.

Theſe people are entirely ignorant of arts, inſomuch that, were it not for the Arabs, they would be deſtitute of almoſt every convenience of life. They are, if poſſible, ſtill more ignorant of the liberal arts; and ſo little deſirous are they even to acquire the knowledge of reading and writing, that they think they have ſufficient learning, if they are able to reckon their cattle by making notches in a piece of wood. Their chief ingenuity is diſplayed in the cambline manufacture, which is a beautiful ſtuff, made with the hair of goats, and other animals. But they have ſeveral very ſtrange and uncommon cuſtoms, which we ſhall here particularize.

The Zocotrans practiſe polygamy, and divorce their wives at pleaſure, either for a certain time, or for ever. They may even be the father of children, without being obliged to maintain either them or the mother, provided the latter, during her pregnancy, conſents that the father ſhall give away the child, when it ſees the light. On theſe occaſions, the father kindles a fire before the door of his hut or cave, and then makes proclamation, that the will give away the infant of which his wife is on the point of being delivered. After this, he fixes on ſome particular perſon for its adopted father, to whom the infant is carried immediately after its birth. Here it meets with all that tenderneſs, kindneſs, and thoſe careſſes which are denied it by the unnatural father, is given to a nurſe, and ordered to be fed with goats milk. Theſe children are called the ſons or daughters of ſmoak; and it frequently happens that a good-natured man, who is himſelf incapable of getting one, ſhall have the honour of rearing a dozen children, upon whom he beſtows all the affection of a real parent. This is certainly one of the moſt extraordinary and unnatural cuſtoms to be met with in hiſtory, as it does not ſeem to be founded on the principle of religion, policy, or inclination, but upon mere caprice; for it is common with a father, who expoſes his own, to adopt the children of others, and requite the good offices due to the former, by his kindneſs to the latter.

Another cuſtom among them, no leſs ſtrange and ſingular than the above, is, that they generally bury their ſick before they have breathed their laſt, making no diſtinction between a dying, and a dead perſon. They eſteem it a duty to put the patient as ſoon as poſſible out of pain; and make this their requeſt to their friends, when they are on the ſick bed, which, in all acute diſorders, may be called the death bed. When the father of a family finds himſelf thus circumſtanced, and has no reaſon to believe that his diſſolution is approaching, he aſſembles his children around him, whether natural or adopted, his parents, wives, ſervants, and all his acquaintances, whom he ſtrongly exhorts to a compliance with the following articles of his laſt will: "Never to admit any alteration in the doctrine or cuſtoms of their anceſtors; never to intermarry with foreigners; never to permit an affront done to them or their predeceſſors, or a beaſt ſtole from either of them, to go unpuniſhed; and laſtly, never to ſuffer a friend to lie in pain, when they can relieve him by death."

They commonly perform the laſt requeſt of the dying man by means of a white liquor of a ſtrong poiſonous quality, which oozes from a tree peculiar to this iſland. Hence it is that legal murders are more common here than in any other country in the world; for, beſides the inhuman cuſtom laſt-mentioned, the other requeſts of dying men produce numberleſs quarrels, and, by taking revenge of the injuries done to their anceſtors, entail family feuds and bloodſhed upon their poſterity for a long ſeries of years.

Juſtice is adminiſtered in Zocotora by the chief magiſtrates, who are next in rank to the ſultan: they are called hodamos, and ſit at certain times to judge and determine in all cauſes political and eccleſiaſtical, civil or criminal. There is no appeal from this tribunal, nor can the ſucceſſors reverſe any decree paſſed before their coming into office, which they hold only for one year, and during this time they preſerve the moſt diſtinguiſhed power and dignity.

The puniſhment for murder here is death, which is inflicted either but cutting off the offender's head, or empaling him alive. In caſes of theft, if the robber eſcapes with his booty, and takes ſanctuary in a temple, he is protected; but if he is caught by the perſon robbed before he reaches the temple, he is then delivered up to juſtice, and the puniſhment of the crime is the loſs of his right-hand. Other trifling matters are puniſhed by fines; of which, one half is paid to the ſultan, and the magiſtrates ſhare the reſt equally among them.

As to their religion, they are pagans, and practiſe the moſt ſuperſtitious maxims: however, they adhere ſtrictly to circumciſion, and are ſo ſtrict in their adherence to this rite, that they cut off the fingers of thoſe whoſe parents have neglected to perform the operation upon them, or have themſelves refuſed it. The Arabs amongſt them are Mahometans.

Lent, or at leaſt a time of faſting ſimilar to it, is kept by them: they begin to obſerve this at the new moon in March, abſtaining, for the ſpace of ſixty days, from milk, butter, fleſh, and fiſh; and living wholly upon dates, rice, honey, and vegetables; procuring the honey from Arabia, in exchange for aloes and frankincenſe. They have altars and croſſes; but as they are entirely ignorant of every tenet of the Chriſtian church, nothing certain can be deduced from ceremonies and uſages handed down by tradition, of which they give no manner of account, nor produce a ſingle reaſon for them.

That they are groſs idolaters, is ſufficiently evident from their worſhipping the moon, which they eſteem as the creative principles of all things; a notion not conſiſtent with Atheiſm, much leſs with Chriſtianity and the doctrines of redemption. At times of great drought they aſſemble in a ſolemn manner, and offer up their petitions to the moon. They make a public ſacrifice to that luminary towards the beginning of Lent, in honour of whom they alſo offer up number of goats. Whenever the moon riſes or ſets, they enter into their temples, and practiſe ſeveral other religious ceremonies, which denote them to be the zealous votaries of this inconſtant deity.

A celebrated French writer tells us, that "at the riſing and ſetting of the moon, or more probably at the new and full moon, they make ſolemn proceſſions round their

temples or moquamos, as alſo round their burial-places, ſtriking together two pieces of odoriferous wood about a yard long, which each man holds in his hands. This ceremony they perform three times in the day, and as often at night; after which, putting a large cauldron, ſuſpended by three chains, over a great fire, they dip into it ſplinters of wood, with which they light their altars and the porch of the temple. They then put up their prayers to the moon, that ſhe will enlighten them with her countenance, ſhed upon them her benign influence, and never permit foreigners to intermix with them. They make alſo an annual proceſſion round the temples, preceded by a croſs; and the whole ceremony ends upon the prieſt's clapping his hands together, as a ſignal that the moon is tired with their worſhip. Others ſay, that the ſignal conſiſts in cutting off the fingers of him who holds the croſs; in recompence for which, he has a ſtick given, on which are certain marks, prohibiting all perſons, of whatever rank or condition, to moleſt or hurt him ever after; on the contrary, they are to aid and aſſiſt him with all their power, in whatever manner he may require their help; they are doomed to ſuffer corporal puniſhment, and the loſs of an arm, unleſs they reſpect and honour him as a martyr to religion."

Sir Thomas Roe confirmed theſe particulars relative to the religion of the Zocotorans. This great man, during his ſtay on this iſland, took great pains to preſerve, in his journal, a minute account of the manners and cuſtoms of the natives; and tells us, that he found the inhabitants to conſiſt of four different ſorts of men, viz. of Arabs, whom the king of Caxem had ſent to keep the iſland in ſubjection to him; of ſlaves to the prince, who are employed in preparing aloes, and other offices of drudgery; of Bedouins, the primitive inhabitants of the iſland, who are baniſhed to the mountains, till they ſubmitted to the yoke, and agreed to breed up their children in the Mahometan religion; and, laſtly of ſavages with long hair, who, excluding themſelves from all ſociety, live naked in the woods.

In order to render our deſcription of this iſland and its inhabitants as complete as poſſible, we ſhall here ſubjoin ſeveral remarkable particulars concerning them, given by Mr. Mandeſloe, whoſe obſervations appear to be very accurate: "they live, ſays he, chiefly upon fiſh, roots, and fruit. They have no wild fowl, and very few tame; yet they are not without cows, camels, aſſes, and ſheep; they have alſo goats, whoſe hair upon the thighs is curled in the manner in which ſatyrs are painted. Their arms are ſwords with large hilts, without a guard; poniards, with long blades, which they conſtantly wear ſtuck in their girdle; and fire-arms, which they manage with ſome dexterity, but cannot keep in order, or free from ruſt; ſo that in a few weeks they are rendered uſeleſs. They are remarkably expert in the uſe of bucklers, which they wield in ſuch a manner as to protect every part of the body, and are wounded only when their ſhoulders are pierced, or cut down by blows.

"Though they live in an iſland, and trade with the continent, they are ignorant of navigation, and have no other veſſels than flat-bottomed fiſhing-boats, with which, however, they weather great ſtorms. The torrents that flow down from the mountains like rivers, either in rainy weather, or when the ſnow on the tops of the mountains is melted by the ſun, ſufficiently ſupplies all foreign ſhipping with water. Though they are Mahometans, yet they worſhip the ſun and moon. Chriſtians or infidels, their religion is a ſtrange mixture of truth and error. But, from the ſolemn proceſſions and ſacrifices made to the luminaries above-mentioned, one would imagine that idolatry and paganiſm chiefly prevailed.

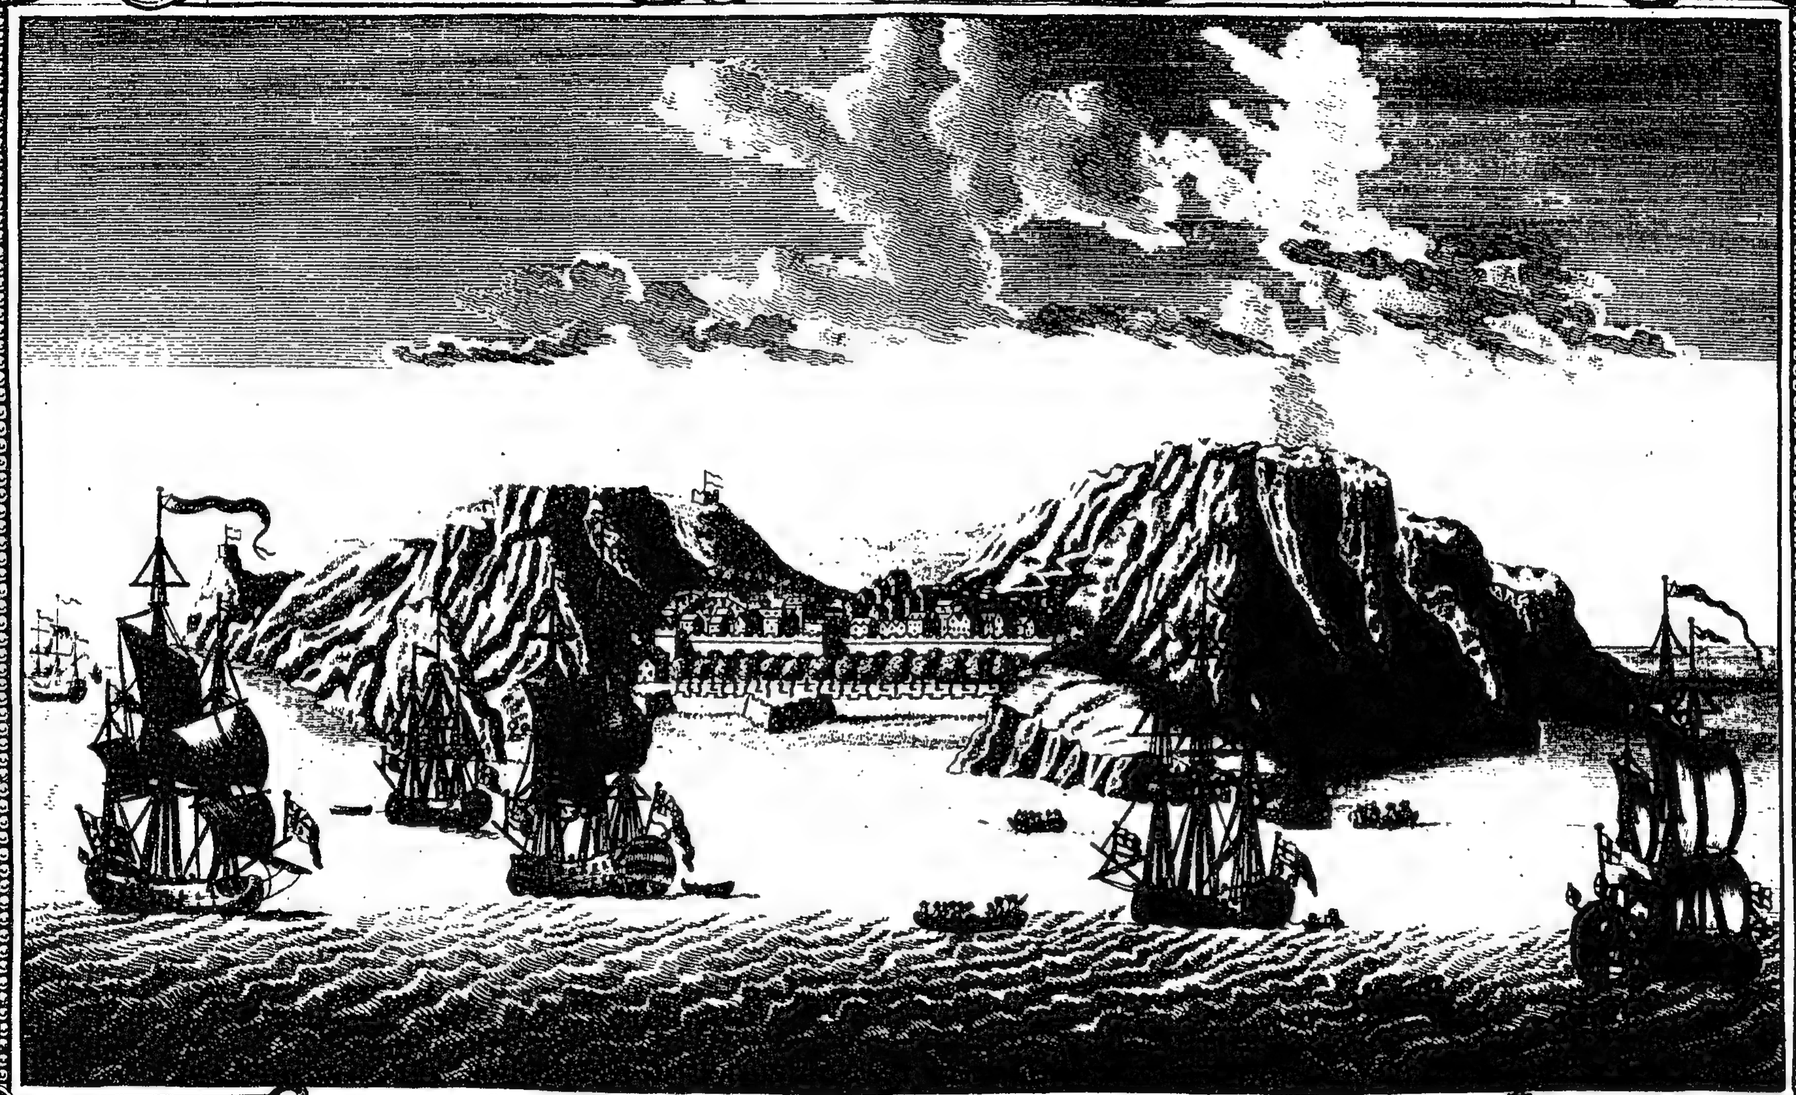
"The people of this iſland uſe their women, who are chiefly Arabians, with great tenderneſs; but are ſo jealous, that they never permit them to be ſeen by a ſtranger. As they are crafty and deceitful themſelves, ſo they are ſuſpicious of the ſame inſincerity in others: they adulterate their commodities, and expect that thoſe they deal with have done the ſame.

"The iſland affords ſome indifferent oranges, tobacco, citrons, and cocoa-nuts; but they ſeldom come to maturity, on account of the ſtrong, dry, and ſandy ſoil. Their chief commodity is aloes; and they have alſo dragon's blood, and keep great numbers of civet-cats; ſo that this commodity may be purchaſed at Zocotora for three or four crowns per ounce; but they find means to adulterate even the civet; ſo that unhappily there is no method of being ſecured from fraud." To conclude, the natural craft and ſubtlety of the Zocotorans, together with the deep penetration and cunning of theſe and moſt other Arabs, who inhabit the iſlands in and near the Red ſea, are inconceivable, and ſerve at once to diſplay the profound ſagacity, as well as perfidy of theſe people.

SECT. IX.

Of the Iſlands of St. HELENA, BISAGOES, BISSAO, and GOREE, their Situation, Extent, Productions, Inhabitants, Animals, &c.

ST. HELENA is ſituate in the Atlantic ocean, in ſix degrees odd minutes weſt longitude, and ſixteen degrees ſouth latitude, almoſt in the mid-way between Africa and America, one thouſand miles diſtant from either continent. It was ſo named by the Portugueſe, who diſcovered it on St. Helen's day. This iſland is twenty-one miles in circumference, and high land, for it may be diſcerned at ſea at above twenty leagues diſtance: it conſiſts of one vaſt rock, ſteep on every ſide, and looks like a caſtle in the middle of the ocean, whoſe natural walls are of that height, that there is no ſcaling them, nor the ſmall valley, called Chapel-valley, in a bay on the eaſt ſide of it, which is defended by a battery of forty or fifty great guns, planted even with the water; and the waves daſhing perpetually on the ſhore, it is at all times difficult landing even here. There is alſo one little creek beſides, where two or three men may land at a time; but this is now defended by a battery of five or ſix guns, and rendered inacceſſible. There is no anchorage any where about the iſland, but at Chapel-valley bay: and, as the wind always ſets from the ſouth-eaſt, if a ſhip overſhoots the iſland ever ſo little, ſhe cannot recover it again.



A little beyond the landing-place, in Chapel-valley, is a fort where the governor reſides with the garriſon; and in the ſame valley there is a pretty town, conſiſting of forty or fifty houſes, built after the Engliſh way, whither the people of the iſland reſort when any ſhipping appears, as well to aſſiſt in the defence of the iſland, if they happen to be enemies, as to entertain the ſeamen, if they are friends: for the governor has always ſentinels, on the higheſt part of the iſland to the windward, who give notice of the approach of all ſhipping, and guns are thereupon fired, that every man may reſort to his poſt. It is impoſſible for any ſhip to come in the night-time, but what has been diſcovered the day before, and preparations made for her reception, if an enemy.

Notwithſtanding the iſland on every ſide appears to be a barren rock, yet on the top it is covered with a fine layer of earth a foot or a foot and a half deep, which produces all manner of grain, graſs, fruits, herbs, roots, and garden-ſtuff: and the country, after we have aſcended the rock, is prettily diverſified with riſing hills and plains, adorned with plantations of fruit-trees and kitchen gardens, among which the houſes of the natives are interſperſed; and in the open fields are herds of cattle always grazing, ſome of which are fatted to ſupply the ſhipping that touch here, and the reſt furniſh their dairies with milk, butter, and cheeſe; they abound alſo in hogs, goats, turkeys, and all manner of poultry, and their ſeas are well ſtored with fiſh.

The greateſt misfortune is, that amidſt all this affluence of other things, they have neither bread nor wine of their own growth; for though the ſoil is exceedingly proper for wheat, yet the rats that harbour in the rocks, and cannot be deſtroyed, eat up all the ſeed before the grain is well out of the ground: and though their vines flouriſh, and afford them grapes enough, yet the latitude is too hot for making wine. As we have obſerved already, there is no country, except Peru, within the torrid zone, where good wine is produced; neither cold nor very hot countries agree with this liquor. All the wine they ſpend, therefore, they have from the Canaries, the Madeiras, or the Cape, which is brought to them in European ſhipping, as well as their flour and malt: and their very houſes are ſome of them brought ready framed from England, there being no timber on the iſland, trees not taking deep root here, for the rock that lies ſo near the ſurface. However they have underwood enough for their neceſſary uſes in this warm climate.

Beſides grapes, they have plantains, bananas, figs, lemons, and ſuch other fruits as hot countries uſually produce, and they make ſhift to raiſe kidney-beans, and ſome other kinds of pulſe in their gardens; though they cannot preſerve their grain from the rats: and to ſupply the want of bread, they eat potatoes and yams.

There were upon the iſland, in the year 1701, about two

A View of the Town and Island of St. HELENA, in the Atlantic Ocean;
belonging to the English East India Company.

Tingle sculp.

two hundred families, moſt of them Engliſh, or deſcended from Engliſh parents, though there were ſome French refugees amongſt them, brought thither to cultivate their vines, and teach them to make wine; but in this, it ſeems, the heat of the climate prevented their ſucceeding, as has been obſerved already. Every family has its houſe and plantation on the higher part of the iſland, where they look after their cattle, their hogs, goats, and poultry, fruits, and kitchen-gardens: they ſcarce ever come down to the town in Chapel-valley, unleſs it be once a week to church, or when the ſhipping arrives, when moſt of the houſes in the valley are converted into punch-houſes, or lodgings for their gueſts, to whom they ſell their cattle, poultry, fruits, or garden-ſtuff. But the inhabitants are not ſuffered to purchaſe any merchandize of the ſhips that touch here. Whatever they want of foreign growth or manufacture, they are obliged to buy at the company's warehouſe, where they may furniſh themſelves, twice every month, with brandy, European or Cape wines, Batavia arrack, malt, beer, ſugar, tea, coffee, China and Japan ware, linen, calicoes, chints, muſlins, ribbands, woollen cloth and ſtuffs, and all manner of cloathing; for which they are allowed ſix months credit. The coin chiefly current here is Spaniſh dollars or Engliſh money.

In all other places near the tropics, the children and deſcendants of white people have not the leaſt red in their cheeks; but the natives of this iſland are remarkable for their ruddy complexions, and robuſt conſtitutions. Their being in general healthful is aſcribed to ſeveral cauſes; among which are theſe: they live on the top of a mountain always open to the ſea-breezes that conſtantly blow here: they are uſually employed in the moſt healthful exerciſes of gardening and huſbandry, and their iſland is frequently refreſhed with moderate cooling ſhowers, and there are no fens or ſalt-marſhes about it to annoy them. They are uſed alſo to climb the ſteep hill between the town in Chapel-valley and their plantation, which is ſo ſteep, that they are forced to have a ladder in the middle of it, from thence called Ladder-hill; and this cannot be avoided without going three or four miles about; ſo that they ſeldom want air or exerciſe, the great preſervers of health.

Mr. Salmon, who was in this iſland, ſays, "As to the genius and temper of the natives, they ſeemed to me the honeſteſt, the moſt inoffenſive and hoſpitable people we had met with of Engliſh extraction, having ſcarce any tincture of avarice or ambition. We aſked ſome of them, if they had no curioſity to ſee the reſt of the world, of which they had heard ſo many fine things; and how they could confine themſelves to a ſpot of earth, ſcarce ſeven leagues in circumference, and ſeparated from the reſt of mankind? To which they anſwered: They enjoyed all the neceſſaries of life in great plenty; they were neither parched with exceſſive heat, or pinched with cold; they lived in perfect ſecurity, in no danger of enemies, of robbers, wild beaſts, or rigorous ſeaſons, and were happy in a continued ſtate of health: that as there were no rich men amongſt them (ſcarce any planter being worth more than a thouſand dollars) ſo there were no poor in the iſland; no man hardly worth leſs than four hundred dollars, and conſequently not obliged to undergo more labour than was neceſſary to keep him in health."

The Portugueſe, who diſcovered this iſland in 1502, ſtored it with hogs, goats, and poultry, and uſed to touch at it for water and freſh proviſions in their return from India; but we do not find they ever planted a colony here; or if they did, having deſerted it afterwards, the Engliſh Eaſt India company took poſſeſſion of the iſland in the year 1600, and held it till 1673, without interruption, when the Dutch took it by ſurprize. However, the Engliſh, commanded by captain Munden, recovered it again within the ſpace of a year, and took three Dutch Eaſt India ſhips that lay in the road at the ſame time. The Hollanders had fortified the landing-place, and planted batteries of great guns there to prevent a deſcent; but the Engliſh being acquainted with a ſmall creek where only two men could go a-breaſt, climbed up to the top of the rocks in the night-time, and, appearing next morning at the backs of the Dutch, they threw down their arms, and ſurrendered the iſland without ſtriking a ſtroke. But, as we have obſerved above, this creek has been ſince fortified, and a battery of great guns planted at the entrance of it; ſo that there is now no place where an enemy can make a deſcent with any probability of ſucceſs.

The affairs of the company here are managed by a governor, deputy-governor, and ſtorehouſe-keeper, who have ſtanding ſalaries allowed them by the company, beſides a public table well furniſhed, to which all commanders, maſters of ſhips, and eminent paſſengers are welcome. The natives ſometimes call the reſult of their conſultations ſevere impoſitions; and though relief may perhaps be had from the company in England, yet a late writer obſerves, that the unavoidable delays in returning a redreſs at that diſtance, ſometimes put the addreſſers under a hardſhip: he alſo thinks, that were not the ſituation of this iſland very ſerviceable to our homeward bound Eaſt India ſhips, the conſtant trouble and expence would induce the company to abandon the iſland; for though it is furniſhed with the conveniences of life, yet the merchants find no profitable commodities there. The maſters of the plantations keep a great many blacks, who, upon ſevere treatment, hide themſelves for a quarter of a year together, keeping among the rocks by day, and roving at night for proviſions: but they are generally diſcovered and taken.

Near the mouth of the river Sierra Leona are ſituated the iſlands of Bulam, La Gallina, Caſnabac, Cazegut, Calacha, and ſome others: theſe are called the Biſagoe iſlands. The iſland of Bulam lies at the mouth of Rio Grande, or the great river, which, by means of this iſland, divides itſelf into two branches. Bulam is between eight and ten leagues long from eaſt to weſt, and between twenty-five and thirty in circumference. The whole coaſt is bordered with woods, beyond which the country is fertile, rich, and beautiful, covered with rice, Indian corn, millet, roots, and fruit, which are cultivated by the negroes of the ſeveral iſlands, who come hither in ſeed-time and harveſt, and afterwards return home.

The ground riſes almoſt imperceptibly for two leagues from the ſea-ſhore, to the foot of ſome hills, which ſerve as a baſe to higher mountains which ſtand in the centre of the iſland; yet theſe mountains are neither ſteep nor craggy, being covered with fine and lofty trees. Through the many vallies between theſe hills and mountains run ſeveral conſiderable rivulets, which the negroes aſſert to run conſtantly, even in the dry ſeaſon of the year. While this iſland preſents to mariners a moſt delightful proſpect from the ſea, it excites at the ſame time their admiration at ſeeing ſo beautiful a ſpot uninhabited.

Both ſides of the Rio Grande, or great river, are very well peopled, and covered with lofty trees, of ſeveral ſorts, which the Portugueſe cut to build barks. This river lies to the ſouth-eaſt of the iſle of Bulam, is about two leagues broad, and, having run ſome leagues from eaſt to weſt, makes a great elbow, or winding, and turns to the north-eaſt, till a little higher it is divided into two arms by the iſland Biſagoe.

In this iſland there is one particular tree, which they call Michery, and might be employed to great advantage in ſhip-building, as it grows to a great height, is eaſily worked, and is at the ſame time hard, ſolid, and proof againſt worms. It is full of an oily moiſture, exceſſively bitter, which probably keeps the worms from infeſting it. Trials have been made of that wood in ſeveral parts of Europe, Africa, and America, and it has always been found of equal goodneſs.

The moſt eaſterly of all theſe iſlands is Formoſa, which is now deſart.

The iſland of Gallina, or Hen iſland, was thus named from the great number of hens the Portugueſe found here. This and the iſland of Caſnabac are very populous and fruitful, and have abundance of good water.

Cazegut, one of the moſt conſiderable of theſe iſlands, is about ſix leagues long, and two broad; its ſoil is very good, producing orange and palm-trees, beſides millet, rice, and all kinds of pulſe. This iſland, with thoſe of Carache, Cunabac, and La Gallina, are the only ones where the Europeans may trade with ſome ſecurity. They trade, however, at ſome of the other iſlands, but they muſt be extremely cautious; for if they venture on ſhore, they will be liable to be robbed and murdered.

Each of the Biſagoe iſlands, except Bulam, is governed by a chief, who aſſumes the authority of a king. All theſe monarchs are perfectly independent, and frequently at war with each other. They have canoes that carry from twenty-five to forty men, with their proviſions and arms, which are ſabres, bows and arrows.

The negroes of theſe iſlands are tall, ſtrong, and healthy, though it is ſaid they live only on fiſh, nuts, and palm-oil; and ſell their rice, millet, and other produce of the earth, to the Europeans for the ornaments they wear. They are in general idoltars, and are ſaid to be of a ſavage and cruel diſpoſition, not only to ſtrangers, but to one

one another; for authors say, that they frequently quarrel about trifles, and will stab or drown themselves, if disappointed of their revenge.

The island of Bissao is near forty leagues in circumference, affords a very agreeable prospect from the sea, rising on every side by a gentle ascent to an eminence in the center of the island: yet there are a number of hills inferior in height to that in the middle, separated by beautiful and fertile vallies, divided by small rivulets, which at the same time augment the richness and elegance of the scene.

Here are little groves of palms, and the rest of the ground is cultivated, and produces a harvest equal to the most sanguine wishes of the inhabitants. Wheat and maiz spring up here to a great height, so as to resemble a field covered with reeds of bamboos. They have likewise another grain that is a species of maiz, which they make into cakes. They have also oranges, bananas, mangoes, and every kind of fruit to be found in the warm climates, and perhaps in greater perfection than in any other place.

The cattle of Bissao are of an uncommon size, and seem to keep pace with the most extravagant growth of the corn: milk and wine are in the greatest abundance; but the island affords neither swine nor horses, the natives forbidding the importation of the former, and the increase of the latter is in general prevented either by the climate or soil.

Notwithstanding the perpetual state of war in which the natives are engaged with the neighbouring islands, and the kingdoms on the continent, yet Bissao is not less populous than fertile; but though the inhabitants are numerous, they live in cottages dispersed up and down the country without the least vestige of a town, except where the French and Portuguese have established themselves. Even the palace of the king consists only of a number of irregular huts, that have a communication with each other. There are about six hundred persons in the Portuguese town, all of whom speak the Portuguese, and pretend that they are descended from them, though they have a fixed and inveterate dislike to that nation, and their complexions are jet-black.

In this island, the dress of the women consists of a cotton girdle, which falls down before, and bracelets of brass, coral and copper; but the virgins go intirely naked, and those of high quality have their bodies marked or painted with a variety of hideous pictures, of snakes and other reptiles, that give their skins some resemblance to flowered sattin; even the eldest daughter of the king is distinguished from the other ladies only by the elegance of these paintings, and the bracelets she is adorned with.

The cloathing of the men of all ranks is only a skin fixed to their girdle, and drawn up between their legs. One of their most extraordinary ornaments is a large iron ring, with a flat round surface on the outside instead of a stone, upon which they ring changes with a bit of iron, in such a manner to converse with the same facility with their castanets, as by means of the most polished language. There is, however, something in this that appears highly improbable, for it is difficult to conceive how ideas can be conveyed by striking together two pieces of iron: it is nevertheless acknowledged, that they have another language that is vocal, and used upon all common occasions, besides this artificial one.

These people are all idolaters; but their notions of religion appear so confused, that it is difficult to enter perfectly into their system. Their chief idol is a small image which they call Shina; but we cannot ascertain the sentiments they form of this object of their worship; besides this, it is said, that every man creates a divinity according to his own fancy. Trees are worshipped as the residence of some deity or spirit superior to man, and are therefore held sacred by them.

The government of the Bissaons is altogether arbitrary, the people in general being subject to the will of their prince; who, though he has nothing to lose, yet may be said to possess every thing within his dominions, as his power extends over his people and their effects. We shall give the following instance of the policy of one of their princes: two slaves, who had been sold to an European merchant, made their escape, and were taken by the king's troops. Equity seemed to require that they should be restored to their masters; but the king gave a different verdict, saying, they had obtained their freedom by having escaped, and, by being retaken by his troops, were again reduced to slavery; so that now the king had an intire property in them.

When the sovereign of this island dies, all the women and slaves, for whom he had a peculiar regard, are sacrificed and buried near their master, that they may attend him in the next world. It is likewise customary for the nobility to have some of their living friends buried with them. A traveller to this place mentions an instance where a father desired that his three sons, of whom he was very fond, might be buried with him at his death.

These people are warlike, and fight with extreme fury, though with little discipline. As treaties of peace are unknown among these nations, so they have no kind of intercourse except in war, and hence no scheme of politics is carried on among them. As the Europeans find it their interest to ferment their quarrels (war being their interest, by augmenting the number of their slaves) consequently they are far from offering their mediation.

If at any time the monarch of this island is determined to carry the war into the neighbouring territories, he orders an instrument, called the bonbalon, to be sounded; this being the general signal to arms, all in the government's pay assemble hereupon at certain head quarters, that are always fixed: where they find the royal fleet, which usually consists of thirty canoes, each carrying thirty men, with their arms and provisions, under the command of an admiral, for the king seldom puts himself at the head of his fleet and armies.

Before the fleet sails, a number of sacrifices are offered to the gods, and the flesh of the victims divided between the court, the priests and the soldiers. In this consultation of the gods, the king always receives a favourable answer; for the deities being of wood, it is easy for the priest to direct what they should say; and hence the army always begins a campaign with the fullest assurance of success.

They make a descent with all possible privacy, surround the enemy's towns and villages, carry off the inhabitants with every thing of value, and then embark before the troops have time to assemble in order to oppose them. One half of the booty belongs to the king, and the remainder is divided among those who obtained it. The slaves are sold to the Europeans, except where any of them happen to be of quality or fortune; in which case he is restored to his friends, on condition of their sending, in exchange, an equal number of slaves, equal in value.

When the invaders return from these expeditions, they assume an air of great importance, and go round the country, shewing their wounds, and relating the wonders they have done and seen, with a long train of prisoners behind them, whom they oblige to sing the praises of the heroes; for which they make them presents of pieces of cloth and other things, which they exchange, for palm-wine. But when these incursions are attended with less honour and profit than was expected, the prisoners are in danger of being sacrificed, especially if the Bissaons have lost an officer of distinction.

The warriors who fall upon these occasions receive public honours by dances performed to the music of tabors. The women express their grief in a manner extremely affecting, pulling their hair, and beating their breast; after which they are served with palm-wine, in order to support their spirits. When thus recruited they begin their mourning with redoubled vigour, and shed tears most plentifully, till the corpse is laid in the grave; when their countenances suddenly brighten, and they resume their former chearfulness.

The king never goes abroad without being surrounded by some thousands of his nobility, women and guards, all of them richly dressed and armed, as far as the skins of beasts, and the brightness of their scymetars can make them so. The palace is about a league distant from the point of Bissao.

There was formerly in this island a fort belonging to the Portuguese, which they mounted with eight pieces of cannon, in order to awe the natives, and prevent their trading with any other foreigner but themselves; the Bissaons, however, soon threw off this restraint, and now maintain the full liberty of receiving all strangers into their ports, where they enjoy perfect security under the king's protection; but before they are suffered to land, his majesty consults the gods by sacrifices, whether admitting those strangers be for the interest of himself and subjects, and the general good of the island.

The island of Goree is situated in fourteen degrees thirty minutes north latitude, and in seventeen degrees twenty minutes west longitude from London, is called by the natives Barsaguiche; but the Dutch, who were the first Europeans that took possession of it, gave it the name

Goree, from an iſland and town of the ſame name in Holland. It is only about eight hundred and forty yards in length, and two hundred and forty-eight in breadth; its whole circumference, including a point at the eaſtern end of the iſland, being, according to a late menſuration, about two Engliſh miles. It ſtands to the ſouth-weſt of Cape Verd, within cannon-ſhot of the ſhore, and conſiſts of a long narrow piece of land, and a ſmall but ſteep mountain. Notwithſtanding its ſmallneſs, its ſituation renders it agreeable: for on the north part of the iſland the inhabitants have a view of Cape Verd and the neighbouring promontories.

Though Goree is ſituated in the torrid zone, the people breathe a temperate air all the year round, owing to its being continually refreſhed by alternate breezes from the land and ſea. A multitude of ſurrounding rocks renders it almoſt inacceſſible, except at two particular bays. Upon the ſummit of a rocky hill is St. Michael's Fort, which the late director M. de St. Jean embelliſhed with ſeveral new buildings, and added works which, in the opinion of the French, rendered the iſland impregnable: the land is alſo defended by ſeveral other forts and batteries, in different parts of it.

Formerly the ſoil was compoſed of only a red ſand, without either graſs, trees, water, or ſcarce any thing beſides reeds; but, by the diligence of the above gentleman, ſeveral ſprings of freſh water were diſcovered in the iſland; gardens were planted with excellent fruit-trees; pulſe and all kinds of vegetables were made to grow in great abundance; and, in ſhort, from a ſmall, barren, and diſagreeable iſland, it was rendered one of the pleaſanteſt and moſt important ſettlements in theſe parts.

Goree was ceded to the Dutch in the year 1617, by the king of Cape Verd, when they immediately built a fort on a rock to the north-weſt, to which they gave the name of Naſſau Fort; but finding that it could not command the harbour, they erected a fortification, called Orange Fort, near the ſhore. The Dutch kept the iſland till admiral Holmes taking it in 1663, placed an Engliſh garriſon in it. Two years after it was retaken by De Ruyter, and the governor and garriſon obliged to ſurrender priſoners of war. The Dutch then augmented the fortifications, and the iſland enjoyed perfect tranquillity, till in 1677 a French ſquadron, commanded by the count d'Eſtrees, attacked the place, and obliged the Dutch governor to ſurrender at diſcretion. D'Eſtrees found that the lower fort mounted forty pieces of heavy cannon, and that the works were kept in excellent repair; but having no inſtructions to garriſon them, he diſmantled this, and entirely demoliſhed Naſſau Fort. Soon after M. Du Caſſee arriving at Goree with a forty gun ſhip, ſolemnly took poſſeſſion of the iſland, and concluded a treaty with the king and negroes, on the ſame conditions the Dutch had enjoyed the iſland; and as this meaſure, which he had voluntarily taken, was approved by the court of France at his return, he was ſent back the following year in quality of governor; and ſoon after, this conqueſt was ſecured to the French company by the treaty of Nimeguin; whereupon the French inſtantly repaired and added new works to both the forts, calling the lower fort Vermandois, and the higher St. Michael. Several unſucceſsful attempts were afterwards made by the Dutch to recover a place of ſuch importance to trade, but all of them proving abortive, the French continued in the poſſeſſion of this iſland till the year 1759, when a ſquadron was fitted out under the command of commodore Keppel, conſiſting of the Torbay, Fougueux, Naſſau, Prince Edward, and the Dunkirk, ſeveral frigates, two bomb-ketches, and ſome tranſports, with more than ſeven hundred regular troops on board, commanded by colonel Worge.

On the arrival of the Engliſh fleet before the iſland, it was reſolved to make the attack on the weſt ſide, not becauſe it was the weakeſt, but from its being the weather ſide; and therefore ſhould their cables be cut by a chain ſhot, or any other accident, the ſhips might, without danger, put to ſea, and beating to windward, renew the action; but if they had anchored on the eaſt ſide, ſuch an accident might have cauſed the ſhips to be driven on ſhore. However, on the 11th of November, at about nine in the morning, the Prince Edward and the Fire Drake bomb, bore down towards the iſland, and in ten minutes after the action was begun, by throwing a ſhell from a bomb. The enemy inſtantly returned the fire from the forts and batteries; and at the ſecond ſhot carried away the Prince Edward's enſign ſtaff, and ſet fire to an arms-cheſt cloſe by it, which, blowing up, killed one of the marines. Encouraged by this ſucceſsful beginning, they levelled their ordnance at the Prince Edward, and began a terrible fire; and few in the ſquadron ſaw this veſſel, in the midſt of this ſhower of bombs and bullets, without ſending up their moſt fervent wiſhes for her ſafety.

When the commodore obſerved that the Fire Drake overcharged her mortar, and that all her ſhells fell beyond the iſland to the ſouth, he ſent his boat on board the Furnace bomb, with advice, that as they ſaw the error of the other in overcharging the mortar, they ſhould avoid that extreme, and that as the enemy ſeemed bent upon ſinking the Prince Edward and the Fire Drake, he deſired they would begin their fire, and endeavour as much as poſſible to draw part of the enemy's attention from their ſuffering friends; and theſe orders were with alacrity inſtantly obeyed.

The fire from all the ſhips was ſoon diſcharged with prodigious fury on the enemy, and that of the Torbay alone, in which was the commodore, ſeemed ſufficient to have razed the very foundations of the iſland. The commodore had brought up with ſuch judgment a-breaſt of the angles of both the weſt point battery and St. Francis fort, that the enemy could not bring a gun from thence to bear upon him. Five guns only could have touched him with advantage; two from St. Peter's, and three from a ſmall lunette on the hill before St. Michael's; both which were ſo warmly attacked by the other ſhips, that they were ſoon deſerted. Indeed the fire from the Torbay was ſo terrible, ſo near, and ſo well aimed, that none but madmen could have ſtood it. The ſhip ſeemed in a continual blaze, and that part of the iſland was darkened by a very great cloud of ſmoke.

Several hundred negroes lined the oppoſite ſhore, to behold the engagement, and were aſtoniſhed at ſeeing ſhips bear down with the utmoſt intrepidity againſt ſtone walls, and receiving the fire from the batteries with intrepid courage. At length the governor was prevailed on to ſtrike his flag; but Mr. Keppel, in the midſt of the noiſe and ſmoke, was ſome time before he perceived the ſilence of the enemy, and at laſt only ſuſpected they had ſtruck, from the ſilence of the reſt of the ſquadron. He ſlackened his fire to look around him, when not a Frenchman was to be ſeen but thoſe who were flying towards the caſtle on the hill. Upon this he ſent a lieutenant, attended by his ſecretary, to wait upon the governor; but before they had left the boat, they were met by M. St. Jean on the beach, who aſked on what terms the honourable Mr. Keppel propoſed he ſhould ſurrender? Surpriſed at the queſtion, they aſked, If his flag was not ſtruck? He anſwered, No, he only meant it as a ſignal for a parley: and being told that the commodore would hear of no terms but his own, replied that he was ſufficiently prepared, and knew how to defend himſelf; to which the others returned, that the commodore had brought up in a ſituation where no gun could hurt him, and did not care if they ſtood out for a month. Hereupon the engagement was renewed; but M. St. Jean, ſoon finding it impoſſible to keep his ſoldiers to their quarters, ſurrendered himſelf and garriſon priſoners at diſcretion, and the Britiſh flag was hoiſted on St. Michael's fortreſs. This iſland, at preſent, however, belongs to the French, being afterwards ceded to them by the treaty of peace in 1763.

The Moors and Arabs bring to this place and Senegal great quantities of gum, which are ſent from hence to Europe and other parts of the world; they bring it hither on camels, bullocks, horſes, &c. The gum is meaſured in a cubical meaſure, called by the Moors, quantor, and every quintal pays a certain duty. Proper commiſſaries put it into ſacks, and then allow it to be carried to the ſettlements belonging to the company. The inhabitants have no water but what they catch in ciſterns, reſervoirs, &c. and wood is extremely ſcarce.

Mahometaniſm is the religion of the natives of this place and Senegal, and they practiſe circumciſion with great rigour. They perform this operation at the age of fifteen, that the youth may have ſtrength ſufficient to undergo it, and be tolerably well inſtructed in the principles of his faith. The ceremony is never performed in hot weather; the laſt quarter of the moon is always choſen, through a notion that the operation is then leſs painful, and the wound cured with more eaſe. It is done in a beautiful meadow, ſurrounded by gardens, upon a few boards elevated a little from the ground. The victims are led thither by relations ſucceeding each other according to their ranks, when the prieſt performs the operation; after which, the youth retires with a chearful countenance, either real or affected.

SECT. X.

Containing a Deſcription of CAPE DE VERD ISLANDS, their Situation, Soil, Climate, Productions, Inhabitants, Animals, &c.

THE Cape de Verd iſlands are ſituated in 14 degrees 10 min. north latitude, and 16 degrees 30 min. weſt longitude. They were ſo called from a cape of the ſame name oppoſite to them, and were diſcovered by Anthony Noel, a Genoeſe, in the ſervice of Portugal, in the year 1640, and are about twenty in number; but ſome of them are only barren uninhabited rocks. The cape took its name from the perpetual verdure with which it is covered. The Portugueſe give them the name of Les Ilhas de Verdes, either from the verdure of the cape, or elſe from an herb called ſargaſſo, which is green, and floats on the water all round them. His Portugueſe majeſty appoints a viceroy to govern them, who conſtantly reſides in the iſland of St. Jago. The Dutch call them the Salt Iſlands, from the great quantities of that commodity produced in ſeveral of them.

The principal of theſe iſlands are the following; namely, 1. May, or Mayo; 2. San Jago, or Saint James's; 3. Sal, or Salt; 4. Buena, or Bona Viſta, or Good Sight; 5. St. Philip's, otherwiſe called Fuego, or the iſland of Fire; 6. St. John, or San Juan; 7. St. Nicholas; 8. St. Vincent; 9. St. Anthony; 10. St. Lucia; 11. Brava.

The ſoil of theſe iſlands is very ſtony and barren; the climate exceeding hot, and in ſome of them very unwholeſome; however, the principal part of them are fertile, and produce various ſorts of grain and fruits, particularly rice, maize, or Indian wheat, bananas, lemons, citrons, oranges, pomegranates, cocoa-nuts, and figs. They have alſo calavances, a ſort of pulſe like French beans, and great quantities of pumpkins, on which the inhabitants chiefly ſubſiſt.

Theſe iſlands produce alſo two other fruits of a remarkable nature, viz. the cuſtard apple, and the papah. The former of theſe is as large as a pomegranate, and nearly of the ſame colour. The outſide huſk, ſhell, or rind, is in ſubſtance and thickneſs between the ſhell of a pomegranate and the peel of a Seville orange, ſofter than the former, yet more brittle than the latter. The coat or rind is alſo remarkable for being covered with ſmall regular knobs or riſings; and the inſide of the fruit is full of a white ſoft pulp, which in its form, colour, and taſte, greatly reſembles a cuſtard, from whence it received its name, which was probably firſt given it by the Europeans. It has in the middle a few ſmall black ſtones, but no core, for the whole of it is intire pulp. The tree that bears this fruit is about the ſize of a quince-tree, and has long ſlender branches that ſpread a conſiderable way from the trunk. Only ſome of the branches bear fruit, for though theſe trees are large, yet in general ſuch trees do not produce above twenty or thirty apples. The fruit grows at the extremity of theſe branches, upon a ſtalk about nine or ten inches long.

The other fruit, called the papah, is about the ſize of a muſk melon, and reſembles it in ſhape and colour both within and without; only in the middle, inſtead of flat kernels, which the melons have, theſe have a quantity of ſmall blackiſh ſeeds, about the ſize of pepper-corns, the taſte of which is much the ſame as that ſpice. The tree on which this fruit grows, is about ten or twelve feet high; the trunk is thickeſt at the bottom, from whence it gradually decreaſes to the top, where it is very thin and taper. It has not any ſmall branches, but only large leaves, that grow immediately on the ſtalks from the body. The leaves are of a roundiſh form, and jagged about the edges, having their ſtalks or ſtumps longer or ſmaller, as they grow nearer or farther from the top: they begin to ſpring out of the body of the tree at about ſix or ſeven feet high from the ground, the trunk being below that entirely bare, and the leaves grow thick all the way from thence to the top, where they are very cloſe and broad. The fruit grow only among the leaves, and moſt plentiful where the leaves are thickeſt; ſo that towards the top of the tree the papahs ſpring forth from it in cluſters. It is, however, to be obſerved, that where they grow ſo thick, they are but ſmall, being no bigger than ordinary turnips; whereas thoſe nearer the middle of the trunk, where the leaves are not ſo thick, grow to the firſt-mentioned ſize.

Poultry of various ſorts abound in the Cape de Verd iſlands, particularly curlews, Guiney hens, and flamingoes, the latter of which are very numerous. The flamingo is a large bird, much like a heron in ſhape, but bigger, and of a reddiſh colour; they go in flocks, but are ſo ſhy, that it is very difficult to catch them: they build their neſts in ſhallow ponds, where there is much mud, which they ſcrape together, making little hillocks, like ſmall iſlands, that appear about a foot and a half above the ſurface of the water. They make the foundations of theſe hillocks broad, bringing them up taper to the top, where they leave a ſmall hollow pit to lay their eggs in; they never lay more than two eggs, and ſeldom leſs. The young ones cannot fly till they are almoſt full grown, but they run with ſurpriſing ſwiftneſs: their tongues are broad and long, having a large lump of fat at the root, which is delicious in its taſte, and ſo greatly admired, that a diſh of them will produce a very conſiderable ſum of money. Their fleſh is lean, and of a dingy colour, but it neither taſtes fiſhy, nor any ways unpleaſant.

Here are alſo ſeveral other ſorts of fowls, as pigeons and turtle doves; miniotas, a ſort of land fowl, as big as crows, of a grey colour, and the fleſh well taſted; cruſias, another ſort of grey-coloured fowl, almoſt as large as the former; theſe are only ſeen in the night, and their fleſh is ſaid to be exceeding ſalutary to people in a decline, by whom they are uſed. They have likewiſe great plenty of partridges, quails, and other ſmall birds, and rabbets in prodigious numbers.

In theſe iſlands are many wild animals, particularly lions, tigers, and camels, the latter of which are remarkably large. There are alſo great numbers of monkies, baboons, and civet-cats, and various kinds of reptiles. The tame animals are horſes, aſſes, ſheep, mules, cows, goats, and hogs; and here the European ſhips bound for the Eaſt Indies, uſually ſtop to take in freſh water and proviſions, with which they are always plentifully ſupplied.

Fiſh of various ſorts abound in the ſea near theſe iſlands, particularly dolphins, bonettas, mullets, ſnappers, ſilver fiſh, &c. and here is ſuch plenty of turtle, that ſeveral foreign ſhips come yearly to catch them. In the wet ſeaſon the turtles go aſhore to lay their eggs in the ſand, which they leave to be hatched by the heat of the ſun. The fleſh of the turtles, well cured, is a great ſupply to the American plantations, as cod-fiſh is to Europe. The inhabitants go out by night and catch the turtles, by turning them on their backs with poles; for they are ſo large that they cannot do it with their hands.

In theſe iſlands are many European families, all of whom profeſs the Roman Catholic religion. The natives are all negroes, and much like their African neighbours, from whom they are ſuppoſed to be deſcended; though, as they are ſubject to the Portugueſe, their own religion and language prevail among them. Both men and women are ſtout, and well limbed, and they are in general of a civil and quiet diſpoſition. Their dreſs (particularly in the iſland of St. John) is very trifling, conſiſting only of a piece of cotton cloth wound round the waiſt. The women ſometimes throw it over the head, and the men acroſs the ſhoulders. Neither ſex wear ſhoes or ſtockings, except on certain feſtivals. The men are particularly fond of wearing breeches, if they can get them, and are very happy if they have but a waiſtband and flap before.

We ſhall now proceed to a partial deſcription of the ſeveral iſlands in the order above ſet down.

The iſland of Mayo, or May, obtained its name from its being diſcovered on the firſt of that month. It is ſituated in 15 degrees 5 minutes north latitude, near three hundred miles from Cape Verd, and is about ſeventeen miles in circumference. The ſoil is in general very barren, and water ſcarce: however they have plenty of cows, goats, and aſſes; and alſo ſome corn, yams, potatoes, and plantains. What trees they have are ſituated on the ſides of the hills, and they have ſome water-melons and figs. The ſea likewiſe abounds with wild fowl, fiſh, and turtle. There grows on this iſland, as well as on moſt of the others, a kind of vegetable ſtone, extremely porous, of a greyiſh colour, which ſhoots up in ſtems, and forms ſomething like the head of a cauliflower.

There is a bay on the weſt ſide of the iſland, and a ſand-bank that runs two or three miles along the ſhore, within which there is a large ſalina, or ſalt-pond, encompaſſed by the ſand-bank, and the hills beyond it. The whole ſalt-pond is about two miles in length, and half a mile wide; but the greater part of it is generally dry. The north end, which is always ſupplied with water, produces ſalt from November till May, thoſe months being the dry ſeaſon of the year. The waters that yield this ſalt work out of the ſea through a hole in the ſand-bank,

and

Various CHARTS of ISLANDS &c. in the ATLANTIC & PACIFIC OCEANS.

and the quantity that flows into it is in proportion to the height of the tides; in the common courſe it is very gentle, but when the ſpring tides ariſe, it is ſupplied in abundance. If there is any ſalt in the pond, when the fluſh of water comes in, it ſoon diſſolves; but in two or three days after it begins to congeal, and ſo continues till a freſh ſupply of water from the ſea comes in again.

A conſiderable trade for ſalt is carried on here by the Engliſh, and the armed ſhips deſtined to ſecure the African commerce, afford the veſſels thus engaged their protection. The inhabitants of the iſland are principally employed in this buſineſs during the ſeaſon; they take it together, and wheel it out of the pond in barrows, from whence they convey it to the ſea-ſide on the backs of aſſes, which animals are very numerous here. The pond is not above half a mile from the landing-place; ſo that they go backwards and forwards many times in the day; but they reſtrain themſelves to a certain number, which they ſeldom exceed.

There are ſeveral ſorts of fowl, particularly flamingoes, curlews, and Guiney hens. Their chief cattle are cows, goats, and hogs, which are reckoned the beſt in all the Cape de Verd iſlands. Beſides the fruits above-mentioned, they have calavanes and pumpkins, which are the common food of the inhabitants.

The inhabitants in this iſland live in three ſmall towns, the principal of which is called Pimont, and contains two churches, with as many prieſts; the other is called St. John, and has one church; and the third, which has a church alſo, is called Lagos. The houſes are very mean, ſmall, and low; they are built with the wood of the fig-tree (that being the only one fit for the purpoſe that grows on the iſland) and the rafters are made of a ſort of wild cane which grows here.

The Portugueſe governor of St. Jago grants the patent to the negro governor of this iſland, whoſe ſituation is tolerably advantageous, as every commander that lades ſalt here is obliged to compliment him with a preſent. He ſpends moſt of his time with the Engliſh in the ſalting ſeaſon, which is his harveſt, and a very buſy time with all the natives. Theſe people have not any veſſels of their own, nor do any Portugueſe ſhips come hither, ſo that the Engliſh are the chief on whom they depend for trade; and though they are ſubjects of Portugal, they have a particular eſteem for the Engliſh nation. Aſſes are alſo a great commodity of trade here; and are ſo plentiful, that ſeveral European ſhips from Barbadoes and other plantations, come annually to freight with them to carry thither.

The iſland of St. Jago, or St. James's Iſland, is ſituated about four leagues to the weſtward of Mayo, between the fifteenth and ſixteenth degrees of north latitude, and in the twenty-third of weſt longitude. This iſland is the moſt fruitful and beſt inhabited of all the Cape de Verd iſlands, notwithſtanding it is very mountainous, and has a great deal of barren land in it.

The principal town is called after the name of the iſland, and is ſituated in fifteen degrees north latitude. It ſtands againſt the ſides of two mountains, between which there is a deep valley two hundred yards wide, that runs within a ſmall ſpace of the ſea. In that part of the valley next the ſea is a ſtraggling ſtreet, with houſes on each ſide, and a rivulet of water in the bottom, which empties itſelf into a fine cove or ſandy bay, where the ſea is generally very ſmooth, ſo that ſhips ride there with great ſafety. A ſmall fort ſtands near the landing place from this bay, where a guard is conſtantly kept, and near it is a battery mounted with a few ſmall cannon.

The town of St. John contains about three hundred houſes, all built of rough ſtone, and it has one ſmall church and a convent. The inhabitants of the town are in general very poor, having but little trade. Their chief manufacture is ſtriped cotton cloth, which the Portugueſe ſhips purchaſe of them, in their way to Braſil, and ſupply them with ſeveral European commodities in return.

There is a tolerably large town on the eaſt ſide of the iſland, called Praya, where there is a good port, which is ſeldom without ſhips, eſpecially in peaceable times. Moſt of the European ſhips bound to the Eaſt Indies touch at this port to take in water and proviſions, but they ſeldom ſtop here on their return to Europe. The town of Praya does not contain any remarkable building, except a fort, ſituated on the top of a hill, which commands the harbour. When the European ſhips are here, the country people bring down their commodities to ſell to the ſeamen and paſſengers; theſe articles generally conſiſt of bullocks, hogs, goats, fowls, eggs, plantains, and cocoa-nuts, which they exchange for ſhirts, drawers, handkerchiefs, hats, waiſtcoats, breeches, and linen of any kind.

The complexion of the natives of this town and St. Jago inclines to black, or is at leaſt of a mixed colour, except ſome few of the better ſort that reſide in the latter, among whom are the governor, the biſhop, and ſome of the padres (fathers) or prieſts. The people of St. Jago town, as they live under the governor's eye, are pretty orderly, though generally very poor, having little trade; but thoſe about Praya are naturally of a thieviſh diſpoſition, ſo that ſtrangers who deal with them muſt be very careful, for if they ſee an opportunity, they will ſteal their goods, and run away.

The iſland of Sal, or Salt, is the windwardmoſt of all the Cape de Verd iſlands, and is ſituated in the ſeventeenth degree of north latitude, and five degrees eighteen minutes weſt longitude from the Cape. It received this name from the great quantity of ſalt naturally produced here from ſalt water, that from time to time overflows part of the land, which is moſtly low, having only five hills, and ſtretches from north to ſouth about eight or nine leagues, but it does not exceed one league and a half in breadth.

There are only a few people in this iſland, and theſe live in wretched huts near the ſea-ſide, and are chiefly employed in gathering ſalt for thoſe ſhips that occaſionally call here for that article. The beſt account of this barren iſland is given us by captain Roberts, who landed here, and relates the following ſtory, which he ſays he was told by one of the blacks that reſided in it. "About the year 1705, not long before I went aſhore, the iſland was intirely deſerted for want of rain by all its inhabitants except one old man, who reſolved to die on it, which he did the ſame year. The drought had been ſo extreme for ſome time, that moſt of the cows and goats died for want of ſuſtenance, but rain following, they increaſed apace, till about three years after they were again reduced by a remarkable event. A French ſhip coming to fiſh for turtle, was obliged, by ſtreſs of weather, or from ſome other cauſe, to leave behind her thirty blacks, which ſhe had brought from St. Antonio to carry on the fiſhing. Theſe people, finding nothing elſe, fed moſtly on wild goats, till they had deſtroyed them all but two, one male and the other female, theſe were then on the iſland, and kept generally upon one mountain. A ſhort time after an Engliſh ſhip (bound for the iſland of St. Mayo) perceiving the ſmoke of ſeveral fires, ſent their boat on ſhore, and thinking they might be ſome ſhip's company wrecked on the iſland, put in there; when they underſtood the ſituation of the people, they commiſerated their caſe, took them all in, and landed them on the iſland from whence they were brought."

The iſland of Buena Viſta, or Bona Viſta, thus named from its being the firſt of the Cape de Verd iſlands diſcovered by the Portugueſe, is ſituated in the ſixteenth degree of north latitude, two hundred miles weſt of the coaſt of Africa, and is twenty miles long, and twelve broad, moſtly conſiſting of low land, with ſome ſandy hills, and rocky mountains. It produces great quantities of indigo, and more cotton than all the other Cape de Verd iſlands; yet there is not one of them where there are fewer cotton cloths to be ſold: for the natives will not even gather the cotton before a ſhip arrives to buy it; nor will the women ſpin till they want it. They have, in general, the ſame animals as in the other iſlands, with plenty of turtle, and many ſorts of fiſh.

When the Engliſh land there to take in a lading of ſalt, they hire men and aſſes to bring it down to the ſea; for which they pay them in biſcuits, flour, and old cloaths. This iſland had alſo formerly a pretty good trade for horſes and aſſes, which are the beſt of all that are upon theſe iſlands. The people are very fond of ſilk, with which they work the boſoms of their ſhirts, ſhifts, caps, women's waiſtcoats, &c.

The people of this iſland prefer the Engliſh dreſs to their own; for moſt of them have ſuits of cloaths bought of the Engliſh, and have learned to make cotton cloth to imitate the European faſhion. The women have one, two, or three cotton cloths wrapped about them like petticoats, tied on with a girdle about the hips, and ſometimes without a girdle. Their ſhifts are made like a man's ſhirt, but ſo ſhort, as ſcarcely to reach to the girdle; the collar, neck, and waiſtbands, of the young people of ſome rank, are wrought in figures with ſilk in various colours in needlework; but the old and the poor have theirs worked with blue cotton thread. Over their ſhifts they wear a waiſtcoat, with ſleeves to button at the arms, not above four inches deep in the back part, but long enough before to tie with ſtrings under their breaſts. Over all they

they have a cotton cloth in the manner of a mantle; thoſe of the married women are generally blue, and the darker the colour the richer it is reckoned; but the maidens, and gay young wives, and widows, wear blue and white, ſome ſpotted and ſome figured. They, however, rather chooſe, if they can get them, linen handkerchiefs wrought on the edges, and ſometimes only on the corners, with red, green, and blue ſilk; the firſt being the colour they moſt admire. They wear neither ſhoes nor ſtockings, except in holidays; and, indeed, at other times the women have generally only a ſmall cotton cloth wrapped round their waiſt, and the men a ragged pair of breeches; to which, if there be but a waiſtband, and a piece hanging to it before to hide what modeſty teaches them to conceal, they think it ſufficient. The people of Bona Viſta are fond of the Engliſh, and moſt of them can ſpeak a little of their language.

The iſland of St. Philip, called alſo Fuego, or the Iſle of Fire, received this latter name from a very large mountain, which frequently emits great quantities of fire and ſulphur. It is ſituated in fifteen degrees twenty minutes north latitude, and ſix degrees fifty-four minutes weſt from the Cape; is the higheſt of all the Cape de Verd iſlands, and appears at a diſtance like one continued mountain. On the weſt ſide of it there is a road for ſhipping, near a ſmall caſtle ſituated at the foot of a mountain, but the harbour is not ſafe, on account of the violent beating of the waves. The wind blows very ſtrong round this iſland, and the ſhore being on a ſlant, the water is very deep, ſo that, except very near the caſtle, no ground is to be found within the lines.

Water is very ſcarce in this iſland, there not being a ſingle running brook throughout it; notwithſtanding which it is tolerably fertile, and produces great quantities ofpompions, water-melons, feſtroons, and maize, but no bananas or plantains, and ſcarce any fruit trees except wild figs; however, in ſome of their gardens, they have guava-trees, oranges, lemons, and limes. They have likewiſe ſome good vineyards, but they make no more wine than juſt what they uſe themſelves.

Moſt of the inhabitants of this iſland are negroes, there being an hundred blacks to one white; they are all Roman Catholics, though ſome of them introduce many pagan ſuperſtitions into that religion. They breed great numbers of mules, which they ſell to other nations, and make cotton cloths for their own uſe.

The Portugueze, on their firſt peopling this iſland, brought with them negro-ſlaves, and a ſtock of cows, horſes, aſſes, and hogs; but the king himſelf furniſhed the place with goats, which ran wild in the mountains. There are many of the latter animals here at this time, and the profits of their ſkins is reſerved to the crown of Portugal. An officer, called captain of the mountains, has the management of this revenue, and no perſon dares, without his licence, kill any one of them.

St. John's is ſituated in fifteen degrees twenty-five minutes north latitude, and ſeven degrees two minutes weſt of Cape Verd, and is very high and rocky. It has more ſalt-petre than any of theſe iſlands: this is found in ſeveral caves, covering the ſides like a hoar-froſt, and in ſome hollow rocks, like iſicles as thick as a man's thumb. This iſland abounds with pompions, bananas, water-melons, and other fruit, and alſo with fowls, goats, aſſes, hogs, &c.

There are plenty of fiſh in the ſeas about St. John's, and moſt of the fiſh here have remarkably ſharp teeth; and they generally uſe crabs and inſects fot baits. Fiſhing is the principal employment of the natives; hence they miſs no opportunities of wrecks, or, when ſhips touch here, to procure all the bits of iron they can.

Captain Roberts tells us, that it is his opinion, that this iſland abounds with copper, and perhaps with finer metals, for which he gives his reaſons: he obſerves, that there are ſeveral acid fountains, of a vitriolic quality, which he tried by putting a clean knife into them, and in about half a minute it would be all covered with copper, nearly of a gold colour, very thick, and, when dry, it might be ſcraped off in ſcales, or powder. Some of theſe waters had a much ſharper power than others, and their acidity diminiſhed in proportion to their diſtance from the fountain-head. Many are found of a dark blue, black, and reddiſh colour, ſome of which exceed iron, and are nearly equal to lead in weight.

In this iſland, the ſalt is made by the heat of the ſun, which ſhining on the water in the holes of the rocks, is thereby turned, and ſometimes lies two feet thick. The natives uſually go and get a quantity of ſalt early in the morning, fiſh the greateſt part of the day, dry, ſplit, and ſalt their fiſh in the evening, and, having heaped them up, let them lie in the ſalt all night. On the enſuing morning they ſpread them out to dry in the ſun, and they are fit to uſe when wanted.

The baleas, a ſort of whale or grampus, is very common near this iſland; and ſome affirm, that ambergris is the ſperm of this creature. A great quantity of ambergris was formerly found about this iſland, but it is leſs plentiful at preſent. Some years before captain Roberts was here, Juan Carneira, a Portugueſe, who was baniſhed from Liſbon for ſome crime, having procured a little ſhip or ſhallop, traded among theſe iſlands: meeting at length with a piece of ambergris of an uncommon bigneſs, he not only procured his liberty, and leave to return before the term of his exile was expired, but had ſufficient left, after defraying all charges, to put himſelf in a comfortable way of living; and a rock near to which he found the ambergris, is called by his name to this day.

The natives of this iſland do not amount to above two hundred ſouls, and are quite black. They are the moſt ignorant and ſuperſtitious of any of the inhabitants of theſe iſlands. But in their diſpoſition they are ſimple and harmleſs, humble, charitable, humane, and friendly; pay a particular reſpect to their equals, reverence their elders, are ſubmiſſive to their ſuperiors, and dutiful to their parents.

People wear in common only a ſlip of cotton faſtened to a ſtring before, which paſſing between the thighs, is tied to the ſame ſtring behind; but when full dreſſed they alſo wear a piece of cotton cloth, (ſpun and wove by themſelves) which the men hang over their ſhoulders, and wrap round their waiſts, while the women put it over their heads, and then wrap it about their bodies; and on both of them it extends to the calf of the leg, or lower.

They uſe in fiſhing, long canes for rods, cotton lines, and bent nails for hooks. As to their hunting, the governor having the ſole privilege of killing the wild goats, none dare hunt without his conſent. This was a law made by the Portugueſe when they peopled theſe iſlands from the coaſt of Africa, in order to prevent the entire loſs of the breed.

When a general hunt is appointed by the governor, all the inhabitants are aſſembled, and the dogs, which are between a beagle and a grey-hound, are called. At night, or when the governor thinks proper to put an end to the ſport, they all meet together, and he parts the goat's fleſh between them as he pleaſes, ſending what he thinks proper to his own houſe, with all the ſkins; and after he comes home, he ſends pieces to thoſe who are old, or were not out a hunting; and the ſkins he diſtributes amongſt them as he thinks their neceſſities require, reſerving the remainder of them for the lord of the ſoil. This is one of the principal privileges enjoyed by the governor; who is alſo the only magiſtrate, and decides the little differences that ſometimes happen among the people.

Upon their not ſubmitting to this deciſion, he confines them till they do, in an open place walled round like a pound: but, inſtead of a gate, they generally lay only a ſtick acroſs the entrance, and thoſe innocent people will ſtay there without attempting to eſcape, except when overcome by paſſion, and then they ruſh out in a rage; but theſe are ſoon caught again, tied hand and foot, and a centinel ſet to watch them, till they agree with their antagoniſt, aſk the governor's pardon for breaking out of his priſon, and have remained there as long as he thinks they have deſerved. Nay, if one kills another, which hardly happens in an age, the governor can only confine him till he has pacified the relations of the deceaſed, by the mediation of his friends, who are bound for the criminal's appearance, in caſe a judge ſhould be ever ſent from Portugal to execute juſtice: but impriſonment is here reckoned ſuch a ſcandal, that Mr. Roberts ſays, it is as much dreaded as Tyburn is by criminals here.

About forty-five miles from the iſland of Salt is St. Nicholas iſland, the north-weſt point of which is in ſeventeen degrees ten minutes north latitude, and ſix degrees fifty-two minutes weſt longitude from Cape de Verd. It is the largeſt of all the Cape de Verd iſlands, except St. Jago. The land is high, and riſes like a ſugar-loaf, but the ſummit of the moſt elevated part is flat. The coaſt of this iſland is entirely clear from rocks and ſhoals. The bay of Paraghiſi is very ſafe, but the other roads are inſecure till the trade winds are ſettled.

There is a valley in this iſland which has a fine ſpring of water in it, and many perſons employ themſelves in ſupplying different parts with that uſeful article, with

which they load asses, and carry it a considerable way at a cheap rate. Water may likewise be obtained in almost any part of the island, by digging a well.

The town of St. Nicholas is the chief place in the island; it is close built and populous, but all the houses, and even the church, are covered with thatch. Captain Avery, the celebrated pirate, having once received some offence from the inhabitants, burnt this town; but it was afterwards rebuilt, much in the same manner, and to the same extent as before.

The people here are nearly black, with frizzled hair. They speak the Portuguese language tolerably well, but are thievish and blood thirsty. The women here are more ingenious, and better housewives than in any other of the Cape de Verd islands. Most families have horses, hogs, and poultry; and many of the people of St. Nicholas understand the art of boat-building, in which the inhabitants of the other islands are deficient. They likewise make good cloths, and even cloaths, being tolerable taylors, manufacture cotton quilts, knit cotton stockings, make good shoes, and tan leather.

The people are strong Roman Catholics, but their dispositions are so obstinate, that their priests find it very difficult to rule them. This island abounds in oranges, lemons, plantains, bananas, pompions, musk, water-melons, sugar-canes, vines, gum-dragon, sestroons, maize, &c.

The island of St. Vincent is under the eighteenth degree of north latitude, two leagues to the west of St. Lucia, and about forty-three leagues distant from the Isle of Salt, west and by north. It is five leagues in length. On the north-west of it there is a bay a league and a half broad at the entrance, surrounded with high mountains, and stretching to the middle of the island. This bay is sheltered from the westerly and north-westerly winds, by the high mountains of the isle St. Vincent; so that this is the safest harbour of any in all these islands; and yet it is difficult of access, because of the furious winds that blow with the utmost impetuosity from the mountains along the coast.

There are several other small bays on the south-side of the island, where ships may anchor, and thither the Portuguese generally go to load hides. The south-east side of this island is a sandy shore, but there is not a drop of water on the hills, nor even in any of the deep valleys, except one, in which fresh water is seen to spout out of the ground on digging a little.

The island of St. Anthony is the most northward of all the Cape de Verd islands, and lies under the eighteenth degree of north latitude, seven miles from St. Vincent, with a channel between them, which runs from south-west to north-east. Here are two high mountains on this island, one of which is nearly as high as the pike of Teneriff, and seems always inveloped in clouds. The inhabitants are about five hundred in number; and on the north-west side of the island there is a little village, consisting of about twenty houses or cottages, and inhabited by near fifty families of negroes and white people, who are all wretchedly poor, and speak the Portuguese language. On the north side of the island there is a road for shipping, and a collection of water in a plain lying between high mountains, the water running from all sides in rainy season; but in the dry season the people are greatly distressed for water. The principal people here are a governor, a captain, a priest, and a schoolmaster, all of whom take much upon themselves, so that the people have some jingling verses concerning them, which imply, that the governor's staff, the beads of the priest, the schoolmaster's rod, and the captain's sword, give them a licence to feast on the natives, who serve as slaves to support their luxury and grandeur.

The island of St. Lucia lies in latitude seventeen degrees eighteen minutes north. It is high land, full of hills, and is about eight or nine leagues long. On the south-east end of it are two small isles, very near each other. On the east-south-east side is the harbour, where the shore is of white sand: here lies a small island, round which there is a very good bottom for anchoring; and ships may ride at anchor in a very good road, in twenty fathom water over-against the island of St. Vincent.
